The University of Notre Dame strives for a spirit of inclusion among the members of this community for distinct reasons articulated in our Christian tradition. We prize the uniqueness of all persons as God’s creatures. We welcome all people, regardless of color, gender, religion, ethnicity, sexual orientation, social or economic class, and nationality, for example, precisely because of Christ’s calling to treat others as we desire to be treated. We value gay and lesbian members of this community as we value all members of this community. We condemn harassment of any kind, and University policies proscribe it. We consciously create an environment of mutual respect, hospitality, and warmth in which none are strangers and all may flourish.

One of the essential tests of social justice within any Christian community is its abiding spirit of inclusion. Scriptural accounts of Jesus provide a constant witness of this inclusiveness. Jesus sought out and welcomed all people into the Kingdom of God—the gentile as well as the Jew, women as well as men, the poor as well as the wealthy, the slave as well as the free, theinfirmanwellasthehealthy. ThesocialteachingsoftheCatholicChurch promotea society founded on justice and love, in which all persons possess inherent dignity as children of God. The individual and collective experiences of Christians have also provided strong warrants for the inclusion of all persons of good will in their communal living. Christians have found their life together enriched by the different qualities of their many members, and they have sought to increase this richness by welcoming others who bring additional gifts, talents, and backgrounds to the community.

The spirit of inclusion at Notre Dame flows from our character as a community of scholarship, teaching, learning, and service founded upon Jesus Christ. As the Word through whom all things were made, Christ is the source of the order of all creation and of the moral law which is written in our hearts. As the incarnate Word, Christ taught the law of love of God and sent the Holy Spirit that we might live lives of love and receive the gift of eternal life. For Notre Dame, Christ is the law by which all other laws are to be judged. As a Catholic institution of higher learning, in the governance of our common life we look to the teaching of Christ, which is proclaimed in Sacred Scripture and tradition, authoritatively interpreted by church teaching, articulated in normative understandings of the human person, and continually deepened by the wisdom born of inquiry and experience. The rich heritage of the Catholic faith informs and transforms our search for truth and our understanding of contemporary challenges in higher education.

This statement was adopted by the officers of the University on August 27, 1997, in conjunction with an Open Letter to the Notre Dame Community.

The Michiana Regional Transportation Center provides from one location services for travel by air, train, bus, and rental car, including the South Shore Railroad, an electric commuter train to Chicago. South Bend is also served by Amtrak. The city lies about 90 miles east of Chicago, Illinois, 140 miles north of Indianapolis, Indiana, and 200 miles west of Detroit, Michigan.

Fall Semester 2005

August
23: Classes begin; Mass—formal opening of school year
30: Last day for course changes

October
15: Midsemester break begins (through Oct. 23)
24: Classes resume
28: Last day for course discontinuance

November
1: Application deadline for admission to the Graduate School for spring semester 2006
9: Registration for spring semester 2006 (through Nov. 30)
24: Thanksgiving holiday begins (through Nov. 27)
28: Classes resume

December
7: Last class day
8: Reading days begin (through Dec. 11)
9: Last day for master's examinations and Ph.D. dissertation defenses for graduation in January 2006
12: Final examinations begin (through Dec. 17)
16: Last day for presenting completed theses and dissertations in the Graduate School office for graduation in January 2006
19: All grades due in Registrar's office by 3:45 p.m.

January
8: January official graduation date (no ceremony)

Spring Semester 2006

January
17: Classes begin
25: Last day for course changes

February
1: Deadline for applying to the Graduate School for fall semester 2006 admission and financial aid

March
11: Midsemester break begins (through Mar. 19)
20: Classes resume
24: Last day for course discontinuance

April
13: Last day for master's examinations and Ph.D. dissertation defenses for graduation in May 2006
14: Easter holiday begins (through Apr. 17)
18: Classes resume
21: Last day for presenting completed theses and dissertations in the Graduate School office for graduation in May 2006

May
3: Last class day
4: Final examinations begin (through May 7)
8: Final examinations begin (through May 12)
15: All grades due in Registrar's office by 3:45 p.m.
19: Commencement weekend begins (through May 21)

Summer Session 2006

June
20: Classes begin

July
14: Last day for master's examinations and Ph.D. dissertation defenses for graduation in August 2006
21: Last day for presenting completed theses and dissertations in the Graduate School office for graduation in August 2006

August
3: Last class day
4: Final examinations
9: August official graduation date (no ceremony)

All dates subject to change.

## Academic Calendar 2006-2007

### Fall Semester 2006

**August**
- 22: Classes begin; Mass—formal opening of school year
- 30: Last day for course changes

**October**
- 14: Midsemester break begins (through Oct. 22)
- 23: Classes resume
- 27: Last day for course discontinuance

**November**
- 1: Application deadline for admission to the Graduate School for spring semester 2007
- 13: Registration for spring semester 2007 (through Nov. 29)
- 23: Thanksgiving holiday begins (through Nov. 26)
- 27: Classes resume

**December**
- 6: Last class day
- 7: Reading days begin (through Dec. 10)
- 8: Last day for master's examinations and Ph.D. dissertation defenses for graduation in January 2007
- 11: Final examinations begin (through Dec. 15)
- 15: Last day for presenting completed theses and dissertations in the Graduate School office for graduation in January 2006
- 18: All grades submitted through insideND by 3:45 p.m.

**January**
- 7: January official graduation date (no ceremony)

### Spring Semester 2007

**January**
- 16: Classes begin
- 24: Last day for course changes

**February**
- 1: Deadline for applying to the Graduate School for fall semester 2007 admission and financial aid

**March**
- 10: Midsemester break begins (through Mar. 18)
- 19: Classes resume
- 23: Last day for course discontinuance

**April**
- 6: Easter holiday begins (through Apr. 9)
- 13: Last day for master's examinations and Ph.D. dissertation defenses for graduation in May 2007
- 10: Classes resume
- 16: Registration for fall semester 2007 (through Apr. 25)
- 20: Last day for presenting completed theses and dissertations in the Graduate School office for graduation in May 2007

**May**
- 2: Last class day
- 3: Reading days begin (through May 4)
- 7: Final examinations begin (through May 11)
- 14: All grades submitted through insideND by 3:45 p.m.
- 18: Commencement weekend begins (through May 20)

### Summer Session 2007

**June**
- 19: Classes begin

**July**
- 13: Last day for master's examinations and Ph.D. dissertation defenses for graduation in August 2007
- 20: Last day for presenting completed theses and dissertations in the Graduate School office for graduation in August 2007

**August**
- 2: Last class day
- 3: Final examinations
- 8: August official graduation date (no ceremony)

The Graduate School

As a Catholic research university, the University of Notre Dame offers first-rate academic training in an environment that addresses questions of value and meaning. We are committed to making quality the hallmark of the Graduate School. Our intent is to allow faculty to invest in the lives of gifted graduate students, equipping them to pass on a vision of inquiry, scholarship, teaching, and service.

Over the past two decades, Notre Dame has made dramatic advances in building a distinguished faculty. Ongoing investment in facilities also invigorates the University's graduate programs. For more than a decade major construction projects have added new campus buildings to provide classrooms, faculty offices, and research facilities in the sciences, engineering, humanities, and social sciences.

Notre Dame has a pivotal role to play as a Catholic center of learning, a place that welcomes the intellectual ferment of a university while encouraging its faculty—in a variety of disciplines and from diverse perspectives—to address ultimate questions, religious foundations, and ethical dilemmas.

History

Located north of the city of South Bend, Indiana, the University of Notre Dame, a Holy Cross institution, was founded in 1842 by the Rev. Edward F. Sorin, a priest of the Congregation of Holy Cross. In 1844 it was chartered by a special act of the legislature of the State of Indiana. Combining the style of the French "college" and the seminary in which Father Sorin and his associates were educated, Notre Dame began as both a secondary school and a four-year college offering the baccalaureate degree in the liberal arts. It soon adapted to the style and structure of the typical 19th-century American university, introducing a science curriculum in 1865, the first American Catholic law school in 1869, an engineering college in 1873, a science curriculum in 1865, the first American Catholic Catholic law school in 1869, an engineering college in 1873, a school of Architecture, and includes 30 departments and programs offering master's and/or Ph.D. degrees in most of the major humanistic, scientific, and engineering disciplines.

Administered originally by a graduate committee of faculty members, the Graduate School was organized formally in 1944 with a graduate dean and graduate council. In 1971, the newly created position of vice president for advanced studies underlined the University's intense focus on building quality in the graduate programs. Since 1990, the Graduate School has been administered by a vice president for graduate studies and research, assisted by several associate and assistant deans and the graduate council.

The University's total student population of more than 10,000 includes nearly 1,700 graduate students and 1,000 professional students. Approximately 800 graduate and professional degrees are awarded annually.

Administration

From 1918 to the present, the University's Graduate School has developed into four divisions—humanities, social sciences, science, and engineering—and the School of Architecture. There are 30 major departments and programs offering master's and/or Ph.D. degrees in most of the major humanistic, scientific, and engineering disciplines.

In the Graduate School

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research and Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Michael T. Edwards, M.S.A.
Assistant Vice President for Research and Director, Office of Research

Terrence J. Alki, Ph.D.
Associate Dean of the Graduate School

Andrew B. Deliyannis, Ph.D.
Manager of Technical Support for the Graduate School

Peter Diffl ey, Ph.D.
Associate Dean of the Graduate School

Terri Hall, B.A.
Assistant Director, Sponsored Programs, Office of Research

Richard A. Hilliard, Ph.D.
Director of Research Compliance

Karen M. Pace, B.S.
Associate Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

Officers of Administration

In the University

President of the University

John F. Affleck-Graves, Ph.D.
Executive Vice President

Dennis Jacobs, Ph.D.
Vice President and Associate Provost

Christine Maziar, Ph.D.
Vice President and Associate Provost

Jean Ann Linney, Ph.D.
Vice President and Associate Provost

Rev. Mark L. Poorman, C.S.C., Ph.D.
Vice President for Student Affairs

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research

Louis M. Nanni, M.A.
Vice President for University Relations

Carol Colby Kaeszbl, J.D.
Vice President and General Counsel

James J. Lyphout, M.B.A.
Vice President for Business Operations

Scott C. Malpass, M.B.A.
Vice President for Finance and Chief Investment Officer

In the Graduate School

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research and Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Michael T. Edwards, M.S.A.
Assistant Vice President for Research and Director, Office of Research

Terrence J. Alki, Ph.D.
Associate Dean of the Graduate School

Andrew B. Deliyannis, Ph.D.
Manager of Technical Support for the Graduate School

Peter Difffley, Ph.D.
Associate Dean of the Graduate School

Terri Hall, B.A.
Assistant Director, Sponsored Programs, Office of Research

Richard A. Hilliard, Ph.D.
Director of Research Compliance

Karen M. Pace, B.S.
Associate Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

The Graduate Council

Following is the Graduate Council membership for the 2005-2006 academic year.

Ex Officio Members

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research, Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Karen M. Pace, B.S.
Assistant Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

Ex Officio Members

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research, Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Karen M. Pace, B.S.
Assistant Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

Ex Officio Members

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research, Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Karen M. Pace, B.S.
Assistant Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

Ex Officio Members

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research, Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Karen M. Pace, B.S.
Assistant Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

Ex Officio Members

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research, Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Karen M. Pace, B.S.
Assistant Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School

Ex Officio Members

Jeffrey C. Kantor, Ph.D.
Vice President for Graduate Studies and Research, Dean of the Graduate School

Anthony K. Hyder, Ph.D.
Associate Vice President for Graduate Studies and Research

Donald B. Pope-Davis, Ph.D.
Associate Vice President for Graduate Studies and Associate Dean of the Graduate School

Karen M. Pace, B.S.
Assistant Director, Sponsored Programs, Office of Research

James H. Powell, Ph.D.
Associate Dean of the Graduate School and Director of the Summer Session

Ellen D. Rogers, M.B.A.
Director, Sponsored Programs, Office of Research

Barbara M. Turpin, Ph.D.
Associate Dean of the Graduate School
Frank P. Incropera, Ph.D.
Matthew H. McClosey Dean of Engineering and H. Clifford and Evelyn A.
Brosey Professor of Engineering (Mechanical)
Joseph Marino, Ph.D.
William K. Warren Dean of the College of Science and Professor of Chemistry
Mark W. Roche, Ph.D.
I. A. O'Shaughnessy Dean of the College of Arts and Letters and the Rev. Edmund P. Joyce, C.S.C., Professor of German Language and Literature
Carolyn Woo, Ph.D.
Martin J. Gillen Dean of the Mendoza College of Business and the Raymond and Milani Siegfried Professor of Entrepreneurial Studies
Jennifer A. Younger, Ph.D.
Director of University Libraries
Patricia O’Hara
Joseph A. Matson Dean of the Law School and Professor of Law

Elected Members

Philip Bess, M.Arch.
Professor of Architecture
Theodore J. Cachey, Ph.D.
Chair and Professor of Romance Languages and Literatures and the Albert J. Ravarino Family Director of the Devers Program in Dante Studies
Lionel Jensen, Ph.D.
Chair and Associate Professor of East Asian Languages and Literatures
Edward J. Maginn, Ph.D.
Associate Professor of Chemical and Biomolecular Engineering
Igor Veretennikov, Ph.D.
Chemistry and Biochemistry, Research Faculty
Joseph P. Wawrykow, Ph.D.
Associate Professor of Theology

One elected member from the College of Science will be announced.

Additional Members

Four appointed members and six representatives from the Academic Council will be announced.

Graduate Student Representatives

Misty Sohieberle
English, President of the Graduate Student Union
Amanda Matthews
Psychology, Vice President of the Graduate Student Union

Graduate Degrees Granted

Master of Architecture
Master of Architectural Design and Urbanism
Master of Arts in the following fields:
  - Art History, Design, and Studio Art
  - Early Christian Studies
  - Economics
  - English
  - French and Francophone Studies
  - German Language and Literature
  - History
  - History and Philosophy of Science
  - Iberian and Latin American Studies
  - Italian Studies
  - Literature
  - Music
  - Peace Studies
  - Philosophy
  - Political Science
  - Psychology
  - Sociology
  - Theology
  - Master of Divinity
  - Master of Education (only for students in the Alliance for Catholic Education program)
  - Master of Engineering (only with J.D.)
  - Master of Engineering in Mechanical Engineering
  - Master of Fine Arts in the following fields:
    - Creative Writing
    - Design
    - Studio Art

Areas and Fields of Study

The University of Notre Dame offers graduate programs leading to master’s and/or doctoral degrees in the following areas and fields of study:

Aerospace and Mechanical Engineering
Aerospace Sciences
- Advanced Aerospace Vehicle Concepts
- Aeroacoustics
- Aero-optics
- Aerospace Structural Design
- Aerospace Systems Design
- Flow Physics and Control
- High-Lift Aerodynamics
- Low Reynolds-Number Aerodynamics
- Low Speed Aerodynamics
- Particle Dynamics

Master of Science in the following fields:
- Biochemistry
- Biological Sciences
- Biophysics
- Chemistry
- Geophysical Sciences
- Mathematics
- Physics

Master of Science in Electrical Engineering

Master of Science in Mechanical Engineering

Master of Science in the following fields:
- Aerospace and Mechanical Engineering
- Biochemistry
- Biological Sciences
- Biophysics
- Chemistry
- Chemical and Biomolecular Engineering
- Chemistry
- Civil Engineering and Geophysical Sciences
- Computer Science and Engineering
- Economics
- Electrical Engineering
- English
- History
- History and Philosophy of Science
- Literature
- Mathematics
- Medieval Studies

Graduate student Union

Through a council of elected officers, appointed committee chairs and representatives from the departments of its constituent colleges, the Graduate Student Union (GSU) provides a variety of services and represents its membership on several University councils and committees. In particular, it subsidizes graduate student travel to present original research, promotes excellence in graduate education, looks for the highest quality of life for graduate students, and maintains a liaison with the administration regarding pertinent issues. The GSU publishes the newsletter, provides listserv updates, conducts a graduate orientation program, and offers awards for outstanding teaching assistants and graduate instructors, in addition to providing various social, cultural, and intellectual activities. The GSU is the graduate students’ official liaison with the University administration and the Office of Student Activities.

The Graduate Student Union finances its operations and Conference Presentation Grant (formerly known as the Robert E. Gordon Travel Grant) through a yearly, mandatory activity fee assessed on all graduate students through the Office of Student Accounts. The Graduate Student Union maintains offices in the LaFortune Student Center at the mezzanine location; send any e-mail inquiries to dfrahn@nd.edu. Telephone: (574) 631-6963, Web: http://www.gsu.nd.edu

Degrees Granted

Master of Architecture
Master of Architectural Design and Urbanism
Master of Arts in the following fields:
  - Art History, Design, and Studio Art
  - Early Christian Studies
  - Economics
  - English
  - French and Francophone Studies
  - German Language and Literature
  - History
  - History and Philosophy of Science
  - Iberian and Latin American Studies
  - Italian Studies
  - Literature
  - Music
  - Peace Studies
  - Philosophy
  - Political Science
  - Psychology
  - Sociology
  - Theology
  - Master of Divinity
  - Master of Education (only for students in the Alliance for Catholic Education program)
  - Master of Engineering (only with J.D.)
  - Master of Engineering in Mechanical Engineering
  - Master of Fine Arts in the following fields:
    - Creative Writing
    - Design
    - Studio Art

Areas and Fields of Study

The University of Notre Dame offers graduate programs leading to master’s and/or doctoral degrees in the following areas and fields of study:

Aerospace and Mechanical Engineering
Aerospace Sciences
- Advanced Aerospace Vehicle Concepts
- Aeroacoustics
- Aero-optics
- Aerospace Structural Design
- Aerospace Systems Design
- Flow Physics and Control
- High-Lift Aerodynamics
- Low Reynolds-Number Aerodynamics
- Low Speed Aerodynamics
- Particle Dynamics

THE GRADUATE SCHOOL

Academic Regulations

Please note:
The following information represents the minimum standards established by the Graduate School. Individual departments may require higher standards. Students are expected to be fully cognizant of their department's requirements.

No exceptions to the following policies and procedures will be valid without the formal written approval of the Graduate School.

Admission to the Graduate School

Applicants for admission to the Graduate School must hold a bachelor's degree or its equivalent from an accredited American college or university or from a foreign institution of acceptable standing by the time of graduate matriculation. If at that time they do not hold a bachelor's degree, the Graduate School admission is void. The applicant should have earned at least a B average in his or her undergraduate major courses and should meet the level of academic achievement that implies a developed ability for advanced study and independent scholarship.
An applicant may seek admission in nondegree status or as a degree-seeking student in either a master's or doctoral program.

Admission to a graduate degree program is not equivalent to admission to candidacy for the degree. (See "Admission to Candidacy," under master's and Ph.D. degree requirements.) Also, admission to the master's program does not automatically mean admission to the doctoral program upon completion of the master's program. A separate decision is required for continuation in the doctoral program.

Application Requirements

An applicant for admission to a degree program is required to submit:

1. one completed online “Application for Admission and Financial Aid”
2. the application fee
3. two (2) copies of the Statement of Intent
4. three (3) letters of recommendation and a second copy of each
5. a waiver of access form for each letter of recommendation with original signatures in ink
6. two (2) official transcripts from each postsecondary institution attended. International applicants must send both an original language and an official (i.e., notarized) English translation of each transcript.
7. official Graduate Record examination (GRE) General Test scores (students may temporarily submit two (2) unofficial photocopies)
8. official GRE Subject Test scores if required by the department (students may temporarily submit two (2) unofficial photocopies)
9. official scores of the Test of English as a Foreign Language (TOEFL) from all non-native speakers of English (students may temporarily submit two (2) unofficial photocopies)
10. two (2) copies of a curriculum vitae/resumé (recommended)

Students seeking admission to more than one department, but who plan to enroll in only one, must submit separate applications for each department. Only one application fee is necessary.

The application fee must accompany the application. This fee is nonrefundable. The fee is $50 for all applications submitted after December 1 for admission to the following fall semester. For applications submitted by December 1 for admission to the following fall semester, the application fee is $35. Fees may be paid by check, money order, or credit card (see online application).

Unless otherwise specified, the application deadline is February 1 for admission and financial aid for the fall semester, and November 1 for the spring semester, though some departments have earlier deadlines. Only a few departments offer spring admission; therefore, applicants who wish to begin in the spring are advised to consult the department.

Beyond these Graduate School admission requirements for all graduate departments and programs, particular programs may require personal interviews and/or submission of special materials such as writing samples or portfolios. Consult the specific department in this regard and submit one (1) copy of each required item to the Graduate School.

The Graduate Record Examination (GRE) is offered several times each year at sites in the United States and abroad. The annual schedules and other information about the GRE can be obtained online at http://www.gre.org or from Educational Testing Service (ETS), Graduate Record Examination, Box 6000, Princeton NJ 08541-6000, USA. If you need to call about the GRE, telephone the Educational Testing Service at (609) 771-7670.

The Test of English as a Foreign Language (TOEFL) is offered several times each year at sites in the United States and abroad. Foreign students, except those noted above, must submit TOEFL scores as part of their application to demonstrate a sufficient command of English to meet the requirements of their field. If not available locally, the annual schedules and other information about the TOEFL can be obtained online at http://www.toefl.org or from Educational Testing Service (ETS), TOEFL, Box 6151, Princeton NJ 08541-6151, USA. If you need to call about the TOEFL, telephone the Educational Testing Service at (609) 771-7100.

Admission to Multiple Degree Programs

An applicant who seeks admission to more than one master's degree program in the Graduate School in order to earn two degrees, or an applicant who seeks admission to a degree program in the Graduate School concurrently with a degree program in another school in the University (i.e., Law School or Mendoza College of Business) must submit a separate and complete application for each program. The applicant must also be accepted by each of the cooperating departments. The Graduate School will agree upon a plan of study defining what will constitute the joint degree program, and the approved written plan must be on file with the Graduate School before the student may begin the program.

Admission to Joint Degree Programs

It is possible for a student to pursue a program of study combining two programs and leading to a joint degree. An applicant who seeks to earn a joint degree, either master's or Ph.D., must submit a separate and complete application to each program and be accepted by both. The relevant departments must agree upon a plan of study defining what will constitute the joint degree program, and the approved written plan must be on file with the Graduate School before the student may begin the program.

Nondegree Applicants

An applicant for admission to a nondegree program is required to submit one completed Graduate School application and two official transcripts from each postsecondary institution attended. (When possible, transcripts should be sent directly to the Graduate School by the institution.) Particular departments may require personal statements detailing the applicant’s graduate plans and expectations.

A nondegree applicant may seek admission as a departmental nondegree student or as an unclassified, visiting, or auditing student in the Graduate School.

A departmental nondegree student is one who has been admitted to a department but does not seek an advanced degree from the University. An applicant with degree intent who lacks one or more admission requirements may be admitted temporarily to this nondegree status at the discretion of the department and with the approval of the associate dean for graduate admissions. The student may register for one to 12 credit hours in any graduate courses for which he or she meets the course prerequisites. However, no student initially admitted to nondegree status will be admitted to degree status until all admission requirements have been satisfied. No more than 12 credit hours earned by a student while in a nondegree status may be counted toward a degree program. Admission as a departmental nondegree student does not guarantee later admission as a degree-seeking student.

An unclassified student is one who is admitted to the Graduate School in a nondegree status, but who is not a member of a particular department. Such a student may, with the approval of the Graduate School, take courses in any graduate department, subject to approval by the department. This category is usually open to nondegree students who wish to take courses in more than one department or students who have completed their degree programs, but wish to continue in the University in graduate student status. No more than 12 credit hours earned by a student while in a nondegree status may be counted toward a degree program. Admission as an unclassified nondegree student does not guarantee later admission as a degree-seeking student.
A nondegree student, however, must register for his or her degree objective. The student's department is considered a nondegree student at Notre Dame and follows the same application and enrollment procedures as a nondegree student.

An auditor is a nondegree student who meets the course prerequisites but receives no academic credit. With the permission of the instructor and the department chair, a degree student also may audit courses. Audited courses may be recorded on a student's permanent record only if the student requests the instructor to record it at the beginning of the semester and if he or she attends the course throughout the entire semester. A recorded audit is graded V. Incomplete audits are not recorded. The audit grade of V cannot be changed to a credit grade.

In the academic year, full-time graduate students may audit courses without charge. Part-time graduate students who audit courses will be charged the normal audit fee of one-half the current credit hour fee.

In the summer session, there is no free audited course. Any course taken or audited in the summer session will be charged the full price.

Acceptance

Official acceptance to the Graduate School in the academic year is granted only by the associate dean. Applicants will be informed officially of the results of their application by a letter from the associate dean for graduate admissions. Applicants who intend to accept offers of admission are required to confirm their acceptance by returning the appropriately completed form that is supplied with the offer of admission.

A student whose degree program begins or continues in the summer must complete a summer session course selection form.

Enrollment in the University

Once admitted, all degree and nondegree graduate students must enroll each semester at the times and locations announced by the University Registrar.

Any admitted student who fails to enroll for one semester or more must apply for readmission upon return. (See “Continuous Enrollment,” below.)

Full-time and Part-time Status

A full-time student is one who is working full time toward his or her degree objective. The student's department is responsible for determining who is a full-time student, and who is otherwise a part-time student.

A nondegree student, however, must register for at least nine credit hours per semester, or six in the summer session, to claim full-time status.

All degree-seeking students are expected to maintain full-time status and to devote full time to graduate study. No degree student may hold a job, on or off campus, without the express permission of his or her department and the Graduate School.

Academic Good Standing

Continuation in a graduate degree program or in nondegree status, admission to degree candidacy, and graduation require maintenance of at least a 3.0 (B) cumulative grade point average (G.P.A.). A student may be dismissed from the department or program if the G.P.A. in any one semester is below 2.5 or if the G.P.A. is below 3.0 for two consecutive semesters. Some departments require higher averages for enrollment and support continuance.

An adequate G.P.A. is only one factor taken into consideration in determining a student's qualification for an advanced degree. Degree students should be aware of their department's performance criteria. The department and the Graduate School annually evaluate each graduate student's overall performance on the basis of these criteria.

A student must be in academic good standing to be eligible for new or continued financial support.

Continuous Enrollment

All students must enroll each semester in the academic year and register for at least one credit hour per semester to maintain student status. Continuous enrollment is met normally by both enrollment in the University and registration in a graduate-level course relevant to the student's program. A student who is concurrently pursuing degrees in the Graduate School and in another school in the University meets the continuous enrollment requirement by registering for a course in either program. Any exception to this rule, including a leave of absence, must be approved by the Graduate School. (See “Leave of Absence,” below.) Degree students who have completed the course work requirement for their degree must register for at least one credit hour per semester, including the final semester or summer session in which they receive their degree. This credit hour should consist of either resident (599, 699) or non-resident (600, 700) thesis or dissertation research within their department. These students may be considered full-time students whether or not they are in residence. Students not in residence and taking one credit hour pursuant to continuous enrollment requirements are charged a special registration fee.

A student who fails to enroll and register for one semester or more must apply for readmission upon return.

Continuing students (i.e., degree-seeking students who are eligible to continue their studies in the fall semester) may have access to University facilities and services from May through August without enrolling and registering for academic credit in the summer session.

Leave of Absence

For exceptional reasons and on the recommendation of the department, a student in good academic standing may request a leave of absence for a maximum of two consecutive semesters. A request for a leave of absence must be made before the semester in which the leave is taken, and all leaves of absence must be approved by the Graduate School. If, for some urgent reason, a student is allowed to leave the University after the beginning of the semester, the withdrawal procedure below must be followed. If at the end of the leave of absence period the student does not return, the student is considered terminated. Application for readmission is required if the student wishes to return.

Medical Separation from Academic Duties

Students enrolled in the Notre Dame Graduate School who wish to temporarily interrupt their programs for medical reasons must apply to the Graduate School. Students are eligible under this policy if they have a “serious medical condition.” For purposes of this policy, “serious medical condition” means a medical condition that (1) requires multiple day hospitalization OR (2) renders the student unable to engage in coursework and all other Graduate School-related duties for a period of at least ten (10) calendar days. Certification by a physician that the student has a serious medical condition as defined in this policy must be submitted to the Graduate School no less than three months prior to the separation period (for childbirth and other predictable requests) or as soon as the need is foreseen (for emergency requests). In situations involving childbirth, the separation period will generally begin on the actual date of childbirth; in all cases, regardless of the nature of the medical condition, the duration of the separation will be as certified by the physician up to a maximum of six weeks. Students may utilize this medical separation policy two non-consecutive times during their graduate studies. Should students need more than six weeks at any one time, they must withdraw from the University. Leaves of absence for one semester or more for medical or other reasons are governed by the Graduate School Leave of Absence policy.

Full-time degree-seeking students in their sixth year of study or less who are receiving financial aid from the Graduate School or external funds will receive a stipend equal to their normal stipend during their period of separation, for a maximum of six weeks paid by the Graduate School. Students will retain their tuition scholarships, access to on-campus medical facilities, and all other resources available to students during the entire separation period (up to six weeks). Students also will be deemed “continuously enrolled” at the University during the entire period of separation.

Teaching Assistant and Research Assistant duties will cease at least during the period of separation. Students are responsible for making arrangements, through their departments, to cover their duties.
Students taking classes will be required to make arrangements with individual course instructors for completion of any courses in progress during the leave. Students will be granted the option to reschedule exams, extend candidacy deadlines or other deadlines not discussed herein. Students are responsible for making arrangements to reschedule exams, extend deadlines and to make up other work not discussed herein. Unlike a regular one-semester leave, time off in conjunction with this policy will count towards the students' degree time limit of eight years and university-sponsored funding cap of six years.

Withdrawal from the Program
To withdraw from the University before the end of the semester, a student must inform the department and the Graduate School as well as complete the notice of withdrawal in the Office of the Registrar, 105 Main Building. For information on refunds, refer to “Tuition and Expenses.”

Upon approval of the withdrawal, the University enters a grade of W for each course in which the student was registered. If a student drops out of the University without following the procedure described above, a grade of F is recorded for each course.

The credit for any course or examination will be forfeited if the student interrupts his or her program of study for five years or more.

The University reserves the right to require the withdrawal of any student when academic performance, health status, or general conduct may be judged clearly detrimental to the best interests of either the student or the University community.

In the case of a medical leave of absence, clearance from the University Health Center is required prior to readmission.

Notre Dame NetID Student Policy
The University of Notre Dame NetID accounts and related services are intended for faculty, staff, and currently enrolled students. "A student must register and enroll at the dates and times announced by the Registrar" (Academic Code 4.1). A student who fails to enroll by the announced date will forfeit the right to access his or her NetID account and related services. University computing resources supplied by way of the NetID are normally available to a student for up to 60 days after his or her graduation date. A student granted a leave-of-absence would normally retain access to University computing services for up to 60 days after the August graduation date. A student who is separated from the University for other reasons, will no longer have access to University computing services.

Registration and Courses

Maximal Registration
During each semester of the academic year, a graduate student should not register for more than 12 credit hours of graduate courses, i.e., the 60000 through 90000-level courses. In the summer session, a graduate student should not register for more than 10 credit hours.

Course Numbers
Courses numbered 60000 – 69999 are typically first-level graduate courses into which qualified advanced undergraduates may be admitted with the permission of the instructor and the approval of the chair. Courses numbered 70000 and above are advanced graduate courses open only to those who have completed the undergraduate and graduate prerequisites.

The advanced undergraduate courses numbered 50000 – 59999 may, with the approval of the department chair and the Graduate School, be taken to satisfy up to 10 hours of graduate credit requirements. Departments may place additional constraints on the use of 50000-level courses to meet their degree requirements.

No graduate credit is allowed for courses below the 50000 level.

Changes in Student Class Schedule
A student may add courses only during the first seven class days of the semester. A student may add courses after this time only on recommendation of the department and with approval of the Graduate School.

A student may drop courses during the first seven class days of the semester. To drop a course after this period and up to the midsemester point (see the Graduate School calendar for the exact date), a student must have the approval of the chair of the department offering the course, of his or her adviser, and of the Graduate School; however, no tuition adjustment will be made after the seventh class day of the semester. A course may be dropped after the midsemester point only in cases of serious physical or mental illness. Courses dropped after this date will be posted on the student’s permanent record with the grade of W.

A course taken for credit can be changed to an audit course after the midsemester point only in cases of serious physical or mental illness.

Graduate Grades

Listed below are graduate grades and the corresponding number of quality points per credit hour.

Quality point values are used to compute the student’s G.P.A. The G.P.A. is the ratio of accumulated earned quality points to the accumulated earned semester credit hours. G.P.A. computation takes into account only those grades earned in Notre Dame graduate courses by students with graduate status at Notre Dame. For courses taken in a department or college in the University but outside the Graduate School, or taken outside the University, the grade will not be included in the G.P.A. computation.

The grades of C- and D are not awarded in the Graduate School.

A student receives the temporary grade of I when, for acceptable reasons, he or she has not completed the requirements for a 500- or higher-level graduate course within the semester or summer session. No grade of I can be given for courses below the 500 level or to graduating students in the final semester or final summer session of a terminal degree program.

The student then must complete the course work for a grade prior to the beginning of the final examination period of the next semester in which the student is enrolled. If a student receives an I for a summer session course, he or she must complete the course work for a grade before the final examination period begins for the next semester or summer session (whichever comes first) in which the student is enrolled.

The University temporarily computes this grade as the equivalent of an F in calculating the G.P.A. When the student fulfills the above requirements, the I is replaced by the new grade. Should the student not complete the course work as required, the I remains on the academic record and is computed in the G.P.A. as equivalent to an F.

The department and the Graduate School will review a student who receives more than one I in a semester or an I in two or more consecutive semesters, to determine his or her eligibility for continued support and enrollment.
The grades of S and U are used in courses without semester credit hours, as well as in research courses, departmental seminars, colloquia, workshops, directed studies, field education, and skills courses. These courses, if given the grade of S, do figure in a student’s earned semester credit-hour total but do not figure in the computation of the G.P.A. A grade of U will not count toward the student’s earned semester credit-hour total, nor will it figure in the computation of the G.P.A.

The grade of V has neither quality-point nor credit-hour value. It is the only grade available to the registered auditor who requests at the beginning of the semester that it be made part of his or her permanent record and who attends the course throughout the entire semester. The grade of V cannot be changed to a credit-earning grade.

The grade of W is given for a course that a student is allowed to drop after the midsemester point.

Examinations
Unexcused absence from a scheduled final examination results in an F. An absence excused in advance results in an I (incomplete).

Grade Reports
Beginning with final grades for the fall 2003 semester, the Office of the Registrar will no longer mail a paper copy of grades unless a copy is requested. Grade information is available to students on IrishLink (a secure Web-based service). The Printed Grade Report Request form is available from the Office of the Registrar Web site at http://www.nd.edu/~ndreg.

Transfer Credits
A department may accept course work completed at another accredited university toward meeting its degree requirements. A student may transfer credits earned at another accredited university only if: (1) the student is in degree status at Notre Dame; (2) the courses taken are graduate courses appropriate to the Notre Dame graduate program and the student had graduate student status when he or she took the courses; (3) the courses were completed within a five-year period prior to admission to a graduate degree program at Notre Dame or while enrolled in a graduate degree program at Notre Dame; (4) grades of B (3.0 on 4.0 scale) or better were achieved; and (5) the transfer is recommended by the department chair and approved by the Graduate School.

These five requirements also apply to the transfer of credits earned in another program at Notre Dame. A student transferring from an unfinished master’s program may not transfer more than six semester credit hours into either a Notre Dame master’s or Ph.D. program.

If the student has completed a master’s or Ph.D. program, he or she may transfer up to nine semester credit hours to a Notre Dame master’s program and up to 24 semester-credit hours to a Notre Dame Ph.D. program.

Occasionally, a student may need to do dissertation research at another institution. Normally, the student would register for the appropriate number of credit hours of research at Notre Dame. If the student does not enroll at Notre Dame and expects to count research hours earned elsewhere toward the Notre Dame degree, the student must have the approval of the department and the Graduate School in advance. The University requires similar prior approval for formal courses taken elsewhere and applied to the degree program. Twenty-four credit hours, including research credit hours, is the maximum acceptable for transfer into a Notre Dame doctoral program.

No grades of transferred courses are included in the student’s G.P.A.

Academic Integrity
Integrity in scholarship and research is an essential characteristic of our academic life and social structure in the University. Any activity that compromises the pursuit of truth and the advancement of knowledge besmirches the intellectual effort and may undermine confidence in the academic enterprise. A commitment to honesty is expected in all academic endeavors, and this should be continuously emphasized to students, research assistants, associates, and colleagues by mentors and academic leaders.

The procedures for ensuring academic integrity in the Graduate School are distinct from those in the Undergraduate Code of Honor.

Violations of academic integrity may occur in classroom work and related academic functions or in research/scholarship endeavors. Classroom-type misconduct includes the use of information obtained from another student’s paper during an examination, plagiarism, submission of work written by someone else, falsification of data, etc. Violation of integrity in research/scholarship is deliberate fabrication, falsification, or plagiarism in proposing, performing, or reporting research or other deliberate misrepresentation in proposing, conducting, reporting, or reviewing research. Misconduct does not include errors of judgment, errors in recording, selection, or analysis of data, differences in opinions involving interpretation, or conduct unrelated to the research process. Misconduct includes practices that materially and adversely affect the integrity of scholarship and research.

Any person who has reason to believe that a violation of this policy has occurred shall discuss it on a confidential basis with the department chair or director of the appropriate institute. If a perceived conflict of interest exists between the chair/director and the accused, the next highest academic officer shall be notified of the charge. The chair/director shall evaluate the allegation promptly. If it is determined that there is no substantial basis for the charge, then the matter may be dismissed with the fact of dismissal being made known to the complainant and to the accused if he or she is aware of the accusation. A written summary of charges, findings, and actions shall be forwarded to the vice president for graduate studies and research as a matter of documentation. Otherwise, the chair will select an impartial panel consisting of three members, one of whom may be a graduate student, to investigate the matter. The chair will inform the accused of the charges. The panel will determine initially whether to proceed directly to a hearing to further investigate the case, or to dismiss the charges. If the panel decides to proceed directly to a hearing, the hearing will be held within 10 days of the original notification. If the panel decides that further investigation is necessary, it shall immediately notify the chair. If it decides that a hearing is not warranted, all information gathered for this investigation will be destroyed. The utmost care will be taken to minimize any negative consequence to the accused.

The accused party must be given the opportunity to respond to any and all allegations and supporting evidence at the hearing. The response will be made to the appointed panel. The panel will make a final judgment, recommend appropriate disciplinary action, and report to the chair in writing. The report will include all of the pertinent documentation and will be presented within 30 days after meeting with the accused. Copies of the report are to be made available to the accused, the chair, and the vice president. If a violation is judged to have occurred, this might be grounds for dismissal from the University; research/scholarship violations might be reported to the sponsor of the research effort (e.g., NSF, NIH, Lilly Foundation, etc.), if appropriate.

If the student chooses to appeal, he or she must address the appeal in writing to the vice president for graduate studies and research within 10 days. The student has the right to appear before the vice president or his or her delegate. The vice president may decide to appoint an ad hoc committee to handle this appeal, if deemed necessary.

Violations of academic integrity by individuals who are not students are governed by different rules; students who are working on externally sponsored programs may also be covered by sponsor-mandated rules. Contact Dr. Richard A. Hilliard, director of research compliance, (574) 631-5386, for further information.
Academic Counselor
The vice president for graduate studies and research has appointed an academic counselor in the Graduate School to be available to graduate students who want to confidentially discuss problems they are having in their programs. The counselor can help a student decide how to resolve the problem. The Graduate School’s academic counselor is Dr. Barbara M. Turpin, associate dean.

Grievance and Appeal Procedures
Students follow the grievance and appeal procedures of the department in which they are studying. Where department procedures are not clear, students contact the department chair and/or the director of graduate studies. Appeals beyond the department are made directly to the vice president for graduate studies and research/dean of the Graduate School. Students may seek advice from the associate dean of the Graduate School who serves as academic counselor before beginning a formal process within the department or an appeal to the vice president/dean.

Requirements for the Master’s Degree
In addition to the following Graduate School requirements, individual departments may have higher standards. Students are expected to know their departmental requirements.

Credit Hours
The number of semester credit hours of course work for the master’s degree is specified by the student’s department. Students in a research program must also complete the research requirements of the department. (See also “Transfer Credits,” above.)

Residency
The minimum residency requirement for the master’s degree is registration in full-time status for one semester during the academic year or for one summer session.

Foreign Language Requirement
The Graduate School does not require foreign language proficiency for the master’s degree. However, some departments do have this requirement. Students should consult their departments concerning this requirement.

Degree Eligibility
Failure to complete all requirements for the master’s degree within five years results in forfeiture of degree eligibility.

A master’s program that is pursued during the summer and the academic year must also be completed within five years.

A student attending summer session only must complete all requirements within seven years.

Thesis Directors
Each student is assigned an adviser from the time of enrollment. This may initially be the director of graduate studies, but an individual adviser or thesis director will be chosen as soon as practicable, following the department’s policies.

Advisers and thesis directors are normally chosen from the teaching and research faculty of the student’s department. There also may be one codirector chosen from the faculty outside (or within) the student’s department. In exceptional cases, a department may choose a thesis director from the Notre Dame teaching and research faculty outside the student’s department. Arrangements for extra-departmental directors or codirectors must be consistent with departmental policies and must be approved by the Graduate School.

Master’s Examination
By the end of the term following completion of the coursework required by the department, the degree candidate must have taken an oral and/or written master’s examination demonstrating mastery in his or her field. Failure in either one or both parts of the examination results in automatic forfeiture of degree eligibility, unless the department recommends a retake. If a retake is recommended, it must be completed by the end of the following semester. The Graduate School allows only one retake of the master’s examination.

Some departments have an equivalent requirement in lieu of the master’s examination. Students are advised to be cognizant of their respective departmental requirements with regard to the master’s examination or its substitute.

A doctoral student may receive the master’s degree without taking the master’s examination on the recommendation of the department and completion of (a) the coursework required by the department for the master’s degree and (b) all written parts of the doctoral candidacy or Ph.D. qualifying examination. Departments may have additional criteria or may choose not to offer a master’s degree in this manner; students should consult the departmental guidelines.

Admission to Candidacy
To qualify for admission to candidacy, a student must be in a master’s degree program. He or she must have been enrolled in the program without interruption and must maintain a minimum cumulative G.P.A. of 3.0 in approved course work. A student who seeks admission to candidacy in a research master’s program must also demonstrate research capability and receive departmental approval of his or her thesis proposal.

Admission to candidacy is a prerequisite to receiving any graduate degree. It is the student’s responsibility to apply for admission by submitting the appropriate form to the Graduate School office through the department chair. The applicable deadline is published in the Graduate School calendar.

Thesis Requirement
The thesis is the distinctive requirement of the research master’s program. With the approval of his or her adviser, the student proposes a thesis topic for departmental approval. The approved topic is researched and the results presented under the supervision of a thesis director.

The thesis director indicates final approval of the thesis and its readiness for the readers by signing the thesis. The candidate then delivers the number of signed copies of the completed thesis required by the department to the department chair. These copies are distributed to the two official readers appointed by the department. Readers are appointed from among the regular teaching and research faculty of the student’s department. The appointment of a reader from outside the student’s department must have the Graduate School’s prior approval. The thesis director may not be one of the official readers. Each reader must unconditionally approve the thesis and the department should promptly report the results to the Graduate School.

Submitting the Thesis

When the thesis is given to the readers, the candidate should also give a complete copy to the Graduate School office for a preliminary review of the format. This copy may be submitted electronically as a PDF or delivered as a printed document.

After the readers approve the thesis and any necessary changes have been made, the candidate must then present the final version of the thesis to the Graduate School for final approval and submission on or before the date specified in the Graduate School calendar. Candidates should be cognizant of deadlines for graduation established by the Graduate School and the department.

The thesis may be submitted either in electronic (PDF) form or in printed manuscript form. Only the official submission will be accepted by the Graduate School.

To submit the thesis electronically, the candidate must upload one complete PDF copy to the Hesburgh Library’s Electronic Dissertation and Thesis database, and provide three signed title pages and any other necessary forms to the Graduate School.

To submit printed copies of the thesis, the candidate must present two clean copies, each signed by the thesis director. The candidate pays the binding costs for the two official copies required by the Graduate School.

Candidates must check with their departments for any additions to the Graduate School requirements.
Should a candidate and adviser decide to microfilm a thesis, information concerning the ProQuest Information and Learning Master’s Publishing Program may be obtained from the Graduate School office.

Requirements for the Doctor of Philosophy Degree

The goal of the University in its Ph.D. programs is to develop productive scholarship and professional competence in its students. In addition to a broad acquaintance with the historical and contemporary state of learning, the University encourages its students and faculty to make contributions to the advancement of their respective fields.

In addition to the following Graduate School requirements, individual departments may require higher standards. Students are expected to know their department’s requirements.

Credit Hours

The number of semester credit hours of formal courses, directed studies, and research is specified by the student’s department. (See also, “Transfer Credits,” above.)

Residency

The minimum residency requirement for the Ph.D. degree is full-time status for four consecutive semesters (may include the summer session).

Foreign Language Requirement

This requirement varies from department to department, in both the choice of language and the degree of proficiency required. Students should consult their department concerning this requirement.

Award of Master’s Degree to Doctoral Students

A doctoral student may receive the master’s degree without taking the master’s examination on the recommendation of the department and completion of: (a) the course work required by the department for the master’s degree and (b) all written parts of the doctoral candidacy or Ph.D. qualifying examination. Departments may have additional criteria, or may choose not to offer a master’s degree in this manner; students should consult the departmental guidelines.

Degree Eligibility

The student must fulfill all doctoral requirements, including the dissertation and its defense, within eight years from the time of matriculation. Failure to complete any of the Graduate School or departmental requirements within the prescribed period results in forfeiture of degree eligibility.

Advisers and Dissertation Directors

Each student is assigned an adviser from the time of enrollment. This may initially be the director of graduate studies, but an individual adviser or dissertation director will be chosen as soon as practicable, following the department’s policies. Advisers and dissertation directors are normally chosen from the teaching-and-research faculty of the student’s department. There also may be one codirector chosen from the faculty outside (or within) the student’s department. In exceptional cases, a department may choose a dissertation director from the Notre Dame teaching and research faculty outside the student’s department. Arrangements for extra-departmental directors or codirectors must be consistent with departmental policies and must be approved by the Graduate School.

Candidacy Examination

The candidacy examination should be passed, and dissertation proposals approved (if the approval process is not part of the candidacy exam), by the end of the student’s eighth semester of enrollment. The examination consists of two parts: a written component and an oral component. The written part of the examination normally precedes the oral part. It is designed, scheduled, and administered by the department. The oral part of the examination is normally taken after the completion of the course work requirement. The oral part, among other things, tests the student’s readiness for advanced research in the more specialized area(s) of his or her field. In total, the examination should be comprehensive. Successful passage indicates that, in the judgment of the faculty, the student has an adequate knowledge of the basic literature, problems, and methods of his or her field. If the proposal defense is part of the oral, it should be a defense of a proposal and not of a completed dissertation.

A board of at least four voting members nominated by the department and appointed by the Graduate School administers the oral part of the examination. Normally, this board has the same membership as the student’s dissertation committee. Board members are chosen from the teaching and research faculty of the student’s department. The Graduate School should be consulted before the department or the student invites a faculty member outside the student’s department to be a board member.

A faculty member appointed by the Graduate School from a department other than the student’s department chairs the examination board. This chair represents the Graduate School and does not vote. After completion of the examination, the chair calls for a discussion followed by a vote of the examiners. On a board of four, three votes are required to pass. If a department chooses to have five members, four votes are required to pass. The chair should, before the examination begins, ask the student’s adviser to confirm departmental regulations for conduct of the examination and voting procedures. The chair sends a written report of the overall quality of the oral examination and the results of the voting immediately to the Graduate School.

In case of failure in either or both parts of the doctoral candidacy examination, the department chair, on the recommendation of a majority of the examiners, may authorize a retake of the examination if this is permitted by departmental regulations. An authorization for retake must be approved by the Graduate School. A second failure results in forfeiture of degree eligibility and is recorded on the student’s permanent record.

Admission to Candidacy

Admission to candidacy is a prerequisite to receiving any graduate degree. To qualify for admission to doctoral candidacy, a student must:

1. be in a doctoral program;
2. have been continuously enrolled in the program without withdrawal;
3. complete the departmental course work requirement with a cumulative average of 3.0 or better;
4. pass the written and oral parts of the doctoral candidacy examination, and have the dissertation proposal approved (if this is not part of the candidacy exam) by the end of the eighth semester of enrollment.

It is the responsibility of the student to apply for candidacy admission by submitting the appropriate form to the Graduate School office through the department chair.

The Dissertation

In continuing consultation with the dissertation director, the candidate explores research areas in his or her field to formulate a dissertation proposal. The methods of approval of the dissertation proposal are determined by the individual departments.

The department chair or director of graduate studies will appoint a dissertation committee consisting of the dissertation director and three readers. Normally, the committee is drawn from the membership of the student’s oral candidacy board. The Graduate School must be consulted before the department invites a committee member from outside the teaching and research faculty of the candidate’s department.

The candidate delivers typed copies of the finished dissertation, signed by the director, to the department chair for distribution to the three readers.

At the same time, the candidate should also give a complete copy to the Graduate School, where it will be reviewed for compliance with the Graduate School style manual. (See “Submitting the Dissertation” below.)

Readers normally have two to four weeks to read the dissertation, decide whether it is ready to be defended, and so indicate on the appropriate form to the Graduate School. Reader approval of the dissertation for defense does not imply reader agreement or support; it implies reader acknowledgment that the dissertation is an academically sound and defensible scholarly product. Only a dissertation that has been unanimously approved for defense by the three readers may be defended.

Even though the dissertation has been approved for defense, revisions may be required. If defects in the dissertation come to light at the defense, the candidate may be asked to revise the dissertation before it is accepted by the Graduate School and the degree is conferred. In that case, it will be the responsibility of the dissertation director, or such person as the committee may appoint, to report to the Graduate School that such revisions have been completed satisfactorily.
Defense of the Dissertation

In defending the dissertation, the doctoral candidate supports its claims, procedures, and results. The defense is the traditional instrument that enables the candidate to explore with the dissertation committee the dissertation’s substantive and methodological force. In this way, the candidate and the committee confirm the candidate’s scholarly grasp of the chosen research area.

The format of the defense is determined by the department with the Graduate School’s approval. The defense is chaired by a faculty member who is appointed by the Graduate School from a department other than the candidate’s department. This chair represents the Graduate School and does not vote. After the examination is completed, the chair calls for a discussion followed by a vote of the dissertation committee. At least three votes out of four will be required to pass a candidate. The chair sends a written report of the overall quality of the defense and the voting results immediately to the Graduate School.

In case of failure of the defense, on the recommendation of a majority of the examiners, another opportunity to defend may be authorized if this is permitted by departmental regulations. An authorization for a second defense must be approved by the Graduate School. A second failure results in forfeiture of degree eligibility and is recorded on the candidate’s permanent record.

Submitting the Dissertation

To receive the degree at the next commencement, the doctoral candidate who has successfully defended his or her dissertation must submit it to the Graduate School on or before the deadline published in the Graduate School calendar. Candidates should be cognizant of deadlines for graduation established by the Graduate School and the department.

To be accepted by the Graduate School, the dissertation should be prepared according to the formatting guidelines published in the Graduate School’s Guide for Formatting and Submitting Dissertations and Theses, even if the candidate has previously published the substance of the dissertation in scholarly journals. The guide is available at the Graduate School office and on the Graduate School Web site at http://graduateschool.nd.edu.

When the dissertation is given to the readers, the candidate should also give a complete copy to the Graduate School, where it will be reviewed for compliance with the style manual. This copy may be submitted electronically as a PDF or delivered as a printed document.

After successfully defending the dissertation and making any necessary changes, the candidate must present the document to the Graduate School for final approval and submission.

The dissertation may be submitted either in electronic (PDF) form or in printed manuscript form. Only the official submission will be accepted by the Graduate School.

The candidate may submit the dissertation electronically by uploading one complete PDF copy to the Hesburgh Library’s Electronic Dissertation and Thesis database, and providing three signed title pages and any other necessary forms to the Graduate School.

Alternatively, the candidate may present two clean, printed copies of the dissertation, each signed by the dissertation director. The candidate pays the binding costs for the two official copies required by the Graduate School.

The Graduate Council requires that all doctoral dissertations be microfilmed by ProQuest Information and Learning. In addition to any other required forms or surveys, the candidate must submit a completed Microfilming Agreement form to the Graduate School's dissertation editor, who handles this publication requirement for the candidate.

One-of-a-Kind (OAK) Ph.D. Program

It is possible at Notre Dame for an exceptional student to pursue a Ph.D. program with a particular faculty member in a department that does not offer the doctoral degree. Admission to such a program is rare and is reserved only for the most exceptional students.

The One-of-a-Kind (OAK) Ph.D. is conferred in the field of study agreed to by the student, the mentor, the chair of the home department, the dean of the college, the dean of the Graduate School, and the final dissertation committee. The name given to the field of study may not overlap with a field already covered by an existing Ph.D. program at the University without approval from that department’s chair.

Program of Study

As with other Ph.D. programs, an OAK program includes course work, exam preparation culminating in a qualifying examination, and research culminating in a dissertation.

Courses within the home department usually include an additional directed studies component. An OAK student also gains experience as a teaching apprentice in at least one advanced undergraduate class or as an independent instructor.

Primary responsibility for advising rests with the designated faculty advisor, who is responsible for organizing a program of study and the appropriate examination and dissertation committees. The dissertation committee will include at least two members from Ph.D.-granting departments in neighboring fields at Notre Dame.

Admission

Admission requires a master’s degree and is based on an evaluation of the following:

- undergraduate and graduate G.P.A.
- GRE scores
- letters of recommendation
- appropriate language skills
- a detailed statement of purpose
- a well-defined program of study
- compatibility of intentions with potential mentors and resources at Notre Dame
- compatibility of intentions with the research profile and academic record of the faculty mentor
- the likelihood of eventual placement in the field

Admission standards are exceptionally high, and a prospective OAK student must be approved, in turn, by the department chair in consultation with his/her colleagues; the college dean in consultation with a college OAK advisory committee; and the dean of the Graduate School in consultation with a Graduate School OAK advisory committee.

Financial Information

Tuition and Expenses

Please note: The following tuition, fees, housing, and living costs are for the academic year 2005–2006. Prospective applicants and students are urged to find out the exact costs at the time of application or registration.

Tuition

For the full-time graduate student, the tuition for the academic year 2005–2006 is $30,700. Tuition for the part-time student is $1,705 per semester credit hour.

In the academic year, the normal charge for an audited course is one-half the current credit-hour fee. However, a full-time graduate student may audit a course, or courses, without charge. The Graduate School determines the definition of full-time.

In the summer session, there is no free audited course. Any course taken or audited in the summer session will be charged the full price.

Library and Athletic Facilities. In addition to the cost of instruction, tuition charges cover the use of the library and athletic facilities other than the golf course and the ice rink, on which a nominal fee is assessed.

Fees

- Nonrefundable application fee: $50 ($35 if submitted by December 1 for admission to the following fall semester)
- Technology Fee: $250*
- Health Center Access Fee: $100**
- Graduate Student Activity Fee: $55
**The technology fee provides partial funding for the University's enterprise-wide technology infrastructure, which provides all students access to the Internet, e-mail, courseware, campus clusters, ResNet, and a wide array of the latest software. This fee provides for the growth in student services, such as course and degree requirements, Web registration, and value-added Internet-related capabilities. The $250 fee will be assessed at $125 per semester. This fee is not charged to graduate students receiving a full tuition scholarship.**

**The health center access fee provides students access to all services at the University Health Center and University Counseling Center, including 24-hour medical care and counseling/mental health assistance, and alcohol and drug education programs, as well as health education and wellness programs. This fee provides partial funding to address increasing student health and wellness needs, along with funding to maintain health facilities. The $100 fee will be assessed at $50 per semester.**

**Financial Arrangements**

Tuition and fees, as well as any required deposits, are payable in advance at the beginning of each semester. Please note that Notre Dame does not accept credit cards for payment of tuition and fees. Tuition and/or fees not covered by scholarship are the responsibility of the student.

A student may not register for a new semester or receive transcripts, certificates, diploma, or any information regarding his or her academic record until all prior accounts have been settled in full.

**Withdrawal Regulations**

Any graduate, law, MBA,* or undergraduate student who at any time within the school year wishes to withdraw from the University should contact the Office of the Registrar. To avoid failure in all classes for the semester and in order to receive any financial adjustment, the withdrawing student must obtain the appropriate clearance from the dean of his or her college and from the assistant vice president for residence life.

Financial Arrangements

Tuition and fees, as well as any required deposits, are payable in advance at the beginning of each semester. Please note that Notre Dame does not accept credit cards for payment of tuition and fees. Tuition and/or fees not covered by scholarship are the responsibility of the student.

A student may not register for a new semester or receive transcripts, certificates, diploma, or any information regarding his or her academic record until all prior accounts have been settled in full.

**Withdrawal Regulations**

Any graduate, law, MBA,* or undergraduate student who at any time within the school year wishes to withdraw from the University should contact the Office of the Registrar. To avoid failure in all classes for the semester and in order to receive any financial adjustment, the withdrawing student must obtain the appropriate clearance from the dean of his or her college and from the assistant vice president for residence life.

On the first day of classes, a full tuition credit will be made. Following the first day of classes, the tuition fee is subject to a prorated adjustment/credit if the student: (1) withdraws voluntarily for any reason on or before the last day of course discontinuance at the University; or (2) is suspended, dismissed, or involuntarily withdrawn by the University, for any reason, on or before the last day of course discontinuance at the University; or (3) is later obliged to withdraw because of protracted illness; or (4) withdraws involuntarily at any time because of military service, provided no credit is received for the classes from which the student is forced to withdraw.

Upon return of the student forced to withdraw for military service, the University will allow him or her credit for that portion of tuition charged for the semester in which he or she withdrew and did not receive academic credit.

Room and board charges will be adjusted/credited on a prorated basis throughout the entire semester.

Students receiving University and/or Federal Title IV financial assistance who withdraw from the University within the first sixty percent (60%) of the semester are not entitled to the use or benefit of University and/or Federal Title IV funds beyond their withdrawal date. Such funds shall be returned promptly to the entity that issued them, on a pro rata basis, and will be reflected on the student’s University account.

This withdrawal regulation may change subject to federal regulations. Examples of the application of the tuition credit calculation are available from the Office of Student Accounts upon request.

* Executive MBA students are subject to a different Withdrawal Regulation and Tuition Credit Calculation, both of which may be obtained from the Executive MBA Program.

**Housing and Residence Life**

Phone: (574) 631-5878
Web: http://orlh.nd.edu

University housing for married, families and single students is available on or adjacent to the campus.

Accommodations for students with families are available in University Village, a complex of 100 two-bedroom apartments with washer/dryer, renting for $402 per month, excluding electricity and phone. The Cripe Street Apartments, 24 one-bedroom units, are available from $498 per month, excluding electricity and phone. A $300 deposit is required.

Accommodations for approximately 140 full-time, degree-seeking single graduate men and women are available in the 36-unit O’Hara-Grace Graduate Residence adjacent to the campus. Each apartment has a kitchen, one-and-one-half baths, living, and bedroom accommodations for four students. Many general and departmental activities are held in Wilson Commons, a center for graduate students located next to the townhouses. The student must take out an individual nine-month contract for $2,974, plus $728 for utilities. The Fischer Graduate Housing apartment complex offers apartments with a kitchen, one full bath, and living and bedroom accommodations for two single students. The student must take out an individual nine-month contract for $3,836, plus $626 for utilities. A deposit of $300 is required for either of these graduate housing options.

Housing charges are due and payable by the semester; however, payroll deductions may be set up for any student receiving a stipend. This is handled at the Office of Student Accounts, 100 Main Building, (574) 631-7113.

Rates for off-campus apartments and houses range from $300 to $1,500 per month. Listings of available off-campus accommodations may be obtained directly from the Office of Residence Life and Housing Web site.

**Accident and Sickness Insurance**

Phone: (574) 631-6114
Web: http://www.nd.edu/~uhs

Notre Dame requires all international and degree-seeking graduate students to have health insurance coverage.

At the beginning of each academic year, the opportunity is provided to show proof of personal health insurance coverage. In the event such proof is not presented, the student will be automatically enrolled in the University-sponsored plan, and the charge for the premium will be placed on the student’s account. The last date a graduate or international student may be waived from the University Student Insurance Plan is September 15, 2005.

Information regarding the University-sponsored plan is mailed to the student’s home address in July. Additional information is available in University Health Services by contacting the Office of Insurance and Accounts at (574) 631-6114 or referring to the UHS Web site: http://www.nd.edu/~uhs.

The cost of the premium for the 2005–2006 academic year (effective August 15, 2005, to August 15, 2006) is (depending on the plan):

**Option 1**

<table>
<thead>
<tr>
<th>Option</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student</td>
<td>$999</td>
</tr>
<tr>
<td>Spouse</td>
<td>$4,942</td>
</tr>
<tr>
<td>One Child</td>
<td>$1,912</td>
</tr>
<tr>
<td>All Children</td>
<td>$3,537</td>
</tr>
<tr>
<td>Spouse and All Children</td>
<td>$7,519</td>
</tr>
</tbody>
</table>

**Option 2**

<table>
<thead>
<tr>
<th>Option</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>

<td>$2,421</td>
</tr>
<tr>
<td>All Children</td>
<td>$1,279</td>
</tr>
<tr>
<td>Spouse and All Children</td>
<td>$3,304</td>
</tr>
</tbody>
</table>

The Office of Student Accounts will offer students receiving a stipend from the University the option of paying the premium through deductions from the academic year salary checks.

**Worker’s Compensation Insurance**

Students injured while performing assigned duties in University laboratories are covered by worker’s compensation insurance as if they were Notre Dame employees. During a period of temporary inability to perform duties as a result of such injuries, workers compensation provides for continuation of 66.6% (to state limits) of usual income after seven days have passed. Income beyond the limits set by workers compensation is subject to the discretion of department chairs where support is from funds allocated by the Graduate School. Income beyond workers compensation is subject to the discretion of principal investigators and the guidelines of external sponsors where support is from funds provided by research grants.
FINANCIAL INFORMATION

Travel Accident Insurance
Students injured while traveling to conferences or on other University business which has been approved by the student’s department chair are covered by Notre Dame travel accident insurance. Compensation in set amounts is available for death or loss of arms or legs. Medical expenses in excess of other insurance are paid up to a maximum dollar amount.

University Travel Policy
Reimbursement for students traveling to conferences or on other University business is contingent on the availability of resources and the source of funding. Support from a department budget is subject to University travel policy; support from a research grant is subject to funding guidelines for the grant; support from the Graduate Student Union is subject to the travel guidelines in place in any given year.

Graduate School Student Health Insurance Subsidy Program
The Graduate School has a program to subsidize the purchase of University-sponsored student health insurance, beginning in the fall of 2004. The subsidy for 2005–2006 is $325. The insurer for the student health insurance policy is Mega Life and Health Insurance Company.

Eligibility
The subsidy will be available to degree-seeking students in the Graduate School who purchase the University-sponsored policy (Mega), and who receive a full 9-month stipend from the Graduate School, from a faculty research grant, or from funds supporting stipends within a department.

A full stipend is defined as the unit amount or more for a GA stipend that is spelled out in the allotment sheet for each program to which the student has been admitted. Some programs have no line item for GA stipends. In such cases, a full stipend is at least $10,500/academic year for master's programs or $13,350/academic year for doctoral programs.

Students who have not purchased the Mega policy are not eligible for the subsidy.

The Graduate School pays the entire premium for multi-year university fellowship winners.

Procedure
No application for the subsidy is required. University Health Services will send a list of students who have purchased the Mega policy to the Graduate School. The Graduate School will then submit a list of students eligible to receive the subsidy to the Office of Student Accounts. Student Accounts will credit the subsidy to each student’s account.

Tax Obligation
Because students receiving a stipend are not classified as employees of the University, the health insurance subsidy is a taxable benefit. In this case, however, it is regarded as ‘taxable but not reportable.’ The University will not withhold money from a student’s pay, nor will it report the subsidy to the Internal Revenue Service. Students who receive the subsidy are obligated to report it on their tax returns.

Further Information
Questions about the subsidy program should be directed to Peter Diffley, Associate Dean of the Graduate School.

Financial Support
Exact amounts for the following aid will vary with the type of support and the department. Exact figures can be obtained from the particular department. Initiation and continuation of financial support depends on the student’s maintaining good academic standing. Initiation and continuation of the following support programs require no specific application to either the department or the Graduate School.

Application
First-time applicants who indicate a need for financial support on the application for admission will be considered by the departmental admissions committee.

To ensure consideration for support, a first-time applicant must submit a completed application, including letters of recommendation, transcripts, and Graduate Record Examination scores (both general and Subject Test if the latter is required by the department), by the program’s application deadline preceding the fall for which the applicant seeks admission. Any international applicant must also submit a score from the Test of English as a Foreign Language (TOEFL).

Only full-time, degree-seeking students in residence at the University are eligible for support. Recipients of financial support such as assistantships or fellowships usually may not accept additional appointments. Rare exceptions are made only on the recommendation of the respective department.

Council of Graduate Schools Policy on Accepted Offers of Admission
In accordance with a resolution passed by the Council of Graduate Schools in the United States, the following policy is in effect:

By accepting an offer of financial aid (such as a graduate scholarship, fellowship, traineeship, or assistantship) for the next academic year, the enrolled or prospective graduate student completes an agreement that both the student and graduate school expect to honor. When a student accepts an offer before April 15 and subsequently desires to withdraw, the student may submit a written resignation for the appointment at any time through April 15. However, an acceptance given or left in force after April 15 commits the student not to accept another offer without first obtaining a written release from the institution to which a commitment has been made. Similarly, an offer made by an institution after April 15 is conditional on presentation by the student of a written release from any previously accepted offer. It is further agreed by the institutions and organizations subscribing to this resolution that a copy of the resolution should accompany every scholarship, fellowship, traineeship, and assistantship offer.

Categories of Support
The University offers three types of support: fellowships, assistantships, and tuition scholarships. Students may receive one type of support or a combination of types.

Fellowships
Fellowships provide a tuition scholarship and a stipend for full-time study by students admitted to graduate programs. The department provides tuition and stipend support for the student in good standing once the fellowship expires.

Applicants for admission are automatically considered by their academic department for all of the following University, endowed, and contributed fellowships.

University Fellowships
The Graduate School awards 12-month, five-year Lilly Presidential Fellowships to highly qualified first-time applicants, who may be nominated for the awards by departmental admissions committees. Teaching assistance may be required in the second, third, and fifth years of the fellowship.

The Arthur J. Schmitt and Lilly Presidential Fellowships are four-year fellowships awarded to graduate students entering a program in science or engineering. Both fellowships require U.S. citizenship.

First- and Dissertation-Year Fellowships
Several departments offer one-year fellowships for full-time graduate studies and research toward the doctoral degree.

In addition to the fellowships named above, talented students from underrepresented groups, including African Americans, Asian Americans, Hispanics, and Native Americans, also may be nominated for a variety of two-year fellowships, among them the Coca Cola Company, McGuire, Liberal Arts, and University Endowed Fellowships. U.S. citizenship is required. For the McGuire Fellowships, provided by the contributions of Mr. and Mrs. Thomas M. McGuire, special consideration is given to African American students studying for a master’s degree.

Highly qualified African American, Asian American, Native American, and Hispanic students accepted to any program in the humanities or social sciences are eligible for University Endowed Fellowships.
Contributed and Endowed Fellowships

Several fellowships funded by private contributions and income from endowments are awarded annually by individual academic departments.

Abrams Fellowship, begun in 1994, funds a graduate student in the humanities or social sciences.

The Michael J. Birck Fellowship in Electrical Engineering, established in 1982 by Michael J. Birck of Lisle, Illinois, provides assistance to graduate students in the field of telecommunications.

The Bond-Montefusco Graduate Fellowships in Architecture, begun in 1985, assist graduate students in architecture.

The Wendell F. Bauche Fellowships support graduate students in engineering.

The Joseph Z. Burgee and Joseph Z. Burgee Jr. Memorial Fellowship, initiated by John H. Burgee in 1984, provides a stipend for an exceptional graduate student in the master’s program in the School of Architecture.

The Joseph and Virginia Consaniti Fellowship, begun in 1988 by Martin G. Knott, provides a stipend to a graduate student in architecture. Special consideration is given to female applicants of Italian descent.

The Donald K. Dorini Fellowships provide 12-month stipends to graduate students in mechanical engineering who are studying hydronics.

The Fitzpatrick Fellowship, endowed by Edward B. Fitzpatrick in 1987, supports the studies of a graduate student in engineering.

The Raymond Jones Fellowship supports graduate students in philosophy.

The Walter W. and Margaret C. Jones Fellowship supports students in engineering.

The Bay and Joan Laughlin Fellowship is unrestricted in its support of graduate students at Notre Dame since 1989.

The Rev. J. David Max Memorial Fund, since 1978, has supported clerics who are studying liturgy in the Department of Theology.

The McCloskey Fellowships, endowed by Thomas D. McCloskey, fund graduate students in the Kroc Institute for International Peace Studies.

The Bayer Predoctoral and Postdoctoral Fellowships, contributed by Klaus H. Risse, chief executive officer of Bayer Inc., fund researchers in the Center for Environmental Science and Technology.

The Navari Fellowship, endowed by Rudolf M. Navari, M.D., supports a graduate student in biological sciences.

The Nolen Fellowship, endowed by James A. Nolen III in 1983, provides stipends for graduate students in architecture.

The Warner-Lambert Fellowships support graduate students in the College of Science.

The George M. Wolf Graduate Fellowships, installed in 1989, support graduate students in the Department of Chemistry and Biochemistry.

The Bernard and Helen Voll Fellowship funds graduate students who are studying ethics.

Fellowship Consortia

The University is an active institutional member of the following fellowship programs:

The National Consortium for Graduate Degrees for Minorities in Engineering and Science (GEM), the central office of which is located at the University of Notre Dame, offers financial aid and paid summer internships to assist minority students in obtaining a master’s degree in engineering.

The National Physical Science Consortium provides multi-year fellowships to graduate students in physics, chemistry, and engineering.

The Latin American Scholarship Program of American Universities (LASPAU) offers scholarships for U.S. graduate study to promising Latin American and Caribbean students and faculty.

Non-University Fellowships

Graduate students have been quite successful in earning National Science Foundation, Mellon, Fullbright, and other highly competitive extramural awards. An online, searchable database is available to access many graduate and postdoctoral fellowships and grants.

Fellowship programs in the departments of biological sciences and psychology are supported by the National Institutes of Health and in the departments of biological sciences and chemical engineering by the Department of Education.

Assistantships

Graduate Assistantships

Graduate assistantships are available for qualified students in all doctoral programs.

Research Assistantships

Research assistantships provide support to qualified recipients under research programs sponsored by government, industry, or private agencies.

Tuition Scholarships

The University offers full or partial tuition scholarships to students qualifying on the basis of merit.

International Tuition Scholarships

Established by the University in 1985, these tuition scholarships are available to eligible international students for graduate study.

The Army ROTC Two-year Program

Phone: (574) 631-6986 or 631-4656, (800) UND-ARMY
Web: http://www.nd.edu/~army/

Graduate students who have two years of education remaining may apply for the two-year contract program in the Army ROTC program. Graduate students are also eligible for scholarship benefits in some cases.

Administered by the Department of Military Science of the University of Notre Dame, this program requires successful completion of the two-year undergraduate ROTC basic course or the equivalent six-week summer camp at Fort Knox, Kentucky. The Army pays for travel to and from summer camp and the student is paid while at camp. Advanced placement may also be awarded to qualifying veterans. This is then followed by two years of advanced course ROTC. While participating in the program a student will receive a personal expense allowance. Upon completion, the student is awarded a commission in the United States Army and serves from three months to four years of active duty according to the needs of the service and the student’s desires. Options also are available for commissioned service in the Army Reserve or the Army National Guard. Application for entrance into the program should be made to the Military Science Department.

Employment and Loans

Office of Financial Aid

Telephone: (574) 631-6436
Fax: (574) 631-6899
E-mail: finaid@nd.edu
Web: http://financialaid.nd.edu

In addition to the student support programs described above, students may apply for federal financial aid opportunities, which include student loans and campus employment. The Office of Financial Aid, located in 115 Main Building, administers all loan and employment eligibility. Please note that while the Office of Financial Aid administers employment opportunities, graduate student employment is also subject to approval by the Graduate School.

In order to be eligible for federal student assistance, a student must be a U.S. citizen, permanent resident, or eligible noncitizen. In general, students must be classified as degree seeking to participate in the federal aid programs and be enrolled at least half-time. The Free Application for Federal Student Aid (FAFSA) is the annual application that must be completed and forwarded to the processing center, listing Notre Dame (Federal School Code 001840) in the appropriate section. Priority processing consideration will occur for those applicants submitting the FAFSA by February 28 for the following fall semester. Applicants should be prepared to submit a signed photocopy of their federal income tax returns and W-2 forms directly to the Financial Aid Office upon request.
Standards of Progress
Recipients of federal financial aid must comply with the standards of progress set by their respective departments for their particular programs of study. When failure to maintain progress results in the possible loss of federal aid eligibility, the Office of Financial Aid will notify students in writing. Appeals indicating any mitigating circumstances must be made in writing to the associate director of financial aid.

Federal Stafford Loan
The terms of the need-based Subsidized Federal Stafford Loan Program require that the student borrower repay, with interest, this source of financial assistance. This program is referred to as “subsidized” because of the interest subsidy being paid by the federal government to the lender while the student is enrolled in school as well as during the six-month grace period following enrollment.

The terms of the non-need-based Unsubsidized Federal Stafford Loan Program require that the borrower repay, with interest, this source of financial assistance. This program is referred to as “unsubsidized” because the federal government is not paying the in-school interest to the lender while the student is enrolled in school. Interest on Unsubsidized Stafford Loans begins to accrue after disbursement of the loan funds; however, the student may choose to have the payment of the interest deferred during enrollment and later capitalized (added to the principal) at the time repayment begins.

The following is a list of additional terms of the Subsidized and Unsubsidized Stafford Loan, subject to revision by federal law: three percent origination fee and up to one percent insurance fee; variable interest rate during repayment not to exceed 8.25 percent; repayment begins six months after the student ceases to be enrolled in school on at least a half-time basis and generally extends over a 10-year period; annual subsidized borrowing limit is $8,500; annual unsubsidized borrowing limit is $18,500 minus subsidized eligibility; aggregate subsidized/unsubsidized borrowing limit is $138,500.

The amount a student may borrow from the Stafford Loan Program may be limited by other financial assistance received by the student. Financial assistance includes, but is not limited to, the following: fellowships, assistantships, University scholarships, tuition remissions, all types of grants, residence hall appointments, campus employment, and any loan received under the auspices of the Higher Education Act as amended. Should a student’s eligibility be impacted at any time during the loan period, the Stafford Loan will be subject to adjustment. All eligibility changes will be reported to the student's lender.

Federal Perkins Loan
The Federal Perkins Loan is a need-based loan made by the University to assist graduate students experiencing financial hardship. The Perkins Loan Program requires that the student borrower repay, with interest, this source of financial assistance. The following are some additional terms, subject to revision by federal law, of the Perkins Loan: no origination or insurance fee; five percent interest rate; interest and repayment begin nine months after the student ceases to be enrolled in school on at least a half-time basis and generally extends over a 10-year period; annual borrowing limit is $6,000; aggregate borrowing limit is $40,000.

The Notre Dame Loan
The University of Notre Dame offers a privately financed student loan program in cooperation with Citibank and its Student Loan Corporation (SLC), a long-term provider of higher education financing programs.

Benefits of this competitively priced alternative loan program include:
- Low Interest Rate. Variable interest rate, adjusted quarterly, based upon the 91-day T-bill plus 2.25 percent.
- No Loan Fees. “No loan fees” means you get 100 percent of the money you borrow. There are no origination or insurance fees—fees other student loans typically charge.
- Cosigner Option. Graduate, law, and graduate business students who have established a sufficient positive credit history may apply without a creditworthy cosigner. Students with no credit history will need to have a creditworthy cosigner in order to apply. International students (who are not U.S. citizens or permanent residents) must apply with a creditworthy U.S. cosigner.
- No Payment. While in School. Repayment of accrued interest and principal begins six months after the student ceases to be enrolled in school, not to exceed seven years from the first disbursement of the first loan, and generally extends up to 15 years.
- Loan Limits. Eligible students may borrow up to the total cost of attendance less any other financial aid that is awarded.

Students considering both the Stafford Loan (subsidized or unsubsidized) and the Notre Dame Loan are strongly encouraged to also consider using Citibank as their Stafford Loan lender, assuming that they have not previously borrowed from another lender. For ease during the repayment period, proviso- sions have been made for such borrowers to have their billing statement sent by Citibank’s Student Loan Corporation, thus providing one monthly repayment process for both loans.

Additional information and an application for the Notre Dame Loan for graduate, law, and graduate business students are available at http://www.nd.edu/~finaid/graduate/loans/ndl.shtml, from the Office of Financial Aid, or from Citibank Student Loans at (888) 812-3479.

Student Employment
Many graduate students working on campus are employed on assistantship agreements directly with their academic departments. Other campus jobs may also be available and are posted on the job board at http://studentemployment.nd.edu.

Research Opportunities and Support
Office of Research
Telephone: (574) 631-7432
Web: http://www.nd.edu/~research/

University policies on research and other sponsored programs are maintained on the Web site of the Graduate School Office of Research at http://www.nd.edu/~research/Pol_Proc/Doc.html.

Graduate Student Union Conference Presentation Grant Program
Awards from the Graduate Student Union (GSU) will subsidize, in part, expenses incurred by graduate students for presenting the results of original research at professional conferences. This program was formerly known as the Gordon Travel Grant Program. All graduate students who are enrolled in the Graduate School and are members of the GSU are eligible. Applicants must attend the conference before applying to the grant. For more information, please visit the GSU web site at http://www.gsu.nd.edu.

Graduate Student Research Support
The Joseph F. Downes Memorial Fund was established in 1973 to assist graduate students with costs associated with attendance at workshops and seminars.

The Farough Fund, established in 1990, provides funds for graduate research in alcohol and drug abuse.

Retirement Research Foundation Thomas Kirby Memorial Grant supports student research in aging and retirement.

The Albert Zahm Research Travel Fund subsidizes, in part, travel expenses incurred by graduate students for purposes directly related to their research. First priority will be accorded doctoral students who have been admitted to candidacy and whose research is the basis for their dissertation. Research master’s degree students who have completed all requirements except the thesis will receive second priority.

Additional information and application for the Notre Dame Loan for graduate, law, and graduate business students are available at http://www.nd.edu/~finaid/graduate/loans/ndl.shtml, from the Office of Financial Aid, or from Citibank Student Loans at (888) 812-3479.
**Oak Ridge Associated Universities**

Web: http://www.orau.org

Since 1992, students and faculty of the University of Notre Dame have benefited from its membership in Oak Ridge Associated Universities (ORAU). ORAU is a consortium of 96 colleges and universities and a contractor for the U.S. Department of Energy (DOE) located in Oak Ridge, Tennessee. ORAU works with its member institutions to help their students and faculty gain access to federal research facilities throughout the country; to keep its members informed about opportunities for fellowship, scholarship, and research appointments; and to organize research alliances among its members.

For more information about ORAU and its programs, contact Anthony K. Flye, associate vice president for graduate studies and research at Notre Dame ORAU council member at (574) 631-8591, or Monnie E. Champion, ORAU corporate secretary, at (865) 576-3306; or visit the ORAU home page.

**Postdoctoral Scholars**

Telephone: (574) 631-7283
Web: http://www.nd.edu/~postdoc/

Postdoctoral Scholar is a University status distinct from faculty or student status. Appointments are made by the Graduate School for all academic units of the University.

The paragraphs below provide summary information on each of the major appointment categories.

**Research Associates**

Appointments to non-faculty research positions with the title Senior Research Associate, Postdoctoral Research Associate, or Research Associate are made by the Graduate School in departments, institutes, and centers throughout the University. The length of appointment varies but is normally for one year; renewal is upon mutual agreement between the appointee and the faculty adviser. Research associates receive salary and substantial benefits. Application should be made directly to the faculty member with whom the applicant wishes to pursue studies.

**Visiting Scholars**

Appointments to non-faculty research positions with the title Visiting Scholar are made by the Graduate School in departments, institutes, and centers throughout the University. The length of appointment varies but is normally for a semester or a year; renewal is upon mutual agreement between the appointee and the chair/director of the appointing unit. Visiting scholars receive no salary and only limited benefits. Application should be made directly to the chair/director of the appointing unit.

**Research Visitors**

The Graduate School appoints students enrolled in graduate or undergraduate degree programs at other universities to research positions with the title Research Visitor for the purpose of using University libraries or consulting with a faculty member. The length of appointment varies but is normally for a semester or a year. Research visitors occasionally receive a stipend, but there are no benefits. Application should be made directly to the faculty member the student wishes to consult, or to the chair of the appropriate department.

**University Resources and Policies**

**Academic Resources**

**University Libraries**

Telephone: (574) 631-6258
Web: http://www.nd.edu/~ndlibs

The University Libraries’ system consists of 11 libraries, which house most of the books, journals, manuscripts, and other non-book library materials available on the campus. Currently, the collections contain nearly 3 million volumes, more than 3 million microform units, more than 3,000 electronic titles, and over 20,800 audiovisual items to support the teaching and research programs. In the past year, the libraries added over 59,475 print volumes in addition to those in other formats and received about 11,200 serial titles.

Through the Notre Dame Web site, users have immediate access to the University Libraries’ catalog, an array of electronic periodical indexes and full-text documents, and professionally developed subject guides to local and Internet-based resources. From their computers, users may request individualized reference assistance, place Interlibrary Loan requests, suggest titles for purchase, and recall or renew charged materials.

The Theodore M. Hesburgh Library, a 14-story structure, serves as the main library and its collections are of primary interest to the students and faculty of the College of Arts and Letters and the Mendoza College of Business. The tower also contains the University Archives; the Medieval Institute Library, with the Frank M. Folsom Ambrosiana Microfilm and Photographic Collection, and the Anasto Byzantine Collection; the Mark K. Davis Drawings Collection; and the Jacques Martain Center.

Orientation sessions are presented by the library staff at the start of each semester and the summer session and are available to interested students and faculty.

A limited number of closed carrels are available to advanced graduate students upon application to their academic departments. Lokomobiles, a type of locker on wheels, are also available to graduate students upon application to the Circulation Desk.

The Thomas Mahaffey, Jr. Business Information Center, located in the Mendoza College of Business, is an innovative, primarily electronic facility supporting existing and emerging programs and research. This state-of-the-art facility is equipped with 32 individual workstations and one group learning area (providing handicapped access and fully equipped for instructional support), and it provides access to and assistance in the use of a broad range of bibliographic, numerical, full-text and graphic databases in business and related disciplines.

The Kellogg/Kroc Information Center is located in 318 Hesburgh Center for International Studies and supports its work in international studies.

The Art Slide Library, located in 110 O’Shaughnessy Hall, became a branch library in July 2002. Created to support the Art, Art History and Design Department, the Art Slide Library provides photographic images for teaching, research, student slide presentations and historical documentation. The slide collection consists of approximately 230,000 slides available to all University faculty, students and visiting patrons. Web sites have been created to support the art history courses. An in-house database facilitates access to the collection for teaching and research purposes.

The remaining seven libraries were established to meet the teaching and research needs of the College of Engineering, the College of Science, the School of Architecture, and the Law School. These libraries generally contain the more recent literature and the Hesburgh Library retains the older materials.

The Architecture Library, located in Bond Hall, has a collection of over 27,540 volumes and over 91 currently received paper journals and five e-journals pertaining to various aspects of architecture.

The Chemistry/Physics Library, located in 231 Nieuwland Science Hall, maintains a collection of some 40,956 volumes and currently receives about 59 paper journals and 934 e-journals in all fields of chemistry and physics. It can provide database searches and bibliographic instruction.
The Engineering Library, located on the first floor of the Fitzpatrick Hall of Engineering, has a collection of 50,179 volumes and approximately 25,000 microform units and receives over 270 paper journals and about 1,450 e-journals related to engineering. The facility provides database searches as well as bibliographic instruction.

The Life Sciences Library, located on the first floor of the Paul V. Galvin Life Sciences Center, houses an estimated 26,000 volumes and receives approximately 329 print journals and 921 e-journals in the fields of biology, life sciences, and medicine. It offers database searching and bibliographic instruction.

The Mathematics Library, located in 001 Hayes-Healey Center, has a collection estimated at 49,085 volumes and subscriptions to about 168 paper journals and 373 e-journals, which deal with all areas of pure and applied mathematics.

The Radiation Chemistry Data Center, located in 105 Radiation Research Building, has a collection of approximately 4,810 volumes and receives 7 paper journals and 20 e-journals in radiation chemistry. It serves many of the information service needs of the radiation chemical community throughout the United States and abroad.

The University, along with more than 208 major universities, colleges, and research libraries, maintains a membership in the Center for Research Libraries, which has access to over 3.5 million volumes of materials and 1.5 million microforms important to research. The University Libraries were elected to the Association of Research Libraries in 1962.

Information Technologies

Telephone: (574) 631-5600
Web: http://oit.nd.edu

The Office of Information Technologies (OIT) supports 11 public-access computer clusters around the campus, plus one in the Hesburgh Library for the exclusive use of graduate students. These clusters provide access to almost 600 computers, running Macintosh, Windows, and UNIX operating systems, and high-quality printers for all students, faculty, and staff. Five clusters are usually open 24 hours every day. The OIT employs student consultants to help support these facilities. For more information about the Notre Dame computer clusters, go to http://oit.nd.edu/helpdesk.

The clusters, academic and most administrative buildings, and the residence halls are linked to a fiber-based campus network that provides access to a number of Notre Dame resources, as well as the Internet. Standard services include access to electronic mail and the World Wide Web. Notre Dame provides direct Ethernet connections to the campus network to graduate students in Fisher and O’Hara-Grace graduate student residences. Ethernet connections are available in Hesburgh Library carrels by request and a cluster of networked computers is available in the married student housing community center. In addition to the locations listed above, all students have access to the network in areas of the Fitzpatrick Hall of Engineering.

The OIT maintains a High Performance Computing Cluster (HPCC) to provide a parallel computing environment for computationally intensive work and research. Some primary users of the HPCC include Chemistry, the Radiation Lab, Center for Applied Mathematics, Computer Science and Engineering, and the Theoretical Solid State Electrophysics Research Group. The University community also has access to national super-computing and data resource facilities. More information about the HPCC can be found at http://www.nd.edu/~hpcc.

The Media Resource Library in DeBartolo Hall includes video and other multimedia items for use in classes. The Media library also assists in locating and ordering new titles. The Media Resource Library is located on the first floor of DeBartolo Hall in Room 115. Please contact Roberta McMahon at (574) 631-5934.

Radiation Laboratory
Reilly Center for Science, Technology and Values
South Bend Center for Medical Education
Walther Cancer Research Center
White Center for Law and Government

Those centers with particular relevance for graduate education are described in the “Centers, Institutes, and Laboratories” section of this Bulletin.

Inter-University Visitation Program
The Midwest Catholic Graduate Schools (MCGS) is a consortium of the Catholic universities of the Midwest that have significant doctoral programs. In addition to Notre Dame, the members are Loyola University of Chicago, Marquette University, and Saint Louis University.

A degree-seeking graduate student at an MCGS university, after initiating a program of studies at the “home university,” may with appropriate approvals take course work or pursue research at one of the other three institutions (“host universities”) as a visiting student. Procedures have been introduced to facilitate such visits. The student registers at both the home and the host universities. Tuition is assessed at the home university at its rate. Registration entries and final grades are forwarded from the host to the home university for listing on the student’s permanent record.

Inter-university visitation makes it possible for students to take advantage of courses or research opportunities offered by the other three institutions that might not be readily available at the home university. Thus, the program expands the choices available to MCGS students for shaping a degree program.

Interested students should review the graduate bulletin and class schedules of the host universities and consult with their advisers and major-field directors.

To participate, a student must complete an “Application for Inter-university Visitation” and secure the necessary approvals from the host institution. Then the graduate dean of the host university must approve the visitation. Finally, an “Intra-MCGS Enrollment Form” must be completed for each course to be taken at the host institution.

Participation is restricted to those fields of study that are under the academic jurisdiction of the graduate deans at both the home and the host institutions. A degree-seeking student must first have completed at least the equivalent of one full semester at the home university. No more than nine credit/semester hours of courses from host institutions can form part of a degree program at the host institution. Interested students may obtain further information and application forms from the Graduate School.

Kaneb Center for Teaching and Learning
The John A. Kaneb Center for Teaching and Learning provides the means for faculty and graduate teaching assistants (TAs) to hone the art of teaching that has characterized a Notre Dame education over the years. Located in DeBartolo Hall, the Kaneb Center serves faculty as they evaluate and improve their teaching and provides programs for TAs to help them develop their teaching skills and function effectively in their teaching roles. The center also helps faculty and TAs use new or existing technology.

Upon completing a series of five or more TA workshops on teaching, TAs receive a “Striving for Excellence in Teaching” certificate.

In collaboration with departments, colleges, and other University units, the center provides analysis and critiques of classroom instruction, assistance with departmental and college planning, assistance in developing teaching techniques, and University-wide stimulation for reflection on teaching and learning.

The Snite Museum of Art
Telephone: (574) 631-5466
Web: http://www.nd.edu/~sniteart

A recent assessment by peer art museum directors determined that the Snite Museum of Art features collections that place it among the finest university art museums in the nation.

The Mesoamerican collection highlights is the comprehensive, exceptional holdings of works of the Olmecs, the earliest Mexican civilization.

The Kress Study Collection has been the foundation for developing Italian Renaissance art, which includes rare works by Bedoli and Ghirlandaio. The Baroque collection highlights works by Claude, Bloemaert, Couplet, and van Ruisdael. Selections from the Feddersen Collection of 70 notable Rembrandt van Rijn etchings are exhibited frequently; and, the 18th-century collection includes such masters as Boucher, Vigée-Lebrun, Reynolds, Conca, and de Mura.

The critically acclaimed John D. Reilly Collection of Old Master to 19th-century drawings includes examples by Tintoretto, Tiepolo, Oudry, Fragonard, Ingres, Géricault, Millet, and Degas. The Noah and Muriel Buskin Collection of 19th-century French Art is the foundation of one of the museum’s major strengths, featuring paintings and sculptures by Corot, Boudin, Couture, Courbet, Carpeaux, Rodin and Gérôme.

The Decorative and Design Arts Gallery spans the 18th through 20th centuries and exhibits early porcelains from Sévres and Meissen. Exceptional ceramics, furniture, glass, and silver pieces represent both the Arts and Crafts and Art Nouveau styles of the 19th century in addition to the Art Deco and Bauhaus modern movements. Twentieth-century-designed pieces by Wright, Sickley, Tiffany, and Hoffman are also on view.

The Janos Scholz Collection of 19th-Century European Photography contains some 5,500 images of persons and places taken during the first 40 years of camera use.
Native American art focuses on early 19th-century Plains Indian-painted war records and costumes; it also features Mimbres and Anasazi painted ceramics from the prehistoric Southwest.

The American collection has 19th-century landscapes by Durand and Inness and portraits by Eakins, Sargent, and Chase. Among highlights of the West and the Southwest regions are paintings by Higgins, Ufer, Russell, and Remington.

Traditional works of African art such as textiles, masks, and sculptures are in the collection.

Twentieth-century styles and movements are seen in paintings by Miro, O’Keeffe, Avery, Glackens, Pearlstein, and Scully. Modern sculptures by Barlach, Zorach, Cornell, Calder, and Rickey complement the paintings and drawings.

Croatian-American sculptor Ivan Mestrovic, who taught at Notre Dame from 1953 until his death in 1962, created many works that remain on campus. Major pieces can be seen in the museum, at the Eck Visitor Center, and the Basilica of the Sacred Heart.

Loan exhibitions from major museums and private collections, in addition to exhibitions mounted by the Snite, are offered periodically in the O’Shaughnessy Galleries, as is the annual exhibition of student art by candidates for M.F.A. and B.F.A. degrees. Special events and programs include lectures, recitals, films, and symposia held in the 304-seat Annenber Auditorium and in the galleries.

Other Facilities and Services

Campus Ministry

Telephone: (574) 631-7800
Web: http://www.nd.edu/~ministry

Notre Dame is a Catholic institution, which extends a welcome and our desire to be of service to students of all denominations and faith traditions.

Through the programs offered by Campus Ministry, we hope to offer opportunities for students to deepen their faith, to develop a spirituality that will serve them well as adult believers, and to discuss the religious and ethical aspects of questions that are essential for all of us.

Pastoral needs of graduate students are met in a variety of ways. Liturgies, prayer services, retreats, and spiritual counseling are available through personnel at University Village and at the Fischer-O’Hara-Grace Graduate Residences as well as through the offices of Campus Ministry. There is a chapel at Fischer Graduate Residences for the use of graduate students with daily and Sunday Masses and opportunities for sacramental reconciliation.

Campus Ministry offers programs in marriage preparation and family life, retreats, faith sharing, sacramental preparation, and pastoral counseling. It coordinates liturgies in the Basilica of the Sacred Heart and in the residence hall chapels. Graduate students are welcome to participate in these celebrations and to serve as Eucharistic ministers, lectors, or members of the Notre Dame liturgical choirs and music groups. Campus Ministry prepares a listing of all Catholic Masses offered each week at the Basilica of the Sacred Heart and in the residence halls. In addition to this, lists of local Protestant churches, as well as synagogues and mosques, are mailed to all graduate students at the beginning of the academic year with times of services and telephone numbers to call for transportation.

Campus Ministry offices are located in the Coleman-Morse Center and in 103 Hesburgh Library Concours.

Campus Security

Telephone: (574) 631-8338
Web: http://www.nd.edu/~ndspd

The security of all members of the campus community is of paramount concern to the University of Notre Dame. Each year the University publishes an annual report outlining safety and security information and crime statistics for campus. This document provides suggestions regarding crime prevention strategies and important policy information about emergency procedures, reporting of crimes, law enforcement services on campus, and information about support services for victims of sexual assault. The brochure also contains information about the University’s policy on alcohol and other drugs, the SafeWalk program, and the campus shuttle service. You may view the document on the Web at http://www.nd.edu/~ndspd/safebroc.html. A printed copy of this brochure is available by sending an e-mail request to ndspd@nd.edu or by writing to Office of the Director, University Security/Police, 101 Campus Security Building, Notre Dame, IN.

Child Care

Telephone: (574) 631-3344

An on-campus childcare center for the children of faculty, staff, and students was opened at Notre Dame in 1994. The Early Childhood Development Center (ECDC) provides a play-oriented learning curriculum that fosters a child’s understanding of self, others, the world, and problem solving. Literature, creative dramatics, music, play, and art are integrated into the daily schedule. The six-classroom center is staffed by 20 full-time employees, including six lead teachers who hold at least a bachelor’s degree. Notre Dame and Saint Mary’s College students serve as part-time teacher-assistants.

The program serves children ages two to six during the school year and two to nine in the summer. A number of full- and part-time schedules are offered to meet varying family needs, and the weekly cost of the program is tied to family income. ECDC also has operated a childcare program at nearby Saint Mary’s for 28 years.

Call for more information or to get on the waiting list.

Food Services

Phone: (574) 631-5000
Web: http://food.nd.edu

All graduate students, whether they live on campus or off campus, may purchase meal plans for the University dining halls. A variety of options are available in 2004--2005. Students may pick from 10 different meal plans providing a variety that can meet any schedule and any budget.

For added flexibility, students may also choose from our Domer Dollar or Flex Point programs. Each option allows for greater flexibility, safety, and convenience because the student never has to carry cash to dine in any of Food Services’ operations. Visit the Card Services Office Web page to learn more about meal plans, Flex Points, and Domer Dollars (http://food.nd.edu/on-campus_students/services/idcard.php) or call the Card Services Office at the South Dining Hall: (574) 631-7814.

Graduate School Career Services

Telephone: (574) 631-5200
Web: http://careercenter.nd.edu

The Career Center at Notre Dame offers students diverse and comprehensive services, including individual advising and counseling, dossier and credential file services, career assessment inventory testing, group workshops, videotape mock interviews, and more.

Programs of particular relevance to graduate students include

• Preparing your curriculum vitae
• Job search strategies for Ph.D.s in industry
• Improve your presentation skills
• Learn to network effectively

In addition to a wide variety of reference materials available in its Flanner Hall offices, the center also provides an online resource, Go IRISH (Internet, Recruiting, Interviewing, Scheduling, Hotlink), that allows students to pursue internships, sign up for interviews, and research careers.

Health Services

Telephone: (574) 631-7497/7567
Web: http://www.nd.edu/~uhs/uhs.html

The University Health Center provides comprehensive treatment of illness and injuries to all students enrolled at the University. The services provided include an ambulatory clinic, pharmacy, laboratory, x-ray facilities, and an inpatient unit. Allergy and travel immunization services are also provided.

There is no fee to see the University physicians or nurses. Students must pay for prescriptions, over-the-counter medications, supplies, and specially prescribed treatments/procedures. A statement of the charges for services rendered will be provided at time of service or mailed to the student, enabling them...
to file for personal insurance reimbursement. Most charges are covered under the University-sponsored student insurance plan, and the Health Center clerical staff files those claims.

The ambulatory clinic services are available on a walk-in or scheduled basis. All patient and immunization shots must be scheduled. Referrals are made to local physicians for consultation and treatment of special cases. Inpatient beds are available for students during the fall and spring semesters when prescribed by a University physician.

Registered nurses provide 24-hour-per-day care. There are no inpatient room and board fees for on-campus students. Off-campus students pay a nominal inpatient room and board fee. All inpatient students pay for their laboratory tests, medications, and treatments.

Laboratory services are provided on site through a satellite facility of the South Bend Medical Foundation, a large local laboratory that also serves the local hospitals.

In case of emergency, the University Security Department provides for transportation of students to local hospitals. Local ambulance services are readily available. Transportation to local physicians’ offices for care that is not an emergency is provided by Health Services if a University physician has referred the patient. Hours of transportation are limited to 12:15 p.m. to 5 p.m., Monday through Friday, during the academic year when the University is in session.

All student health records are kept confidential. No information is released to anyone, including parents and University authorities, without the student’s prior permission. In the event of emergency requiring hospitalization, it is impossible to obtain a student’s permission, a University physician or the hospital will notify a parent or legal guardian.

**International Student Services and Activities**

Telephone: (574) 631-3825
Web: http://www.nd.edu/~issa

The University of Notre Dame’s international student body is made up of 900 students from over 100 countries. The campus community benefits from this diversity through opportunities to learn about other cultures, the sharing of experiences, the promotion of intercultural understanding, and the chance to practice other languages. Many of the services and programs that enhance international educational exchange are offered through International Student Services and Activities (ISSA). This office strives to create a supportive atmosphere where students can live and learn effectively. The office also promotes international programs as a means of stimulating cross-cultural understanding and interest within the campus and community.

Services and programs offered include the International Orientation Program, Family Friendship Program, International Resource Bureau, annual International Week, international club advising, community outreach, general advising, counseling, and referral.

Since many international graduate students bring their families with them to Notre Dame, ISSA tries to meet their needs as well. For example, English as a Second Language classes are offered to spouses of degree-seeking international students, and an International Women’s Club offers support and activities to the wives of all international students and scholars throughout the year.

International Student Services and Activities is located in Room 204 LaFortune Student Center. A separate Office of Foreign Student Visas is located at 121 Main Building and advises international students and scholars with nonimmigrant status.

**Multicultural Student Programs and Services**

Telephone: (574) 631-4841
Web: http://www.nd.edu/~msps

The Multicultural Student Programs and Services office encourages and supports traditionally under-represented students in using all academic and leadership opportunities at the University. The office focuses on student leadership development skills, provides networks for internships and summer research positions, and offers diversity and multicultural educational programming for the entire campus. While working with 20 ethnic organizations, Multicultural Student Programs and Services collaborates with other academic and student affairs’ departments, the Student Union Board, and Student Government to ensure representation of the total student body in programming efforts.

In conjunction with Student Affairs, the office sponsors an annual fine arts lecture series, which addresses various issues impacting people of color. This series serves as a medium to begin dialogue on commonalities, differences, and interests. Another major programming effort is the First Friday luncheon held to permit faculty, administrators, and undergraduate and graduate students an opportunity to interact in an informal atmosphere. The MSPS Building Bridges Program provides first-year students with mentors who are faculty, administrators, upperclass MSPS scholars, and upperclassmen. The participants are exposed to career and graduate school initiatives, scholarships, and University awards. For further information, contact the office in the Intercultural Center, 210 LaFortune Student Center.

**Office for Students with Disabilities**

Telephone: (574) 631-7141 (voice), (574) 631-7173 (TTY)
Web: http://www.nd.edu/~osd

The Office for Students with Disabilities (OSD) provides a variety of services to ensure that qualified students with disabilities have access to the programs and facilities of the University. Services do not lower course standards or alter essential degree requirements, but instead give students the opportunity to demonstrate their academic abilities. Students can initiate a request for services by registering with the OSD and providing information that documents their disability.

While the services or accommodations provided depend on the student’s disability and course or program, some of the services that have been used include extended time on exams and/or separate testing rooms; textbooks in a variety of formats, such as large print, Braille, cassette tape, and computer disk; readers, note takers, and academic aides; screening and referral for diagnostic testing for a learning disability or attention deficit disorder; housing modifications; and hearing amplification equipment. OSD also has a room in the library with CCTV, an Arkenstone Reader, and a Braille printer for student use.

For more information on services or to receive a copy of the University of Notre Dame Policies and Procedures for Students and Applicants with Disabilities, please contact: Coordinator, Office for Students with Disabilities, 109 Badin Hall, E-mail: nd.osd.1@nd.edu.

**Parking**

Telephone: (574) 631-5053
Web: http://www.nd.edu/~ndspd/parking.html

Students must register vehicles operated or parked on campus. Information about traffic and parking regulations and vehicle registration is available from the Parking Services office, 117 Campus Security Building.

**University Counseling Center**

Telephone: (574) 631-7336
Web: http://www.nd.edu/~ucc

The University Counseling Center (UCC), located on the third floor of the University Health Services Building, offers professional individual and group counseling services for degree-seeking students. The UCC is devoted to meeting student needs and assisting with their problems and concerns. These concerns might include interpersonal relationships, personal growth and well-being, stress management, self-esteem and confidence, social/sexual difficulties, performance enhancement, time management, life and career planning, academic difficulties, sexual assault, anxiety, depression, alcohol/drug abuse, and eating disorders. The UCC also offers services especially for graduate students. Every fall and spring the
UCC offers a graduate student therapy group that meets on a weekly basis. In addition, the UCC staff are available to present workshops and programs for graduate school departments and student groups, such as programs for the Graduate Student Union’s Health and Wellness Fair.

The UCC is staffed by licensed clinical psychologists, counseling psychologists, an addiction specialist, clinical social workers, and pre-doctoral interns and counselors who are supervised by professional psychologists, a consulting psychiatrist, and a consulting nutritionist. The UCC operates under an ethical and legal code of strict confidentiality.

The UCC also provides consultation to the University community. Faculty and staff as well as students may consult with the UCC staff in regard to situations related to students and student-life problems. For non-emergency questions or concerns about students, faculty and staff may call UCC’s “Warm Line” service at 631-7336 from 9:00 - 5:00 p.m. Monday through Friday. We offer this service to encourage faculty and staff to think about calling our staff when concerned about a student before an emergency arises. However, for cases of immediate crisis, twenty-four hour emergency service is also available by calling 631-7336 and asking to speak to the emergency on-call therapist.

Professional services are usually by appointment and can be arranged either in person or by telephone. Services at the UCC are offered on a minimal fee scale of $4 per session. Students are offered unlimited credit and can defer payment. If fees still pose a problem, arrangements will be made. There is no charge for the initial appointment. The center is open from 9:00 a.m. to 5:00 p.m., Monday through Friday.

For information or an appointment call 631-7336. The UCC web site contains on-line self help brochures, current events, and tips for making referrals: http://www.nd.edu/~ucc.

**Policies on Harassment and Other Aspects of Student Life**

Sexual and discriminatory harassment and harassment in general are prohibited by the University. Definitions and policies regarding all forms of harassment and other aspects of student life and behavior are described in the Graduate and Professional Student Handbook, which contains the University’s description of student life policies and procedures for advanced-degree students. The codes, rules, regulations, and policies that establish the official parameters for student life at Notre Dame are contained in the handbook. Unless otherwise noted, the policies and procedures in the handbook apply to all graduate and professional students, whether the behavior occurs on or off campus. The handbook may be obtained from the Office of Residence Life and Housing, located at 505 Main Building, and is available from the Office of Residence Life and Housing Web site at http://orlh.nd.edu.
Alliance for Catholic Education

Academic Director:

Thomas Doyle, Ph.D., Professional Specialist

The Alliance for Catholic Education (ACE) seeks to develop a corps of highly motivated and committed young educators to meet the needs of our country’s most underserved elementary and secondary schools.

To carry out its core teaching mission, ACE recruits talented graduates from a broad variety of undergraduate disciplines, representing a diverse set of backgrounds and experiences, and provides an intensive two-year service experience encompassing professional development, community life, and spiritual growth. These three components are at the heart of the ACE initiative. They aim to provide excellence in education and to maximize opportunities for personal and professional growth for program participants.

ACE teachers undergo an intensive teacher education in Notre Dame’s master of education program under the direction of Thomas Doyle. The ACE professional training spans two years and integrates graduate-level course work with an immersion experience in teaching. During the two summers after admission to the program, ACE teachers live and study together at the University of Notre Dame. The summer sessions combine an innovative teaching curriculum taught by seasoned practitioners and select faculty from the University of Notre Dame as well as from other major universities with supervised field experience in both the public and Catholic elementary schools of South Bend, Indiana, and in the Upward Bound Program at Notre Dame.

At the completion of the summer training component, ACE teachers travel to underresourced parochial schools of the Southeast and Southwest to serve as full-time teachers during the regular school year. In addition to the support of mentor-teachers in the parochial schools where they teach, all ACE teachers are brought together once during the school year in a retreat setting to deepen and enhance their commitment to becoming professional educators. Upon completion of two years in the ACE program, participants will have fulfilled the requirements for a master of education degree and will have provided an urgently needed presence in the lives of our nation’s school children.

In addition to a fully funded graduate program, ACE participants receive a modest monthly stipend, medical insurance, travel reimbursement, and an educational award of $4,725 from the Corporation for National Service.

Begun in 1994, ACE currently has over 150 recent graduates from the University of Notre Dame and Saint Mary’s College, as well as a number of other select colleges and universities. These graduates teach in over 100 parochial schools throughout the urban and rural Southern United States.

The primary activities of the center are as follows:

1. Sponsor lecture series and seminars for faculty and graduate students.
2. Sponsor short and long term faculty visitors working in interdisciplinary research projects in applied mathematics.
3. Support student research by providing fellowships to a limited number of graduate students designated as center fellows; also by providing summer fellowships to a limited number of graduate and undergraduate students.
4. Sponsor an annual research workshop for graduate students.
5. Promote interdisciplinary research groups and help secure funding for research.
6. Give institutional recognition to members of the Notre Dame faculty doing research in applied mathematics.

Center for Astrophysics

Director:

Professor of Physics

The Center for Astrophysics at Notre Dame University (CANDU) provides a synergistic focal point for various faculty research interests under the common theme of “astrophysical and cosmological origins” and encourages collaborations both within and beyond the University community.

The national and international visibility of Notre Dame within the astrophysics community has steadily increased in recent years, with world-renowned programs in theoretical/observational cosmology, nuclear astrophysics, cosmic-ray physics, dark matter searches, solar system formation, and extra-solar planet searches. In addition, Notre Dame has made a commitment to the Large Binocular Telescope (LBT) international collaboration. When completed, the LBT will be the largest telescope in the world on a single mount. It will provide image resolution as much as 10 times better than the Hubble Space Telescope.
Research activities of the center focus on cross-disciplinary efforts to explore outstanding scientific questions concerning the origin and evolution of astrophysical phenomena. In addition to the specific scientific missions outlined below, CANDU acts as a cross-disciplinary focal point for interactions among scholars with related interests in other departments such as mathematics, history, philosophy, and the Program of Liberal Studies. Two specific areas of research/collaboration targeted by CANDU fall under the headings of astrophysical and cosmological origins.

Cosmological origins includes topics such as the origin and structure of the universe, the big bang, primordial nucleosynthesis, cosmic background radiation studies, measurements of cosmological expansion rate, age, and matter content, the origin and evolution of galaxies, space-time geometry, and historical, philosophical, and theological foundations.

Astrophysical origins is concerned with the origin of stars and the formation of extra-solar planetary systems, origin and evolution of the elements in stars and supernovae, origin of cosmic rays, gamma-ray bursts, astrophysical neutrinos, and gravity waves.

The center encompasses a broad range of academic interests and is a focal point for undergraduate and graduate research projects. It provides fellowship support for both undergraduate and graduate students, and it also acts as a forum for public outreach and invited lecture series, providing a unique academic environment for intellectual progress.

Another activity of the center is to provide and develop space-based missions. The center is currently developing a NASA mission to detect Earth-mass planets orbiting other stars through an innovative gravitational lensing technique. This will also detect supernovae at large distances, providing a means to measure the age and acceleration of the universe.

Other significant facilities of CANDU include access to the Vatican Telescope; telescope facilities at Mt. Stromlo, Australia, and in South Africa; the Notre Dame nuclear accelerator laboratory; and the Notre Dame Project GRAND cosmic air shower array.

**Center for Environmental Science and Technology**

*Director:* Patricia A. Maurice, Associate Professor of Civil Engineering and Geological Sciences

Phone: (574) 631-8376  
Fax: (574) 631-6940  
Location: 152A Fitzpatrick Hall  
E-mail: cest.1@nd.edu  
Web: http://www.nd.edu/~cest

The Center for Environmental Science and Technology, established in 1987, conducts basic scientific and engineering research that involves faculty from all divisions of the Graduate School. The center serves as a focal point for the promotion and encouragement of the following activities:

1. Conduct basic research in pollution control that combines microbiology, biochemistry, physical chemistry, geochemistry, mathematics, and physics with engineering.
2. Educate undergraduate and graduate science and engineering students to the need for and methods of science-based environmental research.
3. Develop innovative technologies grounded in sound scientific principles for application to environmental problems.
4. Develop interdisciplinary teams to apply cutting-edge technologies to real world problems in many areas of national and international concern.

As a cooperative effort between the Colleges of Engineering and Science, the center fosters interdisciplinary environmental research and education by providing cutting-edge analytical technologies needed to address environmental problems. The goals of the center are to develop a truly comprehensive research and educational program, and to ensure that students obtain basic scientific knowledge needed to address current and future pollution control problems.

Students connected with the center are either enrolled in a degree program in one of the participating departments (e.g., biological sciences, chemical engineering, chemistry and biochemistry, civil engineering and geological sciences, mathematics, physics, or anthropology) or visiting from another institution. The center supports students through the Bayer endowment for predoctoral and postdoctoral fellowships, in addition to various internship opportunities.

**Center for Flow Physics and Control**

*Director:* Thomas C. Corke, the Clark Professor of Aerospace and Mechanical Engineering

Phone: (574) 631-7007  
E-mail: flowpac@nd.edu  
Web: http://www.nd.edu/~flowpac

The University of Notre Dame has a long tradition of achievement in experimental fluid dynamics and aerodynamics that dates back to 1882, with the development of one of the earliest wind tunnels in the United States. Since 1943, contributions to aircraft technology from Notre Dame’s Aerospace Engineering Laboratory have been recognized world-wide through its development of low-turbulence, subsonic, transonic, and supersonic, smoke-visualization wind tunnels. These unique wind tunnels continue to support new research, and form the nucleus of the other new facilities.

As an outgrowth of this long tradition, the Center for Flow Physics and Control was formed in 2001. Research funding comes from a broad number of government agencies, including all branches of the Department of Defense (Army, Air Force and Navy); DARPA; and NASA Langley, Ames, Glenn, and Dryden Research Centers. A general theme of research that bridges this group involves flow diagnostics, prediction, and control. A combination of basic research is aimed at verifying or developing theories for fluid dynamic behavior, and the application of theory towards controlling flows. The work has involved a multitude of flow fields including laminar and turbulent boundary layers, jets, shear layers, and wakes at incompressible and compressible Mach numbers. The applications have included transition control, drag reduction, mixing, flow-induced vibration, and acoustics.

In addition to experiments, the center continues a long tradition of theoretical and computational fluid dynamics (CFD) and modeling of complex flows. The combination of these elements in a single site is a particular strength of the group.

The facilities in the center are primarily located in the Hessert Laboratory for Aerospace Research. This is a modern 40,000-square-foot building that includes laboratories, computer facilities, fully staffed machine and electronics shops, faculty and student offices, and conference and meeting rooms.

The research facilities include numerous high-quality subsonic, transonic, and supersonic wind tunnels, as well as specialty facilities such as a high-speed heated anechoic jet facility, an anechoic open-jet wind tunnel, and an atmospheric boundary layer wind tunnel. Specialized laboratories focus on particle dynamics, optical measurements, digital time-series acquisition and image processing, and computational fluid dynamics.
Research in the center is broken into five areas—aero-optics, aero-acoustics, fluid-structure interactions, multiphase flows, and intelligent flow control—and involves faculty in the departments of aerospace and mechanical engineering, electrical engineering, civil engineering, and geological sciences, computer science and engineering, and mathematics.

Advisers from industry provide intellectual feedback and industrial teaming.

**Center for Molecularily Engineered Materials**

**Director:**

Paul J. McGinn, Professor, Department of Chemical & Biomolecular Engineering

Telephone: (574) 631-6151
Fax: (574) 631-8366
Location: 178 Fitzpatrick Hall
E-mail: cmem@nd.edu
Web: http://www.nd.edu/~cmem

Materials engineered at the molecular level offer tremendous potential for new technological applications, especially in key industries such as aerospace, automotive, biomaterials, chemicals, defense, electronics, energy, metals, and telecommunications.

The Center for Molecularly Engineered Materials actively explores multidisciplinary fundamental concepts in materials science and engineering, with emphasis on the study of materials at the molecular level. At Notre Dame, it is the primary interdisciplinary unit dedicated to the molecular-level design, synthesis, characterization, and development of advanced materials.

The center's objective is to utilize molecular-level engineering of materials to explore promising technological applications in a variety of fields ranging from catalysts, adsorbents, and sensors to fuel cells, biomaterials, and nanomagnetics. An important focus of the center is integrating materials engineering over length scales from the molecular up to macroscopic dimensions so as to have maximum utility. A key goal is to serve as a national resource for exploring long-range molecular-level materials engineering concepts for applications that would otherwise not be possible due to the near-term focus of the commercial sector.

The aim is to develop materials and systems whose structure and components exhibit novel and significantly improved physical, chemical, and biological properties, phenomena, and processes, due to their molecular-scale design and engineering. Included among the areas of emphasis are the synthesis and characterization of new materials with features on the molecular scale, experimental studies and mathematical modeling, and advanced processing techniques. For example, molecular-level synthesis and assembly methods will result in chemical/biological sensors with improved accuracy and sensitivity that can rapidly test large quantities of food for bacterial contaminants or airborne toxins; novel catalyst structures that provide both an ideal chemical environment on the molecular scale and the optimal macrostructure for efficient high-volume chemical, petroleum, and pharmaceutical processing; significant improvements in semiconductor interfaces for solar energy conversion; environmentally benign corrosion inhibitors; and better sensors and controls to increase efficiency in manufacturing.

The center integrates interdisciplinary research groups in catalysis and reaction processes, electrochemical interfaces and processes, nanostructured materials, advanced processing techniques, and biology inspired materials. It includes researchers from several departments in the Colleges of Engineering and Science and the Radiation Laboratory. The thrust activities are synergistically planned, coordinated, and executed so as to provide a coherent approach to targeted and evolving concepts.

**Center for Nano Science and Technology**

**Director:**

Wolfgang Porod, the Frank M. Freimann Professor of Electrical Engineering

Telephone: (574) 631-6376
Fax: (574) 631-4773
Location: 203 Cushing Hall
E-mail: ndnano@nd.edu
Web: http://www.nd.edu/~ndnano

Research conducted in the Center for Nano Science and Technology entails the study of small device structures and device-related phenomena on a spatial scale of less than one-thousandth the diameter of a human hair. The center integrates research programs in molecular- and semi-conductor-based nanostructures, device concepts and modeling, nanofabrication, and electrical and optical characterization, and integrated systems-level design to address common application goals.

The center comprises a multidisciplinary collaboration of faculty from the departments of electrical engineering, computer science and engineering, chemistry and biochemistry, and physics who are exploring fundamental concepts and issues in nano science and developing unique engineering applications using principles of nano science. The center was established on a base of 15 years of faculty research and educational development at Notre Dame in nano science and technology.

At present, center faculty are engaged in such initiatives as quantum-based devices and architectures; high-speed resonant-tunneling devices and circuits; photonic integrated circuits; the interaction of biological systems with nanostructures; and the design and fabrication of microelectromechanical systems.

In addition to training students for immediate participation in nano science and technology and preparing them to be productive and extremely competitive in the future marketplace, the center also allows faculty to conduct avant-garde research and provides industry leaders with a forum, a “think tank,” to explore long-range ideas. Involvement with industrial technologists also benefits students by providing experience in working with the commercial sector.

**Keck Foundation Initiative**

The W.M. Keck Foundation Initiative on “Integrated Nanoelectronics: Information Processing at the Molecular Level” is a major research program within the Center for Nano Science and Technology.

This initiative explores the use of nanoelectronics in developing radically different approaches to information processing. The research aims to combine novel device concepts with both fundamental fabrication issues in physics and chemistry and higher-level integration issues of systems, architectures, and algorithms. This initiative builds on the notion of Quantum-Dot Cellular Automata (QCA), a concept developed at Notre Dame, which is based on encoding binary information through the charge configuration of quantum-dot cells.

**Facilities**

(http://www.nd.edu/~ndnano/research.htm)

The center has excellent on-site research facilities and capabilities. These include nano-lithography and scanning tunneling microscopy; nanodevice and circuit fabrication; nano-optical characterization including femtosecond optics and near-field scanning optical microscopy; electrical characterization at helium temperatures and in 10 T magnetic fields; 50 GHz high-speed circuit analysis; and device and circuit simulation and modeling. In recent years, federal grants received to support research in nano science and technology total approximately $10 million.

**Center for Philosophy of Religion**

**Director:**

Thomas P. Flint, Professor of Philosophy

Telephone: (574) 631-7339
Location: 418 Malloy Hall
E-mail: cprelig@nd.edu
Web: http://www.nd.edu/~cprelig

The Center for Philosophy of Religion was established at Notre Dame in 1976. Although operating in close association with the Department of Philosophy, it is not a degree-granting institution. Its aim is to advance the understanding of religion and religious belief and to promote and advance a specifically Christian and theistic approach to some of the main topics and problems of philosophy.
In pursuit of these goals, the center sponsors several different sorts of activities. First, it offers stipendary fellowships on a competitive basis to scholars who then come to Notre Dame to work on projects in philosophy of religion and Christian philosophy. It also extends nonstipendiary resident fellowships to scholars who are on sabbatical leave and would like to come to Notre Dame to work on a topic in Christian philosophy or philosophy of religion; such fellows receive guest faculty status and secretarial services.

The center periodically sponsors conferences and lectures on selected issues.

The center also publishes a series of volumes that includes conference proceedings and monographs. The center will address its subject from within a posture that is committed and Christian; its perspective (though not necessarily that of its fellows and lecturers) is that of the committed believer, rather than one of artificial neutrality.

**Center for Tropical Disease Research and Training**

**Director:**
Frank H. Collins, the George and Winifred Clark Professor of Biological Sciences

Telephone: (574) 631-8045  
Fax: (574) 631-3996  
Location: 315 Galvin Life Sciences  
E-mail: CTDRT.1@nd.edu  
Web: http://ctdrt.bio.nd.edu

The Center for Tropical Disease Research and Training (CTDRT) is an administrative structure at the University of Notre Dame that brings together a diverse group of faculty, staff and students from several different colleges and departments in the University whose research and teaching is focused on human pathogens and their invertebrate and vertebrate vectors, the diseases caused by these organisms, and the impact of these diseases on human society. Members of CTDRT are concerned in particular with the impact of infectious diseases in less developed parts of the world, and research interests of center members range from biomedical science to issues of human rights. Center members also work on new and emerging infectious diseases of importance in the United States, especially those like West Nile encephalitis and Lyme disease whose public health impact is significantly influenced by human impacts on the environment. Among the diseases studied at CTDRT are malaria, toxoplasmosis, tuberculosis, lymphatic filariasis, leishmaniasis, dengue, and West Nile encephalitis. Many faculty work specifically on arthropod vectors, particularly mosquito vectors of arboviruses, falciparum worms, and malaria parasites, tick vectors of the Lyme disease spirochete, and sand fly vectors of *Leishmania* parasites. Examples of some of the areas of research interest among center faculty include:

- Biology of Intracellular Pathogens  
- Genomics and Integrative Research  
- Tools for Genetic Engineering of Vectors and Pathogens  
- Population and Evolutionary Genetics  
- Rational Drug Design  
- Interdisciplinary Approaches to Global Health

Faculty in CTDRT receive support from major federal funding agencies such as the NIH, NSE, DOD, and USDA, from private foundations like John D. and Catherine T. MacArthur Foundation, Ellison Medical Foundation, Burroughs Wellcome Fund, and the Bill and Melinda Gates Foundation, from international funding bodies like the World Health Organization, from pharmaceutical industries, from the state of Indiana, from the University of Notre Dame, and from private benefactors. The center has sponsored a number of program grants, including the a Gates Foundation lymphatic filariasis elimination program in Haiti, a NIAID Tropical Disease Research Unit grant, and an NIH Training Grant in Experimental Parasitology and Vector Biology that has trained graduate students and postdoctoral fellows for more than three decades.

**Charles and Margaret Hall Cushwa Center for the Study of American Catholicism**

**Director:**
Timothy Matovina, Associate Professor of Theology

Telephone: (574) 631-5441  
Fax: (574) 631-8471  
Location: 1135 Flanner Hall  
E-mail: cushwa.1@nd.edu  
Web: http://www.nd.edu/~cushwa

The Cushwa Center for the Study of American Catholicism is widely recognized as the leading center for the historical study of Roman Catholicism in the United States.

Cushwa Center seminars, conferences, and research projects, many of which produce scholarly volumes or popular educational publications, engage a national body of historians and colleagues from theology, women’s studies, sociology, ethnic studies, religious studies, American studies, and English. The center also provides resources and critical commentary for media coverage of U.S. Catholicism and collaborates with church leaders and pastoral workers to enhance the vitality of Catholic life in the United States. In all aspects of its mission—research, teaching and faculty development, and public service—the Cushwa Center seeks interdisciplinary and ecumenical cooperation.

**Events**

The Cushwa Center sponsors a number of programs that promote the study of American Catholicism:

Twice a year, the American Catholic Studies Seminar brings scholars from across the country to present papers at Notre Dame. Published in a working paper format, these essays are made available to the public for the cost of duplication.

Once a year a prominent scholar in the field of American Catholic studies delivers a Cushwa Center Lecture.

The Notre Dame Seminar in American Religion is a semiannual gathering of historians of American religion and other scholars who meet to discuss a recent book published in the field. The author of the book is present for the seminar.

The Cushwa Center sponsors a conference each spring, covering topics such as Catholicism in Twentieth-Century America, U.S. Hispanic Catholicism, African American Catholicism, and Catholicism in International and Comparative Contexts.

**Publications and Research**

The Cushwa Center’s American Catholic Studies Newsletter, published twice a year, reviews the latest scholarship in the field. It also features personal news items and provides information on archival holdings pertinent to the study of U.S. Catholicism.

In conjunction with the university of Notre Dame Press, the Cushwa Center publishes two book series: *Notre Dame Studies in American Catholicism* and *The Irish in America*. The fourteen books published to date in these series, as well as the center’s specialized studies of the growth of Hispanic Catholicism in the United States and the history of Catholic parish life, have helped to build the Cushwa Center’s reputation. Increasingly, the center is also earning recognition for important interdisciplinary research in American religion and culture, the experiences of women in religious history, the impact of the Second Vatican Council on the American Catholic community, and the Catholic presences and diverse religious practices of U.S. Catholic men and women in the twentieth century.

Research travel grants, offered annually, assist scholars who wish to use Notre Dame’s library and archival collection in Catholic Americana.

The center also administers a Hibernian Research Award and a program of lectures, publications, and conferences related to the Irish American experience. These activities are funded by an endowment from the Ancient Order of Hibernians.
Twentieth Century Project

Initiated in 1997, “Catholicism in Twentieth Century America” seeks to integrate the experiences and contributions of Catholics more fully into the narratives of American history. Faculty and dissertation fellows participated in one of three working groups: Public Presences, Catholic Women, and Catholic Practices and Identity. Several completed manuscripts from the project have been published in a new publication series, Catholicism in Twentieth Century America, which is under the general editorship of Scott Appleby and sponsored by the Cushwa Center and Cornell University Press.

Devers Program in Dante Studies

The Albert J. Rasinoro Director:

Theodore J. Cachey Jr., Chair and Professor of Italian Language and Literature

Telephone: (574) 631-5610
Fax: (574) 631-6308
Location: 102 Hesburgh Library
E-mail: devers@nd.edu
Web: http://www.dante.nd.edu

The William and Katherine Devers Program in Dante Studies supports rare book acquisitions in the John A. Zahm, C.S.C., Dante Collection, as well as teaching and research about Dante across the humanities curriculum, in particular in the medieval and Italian studies areas. The program also sponsors book exhibitions, seminars, and visiting professorships. It also sponsors print and electronic publications of scholarly research on Dante. In addition, the Devers Program plays a major role in the creation of the Dante Center and the Dante Journal of Interdisciplinary Studies, published by the University of Notre Dame Press.

The William and Katherine Devers Program in Dante Studies is under the general editorship of Scott Appleby and sponsored by the Cushwa Center and Cornell University Press. Though concerned primarily with the Catholic intellectual heritage, the institute supports complementary research deriving from other Christian intellectual traditions as well as from Jewish and Islamic ones. It invites the participation of scholars without regard to religious belief.

By encouraging work of this sort, the institute hopes, on the one hand, to enrich our common academic efforts with neglected assets and, on the other, to strengthen ties between the church’s intellectual life and that of the academy. In so doing, the institute seeks to promote scholarship of high quality, reflecting a broad array of interests, without aligning itself with any ideological perspective.

International in the scope of its mission, the Erasmus Institute offers residential fellowships at its center on the campus of the University of Notre Dame for scholars at the faculty, postdoctoral, and dissertation stages. It also arranges summer seminars for graduate students and faculty.

Hessert Laboratory for Aerospace Research

Director:

Thomas C. Corke, Clark Professor of Aerospace and Mechanical Engineering

Telephone: (574) 631-7007
Fax: (574) 631-8355
Location: 104 Hessert Laboratory
E-mail: amedept@nd.edu
Web: http://www.nd.edu/~ame/facilities/
Hessert.html

The Hessert Laboratory for Aerospace Research is a building dedicated in 1991, which houses a variety of specialized experimental research facilities, graduate students, and faculty. The laboratory is primarily used by faculty and students in the Department of Aerospace and Mechanical Engineering, and is the home for the Center for Flow Physics and Control.

The Main Laboratory contains a wide variety of research wind tunnels. These include induct subsonic tunnels, induct and blowdown transonic and supersonic tunnels, an anechoic wind tunnel, an atmospheric wind tunnel, and a closed circuit water tunnel. These wind tunnel facilities are supported by data acquisition and instrumentation including laser doppler anemometry, particle image velocimetry, hot-wire anemometry, and force balance capabilities for both subsonic and supersonic flows. These facilities are currently being used to perform research in areas of flow stability, and turbulence transition, high angle of attack and high lift aerodynamics, bluff body flows, aero-acoustics, fluid-structure interactions, and aero-optics.

The laboratory also contains a number of specialized facilities including those for the study of the dynamics of solid and liquid particles, the development of aero-optic measurement techniques, and the control of fluid instabilities. The Hessert Laboratory is used for a variety of graduate and undergradate educational programs including experimental measurements. All of the research and educational activities are supported by fully staffed electronics and machine shops.

Indiana University School of Medicine – South Bend

Director:

To be announced

Telephone: (574) 631-5574
Fax: (574) 631-7821
Location: 12134 Notre Dame Ave., South Bend, Indiana 46617
E-mail: sbcme.1@nd.edu
Web: http://galen.sbcme.nd.edu

The Indiana University School of Medicine – SB (IUSM – SB) is one of eight centers for medical education in the Indiana University Medical School system. The center offers the first- and second-year program in medicine and participates in programs leading to a master’s and a doctoral degree in biomedical oriented sciences in conjunction with the Notre Dame Graduate School.

Although all students in the center’s programs are registered in the University of Notre Dame, admission to the medical program is a function of the Indiana University Medical School, and applications should be directed to its admissions office. Admission to biomedical graduate programs is a joint function of the center and the several cooperating departments of the Graduate School. Application for these programs should be made to the Office of Graduate Admissions.

At present, biomedical oriented graduate programs in which the center plays a conspicuous role are offered in the areas of human anatomy, human physiology, and neuroscience. The student’s major

Erasmus Institute

Director:

Rev. Robert E. Sullivan, Associate Professor of History

Telephone: (574) 631-9346
Fax: (574) 631-3585
Location: 1124 Plummer Hall
E-mail: erasmus@nd.edu
Web: http://www.nd.edu/~erasmus

The Erasmus Institute, an international Catholic center for advanced studies at the University of Notre Dame, fosters mainstream academic research drawing on the intellectual traditions of the Abrahamic faiths. Founded in 1997, the institute serves scholars who are applying the resources of Christian, Jewish, and Muslim thought to currently important topics in the humanities, social sciences, law, and arts. That rich cultural legacy clearly bears on much present-day scholarly inquiry apart from the disciplines of theology and religious studies. In political science, for example, the just war theory, which draws heavily on Catholic thinkers beginning with Augustine, is as important to many secular theorists and strategists as to their Christian colleagues. Among the projects that the Erasmus Institute has supported are a study of the role of Catholicism in shaping indigenous historical memory in early colonial Peru (Sabine MacCormack, University of Michigan), a project on the appropriation and adaptation of Pauline representations of Jews and women in the construction of Christian identity in early English literature (Lisa Lampert, University of California, San Diego), and a study of Emerson between the idealism of Jonathan Edwards and the pragmatism of William James (Roger Lundin, Wheaton College). Though concerned primarily with the Catholic intellectual heritage, the institute supports complementary research deriving from other Christian intellectual traditions as well as from Jewish and Islamic ones. It invites the participation of scholars without regard to religious belief.

By encouraging work of this sort, the institute hopes, on the one hand, to enrich our common academic efforts with neglected assets and, on the other, to strengthen ties between the church’s intellectual life and that of the academy. In so doing, the institute seeks to promote scholarship of high quality, reflecting a broad array of interests, without aligning itself with any ideological perspective.

International in the scope of its mission, the Erasmus Institute offers residential fellowships at its center on the campus of the University of Notre Dame for scholars at the faculty, postdoctoral, and dissertation stages. It also arranges summer seminars for graduate students and faculty.
adviser for these programs is chosen from the center faculty, and the student’s committee is composed of faculty from the center and the appropriate graduate departments.

A unique M.D./Ph.D. program is available to outstanding students. These students are admitted simultaneously to the Indiana University School of Medicine and the University of Notre Dame Graduate School. The M.D./Ph.D. program is described in the Division of Science section of this Bulletin.

Students interested in this program should contact the office of the director, IUSM – SB. Other graduate students may take courses in the center subject to approval of the course instructor, the center director, and the home department of the student, and subject to the availability of space in the desired course.

**Institute for Church Life**

**Executive Director:**

John Cavadini, Ph.D., Chair and Associate Professor of Theology

Telephone: (574) 631-5510  
Fax: (574) 631-6968  
Location: 1201 Hesburgh Library  
E-mail: id@nd.edu  
Web: http://www.nd.edu/~icl

The Institute for Church Life (ICL) exists as an integral component of the University’s larger mission of teaching, research, and service to society and to the Church. Through its resources, projects, and affiliate centers the institute reaches out to the whole spectrum of Church leaders—its bishops, clergy, religious, and laity—to provide training and service as well as opportunities for spiritual rejuvenation and personal growth.

In this work, the institute seeks to embody the spirit and mandate of the Second Vatican Council, to implement a mission of transforming the Church and society in light of the Gospel, and to renew the theological, ministerial, pastoral, catechetical, and liturgical traditions of the Church. In part, the institute’s efforts are realized through its ongoing collaboration with the Center for Pastoral Liturgy, the Center for Social Concerns, NDVI (the Notre Dame Vocation Initiative), STEP (Satellite Theological Education Program), and the academic departments and schools of Notre Dame, especially the Department of Theology.

For more than 25 years, ICL has provided distinguished leadership through its publications, training sessions, service to episcopal and national organizations, involvement in social concerns, research, and educational programs. Guided by its executive committee, ICL is expanding its programs and initiatives for the special needs of a Church at the beginning of the new millennium.

As a bridge between the University and the Church, ICL links programs and personnel on campus with Church leaders, University graduates, and others who are concerned with the development of vital communities of faith. Further, ICL hopes to serve as a catalyst for cooperation among a variety of entities and agencies within the University and within the Church.

**Components of the Institute for Church Life**

The Center for Pastoral Liturgy is concerned primarily with the pastoral dimensions of the reform of liturgy that express and shape the religious experience of people. Bringing together a variety of resources, the center’s staff provides educational programs on liturgy and pastoral life to assist parishes and dioceses with renewal of worship. The center also sponsors an annual conference at Notre Dame as well as regional conferences, and publishes newsletters, Assembly, and books on various aspects of worship. Established in 1971, the Notre Dame Center for Pastoral Liturgy was designated by the bishops in the United States as an official liturgical center.

The Center for Social Concerns offers programs aimed at raising the consciousness of students, faculty, staff, and alumni/a to social, cultural, and justice issues in our society. Experiences in the South Bend area, throughout the United States, and internationally are developed for participating students and enhanced with course work, readings, and discussion. The staff also works with faculty to assist them in incorporating into their courses information about justice issues, as well as experiential and community-based service learning models appropriate to their courses. The center staff invites the discussion of self-initiated social justice, service, and leadership opportunities with interested graduate students.

Retreats International (RI), a professional organization serving the larger retreat movement, provides the structure and format for networking and collaboration among its some 360 member retreat centers and houses of prayer. RI also gathers and publishes significant data pertinent to retreat/renewal ministry, and publishes various monographs on topics of interest to those involved. Retreats International conducts the Institute for Adult Spiritual Renewal on the Notre Dame campus that attracts more than 500 persons involved in many church ministries.

The Satellite Theological Education Program (STEP) provides quality theological education to pastoral ministers and other adult Catholics from dioceses across the country. The primary services STEP provides are designed to assist dioceses enhance catechetical, ministry formation, and adult education programs through online courses (“eCourses”). STEP eCourses are conducted entirely online via the Internet with the adult learner in mind, taking advantage of the flexibility this medium allows to bring the resources of Notre Dame to dioceses and parishesioners from across the country. Beginning with the fall 2004 semester, STEP will assist the Theology Department with the development and delivery of online courses for credit as part of the department’s M.A. program.

Vocare, the Notre Dame Vocation Initiative, was established to help students “understand their future work in light of their faith commitments and provide talented young people with opportunities to explore ministry, either lay or ordained, as their life’s work.” Vocare intends to foster a sense of vocation in a broad range of youth, from high-school students to young adults who have graduated from college. It has three component programs, one directed to Notre Dame students and faculty, another to high-school youth, and the third to Notre Dame graduates as they make the transitions into careers.

**Institute for Educational Initiatives**

**Director:**

Rev. Timothy R. Scully, C.S.C., Professor of Political Science

Telephone: (574) 631-0464  
E-mail: pauley.18@nd.edu  
Web: http://www.nd.edu/~ici

In its mission to improve the education of all youth, particularly the disadvantaged, the Institute for Educational Initiatives conducts four programs designed to address specific educational goals. These are the Program on the Social Organization of Schools, the Alliance for Catholic Education (ACE), the Mendelsson Center for Sports, Character, and Community. Through the research and teaching of these programs, the institute seeks to contribute to the revitalization of American education and, consistent with Notre Dame’s mission as a Catholic university, to benefit parochial education in a special way.

The Program on the Social Organization of Schools conducts basic and applied research on school and the learning process. Researchers study the formal and informal organization of schools, the curriculum, teacher practices, and student social relationships in an effort to determine how these factors interact with student background and ability to affect student learning. Special attention is given to the study of Catholic schools, particularly in reference to the education of at-risk students.

The Alliance for Catholic Education seeks to develop a corps of highly motivated and committed young educators to meet the needs of our country’s most underserved elementary and secondary schools. ACE teachers undergo an intensive teacher education program that spans two years and integrates graduate-level course work with an immersion experience in teaching. The ACE program also seeks to influence and support Catholic education through educational
outreach. Outreach activities include support for mentoring and tutoring in the South Bend area schools, summer institutes for Catholic school superintendents, assistance for foundations interested in educational issues, and partnerships with teacher-service programs at other colleges and universities.

The Mendelsohn Center for Sports, Character and Community encourages sport participants, sport organizations, sports leaders, and educational institutions that sponsor sport programs to embody values and behaviors that promote holistic human development and social justice. In recognition of the importance of sport in contemporary society and culture, the center conducts research on the relationship between sport and broader culture, exploring both the possibilities and the limitations of sport’s contributions to a more just and compassionate world. It also develops and offers educational opportunities for those involved in sport and holds a biennial conference. The center also houses the Institute for Coaching and Education.

**Institute for Latino Studies**

**Director:**

Gilberto Cárdenas, Assistant Provost and the Julián Samora Professor of Latino Studies

Telephone: (574) 631-4440
Location: 230 McKenna Hall
E-mail: latino@nd.edu
Web: http://www.nd.edu/~latino

The Institute for Latino Studies was founded in 1999 to advance knowledge and understanding of the Latino experience in the United States. Building upon the outstanding intellectual tradition of Julián Samora (professor in the Department of Sociology, 1959–1985), the institute fosters interdisciplinary study, research and outreach in Latino studies as a vital component of the University’s mission. The institute promotes and develops Latino-focused scholarship by working with students, faculty, and fellows to create a University-wide academic program, including an undergraduate minor in Latino studies. Its Galería América offers exhibitions and special programs on Latino art, and the Julián Samora Library and Archives provide resources for study and reflection.

The institute conducts research in areas central to our nation’s future through five programs:

- **Border and Inter-American Affairs** explores points of intersection between the interests of U.S. Latinos and the populations of their countries of origin.
- **The Center for the Study of Latino Religion** conducts ecumenically focused research on the impact of religion on the political, social, cultural, and educational life of U.S. Latinos.
- **The Metropolitan Chicago Initiative** oversees research and community-outreach projects focusing on the status of Latino families and neighborhoods and ways to improve their health, education, and well-being.
- **Institute for Structure and Nuclear Astrophysics**
  **Director:**
  Ani Aprahamian, Chair and Professor of Physics
  Telephone: (574) 631-7716
  Fax: (574) 631-5952
  Location: 124 Nieuwland Science Hall
  E-mail: nsl@nd.edu
  Web: http://www.nd.edu/~nsl

For more than 50 years, the University of Notre Dame has supported an active research program in the fields of low and medium energy experimental nuclear physics. This rich history continues today within the Institute for Structure and Nuclear Astrophysics (ISNAP).

Funded by the National Science Foundation, ISNAP is a three-accelerator laboratory with a broad program in low-energy nuclear physics. The research emphasis is on nuclear astrophysics, weak interactions and fundamental symmetries, nuclear structure, and nuclear reactions with radioactive nuclear beams (RIBs). The experimental work, which focuses on studying the impact of various aspects of nuclear structure on understanding the origin of the elements from stellar evolution to explosive scenarios, is carried out at the FN, KN, and JN Van de Graaff Accelerators at ISNAP’s Nuclear Structure Laboratory.

Physics research in nuclear structure is focused on studies of dynamics, deformations, and bulk nuclear properties. Dynamics of nuclei include studies of behavior as wide ranging as vibrational motion associated with tidal waves on the surface of the nucleus to giant resonances and rotational motion including chiral rotations as well as superdeformations. Understanding nuclear dynamics has many implications from the most fundamental issues related to nuclear forces to probing incompressibility of nuclear matter and therefore the properties of neutron stars. Theoretical approaches of many body quantum systems can also be applied more generally to mesoscopic systems or clusters of atoms, and quantum dots.

A pioneering focus in ISNAP has been the development and application of short-lived radioactive beams, and the associated study of the structure and reactions of nuclei at the very limits of particle stability. This includes investigations of the recently discovered “neutron halo” nuclei, exotic systems in which a cloud of nearly pure neutron matter at very low density surrounds a normal nuclear core. These nuclei can be a key for the onset of explosive nucleosynthesis mechanisms such as the r-process.

Measurements of nuclear reaction rates and decay processes at stellar temperatures and densities comprise a strong part of the experimental effort in nuclear astrophysics. The goal is to understand the origin and distribution of the elements in the universe. Research is directed towards simulating nucleosynthesis in the laboratory, understanding late stellar evolution and explosive nucleosynthesis in novae and supernovae, and explaining the origin of the very high luminosity observed in stellar x-ray bursts.

Developing accelerator mass spectrometry techniques for a range of applications from oceanography to astrophysics is a new research focus of our laboratory. Accelerator mass spectrometry has traditionally been used to detect environment tracers at or below their natural abundance level with extremely high sensitivity. We seek to advance and exploit this technique at the local facilities for identifying new radioactive noble gas probes of oceanography and for the study of low cross-section nuclear reactions, which are important in stellar evolution.

**Interdisciplinary Center for the Study of Biocomplexity**

**Director:**

Mark Alber, Professor of Mathematics and Concurrent Professor of Physics

Telephone: (574) 631-4178
Fax: (574) 631-6579
Location: 255 Hurley Hall
E-mail: malber@nd.edu
Web: http://www.nd.edu/~icsb

Biocomplexity is the study of the complex structures and behaviors that arise from the interaction of biological entities (molecules, cells, or organisms). While physical and chemical processes give rise to a great variety of spatial and temporal structures, the complexity of even the simplest biological phenomena is infinitely richer.

Members of the University of Notre Dame Interdisciplinary Center for the Study of Biocomplexity (ICSB) come from eight departments from the schools of science and engineering and are working together to meld physical, mathematical, and computational approaches with those of modern biology to understand this complexity in a quantitative and predictive way.
The main goal of the ICSB is to develop comprehensive multiscale models of cell and tissue organization and their relation to development. We address three scales of structure starting from the level of genetic control networks and including at the subcellular level, molecular machines and cytoskeletal and protein networks. At the cell level we emphasize cell polarity and cell-cell interactions. At the supercellular level our studies include the aggregation of cells into tissues and tissues into organs.

All ICSB projects combine quantitative experiments and computer simulation and build on the mutually complementary strength of the researchers at Notre Dame with the support from collaborators at Indiana University and other institutions. Projects currently under way within the center include:

1. Modeling organogenesis and tissue development, including the mechanical properties of tissues.
3. Modeling cellular dynamics, including the mechanical properties of cells.
4. Population dynamics and ecological system

The ICSB also conducts international workshops essential to its training mission. Thus far ICSB has organized six such Biocomplexity Workshops, including “Multiscale Modeling in Biology,” held in August of 2003, at the University of Notre Dame.

### Joint Institute for Nuclear Astrophysics

**Director:**
Michael Wiescher, the Frank M. Freimann Professor of Physics

Telephone: (574) 631-6788
Fax: (574) 631-5952
Location: 255 Nieuwland Science Hall
E-mail: wiescher.1@nd.edu
Web: http://www.jinaweb.org

The Joint Institute for Nuclear Astrophysics (JINA) — a National Science Foundation (NSF) Physics Frontier Center — at the University of Notre Dame, Michigan State University, and the University of Chicago provides an intellectual center for the field of nuclear astrophysics with the goal to enable swift communication and to stimulate collaborations across field boundaries. Nuclear astrophysics focuses on questions at the interface between nuclear physics and astrophysics. It addresses the role of nuclear reaction processes as an engine of stellar evolution and attempts to find answers to the fundamental questions of the origin of the elements found today throughout the universe.

Because of the extreme nature of the stellar conditions, an understanding of these nuclear processes poses an enormous challenge to both nuclear theorists and experimentalists. Advances in experimental nuclear astrophysics now allow physicists to simulate and investigate many stellar processes in the laboratory. These studies require a wide range of techniques and facilities. They include innovative methods to measure the extremely slow reactions in the interiors of stars, as well as new facilities to produce the very exotic, short-lived nuclei that come to existence in the extreme environments of stellar explosions. While JINA researchers are leading and/or collaborating in these kinds of experiments, they also seek to combine the experimental results with detailed theoretical simulations of rapid hydrodynamic processes in stellar evolution and stellar explosions. Through a broad collaboration with research centers at the Universities of Arizona and California, this interdisciplinary approach will drive further advances in the field through the development of new computational techniques. To move toward these advances, JINA will also organize a series of goal oriented workshops and conferences to offer the opportunity for the national and international research community to discuss the experimental, theoretical and observational results on a regular basis.

JINA also offers extensive training and outreach programs from kindergarten through graduate study to inform about the rapidly emerging scientific results and to stimulate interest for future generations of students and researchers in the field.

### W.M. Keck Center for Transgene Research

**Director:**
Francis J. Castellino, the Kleiderer-Pezold Professor of Biochemistry

Telephone: (574) 631-9931
Fax: (574) 631-8017
E-mail: transgen@nd.edu
Web: http://www.nd.edu/~transgen

The W.M. Keck Center for Transgene Research employs innovative genetic technology to study human diseases that involve blood clotting, anti-clotting, and clot-dissolving systems and related inflammatory processes, such as heart disease, atherosclerosis, infection, and cancer. Established in 1997, the center brings together research in transgenic manipulations both locally, and with other laboratories around the world that possess special expertise in characterizing the genetically altered animals. The director’s own laboratory at Notre Dame is considered among the foremost worldwide conducting basic biochemical and genetic research on blood clotting processes.

In establishing this sophisticated cutting-edge technology at Notre Dame, the center hopes to better understand how clotting systems function in a living organism, and how they relate to inflammatory processes at the gene level, in this case mouse models of disease. In transgene research, scientists alter genetic material in a very precise manner in an animal’s embryo, either by adding, deleting, or exchanging certain genes in the few cells of the newly formed embryo. This changes the animal in every cell in its body, for its entire life span, and the changes will be handed down to future generations.

By breeding animals with differently altered genes, Notre Dame researchers expect to get a clearer view of the complex interplay of all genes involved in particular diseases. They are attempting to determine how these coagulation proteins function in a living organism; if the cells have some backup mechanism for clotting and clot dissolving; and if there are other processes within the animal, such as inflammation, atherosclerosis (production of degenerative changes in arterial walls), tumorigenesis (production of tumors), spread of infection, and metastasis (the spread of malignant tumors), for example, that are affected as well.

### Kellogg Institute for International Studies

**Director:**
Scott Mainwaring, Eugene Conley Professor of Political Science

Telephone: (574) 631-6580
Fax: (574) 631-6717
Location: 130 Hesburgh Center
E-mail: kellogg@nd.edu
Web: http://www.nd.edu/~kellogg

The Helen Kellogg Institute for International Studies promotes comparative international studies. Each year, Kellogg hosts about 15 residential visiting fellows and guest scholars from the United States and abroad. The institute also comprises about 50 faculty fellows, coming from numerous departments and other units around Notre Dame. It awards individual support for research to faculty and graduate students, and internships and grants to undergraduates. In support of intellectual exchange, Kellogg schedules a twice-weekly speaker series, conferences, round tables, current affairs panels and cultural events, and it disseminates research through publications. Through these activities, Kellogg fosters interdisciplinary, comparative social science research on contemporary political, economic, social, and religious issues in international affairs.

The institute emphasizes five major themes: democratization and the quality of democracy; growth and development; public policies for social justice; religion and the Catholic Church; and social movements and organized civil society.
The institute promotes research that is germane to major issues in the contemporary world, and its research on democracy attracts worldwide attention. Similarly, Kellogg's research on public policies seeks to influence not only academic debates, but also public policy discussions.

Kellogg researchers place special emphasis on Latin America, reflecting both the region's importance to the United States and Notre Dame's longstanding ties there. Despite its prominence on the institute's research agenda, Latin America does not command exclusive attention. Over time, Kellogg has fostered a growing range of research on other regions of the world while retaining the Latin American emphasis for which it is best known. Researchers at the institute seek thematic comparisons with Europe, Asia, and Africa.

From the outset, the institute has attempted to build bridges in innovative ways between the United States and Latin America and other regions, actively seeking balanced participation between its U.S. and foreign scholars. The institute collaborates with foreign social science centers in joint research projects and sponsors a continual interchange of ideas with scholars from Latin America and the world over.

Working groups provide a forum for thematically focused discussion among fellows, visitors, outside speakers, graduate students, and the University community. These groups provide an opportunity for scholars to define and explore emerging research themes, shape the field of comparative international study, and even influence public policy choices.

Research Support for Graduate Students Kellogg plays an active role in support of graduate training without awarding degrees itself. The institute encourages graduate student involvement in research projects, working groups, and in its seminars and lectures. Many graduate students work as teaching assistants to professors who teach undergraduate courses. Regular interaction with Kellogg fellows, visiting fellows, and international conference participants keeps students abreast of international developments and the latest research trends.

Kellogg supplements departmental fellowships to attract Ph.D. students from Latin America, awarding a stipend of $5,000 for each of five years to outstanding candidates.

Financial assistance to other graduate students includes Foreign Language and Area Studies (FLAS) fellowships, seed money grants, and dissertation fellowships to support various stages of field research or the writing of doctoral dissertations. These grants have funded initial research in many countries and have helped graduate students to obtain external support at a later date. The winners of these competitive awards in 2003 included doctoral candidates working on topics such as re-examining the nuclear proliferation puzzle, political finance and party organizations in federal systems, and Catholic revival in a Chinese village.

For more information about dissertation fellowships and seed money grants for Notre Dame graduate students or about the supplemental fellowships for graduate students from Latin America, please contact Academic Coordinator Holly Rivers at (574) 631-6023 or hrivers@nd.edu. For FLAS award information, contact Assistant Program Manager Juliana de Sousa Solís, at (574) 631-8523 or jdesousa@nd.edu. Also, see our Web site under Grants/Awards.

The Kellogg/Kroc Information Center (http://www.nd.edu/~kic) maintains a small collection focused on current events, including working papers, newsletters, and reference sources. Access to numerous electronic resources, including indices and full-text databases, is also available through the center.

Keough Institute for Irish Studies

Director:
Christopher B. Fox, Professor of English

Telephone: (574) 631-3555
Fax: (574) 631-3620
Location: 422 Flanner
E-mail: irishstu@nd.edu
Web: http://www.nd.edu/~irishstu

The Keough Institute for Irish Studies is an interdisciplinary project devoted to teaching and research in Irish culture, primarily in the English and Irish languages, and in all its internal and external relations. These relations include not only specific connections and comparisons with other cultures, but also recognitions, at both theoretical and empirical levels, of the various ways in which this field of study can be organized and illuminated in the light of contemporary theory. Ireland has an extraordinary tradition in literature (in both the Irish and English languages), a unique historical position in relation to British and European historical development, and an influence, disproportionate to its size, on the history of the United States.

On the Notre Dame campus, the Keough Institute hosts major conferences, which have included special conferences on the Famine and on the Great Irish Rebellion of 1798, co-sponsored by the Irish government; a conference entitled “Partition and Memory: Ireland, India and Palestine,” co-sponsored by the United States Institute for Peace; the American Society for Eighteenth-Century Studies; and North American Celtic Studies Association national meetings. In April 2005, the institute will host the national meeting of the American Conference of Irish Studies.

Graduate students in Irish studies are encouraged to participate in the regular bi-weekly faculty graduate on-campus seminar series and in graduate workshops. Recent speakers have included Benedict Anderson, Ciaran Carson, Elizabeth Calllingford, Seamus Deane, John McGahern, Katie Trumpener, Marjorie Howe and David Lloyd.

The month-long Irish Seminar is held in Dublin, Ireland, every summer at the Notre Dame Keough Centre in Newman House. The Irish Seminar attracts participants from universities worldwide to participate in discussion and debate with major figures, including recent guests Seamus Heaney, Nuala Ó Faoláin, Stephen Rea and Edna O’Brien.

Funded opportunities allow students to participate in the Irish Seminar or advance their knowledge of Irish by studying in a joint program at the National University of Ireland (NUI)–Galway.

The core faculty in Irish studies at Notre Dame includes members of the departments of English, History, and Classics. The core faculty is also regularly supplemented by visiting scholars who come as fellows of the Keough Institute. Recent visiting professors have included Angela Bourke of University College Dublin, Thomas Bartlett of University College Dublin, Ciarán Brady of Trinity College Dublin, Joseph Cleary of St. Patrick’s College-NUI, Terry Eagleton of Oxford University, Maud Ellman of Cambridge University, John Kelly of Oxford University and Margaret O’Callahan of Queen’s University Belfast. Through the National Endowment for the Humanities, the Keough Institute also awards an annual fellowship to a visiting scholar to concentrate on research and writing while in residence.

The University’s Hesburgh Library sustains advanced research in all areas of Irish Studies. Its rare special collections include the A. A. Luce Berkeley Collection, the William B. Todd Burke Collection, the 1798 Irish Rebellion and Act of Union Collection, the Grattan Collection of Irish Pamphlets, the O’Neill Collection of Irish Music, the Keough Vienken Collection of Swift, the David J. Butler Collection of Irish Maps, collections relating to eighteenth-century drama, the Abbey Theatre and the Cuala Press, and the massive Herbert Allen Keough Eighteenth-Century Microfilm Collection with over 200,000 eighteenth-century books, broadsides and other printed materials. Recent acquisitions include major collections in Irish language materials, the Goldsmith Press Collection in Economic Literature and, through the new Irish Fiction Initiative and Smurfitt Fund, the Loeb Collection of Irish Fiction. Containing many rare eighteenth- and nineteenth-century works, the Loeb Collection is the most comprehensive collection of Irish fiction in the world. Through major funding from the National Endowment for the Humanities and the ongoing Medieval Literature Initiative, the Notre Dame Medieval Institute in the Hesburgh Library also contains substantial collections that support Irish studies.

A graduate program in Irish language and literature may be pursued through the Ph.D. program in literature, and Irish studies through a doctoral program in English or history.
Joan B. Kroc Institute for International Peace Studies

Director:
R. Scott Appleby, the John M. Regan Jr. Director and Professor of History

Phone: (574) 631-6790
Fax: (574) 631-6793
Location: 100 Hesburgh Center
E-mail: krocinst@nd.edu
Web: http://www.nd.edu/~krocinst

The Kroc Institute is founded on the belief that peace is inexcusable from the resolution of violent conflicts and the promotion of social justice and equitable development. This comprehensive understanding of peace is rooted in the Catholic social tradition, a broadly ecumenical tradition of moral wisdom that stresses the necessity for justice in bringing about peace.

The institute's mission embraces both the prevention of violence or war, sometimes called "negative peace," and the building of cooperative, just relations between people, or "positive peace." Among the many college and university programs in peace and conflict studies, the Kroc Institute is a leader in addressing the political, cultural, religious, social, and economic factors that lay the foundation for positive peace.

The institute's library contains more than 95,000 books and periodicals, catalogues, journals, and photographic materials. The reference collection also contains about 50,000 photographs and negatives of miniatures and illuminated initials from the 12,000 medieval and Renaissance manuscripts held in the Biblioteca Ambrosiana in Milan. The collection also contains about 50,000 photographs and negatives of miniatures and illuminated initials from the manuscripts, supplemented by some 15,000 color slides. The Mary Davis Drawings Collection contains photographs, negatives, and color slides of the 8,000 drawings in the Ambrosiana. The institute purchases all volumes related to the Ambrosiana materials and maintains a bibliography of all citations to Ambrosiana manuscripts.

The Medieval Institute

Director:
Thomas F. X. Noble, the Robert M. Conway Director of the Medieval Institute and Professor of History

Phone: (574) 631-6603
Fax: (574) 631-8644
Location: 715 Hesburgh Library
E-mail: medinst@nd.edu
Web: http://www.nd.edu/~medinst/

The Medieval Institute, established in 1946 and located on the seventh floor of the Hesburgh Library, is a center of research and advanced instruction in the civilization of the Middle Ages, with particular strengths in intellectual history, Byzantine studies, which has extensive holdings in the intellectual history of the Byzantine empire.

The Frank M. Folsom Ambrosiana Microfilm and Conroy Lectures, an annual series of three lectures delivered by a distinguished medievalist and published and unpublished, for the history of medieval universities. The institute's Paleography Room contains an extraordinary collection of catalogues, facsimiles, and reference tools to assist research on manuscripts.

The institute's library has long held extensive collections relevant to the Latin culture of the Middle Ages. Holdings in the history of medieval education are unrivaled in North America. Recently, the institute has enhanced its focus to include vernacular and Latin literature, musicology, liturgy, medieval Judaism and Islam, and art history. Microfilms of more than 3,000 medieval manuscripts from European libraries and a collection of more than 300 facsimiles of medieval seals supplement this collection. Over the years the institute has accumulated a valuable collection of medieval manuscripts, incunabula, and other manuscripts, and rare books that are preserved in the Department of Special Collections. Also found there is the John Augustus Zahm, C.S.C., Dante Collection containing early and rare editions and an extensive and valuable set of literary studies of the Divine Comedy from the 19th and early 20th centuries. Recently, the institute acquired 90 medieval coins, likewise housed in Special Collections.

Research in the institute is also supported by the University's Milton V. Anastos Collection in Byzantine studies, which has extensive holdings in the intellectual history of the Byzantine empire.

The Frank M. Folsom Ambrosiana Microfilm and Photographic Collection consists of microfilms of the 12,000 medieval and Renaissance manuscripts held in the Biblioteca Ambrosiana in Milan. The collection also contains about 50,000 photographs and negatives of miniatures and illuminated initials from the manuscripts, supplemented by some 15,000 color slides. The Mary Davis Drawings Collection contains photographs, negatives, and color slides of the 8,000 drawings in the Ambrosiana. The institute purchases all volumes related to the Ambrosiana materials and maintains a bibliography of all citations to Ambrosiana manuscripts.

The institute regularly sponsors major conferences and hosts a variety of guest lectures and seminars every year. In fall 2002, the institute inaugurated the Conway Lectures, an annual series of three lectures delivered by a distinguished medievalist and published under institute auspices.

For a description of the master of arts program in peace studies, please refer to the Division of Social Sciences section of this Bulletin.
The Radiation Laboratory's research programs are principally conducted by members of the University's faculty aided by students of all levels, postdoctoral fellows, and visiting scholars from around the world. Several members of the laboratory faculty are also professors in academic departments. Scientists at the Radiation Laboratory conduct research in collaboration with faculty members. Graduate students are accepted as members of the laboratory on recommendation by their faculty and Radiation Laboratory research advisors. Graduate students frequently are supported financially by Radiation Laboratory research fellowships during the development of their doctoral dissertations.

The Radiation Laboratory operates from its own building that houses many special facilities developed for the study of the effects of light and radiation. Three electron accelerators are housed in underground vaults adjacent to the main laboratory building. These accelerators include an 8-million-electron-volt (MeV) linear accelerator used to study chemical and physical processes occurring at nanosecond or longer times; a 2 MeV Van de Graaff accelerator used in studies of Raman spectroscopy of short-lived radicals and electronically excited molecules; and a 3 MeV Van de Graaff dedicated to studies of electron spin resonance of intermediates produced during radiation chemical processes. In addition, the laboratory has three cobalt sources (60Co) for irradiation rated at sixteen, four, and one kilocuries.

Studies with visible and ultraviolet light are carried out using many different types of light sources. These include several nitrogen lasers, dye lasers, excimer lasers, and high-intensity YAG lasers capable of producing light pulses as short as 10-11 sec, for irradiation in the visible and ultraviolet regions. Facilities are available for study of radiation processes at high pressures and very low temperatures. Analytical facilities include various types of spectrophotometers, electron-spin-resonance (ESR) spectrometers, a Raman spectrophotograph for time-resolved studies, high-resolution Raman spectrophotograph/microscope, spectrophotometer and fluorescence lifetime apparatus, gas and liquid chromatographs, capillary electrophoresis, an ion chromatograph, a mass spectrometer, a differential scanning calorimeter, a Fourier-transform infrared spectrometer, light-scattering and electrochemical apparatus, and other similar types of equipment. A state-of-the-art Atomic Force Microscope operates in the laboratory to characterize materials on the nanometer scale and near-field-scanning microscopy capabilities are currently under development. A transmission electron microscope is also available at the Rad Lab. Computer facilities support research programs in theoretical chemistry and kinetic modeling. The laboratory operates its own glass, electronics, graphics, and machine shops.

The Radiation Laboratory is home to the Radiation Chemistry Data Center, which provides the international scientific, engineering, and industrial communities with bibliographic and numeric databases on topics of importance to the fundamentals of energy generation and environmental management.
The Five-Year, Double Degree Program in Arts and Letters/Engineering enables students to earn two undergraduate degrees in 10 semesters of course work. It provides a select group of students the opportunity to combine the values of an intensive liberal arts education with their professional training in engineering.

**Research: Conferences, Lectures, and Publications**

The center regularly brings to campus distinguished speakers to lecture on topics relevant to the interests of students and faculty involved in all of its academic programs. This includes a major speaker series in the History and Philosophy of Science (HPS), bringing to campus eight or more well-known scholars every year. The center also sponsors activities and lectures specifically devoted to applied science and technology and to their social and ethical implications. Issues pertaining to risk assessment, the environmental crisis, current issues in biotechnology, medical ethics, and science and religion have all been the subject of lectures or panel discussions recently, as have computer ethics and nuclear weapons control.

Over the years, the Reilly Center and HPS Program have cosponsored several major academic conferences. The most recent events have included “The Need for a New Economics of Science,” which examined the changing economic relations of science and funded research; a major international conference held on “Galileo and the Church,” and a joint conference on science and values, cosponsored by the HPS programs at Notre Dame and the University of Bielefeld (Germany). Proceedings of major conferences are made available as volumes in the series *Studies in Science and the Humanities from the Reilly Center,* published through the University of Notre Dame Press. In addition, smaller conferences are sponsored on an occasional basis.

**Walther Cancer Research Center**

**Director:**
Rudolph M. Navari, M.D., Associate Dean, College of Science

Telephone: (574) 631-9931  
Fax: (574) 631-4939  
Location: 250 Nieuwland Science Hall  
E-mail: wcc@nd.edu  
Web: http://cancerresearch.nd.edu

The Walther Cancer Research Center is a collaboration between the University of Notre Dame and the Walther Cancer Institute, a private nonprofit research organization affiliated with major universities and medical institutions. The Walther Cancer Center’s activities include a wide variety of specific areas including cell biology, biochemistry, drug design, clinical oncology, and patient care. The center emphasizes collaboration and communication among its members in order to maximize the transfer of information between the laboratory and the clinic.

The specific objectives of the research center at the University involve four major areas of investigation: the molecular biology and gene targeting program, the cell biology and cell signaling program, drug design and development, and clinical oncology.

The molecular biology and gene targeting program utilizes transgene technology to develop mice with either delayed expression or expression of mutated forms of proteins. These technologies permit the study of the relative contribution of components of the coagulation and fibrinolytic systems in various stages of cancer and methods to potentially identify new therapeutic regimens.

The cell biology and cell signaling program studies the mechanisms and regulation of cell proliferation, cell motility, angiogenesis, apoptosis, and transformation. Using a variety of cancer cell culture systems and techniques, an *in vitro* assessment of cell proliferation, cell death, invasion, and migration is carried out with an emphasis on the biology of hormone-dependent cancers, experimental therapeutics, and hormone resistance.

The drug design and development program investigates the synthesis and the structural details of various potential chemotherapeutic agents as well as their interaction with biological receptors at the molecular level. The structural characterization is accomplished using high-field nuclear magnetic resonance mass spectroscopy and X-ray crystallographic techniques.

The clinical oncology program studies the doctor-patient relationship with the goal of improving communication in the areas of truth telling, confidentiality, informed consent, decision making, and end-of-life care. Current studies include the development of an educational intervention for patients with a new cancer diagnosis, the development of new antiemetics, antibiotic use in hospice care, and palliative care.

The 21 faculty in the Walther Cancer Center are members of the departments of biological sciences and chemistry and biochemistry.
The School of Architecture currently offers three programs that challenge and respond to the exigencies of environmentally sustainable, that is based on and extends and supports good human communities, that is in spirit and form, that gives physical expression to classicism. The curriculum fosters design that is classical influencing and traditional European and American urban discourses of classical architecture, vernacular building and traditional European and American urbanism. The curriculum fosters design that is classical in spirit and form, that gives physical expression to classical architecture descending from Greece and Rome.

Students choosing to concentrate in classical architecture spend extensive time in both South Bend and Rome on studio projects and ancillary course work that develop their knowledge of and ability to participate in the 2,500-year old tradition of western classical architecture descending from Greece and Rome.

Students choosing to concentrate in urban design likewise spend time in South Bend and Rome — and travel extensively to other towns and cities as well — learning in their design studios the formal principles of good urban design, and being introduced to the political, legal and cultural frameworks of contemporary traditional urban design through studio-based community design charrettes.

An independent semester-long terminal design project is required of all students in their final semester. This project provides an opportunity for students to design in a variety of scales and contexts of their own choosing, in which contemporary architectural issues are explored in projects that require the student to synthesize their academic experience. M.Arch student projects may include an urban design component, but must include the in-depth design of a building.

Path A: The Master of Architectural Design and Urbanism (M.ADU) Post-professional Degree

The two-year master of architectural design and urbanism post-professional degree is intended for students who already hold an accredited professional degree and are seeking to further develop their design skills and critical thinking in the disciplines of classical architecture and traditional urban design. The studio course work consists of a foundational first semester spent in South Bend introducing students to classical architectural design, urban principles and history, and the history of Rome; followed by two semesters of studio work (one in Rome) in the student’s selected concentration, followed by an independent terminal design project in the student’s fourth semester. Forty-five credit hours are required for graduation, and M.ADU students are limited to 12 credit hours per semester. M.ADU students also serve as teaching assistants in undergraduate courses during their three semesters in South Bend, for which they receive a stipend.

Although Path A leads to a post-professional degree, and although Notre Dame encourages and accepts applications from foreign students with professional degrees in their home country, foreign applicants should note that the master of architectural design and urbanism (M.ADU) degree does not permit persons lacking an N.A.A.B.-accredited degree to sit for the Architectural Registration Examination (A.R.E.) in the United States.

Paths B and C: The Master of Architecture (M.Arch) Professional Degree

The National Architectural Accrediting Board (N.A.A.B.) requires all schools offering professional degree programs in architecture to publish the following statement:

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (N.A.A.B.), which is the sole agency authorized to accredit US professional degree programs in architecture, recognizes three types of degrees: the bachelor of architecture, the masters of architecture and the doctor of architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on its degree of conformance with established educational standards.

Masters degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree, which, when earned sequentially, comprise an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.
Path B: Two-year M.Arch

Notre Dame’s two-year master of architecture degree is intended for students entering the University of Notre Dame with a four-year pre-professional degree in architecture who are seeking a professional graduate degree that focuses upon classical architecture and traditional urbanism. Studio course work is identical to that of the two-year Path A M.ADU program, with a foundational first semester spent in South Bend, followed by two semesters of studio work (one in Rome) in the student’s selected concentration, followed by a terminal design project in the student’s fourth semester. Required studio and seminar courses are supplemented by other courses needed to meet the N.A.A.B.’s substantive curricular requirements for accredited professional architecture degree programs, which will vary from student to student depending upon their undergraduate architectural education. Approximately 60 credit hours are required for graduation, and the normal course load for Path B / two-year M.Arch students is 15 credit hours per semester.

Degree Requirements

As described above, degree requirements include various studio and theory courses in Paths A, B and C; as well as various ancillary history and technology courses for Paths B and C. Minimum credit hour requirements for Paths A, B and C are indicated below, as well as the anticipated time to complete them:

- Path A: M.ADU
  - 45 credit hours (48 max); two years
- Path B: M.Arch
  - 60 credit hours; two years
- Path C: M.Arch
  - 96 credit hours; three years

Application

All applications to the Notre Dame graduate programs in architecture must be done on line. In addition to the Notre Dame Graduate School’s requirements for application, the following documents are also to be submitted:

- Letters of Recommendation: for those applicants with practice experience in architecture, a minimum of one letter of recommendation from a registered practicing architect is required in addition to the references required by the Graduate School.
- Portfolio: all applicants must submit a portfolio of their work from academic experience, from independent projects, and/or from practice. The portfolio size should be a maximum 11 x 14 inches and should include only reproductions, not originals. Candidates submitting portfolios in excess of 11 x 14 inches will not be considered.

A visit to the campus and a personal interview are encouraged. The School of Architecture’s graduate studies committee conducts interviews.

Completed applications and all admission requirements except the portfolio should be directed to the Office of Graduate Admissions, and are due on February 1 for admission in the fall of that same year. Portfolios only (with self-addressed return package and sufficient return postage, if return of portfolio is desired) should be directed to:

Graduate Studies Committee
School of Architecture, 110 Bond Hall
University of Notre Dame
Notre Dame, IN 46556-5652

Financial Support

Candidates in the M.ADU program receive financial support in the form of full tuition scholarships and stipends in the form of graduate assistantships and fellowships including the Bond-Montedonico Fellowship program, the Joseph Z. Burgee and Joseph Z. Burgee Jr. Fellowship program, the James A. Nolan Jr. Fellowship, and the Joseph M. and Virginia L. Corasaniti Architecture Fellowship. Teaching or research requirements for M.ADU students receiving stipends comprise a minimum of three out of four semesters, and average 15 hours per week during the academic semester. M.Arch students are eligible for financial aid in the form of partial tuition scholarships, loans, and work study. Path C students are not permitted to have work study jobs during their first year of study.

Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

Required Courses

- 60211. Architectural History I / Pre-Renaissance (3-3-0)
  A survey of architectural history from the Egyptian, Greek, and Roman civilizations to Europe during the Romanesque and Gothic periods. Each period is studied in relation to physical determinants, such as climate, materials, technology, and geography, and historical determinants such as economics, religion, politics, society, and culture.
- 60221. Architectural History II / Post Renaissance (3-3-0)
  This course continues the history survey, beginning with Renaissance and Baroque Europe, continuing to the 18th and 19th centuries in Europe and the United States, to the world-wide impact of the Modern Movement and late 20th-century reactions to it.
- 60411. Building Technology I / Masonry and Timber (3-3-0)
  Qualitative and quantitative principles of traditional building assembly and detailing in masonry and timber.
- 60421. Building Technology II / Concrete, Steel and Glass (3-3-0)
  Qualitative and quantitative principles of modern building assembly and detailing in concrete, steel and glass.
- 60431. Environmental Systems I / Acoustics and Illumination (3-3-0)
  Principles of acoustics, illumination, electrical and signal systems, with emphasis on architectural applications.
- 60511. Structures I / Introduction to Structures (3-3-0)
  Basic principles of building structures with a focus on statics. General topics include structural stability, dynamics and lateral loads, structure types, and materials. Computational subjects involve vectors and forces, torque, shear, bending moments, spanning conditions, beams, columns, funicular structures, arches, and domes.
- 60521. Structures II / Concrete (3-3-0)
  Prerequisite: ARCH 60511. The study of concrete structures. Studies include beams, columns, frames, shear walls and connections. Subjects include reinforcement, material properties, design, foundations, and building codes.
- 61021. Introduction to CAD (3-0-4)
  Instruction in analysis and representation of architectural form through the medium of the computer, including drafting and three-dimensional modeling.
- 61111. Architectural Design I (6-0-12)
  Part one of a required two-semester studio sequence introducing all three-year M.Arch students to the grammar, syntax, and composition of classical architecture and the latter’s relationship to tectonics, expression, and urbanism.
- 61121. Architectural Design II (6-0-12)
  Part two of a required two-semester studio sequence introducing all three-year M.Arch students to the grammar, syntax, and composition of classical architecture and the latter’s relationship to tectonics, expression, and urbanism.
70211. History of Rome (3-3-0)
A history of Rome from its origins through the Republic and Empire, its ongoing character as the spiritual and administrative center of European Christendom, and its role as the capital of modern Italy, with special attention to the relationship between its political and religious history and its formal order.

70311. Urban Elements and Principles (3-3-0)
A required theory course for all graduate students enrolling in a broad survey, both typological and historical, of the physical characteristics of traditional western cities and their development; with special emphasis upon urban form as a cooperative human artifact embodying particular cultural values and ideals.

71111. Elements and Principles of Classical Architecture (6-0-8)
A required first design studio for all M.ADU and two-year M.Arch students, introducing them to the grammar, syntax, and composition of classical architecture and the latter’s relationship to tectonics, expression, and urbanism.

71141. Classical Architecture I (6-0-12)
Part one of a two-studio sequence for students concentrating in classical architecture, in projects that explore in detail selected elements and aspects of classical architecture.

71142. Urban Design I (6-0-12) – Rome
Part one of a two-studio sequence for students concentrating in urban design, in projects that focus in detail upon the formal elements of traditional European urbanism; with a visiting critic, in Rome.

73321. Architectural Treatises (3-3-0)
Consideration of the theoretical and practical background of traditional architecture through a careful reading both of primary theoretical sources (including Vitruvius, Alberti, Serlio, Palladio, Vignola, Claude Perrault, and others) as well as influential pattern books; and the pertinence of both to contemporary architectural discourse and practice.

73322. Italian Urbanism (6-3-6) – Rome
A six-credit drawing and theory course centered upon outdoor, on-site analyses and documentation of both prototypical and exceptional urban conditions in Rome and elsewhere in Italy. Analytical work to be documented by a combination of measured drawings, sketchbook, watercolor and photographic records of sites visited in Rome and on multiple field trips.
The Division of Engineering

Five departments in the Division of Engineering offer program opportunities to qualified graduate students for advanced instruction and research leading to the degrees of master of science and doctor of philosophy. The graduate program strikes a balance between basic science and engineering application, theory and experiment, and scholarly achievement and professional development. The division attracts scholars—faculty, postdocs and students—with interests encompassing a wide range of topics in engineering and the geological sciences.

Through its program of sponsored research, the division enhances the opportunities available to its faculty and graduate students to conduct research in their areas of interest. Responding to the requirements of an increasingly complex and interconnected social context, the division has developed a number of interdisciplinary programs of advanced teaching and research. Some of these programs are in collaboration with faculty members of other divisions and institutes within the University, while others involve cooperative efforts with professional colleagues from outside organizations. (http://www.nd.edu/~engineer/prospects/geninfo.htm)

Aerospace and Mechanical Engineering

Chair: Stephen M. Batill
Director of Graduate Studies: John E. Renaud

Aerospace and Mechanical Engineering offers graduate programs of study and research leading to the degrees of master of science in aerospace engineering, master of science in mechanical engineering, master of engineering in mechanical engineering, and doctor of philosophy. In addition, a combination master of engineering/juris doctor degree program is available only to Notre Dame law students.

For those students seeking a master’s degree, the programs aim at proficiency and creative talent in the application of basic and engineering sciences to relevant problems in the two engineering disciplines. The doctoral program strives to prepare students for creative and productive scholarship. It is designed to suit each student’s interests and give students the opportunity to conduct individual research under the supervision of the department faculty.

Students in either the master’s degree or the doctoral degree programs must satisfy departmental and University course requirements along with the residence requirement.

Every degree-seeking student is required to participate in the academic programs of the department by performing a teaching-related assignment.

Current research efforts are within the areas of aerospace sciences, biomechanics and biomaterials, mechanical systems and robotics and design, solid mechanics and materials, and thermal and fluid sciences.

Aerospace Sciences

The aerospace sciences area emphasizes both the theoretical and the experimental aspects of aeroacoustics, aerodynamics, aerospace systems design, high-lift aerodynamics, low Reynolds-number aerodynamics, low-speed aerodynamics, particle dynamics, flow control, transonic, supersonic and hypersonic flows, and vortex aerodynamics.

Biomechanics and Biomaterials

The biomechanics and biomaterials area offers opportunities for both basic and applied research using both experimental and computational techniques. Research focuses on the design and manufacture of next-generation orthopaedic devices, biological material characterization, the design, synthesis, and characterization of novel biomaterials, biocompatibility, tribology, surgical simulation, human body kinematics, and computational modeling of biomechanical systems. Collaborative research efforts are maintained with industrial partners and the Departments of Biological Sciences, Chemical and Biomolecular Engineering, and Computer Science and Engineering.

Mechanical Systems and Robotics and Design

Research in this area is in both the theoretical and the experimental aspects of computer-aided design and manufacturing, design for manufacturing, design optimization, model-based design, reliability, dynamic and control systems, mechanism and machine theory, robotics, and tribology.

Solid Mechanics and Materials

Research in this area focuses on the theoretical, experimental, and computational aspects of coupled field phenomena in continuum mechanics, cyclic plasticity, damage mechanics, dynamic deformation and fracture, fatigue crack initiation, fracture analysis of aircraft structures, high temperature fatigue of engineering alloys, inelastic buckling, interface fracture mechanics, modeling of composite and fused deposition polymeric materials, and structural stability.

Thermal and Fluid Sciences

Experimental and theoretical research in this area is conducted in boundary layer phenomena, chaos in fluid systems, computational fluid mechanics, detonation theory, droplet sprays, fire research, fluid-structure interaction, flow control, food processing technology, hydronics, hydrodynamic stability, industrial energy conservation, microfluid mechanics, molecular dynamics, multiphase and buoyant flows, reacting flows, turbulent flows, and solidification of liquid metals.

In cooperation with the Department of Civil Engineering and Geological Sciences, the Department of Aerospace and Mechanical Engineering offers an interdisciplinary program of study and research in the areas of solid, continuum, and structural mechanics. Courses in these subject areas listed by each department are cross-listed and are offered jointly. Students pursuing research in the areas of biomaterials and biomechanics may take selected courses offered by the Department of Chemical and Biomolecular Engineering.

Course Descriptions

Each course listing includes:
- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

560611. Mathematical Methods I (3-3-0)
Multidimensional calculus, linear analysis, linear operators, vector algebra, ordinary differential equations.
60612. Mathematical Methods II
(3-3-0)
Continuation of AME 561 (60611). Partial differential
equations, characteristics, separation of variables, similarity
and transform solutions, complex variable theory, singular
integral equations, integral transforms.

60613. Finite Elements in Engineering
(3-3-0)
Fundamental aspects of the finite-element method are
developed and applied to the solution of PDEs encoun-
tered in science and engineering. Solution strategies for
parabolic, elliptic, and hyperbolic equations are explored.

60614. Numerical Methods
(3-3-0)
Interpolation, differentiation, integration, initial value
and boundary value problems for ordinary differential
equations; solution methods for parabolic, hyperbolic,
e and elliptic partial differential equations; applications to
classical and current research problems in engineering
and science.

60621. Intro to Aeroelasticity
(3-3-0)
Aerodynamic loadings, steady state aeroelastic problems,
flutter analysis under various flow conditions, analyti-
cal methods in aeroelasticity demonstrated by selected
problems.

60622. Structural Dynamics
(3-3-0)
Examines problems in the vibration of continuous
linear elastic structures, including strings, rods, beams,
membranes and plates; Hamilton’s principle; solution by
separation of variables, integral equation and transform
methods; variational methods of approximation includ-
ing the finite element method; computational methods.

60623. Analytical Dynamics
(3-3-0)
Fundamental principles and analytical methods in
dynamics with applications to machine design, robot
analysis, and spacecraft control.

60624. Continuum Mechanics
(3-3-0)
Deformation and motion of continua and singular sur-
faces; general balance equations; stress principle; balance
laws for mass, momentum, and energy; thermodynamics
of continua; entropy balance; constitutive relationships;
material symmetry and invariance theory; linear and
nonlinear constitutive models; variational foundations;
topics of special interest.

60630. Microparticle Dynamics
(3-3-0)
A first-year graduate level course that introduces the
subject of aerosol dynamics with emphasis on the funda-
mental laws that govern microparticle transport deposi-
tion and suspension in gases and vacuum.

60631. Advanced Measurements Laboratory
(3-3-0)
A graduate course designed to give students laboratory
experience in the use of modern measurements and the
design of experiments for specific problems.

60632. Physical Gas Dynamics
(3-3-0)
An introduction to quantum mechanics, internal
structure, and quantum energy states of monatomic
and diatomic gases. Application to chemical reactions,
dissociating gases, and ionized gases. High temperature
properties of air.

60633. Introduction to Acoustics and Noise
(3-3-0)
A course that treats the fundamentals of sound and noise
production, transmission, and measurement. Theoretical,
experimental, environmental, and legislative topics.

60634. Intermediate Heat Transfer
(3-3-0)
Fundamentals of heat convection and radiation, scaling
and heat transfer analysis in external and internal flows,
turbulent heat transfer, thermal radiation properties of
ideal and real surfaces, radiative transfer in black and
gray enclosures, introduction to radiative transfer with
participating media.

60635. Intermediate Fluid Mechanics
(3-3-0)
Derivation of governing equations of mass, momentum,
and energy for a viscous, compressible fluid; general sur-
vey of vortex dynamics, potential flow, viscous flow, and
compressible flow.

60636. Fundamentals of Combustion
(3-3-0)
Thermodynamics and chemical kinetics of combus-
tion reactions, modeling of reacting fluid mechanical
systems, subsonic and supersonic combustion, detailed
and on-step kinetics, ignition theory, asymptotic and nu-
merical techniques for modeling combustion systems.

60638. Turbo Engine Components
(3-3-0)
The course concentrates on describing the hardware used
in modern turbofan engines and presents the detailed
analysis of these components. In particular, the course
covers the analysis of inlets, fans compressors, combus-
tors, turbines, afterburners and nozzles. In addition to
the analysis, the course introduces design guidelines used
by industry. This course describes why, for example, the
swirl patter in fans and compressors are the way they
are by design. Most of the relevant concepts, terms and
associated analysis related to turbine engine design are
introduced.

60639. Advanced Aerodynamics
(3-3-0)
A graduate level course that addresses various topics
related to aerodynamics with application to surface or
flight vehicles.

60641. Advanced Mechanics of Solids
(3-3-0)
The course covers fundamental principles and techniques
in stress analysis of trusses, beams, rigid frames and thin-
walled structures. Emphasis is placed on energy methods
associated with calculus of variations.

60643. Tribology
(3-3-0)
A first-year graduate course that introduces the subject
of the mechanics of surfaces in contact, with emphasis on
the fundamental analysis of surface topography, contact
mechanics, friction and frictional heating and wear.

60644. Finite Element Methods in Structural Mechanics
(3-3-0)
Finite element methods for static and dynamic analysis
of structural and continuum systems. Displacement
approach for two- and three-dimensional solids along
with beams, plates and shells. Material and geometric
nonlinearities.

60645. Advanced Mechanical Behavior of Materials
(3-3-0)
The materials science and engineering of the mechanics
of solids. Description of the relationships between the
macrosopic deformation of engineering materials and the
meso-, micro- and atomic-level structural mechanisms.

60651. Advanced Vehicle Dynamics
(3-3-0)
The equations of motion of rigid airplane are developed
and analyzed. The relationship between aerodynam-
ics stability derivatives, vehicle motion, and handling
qualities is presented. Also classical and modern control
theory is applied to the design of automatic flight control
systems.

60652. Advanced Control Systems
(3-3-0)
The application of techniques such as the phase-plane
method, Lyapunov method, vector-format method, the
z-transform method, and statistical methods to the de-
sign of control systems.

60653. Math Theory of Robotic Manipulation
(3-3-0)
Homogeneous representation of rigid motion in R3,
exponential coordinates for rigid motions, twists and
screws, spatial and body velocities and adjoint repre-
sentation for coordinate transformations. Manipulator
kinematics via the product of exponentials formulation,
inverse kinematics, Jacobians, singularities and manipu-
lability. Multifingered hand kinematics including contact
models, the grasp map, force closure, grasp planning,
grasp constraints and rolling contact kinematics.

60654. Advanced Kinematics
(3-3-0)
An in-depth study of the curvature theory of general pla-
nar one degree of freedom motion and the special case of
first-order translations. Development of Frenet-Stenzel’s
equation. Applications to synthesis of one degree of free-
dom mechanisms for path tracking, rigid body guidance
and function generation.

60656. Vision-Based Control of Engineering Systems
(3-3-0)
A study of tools of estimation and stochastic modeling
and their use in the application of artificial vision to the
guidance and control of multi-degree-of-freedom mecha-
nisms. The Kalman filter and extended Kalman filter are
developed; state and observation equations, based,
respectively, on robot mechanisms and discrete visual
issues of image analysis, time delay, and the modeling of
random-disturbance consistencies as well as kinematic
holonomy.
For master’s degree students.

This course is reserved for the six-credit-hour thesis reserved by any University course.

Concepts, Engineering applications.

Nonlinear programming nonconvex optimization, Interior-point methods, Primal-Dual methods, Approximation theory.

Mechanical adaptability of the skeleton to mechanical loads. Applications to the design of orthopaedic devices.

The effects of mechanical loading on cells are examined. Mechanical properties and material structure of cell materials are reviewed. Filaments, filament networks and membranes are examined. Mechanics of flow induced effects, adhesion cell-substrate interactions, and signal transduction are examined. Experimental techniques are reviewed.

To teach students the motion capabilities of the human body and to develop and study kinematic models of the individual joints in the human body. Both simply and to develop: kinematic models of the individual joints.

This course involves special studies in the field of metal cutting mechanics.

The materials science and engineering of failure, including fracture and fatigue. Description of the relationships between the failure of engineering materials and the meso-, micro- and atomic-level structural mechanisms.

Review of state space linear dynamical control systems, basic Lyapunov theory, and bifurcation theory. Basic concepts and methods from differential geometry including manifolds, tangent spaces, vector fields, distributions, Frobenius’ Theorem, and matrix groups and their application to nonlinear control including I/O and full state linearization via state feedback, controllability and observability, trajectory generation for nonlinear systems, and applications to stratified systems such as legged robotic locomotion and robotic manipulation.

This course involves special studies in the field of metal cutting mechanics.

Required for candidates for the advanced degree in the research program.

This course is reserved to provide the required continuing minimal registration of one credit hour per academic semester for nonresident graduate students who wish to retain their degree status.

In addition to the courses listed above, selected 50000-series courses for advanced undergraduates may be taken for graduate credit, subject to approval of the Department of Aerospace and Mechanical Engineering. For information on these courses, refer to the College of
Engineering section of the Bulletin of Information, Undergraduate Programs.

The Program of Studies

The department offers programs leading to the degrees of master of science and doctor of philosophy. The aim of the graduate program is to prepare qualified candidates for research, development, teaching, and other professional careers in chemical engineering. Thus, the Ph.D. program is emphasized.

The objective of the doctoral program is to superimpose upon a broad education the ability to think independently in new fields, to coordinate technical ideas at an advanced level, and to make a systematic approach to the solution of new problems.

The course work is chosen in consultation with department faculty and the dissertation research adviser according to procedures outlined in A Guide to Graduate Studies in Chemical and Biomolecular Engineering (available from the department office).

The master’s degree program consists of at least 15 credit hours of course work, plus 15 credit hours of thesis research and graduate seminar. For the Ph.D. degree, a minimum of 30 credit hours of course work is required, in addition to 42 credit hours of dissertation research and graduate seminar. There are required courses in the areas of thermodynamics, reaction engineering, transport phenomena, and mathematical methods.

After the second semester of residence, each Ph.D. student presents written and oral reports based on thesis research or project work. These reports, along with performance in courses, in research, and in teaching assistantship duties, constitute the comprehensive evaluation in chemical engineering. This allows the faculty to evaluate the student’s grasp of chemical engineering fundamentals and his or her ability to perform original, independent research. Students who pass the comprehensive evaluation may continue to the Ph.D. program.
CHEMICAL AND BIOMOLECULAR ENGINEERING

Ph.D. students generally take the oral candidacy examination before the end of the fifth semester in residence. This examination focuses on the progress achieved in thesis-related work and on the proposed future research.

The departmental faculty believes that all students seeking advanced degrees in chemical engineering should have some experience related to the instruction of others. Therefore, all first- and second-year graduate students are assigned teaching assistant duties. These duties consist of conducting recitation sections for lecture courses, supervising laboratory courses, or grading homework.

Full-time students normally complete the Ph.D. degree requirements in about four-and-a-half years beyond the bachelor's degree. Requirements for the master's degree can normally be completed in two years of full-time study.

A student pursuing the Ph.D. degree will be eligible to receive an M.S. degree after completing five semesters in the Ph.D. program, passing the Ph.D. candidacy exam, and preparing and submitting for publication a research paper in collaboration with the student's research advisor(s). This paper shall describe work in which the student has a primary (not supporting) role, submitted to a research journal or to the proceedings of a technical conference, and be subject to peer review.

New graduate students in chemical engineering select their research area and director during their first semester in residence at Notre Dame. Areas of current research include applied mathematics; biological materials; bioseparations; catalysis and surface science; ceramic materials; chemical reaction engineering; combustion synthesis of materials; drug delivery systems; ecological modeling; environmentally conscious design; fuel cells; gas-liquid flows; ionic liquids; materials science; microfluidic devices; microscale sensor arrays; molecular modeling and simulation; molecular theory of transport; nanostructured materials; parallel computing; phase equilibria; pollution prevention; polymer rheology; process dynamics; process optimization and design; process simulation; statistical mechanics; superconducting materials; supercritical fluids; suspension rheology; and transport in porous media.

More detailed descriptions of the research interests of individual faculty members may be found at the departmental website.

In addition to graduate assistantships and Peter C. Reilly Fellowships, several industrial fellowships also are available for highly qualified students.

**Course Descriptions**

Each course listing includes:
- Course number
- Title
- Credits per semester—lecture hours per week—laboratory or tutorial hours per week
- Course description

**CHEMICAL AND BIOMOLECULAR ENGINEERING**

60538. Introduction to Statistical Thermodynamics for Engineers
(3-3-0)

Development of the fundamentals of statistical mechanics and thermodynamics. Applications to monatomic gases and solids, diatomic and polyatomic gases, chemical equilibrium, dense gases, solids, and liquids.

60539. Chemical Process Simulation and Optimization
(3-3-0)

This course will provide an overview of the computational methodologies used for chemical process simulation and optimization. Topics will include: (1) how to formulate process models; (2) how to solve process models (linear and nonlinear equation solving, etc.); and (3) how to optimize using process models (linear and nonlinear programming, global optimization, etc.).

60540. Mathematical Methods in Engineering I
(3-3-0)

Rigorous development of tools of mathematical analysis and application of these to solve engineering problems. Topics include matrices, linear and nonlinear ordinary differential equations, special functions, and modeling.

60541. Transport Phenomena I
(3-3-0)

Differential balance equations that govern transport processes are derived and used to solve problems that demonstrate the physical insight necessary to apply these equations to original situations. The emphasis in this course is on fluid mechanics.

60542. Mathematical Methods in Engineering II
(3-3-0)

Introduction to solid state and surface chemistry, adsorption, reaction of gases on solid surfaces, experimental techniques in catalysis, catalyst preparation, and industrial catalytic processes.

60543. Advanced Chemical Reaction Engineering
(3-3-0)

Prerequisite: Undergraduate course in chemical reaction engineering. Analyses and mathematical modeling of chemical reactors with emphasis on heterogeneous reaction systems.

60544. Transport Phenomena II
(3-3-0)

The differential equations that govern transport phenomena are applied to the solution of various heat and mass transfer problems.

60545. Advanced Chemical Reaction Engineering
(3-3-0)

Partial differential equations, characteristics, separation of variables, similarity and transform solutions, complex variable theory, singular integral equations, integral transforms. (Every spring)

60546. Mathematical Methods in Engineering II
(3-3-0)

This course is focused on an advanced treatment of thermodynamic concepts. An introduction to molecular thermodynamics is given, followed by detailed treatments of phase equilibrium, equation-of-state development and activity coefficient models.

60547. Polymer Engineering
(3-3-0)

Prerequisite: Senior or graduate student standing in science or engineering. A course for seniors and graduate students in science and engineering who are interested in applications of engineering to polymer science and technology. Topics include polymerization reactions and the structure, properties, processing, and production of polymers.

60551. Structure of Solids
(3-3-0)

This class seeks to provide students with an understanding of the structure of solids, primarily as found in metals, alloys, and ceramics applied in technological applications. The structure of crystalline solids on the atomic level as well as the microstructural level will be discussed. Imperfections in the arrangements of atoms will be described, especially as regards their impact on properties. The study of structure through X-ray diffraction will be a recurring theme. A sequence of powder diffraction laboratory experiments (four to five class periods) also will be included.

60552. Environmental Design
(3-3-0)

The goals of this course are to explore how to design and operate chemical processes so that we avoid or decrease the amount of pollutants that are released into the environment. Thus, this is essentially a course in pollution prevention. In the course, we identify and apply chemical engineering principles learned in previous classes (thermodynamics, phase equilibria, transport, reaction engineering) to environmental problems. In addition to normal lectures, discussions and homeworks, the course is comprised of a series of case studies that compare the design and operation of chemical processes using conventional technology versus new technology that incorporates various principles of pollution prevention.
60576. Global Climate Change
(3-3-0)
This course integrates the principles of physical sciences and engineering as they pertain to the environment, with additional discussion of social, political, and theological concerns. We analyze the complex couplings and feedback mechanisms that operate between the geosphere, the biosphere, the atmosphere, and the hydrosphere as related to global climate changes.

60581. Biomedical Engineering Transport Phenomena
(3-3-0)
This course brings together fundamental engineering and life science principles, and provides a focused coverage of key concepts in biomedical engineering transport phenomena. The emphasis is on chemical and physical transport processes with applications toward the development of drug delivery systems, artificial organs, bioartificial organs, and tissue engineering.

60582. Biomaterials Engineering
(3-3-0)
Biomaterials engineering is the application of engineering principles to design, develop, and analyze materials that involve biological molecules. These may be materials of biological origin that are used in medical, biological, or chemical applications, and materials of chemical origin that are used with biological systems or their components. In this course you learn about the basic principles involved in the choice of material properties, the nature of the interaction of biological materials with their surroundings, and modern applications in science, medicine, and engineering. Issues relating to marketing, packaging and storage, regulation, and ethics will also be discussed. Students will have an opportunity to apply mathematical-based engineering analysis of complex biomaterials systems.

60584. Bioprocess Engineering
(3-3-0)
Bioprocess engineering is the application of engineering principles to design, develop, and analyze processes that use biocatalysts. These may be in the form of a living cell, its substructures, or their chemical components. In this course you learn concepts of cellular biology, and be introduced to mathematical-based engineering analysis of complex biological systems. By the end of this course you should be able to understand basic structure and function of cells, homogeneous and heterogeneous enzyme kinetics, the regulation of cell growth, the design and operation of bioreactors, recovery and characterization of products, and methods in genetic engineering and molecular cloning.

60631. Molecular Modeling
(3-3-0)
And introduction to the theory, methods and applications of classical molecular modeling as applied to contemporary research in chemical engineering, chemistry, physics and biology. Topics include elementary statistical mechanics and ensemble theory, classical force fields, Monte Carlo, molecular dynamics, free energy calculation, and transport properties. Applications to simple and complex fluid as well as solids.

60634. Nonlinear Dynamics and Pattern Formation
(3-3-0)
This course reviews some classical pattern formation dynamics in extended domains. Specific topics include Rayleigh-Benard convection, Hamiltonian dynamics, wave phenomena, solidification, Turing patterns, etc. Analytical and numerical tools will be introduced to reduce the model dimension and to classify the pattern dynamics.

60992. Gaann: Risk Assessments
(1-1-0)
The GAANN program is a project funded by the Department of Education to provide interdisciplinary training on the topic of Risk Assessments of Novel Chemicals in the Environment. This course will introduce the scholars to ionic liquids, the novel chemicals of primary interest. Then various GAANN faculty will discuss different ways that their research might contribute to this project. The grade for the course will be based on a research proposal that the student will have to prepare, as well as on attendance.

60910. Selected Topic/Materials Processing
(3-3-0)
This course covers a limited number of materials processing techniques used by materials researchers as well as industrial manufacturers. The primary areas to be covered include thin film processing, fine (“nanoscale”) particle processing, crystal growth, and a few selected ceramics processing techniques. Within each of these areas various techniques will be discussed, with both the theoretical and practical aspects being described.

60913. Macromolecular Bioengineering
(3-3-0)
Recent advances in molecular biology have made it possible to thoroughly study biological macromolecules. These macromolecules can perform many important functions, such as information transfer, catalysis, energy acquisition, transport regulation, and energy generation. This course focuses on the unique characteristics of macromolecules and how they can contribute in the area of engineering, such as in developing nanoscale devices, innovative materials, information storage devices, energy capture and storage, and many other applications.

60916. Biological Dynamics & Diagnostics
(3-3-0)
This course will examine physiology phenomena such as cardiac rhythms, bacterial detection/diagnostics, neuron signal transmission, blood circulation, pulmonary airflow, and more general biological topics such as ion channels, actin motors, genomic sequences from the viewpoint of mathematical analysis. Explicit and implicit patterns and organized dynamic will be elucidated and used to provide insight into the underlying physiology or biology.

60926. Carbon Science & Technologies
(3-3-0)
Lectures cover both fundamental science of carbon (e.g., structure, properties) as well as engineering application of these materials.

60995. Transport Phenomena/Microscale
(3-3-0)
An advanced course intended to give students insight into the unique problems that arise for fluid flow and transport phenomena in very small passages such as occur in microfluidic devices.

63001. Graduate Seminar
(1-1-0)
Staff members, guest speakers, and doctoral students discuss current research problems. (Every semester)

66697. Directed Readings
(0-0-0)
Course requires the student to explore various readings as explained by the professor.

67690. Ceramics
(0-0-0)
Intended to facilitate research interactions between Notre Dame and Industry by allowing students to get credit for work experience.

68901. Research and Dissertation
(0-0-0)
Research and dissertation for resident doctoral students.

68991. Nonresident Dissertation Research
(1-1-0)
Required of nonresident graduate students who are completing their dissertations in absentia and who wish to retain their degree status.

The Program of Studies

The graduate program in civil engineering and geological sciences provides an interdisciplinary atmosphere conducive to preparation of qualified candidates for careers in structural/geotechnical/materials engineering, environmental engineering, and geological sciences.

The programs of study offered by the department lead to the master of science degree and the doctor of philosophy. The department requires a minimum cumulative grade point average of 3.0 for graduation from its degree programs.

Although both research and nonresearch options are available to students seeking the master’s degree, the research option is the preferred and normal route. The nonresearch option is allowed only in exceptional circumstances. In the research option, 30 credit hours are required with six to 14 of these credits devoted to thesis research, depending on the program of study developed in conjunction with the department. The research option requires a completed thesis and an oral defense of that thesis. The master’s research is commonly completed by the end of the fourth semester of enrollment.

Requirements for the doctor of philosophy include a total of 72 credit hours with at least 18 credit hours of formal graduate course work, successful completion of a written qualifier examination, a research proposal, an oral candidacy examination, and completion and defense of a dissertation.

Programs of study and research are arranged to suit the specific background and interests of the individual student, with guidance and approval of the faculty of the department and in conformity with the general requirements of the Graduate School.

Regardless of funding source, all students participate in the educational mission of the department by serving as teaching assistants for eight hours per week during their first year, four hours per week during their second year, and four hours per week during one additional semester.

Students in all the graduate programs are encouraged to include courses from other departments and colleges within the University to expand their understanding of today’s complex technological-social-economic problems. In the past, students have shown particular interest in extradepartmental courses in biological sciences, chemical engineering, chemistry, economics, electrical engineering, mathematics, and mechanical engineering.

Admission to graduate study in civil engineering and geological sciences is not limited to undergraduate majors in civil engineering and/or geology. Those with undergraduate majors in other fields of engineering or the physical sciences are encouraged to apply.

All full-time admitted students, pursuing a research degree option, are provided with full financial support that includes a competitive stipend and full tuition waiver. Additional fellowships are available for students from underrepresented groups.

Course Descriptions

Each course listing includes:

- Course Number
- Title
- (Credits per semester—lecture hours per week/laboratory or tutorial hours per week)
- Course Description

Civil Engineering

60110. Structural Reliability and Probabilistic Bases of Design (3-3-0)
Prerequisite: CE 20110 or consent of instructor. Identification and modeling of nondeterministic problems in the context of engineering design and decision making; stochastic concepts and simulation models.

60120. Advanced Geostatistics (3-3-0)
Prerequisite: CE 20110 or consent of instructor. Introduction to modern geostatistical techniques, including principal component analysis, factor analysis, kriging, and 3-D simulation. The focus is on application to field data and analysis. Substantial computer programming required.

60125. Numerical Methods in Engineering (3-3-0)
Finite difference and finite element methods for the solution of ordinary and partial differential equations encountered in engineering.

60130. Finite Elements in Engineering (3-3-0)
Prerequisite: CE 30120 or consent of instructor. Fundamental aspects of the finite-element method are developed and applied to the solution of PDEs encountered in science and engineering. Solution strategies for parabolic, elliptic, and hyperbolic equations are explored.

60151. Durability Issues in Materials (3-3-0)
Prerequisite: Consent of instructor. An introduction to durability mechanics and nondestructive testing of concrete, steel, and reinforced concrete in civil structures. When time permits, the course also covers rehabilitation and repair techniques.

60170. Advanced Mechanics of Solids (3-3-0)
Prerequisite: AME 20241. Finite element methods for static and dynamic analysis of structural and continuum systems. Analysis of two and three dimensional solids as well as plates and shells. Introduction to nonlinear analysis.
60250. Structural Dynamics
(3-3-0)
Prerequisite: Consent of instructor.

60251. Analytical Dynamics
(3-3-0)
Fundamental principles and analytical methods in dynamics with applications to machine design, robot analysis, and spacecraft control.

60272. Advanced Topics in Reinforced Concrete Design
(3-3-0)

60273. Advanced Structural Stability
(3-3-0)

60275. Prestressed Concrete Design
(3-3-0)
Prerequisite: CE 40270 or consent of instructor. Mechanics of prestressed concrete structural members. Design of prestressed concrete structural members and simple systems. Strength and serviceability considerations.

60280. Design of Structures to Resist Natural Hazards
(3-3-0)
Prerequisite: CE 40270 and CE 40280 or consent of instructor. Natural hazards and associated load effects on structures. Structural performance under extreme loads. Analysis of damage caused by wind storms, earthquakes, and ocean waves. Design provisions to resist damage from natural hazards.

60300. Geochemistry
(3-3-0)
Prerequisite: CHEM 30321 or consent of instructor. An introduction to the use of chemical thermodynamics and chemical kinetics in modeling geochemical processes. Special emphasis is placed on water-rock interactions of environmental interest.

60320. Environmental Chemistry
(3-3-0)
Prerequisite: Consent of instructor. Application of acid-base, solubility, complex formation and oxidation reduction equilibria to water supply, wastewater treatment and natural and environmental systems.

60330. Environmental Biotechnology
(3-3-0)
Prerequisite: CE 40340 or consent of instructor. Environmental biotechnology is the application of biological processes to the solution of environmental problems. Applications include municipal and industrial wastewater treatment, drinking water treatment, remediation of soils and groundwaters, remediation of surface waters and sediments, and control of air contaminants.

60347. Physicochemical Treatment of Organics
(3-3-0)
An investigation of the physicochemical treatment processes for treatment of organic contaminants.

60350. Environmental Microbiology
(3-3-0)
Corequisite: CE 40605. Prerequisite: Consent of instructor. Fundamentals of microbiology as needed to understand environmental systems and microbial treatment processes. Emphasis is placed on kinetics and energetics of microorganisms, fate of environmental pollutants, biotechnology applications, and laboratory techniques used to cultivate organisms and analyze biological systems.

60385. Hazardous Waste Management and Design
(4-3-1)
Prerequisite: Consent of instructor. The course addresses traditional and innovative technologies, concepts, and principles applied to the hazardous waste management and design to protect human health and the environment. Topics include the regulatory process, fate and transport of contaminants, toxicology, environmental audits, waste minimization, physicochemical processes, bioremediation, stabilization, incineration, land disposal, risk assessment, remedial investigations, remedial technologies, and alternative analysis. Includes a remediation design project, which may require laboratory analyses.

60450. Advanced Hydraulics
(3-3-0)
Application of the basic principles of fluid mechanics. Study of laminar flow, turbulent flow, and dispersion processes with emphasis on conduit and open channel flow.

60501. Geotechnical Earthquake Engineering
(3-3-0)
The course focuses on describing earthquake hazards and developing methods used for seismic analysis and design. Topics covered include seismicity, site response analysis, liquefaction, and dynamic properties of soils.

60530. Foundation Analysis and Design
(3-3-0)
Prerequisite: CE 30510 or consent of instructor. The course covers topics in foundation engineering, including earth pressure theories, design of retaining structures, bearing capacity, and the analysis and design of shallow and deep foundations.

67600. Special Studies
(0-0-0)
Prerequisite: Consent of instructor. This number is reserved for specialized and/or experimental graduate courses. Content, credit, and instructor will be announced by the department.

78600. Research and Dissertation
(0-0-0)
Prerequisite: Consent of instructor. Research and dissertation for resident doctoral students.

78610. Nonresident Dissertation Research
(1-0-0)
Prerequisite: Consent of instructor. Required of nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

70140. Advanced Finite Element Methods
(3-3-0)
Prerequisite: CE 60250 or consent of instructor. Finite element methods for static and dynamic analysis of structural and continuum systems. Displacement approach for two and three dimensional solids along with beams, plates, and shells. Material and geometric nonlinearities.

70250. Experimental Methods in Structural Dynamics
(3-3-0)
Prerequisite: CE 60250 or consent of instructor. Overview of experimental techniques for analyzing and modeling the behavior of structures under dynamic loads, including stochastic concepts and spectral/time-frequency transform techniques. Course includes vibration measurement through experiments, signal processing and system identification. Experimental modules on acceleration-based system identification, strain/displacement measurement, modal testing and remote data acquisition systems are provided.

70290. Behavior and Design of EQ Resistant Structures
(3-3-0)

77600. Special Studies
(0-0-0)
Prerequisite: Consent of instructor. This number is reserved for specialized and/or experimental graduate courses. Content, credit, and instructor will be announced by the department.

78600. Research and Dissertation
(0-0-0)
Prerequisite: Consent of instructor. Research and dissertation for resident doctoral students.

78610. Nonresident Dissertation Research
(1-0-0)
Prerequisite: Consent of instructor. Required of nonresident graduate students who are completing their dissertations in absentia and who wish to retain their degree status.

ENVG

60300. Geochemistry
(3-3-0)
Prerequisite: CHEM 30321 or consent of instructor. An introduction to the use of chemical thermodynamics and chemical kinetics in modeling geochemical processes. Special emphasis is placed on water-rock interactions of environmental interest.
tested using thermodynamic approaches. Models using actual data sets. These models will be addressed.

Prerequisite: Chem 30321 and ENVG 40300 or consent of instructor.

Specific topics include: age dating, identification of minerals with emphasis on environmental and technical aspects of minerals, both natural and man-made, in the environment. Specific topics include: dating, identification of geological reservoirs and radioactive waste disposal.

Faculty

Peter C. Burns, Chair and the Henry J. Masaon Jr. Professor of Civil Engineering and Geological Sciences. B.Sc., Univ. of New Brunswick, 1988; M.Sc., Univ. of Western Ontario, 1990; Ph.D., Univ. of Manitoba, 1994, (1997)

Ahlan Kareem, the Robert M. Moran Professor of Civil Engineering and Geological Sciences. B.S., W. Pakistan Univ. of Engineering and Technology, 1968; M.S., Univ. of Hawaii, 1975; Ph.D., Colorado State Univ., 1978. (1990)

Sydney Kelber, Professor Emeritus. B.S., Univ. of Leeds, 1946. (1967)

Lloyd H. Ketchum Jr., Associate Professor. B.S.C.E., Michigan State Univ., 1960; M.S.E., Univ. of Michigan, 1964; Ph.D., ibid., 1964; Ph.D., ibid., 1972. (1973)

Tracy Kijewski-Correa, the Rouney Family Assistant Professor. B.S., Univ. of Notre Dame, 1997; M.S., ibid., 2000; Ph.D., ibid., 2003. (2003)

David J. Kirkner, Associate Professor. B.S., Youngstown State Univ., 1971; Ph.D., Case Western Reserve Univ., 1979. (1979)

Yahya C. Kurama, Director of Graduate Studies and Associate Professor. B.S., Bogazici Univ., 1990; M.S., Lehigh Univ., 1993; Ph.D., ibid., 1997. (1998)

Kenneth R. Lauer, Professor Emeritus. B.S., Univ. of Alberta, 1947; M.Sc., ibid., 1948; M.C.E., Cornell Univ., 1952; Ph.D., Purdue Univ., 1960. (1956)

Clive R. Neal, Associate Professor. B.S., Univ. of Leicester, 1982; Ph.D., Univ. of Leeds, 1985. (1990)

Lynn Ann Salvati, Clare Boothe Luce Assistant Professor. B.S., Brown Univ., 1995; M.S., Univ. of California, Berkeley, 1996; Ph.D., ibid., 2002. (2002)

Joannes J. Westerink, Associate Professor. B.S., State Univ. of New York, 1979; M.S., ibid., 1981; Ph.D., Massachusetts Institute of Technology, 1984. (1990)

Jennifer R. Woertz, Assistant Professor. B.S., Univ. of Illinois, 1996; M.S., Univ. of Texas, 1998; Ph.D., ibid., 2003. (2003)

The Program of Studies

Current research emphasizes several distinct areas: computer science and engineering and the doctor of philosophy.

The doctoral program normally requires four years of full-time work. The requirements include successful completion of the Ph.D. qualifying and candidacy examinations, a dissertation, and the oral dissertation defense examination. Students are encouraged to pursue course work outside the department whenever such studies support their program in the major field.

The Ph.D. qualifying examination is written and is normally taken in the second spring semester after entering the program with a bachelor’s degree. Those admitted with a master’s degree are required to take the Ph.D. qualifying examination the first spring after entering the program. The Ph.D. candidacy requirement, which consists of a written and an oral part, is administered to determine if the student has identified a viable dissertation topic. The candidacy consists of a written topic proposal followed by an oral examination. After passing the Ph.D. candidacy, which typically takes place after the completion of the formal course work, the student devotes essentially all efforts to completing his or her dissertation research. At the dissertation defense, the student defends the dissertation before an oral examining board. In recent years, students have completed the Ph.D. degree requirements in about four to five years.

Finally, both M.S. and Ph.D. candidates are required to complete a teaching apprenticeship that involves teaching duties of one semester for M.S. candidates and two semesters for Ph.D. candidates.

Research Facilities

Notre Dame’s College of Engineering maintains a cluster of 110 PC workstations running Windows and Linux, as well as a cluster of 20 Sun Microsystems Blade 1000 workstations with 3D graphics display capability. Also in the cluster are six Xerox line printers which are available to faculty, staff, and students. The College also maintains a teaching lab/classroom with Windows desktop workstations.

The University’s Office of Information Technology provides an AFS file service with 18 Sun UltraSparc fileervers. These fileervers provide over 5 Terabyte of RAID (0+1) mirrored/stripped file storage for the campus community. In addition the OIT provides 9 Terabytes of file space as a CIFS filesystem via two Network Appliance File Servers.

The University’s High Performance Computer Center provides a wide variety of computer nodes for use by the campus research community. The HPCC also contains several support systems which provide file space, and other services to the HPCC computer cluster systems. The hardware base of the HPCC includes:

Multi-processor Systems:

- Eight Sun Enterprise 4200 - 4 x 450 MHz processors, 4 GB RAM, 35 GB /scratch space
- Six - Sun V880 - 8 x 900 MHz CPU processors, 16 GB RAM

Beowulf Computer Clusters:

- One - Sun Microsystems V60 Beowulf cluster - 128 node Dual 3.0Ghz Xeon CPU, 2GB RAM
- One - Sun Microsystems Beowulf cluster with Myrinet - 16 Dual 2.2Ghz Opteron CPU 8GB RAM
- One - IBM 1300 (x330) Linux Cluster, 32 Node 2 x 1.4 GHz Pentium III, and 1GB RAM

The BoB cluster in Chemistry also reserves cycles for use by campus researchers. BoB is the 445th fastest computer in the world. BoB is built out of 106 commodity dual-processor desktop computers. Each computer has 2x 1.7 GHz Xeon processors, 1 GB RDRAM, 40 GB HD and a Gigabit Ethernet card.

The campus is connected to the VbNS Internet-II backbone via a Gigabit connection that is shared with several local industrial partners. Two hundred megabits of this connection is reserved to use for Notre Dame commodity and research traffic. The residence hall network (RESNET) has a separate 45 megabit OC-3 connection via a local service provider. All desktop network ports in the College of Engineering are provided by 100 megabit Ethernet switches, and the College is connected to the campus backbone network via dual Gigabit Ethernet connections.

The Department of Computer Science and Engineering maintains over 100 Dual-CPU Beowulf computer nodes housed in five clusters. In addition, the department provides 85 UltraSparc workstations, 25 Windows workstations, 25 Linux systems and 12 Apple Macintosh G4/G5 systems. The department also contains a research Myrinet gigabit network, a scanner, color printer, 20 laser printers, and a large-bed plotter.

The System and Network Administration lab contains multiple HP Linux fileervers which provide a total of 2TB of RAID disk storage, a Sun Microsystems Inc., Blade 1000 fileerver, and 24 seats of Solaris, Linux, and Windows systems, which includes various RAID disk systems. The lab also contains a Cisco 4500 router, an HP5308 switch/router, two Cisco 2924 Ethernet switches, several HP Procurve Gigabit Ethernet switches, 2 HP Internet Advisor network analysis system, and various other pieces of network equipment. Software in the lab includes HP Network Node Manager, SNMP, Cisco IOS, Linux, Solaris, Windows (xp, 2000, Server 2003). The servers in the lab provide access to Oracle, db2, mysql, and Microsoft SQL databases, and associated web servers (Apache and IIS) to access the databases. This lab is used by several undergraduate courses and research projects within the department.

The Artificial Intelligence and Robotics laboratory currently hosts five robots, one ActivMedia Pioneer Peoplebot, three ActivMedia Pioneer P2Dex robots, and one Arrick Robotics Trilobot. All ActivMedia robots have an onboard Linux PC, Sony pan-tilt-zoom cameras and are equipped with wireless Ethernet links. They are operated using AGES, a distributed agent development environment under development in the lab. Additional computing equipment comprises four Dell Linux PC desktops, one Dell laptop, and one SUN UltraSPARC workstation.

Additional equipment is available by individual research group to support specific research projects. Specialized laboratories that include this equipment are the Distributed Computer Lab, the Laboratory of Computational Life Sciences, the Lab for VLSI, and the Computer Vision Research Lab.

A specialized College of Engineering research library holds more than 50,000 volumes. The Engineering Library augments the University’s Theodore M. Hesburgh Library, which contains more than three million volumes and receives 625 journals related to engineering. The Hesburgh Library also provides database searches and bibliographic instruction.

Computer Science and Engineering
Course Descriptions

Each course listing includes:

- Course number
- Title
- Prerequisites
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

60092. Computer System Modeling
(3-3-0)
Computer techniques for simulating the behavior of physical, biological, engineering and social systems, including both natural and artificial systems. Applications include scientific enquiry, engineering design, manufacturing planning, training, entertainment, and games. Topics include animation, visualization, and graphical analysis of results.

60111. Complexity and Algorithms
(3-3-0)
A study of theoretical foundations of computer science and a selection of important algorithm techniques. Topics include the classes of P and NP, the theory of NP-completeness, linear programming, advanced graph algorithms, parallel algorithms, approximation algorithms, and randomized algorithms.

60113. Numerical Methods and Computation
(3-3-0)
Introduction to analysis and implementation of numerical methods for scientific computation. Topics include computer arithmetic, solution of linear and nonlinear equations, approximation, numerical integration and differentiation, numerical solution of ordinary and partial differential equations, and applications of all these.

60131. Programming Languages
(3-3-0)
Prerequisite: Familiarity with a standard programming language. An introduction to modern computing concepts and computational models as embodied in a number of different classes of languages. These include (1) functional-based languages such as Lisp, Scheme, SASL, ML, (2) logic-based languages such as Prolog, Parlog, Strand, OPS; and (3) object-oriented languages such as Smalltalk, C++, Java.

60166. Computer Graphics
(3-3-0)

60171. Artificial Intelligence
(3-3-0)
Prerequisite: Advanced standing in engineering or science. Evaluation of the areas that make up artificial intelligence today. Development of various representations commonly used. Differences between knowledge bases and databases are explored. A study of several applications including expert systems.

60232. Software Engineering
(3-3-0)
Prerequisites: CSE 30331, CSE 30341. Software Engineering is an engineering discipline that is concerned with all aspects of producing high-quality, cost-effective and maintainable software systems. This course provides an introduction to the most important tasks of a software engineer: requirements engineering, software design, implementation and testing, documenta-

60239. Computer Simulation
(3-3-0)
Prerequisites: MATH 30530. Computer techniques for simulating the behavior of physical, biological, engineering and social systems, including both natural and artificial systems. Applications include scientific enquiry, engineering design, manufacturing planning, training, entertainment, and games. Topics include animation, visualization, and graphical analysis of results.

60231. Computer Architecture
(3-3-0)
Classic high-performance computer architectures are considered along with standard parameters for their evaluation. Characteristics that improve performance are introduced. Various forms of parallel processing with specific implementation examples are given. More recent architectural advances are discussed, such as power-away, fault tolerance, and others.

60253. Computer Vision
(3-3-0)
An introduction to the major biometric techniques (fingerprint, face, iris, voice, hand shape), the underlying pattern recognition basis for these biometrics, and current concerns regarding privacy and social / ethical issues.

60259. Simulation of Complexity
(3-3-0)
Computer simulation of biosystems.

60567. 3D Photography
(3-3-0)
Course provides a comprehensive treatment of three-dimensional photography including digitization techniques, 3D data processing, surface and volume extraction, 3D object recognition, and applications in areas such as character design, historic preservation, biometric authentication and archaeology.

60613. Introduction to E-Technology
(3-3-0)
Introduction to concepts, theories and techniques of Internet and WWW programming. The goal of this course is to prepare the student to design and develop Web-based applications, e-Commerce applications, e-Science applications and Internet-based services. Students will be expected to design a large system (course project) requiring integration with other student projects.

60641. Operating System Design
(3-3-0)
This course introduces students to advanced topics in operating systems. The course will follow the course text book as well as important research publications. Topics include: advanced process management mechanisms, virtual machines, monolithic vs micro kernels, storage management, protection and security, OS reliability and robustness, energy aware computing and other current research topics.

60656. Advanced Databases
(3-3-0)
Prerequisite: CSE 30246. Advanced topics in databases, DBA techniques.

60721. Advanced Architecture
(3-3-0)
Prerequisites: CSE 60321. Advanced topics in computer architecture.

60726. CAD of Digital Systems
(3-3-0)
This is a senior/entry graduate level course intended to expose students to the fundamentals of CAD tools for the design and analysis of digital systems. The course aims at introducing to students the theory and implementation behind commercial CAD tools so that the students will be able to contribute to the development of such tools as well as productive users of such tools. The main topics include basic algorithms for CAD, digital system modeling, timing and power analysis, logic/architectural synthesis, physical level design, and system-level design.

60743. Behavior-Based Robotics
(3-3-0)
This course is designed to provide a forum for applying and testing artificial intelligence methods and models, especially behavior-based techniques, on a robot. While models will be evaluated with respect to their theoretical tenability, most emphasis will be given to issues of practicality. These practical considerations will be extensively studied in simulations as well as real-world implementations on a variety of robots. Implementations might also comprise new ideas, hopefully giving rise to original research results.

60753. Digital Systems Testing
(3-3-0)
A comprehensive and detailed treatment of digital systems testing and testable design. Fundamental concepts as well as the latest advances and challenges in the field of ULSI/VLSI testing are examined. Topics covered include fault modeling and simulation, combina-

60813. Introduction to Data Structures
(3-3-0)
A comprehensive and detailed treatment of data structures and algorithms. Topics covered include abstract data types, algorithmic paradigms, complexity analysis, and data structures for various problems. Students will be expected to design and implement a large system (course project) requiring integration with other student projects.
60764. Computer Networks
(3-3-0)
This course introduces students to topics on the principles, design, implementation, and performance of computer networks. Topics include: Internet protocols and routing, congestion control, switching and routing, mobile IP and ad-hoc networks, network security, the end-to-end arguments, peer-to-peer systems and other current research topics.

60771. Distributed Systems
(3-3-0)
A distributed system is a collection of independent machines that work together on a common problem. Distributed systems have been both interesting and difficult to build because their components may be autonomous and highly failure prone. The primary material for this course will be a series of papers describing both working distributed systems and theoretical results. Topics may include distributed file and storage systems, batch computing, peer-to-peer computing, grid computing, process migration, fault tolerance, security, time and ordering, and distributed agreement. Students will undertake a course project that involves building and evaluating a distributed system. Grading will be based on discussion, exams, and the course project.

63801. Research Seminar I
(1-1-0)
Weekly seminars for graduate students.

63802. Research Seminar II
(1-1-0)
Weekly seminars for graduate students.

66191. Directed Readings - Biometrics
(3-3-0)
Directed readings in the field of biometrics.

67101. Directed Readings
(3-3-0)
Topics will vary from semester to semester and will be announced in advance. Possible topics might include: computer-aided design, numerical analysis and computation, distributed computing, computational geometry, special VLSI architectures, and others of interest to students and faculty.

67900. Special Studies
(0-0-0)
This number is reserved for specialized and/or experimental graduate courses. Content, credit, and instructor will be announced by department.

68900. Thesis Direction
(0-0-0)
Research to satisfy the six credit hours required for the master's degree.

68901. Thesis Direction
(0-0-0)
Research to satisfy the six credit hours required for the master's degree.

68905. Nonresident Thesis Research
(1-1-0)
Required of nonresident master’s degree students who are completing their theses in absentia and who wish to retain their degree status.

76100. Directed Readings
(0-0-0)
Topics will vary from semester to semester and will be announced in advance. Possible topics might include: computer-aided design, numerical analysis and computation, distributed computing, computational geometry, special VLSI architectures, and others of interest to students and faculty.

70188. Advanced Communications & I/O Architecture
(3-3-0)
Advanced communications & I/O architecture

70421. Advanced Embedded Systems Design
(3-3-0)
This is an advanced graduate level course intended to expose students to the state-of-the-art design and analysis techniques for embedded systems. The main topics include system modeling, performance and power/energy analysis and estimation, system-level partitioning, synthesis and interfacing, co-simulation and emulation, and re-configurable computing platforms.

75701. Industrial Research Experience
(0-0-0)
In most engineering disciplines, the experience gained through on-the-job training is invaluable to graduate students. This course aims at providing advanced graduate students with real-world working experience. It requires students to work in an industrial environment participating in projects related to their research areas. Students are to submit a final report at the completion of the course.

77900. Special Studies
(0-0-0)
This number is reserved for specialized and/or experimental graduate courses. Content, credit, and instructor will be announced by department.

98900. Research and Dissertation
(0-0-0)
Research and dissertation for resident doctoral students.

98901. Research and Dissertation
(0-0-0)
Research and dissertation for resident doctoral students.

98995. Nonresident Dissertation Research
(1-1-0)
Required of nonresident doctoral students who are completing their dissertations in absentia and who wish to retain their degree status.

Upper-level Undergraduate Courses
Graduate students may also consult the director of graduate studies for permission to take one upper-level undergraduate course as credit toward their degree. Full descriptions of these courses are available in the Bulletin of Information, Undergraduate Programs.

Faculty
Panos J. Antsaklis, Director of the Center for Applied Mathematics, the H. C. and E. A. Brouey Professor of Electrical Engineering, and Concurrent Professor of Computer Science and Engineering, Dipl., National Technical Univ. of Athens, 1972; M.S., Brown Univ., 1974; Ph.D., ibid., 1977. (1980)

Kevin W. Bowyer, Chair, the Schubmehl-Prein Professor, and Concurrent Professor of Electrical Engineering, B.S., George Mason Univ., 1976; Ph.D., Duke Univ., 1980. (2001)

Nitesh V. Chawla, Research Assistant Professor. M.S., Univ. of South Florida, 2000; Ph.D., ibid., 2002. (2002)

Joseph C. Freeland, Associate Professor Specialist. B.S.E., Purdue Univ., 1985. (1995)

Xiaobo (Sharon) Hu, Associate Professor. B.S., Tianjin Univ., 1982; M.S., Polytechnic Institute New York, 1984; Ph.D., Purdue Univ., 1989. (1996)

Yih-Fang Huang, Chair and Professor of Electrical Engineering and Concurrent Professor of Computer Science and Engineering, B.S.E.E., National Taiwan Univ., 1976; M.S.E.E., Univ. of Notre Dame, 1980; M.A., Princeton Univ., 1981; Ph.D., ibid., 1982. (2003)

Jesus A. Izaguirre, Assistant Professor. B.A., ITESM-Mexico, 1991; M.S., Univ. of Illinois Urbana-Champaign, 1996; Ph.D., ibid., 1999. (1999)

Peter M. Kogge, the Ted H. McCarthy Professor of Computer Science and Engineering and Concurrent Professor of Electrical Engineering, B.S., Univ. of Notre Dame, 1968; M.S., Syracuse Univ., 1970; Ph.D., Stanford Univ., 1973. (1994)
Electronic Circuits and Systems. Approximately half of the faculty members have research interests in this area, which includes systems and control, signal and image processing, and communications. Projects are conducted in the following areas: turbo coding and iterative decoding; bandwidth efficient coding and modulation; radio architecture and codes for deep space and satellite communications; multimedia communication, including combined source and channel coding and restoration techniques for robust transmission of video/audio; statistical signal processing, including array signal processing (radar, sonar) and adaptive interference mitigation in wireless communications; identification and estimation, including blind identification, set membership estimation, adaptive equalization, and spectral analysis; digital filtering, including analysis and design of multidimensional filters, floating point realizations, robust stability of discrete-time systems, and nonlinear discrete-time systems; digital image processing, including data compression for image sequences, video data processing, tomographic image reconstruction, and image restoration/enhancement; control systems — e.g., investigations of stability, robust control, restructurable control, zero dynamics, modeling, and nonlinear servomechanism design; control of communication networks; hybrid and discrete event systems; and large-scale dynamic systems, including qualitative properties of large-scale dynamical systems addressing Lyapunov stability, input-output properties, and decomposition problems.

Electronic Materials and Devices. The other half of the faculty members have research interests in this area, which includes solid-state, nanoelectronics, and optoelectronic materials and devices. Current research projects include quantum device phenomena — e.g., optical properties, localization, universal conductance fluctuations, transport, interference, and resonant tunneling; nanoelectronic systems, including novel circuits and systems architectures for the nanoelectronic regime; experimental nanoelectronics, including nanofabrication of quantum dots, cryogenic characterization of single-electron effects, and ultra-small resonant tunneling diodes for ultra-high-speed digital ICs; nanospectroscopy — high-spatial, spectral, and temporal resolution investigations of quantum dots via atomic force microscopy and near-field scanning optical microscopy; device degradation-studies of the electromigration behavior of ultrasmall metal interconnects and hot carrier effects in MOS oxide breakdown phenomena; optoelectronic materials-studies of the optical and material properties of compound semiconductor native oxides; optoelectronic devices-fabrication and characterization of waveguides and optical components for integrated photonic ICs, semiconductor lasers, and optical amplifiers; micromachining-fabrication of microelectromechanical devices utilizing Si processing, particularly reactive ion etching; and ultra-high-speed circuits and devices for digital and microwave circuit applications.

The Nanofabrication Facility allows fabrication of ICs and devices with geometries as small as 0.02 microns. The 3600-square-foot cleanroom contains a photomask generator, four contact mask aligners, a wafer stepper, nine furnace tubes, a plasma etcher, PECD, APCVD, LPCVD, RIE, ICP Deep RIE, five evaporators, and a sputtering system. Inspection systems include an ISI SEM, Hitachi FESEM, a prism coupler, an interferometer, an ellipsometer, a variable-angle spectroscopic ellipsometer, two surface profilers, a four-point probe, and two Zeiss optical microscopes. A 50-kV SEM/EML system is available for nanolithography.

Advanced measurement facilities include low-temperature equipment such as a 3He cryostat capable of 300 mK and magnetic fields of 11T and a dilution refrigerator capable of 10mK, with fields up to 11T. A UHV-STI with atomic resolution is available for sample characterizations, along with two AFMs.

The High-Speed Circuits and Devices Laboratory houses a state-of-the-art microwave and high-speed digital device and circuits characterization facility. Full on-wafer testing capability, including analog characterization to 50 GHz and digital testing to 12.5 Gb/s, allows for comprehensive characterization of both analog and digital high-speed microelectronic circuits. In addition, facilities for high-speed optoelectronic characterization of detectors and photoreceiver subsystems for fiber-optic telecommunications are available. State-of-the-art microwave CAD, data collection, and data analysis facilities are also in place for rapid circuit design and characterization. The Semiconductor Optics Lab includes a 15-watt Argon-ion laser, a tunable-mode-locked Ti:sapphire laser delivering femtosecond pulses, an He-Cd laser, and He cryostats with high spatial resolution and magnetic fields up to 12 Tesla.

The Laboratory for Image and Signal Analysis (LISA) features state-of-the-art workstations for development and analysis of digital signal, image, and video processing algorithms, as well as equipment for the acquisition, processing, and real-time display of HDTV sequences, cameras, frame grabbers, a flat-bed scanner, several high-definition, 24-bit color monitors, and specialized printers.

The Network Communications and Information Processing (NCIP) Lab focuses on research in multimedia and MIMO communications, software radio, distributed signal processing, sensor networks, and network protocol analysis, design, and implementation. Equipment includes a sensor networking testbed with 40 “Berkeley motes” of various generations, four Intel Stargate devices, sensor and programming boards, a software radio testbed with 6 USRP boards with basic transmit and receive daughterboards, RF test and measurement equipment (spectrum analyzer, arbitrary waveform generator, oscilloscope), a file server and several PCs and Macs.

The Embedded Sensor-Actuator Network (ESAN) Laboratory supports research into the use of embedded sensor-actuator networks in the monitoring and control of distributed physical processes. The lab has several Windows XP and Linux platforms for cross-platform development of embedded systems ranging from 386 and ARM single board computers to 8-bit micro-controller platforms such as Crossbow’s MICA2 embedded sensor...
node. The lab has a system of ceiling-mounted cameras and several autonomous robotic systems (K-team Koala and ActivMedia Pioneer 3 robots) supporting research work into multi-agent coordination over ad hoc wireless networks. The lab also has an embedded wireless sensor network used to support research into sensor network middleware for environmental monitoring.

The Communication Systems Research Laboratory and the Wireless at Notre Dame (WAND) Laboratory support a research program in physical-layer communication signal processing, coding, and modulation, as well as novel transceiver architectures. It has a full complement of RF measurement equipment, wide-band digitizers, and connections to roof antennas as well as a full complement of supporting workstations.

The department has its own electronics shop run by a full-time technician, and the solid-state laboratories are overseen by a full-time professional specialist and a full-time technician. Another full-time professional specialist manages the department's undergraduate laboratories.

### Application

GRE General Test scores, TOEFL scores for international students, two transcripts showing academic credits and degrees, letters of recommendation from 3 or 4 college faculty members and a statement of intent should be sent to the Graduate Admissions Office, University of Notre Dame, 502 Main Building, Notre Dame, Indiana 46556.

The GRE should be taken no later than January preceding the academic year of enrollment, particularly if financial aid is desired.

The application deadlines are November 1 for the spring semester and February 1 for fall admission.

### Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Title</th>
<th>Credits</th>
<th>Prerequisites</th>
</tr>
</thead>
<tbody>
<tr>
<td>60542</td>
<td>Analog Integrated Circuit Design</td>
<td>3-3-0</td>
<td>Prerequisite: EE 30342. This course covers bipolar and complementary metal oxide semiconductor (CMOS) amplifier design, including frequency response, noise, feedback, stability, and compensation. Operational amplifiers, bandgap reference circuits, oscillators, and phase lock loops are analyzed. Both analytic and SPICE circuit design methods are developed.</td>
</tr>
<tr>
<td>60546</td>
<td>IC Fabrication</td>
<td>3-3-0</td>
<td>Corequisite: EE 61546. This course introduces the students to the principles of integrated circuit fabrication. Photolithography, impurity deposition and redistribution, metal deposition and definition, and other topics. Students will fabricate a 5000 transistor CMOS LSI circuit.</td>
</tr>
<tr>
<td>60548</td>
<td>Electromagnetic Theory</td>
<td>3-3-0</td>
<td>Prerequisite: EE 30358. The fundamental laws of Ampere, Gauss and Faraday leading to Maxwell's equations. Solutions of boundary value problems in various coordinates.</td>
</tr>
<tr>
<td>60553</td>
<td>Advanced Digital Communications</td>
<td>3-3-0</td>
<td>Prerequisite: EE 40453 and EE 60563 or equivalent. Review of the signal space approach to communication theory and the derivation of optimum receiver principles. Intersymbol interference and equalization. Modulation and coding for fading and wireless channels. Introduction to spread spectrum communication and digital cellular systems.</td>
</tr>
<tr>
<td>60554</td>
<td>Computer Communication Networks</td>
<td>3-3-0</td>
<td>Prerequisite: EE 60563 or equivalent. Introduction to queuing systems. Network design for centralized and distributed networks. Routing and flow control algorithms. Polling and random access protocols, packet radio, satellite networks, and local area networks.</td>
</tr>
<tr>
<td>60555</td>
<td>Multivariable Control</td>
<td>3-3-0</td>
<td>Prerequisite: EE 60550 or equivalent. This course studies the design of robust optimal controllers for linear continuous-time systems. Topics include: normal linear signal/system spaces, matrix fraction descriptions, internal stability, uncertain systems, robust stability, robust performance, SISO/MIMO loopshaping, linear fractional transformations and the generalized regulator problem, H2/H-infinity optimal control, algebraic Riccati equation, and balanced model reductions.</td>
</tr>
<tr>
<td>60556</td>
<td>Fundamentals of Semiconductor Physics</td>
<td>3-3-0</td>
<td>Prerequisite: EE 30357, EE 40476 or equivalent. Treatment of the basic principles of solids. Topics include periodic structures, lattice waves, electron states, static and dynamic properties of solids, electron-electron interaction transport, and optical properties.</td>
</tr>
<tr>
<td>60558</td>
<td>Microwave Circuit Design &amp; Measurement Lab</td>
<td>3-3-0</td>
<td>This course is an introduction to microwave circuit design and analysis techniques, with particular emphasis on applications for modern microwave communication and sensing systems. An integrated laboratory experience provides exposure to fundamental measurement techniques for device and circuit characterization at microwave frequencies. Students will develop an enhanced understanding of circuit design and analysis principles as applied to modern microwave circuits, as well as become familiar with design techniques for both hand analysis and computer-aided design. An appreciation for basic measurement techniques for characterization of microwave devices, circuits and systems through laboratory experiments will also be developed. Fall.</td>

<td>Optimal Control</td>
<td>3-3-0</td>
<td>Prerequisite: EE 40455, EE 60550 or equivalent. Optimal control is concerned with the synthesis of feedback control laws that minimize some specified measure of control system performance. This course is a rigorous introduction to the classical theory of optimal control. The topics covered by this course include: 1) the calculus of variations, 2) Pontryagin's principle, 3) dynamic programming, and 4) stochastic dynamic programming.</td>

ELECTRICAL ENGINEERING

60566. Solid-State Devices (3-3-0)
Prerequisite: EE 60556 or equivalent. In-depth analysis of electronic devices with an emphasis on both homojunction and heterojunction devices. Operation of p-n junctions is analyzed, along with BJTs, MOSFETs, and heterojunction devices such as HBTs and MODFETs.

60568. Modern Photonics (3-3-0)
Prerequisite: EE 30347 or EE 60556. A hands-on overview of the important role of photons alongside electrons in modern electrical engineering. Photonics technologies studied include lasers, optical fibers, integrated optics, optical signal processing, holography, optoelectronic devices and optical modulators. A survey of the properties of light, its interactions with matter, and techniques for generating, guiding, modulating and detecting coherent laser light.

60571. Statistical Signal Processing (3-3-0)
Prerequisite: EE 60563 or equivalent. This course covers essential statistical concepts for communications and signal and image processing. The topics include Bayesian estimation methods such as MMSE and MAP, probability theory of estimation that includes concepts of sufficiency, consistency, and efficiency; Fisher's information; confidence intervals and basic hypothesis testing; classical Fourier-analysis based spectral analysis methods and modern eigen-decomposition based methods such as MUSIC and ESPRIT; interference suppression for various communication systems including wireless multiuser communications.

60573. Random Processes, Detection, & Estimation (3-3-0)
Prerequisites: EE 60563 or equivalent. Fundamentals of random processes, including characterization, convergence issues, covariance and power spectral density. Spectral representations of stochastic processes using Karhunen-Loeve, Fourier, and sampling expansions. Detection and estimation from continuous waveform observations. Other topics: linear prediction and filtering adaptive; Wiener and Kalman filters.

60576. Microelectronic Materials (3-3-0)
Principles of materials science applied to materials issues in fabrication, operation, and reliability of microelectronic devices.

60580. Nonlinear Control Systems (3-3-0)
Prerequisite: EE 40455 or equivalent. This course studies the analysis and design of nonlinear feedback control systems. Topics include: Lyapunov stability, Input-Output Stability of Perturbed Systems, Model-reference adaptive control, sliding mode control, Lyapunov redesign methods, back stepping, and feedback linearization.

60581. Digital Image Processing (3-3-0)
Prerequisite: EE 60563. An introduction to the manipulation and analysis of digital images, intended as a foundation for research in such fields as visual communications, medical imaging, and image analysis. Specific topics include human visual effects, filtering, compression, restoration, and reconstruction.

60587. Quantum Mechanics for Electrical Engineers (3-3-0)
The course focuses on those aspects of quantum theory that are of particular relevance to electrical engineering. It is intended to give seniors and first-year graduate students a working knowledge of quantum mechanics at a level sufficient to illuminate the operation of standard and advanced quantum devices. Topics include classical mechanics versus quantum mechanics, early quantum theory, Schrödinger formulation, time-dependent and time-independent Schrödinger equation, Dirac formulation, Bloch theorem, magnetic effects, open quantum systems, and density matrices.

60590. Optical Characterization of Nanostructures (3-3-0)
Prerequisites: Undergraduate quantum mechanics, electricity and magnetism, and solid state physics. Graduate students of chemistry, engineering, materials science, and physics are welcome with approval of the instructor. This course treats the optical characterization techniques that are employed to investigate the physical properties of modern semiconducting materials. A brief overview will first be given of the basic science and growth of these materials, and the theory for their optical characterization. A detailed description will then be provided of measurement techniques, illustrated by examples of the application of these techniques to current semiconductor research and technology. Emphasis will be given to the use of these techniques to investigate low dimensional nanostructures such as quantum wells, wires, and dots.

60604. Wireless Communications (3-3-0)
Prerequisites: EE 60553 or EE 60563. This course will address the physical layer of wireless communication channels. Topics will include: modeling of the wireless channel (e.g. propagation loss, fading), interference models and cell planning, multiple access, modulation and equalization techniques, well-suited to wireless communications. Standards for cellular systems and wireless LANs will be used to motivate and illustrate.

63502. Solid State Seminar (1-1-0)
This course consists of lectures by faculty, senior graduate students, and visiting lecturers covering a broad range of topics in electronic materials, devices and circuits. Students read papers in preparation for the weekly talks and are given a comprehensive examination.

66597. Directed Readings (0-0-0)
Individualized instruction in the areas of faculty and student interest. Course content and credit will be determined by faculty members offering the course.

67001. Special Studies (0-0-0)
Individual or small-group study under the direction of a faculty member in a graduate subject not currently covered by any University course. Individual or small-group study under the direction of a faculty member in a graduate subject not currently covered by any University course.

67003. Advanced Digital Signaling Processing (3-3-0)
Prerequisite: EE 40471 or equivalent. This course covers advanced topics of digital filter design, finite wordlength effects, multirate digital signal processing, and select topics of adaptive digital filters and spectrum analysis.

67010. Instrumentation for Nanoelectronics (3-3-0)
Prerequisite: EE 30342. This lab course is intended to give students hands-on practice on measurements and applications of nanoelectronics devices combined with development and implementation of interfacing instrumentation. Single-electron and nanomagnetic devices are the primary subjects of the course.

67011. Topics in Wireless Networking (3-3-0)
After reviewing the characteristics of the wireless channel, we discuss current cellular and local area wireless networks (GSM, IS-95, UMTS, 802.11, 802.15, HiperLAN, HomeRF, Bluetooth) to gain insight into their architectures and protocols. The second part of the course covers wireless ad hoc and sensor networks, addressing the challenges and proposed solutions, with an emphasis on modeling and cross-layer protocol design aspects. In the third part, we will discuss emerging wireless technologies such as ultra-wideband, software-defined radio, virtual antenna arrays, and cognitive radio techniques and their use in future wireless networks.

67014. Epitaxial Nanostructures (3-3-0)
The class will cover advanced topics on epitaxial growth of semiconductor nanostructures, transport, device physics and technology. The class will comprise of finding, reading, and analysis of research papers, writing reports, discussions, and oral presentations. Students will be required to think independently, come up with new ideas, and work under the instructor’s guidance with the intention of publishing their work.
67015. Robust Stability & Modern Applications  
(3-3-0)  
Coverage of results in the area of robust stability of dynamical systems. The emphasis is placed on the case of structured uncertainties, i.e., uncertainties that are described in the coefficient space. The course is self contained and requires no prior graduate level knowledge in the area of stability, systems, or control. All major theorems will be shown from first principles. The material covered stretches from elementary concepts such as the principle of argument, Hurwitz and Schur stability and the Hermite-Biehler Theorem to the use of piece-wise linear Lyapunov functions and semi-groups for the analysis of time-varying/nonlinear systems stability. The developed concepts are illustrated using examples from the areas of networking, in particular congestion control, and sensor-actuator networks and systems.

67016. Principles of Vacuum Systems for Microelectronics  
(1-1-0)  
Prerequisite: EE 40446, EE 60546 or consent of instructor. Fundamentals of vacuum environments and systems for microelectronics applications. A survey of vacuum pumps, gauges, and practices will be presented.

67017. SEM and Nanofabrication  
(1-1-0)  
Prerequisite: EE 40446, EE 60546 or consent of instructor. A short introduction to fundamentals of scanning electron microscopy and electron beam lithography. SEM fundamentals will be used to illustrate issues in nanofabrication by EBL.

67018. Advanced Nanolithography  
(1-1-0)  
Prerequisite: EE 40446, EE 60546 and EE 67016 or consent of instructor. A short introduction to the wide array of technologies used for performing lithography below 0.1 micron.

67020. Wide Bandgap Semiconductors  
(3-3-0)  
This course will discuss the development of wide bandgap semiconductors, including III-V Nitrides, II-VI semiconductors, SiC and diamond. Growth, material properties, device physics and technology will be addressed. The class will consist of reading and analysis of research papers, writing reports, discussions, and oral presentations. Students will be required to think independently, come up with new ideas, and work under the instructor’s guidance with the intention of publishing their work.

67598. Special Studies  
(0-0-0)  
Individual or small-group study under the direction of a faculty member in a graduate subject not currently covered by any University course.

68599. Thesis Direction  
(0-0-0)  
Research to satisfy the six credit hours required for the master’s degree.

80630. Robust Stability of Linear Systems  
81603. Transmitting Electron Microscope Lab  
(4-3-1)  
Corequisite: EE 81603. Introduction to Transmission Electron Microscopy (TEM) applied to metals, ceramics and semiconductors. TEM optics, electron diffraction, image formation modes and mechanisms, specimen preparation and practical TEM operation, and analytical techniques for chemical analysis.

80650. Advanced Linear Systems Design  
(3-3-0)  
Prerequisite: EE 60550 or consent of instructor. Applications of modern algebra to problems of complicated linear system design. Quotients and state variable design; freedom and system-matrix design; tensors and multilinear design.

80653. Information Theory  
(3-3-0)  
Corequisite: EE 60563. A study of Shannon's measure of information to include: mutual information, entropy, and channel capacity; the noiseless source coding theorem; the noisy channel coding theorem; rate distortion theory and data compression; channel coding and random coding bounds.

80654. Coding Theory  
(3-3-0)  
Corequisite: EE 60563. Error control coding techniques for digital transmission and storage systems. Linear block codes, cyclic codes, BCH codes, and Reed-Solomon codes. Syndrome decoding. Convolutional codes, maximum likelihood decoding, maximum a posteriori probability decoding, and sequential decoding. Block and trellis coded modulation. Low density parity check codes and turbo codes. Applications to computer memories, data networks, space and satellite transmission, data modems.

80655. Digital Control Systems  
(3-3-0)  
Prerequisite: EE 40455 and EE 60550 or equivalent. Analysis and design of discrete-time and sampled-data control systems. State space descriptions and transfer function descriptions using the z-transform. Control design using classical (root-locus, Bode, Nyquist), state space, and polynomial techniques.

80656. Advanced, Semiconductor Physics  
(3-3-0)  
Prerequisites: EE 60587. The class will provide graduate students with a solid understanding of the basic underlying physics of semiconductors that lead to practical applications. Starting from electronic bandstructure, the course will cover topics such as electron-photon interactions, charge scattering and transport, and optical properties of semiconductors. The effects of quantum confinement in modern nanoscale electronic and optical devices will be covered in detail. The course is geared to be a bridge between physics and engineering; much of the physical concepts covered will be shown to be the basis of practical semiconductor devices currently in commercial production. The students will be required to choose a topic of research early in the class and make presentations and write term papers. The students will be evaluated through their assignment solutions, reports, and presentations.

80663. Information and Complexity  
(3-3-0)  
This course provides and introduction to the basic measures used to characterize information and complexity. Topics include: NP completeness, Kolmogorov Complexity, and entropy. All of these concepts are then used to study cryptographic systems.

80665. Noncooperative Optimal Control: Dynamic Games  
(3-3-0)  

80666. Advanced Solid State Devices  
(3-3-0)  
Prerequisites: EE 60566. This course provides in-depth coverage of electronic devices, ranging from conventional to innovative devices. Topics include MOSFETs, resonant tunnel diodes, single-electron devices, power devices, and heterojunction devices. Particular attention is paid to recent development in device research.

80673. Advanced Stochastic Processes  
(3-3-0)  
Prerequisites: EE 60563, EE 60573. Stochastic processes are found in probabilistic systems that evolve with time. This course introduces the fundamentals of stochastic processes and the application of stochastic theory to problems in engineering and science. Bernoulli processes, renewal theory, and Markov chains will be covered.

80675. Stochastic Control Theory  
(3-3-0)  
Prerequisite: EE 60555 or consent of instructor. Optimal control in the presence of process noise. Cost as a random variable. Minimizing average cost over many realizations of a process. Optimal control when the system will operate only a small number of times. Distribution of the cost. Description of stochastic cost by moments or by cumulants. Optimal stochastic control of cost cumulants. Application to the protection of buildings from earthquakes.
87005. Advanced Topics in Multiuser Communications  
(3-3-0)  
Senior graduate course exploring advanced topics in multiuser communications, signal processing, and information theory. Example topic areas include: multiple-access channels; multi-user detection; broadcast channels; communication with side information and watermarking; multipath and relay networks; multi-antenna and multi-carrier systems. Objectives for the course are to develop understanding of the basic models, fundamental performance limits and tradeoffs, and practical approaches for communication in these environments. Interaction and cross-fertilization of ideas from different research areas will also be emphasized.

87006. High Speed Devices  
(3-3-0)  
This course consists of a series of lectures where the fundamental properties of high-speed devices are presented and discussed. In addition, each student has to present a student paper related to one selected device. The paper should present the device, design, the principle of operation, typical figures of merit and possible advantages and drawbacks.

87008. Advanced Topics: Iterative Decoding  
(3-3-0)  
This course will address recent innovations pertaining to the iterative decoding of graph-based error control codes. Particular emphasis will be placed on the belief propagation algorithm as applied to low-density parity check (LDPC) codes and to the maximum a posteriori (MAP) algorithm as applied to turbo codes. Application of these techniques to bandwidth-efficient modulation will also be considered.

87012. Advanced Electron Devices  
(3-3-0)  
In-depth coverage of electronic devices, ranging from conventional devices to innovative devices. Topics include MOSFET's resonant tunnel diodes, single electron devices, power devices, and heterojunction devices. Particular attention is paid to recent developments in device research.

88700. Nonresident Dissertation Research  
(1-0-0)  
Required of nonresident doctoral students who are completing their dissertations in absentia and who wish to retain their degree status.

83701. Graduate Seminar  
(0-0-0)  
Lectures by speakers from inside and outside the Notre Dame community on subjects of current research interest.

Faculty

Peter H. Bauer, Professor, Diplom. Engineer in Electrical Engineering, Technische Universität München, 1984; Ph.D., Univ. of Miami, 1987. (1988)

William B. Berry, Professor Emeritus. B.S.E.E., Univ. of Notre Dame, 1955; M.S.E.E., ibid., 1957; Ph.D., Purdue Univ., 1963. (1964)

Kevin Bowyer, Chair and the Schubmehl-Prein Professor of Computer Science and Engineering and Concurrent Professor of Electrical Engineering. B.S., George Mason Univ., 1976; Ph.D., Duke Univ., 1980. (2001)

Daniel J. Costello, the Leonard Bettes Professor of Electrical Engineering. B.S.E.E., Seattle Univ., 1964; M.S.E.E., Univ. of Notre Dame, 1966; Ph.D., ibid., 1969. (1985)

Patrick J. Fay, Associate Professor. B.S.E.E., Univ. of Notre Dame, 1991; M.Eng., Univ. of Illinois at Urbana-Champaign, 1993; Ph.D., ibid., 1996. (1997)

Martin Haenggi, Assistant Professor. Dipl. El.-Ing. ETH, ETH Zurich, 1995; Dipl. NDS ETH, ibid., 1998; Ph.D., ibid., 1999 (2000)

Douglas C. Hall, Associate Professor. B.S., Miami Univ., 1985; M.S., Univ. of Illinois at Urbana-Champaign, 1988; Ph.D., ibid., 1991. (1994)

Yih-Fang Huang, Chair and Professor of Electrical Engineering and Concurrent Professor of Computer Science and Engineering. B.S.E.E., National Taiwan Univ., 1976; M.S.E.E., Univ. of Notre Dame, 1979; Ph.D., Princeton Univ., 1982. (1982)

Thomas H. Kosel, Associate Professor. B.S., Univ. of California, 1967; M.I.B., ibid., 1970; Ph.D., ibid., 1975. (1978)

Craig S. Lent, the Frank M. Freimann Professor of Electrical Engineering A.B., Univ. of California, Berkeley, 1978; Ph.D., Univ. of Minnesota, 1984. (1986)

Christine M. Mazar, Vice President and Associate Provost of the University and Professor of Electrical Engineering. B.S.E.E., Purdue Univ., 1981; M.S.E.E., ibid., 1984; Ph.D., ibid., 1986. (2004)

Alexei Orlov, Research Associate Professor. Ph.D., Russian Academy of Science, 1990.

Wolfgang Porod, Director of the Center for Nano Science and Technology and the Frank M. Freimann Professor of Electrical Engineering. M.S., Univ. of Graz, 1979; Ph.D., ibid., 1981. (1986)

Michael K. Sain, the Frank M. Freimann Professor of Electrical Engineering. B.S., St. Louis Univ., 1959; M.S., ibid., 1962; Ph.D., Univ. Illinois, 1965. (1965)

Gregory Snider, Associate Professor. B.S.E.E., California State Polytechnic Univ., 1983; M.S.E.E., Univ. of California, Santa Barbara, 1987; Ph.D., ibid., 1991. (1994)

Robert L. Stevenson, Professor of Electrical Engineering and Concurrent Professor of Computer Science and Engineering. B.E.E., Univ. of Delaware, 1986; Ph.D., Purdue Univ., 1990. (1990)

John J. Uhran Jr., Senior Associate Dean for Academic Affairs in the College of Engineering, Professor of Computer Science and Engineering, and Professor of Electrical Engineering. B.S., Manhattan College, 1957; M.S., Purdue Univ., 1963; Ph.D., ibid., 1966. (1966)

Engineering and Law Dual Degree Program

The dual degree program in engineering and law is designed for law students who are interested in pursuing careers in areas such as patent, environmental, telecommunications, or similar law specialties. To be eligible for the master of engineering degree, the candidate must have a B.S. in an A.B.E.T. accredited engineering or computer science program and must also be a candidate for the juris doctor degree in the Notre Dame Law School. The master’s of engineering program is not available as an individual degree program.

To be awarded both degrees, the candidate must complete a minimum of 99 credit hours, 75 in law and 24 in the engineering program. The engineering degree awarded will be the master of engineering with a concentration in one of the engineering disciplines offered in Notre Dame’s division of engineering. The course work-only master’s program requires the completion of 24 credit hours of engineering, mathematics, or science courses acceptable to the appropriate engineering department; six credit hours of appropriate law courses; and a master’s examination. Courses for the M.Eng. will be chosen in consultation with an adviser in the student’s engineering department. The recommended distribution of engineering courses in the Law School curriculum is one each semester during the first and third years of study and two each semester during the second year. (http://www.nd.edu/engineer/prospects/images/lawdual.pdf)

Admission

Admission to the program requires a separate application to each school. Admissions decisions will be made independently by the Law School and by the Graduate School.

Law School applications may be obtained from the Director of Admissions, P.O. Box 959, University of Notre Dame, Notre Dame, IN 46556-0959, telephone (574) 631-6626.

For further information about the engineering program, contact the Office of Graduate Admissions by telephone at (574) 631-7706 or by email at gradad.1@nd.edu.
The Division of Humanities

The Division of Humanities offers graduate programs from the master's in English, history, history and philosophy of science, literature, medieval studies, philosophy, and theology. Master's degree programs are also available in art, creative writing, early Christian studies, music, and German and Romance languages and literatures. Because of the increasingly interdisciplinary nature of research in many fields, joint Ph.D. programs (e.g. in mathematics and philosophy, or history and philosophy of science and physics) are available as well.

Several centers and institutes provide a framework for multidisciplinary research in the humanities. The Medieval Institute, for instance, coordinates the teaching and research of the largest contingent of medievalists of any North American university. The Keough Institute for Irish Studies is an interdisciplinary project devoted to teaching and research in Irish culture in all its internal and external relations. The Nanovic Institute provides a forum for the discussion of key issues in Europe across all fields. The Erasmus Institute brings resources from two millennia of Catholic thought to bear on problems in the humanities, social sciences, and arts. The Notre Dame Center for Ethics and Culture supports scholarly research in ethics and its dissemination in the classroom and the broader culture. The Center for Philosophy of Religion promotes, supports, and disseminates scholarly work in the philosophy of religion and Christian philosophy. Descriptions of these and other University research institutes and centers may be found elsewhere in this Bulletin.

The division attempts to prepare graduate students to be expert researchers in a specific area, excellent pedagogues, and broad intellectuals. The programs provide training in research through seminars, opportunities to work with faculty in their research, support to become engaged in professional societies, and rigorous standards for dissertations. Many of the departments have formal pedagogical training programs and make use of the Kaneb Center. The John A. Kaneb Center for Teaching and Learning sponsors a program of workshops, presentations, and consultations that highlight the best teaching practices and learning environments and encourage and assist the efforts of Notre Dame’s faculty and teaching assistants to nurture and sustain these. The residential nature of the programs create a rich intellectual environment in which faculty and graduate students interact with one another and among themselves on a regular basis.

Art, Art History, and Design

Chair:
Dennis Doordan

The Program of Studies

The Department of Art, Art History, and Design offers the master of fine arts (M.F.A.) degree in studio art and design and the master of arts (M.A.) degree in art history. In studio art and design, the department also awards the M.A. degree, but only to students who are not accepted to degree candidacy in the M.F.A. program.

The aim of the graduate program is to educate qualified, promising students in various aspects of creative activity and art history. Studio and design students may concentrate in ceramics, design, painting, photography, printmaking, and sculpture, or in a combination of these disciplines. Art history students select from a range of course offerings to fulfill their professional interests. In addition to specific courses, graduate students may pursue an area of interest through a system of independent study with a faculty adviser and a graduate committee selected by the student. Students are expected to develop a personal direction that culminates in a professional exhibition of visual work or a research project in art history.

The Master of Fine Arts Degree

The master of fine arts degree (M.F.A.) at Notre Dame is for artists and designers with exceptional talent and strong academic skills. The program combines studio work with academic studies in art history and criticism. The College Art Association and most other professional institutions of higher education recognize the M.F.A. as the terminal degree for artists and designers. This degree has become the standard prerequisite for those who intend to teach at the college level. It is also appropriate for individuals seeking to further develop their professional careers as artists and designers.

The M.F.A. degree is a studio and research degree that requires three years or six semesters of study and 60 graduate credit hours with a B (3.0) or better average, including nine credit hours of art history, three credit hours in ARHI 63570 (Graduate Seminar) and 10 credit hours of ARST 78708 (Thesis Direction). Additional requirements include:

- The successful completion of a written thesis approved by the student's thesis committee.
- The completion of a thesis project, an exhibition of creative work that is approved by the entire art and design faculty.

Students who are not in residence but still in the process of finishing an M.F.A. degree must be enrolled for a minimum of one credit hour of ARST 78706 (Nonresident Thesis Research) each semester.

Admission

Prerequisites for admission ordinarily include the B.F.A. degree in studio art or design, including courses in art and art history. However, students of exceptional merit who have earned the B.A. or B.S. degree in studio art or design or the equivalent will be considered. All applicants must have a B (3.0) or better average in undergraduate major courses.

Art and design majors are evaluated primarily on the basis of a portfolio of 20 slides of recent work and three letters of recommendation. All applicants must write a statement of intent indicating their goals for the M.F.A. degree and their expectations for graduate studies.

CD Portfolio Submissions: A CD-ROM is an optional method for submitting a portfolio. Submissions however must follow these guidelines to be considered:

- The digital portfolio should be developed cross-platform or there should be both Apple
Admission
Admission to the art history program is based on Graduate Record Examination scores, evaluation of undergraduate transcripts, a writing sample, and letters of recommendation. Successful applicants are normally expected to hold a B.A. in art history or its equivalent (20 to 30 credit hours in art history). Students with insufficient undergraduate art history credits may be provisionally admitted to the program with the stipulation that they make up any deficiencies before being admitted to regular candidacy.

Undergraduate courses taken to rectify deficiencies will not count toward the 36-credit-hour degree requirement.

To be considered for tuition and stipend scholarships, applications should be received by February 1.

The Master of Arts Degree: Art History
The M.A. prepares the student for more advanced graduate work by providing him or her with the opportunity to solidify general and specialized art historical knowledge and to hone research skills. The degree may also serve as a foundation for employment or further study in fields such as museology, visual image management, and art dealing and investment. The M.A. in art history is not a terminal degree. A doctorate is normally required to teach at the collegiate level.

The M.A. in art history requires the completion of 36 credit hours of graduate study, including six credit hours of thesis research, with a B (3.0) or better average. A normal course load is from nine to 12 credit hours per semester. The successful completion of ARHI 63576 (Art History Methods) is required. Students must also successfully complete four seminars in addition to ARHI 63576, and take at least one course or seminar from each of the core art history faculty. Students who are not in residence but still in the process of finishing an M.A. degree must be enrolled for a minimum of one credit hour of ARHI 68574 (Nonresident Thesis Research) each semester.

Additional requirements include:

- The successful completion of a comprehensive examination. This examination is taken at the beginning of the fall semester of the second year of study.
- The successful completion of a written thesis. The student will be expected to select a thesis topic and adviser by the end of the first year of study. The finished thesis must be read and approved by the adviser and two other readers.
- Evidence of reading ability in one foreign language, either German, French, or another language approved by the graduate adviser. Reading ability is normally demonstrated by obtaining a passing grade on the appropriate Graduate Reading Examination administered by the University. This requirement must be fulfilled during the first year of graduate study.

Art History Program Courses (ARHI)
63105. Topics in Greek and/or Roman Art (3-3-0) Topics course on special areas of Greek and/or Roman art.
60120. Classical Greek Art (3-3-0) This course analyzes and traces the development of Greek architecture, painting, and sculpture in the historical period, from the eighth through the second centuries B.C., with some consideration of prehistoric Greek forebears of the Mycenaean Age. Particular emphasis is placed upon monumental art, its historical and cultural contexts, and how it reflects changing attitudes towards the gods, human achievement, and the relationship between the divine and the human.
60121. Greek Architecture (3-3-0) In this course, the development of Greek monumental architecture and the major problems that define it will be traced from the eighth through the second centuries B.C., from the late Geometric through the Archaic, Classical, and Hellenistic periods. Among themes to be treated are the relationship between landscape and religious architecture, the humanization of temple divinities, the architectural expression of religious tradition and even specific history, architectural procession and hieratic direction, emblem and narration in architectural sculpture, symbolism and allusion through architectural order, religious revival and archaism, and the breaking of the architectural and religious canon.
63112. Seminar in Greek and/or Roman Art (3-3-0) Permission required. Seminar on specific subjects in Greek and/or Roman art.
63112. Athenian Acropolis in Context (3-3-0) Permission required. The monumental elaboration of the Athenian Acropolis did not begin with Pericles and Phidias in the mid-fifth century B.C. Greek monumental art and architecture were spawned in the context of religion, and by the early Archaic period, the Acropolis was the center of Athenian religion: all at once, religious awe and piety were expressed in the form of impressive freestanding sculptural dedications and in large and meticulously wrought stone buildings, elaborately decorated with carved and painted designs and, most impressively, with figural relief sculpture. The monuments of the Athenian Acropolis must be understood first in this context — as the embodiment of religious concepts — and then in the context of Greek art and culture as a whole. An ultimate goal of the seminar will be to arrive at an understanding of the evolving meaning of the Greek Temple and monumental form, and how they find unique expression in the fifth century Acropolis building program of Pericles. Among the themes that will be treated to one degree or another are the relationship between landscape and religious architecture, the humanization of temple divinities, the monumental expression of religious tradition and even specific history, architectural procession and hieratic direction, emblem and narration in architectural sculpture, symbolism and allusion through architectural order, religious revival and archaism, the breaking of architectural and religious canon. Taken together, they constitute the specific architectural narrative of the Periclean Acropolis.
60130. Etruscan and Roman Art and Architecture (3-3-0)
Roman Art of the Republic and Empire is one focus of this course, but other early cultures of the Italian peninsula and their rich artistic production are also considered. In particular, the arts of the Villanovans and the Etruscans are examined and evaluated as both unique expressions of discrete cultures and as ancestors of and influence on Rome. The origins and development of monumental architecture, painting, portraiture and historical relief sculpture are isolated and traced from the early first millennium B.C. through the early fourth century of the modern era.

67171. Special Studies - Ancient (0-0-0)
Independent study in ancient art history under the direction of an individual faculty member.

66172. Directed Readings - Ancient (0-0-0)
Specialized reading related to the study of ancient art history under the direction of an individual faculty member.

60202. The Contest of Word and Image in Early Medieval Art (3-3-0)
This course will investigate the art produced in Western Europe between the seventh and eleventh centuries. Often characterized as a Dark Age, this period in fact demonstrates a fertile, fluid and inventive response to the legacy of Late Antique Christianity. The course will focus on the production and reception of illuminated manuscripts, perhaps the site where the most original encounters with and re-shaping of this legacy occur. This course should interest those who wish to think through the relationship of words and images on the page and in life.

63205. Topics in Medieval Art (3-3-0)
The topic and format of this course will vary from year to year.

60212. Byzantine Art (3-3-0)
Byzantine art has often been opposed to the traditions of western naturalism, and as such has been an undervalued or little known adjunct to the story of Medieval art. In order to develop a more sophisticated understanding of this material we will examine the art produced in Byzantium in the period from the ninth to the twelfth century, a period which marks the high point of Byzantine artistic production and influence. Stress will be placed upon the function of this art within the broader setting of this society. Art theory, the notions of empire and holiness, the burdens of the past and the realities of contemporaneity will be brought to bear upon our various analyses of material from all media. How we, as art historians, can write the history of this rich culture will be a central issue of this course.

60220. Early Medieval Art (3-3-0)
This course will investigate the art produced in Western Europe between the seventh and eleventh centuries. Often characterized as a Dark Age, this period in fact demonstrates a fertile, fluid and inventive response to the legacy of Late Antique Christianity. The course will focus on the production and reception of illuminated manuscripts, using facsimiles of these works as a basis for teaching. Students will become familiar with art-historical methods for the examination of such works, and will be invited to contemplate the interplay of word and image that these books propose. Categories of material discussed include: Insular art, the Carolingian scriptoria, Ottonian imperial image making, Anglo Saxon art, Spanish Apocalypse and Italian Exultets.

60240. Romanesque Art (3-3-0)
This course examines sculpture, architecture, manuscript illumination, and mural painting along with the arts produced for church and court in Western Europe during the 11th and 12th centuries. Pilgrimage to the holy shrines, the veneration of saints, and crusades to Jerusalem are among the issues discussed in relation to the arts. Monastic and ecclesiastical reform, heresy, and renewed interest in antiquity are also considered.

60250. Gothic Art (3-3-0)
This course studies Gothic monuments -- who commissioned and made them and how they functioned for different audiences. Among others we consider the following questions: what motivated large architectural enterprises? What was their cultural, political, and social significance to women and men, to the laity and clergy, and to viewers from different social classes? How did imagery convey complex theological messages to this varied audience? How did architectural or public images differ from the portable private works of art which became increasingly popular in the late Gothic period?

67271. Special Studies - Medieval (0-0-0)
Independent study in Medieval art history under the direction of an individual faculty member.

66272. Directed Readings - Medieval (0-0-0)
Specialized reading related to the study of Medieval art history under the direction of an individual faculty member.

63305. Topics in Renaissance Art (3-3-0)
Topics course on special areas of Renaissance art.

60311. 15th-Century Italian Renaissance Art (3-3-0)
This course investigates the century most fully identified with the Early Renaissance in Italy. Individual works by artists such as Brunelleschi, Donatello, Ghiberti, Botticelli, and Alberti are set into their social, political, and religious contexts. Special attention is paid to topics such as the origins of art theory, art and audience, Medician patronage, and art for the Renaissance courts of northern Italy and Naples.

63312. Venetian and Northern Italian Renaissance Art (3-3-0)
This course focuses on significant artistic developments of the sixteenth century in Venice with brief excursions to Lombardy and Piedmont. Giorgione, Titian, and Palladio, the formulators of the High Renaissance style in Venice, and subsequent artists such as Tintoretto and Veronese are examined. An investigation of the art produced in important provincial and urban centers such as Brescia, Cremona, Milan, Parma, Varallo, and Vercelli also provide insight into the traditions of the local schools and their patronage.

60313. The High Renaissance in Rome and Florence (3-3-0)
Leonardo, Michelangelo, Bramante, and Raphael provide the basis of study of one of the most impressive periods of artistic activity in Italy - the High Renaissance in Rome and Florence. The course also investigates the origins of Mannerism in the excessive achievements of Jacopo Pontormo, Rosso Fiorentino, and the succeeding generation of late-Renaissance maniera artists who helped to formulate a new courtly style.

60314. Seminar in Mannerism: Painting and Sculpture (3-3-0)
This course will explore the artistic rends in Italy after the High Renaissance (c. 1520) and before the Baroque (c. 1580), and will begin with definitions of terminology and a brief historiographic survey. Our attention will then turn to the Roman art of Raphael’s heirs, Giulio Romano, Perino del Vaga, and Polidoro da Caravaggio, and the emerging Tuscan painters Pontormo, Rosso Fiorentino, and Domenico Beccafumi. We will also investigate the dispersal of the Roman school: Giulio Romano to the Gonzaga course in Mantua, in 1524; and follow-
ing the Sack of Rome by imperial troops in 1527, other mannerist artists to Genoa, Bologna, Parma, and as far as the French royal chateau at Fontainebleau. Rome consequently experienced a revival at the end of the reign of Clement VII, and under the pontificate of Paul III, notably, the arts, politics, and theology flourished. This period may be marked by such diverse works as Michelangelo’s monumental Last Judgment (1536-41) and his frescoes (1542-45) in the Pauline Chapel, Vatican Palace, the decorations (1536-51) by various mannerist artists in San Giovanni Decollato, Perino’s elegant frescoes in the Sala Paolina (1545-47), Castel Sant’ Angelo, Giorgio Vasari’s fantastic murals in the Palazzo Cancelleria (1546), and Francesco Salviati’s beautiful, secular frescoes in the Palazzo Ricci-Sacchetti (c. 1553-54). Attention will also be given to the art of the Counter-Reformation in Rome, and to painting and sculpture by Bronzino, Salviati, Cellini, Bandinelli, Vasari, Giambologna, and others at the Florentine courts of Dukes Cosimo I and Francesco I.

63315. Seminar in Renaissance Art (3-3-0)
Permission required. Seminar on specific subjects in Renaissance art.

60320. Northern Renaissance Art (3-3-0)
This course traces the development of painting in Northern Europe (France, Germany, and Flanders) from approximately 1300 to 1500. Special attention is given to the art of Jan Van Eyck, Rogier van der Weyden, Heyromnys Bosch, and Albrecht Dürer. Through the consideration of the history of manuscript and oil painting and the graphic media, students will be introduced to the special wedding of nature, art, and spirituality that defines the achievement of the Northern Renaissance.

60350. Survey of Italian Baroque Art: From Caravaggio to Tiepolo (3-3-0)
This course surveys Italian painting, sculpture, and architecture of the seventeenth and eighteenth centuries, a period which also witnesses the foundation and suppression of the Jesuit Order, the Counter-Reformation, absolute monarchy, and democratic ideologies, the evolution of design theories, modernizing economic, political, and legalistic technological paradigms. These questions arise throughout this course, which concentrates on select artistic events in the United States and Europe during the second half of the 20th century. Movements considered include pop art, minimalism, op art, arte povera, postminimalism, earth art, conceptual art, photo-realism, video and performance art, and other recent picture/theory approaches to art making. This course focuses on recent developments in painting and sculpture. It also examines associated theories of art criticism.

63405. Topics in Modern Art (3-3-0)
Topics course on special areas of modern art.
such as heroism, metamorphosis, and earthly and divine love. One aim of this class will be to identify the explanatory character of myth, and of story-telling within culture, as means of historical self-understanding, self-revelation, and catharsis.

60522. Fashioning Identities in Colonial America
(3-3-0)
This course will focus on dress and material/visual culture in Colonial North America. It will provide an introduction to methodology, and offer an overview of key themes in the history of dress and consumerism within the framework of gender studies. In our focus on the Colonial period (especially in the 18th Century), we will analyze the economics of dress (the production, marketing and acquisition of cloth and clothing) and will assess the importance of fashion and commerce and politics. We will evaluate the role of dress in the construction of colonial identities, and we will examine the ways that dress operated as a visual focus for racial, class and ethnic encounters.

63535. Seminar: Feminist Issues in Modern Art
(3-3-0)
In this course we will survey many of the major figures -- both men and women artists -- of 19th and 20th-century European and American art, in order to examine current debates about the role of the feminine in modern art. The selected readings will explore a broad range of significant, recent discussions of this field, as well as the theoretical sources of these studies. The most important of these issues will include theories of sexuality; the role of gender in the formation of the avant-garde; the problem of a feminine subjectivity -- its possibility or impossibility; the woman-child as the type of woman artist; the importance of the maternal body for men and women artists; the experience of mothering in developing artistic subjectivity; the feminine as performance and masquerade; and the collapse of the feminine into the primitive.

60550. History of Photography
(3-3-0)
This course deals with the development and use of photography as an artistic medium from time of its invention in the mid-nineteenth century up to the present moment. Besides viewing slides, the student will be able to view a large number of original photographs from the Snite Museum of Art.

66572. Directed Readings
(0-0-0)
Permission required. Specialized reading related to the student's area of study.

68573. Thesis Direction
(0-0-0)
Independent research and writing on an approved subject under the direction of a faculty member. Required of candidates for the research M.A. in art history and for the M.F.A.

68574. Nonresident Thesis Research
(1-1-0)
Required of all nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

63576. Art History Methods
(3-3-0)
Required of all art history graduate majors. This seminar is a survey of the historiography of art history with special attention paid to the various types of methodology which have been applied to the analysis of art. Special attention is given to nineteenth-century and twentieth-century art historical methods, including connoisseurship, biography, iconology, psychoanalysis, semiotic, and feminist approaches.

60580. History of Design: Form, Values, and Technology
(3-3-0)
This course will provide a historical perspective on the development of industrial, product and graphic design in the 19th and 20th centuries. More than the aesthetic styling of products, design mediates the intersection of technology and cultural values in the modern era. The role of the modern designer as both a facilitator and a critic of industrial technology will be examined.

67585. Topics in Design Studies
(3-3-0)
Topics course on special areas of design studies.

63805. Seminar in Contemporary Art
(3-3-0)
Seminar on specific subjects in contemporary art.

Design Program Courses (DESN)
61104. Graphic Design Research
(0-0-0)
Special projects in visual communications for students of graphic design.

61108. Graduate Web Studio
(3-0-6)
This course will cover the design and technical considerations in presenting creative work on the web. Topics will include basic web page design, digitizing 2D and 3D work, digital video, and having an online resume.

67171. Special Studies - Graphic Design
(0-0-0)
Independent study in graphic design: research or creative projects. Open to graduate students with permission of the instructor.
61204. Product Design and Research
(0-0-0)
Special projects in product and systems design.

67271. Special Studies-Product Design
(0-0-0)
Independent study in product design: research or creative projects. Open to graduate students with permission of the instructor.

6350. Sculpture/Ceramics Seminar
(1-1-0)
A team-taught seminar/critique that brings together all the ceramics and sculpture faculty and graduate students in a weekly dialogue focusing on issues in contemporary art as they relate to student research. This course is required of all ceramic and sculpture candidates each semester leading to and including the M.F.A. thesis year.

6104. Ceramics Studio
(0-0-0)
Studio projects and research in ceramics.

6115. Ceramic Sculpture
(0-0-0)
Clay is the primary medium for this advanced course in sculpture.

6350. Sculpture/Ceramics Seminar
(1-0-0)
Required of all MFA candidates each semester. This team-taught seminar/critique meets each week to critique ongoing graduate student work and to discuss issues related to contemporary art practice.

61407. Photography Studio
(0-0-0)
Studio projects and research in photography and photo-related media.

63450. Painting/Printmaking Seminar
(1-1-0)
A team-taught seminar/critique that brings together all the printmaking and painting faculty and graduate students in a weekly dialogue focusing on issues in contemporary art as they relate to student research. This course is required of all photography candidates each semester leading to and including the M.F.A. thesis year.

67471. Special Studies - Photography
(0-0-0)
Independent study in photography: research or creative projects. Open to graduate students with permission of the instructor.

67571. Special Studies - Printmaking
(0-0-0)
Independent study in printmaking: research or creative projects. Open to graduate students with permission of the instructor.

61608. Sculpture Studio
(0-0-0)
Studio projects and research in three-dimensional media.

67671. Special Studies - Sculpture
(0-0-0)
Independent study in sculpture: research or creative projects. Open to graduate students with permission of the instructor.

62704. Teaching Methods
(1-1-0)
This seminar prepares graduate student instructors for teaching undergraduate courses in the department. Course development, assignment preparation, time management, student evaluations, grading, and student/instructor dynamics are covered. Required for M.F.A. students in studio and design.

63750. Graduate Seminar
(2-3-0)
The class will consist of trips to local, Chicago, and other area venues to view art performances, lectures and exhibitions where students can experience diverse works of art first-hand. An integral part of the course will be readings about the artists and the works seen as well as discussions centered on the concepts, methods, forms, etc. of the works viewed.

67771. Special Studies
(0-0-0)
Independent study in art studio: research or creative projects.

78706. Nonresident Thesis Research
(1-0-0)
Required of all nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

78707. Research and Dissertation
(0-0-0)
Individual conferences and consultation between the graduate student and the dissertation director. Required of students pursuing dissertation research in residence.

78708. Thesis Direction
(0-0-0)
Independent research and writing on an approved subject under the direction of a faculty member. Required of candidates for the M.F.A. in art studio.

The Department of Classics offers instruction in classical studies and is the administrative home to the program in Arabic studies. The department cosponsors a master’s degree program in early Christian studies with the Department of Theology. The following courses are available to graduate students. Graduate students who intend to begin or renew their study of Greek, Latin, Arabic, or Syriac are invited to contact the department for advice.

Course Descriptions
Each course listing includes:
- Course Number
- Title
- (Credits per semester–lecture hours per week–laboratory or tutorial hours per week)
- Course Description

Classical Literature and Civilization

60125. Classical Greek Tragedy (3-3-0)
This advanced course in literature provides detailed study of the theory and practice of classical Greek tragedy. The structures and sensibilities that inform tragedy are assessed, with special attention to plays written by the three great tragedians, Aeschylus, Sophocles, and Euripides. The Greeks’ own responses to tragedy, as represented by Sophocles, Plato, and Aristotle, are also discussed. The form and function of Greek tragic plays, their place in classical culture, and their distinctive approach to issues of human life are key topics of the course.

60220. The Romans and Their Gods (3-3-0)
An introduction to the way in which the Romans conceived of, worshipped, and communicated with the mythical gods of their pantheon. The course focuses first on conventional religious rituals and their cultural meaning, and secondly on the success of Roman polytheism in adapting to changing historical and social conditions. Particular attention is paid to the so-called “Mystery Religions,” including Christianity, and their relationship to conventional forms of Roman religious behavior.

60225. Romans and Christians (3-3-0)
The early development of the Christian religion in its historical Roman context. The course surveys the political, social, and administrative structures of the Roman Empire, examines the complexity of Rome’s religious life, and analyzes the rise of the Jesus movement and Rome’s reaction to it. Particular topics studied include pagan and Christian magic and miracle-working, the sectarian and subversive character of early Christianity, martyrdom and persecution, and Constantine’s emergence as Rome’s first Christian emperor.

60320. Family and Household in Greco-Roman Antiquity (3-3-0)
This course takes as its main theme the life-cycle of the ancient Greeks and Romans, and examines its component parts. Among the topics studied are Greco-Roman views and practices concerning marriage, divorce, child-rearing, and old age. The ways in which family and household were conceptualized in the ancient world, and the demographic patterns that controlled the life-cycle are given special consideration.

60365. Art and Literature of Metamorphoses (3-3-0)
This course begins with a critical study of Ovid’s great poem, the Metamorphoses. The poem itself became a subject of metamorphosis in poetry and art in the hands of such figures as Stiacci, Dante, Botticelli, Bernini, Rembrandt, Hughes and Heaney. The course addresses the modeling of transformation within the literary text by examining first Ovid and his sources, and second, adaptations of his poem by writers such as Shakespeare and Kafka. Connections with folklore, magic, and religion are explored. The graphic arts receive equal consideration as the course explores how Ovid’s ideas of the transformation of the body, the capacity of the human body for allegory, and the fragility of identity have influenced later artists and authors.

60420. Late Antique/Early Christian Art (3-3-0)
Art in Late Antiquity has traditionally been characterized as an art in decline, but this judgment is relative, relying on standards formulated for art of other periods. Challenging this assumption, we will examine the distinct and powerful transformations within the visual culture of the period between the third and sixth centuries AD. This period witnesses the mutation of the institutions of the Roman Empire into those of the Christian Byzantine Empire. Parallel to these social changes we can identify the emergence of a Christian art that defines our basic assumptions about the role of art in a Christian society. The fundamental change in religious identity that was the basis for this development had a direct impact upon the visual material that survives from this period. This course examines the underlying conditions that made images so central to cultural identity at this period.
Greek Language and Literature (CLGR)

60001. Beginning Greek I

This two-semester sequence of courses introduces students to the language of the ancient Greeks for the first time. It emphasizes the fundamentals of ancient Greek grammar and vocabulary, and prepares students to read original Greek texts. An appreciation for ancient Greek culture is also fostered through secondary readings and class discussion.

CLGR 60001 is offered each fall semester and CLGR 60002 is offered each spring semester.

60002. Beginning Greek II

This two-semester sequence of courses introduces students to the language of the ancient Greeks for the first time. It emphasizes the fundamentals of ancient Greek grammar and vocabulary, and prepares students to read original Greek texts. An appreciation for ancient Greek culture is also fostered through secondary readings and class discussion.

CLGR 60001 is offered each fall semester and CLGR 60002 is offered each spring semester.

60003. Intermediate Greek

This second-year language course builds on the work of Beginning Greek I and II. It combines a review of grammar with careful reading of classical Greek authors such as Homer and Plato. The course improves students’ translating skills, introduces methods for studying Greek literature in its historical and cultural contexts, and prepares students for more advanced work in the rich literature of the ancient Greeks. Offered each fall semester.

60004. Reading and Writing Greek Prose

This second-year language course continues the review of grammar begun in CLGR 60003 and introduces students to stylistic analysis through close

60011. Homer

This third-year course builds on CLGR 60003 and CLGR 60004, and offers close reading of passages from the Iliad and Odyssey. Homer’s epic poems stand at the head of the tradition of European literature; their themes and poetic style have substantially influenced the works of Dante, Milton and many other European writers. The poems are discussed in their cultural context, and features of poetic oral composition are examined. The course prepares students for advanced offerings in Greek literature, especially CLGR 60021 and CLGR 60031. Offered in fall semester, alternate years.

60012. Age of Herodotus

This third-year course builds on the work of CLGR 60003 and CLGR 60004, and offers close reading of passages from the Histories of Herodotus. The Histories tells of the momentous wars between the Greeks and the Persians in the early classical era, and is the earliest surviving narrative of the western historical tradition. The political, social, and cultural conditions of fifth-century Greece that inspired Herodotus are discussed, and the development of Greek history-writing is examined. The course prepares students for advanced offerings in Greek literature, especially CLGR 60022, CLGR 60032, and CLGR 60042. Offered in spring semester, alternate years.

60013. Greek Tragedy

This third-year course builds on the work of CLGR 60003 and CLGR 60004 and offers close reading of passages from the tragedies of Sophocles and Euripides. These plays illustrate the Athenian invention and development of tragedy that took place when Athens dominated Greece politically between the Persian Wars and the Peloponnesian War, the great fifth-century war against Sparta. The ways in which the plays reveal and address the city’s ideological, political, and sexual tensions are key themes for discussion in the course, and matters of style are appropriately examined. The course prepares students for advanced offerings in Greek literature, especially CLGR 60023. Offered in fall semester, alternate years.

60021. Hesiod

This advanced course introduces students to the poetry of Hesiod through close reading and detailed study of the Theogony and the Works and Days. Both works represent an early poetic tradition in Greek literature parallel to but separate from that of Homer which focuses on the human condition in a cosmos controlled by all-powerful and vengeful gods. The relationship of these central works of archaic Greek literature to other archaic texts is a key theme for discussion in the course.

60022. Thucydides

This advanced course introduces students to the historical writing of Thucydides through close reading and detailed study of the History of the Peloponnesian War. Often considered the most accurate and methodical of the ancient historians, Thucydides brought to Greek history-writing a high level of precision in both language and analysis. His uniquely candid accounts of the history, politics, and social effects of the great war between Athens and Sparta, and the connection between content and literary style are key themes for discussion in the course.

60026. The Age of Alexander

Alexander the Great (356-323 BCE) had a stunning impact on the ancient Mediterranean world. Leading a panhellenic crusade against the Persians, he created an empire of enormous proportions that included his native Macedonia, Greece, Egypt, and much of the ancient Near East. In so doing he laid the foundations for the dispersal of Greek ideas and practices over a huge area. This course examines Alexander’s meteoric and ruthless career through careful study of two Greek authors who wrote extensively about him, Arrian and Plutarch.

60031. Greek Lyric Poetry

This advanced course includes readings from Archilochus’ iambic and elegiac poems, Sappho’s monodies, and Pindar’s choral works. It introduces students to archaic and classical Greek lyric poetry, which represents a literary tradition that drew inspiration from religious ritual, contemporary politics, and private experience. Its authors experimented with diction, style, and meter in ways distinct from those of the epic poets. The manner in which they wrote and the ways in which they responded to the epic tradition are key themes for discussion in the course.

60034. Plato

This advanced course offers accelerated reading and detailed study of the philosophical dialogues of Plato, whose writings, often radical and challenging, represent a cornerstone in the Western intellectual tradition. The development of Plato’s philosophical ideas in their historical context is a key theme for discussion in the course, and attention is paid to the main features of his prose style in selections of his works.

60063. Euripides

This advanced course offers accelerated reading and detailed study of the tragic plays of Euripides, the last of the great tragedians of classical Athens and the object of ridicule from the comic writer Aristophanes. Euripides’ plays depart from those of his predecessors first because of their escapist and romantic plots and secondly because of their fierce engagement with contemporary Athenian politics and society. The course dwells on this development, and also considers why Euripides is sometimes considered the most radical of the Athenian tragedians.
Latin Language and Literature (CLLA)

60001. Beginning Latin I
(3-4-0)
This two-semester sequence of courses introduces students to the language of the ancient Romans for the first time. It emphasizes the fundamentals of Latin grammar and vocabulary, and prepares students to read original Latin texts. An appreciation for ancient Roman culture is also fostered through secondary readings and class discussion. CLLA 60001 is offered each fall semester and CLLA 60002 is offered each spring semester.

60002. Beginning Latin II
(3-4-0)
This two-semester sequence of courses introduces students to the language of the ancient Romans for the first time. It emphasizes the fundamentals of Latin grammar and vocabulary, and prepares students to read original Latin texts. An appreciation for ancient Roman culture is also fostered through secondary readings and class discussion. CLLA 60001 is offered each fall semester and CLLA 60002 is offered each spring semester.

60003. Intermediate Latin
(3-3-0)
Prerequisite: CLLA 60002 or equivalent. This second-year language course builds on the work of Beginning Latin I and II. It combines a review of grammar with careful reading of classical Latin authors such as Cornelius Nepos and Ovid. The course improves students’ translating skills, introduces methods for studying Latin literature in its historical and cultural contexts, and prepares students for more advanced work in the sophisticated literature of the ancient Romans. Offered each fall semester.

60004. Reading and Writing Latin Prose
(3-3-0)
This second-year language course continues the review of grammar begun in CLLA 60003 and introduces students to Latin texts. An appreciation for the complexity of Cicero’s grammatical expression and the elegance of Cicero’s Latin prose are the primary objectives of this course. Offered each spring semester.

60010. Intensive Latin
(5-5-0)
This accelerated course provides an introduction to the Latin language for beginners and covers in one semester the contents of CLLA 60001 and CLLA 60002. Students who complete the course are eligible to proceed to the intermediate level of study.

CLASSICS

60005. Socratic Literature
(3-3-0)
This course will study the character and philosophical significance of Socrates within the context of the intellectual ferment of late fifth-century Athens. The Greek primary texts that constitute the heart of the course are Plato’s Laches and Lysis and sections of Xenophon’s Memorabilia. Issues that arise from these texts, like the ideal of rational character and Socrates’ great interest in Eros, will provide opportunities for student research and classroom discussions.

60011. Virgil
(3-3-0)
This three-year course builds on CLLA 60003 and CLLA 60004, and offers close reading of passages from the Aeneid. Virgil’s inspired adaptation of Homer’s epic poems traces the story of the flight of Aeneas from Troy to Italy, where Rome, a new Troy, will be founded. The place of Virgil’s epic in the emperor Augustus’ cultural program, various critical approaches to the poem, and its compositional techniques provide subjects for discussion. The course prepares students for advanced study in Latin literature, especially CLLA 60021, CLLA 60031, CLLA 60041, and CLLA 60051. Offered in fall semester, alternate years.

60012. Latin History-Writing
(3-3-0)
This third-year course builds on CLLA 60003 and CLLA 60004, and offers close reading of passages from the works of the historical writers Caesar and Sallust. Latin historiography is a sophisticated instrument for narrating past events, for showing how notions of cause and effect and change over time develop in historical thinking, and for indicating the relevance of the past to the present. The political and social conditions of Rome that informed the writings of Caesar and Sallust are discussed, and the compositional techniques of their works are examined. The course prepares students for advanced offerings in Latin literature, especially CLLA 60022, CLLA 60032, and CLLA 60052. Offered in spring semester, alternate years.

60013. Roman Lyric Poetry
(3-3-0)
This third-year course offers close reading of passages from the lyric poetry of such authors as Catullus and Horace. The lyric form gives precise and economical expression to a wide range of human thoughts and emotions, from the highly personal to the grandly patriotic. The range of Roman lyric, the technique of its practitioners, and the place of lyric poetry in Roman life are themes that receive special attention. This course prepares students for advanced offerings in Latin literature, especially CLLA 60023, CLLA 60033, CLLA 60043, and CLLA 60053. Offered in fall semester, alternate years.

60014. Cicero’s Speeches
(3-3-0)
This third-year course builds on the work of CLLA 60003 and CLLA 60004, and offers close reading of select speeches of Rome’s greatest orator, Cicero. The art of persuasion was an essential requirement for success in Roman public life, and no one was more persuasive than Cicero. The flexibility and complexity of Cicero’s grammatical expression, the range of his styles, and the political contexts in which his speeches were delivered are all given careful treatment. The course prepares students for advanced offerings in Latin prose, especially Latin CLLA 60024, CLLA 60034, and CLLA 60054. Offered fall semester, alternate years.

60015. Introduction to Christian Latin Texts
(4-4-0)
This course has two goals: to improve the student’s all-around facility in dealing with Latin texts and to introduce the student to the varieties of Christian Latin texts and basic resources that aid in their study. Exposure to texts will be provided through common readings which will advance in the course of the semester from the less to the more demanding and will include Latin versions of Scripture, exegesis, homiletic, texts dealing with religious life, formal theological texts, and Christian Latin poetry. Philological study of these texts will be supplemented by regular exercises in Latin composition. Medieval Latin Survey will follow this course in the spring term.

60017. Medieval Latin Survey
(3-3-0)
The aim of this course is to experience a broad spectrum of Medieval Latin texts. Readings representative of a variety of genres (literary and subliterary), eras, and regions will be selected. Students planning to enroll in this course should be completing Introduction to Christian Latin Texts or they must secure the permission of the instructor. Those with interests in particular text types should inform the instructor well in advance so that he can try to accommodate their interests.

60023. Roman Epic: Vergil
(3-3-0)
This advanced course introduces students to Latin elegy, a form of verse that served Roman poets as a vehicle for expressing and exploring personal feelings, especially those associated with love. Readings from Catullus, Propertius, Tibullus, and Ovid expose how Roman poets adapted and experimented with the elegiac form to express highly charged personal emotions often at odds with conventional Roman values.

60024. Roman Rhetoric
(3-3-0)
This advanced course introduces students to Roman writings on rhetoric, a vital art in Roman public and cultural life. Readings from the Rhetorica ad Herennium, Cicero, the elder Seneca, Quintilian, and Tacitus allow differing concepts of rhetoric to be seen, the relationship between rhetorical theory and practice to be understood, and the lasting value of Roman efforts to theorize the power of speech to be appreciated.

60027. Medieval Latin Texts
(3-3-0)
A survey of Medieval Latin Texts, designed to introduce intermediate students to medieval Latin literature and to help them progress in translation skills.

60031. Roman Epic: Vergil
(3-3-0)
This advanced course deals with the full corpus of Virgil’s poetry, and explores the creative history of Rome’s greatest poet through close readings of passages from his pastoral poetry, the Georgics and Eclogues, and his masterpiece the Aeneid. Special attention is given to the settings in which Virgil composed his works, and current and traditional critical interpretations of his poetry are considered.
This advanced course introduces students to the historian Livy through close reading and detailed study of passages from his grand narrative of Rome's history from the founding of the city to the age of Augustus. Aeneas' flight from Troy, Rome's conquest of Italy, and Hannibal's dramatic invasion of Italy across the Alps are some of the stirring topics to which attention is given. Livy's artistic and historical methods, and his position in the emperor Augustus' cultural program, are key themes for discussion in the course.

60044. The Roman Novel (3-3-0)
This advanced course offers close reading and detailed study of excerpts from Petronius' Satyricon and Apuleius' The Golden Ass. Ribald and full of comic adventures, these works have much in common with modern picaresque novels. Petronius' Trimalchion, an ex-slave buffoon, and Apuleius' Lucius, a young aristocrat magically transformed into an ass, are two of Latin literature's most memorable creations. Narrative technique, critical interpretation, and the special perspective on Roman life the works present, are major subjects for discussion in the course.

60054. St. Augustine's Confessions (3-3-0)
This advanced course introduces students to the thought and manner of writing of Augustine through close reading and detailed study of excerpts from his highly self-reflective autobiography, the Confessions. Augustine's extended analysis of his spiritual development combines in a masterful way the language and habits of thought of the Christian tradition with those of classical philosophy and literature. The style of the Confessions, the significance of the work, and its relation to Augustinian thought at large are major topics for discussion in the course.

Middle Eastern Languages

Arabic (MEAR)

60001. First Year Arabic I (3-3-0)
This two-semester sequence of courses is a basic introduction to all aspects of the Arabic language through a comprehensive and integrated method. The focus is on language proficiency in all areas of the language, including speaking, reading, and writing. The course also introduces students to aspects of Arabic culture and everyday life in the Middle East. MEAR 60001 is offered each spring semester and MEAR 60002 is offered each fall semester.

60002. First Year Arabic II (3-3-0)
This two-semester sequence of courses is a basic introduction to all aspects of the Arabic language through a comprehensive and integrated method. The focus is on language proficiency in all areas of the language, including speaking, reading, and writing. The course also introduces students to aspects of Arabic culture and everyday life in the Middle East. MEAR 60001 is offered each spring semester and MEAR 60002 is offered each fall semester.

60003. Second Year Arabic I (3-3-0)
This second-year Arabic course builds on the previous two semesters. The emphasis is on speaking and writing for self-expression with continued study of the basic grammatical structures. Proficiency remains the focus through readings and conversations in the language. Students develop skill in the use of the Arabic dictionary.

60004. Second Year Arabic II (3-3-0)
This course is geared to consolidating skills gained in the previous three semesters while enhancing the ability to converse and conduct oneself in Arabic. Reading skills are enhanced by exposure to more sophisticated examples of literature. Original written expression is encouraged through the composition of short essays.

60005. Third Year Arabic I (3-3-0)
This third-year Arabic course emphasizes on developing, listening, speaking, reading, and writing skills in interactive settings. Vocabulary building will be the focus of drills; we will cover basic vocabulary in various authentic uses of the language. Special attention will also be given to media Arabic. Basic Arabic grammar should be completed by the end of the year. We will continue with part two of the Kitaab sequence. Supplementary materials, mainly from Arabic media (BBC Arabic News, newspapers, magazines), will be provided. Tests, both oral and written, will cover the textbook materials, in addition to the basic grammar and the cumulative vocabulary.

60006. Third Year Arabic II (3-3-0)
This third-year Arabic course emphasis is on developing listening, speaking, reading, and writing skills in interactive settings. Vocabulary building will be the focus of drills; we will cover basic vocabulary in various authentic uses of the language. Special attention will also be given to media Arabic. Basic Arabic grammar should be completed by the end of the year. We will continue with part two of the Kitaab sequence. Supplementary materials, mainly from Arabic media (BBC Arabic News, newspapers, magazines), will be provided. Tests, both oral and written, will cover the textbook materials, in addition to the basic grammar and the cumulative vocabulary.

60030. Love, Death, and Exile in Arabic Literature and Cinema (3-3-0)
This course explores literary and artistic presentation of the themes of “love, death, and exile” in Arabic literature and popular culture from the pre-Islamic era to the present day. Through close readings of Arabic poetry, essays, short stories, and novels (in English translation), and analyzing a number of Arabic movies (with English subtitles), we discuss the following issues: themes and genres of classical Arabic love poetry; gender, eroticism, and sexuality in Arabic literary discourse; alienation, fatalism, and the motif of ’al-hanin ila al-watan’ (nostalgia for one’s homeland) in modern Arabic poetry and fiction.

60050. Canon and Literature of Islam (3-3-0)
This course is an introduction to the fundamental religious texts and literature of Islam. The list includes the Qur’an (the central, sacred scripture of Islam), the hadith (record of the speech and actions of the Prophet Muhammad), biographies of the Prophet, exegetical literature, historical texts, mystical and devotional literature. Students will read primary texts in English translation with a focused discussion and analysis of form, content, historical background, religious significance, and literary allusions of the various texts. Themes such as “the unity and majesty of God,” “prophecy and revelation;” “good and evil,” “this world and the hereafter” will be dealt with in the lectures and conversation in class. The course lays heavy emphasis on class discussion and student preparedness.

60060. Islam: Religion and Culture (3-3-0)
This introductory course will discuss the rise of Islam in the Arabian peninsula in the seventh century of the Common Era and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the life of the Prophet Muhammad, the Qur’an and its role in worship and society, early Islamic history, community formation, law and religious practices, theology, mysticism, and literature. Emphasis will be on the core beliefs and institutions of Islam and its religious and political thought from the Middle Ages until our own time. The latter part of the course will deal with the spread of Islam to the West, resurgent trends within Islam, both in their reformist and extremist forms, and contemporary Muslim engagements with modernity.

Faculty
Asma Afsaruddin, Associate Professor and Fellow in the Joan B. Kroc Institute for International Peace Studies.

Keith Bradley, Chair and the Eli J. Shaheen Professor of Classics, and Concurrent Professor of History.

Li Guo, Assistant Professor.

Brian A. Kroonenko, Associate Professor.

David J. Ladouceur, Associate Professor.
Early Christian Studies

The two-year interdisciplinary M.A. program in early Christian studies is sponsored jointly by the Departments of Classics and Theology, with the participation of faculty in several other departments (see listing below). It offers beginning graduate students basic training in philology, theology, history, liturgy, art history, and philosophy. Each student develops a curriculum to meet individual needs in consultation with a committee of faculty advisers. But all curricula are designed to ensure that students are equipped with the necessary language skills (at least two ancient Christian languages and literatures [Latin and/or Greek and/or Syriac] and one or more contemporary research languages) and with a sturdy grasp of the intellectual, historical, and social contexts of the early church and the methods and resources for studying them.

New disciplinary and critical approaches to late antiquity, as well as a growing awareness of the importance of Christian origins for the present life of the churches, have made early Christian studies a vibrant and rapidly expanding field. Traditional expertise in philology, history, and theology remains fundamental, but these skills must now be supplemented by a broad range of interdisciplinary approaches. An unusually strong faculty presence makes Notre Dame the ideal place for pursuing this area. Students who come with a keen interest in the field, but limited formal training in it, may acquire the basic skills and knowledge necessary for advanced study. Those already adequately prepared in the basics can broaden their competency by studying the language and culture of Middle Eastern, Egyptian, and Byzantine Christianity, and of Rabbinic Judaism and early Islam.

This is a demanding, extended (two academic years plus summer) M.A. program that prepares students to enter the best doctoral programs in theology, religious studies, history, art history, and literary studies, already proficient in language study and basic training in the multiple fields of early Christian studies.

A limited number of tuition scholarships and stipends are available.

Contributing Faculty

Joseph P. Amar, Associate Professor of Classics and Concurrent Associate Professor of Theology. Syriac and Christian Arabic literature.

Charles E. Barber, the Michael P. Grace Professor of Arts and Letters and Associate Professor of Art, Art History, and Design. Early Christian and Byzantine art.

Keith R. Bradley, Chair and the Shabana Professor of Classics, and Concurrent Professor of History. Roman social and cultural history.

John C. Cavadini, Chair and Associate Professor of Theology, and Executive Director of the Institute for Church Life. Patristic theology.

Brian E. Daley, S.J., the Catherine F. Huisking Professor of Theology. Patristic theology.

Blake Leyher, Associate Professor of Theology and Concurrent Associate Professor of Classics. Social history of early Christianity.

Daniel J. Sheerin, Professor of Classics and Concurrent Professor of Theology. Christian Latin literature.

Robin Darling Young, Associate Professor of Theology. Early Eastern Christianity.

The University of Notre Dame does not offer a graduate degree in Chinese or Japanese. Graduate students who wish to audit a Chinese or Japanese language class must receive permission from the instructor.

Course Descriptions

Each course listing includes:

• Course number
• Title
• (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
• Course description
Chinese Language Courses
10101, 10102, 10103. Beginning Chinese I, II, and III (3-3-0) (3-3-0) (3-3-0)
For students with no background in Chinese. A three-semester sequence of three-credit courses covering the same material as 10111-10112 and designed to prepare students to enter 10211. 10101 and 10103 are offered only in the spring semester, 10102 only in the fall. Equal emphasis on the basic skills of listening, speaking, reading, and writing. Students may expect to master a spoken vocabulary of about 1,000 words and a written vocabulary of 500 characters.

10111, 10112. First-Year Chinese I and II (5-5-0) (5-5-0)
Continuation of First Year Chinese I. Equal emphasis is placed on the basic languages skills in speaking, listening, reading, and writing. Students will learn both the Chinese Romanization system of the pinyin and written characters, and to perform conversational skills in daily life situations. By the end of the course they are expected to have mastered a spoken vocabulary of about 1,000 words and 500 written characters.

20211, 20212. Second-Year Chinese I and II (5-5-0) (5-5-0)
Grammar review and training in the four basic skills to higher levels of sophistication: oral-aural skills for fluency in communication, reading for critical understanding, and the ability to write simple compositions.

30311, 30312. Third Year Chinese I and II (3-3-0) (3-3-0)
The course focuses on the development of advanced conversational, reading, and writing skills, using a wide range of authentic materials, including material from news media.

40411, 40412. Fourth-Year Chinese I and II (3-3-0) (3-3-0) Shiga
The second in a sequence of intermediate courses offered for those students who did not participate in the Year-in-Japan Program. Development of oral-aural skills with an emphasis on typical conversational situations. Improvement of reading and writing skills.

40421, 40422. Advanced Japanese I and II (3-3-0) (3-3-0) Shiga
Advanced Japanese is a three-credit course for students who have completed EALJ 40412, JJ 500 (Intensive Japanese 500) in the year-in-Japan program at Nanzan, or an equivalent course at Sophia, Kanazawa, Hakodate, or Middlebury. This course takes students beyond the grammar-centered approach of textbooks to the study and discussion of original materials produced in Japanese for everyday Japanese consumption. Course materials include excerpts from short stories, poetry, letters, social criticism, academic writing, newspaper articles, and video clips. Students may repeat the course more than once, as the content of the course changes according to the needs and interests of the students enrolled.

Japanese Language Courses
10101, 10102, 10103. Beginning Japanese I, II, and III (3-3-0) (3-3-0) (3-3-0)
A three-semester sequence of three-credit courses covering the same material as 10111-10112 and designed to prepare students to enter 20211. Courses 10101 and 10103 are offered only in the spring semester, 10102 only in the fall. Introduction to the fundamentals of modern Japanese. Equal emphasis on speaking, listening, reading, and writing. Introduction of the hiragana and katakana syllabaries, and 200 kanji.

10111, 10112. First-Year Japanese I and II (5-5-0) (5-5-0)
Introduction to the fundamentals of Japanese. Equal emphasis on the four skills: speaking, listening, reading, and writing. Introduction of the hiragana and katakana syllabaries, and 200 kanji.

20211, 20212. Second-Year Japanese I and II (5-5-0) (5-5-0)
This course has continued training in the fundamentals of the modern language. Equal emphasis on the four skills: speaking, listening, reading, and writing. Introduction to approximately 200 kanji.

30311, 30312. Third-Year Japanese I and II (3-3-0) (3-3-0)
The first in a sequence of intermediate courses offered for those students who did not participate in the Year-in-Japan Program. Development of oral-aural skills with an emphasis on typical conversational situations. Improvement of reading and writing skills.

40411, 40412. Fourth-Year Japanese I and II (3-3-0) (3-3-0) Shiga
This course takes students beyond the grammar-centered approach of textbooks to the study and discussion of original materials produced in Japanese for everyday Japanese consumption. Course materials include excerpts from short stories, poetry, letters, social criticism, academic writing, newspaper articles, and video clips. Students may repeat the course more than once, as the content of the course changes according to the needs and interests of the students enrolled.

40421, 40422. Advanced Japanese I and II (3-3-0) (3-3-0) Shiga
Advanced Japanese is a three-credit course for students who have completed EALJ 40412, JJ 500 (Intensive Japanese 500) in the year-in-Japan program at Nanzan, or an equivalent course at Sophia, Kanazawa, Hakodate, or Middlebury. This course takes students beyond the grammar-centered approach of textbooks to the study and discussion of original materials produced in Japanese for everyday Japanese consumption. Course materials include excerpts from short stories, poetry, letters, social criticism, academic writing, newspaper articles, and video clips. Students may repeat the course more than once, as the content of the course changes according to the needs and interests of the students enrolled.

Faculty

English
Chair:
Stephen Fredman
Director of Graduate Studies:
Sandra Gustafson
Director of Creative Writing:
William O’Rourke

The Program of Studies
The Department of English at the University of Notre Dame is distinguished by its extraordinary diversity. In addition to study in the traditional fields of Old English, Middle English, Renaissance, Restoration and 18th-century, Romantic, Victorian, early American, modern British, and modern American literature, it offers opportunities to work in interdisciplinary fields and programs such as Irish studies, literature and philosophy, religion and literature, the history of science, gender studies, and the Medieval Institute. The intellectual life of the department is further enlivened by sponsorship of conferences, colloquia, and lectures, most notably the annual Ward
Phillips and Duffy lectures which have brought a series of distinguished literary critics to our campus. The graduate programs in English seek to combine a formal course of study with encouragement to develop intellectual independence. Students in the Ph.D. program, for example, begin with intensive coursework and work toward independent and specialized study. We also seek to train students not only in the history of literature but also in the traditions of critical inquiry, and we have made the study of literary theory as well as literary history an integral part of the program.

Admission

Applicants to both the M.A. and the Ph.D. programs are expected to have completed eight or more upper-division English courses. They must also take the Graduate Record Examination general and subject tests. In addition to other materials required by the Graduate School, the applicant should submit a writing sample, preferably a critical literary essay of 10–15 pages. Special conditions apply for applicants to the creative writing M.F.A. program. Creative writing applicants need not take the GRE subject test and they need not have taken eight English courses. As a writing sample, they should provide 25–30 pages of fiction or nonfiction, or 20 pages of poetry.

Master’s Program

English and American Literature

The Master’s Program is specifically designed for Notre Dame or St. Mary’s undergraduate English majors seeking advanced training before applying to a Ph.D. program at another institution. This is a 30-credit-hour program, requiring either 30 credit hours of course work or 24 credit hours of course work and six credit hours of thesis research. Students must take one course in literary criticism or theory. Those seeking the research degree must also demonstrate proficiency in a language appropriate to their area of research. Near the conclusion of the program, the student takes a written examination covering three major literary texts and selected criticism; this examination is designed to test the student’s capacity for critical study.

Master’s Program in English and Law

This is a program open only to students already admitted to the Notre Dame Law School who also wish to obtain an M.A. in English. A student typically takes 21 hours of English courses and 9 hours of law courses. The course on “Law and Literature,” offered in the Law School, can be counted towards the 21 hours of English. Students would normally pursue the nonresearch degree; those wishing to complete the research degree need to complete an additional six hours of thesis research. Admission is through the normal procedures of the Graduate School and the Department of English.

M.F.A. in Creative Writing

The graduate creative writing program includes workshops with nationally acclaimed writers and literature classes with a distinguished English Department faculty. Students participate fully in the intellectual life of the department, which includes regular visits from prominent writers. Students may also choose to work as editorial assistants on our national literary magazine, The Notre Dame Review. Throughout the four semesters, all students work closely with an adviser on the thesis, which will ultimately be a publishable novel, collection of stories, volume of poetry, or work of literary nonfiction. Course work includes 36 credit hours of writing workshops, thesis preparation tutorials, and literature classes.

Ph.D. Program

Course Requirements

The Ph.D. program requires 48 credit hours of course work. Students must take the Introduction to Graduate Study, a historical distribution of courses, and at least one course in literary theory. In keeping with its policy of encouraging interdisciplinary study, the program permits the student to take up to 12 credit hours of course work in a field other than English.

Foreign Language Requirement

The student must demonstrate proficiency in one language verifiably appropriate to the student’s area of research by the end of the second year of full-time residency.

Candidacy (Comprehensive Three-Field) Examination

The student takes examinations in one historical period selected from among Old English, Middle English, Renaissance and Restoration, and 19th-century British, 20th-century British, British American literature (to 1865), middle American literature from the Civil War to 1930, and post-1930 American literature; either a second historical period or a special topic; and one examination in literary theory/methodology. One of these three fields, ordinarily the field in which the student intends to write his or her dissertation, is designated the major field. These examinations are intended to determine whether the student possesses the theoretical skills and specialized knowledge necessary for writing a dissertation and for teaching in his or her field. Special reading courses enable students to dedicate the majority of their last two semesters of course work toward preparation for these examinations. The written part of the examination is followed by an oral component.

Dissertation Proposal

During the fourth year, students produce a dissertation prospectus and preliminary draft of one part of the dissertation (a chapter or substantial part of a chapter). Students then meet with the dissertation committee for advice on continuing and completing the project.

Dissertation

Upon receiving approval of the proposal, the student proceeds with the dissertation under continuing supervision of the dissertation director. The dissertation is intended to demonstrate the student’s readiness to participate fully in the profession as a scholar and literary critic.

Further information about financial aid opportunities, the department’s many programs and activities, and the faculty is contained in a brochure, obtainable by writing to the Graduate School.

Programs and Institutes

The Department of English offers a variety of subject concentrations in both modern and historical language and literature studies. For more information and up-to-date program descriptions, please visit the appropriate website:

- Keough Institute for Irish Studies
  http://www.nd.edu/~irishstu
- Modern Poetry and Poetics
  http://www.nd.edu/~poetics
- Old and Middle English

Publications

The Department of English publishes several scholarly journals, Religion and Literature, The Shakespeare Survey, Nineteenth-Century Contexts, and a literary quarterly, The Notre Dame Review. All of these publications provide graduate students with the opportunity to learn about the process of editing and production.

Financial Assistance and Funding for Professional Activity

The full range of financial assistance, including fellowships (University Lilly Fellowships, first-year fellowships, ethnic minority fellowships, and others), teaching assistanceships, and tuition scholarships, is available to students in the English programs. Students admitted into the Ph.D. program ordinarily receive full funding, which continues to be provided throughout course work and within the standard time frame for completing the dissertation (currently six years). The English Department is also committed to supporting students’ involvement in professional activities. Funding is provided for research travel and participation in academic conferences. All students admitted into the M.F.A. program are awarded full tuition scholarships and are also considered for teaching and editorial assistanceships. All current M.F.A. students are eligible to apply for the Nicholas Sparks Summer Fellows Program, which offers internships in publishing and author representation, and all second-year M.F.A. students are
eligible to apply for the Sparks Prize, a $20,000 annual award to one graduating writer each year. Please note that the request to be considered for financial support is made on the application for admission. No separate application is needed.

**Preparation for the Profession: Teaching and Scholarship**

The English Department offers all graduate students a variety of teaching opportunities and professional preparation activities, all designed to provide students with important professional experience and to place them in a highly competitive position for entering the job market. All beginning students enroll in a seminar on “Teaching Writing,” followed by two intensive orientation meetings on teaching First-Year Composition. Students then typically teach two semesters of “First-Year Composition,” never more than one class a semester and with class enrollments kept to about 17. Third- and fourth-year students have opportunities to teach literature courses. Postdoctoral teaching fellowships are also available. Students enroll later in a “Preparing for the Profession” seminar, which concentrates on preparing papers for academic conferences, submitting essays for publication to academic journals, and developing strategies for entering the job market. Our job placement workshop consists of practice job interviews and facilitates students generally in their searches for academic employment.

**Course Descriptions**

Some courses are offered every year or semester, such as “Graduate Writing Workshops” and “Introduction to Graduate Studies,” and courses in the traditional historical areas are offered every semester in the standard lecture format. Specific topics will vary each semester.

Each course listing includes:

- **Course number** (where possible)
- **Title**
- **Credits per semester**—lecture hours per week; laboratory or tutorial hours per week
- **Course description**

Courses within the following topics vary from year to year, but there will always be at least one course taught from each topic per semester. Recent course offerings have included:

**Old and Middle English Literature**

90201. Beowulf
90202. Chaucer’s Early Poetry
90203. First Aid in Middle English
90211. Canterbury Tales
90212. The Poetry of Cynwulf
90214. Latin Literature of Anglo-Saxon England
90223. Old English Biblical Verse
90226. Language, Symbolism, and Vision
90227. Chaucer and Medieval Narrative
90229. Writing and Politics in Middle English

**Renaissance Literature**

90117. Print, Manuscript, and Performance in the Atlantic World, 1550–1800
90209. Books, Authors, and Readers in Early Modern England
90217. Republican Aesthetics
90221. Hamlet and Lear in Performance
90223. Spenser, Milton, Marvell
90230. Shakespeare and Film
90233. History Plays and Historiography

**Restoration and 18th Century Literature**

90231. Age of Johnson
90302. Aesthetic Theory and the Enlightenment
90303. Reading the French Revolution
90311. Monsters of Benevolence: Irish Ascendancy Writers and Early Modernity, 1720–1800

**Romantic and Victorian Literature**

90301. Victorian Science and Literature
90304. Nineteenth-Century British Novel
90306. Romantic Era Drama and the Public Theatre
90307. Victorian Literature
90308. Romanticism and Culture Wars: Lakers, Scots, and Cockneys
90309. Romanticism, Gender, Colonialism
90310. The 19th Century Local

**Modern British Literature**

90401. Modern British Poetry
90406. Postmodernism and British Poetry
90407. Woolf and Bloomsbury
90409. Modernism and Modernity

**American Literature before 1900**

90601. Early American Literature
90604. American Realism
90605. American Literature at War in Mexico

**American Literature after 1900**

90702. Cold War Fictions
90705. Objectivism in 20th Century American Poetry
90801. African-American Women Writers
90802. Black Feminist Criticism
90803. Latino Poetry
90804. Fictions of Citizenship
90805. Latina/o Literature
90820. Writing Harlem: Race, Renaissance, the Modern

**Irish Studies**

90502. Representing Ireland
90504. Anglo-Irish Identities
90505. Modernity, Gothic, and Irish Culture
90506. Modern Irish Drama and Revolutionary Politics
90508. Gaelic Gothic
90509. Joyce, Modernity, Post Colonial Ireland
90510. Irish Modernism
94513. Ireland: Genealogies/Culture

**Literary Theory**

90403. From Brecht to Performance Art: Drama and Dramatic Theory, 1930–2000
90405. Weimar Republic
90708. Poetic Language, Theory, Performance
90903. History of Modern Aesthetics
90904. Philology and Weltliterature
90905. Modern and Contemporary Poetics

92001. Practicum: Teaching Writing (1-1-0)

The purpose of this practicum is to provide graduate students with integrated training in the teaching of literature and writing on the undergraduate level. This practicum is required for all first-year Ph.D. students in the English Department. Any other graduate student interested in this course should contact the instructors for more information.

92002. Practicum: Writing for the Profession (1.5-1.5-0)

This is a workshop open to any student whose dissertation prospectus has been approved. Topics covered will be: Abstract and Conference Papers, Articles, Book Proposals, Dissertations, Dissertations to Book, Grant Applications, Job materials (letters, abstracts, teaching philosophy, writing sample). In consultation with the directors of their dissertations, participants must set and meet writing goals for the semester—usually but not exclusively the preparation of an article for publication.

90011. – 90015. Graduate Fiction Writing Workshop (3-3-0)

A fiction workshop for students in the MFA Program.

90031. – 90034. Graduate Poetry Writing Workshop (3-3-0)

A poetry workshop for students in the MFA Program.

90091. The Writing Profession (1.5-1.5-0)

For students in the M.F.A. program: a series of workshops on submitting manuscripts for publication, finding an agent, and applying for jobs in the academy and in publishing. Informational sessions will be followed by workshops in which students will have their submission letters, vits, and job application letters reviewed. The sessions will be arranged at a time convenient to all the participants.

90092. Small Press Literature and Publishing (0-0-0)

The literature, philosophy, and practice of literary magazines.

90101. Introduction to Graduate Study (3-3-0)

Introduces students to research techniques, literary theory, and the scholarly profession of literature. Frequent guest lectures by the English faculty will enable students to become acquainted with research activities taking place in the department.
ENGLISH

90110. English for Non-native Speakers
(3-3-0)
A course designed to improve spoken English of non-native speakers, at the intermediate level, with a specific goal of increasing communication skills for teaching, research, and discussion purposes.

90111. Advanced English for Non-Native Speakers
(3-3-0)
This course is primarily designed to improve spoken English of non-native speakers, at the intermediate level, with a specific goal of increasing communication skills for teaching, research, and discussion purposes. Mastery of English pronunciation, vocabulary, idiomatic expression, and sentence structure will be the focus. Emphasis will be placed on learning to command clear and accurate spoken English for the purpose of classroom instruction and participation. To this end, emphasis will be placed on phonology, stress placement, intonation, juncture, accent, tempo, general pronunciation, linguistic posture and voice (kinetics), conversational diction, presentation of material, handling questions, and other matters of instruction related to Language Arts.

96001. Directed Readings
(0-0-0)
Directed readings for examinations in the doctoral program.

97001. Special Studies
(0-0-0)
Topics vary by semester.

98000. Nonresident Thesis Research
(1-0-0)
Required of nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

98001. Thesis Direction
(0-0-0)
Research and writing on an approved subject under the direction of a faculty member.

98600. Nonresident Dissertation Research
(0-0-0)
Required of nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

98601. Research and Dissertation
(0-0-0)
Independent research and writing on an approved subject under the direction of a faculty member.

The **Program of Studies**

The Department of German and Russian Languages and Literatures offers an M.A. degree in German. The primary aim of the master's program is to provide students with a comprehensive background in the literary and cultural achievements of the German-speaking countries. The courses of study provided will, in most instances, lead to a career in teaching and scholarship, but they may also serve as fundamental training for those who plan to enter professions based on international relations or where an advanced knowledge of German plays an auxiliary role.

**General Requirements**

Graduate study in German assumes a prior undergraduate major in German or its equivalent. The graduate adviser, in conjunction with the department chair, will help to determine the individual course of study for each student once on campus. All candidates for the M.A. degree in German are expected to take a minimum of 30 credit hours in their specialized area or related fields. The master's program combines intensive literary studies with advanced courses in related areas of other disciplines, such as other foreign languages, art, English, government, history, international studies, music, philosophy, psychology, and theology. The goal of advanced studies in the department is the critical understanding and articulation of the culture of other nations as reflected primarily in their literatures. It is assumed that applicants for admission to the M.A. program in German are already fluent in the language, especially if they also apply for a teaching assistantship.

Upon their arrival on campus, graduate students will be advised of their course of studies and given detailed instruction on how to plan their four semesters of graduate work. Besides taking advanced courses, students are also responsible for the reading list that covers the various periods of German literature. During the first year of study, an oral proficiency examination in German will determine candidacy for the master's degree. Furthermore, incoming graduate students are required to attend a week-long orientation prior to the beginning of classes, enroll in GE 503 (SLA Theory and Practice: Understanding the Profession) and GE 504 (Development of Multi-Media Material for Language Teaching), and work closely with a faculty member (or the German Supervisor) on departmental matters of teaching, learning, and testing German for proficiency.

The master's program is concluded by a comprehensive written examination designed to test satisfactory knowledge of two areas of concentration and sufficient competency in four other fields of the German literary tradition. The precise areas of concentration on the examination will be determined by the graduate advisor, in consultation with the department chair, and is based on the interests of the individual student. To the extent possible, graduate students will be given the opportunity to participate in the elementary language teaching of the department. Students in the master's research program may earn up to six of their required 30 credit hours in researching and composing the thesis required of all research students.

**Course Descriptions**

Each course listing includes:

- **Course number**
- **Title**
- **(Credits per semester—lecture hours per week)—laboratory or tutorial hours per week**
- **Course description**

**Not all courses are offered every year.**

**Graduate Reading Courses**

**60500. Graduate German Reading**

**3-3-0**

Intended as review for graduate students who wish to take the GRE in German. The final examination of the course, if passed, fulfills the requirements of the GRE.
GERMAN LANGUAGE AND LITERATURE

60503. SLA Theory and Practice: Understanding the Profession
(3-3-0)
This methodology course for pre- and in-service secondary teachers and graduate teaching assistants recognizes the vital need for second language learning in the curriculum of the future, pursues new directions in second language acquisition (SLA) research, and develops creative ways to enhance teaching, learning, and testing in the classroom. Participants are challenged to ask new questions that research efforts have only begun to address and to make explicit their own theories and hypotheses of how SLA occurs. The goal is for participants to understand, clarify, and articulate their beliefs and practices about language teaching and learning, including various theoretical and practical insights into what it means to be proficient in a language. It is also hoped that participants will gain a new perspective on how adult learners develop proficiency in a second language (from empiricist to rationalist views), become familiar with past and current methodological approaches and practices, re-examine current assumptions and language teaching practices, and achieve an integrated perspective of the issues surrounding contextualization of the four skills and culture, proficiency-oriented classroom testing, lesson and curriculum planning, and, finally, use of authentic materials and emerging digital technologies for second language learning.

60504. Development of Multi-Media Material for Language Teaching
(3-3-0)
This course investigates the parameters involved with multimedia materials development, explores second language acquisition (SLA) research and its impact on language teaching, and analyzes and critiques textbooks and other teaching materials. Participants are asked to write a prospectus, including rationale, audience, methodology, and sample materials.

90113. Business German
(3-3-0)
German business language and practices. Designed to introduce the internationally oriented business and German major to the language, customs and practices of the German business world.

90215. Medieval German Literature
(3-3-0)
A survey of German literature from its beginnings during Germanic times until the 16th century. Ideas, issues and topics are discussed in such a way that their continuity can be seen throughout the centuries. Lectures and discussions are in German, but individual students' language abilities are taken into consideration. Readings include modern German selections from major medieval authors and works such as Hildebrandt, Rolandental, Nibelungenlind, Irvin, Parzival, Tristan, courtly lyric poetry, the German mystics, secular and religious medieval drama, Der Ackermann aus Buhmen, and the beast epic Reinette Fuch. Class discussions and brief presentations in German by students on the selections are intended as an opportunity for stimulating exchange and formal use of German.

90440. Goethe and His Time
(3-3-0)
An intensive study of Goethe's major works of poetry, prose, and drama within the cultural framework of his times.

90490. Schiller
(3-3-0)
In this course we will consider Friedrich Schiller as a dramatist, poet, aesthetic philosopher, and historian. We will read several of Friedrich Schiller's most important plays, including Die Rauber, Kabale und Liebe, Die Versuchung des FIXO, Wittenstein, Maria Stuart, and Die Braut von Messina. In addition, we will read from his letters on beauty (Kallias), and the essays Über Anmut und Würde, "Über naive und sentimentalische Dichtung," and "Die Ästhetische Erziehung des Menschen." Finally, we will also read selections from his historical works on the Thirty Years' War and on the Netherlands.

90556. Dramatic Literature before 1900
(3-3-0)
An advanced survey of theatrical literature and criticism from the earliest plays to the beginning of the 20th century. Students will read one to two plays per week along with selected secondary critical literature.

90561. European Romanticism
(3-3-0)
This course will present the figure of Giacomo Leopardi, the outstanding romantic Italian Poet, and his striking similarities with some of the protagonists of that season of poetry: Wordsworth, Keats, Holderlin, and, later, Baudelaire. We will also delve into the Operette morali and the private diary called Zibaldone to illustrate the surprising depth of Leopardi's thinking, one of the most original and perceptive explorations of the human condition ever prospected. We will show that this isolated poet and thinker was one of the founders of modern nihilism, and we will compare his most stunning ideas to the ones elaborated by his great contemporary Schopenhauer and by the modern existentialist thought.

90635. National Theatre: Contemporary Europe
(3-3-0)
This course provides students with insight into the development of European theatre, from Brecht-Weigel's work at the Berliner Ensemble to the theatre works of Giorgio Strehler at the Piccolo (Italy), Peter Brook at the Buffes de Nord (UK, France), Ariane Mnouchkine at Theatre de Soleil (France), Peter Stein at the Schaubuehne, Pina Bausch at Tanztheater Wuppertal, and Heiner Mueller and Einar Schleef at the Volksbuehne and the Berlin Ensemble (Germany). Students are introduced to the main productions of these directors, their theatrical roots, and their influence on contemporary European theatre and playwriting.

90648. German Cinema in the Weimar Republic
(1918-1933)
(3-3-0)
Prerequisites: None for those taking the class in translation. For those desiring German credit, advanced standing in German (five semesters or permission of instructor) is necessary. The years between 1918 and 1933 are the Golden Age of German film. In its development from Expressionism to Social Realism, the German cinema produced works of great variety, many of them in the international avant-garde. This course gives an overview of the silent movies and sound films made during the Weimar Republic and situate them in their artistic, social, and political context. The oeuvre of Fritz Lang, the greatest German director, receives special attention. Should we interpret Lang's disquieting visual style as a highly individual phenomenon independent of its environment, or can we read his obsessive themes (world conspiracies and terrorized masses, compulsive violence and revenge, entrapment and guilt) as a mirror image of the historical period? Might his films, as some critics have suggested, even illustrate how a national psyche gets enmeshed in fascist ideology? Films subtitled, dubbed, or in English; readings, lectures, and discussions in English. For German credit, reading and writing of German required.

90660. Modern Metropolis German Literature
(3-3-0)
Prerequisite: None for those taking the class in translation; to receive German credit, advanced standing in German (minimum of four semesters or the equivalent) is required. How have German films since 1945 been trying to deal with the Nazi past? How do Germans picture their memories of the Third Reich, how do they define themselves within and against their country's history, and how do they live with their remembrances now? Primarily, this class aims at issues in the realm of ethics (perpetrators, victims, and passive accomplices; stereotypes; courage and cowardice; personal and national guilt; revisionism, coming-to-terms, and productive memory; responsibility and the [im]possibility of reconciliation). Some central questions about German history during the Third Reich and the postwar era will be dealt with. The course will also develop basic categories of film analysis and ask questions about the special capacity of film to help a nation work through its past. Films subtitled, dubbed, or in English language. Readings, lectures and discussions in English.

90669. Modern Metropolis German Literature
(3-3-0)
If Paris was known as the capital of the 19th century, turn-of-the-century Berlin was declared the capital of the 20th century. The largest then German metropolis came to epitomize rapid and spectacular modernization in Germany that started before World War I and continued during the Weimar Republic. Berlin had it all: gigantic industrial factories, glamorous boulevards, street lights, dazzling shop windows, night life, movies and entertainment, armies of white-collar employees, housing barracks, modern architecture, shopping, traffic, crime, and social problems.

This course offers an introduction into one of the most dynamic periods in German cultural history (1900-1933) as it is represented in texts and films about the big city. The discussions will focus on the following questions: Why did the big city appear...
Directed readings in the German and Russian culture. Taught in German.

90685. German Drama 1750 to the Present
(3-3-0)
We will read and discuss some of the greatest plays in the German dramatic tradition, by authors such as Lessing, Goethe, Schiller, Kleist, Grillparzer, Nietzsche, Freietag, Hauptmann, Hofmannthal, Brecht, and Werfel. This semester we will focus on the so-called “drama of reconciliation,” a newly rediscovered genre, where the conflict is serious but ends harmoniously. By interpreting classic German-language plays in the original, you will (1) learn how to approach drama analysis, and you will (2) develop a sense for the history of drama throughout the past 250 years. In addition, we will study a few short, and often English-language, texts in the theory of drama (Aristotle, Schelling, Carriere, and Cavell, as well as our department’s own Holsé and Roche), which will (3) allow you to differentiate between the basic genres of drama (tragedy, comedy, and drama of reconciliation), and you will (4) understand better the nature of conflict and reconciliation. Students interested in other national literatures will have the opportunity to draw comparisons with plays by authors such as Aeschylus, Sophocles, Shakespeare, Calderon, Corinne, Racine, and Ibsen; and those interested in film may branch out into analyzing works by directors such as Hitchcock, Renoir, Ford, Capra, Curtiz, Hawks, Chaplin, and Kurosawa.

90887. Literature and Religion
(3-3-0)
Literature, according to Martin Walser, descends just as irrefutably from religion as human beings do from the apes. Indeed, there is no denying that even during aesthetic modernism, literature, art, and religion are closely intertwined. When art achieved autonomous status in the second half of the 18th century, it did, to be sure, shed its subservient function relative to religion, yet in terms of its topics, themes, and, most particularly, its claim to interpret and give meaning to human existence literature remained tied to religion, in fact became its great rival.

This seminar will examine several stations of this development. Beginning with church hymns during the Renaissance and Barock, we will see how the Bible was discovered as a literary text in the 18th century. At the end of the century, art is conceived as an autonomous, even holy artifact. Poetry, for some, even becomes the medium of human self-definition and the place in which new myths are created. In the Romantic period art and religion become fused into a single unity. A century later, art and religion again come into close contact in lyric poetry of the fin-de-siecle. The seminar concludes with a consideration of the psalm form in 20th-century poetry. Readings will include works by Luther, Paul Gerhardt, Klopstock, Hold-erlin, Wackenroder, Stefan George, Rilke, Trakl, Brecht, Celan, and Bachmann.

90911. Self-Definition and the Quest for Happiness
(3-3-0)
Prerequisite: Four semesters of German or the equivalent. Everyone from the ancients to the most technologically conscious CEOs tell us that those who succeed know the difference between the important and the unimportant and they allocate their time accordingly. But how does one make these choices? If in fact success and happiness are synonymous, as some would claim, which way lies success, lies happiness? And what are the guideposts? What really matters? In an age such as ours, does anything have lasting value? Do I really matter? If I am most assuredly defined by my beliefs and my deeds, what then do I believe, what do I do? In the final analysis, who am I? If literature, as so many maintain, not only mirrors but also fore-tells world events, how have several 20th-century authors representing diverse national traditions formulated the answers to these seminal questions? Readings will include F. Scott Fitzgerald, The Great Gatsby, and Frisch, Andorra.

The Program of Studies

The graduate programs in history permit students to deepen their knowledge and understanding of selected historical specializations and to nourish the historical perspective that marks the educated citizen. Advanced work in history may prepare students for careers in scholarship and teaching, for certain public service careers, or for careers in research.

The history programs accept only students planning to pursue the Ph.D. degree. These students are normally awarded a master’s degree in the course of pursuing their doctorates.

Admission

An applicant ordinarily should have completed at least 24 credit hours of undergraduate work in history. Language preparation is highly desirable; prospective medievalists must know Latin, and prospective modern Europeanists must know at least one modern European language. Both medievalists and those pursuing studies in other fields will be required to demonstrate proficiency in reading relevant foreign languages.

Incoming graduate students in the history programs begin studies in the fall semester. Students applying to enter in the fall should have complete dossiers (application, transcripts, writing sample, recommendations, and GRE scores) on file with Notre Dame’s Office of Graduate Admissions no later than the preceding January 15. The “Statement of Intent” accompanying the application should describe the student’s areas of interest as explicitly as possible and should list the departmental faculty members with whom they wish to study. (Please note that professors designated “emeritus” are retired.) The writing sample should demonstrate the applicant’s skills in writing, analysis, and (if possible) historical research.

Fall applicants who wish to begin studies at Notre Dame the preceding summer should meet all application requirements and also summer session admissions requirements stipulated in Notre Dame’s Summer Session Bulletin of Information.

General Requirements

Before completing their doctorates, students must satisfy the departmental requirements for the master’s degree. Doctoral students receive their master’s after completing at least 36 credit hours of study including one graduate-level seminar in history and 24 credit hours of graduate-level work (seminars, colloquia, directed readings, supplemental research, and readings) in history or related disciplines. The master’s degree demands satisfactory completion of course work with a GPA of no less than 3.0. Students must also pass an M.A. exam (normally the candidacy exams count in place of a separate M.A. exam) and satisfy the language requirements (see below). In order to enter the doctoral program, students must satisfy the foreign language requirement and receive the approval of the departmental faculty. Students entering Notre Dame with a master’s degree in history from another institution normally have the same course work, writing, and examination requirements as those entering without such a degree, but holders of the master’s degree may be able to transfer as many as 24 credits into the history Ph.D. program, upon approval of the director of graduate studies. Normally, no more than three credits may be transferred and used to replace required courses in history.

In order to receive a Ph.D., a student must complete a total of 42 credit hours of study, including at least three graduate-level seminars in history (two for students in American history). Work must be in graduate-level courses (seminars, colloquia, directed readings, supplemental research and reading, dissertation research) in history or related disciplines.

In addition to completing prescribed course work, doctoral students must also pass Ph.D. candidacy examinations in their specialties. The candidacy examination will normally be taken in the student’s third year of residence. Students wishing to take candidacy examinations earlier than the third year of residence may do so with the consent of their academic advisers and the director of graduate studies. To be eligible to take the candidacy examination, students must satisfy the foreign language requirement and complete the required course work in their specialization.

Faculty

Jan-Lüder Hagens, Assistant Professor and Fellow in the Nanovic Institute for European Studies. M.A., Univ. of Virginia, 1983; Staatsexamen, Univ. of Tübingen, 1988; M.A., Princeton, 1989; Ph.D., ibid., 1993. (1997)

Vittorio Hoole, the Paul Kimball Professor of Arts and Letters, Concurrent Professor of Philosophy, Concurrent Professor of Political Science, and Fellow in the Nanovic Institute for European Studies, Ph.D., Univ. of Tübingen, 1982; Dr. habil., ibid., 1985. (1999)

John L. Liontas, Assistant Professor. B.A., Univ. of Siegen, Germany, 1985; M.Ed., Univ. of South Carolina, 1989; Ph.D., Univ. of Arizona, 1999. (2000)

Robert E. Norton, Chair of German and Russian Languages and Literatures, Professor of German, and Fellow in the Nanovic Institute for European Studies. B.A., Univ. of California at Santa Barbara, 1982; M.A., Princeton Univ., 1985; Ph.D., ibid., 1988. (1998)
Before being advanced to Ph.D. candidacy, students must submit to the department an approved dissertation proposal (see procedures outlined below). Within eight years of enrollment into the history graduate program, students must complete a satisfactory doctoral dissertation or risk the loss of their candidacy status.

Specialization
The department offers three fields of study: United States History, Latin American History, Medieval History, and Modern European History. Incoming students must select one of these fields at the time of admission. The faculty prescribes course requirements in each field. In the first year of study, a student must write a substantial original paper, which will figure in the department's screening of the student for the Ph.D. program. See the Graduate Handbook for specific field requirements.

Language Requirement
One basic requirement for all candidates for the doctorate in history is a reading knowledge of one modern foreign language. In each field additional languages or an appropriate skill are prescribed as the faculty in that field considers necessary. The following provisions are in force. Candidates in the field of medieval history must demonstrate competence in Latin and two modern foreign languages, one of which is normally French or German. Competence in Latin is demonstrated by a student's passing the examination in medieval Latin administered by the Medieval Institute. Candidates in modern European history must demonstrate competence in reading two foreign languages, one of which must be French or German. Candidates in American history must demonstrate competence in one modern foreign language. In all fields, language and skill requirements must have been completed by the student before the student will be permitted to take Ph.D. candidacy examinations. Candidates in Latin American history must demonstrate competence in two foreign languages, one of which must be Spanish.

To receive the M.A., doctoral students must demonstrate a reading knowledge of one modern foreign language by the end of their third semester in residence.

Examinations
First-year examinations in medieval and modern European history are oral examinations administered near the end of the student's second semester of residence. The examination board will consist, whenever possible, of three faculty members who have worked with the student during the year. Each faculty member may pose questions based on student coursework during the year. The first-year examination will last approximately one hour. The first-year examination does not take the place of a master's exam.

Students will normally take receive their master's degree upon successful completion of their Ph.D. candidacy examinations. In order to receive the master's degree earlier, a student, upon completion of at least a year of course work, may take and must pass a written two-hour examination, administered by three history professors, normally with whom the student has taken course work.

Ph.D. candidacy boards will consist of four or five faculty members chosen by the student and his/her advisor, and approved by the director of graduate studies. The written exam shall consist of four or five two-hour essays on topics selected by the examination board within fields chosen by the student; the oral exam shall involve questioning by the board for not less than 90 minutes and not more than three hours. There must be a gap of at least five working days between the final written exam and the oral exam.

Students who fail a Ph.D. candidacy examination may appeal to the director of graduate studies to retake the failed portion one time.

Advancement to Candidacy for the Ph.D.
While preparing for the Ph.D. candidacy examinations, students should also be preparing a dissertation proposal in consultation with his or her advisor. The student will then present a dissertation proposal to the committee. The proposal should include a statement of the subject to be addressed; a survey of the relevant sources, where they are located, and how the student expects to get to them; how this dissertation would contribute significantly to knowledge in the field; what languages or quantitative skills are required and how the student proposes to gain them; and the timetable and financial resources required. The proposal should be concise; normally 5-10 pages plus bibliography. The committee may accept, reject, or modify the proposal. If and when a proposal is accepted, the committee will notify the director of graduate studies who will, in turn, nominate the student to the Graduate School as a Ph.D. candidate. The proposal must be approved before the start of the student's seventh semester of enrollment.

Writing and Defense of the Dissertation
After advancement to Ph.D. candidacy, students must complete a doctoral dissertation, which the department understands to be a substantial piece of research based on primary sources that makes an original contribution to historical knowledge. Departmental procedures for approval of the dissertation are as follows:

1. The dissertation must be read and approved by the student's advisor.
2. The student then furnishes the department with three copies of the thesis. Copies must be furnished to the department at least six weeks before the date of the defense. These copies are to be read and approved within 30 days by three readers from the graduate faculty. Students are responsible for incorporating into the dissertation whatever changes the readers find necessary. At this time, the student submits a complete copy of the dissertation to the Graduate School for a preliminary formatting review.

3. Normally the student defends the doctoral dissertation by delivering a brief lecture that any member of the graduate faculty may attend. The academic adviser, three readers, and an outside chair appointed by the Graduate School must also attend. After the lecture and a period for questions and discussion, the committee must vote as to whether the dissertation defense has been satisfactory.
4. Two clean, corrected, unbound copies of the dissertation must be delivered to the Graduate School by the appropriate due date.

Financial Aid and Other Information
Financial aid is allocated to the department by the University each spring. A portion of this aid is available for incoming first-year graduate students and is assigned on the basis of merit after review of application dossiers. Students already in residence are assigned aid by faculty vote, after an annual general review of student performance. All available aid is reassigned annually for the term of one academic year. Students whose performance falls below University minima stipulated in the general regulations of this Bulletin or who do not satisfy other published requirements for aid will have their aid withdrawn. Graduate assistantships are ordinarily reserved for students who have already completed a year of graduate work.

For general information concerning admissions procedures, course and hour requirements, grades, financial aid, procedures pertaining to graduate research, and other matters, consult the Graduate School regulations that introduce this Bulletin. Note that certain departmental degree requirements (for instance, foreign language proficiency) are more demanding than the Graduate School's general rules. Application forms and information concerning non-curricular aspects of graduate study at Notre Dame may be obtained by writing the University of Notre Dame, Graduate Admissions, 502 Main Building, Notre Dame, IN 46556.

Course Descriptions
Each course listing includes:

- Course number
- Title
- (Credits per semester–lecture hours per week–laboratory or tutorial hours per week)
- Course description

Except in the case of "required" courses for students in certain degree programs, courses offered for historians by other University departments are not shown.

66050. Directed Readings (0-0-0)
Independent study of special topics under direction of a faculty member. Agreement by the faculty member and approval by the director of graduate studies required.
60260. Late Antiquity (3-3-0)
This course will explore the transformation of the Roman World from about 300 to 600 AD. We will ask: was the "fall" of the Roman Empire a civilizational catastrophe? Or was it a slow, messy process blending continuity and change? Or was late Antiquity itself a dynamic and creative period? Our emphasis will fall on: The changing shape of Roman public life; the barbarians and their relations with Rome; the emergence of the Catholic Church; the triumph of Christian culture; literature, art, and architecture in the late imperial world. There will be a mid-term and a final. Students will write either one term paper or a series of shorter papers. Readings will emphasize primary sources.

60263. World of Charlemagne (3-3-0)
The Carolingian (from Carolus, Latin for Charles: Charles the Great—Charlemagne—was the most famous Carolingian) period, roughly the eighth and ninth centuries, was foundational for western Europe. But this was also the time when the mid-Byzantine Empire consolidated its position and when the Abbasid family of caliphs introduced important and durable changes in the Islamic world. This course will focus on the West in the age of Charlemagne, but will draw frequent comparisons with and make continuous reference to Europe's Byzantine and Islamic neighbors. The course will explore such themes as: Europe's Roman and Christian inheritances from antiquity; the peoples of the Carolingian world; kingship and empire; political and social institutions and ideologies; religious and secular law; war and diplomacy; agriculture and trade; the church—popes, bishops, monks, and nuns; theology; art and architecture; Latin and vernacular literature. Reading assignments will combine modern scholarship and primary sources (in translation). Students will write mid-term and final examinations and will choose between several short papers or one long paper. Graduate students will meet weekly with the professor, carry out reading assignments different from those of the undergraduates, and submit a series of short papers.

60291. Politics and Religion in Medieval Europe (3-3-0)
This course considers the intersection between political action and religious claims in medieval Europe. Virtually all the powers—kings and popes, princes and bishops—claimed to act on religious principle and in accord with transcendent notions of virtue or world order. And yet they fought bitterly with each other, with words and with swords, and mutually condemned one another. The course will begin with the showdown between emperors and popes known as the Investiture Contest, then take up pivotal figures like Pope Innocent III, King Frederick II, and Pope Boniface IX, and conclude with sections on the Spiritual Franciscans and on conciliarism. Two papers based on primary sources, one mid-term, and a final.

60435. Nineteenth-Century Ireland (3-3-0)
Drawing on monographs and general studies, this course invites students to consider how different social groups experienced the profound changes that transformed nineteenth-century Ireland. Although the course traces political developments, it pays equal attention to socioeconomic and cultural issues, including the shift from high fertility to sexual restraint; patterns of emigration, consumption and social unrest; improvements in education and literacy; linguistic change; changing devotional practices and cultural 'revival' in the late 1800s.

60451. Modern France (3-3-0)
Although it is not a superpower on the level of the United States, France continues to claim an important role in the world of international diplomacy. The French pride them selves also as being heirs to cultural and intellectual traditions that have been a major influence in both the West and the world. This course will survey the history of France from Napoleon to the present, and will balance a concern for political and social developments with an interest in French culture. The goal will be to help students understand the vitality of the French past and better appreciate the current role of France in Europe and the world. Lectures will be supplemented by frequent discussions, and students will view a number of films in addition to reading about five books. Students will be responsible for making one brief class presentation and writing an essay of ten to twelve pages. There will be a midterm and a final exam as well.

83000. The Historian's Craft (3-3-0)
This seminar is designed to introduce students to theoretical and practical foundations of historical method. Students are required to complete several written and oral assignments and to write a short primary research paper on a topic selected in consultation with the instructor. Those students who prefer to write a more substantial primary research paper with their PhD advisors should consult with the instructor as soon as possible. This course is required for all first year students.

87000. Supplemental Research and Reading (3-3-0)
Independent study under the direction of the student's graduate adviser. May be taken each semester.

83001. Reference Bibliography Workshop (0-3-0)
An introduction to research resources for historians at Notre Dame. Required for first-year students in United States and modern European history; optional for other students. (12 to 14 sessions).

83002. Graduate Teaching Practicum (3-3-0)
Required of all graduate students acting as a teaching assistant in the history department for the first time.

83003. Teaching Practicum II (3-3-0)
Required for all graduate students serving as teaching assistants in the Department of History, or those who have not taken it in the past.

87050. Special Studies (0-0-0)
Independent study of special topics under the direction of a faculty member. Agreement by the faculty member and the Director of Graduate Studies required.

83200. Introduction to Medieval Studies I (1-1-0)
Led by Thomas Noble with weekly visits by faculty in various fields of study, this course is a systematic introduction to the sources, research tools, and methodologies for medieval studies in the widest possible sense of the term. The course if offered on a non-graded basis but active participation in the hour-long weekly sessions is expected.

83201. Proseminars in the Early and Late Middle Ages (3-3-0)
This course is designed to introduce students to major historiographical issues and interpreters for the years between 450 and 1000. Students will learn to read critically, and must be prepared to write short summaries and discuss intelligently each week. The course will begin with the question of Late Antiquity as a distinct historical era, examine the Merovingian and Carolingian kingdoms, and end with the state of Europe in the year 1000.

83202. Proseminars in the Early and Late Middle Ages (3-3-0)
This course is designed to introduce students to major topics under discussion in the history of the high and later middle ages, roughly the years 1100-1400. Among the topics to be treated, with the historians now at work on them, are: law, government and literacy; the church as an institutional and cultural force; social class and mobility as economic realities and cultural images; the university in society and culture; and the cultivation of the human person in literary sensibility and religious devotion. Most of the course will consist of intensive secondary readings, with regular written reports, occasional primary readings, and a major bibliographical paper at the end.

83205. Introduction to Medieval Studies II (1-1-0)
An introduction to the basic research tools of medieval studies including specialized library catalogues, reference books, editions, commentaries, and data bases. The emphasis will be on practical, hands-on experience necessary to do fundamental research.
HISTORY

83601. Colloquia: Europe and America, 15th-17th Centuries (3-3-0)
This course provides an introduction to the history of the American during the age of European expansion. It focuses on topics in the history of Europe that bear upon colonization and it explores the intertwined histories of the three continents. In a funnel-like fashion the course establishes global and trans-oceanic contexts for what eventually becomes a history of English North America. Topics in continental European history during the Early Modern period provide the social, cultural, and ideological foundation for comparative views of religion, science, gender, race, and politics. Spanish, French, and English (some semesters Portuguese) perspectives intersect with those of African and North and South American peoples. Since full historiographical coverage of these regions and topics is not possible in one semester, the course takes a selective topical approach that will vary from semester to semester.

83602. Colloquia in American History: to 1790, 1790 to 1890, since 1890 (3-3-0)
This colloquium provides an introduction to major historical and historiographical problems associated with the European colonization of the Americas from roughly 1680 through the beginning of the nineteenth century. The syllabus and bibliography incorporate a variety of methodological and philosophical perspectives on early American history—politics, culture, law, ethnicity, economy, geography, society, race, religion, philosophy, ideology, and gender are represented in the readings. There is also a mix of older and more recent writings. We will attempt, individually and collectively, to synthesize specialized studies into larger understandings of causality, continuity, and change.

83603. Colloquia in American History: to 1790, 1790 to 1890, since 1890 (3-3-0)
History 83603 is a colloquium designed to acquaint graduate students with United States history and historiography from roughly 1790 to 1890. The course will revolve around discussion of common assigned readings. Essays, based on these readings, will also be required. The course is required of doctoral students in American history, who will normally take it in their first or second year of graduate study. Undergraduates will NOT be admitted without prior written permission of the instructor, which will be given only in very exceptional cases.

83604. Colloquia in American History: to 1790, 1790 to 1890, since 1890 (0-0-0)
The colloquium is an intensive survey of recent historical writing on the United States from the late nineteenth century forward. Topics will include Progressive reform, gender and the early 20th century State, the culture of consumption, the new environmental history, the meaning of bohemia, the character of New Deal liberalism, the origins of the cold war and the shifting nature of American race relations.

83975. History of Science and Technology, Medieval Period to 1750 (3-3-0)
This course will be the first half of a two-semester survey of the main events in the history of natural philosophy and science from Greek antiquity to the early Enlightenment. The first half, taught by Prof. Robert Goulding, will begin with Presocratic reflections and carry the course to the Renaissance. The second half, taught by Prof. Sloan, will deal with the science of Galileo, Descartes, Boyle and Newton. The course is open to HPS graduate students, graduate students in History and Philosophy, and upper level undergraduates by permission.

97000. Candidacy Semester Readings (0-0-0)
A special reading course in which the student may enroll only in the semester in which he or she takes the Ph.D. candidacy examination. It permits the student to devote full time to preparation for the examination and, after its completion, to write a dissertation proposal. Regular graduate course work may also be pursued during the candidacy semester.

97050. Special Studies (0-0-0)
Independent study of special topics under the direction of a faculty member. Agreement by the faculty member and the Director of Graduate Studies required.

93075. Introduction to Mediterranean Islamic Society (3-3-0)
This colloquium intends to introduce students to the fundamentals of social and cultural life in the Middle East, ca. 600-1500 CE. There are no pre-requisites, but some familiarity with medieval Islamic political history is recommended. We will focus on the reading and analysis of key secondary studies. These will especially include those that might illuminate the study of the quiant peoples of the medieval Eurasian subcontinent, i.e., the place commonly known as “Europe”. Book reviews and a long paper based on secondary research required.

93210. Graduate Seminar: Apuleius (3-3-0)
An investigation of the historical Apuleius. The course examines the Roman-African context into which Apuleius was born, recreates the educational travels to Carthage, Athens and Rome which occupied his early life, and focuses especially on his trial for magic in Sabratha in 158/9, before following him back to Carthage where he spent the rest of his life. Notice will be taken of all of Apuleius’ writings, but special attention will be paid to the Apology, and to the documentary nature and socio-cultural importance of the Metamorphoses. The course is open to students with or without Latin.

93250. Muslims and Christians in the Medieval Mediterranean World (3-3-0)
This course will examine contacts between Christianity and Islam in the period from the seventh century to the fifteenth century. Although issues of religion will be addressed, the course is more concerned with diplomatic, economic, military, cultural, technological, and intellectual encounters and exchange. Special attention will be focused on the regions of Spain, Sicily, and the Crusader States. The course is designed as a survey, but students may elect to write either a research paper or three shorter historiographical essays. Regular student presentations will also be required.

93251. Literacy, Piety, and Power in the High Middle Ages (3-3-0)
This course explores the impact of literacy on two aspects of high medieval history, on political administration and religious piety. It will examine the degree to which writing transformed the ways in which political power was conceived and implemented, and also the ways internal piety was understood and cultivated. While these two spheres of life may appear quite different at first glance, they also intersected in important ways, not only at royal or princely courts, but also, for instance, at the council of Constance in 1414-1418. The course will consist of a combination of secondary readings (at least one language beyond English required) and primary readings in Latin and Middle English. It will require weekly readings and discussion in class, and a major seminar paper as the final achievement.

93252. Medieval Nobilities (3-3-0)
Hereditary social elites of the type most distinctively called ‘nobilities’ were the dominant orders of most of the societies of Latin Europe from the time of the Roman Empire to about 1918, and after a hiatus between the wars, the study of these nobilities has been one of the principal themes of European historiography dealing with every part of the ‘medieval’ period. In practice, the historians of different national schools and different periods of modern historiography have tended to be interested in quite different aspects of nobiliary history, from the nature and origins of nobilities and their internal grades and strata to their distinctive cultures and attributes, and their relationships to castles, dominions, vassals, and peasants on the one hand, and to other nobles, prelates, kings, courts, and governments on the other. This course will introduce graduate students to the most important themes and scholarship in this area in a number of different countries, focusing on England, France, Spain, but including other countries that are of particular interest to the students. It will also familiarize them with a variety of different types of document collection and reference work of use for investigating or identifying noble persons.
93253. Colloquium: Medieval Cities (3-3-0)
This graduate colloquium will examine the development and structure of urban centers in Europe and the Mediterranean World from Late Antiquity to the later Middle Ages. Through a discussion of primary texts, secondary historical studies, and works on modern urban theory, we will track the history of urban life in the Middle Ages, with particular attention given to the topography, society, culture, and economy of cities in southern Europe.

93254. Medieval Coinage and Money (3-3-0)
This course will offer an introduction to numismatic methodology and monetary history with an emphasis on medieval Europe. Attention will also be given to the coinages of late Antiquity, Byzantium, the pre-modern Islamic world, and pre-modern Europe, as well as related phenomena such as medals, tokens, seals, and credit transactions. Among the topics under study will be archaeological and hoard study, scientific and statistical analysis of coins, and the relationship of numismatic evidence to other historical sources. In addition to participation in the scheduled discussions and workshops, students will pursue research projects related to the coinage of their field of specialization leading to periodic oral reports and a final paper.

93255. 12th Century Renaissance and Reform (3-3-0)
Since the publication of Charles Homer Haskin's Renaissance of the Twelfth Century in 1927 and Giles Constable's Reformation of the Twelfth Century in 1996, together with enormous literatures on the Gregorian Reform and on the emergent vernacular literatures, the years 1050-1200 have come to stand as a turning-point in European history, for some the hinge between the earlier and the later middle ages, for some the making of "Old Europe," a culture and society that persisted to the eighteenth century. This will be an intensive graduate-level reading course in the secondary literature surrounding these claims, and as well in selected primary sources. Beyond the themes already noted, the course will consider the rise of literacy, the new centers of culture (university, courts, épiscopal courts), the place of women's writings in all this, and broader questions of commonality or diversity.

93256. Paleography (3-3-0)
An introduction to Latin paleography from the beginnings of Latin writings to about 1500. Seminars will cover the developments of handwriting over the course of this period and practical exercises in reading various hands. Special emphasis will be given to the technique of describing medieval manuscripts, to the nature of palaeographical research, and to the implications of paleography for other forms of research. Students are expected to have a working knowledge of Latin.

93257. Canon Law in the High Middle Ages (3-3-0)
This course will introduce students to the study of canon law in the high middle ages. It will teach them the structure and usage of Gratian's Decretum, the university textbook, and of the papal Decretales (1234), the only truly authorized lawbook of the medieval church. In addition, students will learn to use and to read the extensive glossating and commentary literature that grew up around these authoritative texts. To focus the students' historical approach, this particular semester will focus on teachings about custom, arguably the most omni-present and socially significant form of law in the middle ages: its status in law, its authority over against positive legislation or court decisions, and quite particularly the venues and practices in the church where custom was presumed to prevail. As a seminar, the course will expect reading ability in Latin, and students will prepare a major seminar paper at the end.

93258. Merovingian Franks 450 - 750 (3-3-0)
This course will survey and analyze key literature and sources on the establishment, development, and eventual collapse of the Merovingian Frankish kingdom. Central issues will include: the nature, origins, and audiences of the major sources; Frankish ethnicity; Frankish kingship; central and local institutions in the Frankish kingdoms; the economy of Merovingian Francia; the Merovingian church; academic and intellectual institutions; problems of language and communications; Merovingian relations with their neighbors. Student responsibilities will include: substantial weekly reading assignments (most but not all sources will be read in translation; scholarly works in French and German will be assigned); periodic oral and written reports; two or three synthetic essays.

93259. Devotion and Dissent in the Later Middle Ages (3-3-0)
Recent studies of religious culture in later medieval Europe have projected bi-polar, nearly contradictory images: a time of unparalleled intensity in devotion, even of extremes and excesses, but also a time of dissent, among people as well as intellectuals, shaking the foundations of the established church. This seminar will study that religious culture in depth, focusing on the years 1350-1450 with wide reading in primary and secondary materials. It will examine in particular the role of vernacular writings, local social organization, women as writers and exemplars, and intellectuals as defenders of alternative religious views. Latin required.

93260. Topics in Reformation History (3-3-0)
A colloquium to acquaint graduate students with significant scholarship on early modern Christianity, both geographically and thematically, in its political, social, and cultural contexts. Students will lead class discussions, write book reviews, and produce a historiographical essay on a topic of their choice. Reading ability in languages other than English desirable but not required.

93400. Modern European Social History (3-3-0)
This course will explore some of the central themes in the historical scholarship on European society from the French Revolution to the present. Students will read both standard works in the field, such as E.P. Thompson’s The Making of the English Working Class, and a selection of more recent studies that will suggest the variety of approaches used by social historians. Topics will include: class formation and identity; gender and family; popular culture; politicization and the relationship between state and society; the social impact of war. The class will be organized around student reports. Students will be responsible for writing several book reviews and developing a bibliography of journal articles and books related to their particular interests, which will serve as the basis for a final essay.

93401. Nationalism in Europe (3-3-0)
Nationalism, one of the central themes of nineteenth and twentieth-century European history, remains a central political and cultural force despite the impact of globalization on the nation state. This course explores the rise of nationalism from the French Revolution to the explosion of ethnic genocide in the Balkans during the 1990s. Emphasis will be placed on historiographical questions, the social theories of nationalism, the nation, and the nation-state, and the politics of identity, embodiment, and community.

93402. Republicanism (3-3-0)
Republicanism focuses on an early-modern European and transatlantic ‘discourse’ identified by J.G.A. Pocock as ‘The Machiavellian Moment’. The core of course is the seventeenth and eighteenth-century Anglophone world, particularly the English Republicans - John Milton, Machamont Nedham, Algernon Sidney, James Harrington - of the 1650s. We will also look back, however, to the theorists of the Renaissance city-states, above all Machiavelli, and beyond to their classical sources. And the English republicans will further be considered as a bridge to the eighteenth-century commonwealthmen and the American founding fathers. The methodological stance is based on the concept of political ‘languages’ as pioneered by Pocock, Quentin Skinner and John Dunn, rather than on the canonical - great, timeless, books - approach once dominant in the history of political thought. The format is discussion-led, and students are expected to engage with the original texts.

93403. Fin De Siecle Europe (3-3-0)
After an initial discussion of historiography, this course will concentrate on the political, intellectual and sociocultural currents in turn of the century Europe. The spate of publications on this period in the last decade has been stimulated by a growing debate on the history of countries concerned and on new historical approaches. Carl Schorske’s collection of essays, Fin de Siecle Vienna, has been the subject of many conferences and his approach has been both lauded and rejected. His work has stimulated similar studies of other countries such as Eugen Weber’s.
France, Fin de Siecle, that have tried to be more encompassing. But these more broadly conceived studies have often been criticized for being too superficial. We will begin with three national history approaches (Austria, France and Germany) followed by topical approaches (gender, youth, crime). The readings for this course will, therefore, not only introduce you to some of the history of the period but will also introduce you to some novel approaches and important historical controversies.

93404. Religion and Society in Europe (3-3-0)
This course will examine some of the major themes in the social history of religion as it has developed over the past two decades. For the first two weeks we will concentrate on the early modern period, focusing on seminal works by John Bosco, Natalie Davis, Jean Delumeau, Carlo Ginzburg, Christopher Hill, Keith Thomas, and others. Issues considered will include the process of confessionalization, the relationships between popular and institutional religion, and the role of religion and religious dissent in legitimizing political regimes and the opposition to them. We will then turn to the eighteenth century, and consider the status of religion in the age of "enlightenment," with particular attention paid to Methodism, Jansenism, and Pietism, movements that provided devotional and theological alternatives to established churches, and contributed to new understandings of the relationship between religion and civil society. In the last half of the course we will consider the challenges posed to religious institutions and believers in the era following the French Revolution. The emergence of powerful ideologies promoting nationalism and socialism, and the increasing reach of state power into the lives of citizens put pressure on established religions, and generated change and innovations both inside and outside of the traditional churches. In the twentieth century we will examine how religious identities and institutions were defined in the face of totalitarian and authoritative regimes.

93405. Gender in Modern Euro History (3-3-0)
In this graduate colloquium we will explore how paying attention to gender can challenge and transform understandings of the more recent European past. The focus is on Central Europe since the 1870s, but we will also look east and west from that base. The approach will be both roughly chronological and thematic; rather than systematic coverage of two hundred years of European history, we can only sample the possibilities. Readings include some classic texts—primary and theoretical as well as secondary—along with newer and less familiar studies. For example, we will consider works by Frederick Engels, Virginia Woolf, Simone de Beauvoir, Otto Weininger, Alexandra Kollontai, Sigmund Freud, Michel Foucault, Lynn Hunt, Judith Butler, George Mosse, Isabel Hull, Antoinette Burton, Klaus Theweleit, Dagmar Herzog, and many others. Students who wish their major project to be a seminar paper rather than a historiographical essay should contact the professor before the semester begins.

93406. 19th- and 20th-Century European Intellectual History (3-3-0)
Depending on the linguistic range and interests of students, this course will survey several of the following topics: the development of liberalism in England, France and Germany (Mill, Tocqueville, Hegel and the Hegelian tradition); variants of socialism ("utopian" socialism and Marxism); positivism and materialism; Darwin and Darwinism; Nietzsche; Freud, Jung, and psychoanalysis; Weber, Durkheim, and the development of modern sociology; Lenin, Bogdanov, and "Russian Marxism"; Heidegger's rebellion against modernity.

93407. Totalitarianism in 20th-Century Europe (3-3-0)
This graduate colloquium will explore origins, nature, and functioning of totalitarian regimes in 20th century Europe. Students will be asked to write a term paper analyzing a theme or an event dealt with in the readings. Those who prefer to write a primary research paper should consult with the instructor prior to taking the course.

93408. Modern Germany (3-3-0)
This course provides an opportunity for graduate students to survey major events in German history over the last two centuries while familiarizing themselves with some of the classic and recent interpretations of that past. Both geographically and methodologically, our scope will be broad. In very real ways, the "German history" of the nineteenth and twentieth centuries has also been European and even world history, so do not be surprised if our discussions occasionally take us far from Berlin or Munich. Works from the subdisciplines of diplomatic, intellectual, social, political, cultural, and "everyday" history will be included among the required readings. The class is structured as a colloquium, with weekly readings, some common, others individual.

93409. Political Violence in Modern Europe (3-3-0)
This course will explore causes, consequences and modalities of violence in modern Europe, giving special attention to themes of terrorism and state violence. Students will be asked to write a longitudinal paper -- 20 pages or so -- analyzing some theme or episode dealt with in our readings.

93410. 19th- and 20th-Century Polish History (3-3-0)
This lecture course explores Polish history from the partitions to the present. Special emphasis will be placed on understanding Poland's changing political, cultural, social, and physical geography. Politically effaced from the map of Europe twice in the two centuries under study, Poland ceased to exist as a political nation between 1797-1918 and 1939-1945. In the wake of World War II, moreover, Poland's geographies shifted once more as the country changed physical shape and simultaneously came under Soviet rule. Each time independence melted away, the Polish nation grew stronger and experienced social, cultural, and political transformation, ultimately spearheading the drive of all of Eastern Europe to overthrow Communist rule. Although basically a lecture course, the instructor will provide ample opportunity for discussion and questions in class. About seven books will be assigned.

Graduate students will be expected to attend the undergraduate lecture class and to participate in a separate weekly discussion seminar. Seven short papers/exercises and a long final project are required.

93411. Europe in the Two World Wars (3-3-0)
This graduate colloquium will explore how historians have approached and interpreted the two world wars that devastated Europe during the last century. We will consider classic and recent works of military and diplomatic history; political, social, cultural, and religious history; women's and gender history; history of everyday life; personal accounts; and representations in film. The reading/viewing list may include works by Goetz Aly, Omer Bartov, Julien Benda, Richard Breitman, Vera Brittain, Joanna Bourke, Belinda Davis, Fritz Fischer, Paul Fussell, Michael Geyer, John Keegan, Victor Klemperer, Elena Klimov, Hans Mommsen, Bogdan Musial, Jean Renoir, Mary Louise Roberts, Gerhard Weinberg, Jay Winter, and others. There will be weekly assignments of various kinds, including work with textbooks on the subject and major journals in the field, as well as a historiographical essay. Those who wish to write a seminar paper instead should discuss their plans with the instructor in advance.

93610. History of American Women (3-3-0)
This colloquium is intended to serve as an introduction to the field of U.S. women's and gender history. It will provide a basic background to some of the major current methodological approaches and topical interests in the field, as well as acquainting the student with the way approaches to women's history have developed and changed over the past thirty-five years. Although the course will be organized chronologically, from colonial times through the twentieth century, the main focus will be historiographical.

We will not attempt to "cover" all the important areas of U.S. women's history. Students who wish to master this field, however, will emerge from the class with the requisite analytical tools to begin that task.

93611. Biography as History (3-3-0)
This course will consider the art of writing biography and its relationship to the art of writing history generally. Most of the subjects will be Americans, including some known primarily for their religious roles and some who are not. No specialized knowledge of American history is a prerequisite and students may do papers on figures from other places. This course may be taken as either a colloquium or a seminar.
Calvinism, Newtonian physics, republicanism, and occasional French or German voices. Examples anglophone North America. This does not preclude examination field in Anglo-American intellectual graduate students in history who intend to offer an
Readings in selected topics in Anglo-American intel-
(3-3-0)

93650. British-American Intellectual History 1650-
1800 (3-3-0)
Readings in selected topics in Anglo-American intel-
lectual history from the late seventeenth century through the late eighteenth. Though suitable for graduate students in history who intend to offer an examination field in Anglo-American intellectual history, it is by no means intended solely for them. “Anglo-American intellectual history,” as used here, comprises those discourses common to Britain and anglophone North America. This does not preclude occasional French or German voices. Examples might include sensationalist psychology, evangelical Calvinism, Newtonian physics, republicanism, and Scottish common-sense philosophy. I have aspired to a focus on problems that were nodes of change rather than an even-handed survey. Inevitably, in this period the primary reading tilts toward British authors. The course will meet weekly for discussion of common assigned readings. Essays, based on the assigned readings, will also be required: the charac-
ter of these to be worked out individually with the instructor.

93651. Slavery and the Modern World, 1500-1865 (3-3-0)
Was slavery an atavistic institution swept away by the forces of modernity, such as capitalism, nationalism, and democratic revolution? Or was its revival and extension a product, at least in part, of those forces? This will be a transatlantic inquiry with special at-
tention to England, France, their colonies in North America and the Caribbean, and the early United States. Topics include the slave trade, colonialism, merchant and industrial capitalism, slave resistance and rebellion, the American Revolution, antislavery ideas and movements, relations between slaves and masters, the character of and differences between societies with slaves, racism, the role of slavery in US politics, and the forms of culture created by those who experienced the conjuncture of slavery and modernity.

93652. Puritanism in Colonial New England (3-3-0)
A study of the interaction of Puritanism and the cul-
ture of seventeenth-century New England and of the legacy of Puritanism in the religion and culture of eighteenth-century New England through the era of the Great Awakening and Jonathan Edwards. Weekly class discussion will be based on assigned reading on which students are to prepare brief reviews. Students taking the course as a seminar will be required to write a research paper. Those taking it as a collo-
quium will be required to write two papers critically surveying literature in the field.

93653. Colloquium: US Civil War Era (3-3-0)
The Civil War has generated not only the most popular interest of any topic in U.S. history but a huge, often eloquent, and always contentious histo-

93654. Humans and Nature in Americas (3-3-0)
This colloquium imagines where earth-centered histories of the Americas, c.1450-1850, might begin. The course draws on works by eco-philosophers, cultural anthropologists, literary critics, and histo-
rians of early modern Europe and the Americas, in addition to a selection of writings and oral traditions from the historical subjects themselves. The course focuses on the period from the late medieval through the early modern; across space, it considers compara-
tive questions about Africa, South Asia, East Asia, and the Pacific Rim. Collectively, the readings are intended to give us a foundation for reading classic historical texts through the prism of nature, alert to the ways that people saw the natural worlds in which they lived and constructed experience through their perceptions of themselves in nature.

93655. Seminar: Anglo-American Intellectual His-
tory (3-3-0)
A research seminar in American and British intellec-
tual history. Members of the seminar will complete an article-length paper (20-30 pages), based on origi-

93656. Colloquium: Anglo-American Intellectual History II (3-3-0)
Readings in selected topics in British and American intellectual history from the end of the eighteenth century through the late nineteenth. Though suit-

“A Anglo-American intellectual history,” as used here, comprises those discourses common to Britain and anglophone North America. This does not preclude occasional French or German voices. Examples might include evangelical reform movements, Romantic metaphysics, feminism, liberalism, Dar-
winian biology, and religious unbelief. But topics widely discussed only on one side of the Atlantic are excluded: a policy that eliminates important regional cultures (such as the American South) and major topics (such as African-American nationalism and Benthamite utilitarianism except as refracted through J. S. Mill). I have aspired to a focus on problems that were nodes of change rather than an even-handed survey.

The course will meet weekly for discussion of com-
mon assigned readings. Essays, based on the as-
signed readings, will also be required: the character of these to be worked out individually with the in-
structor. Undergraduates are not admitted without the prior express permission of the instructor.

98699. Research and Dissertation (0-0-0)
Individual conferences and consultation between the doctoral student writing the dissertation and the dissertation director. Required of students pursuing dissertation research in residence.
98700. Nonresident Dissertation Research (1-1-0)
Continuing registration for the doctorate beyond 72 credits; required of students not in residence.

93800. Modern Religion, Conflict, and Violence (3-3-0)
This course will focus on modern religion and its capacity for inspiring both deadly conflict and non-violent social change. The first part of the course examines politically charged religious resurgence around the world-origins, ideologies, social organization, leadership, political impact, cultural influence. Movements to be considered include Sunni Islamist parties and movements in Egypt, Algeria, Sudan, Jordan, Palestine, Pakistan, and Indonesia; Shi'ite movements in Iran and Lebanon; Jewish extremists in Israel and New York; Hindu nationalists in India; Sikh radicals in the Punjab; Buddhist nationalists in southeast Asia; Protestant fundamentalism and the Christian Right in the United States; Roman Catholic traditionalism in the United States and Europe. The second part of the course compares modern religious communities, traditions and groups that pursue social change through conflict resolution, nonviolence, human rights activism, and the like. Cases include The Community of Sant Egidio, Socially Engaged Buddhists, the World Conference on Religion and Peace.

93973. Archives and Empires: The Inca and the Spanish (3-3-0)
Traditionally, scholars have highlighted the differences between the Inca empire and that of its Spanish conquerors. These differences are indeed striking, and will be explored in this course. But there are also similarities between the two imperial polities, which we will likewise study. Attention will focus on the production, collection, ordering and storage of information by both imperial and local authorities, and on how this information was used. The Incas recorded administrative and narrative information on quipus (knotted cords) and with reference to indigenous Andean languages. The Spanish in the Andes briefly used this system before switching to alphabetic writing and the Spanish language. Questions we will address include: did this change affect the kind of information that was preserved, and if so how? And also, what role do culture and religion (as documented in imperial records) play in the creation and maintenance of imperial power?

93974. de las Casas: Context and Resonance (3-3-0)
The Spanish conquest of Central and South America generated a crisis of conscience in Spanish universities and in Spain at large. People wanted to know: was the conquest justified, and if not, seeing that it could not be undone, what were the invaders to do? In this prolonged and often bitter debate, Bartolomé de las Casas (1484-1566), Dominican friar and bishop of Chiapa in Mexico, formulated what still are among the most moving and intellectually incisive arguments for the equality of all human beings. He also wrote one of the earliest comparative histories of civilization (the Apologética Historia). The task of the course is to understand the thought of Las Casas and his followers in its sixteenth century context, and then to enquire into the connections between the ideas of Las Casas and contemporary theologians of liberation, in particular Gustavo Gutiérrez.

93976. The Scientific Revolution (3-3-0)
This course will examine the changes in ideas about the natural world that took place in seventeenth-century Europe in terms of the disciplines that structured enquiry and demonstration. The approach will be thematic rather than chronological. Natural history or astronomy will be treated on equal terms with the study of language or the Bible.

93977. Social Uses of Science since 1800 (3-3-0)
This course is a comparative survey of modern scholarship on the normative uses of science. We shall begin in the early modern period, where many of the issues of the construction of this thing-called science are delineated unusually clearly. Our main focus will be the U.S., Britain, France, and Germany in nineteenth and twentieth centuries.

93978. History of Modern Astronomy (3-3-0)
Traces the development of astronomy and cosmology from the late 17th century to the 1930s. Attention is given to the interactions of astronomy with other areas of science and with philosophical, religious, and social factors. Satisfies core history requirement.

93979. Science, Medicine, and Social Reform (3-3-0)
A comparative history of medicine, welfare, and the state in the United States and Europe from the late eighteenth to the mid 20th century. Topics include medical police, the rise of social statistics, public health and social control, eugenics, alternative medicine, and the role of religion.

93985. Development of Moral Doctrine (1-1-0)
An examination of how Catholic moral doctrine has developed in specific areas, viz. marriage and divorce: religious liberty; slavery; and usury. Attention will also be given to more general theory on the development of doctrine in the Catholic Church. Course requirement: One 12-page paper on any area of moral doctrine, assessing development or lack of it in that area.

Faculty

Doris Bergen, Associate Professor, Fellow in the Nanovic Institute for European Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies. B.A., Univ. of Saskatchewan, 1982; M.A., Univ. of Alberta, 1984; Ph.D., Univ. of North Carolina, Chapel Hill, 1991. (1996)

Paul Cobb, Assistant Professor. B.A., Univ. of Massachusetts, 1989; M.A., Univ. of Chicago, 1991; Ph.D., ibid., 1997. (1999)

Vincent P. DeSantis, Professor Emeritus. B.S., West Chester Univ., 1941; Ph.D., Johns Hopkins Univ., 1952. (1949)

Philip Gleason, Professor Emeritus. B.S., Univ. of Dayton, 1951; M.A., Univ. of Notre Dame, 1955; Ph.D., ibid., 1960. (1959)

Daniel Graff, Director of Undergraduate Studies and Assistant Professor. B.A. Univ. of Illinois, 1990; M.A., Univ. of Wisconsin, 1993; Ph.D., ibid., 2004. (2001)

Courses are offered over a wide range of topics in the history of science, from medieval natural philosophy to the physics, biology, medicine, and technology of the 19th and 20th centuries. Particular emphases can be pursued in medieval natural philosophy and medicine, the scientific revolution of the 17th century, the history of astronomy, physics, and mathematics, 19th-century European and American science, technology and medicine, the history and philosophy of economic thought, and the history of life and physical science in the 20th century.

Course work in the philosophy of science draws upon the resources of the University's departmental strengths in philosophy of science, ethics, the history of philosophy, and analytic philosophy. The field itself tends to divide into four parts, all of which are dealt with at Notre Dame. The first is concerned with such themes as explanation, theory-evaluation, theory-change and rationality, and recent continental approaches to the philosophy of science. The second
Financial Aid

The Notre Dame program offers a limited number of fellowship-assistantships to entering students each year that include full-tuition scholarships. These provide a duty-free fellowship for the first year, with services expected for stipend continuation in the second, third, and fourth years. A fifth-year dissertation fellowship is awarded to students making satisfactory progress toward the degree. Duties will normally include teaching assistantship work in the selected disciplinary department (history or philosophy); in the undergraduate science, technology, and values concentration; or in the undergraduate Program of Liberal Studies.

Applicants are urged to apply for the competitive NSF and Andrew Mellon predoctoral fellowships in the history and philosophy of science. Deadlines for these applications are in November of the year preceding admission but may also be applied for in the first year of the program.

Master’s Program

Because HPS is a doctoral program, applicants interested only in receiving a terminal M.A. degree will not be accepted. However, this rule does not apply to individuals concurrently enrolled in other doctoral graduate programs of the University who seek to earn a nonresearch HPS master’s degree in order to complement their doctoral studies. Students whose primary enrollment is in HPS will be entitled to receive a master’s degree once they have completed the written and oral examination for Ph.D. candidacy. In addition, in the event that an admitted HPS student decides to leave the program or is subsequently discontinued by the HPS program or the disciplinary department, the student may pursue a research (or thesis) terminal M.A. degree.

The nonresearch HPS M.A. degree requires the completion of 36 credit hours of course work. Three courses in history of science and three courses in philosophy of science form the core of this requirement. The student, in consultation with the HPS program director, selects the remaining courses. To be eligible for HPS credit, these courses must bear in significant ways on the concerns of history and philosophy of science. Students taking the nonresearch HPS M.A. concurrently with a Ph.D. in another Notre Dame program may count up to nine hours of course work toward both degree programs, subject to approval by the director of HPS and the director of graduate studies in the other program. Reading knowledge in one foreign language (ordinarily French or German) will be required. A one-hour oral examination, based on course work, will complete the requirements for the nonresearch degree. Students taking the terminal HPS research M.A. will prepare an extended research paper or formal M.A. thesis under the direction of a faculty member, for which six hours of thesis credit will be awarded. A one-hour oral comprehensive examination completes the requirements for this research M.A. degree.

Doctoral Program

HPS students pursue the Ph.D. degree in either a philosophy track or a history track.

Philosophy Track

Those who elect the philosophy track toward the Ph.D. in history and philosophy of science must satisfy the following course distribution requirements. In HPS, they will take a minimum of three courses in the general area of philosophy of science and four courses in history of science, plus the HPS Proseminar. Courses in the history of science will be selected from offerings designated as satisfying the examination fields for the history of science M.A. comprehensive. In addition, students will satisfy a slightly modified form of the philosophy graduate program’s requirements, namely, the philosophy proseminar and a minimum of one course in each of the following areas: logic, history of ancient philosophy, history of medieval philosophy or science, and history of modern philosophy, and in two of the following three areas: ethics, metaphysics, and epistemology. Students may also be advised to take some extra work in one of the sciences, if this seems necessary for the specialized research they are planning. The language requirement for Ph.D. candidates in the philosophy track is a reading knowledge of two foreign languages.

Ethics of Science and Technology Concentration

Students on the philosophy track who elect the ethics of science and technology concentration will satisfy the philosophy-track course requirements, but with the following exceptions: (1) the student will take at least four courses in ethics or science and ethics; (2) 20th-Century Ethics will be taken as one of the three required philosophy core courses; (3) one of the four required history of science courses will be selected from a specified list of courses in the area of science, technology, and values; and (4) an additional course in ethics will be chosen from a specified list of philosophy courses.

In late summer after his or her second year, the student will take a written qualifying examination in the history of philosophy administered by the Philosophy Department. In the late summer after the third year, the student will take a written M.A. comprehensive examination in history of science. This will include examinations in the following areas in the history of science: (1) ancient, medieval, and early-modern natural philosophy; (2) history of physical science 1700 to 1910; (3) history of life science 1700 to present; and (4) science, technology, and society (including history of medicine and technology). Students will also be expected to turn in at the end of the summer an advanced paper in philosophy normally expected of philosophy majors after the second year (see philosophy doctoral requirements). In the first semester of the fourth year, the student will take an oral qualifying examination in the philosophy of science, with a special focus on
the problem area in which he or she intends to write a dissertation. The five members of the examination board will be appointed jointly by the HPS program director and the director of graduate studies in philosophy. Once Ph.D. candidacy requirements have been completed, the student will begin preparation of a dissertation proposal under the guidance of a research director of his or her choice. The proposal will be presented to a thesis evaluation committee, consisting of five faculty chosen jointly by the HPS program director and the director of graduate studies in philosophy. The committee can approve, reject, or request modifications in the candidate's proposal. When the proposal is approved, the student will work under the direction of his or her thesis director to prepare a dissertation that must be approved by the director and three readers appointed by the HPS program director. Readers are normally drawn from the committee that approved the original proposal, but one outside member of the committee may be substituted if deemed desirable for expert judgment of the dissertation. If the readers accept the dissertation, the HPS program director arranges for a dissertation defense. The defense committee is composed of at least the dissertation director, the three dissertation readers, and an outside chairperson appointed by the Graduate School. After the defense and ensuing discussion, the committee decides by majority vote whether the defense of the dissertation project has been satisfactory and determines whether any revisions of the dissertation are required as a result of weaknesses revealed in the oral defense.

**History Track**

Those who elect the history track toward the Ph.D. in history and philosophy of science will take a minimum of four courses in history of science, plus the HPS Proseminar, and three courses in the general area of philosophy of science. In addition, a student will take at least eight more courses (three of which must be research seminars) in two of these fields: American, Modern European, or Medieval History. These eight courses can include the history of science and technology.

The basic language requirement for Ph.D. candidates on the history track is a reading knowledge of one modern foreign language. In addition, competence must be shown either in a second language or in a technical discipline bearing on the student’s research work, such as one of the natural sciences.

In the late summer after the second year, the student will take a written M.A. comprehensive examination in history of science. This will include examinations in the four following areas in the history of science: (1) ancient, medieval, and early-modern natural philosophy; (2) history of physical science 1700 to 1910; (3) history of life science, 1700 to present; and (4) science, technology, and society (including history of medicine and technology). This will replace the long paper and examination requirements normally expected for certain tracks within the History Department (medieval, modern European) (see history doctoral requirements). In the spring of the third year, the student will prepare for the Ph.D. candidacy examination, taken in the late summer. This will consist of two parts, written and oral. The examination board will consist of five faculty members appointed jointly by the HPS program director and the director of graduate studies in history. Each examiner will set a two-hour written examination in one of five fields, two of which will be in specialized areas in the history of science and technology, two in other history fields, and one in the philosophy of science. The oral examination will be given shortly after the written and will involve the same five examiners.

Once Ph.D. candidacy requirements have been completed, the student will begin preparation of a dissertation proposal under the guidance of a research director of his or her choice. The proposal will be presented to a thesis evaluation committee, consisting of three faculty chosen by the HPS program director and the director of graduate studies in history, plus the student’s research director. The committee can approve, reject, or request modifications in the candidate's proposal. When the proposal is approved, the student will work under the direction of his or her thesis director to prepare a dissertation that must be approved by the director and three readers appointed by the HPS program director. Readers are normally drawn from the committee that approved the original proposal, but one outside member of the committee may be substituted if deemed necessary for the student's dissertation work. If the readers accept the dissertation, the program director arranges for a dissertation defense. The defense committee is composed of at least the dissertation director, the three dissertation readers, and an outside chairperson appointed by the Graduate School. After the defense and ensuing discussion, the committee decides by majority vote whether the defense of the dissertation project has been satisfactory and determines whether any revisions of the dissertation are required as a result of weaknesses revealed in the oral defense.

### Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

The listing includes courses that were offered in the past three academic years.

83100. HPS Colloquium

(1-1-0)

Discussion of a prominent recent work in the field of HPS, and research presentations by visiting scholars. Required course for HPS students in the first and second years of the program. (Every semester)

83198. Human Nature vs. Kant Idealism

(3-3-0)

This seminar compares and contrasts the philosophical aims of Hume's naturalism and Kant's transcendental idealism, with attention to the 18th-Century background of their views.

83199. Kant, Kuhn & Friedman

(1-1-0)

This one-credit course is devoted to a close, critical reading of Michael Friedman's Dynamics of Reason and related works by Friedman and a few other authors on the role of the a priori in space-time theory.

83601. Science and Social Values

(3-3-0)

This course will be the first half of a two-semester survey of the main events in the history of natural philosophy and science from Greek antiquity to the early Enlightenment. The first half, taught by Professor Robert Goulding, will begin with Pre-Socratic reflections and carry the course to the Renaissance. The second half, taught by Professor Sloan, will deal with the science of Galileo, Descartes, Boyle and Newton.

83801. Philosophy of Science

(3-3-0)

A survey of major problems, movements, and thinkers in twentieth-century philosophy of science. The course begins with a look at the historical background to logical empiricism, its rise to prominence, and its early critics, such as Popper. After a study of major problems in the neo-positive tradition, such as confirmation, explanation, and the nature of scientific laws, historicist critiques of neo-positivism, chiefly Kuhn’s will be studied next, followed by a consideration of the realism-instrumentalism debate. The course concludes with a brief look at new perspectives, such as social constructivism and feminist philosophy of science. (Satisfies core philosophy of science requirement.) (Every Fall.)
determinism, proceed through a combined social/technical history of the computer and the internet, and then consider some ways in which computers are changing the definition of the “human” (using my recent book Machine Dreams) and the definition of the economy.

93501. Theology after Darwin (3-3-0)
This course will be an upper-division undergraduate/graduate level survey of attempts by Christian theologians (both Protestant and Catholic) to come to grips with the challenges raised by the Darwinian revolution. We will begin with an overview of the role of the so-called argument from design in eighteenth and nineteenth century Christian theology. Then we will consider two paradigmatic late-nineteenth-century reactions to Darwin, that of Charles Hodge (What is Darwinism?) and of John Zahm, C.S.C. (Evolution and Dogma). From there we will study the largely negative mood of the early-twentieth century (with the exception of the liberal theology of Shailer Matthews and other members of the University of Chicago Divinity School), with particular attention to the rise of creationism. We will conclude by looking at three influential contemporary responses to Darwin: the modified creationist attack on Darwinism represented by the so-called intelligent design argument; the use of Darwin to attack the coherence of Christian faith by figures such as Daniel Dennett and Richard Dawkins; and the argument by John Haught and Denis Edwards (building on Teilhard de Chardin) that the Darwinian revolution can in fact support and enrich Christian faith and theology.

93631. The Scientific Revolution (3-3-0)
This course studies selected developments in science during the period from 1500 to the death of Newton in 1727. The focus will be on such major figures as Copernicus, Kepler, Galileo, Huygens, and Newton. Philosophical, religious, and historiographical issues will receive some attention. Satisfies core history requirement.

93635. Topics: Scientific Revolution (3-3-0)
Examination of selected topics in the medical, physical, and occult sciences of the Scientific Revolution period. The first half of the course will deal with life sciences, beginning with the work of Aristotle and Galen, and move into the work of Harvey, Descartes, Boyle and the interactions of the life and physical sciences in the early modern period. The second half will deal with topics in the history of vision and optics and their relations to other sciences and to magic, especially in the early-modern period.

93638. British-American Intellectual History 1650-1800 (3-3-0)
Readings in selected topics in Anglo-American intellectual history from the late seventeenth century through the late eighteenth. Though suitable for graduate students who intend to offer an examination field in Anglo-American intellectual history, it is by no means intended solely for them.

“Anglo-American intellectual history,” as used here, comprises those discourses common to Britain and anglophone North America. This does not preclude occasional French or German voices. Examples might include sensationalist psychology, evangelical Calvinism, Newtonian physics, republicanism, and Scottish common-sense philosophy. I have aspired to a focus on problems that were nodes of change rather than an even-handed survey. Inevitably, in this period the primary reading tilts toward British authors.

93647. Seminar: Anglo-American Intellectual History (3-3-0)
A research seminar in American and British intellectual history. Members of the seminar will complete an article-length paper (20-30 pages), based on original research in primary sources. Unless the member’s scholarly interests strongly dictate otherwise, the topic should fall within the period from about 1775 to 1925. Cross-national topics are welcome, assuming that the member has any language skills needed. Topics should if possible involve archival research.

93711. History of Modern Astronomy (3-3-0)
This course will treat a number of topics in the history of astronomy in the period from 1700 to the present. About half the course will be devoted to the development of galactic and extra-galactic astronomy from the creation of the island universe theory in the eighteenth century to the expanding universe theory of the present century. Another topic that will definitely be treated, although on a more limited scale, is the history of ideas of extraterrestrial intelligent life. Other areas that may be included are: the rise of astrophysics, planetary discoveries from Uranus to Pluto, astronomical instruments and observatories, radio astronomy, and American astronomy. Special attention will be given to philosophically and religiously significant aspects of the history of astronomy. Persons interested in philosophy of science, history of science, astronomy, physics, or the relations of astronomy to religion and literature may find this course of value. No specific background in astronomy is assumed.

93721. The Darwinian Revolution (3-3-0)
A combined historical and philosophical approach to the revolution created by the work of Charles Darwin. The course deals with the origins of Darwinism; the 19th-century debate over evolution; the subsequent development of mathematical and genetic approaches to natural selection theory; and the formulation of neosynthetic evolutionary theory. The course will close with consideration of more recent developments connected to developmental genetics, punctuated equilibrium theory, and chaos-theoretical approaches to evolution. Students will be introduced to the historical and philosophical literature of current interest. Satisfies core history requirement.

93722. The Molecular Revolution in Biology (3-3-0)
This course offers a historical and philosophical analysis of the origins and development of the molecular revolution in biology that broke into full public view in the early 1950s with dramatic discoveries of the molecular structure of DNA and the biophysical mechanism of the action potential in the nervous system. The course will approach this with an analysis of the development of the chemistry and physics of living materials from Lavoisier and the German biophysical school (Helmholz), through the remarkable advances in physiology of the French school (Bernard) and the development of genetics. The course will terminate in the examination of molecular approaches in contemporary work in human genetics (the Human Genome Project). Satisfies core history requirement.

93742. History of Economic Thought (3-3-0)
Introduction to the history of economic thought and methodological issues in economics. Survey of preclassical, classical, Marxian, marginalist, and other approaches. Issues in the philosophy of science concerning explanation, verification, and prediction.

93751. Science, Medicine and Social Reform, 1750 to 1950 (3-3-0)
A comparative history of medicine, welfare, and the state in the United States and Europe from the late-eighteenth to the mid-twentieth century. Topics include medical police, the rise of social statistics, public health and social control, eugenics, alternative medicine, and the role of religion.

93771. The Social Uses of Science, 1800 to the Present (3-3-0)
This course is a comparative survey of modern scholarship on the normative uses of science. We shall begin in the early modern period, where many of the issues of the construction of this thing called science are delineated unusually clearly. Our main focus will be the U.S., Britain, France, and Germany in the nineteenth and twentieth centuries.

93802. Scientific Realism and Anti-Realism (3-3-0)
The controversy regarding realism and anti-realism has been one of the two or three focal issues in the philosophy of science over recent decades. After a brief look at the historical origins of this controversy in early astronomy and in Newtonian mechanics, we shall go on to study the criticisms, defenses, and expliciations of scientific realism in the writings of van Fraassen, Putnam, Fine, Hacking Laidan, Pullos, Kukla, and Ganson. We will rely mainly on reproductions of selections from historical sources as well as of recent articles.
93805. Philosophy of Biology (3-3-0)
Central issues in the philosophy of science from the perspective of the life sciences, with particular emphasis on topics in evolution theory and sociobiology and philosophy of the adaptation and development of the life sciences (from organic chemistry to cognitive neuroscience). Topics to be covered include: teleology, reductionism and supervenience, the biological basis of cognition, explanation, scientific realism, theory change, and the critical appraisal of alternate research strategies.

93811. History of the Philosophy of Science up to 1750 (3-3-0)
This seminar begins by examining four conceptions of science: those of Plato, Aristotle, Epicurus, and Chrysippus. It then considers how the natural philosophies developed by their ancient traditions were transformed by medieval and modern thinkers, who significantly revised the goals of previous scientific inquiry. Among the moderns, we will focus on Descartes, Boyle, and Newton.

93812. History of the Philosophy of Science 1750 to 1900 (3-3-0)
The second half of the history of "classical" philosophy of science. Themes: the epistemic status of scientific knowledge-claims; the presuppositions, techniques, and modes of inference appropriate to natural science; the ontological status of scientific constructs. We shall begin with Reid and Kant, go on to Comte, Whewell and Mill, and end with Mach and Poincaré.

93813. Leibniz, Newton and Kant's First Critique (3-3-0)
A close examination of central aspects of Kant's *Critique of Pure Reason*, considered as an attempt to resolve tensions between the model of intelligibility exemplified by Newton's physics and the model of intelligibility articulated in Leibniz's metaphysics. We will investigate some conflicts between Leibniz and Newton with respect to space, time, causality, and freedom, and we will critically study both the methods adopted by Kant to resolve these conflicts (transcendental arguments) and the results supposedly achieved thereby (transcendental idealism). The *Critique* as seen from this perspective will be contrasted with the *Critique* as it is understood by some contemporary philosophers. Classes will be held in seminar format. Short weekly writing and two papers will be required. Books will include Leibniz and Clarke: *Correspondence*, ed. by Roger Ariew (Hackett, 2000) and Kant's *Critique of Pure Reason*, eds. Paul Guyer and Allen Wood (Cambridge, 1998).

93822. Ethics and Science (3-3-0)
Prerequisite: Consent of instructor. Use of four ethical theories and five classical logical/analytical criteria to ethically evaluate case studies in contemporary science. Problems analyzed via contemporary science include practical issues of plagiarism, attribution, peer reviewing, data sharing, data ownership, collaborative science, scientific misconduct, paternalism, whistleblowing, conflicts of interest, secrecy in science, and advocacy in science. Methodological issues to be dealt with include scientists misrepresenting their opinions with confirmed science, cooking and trimming their data, failure to attend to the purposes for which their research may be used or missed, and scientists' use of evaluative presuppositions, questionable inferences and default rules, question-begging validation and benchmarking, and misleading statistics. (On demand)

93824. Environmental Justice (3-3-0)
This course will survey environmental impact assessment (EIA), ecological risk assessment (ERA), and human-health risk assessment (HHRA); ethical and methodological issues related to these techniques; then apply these techniques to contemporary assessments for which state and federal governments are seeking comments by scientists and citizens.

The course is hands-on, will have no tests, but will be project-based, with students working on actual assessments which they choose (about 2500 are done in US each year). The goal will be to teach students EIA, ERA, and HHRA and how to evaluate draft analyses, particularly those used to site facilities or make environment-related decisions in which poor people, minorities, and other stakeholders are themselves unable to provide comments. Course will cover flaws in scientific method and flaws in ethics that typically appear in these assessments.

93871. Historical Foundations of Space-Time Theory (3-3-0)
This seminar will address several of the more important contemporary problems in the philosophy of space and time, both from the point of view of conceptual problems in the foundations of physics and from the point of view of systematic metaphysics and epistemology. The seminar will start with a non-technical, but rigorous introduction to current physical conceptions of space and time (both special and general relativity). We will then turn our attention to various specific topics, such as: conventionalism and the structure of spacetime; the "hole" argument in general relativity; causality and spacetime; spacetime substantivalism; space, time, and individualism; temporal becoming; black holes and spacetime singularities. Each member of the seminar will be expected to prepare a presentation to the seminar and to write a term paper on some topic arising from the readings or seminar discussions.

93872. Historical Foundations of the Quantum Theory (3-3-0)
This course is an historically organized survey of major issues in the philosophical foundations of quantum mechanics. Working with a mix of primary and secondary texts, we will first survey the development of the quantum theory through the emergence of wave and matrix mechanics in the 1920s, the aim being to understand the context in which Bohr's complementarity interpretation and debates about it first arose. A careful study of the Bohr-Einstein debate over the completeness of quantum mechanics will be followed by a review of the major controversies over interpretation in the second half of the twentieth century, including the measurement problem, hidden variables theories, and Bell's theorem. The course will conclude with a look at new questions of interpretation unique to the context of quantum field theory. The course will not assume advanced training in physics.

93881. Theology and the Natural Sciences (3-3-0)
The rapid progress of the natural sciences over the last few centuries has raised numerous issues for Christian theology, just as Aristotelian natural philosophy did in the thirteenth century. Dealing with those issues had a transformative effect on theology at that earlier moment. Is something similar happening today? Ought it? To enter into issues of this sort involving two very different ways of knowing inevitably involves two other ways: philosophy and history. The contribution of these latter to the four-way dialectic will be emphasized. Such a dialectic makes heavy epistemic demands, as case-histories will demonstrate.

93882. Science and Religion (3-3-0)
One of the most interesting and important topics of the last 500 years is the relation of the newly emerging modern science to religious belief in particular Christianity. This course deals with that topic. We'll begin by considering views according to which there really can't be an interactive relationship between science and religion (some of van Fraassen's work suggests this), move to views according to which there can be such a relationship, but only if one or the other is over stepping its bounds (Gould), and then consider views according to which such interaction is perfectly proper. Clearly there can be many different sorts of contact: for example, one way support, mutual support, conflict (Daniel Dennett and Richard Dawkins), and the like. We'll be interested in particular in cases where there appears to have been conflict, as is widely alleged to be the case with the Copernican revolution and the advent of Darwinian evolution. In such cases, what is the rational response on the part of someone who is committed both to the central claims of Christianity and is also enthusiastic about science? How shall we think about the epistemology of such conflict? As a particular contemporary case in point we'll take a closer look at the contrast between Christian ways of understanding ourselves and some of the claims of sociobiology or evolutionary psychology.

96697. Directed Readings (0-0-0)
Readings and discussion of chosen texts under the personal supervision of a member of the faculty.

Research and Direction
78599. Thesis Direction (0-0-0)
Research and writing on an approved subject under the direction of a faculty member.
Faculty

J. Matthew Ashley, Associate Professor of Theology and Fellow in the Center for Social Concerns. B.S., St. Louis Univ., 1982; M.T.S., Weston School of Theology. 1988; Ph.D., Univ. of Chicago, Divinity School, 1993. (1993)

Christopher B. Fox, Professor of English and Director of the Keough Institute for Irish Studies. B.A., Cleveland State Univ., 1971; M.A., State Univ. of New York at Binghamton, 1974; Ph.D., ibid., 1978. (1986)

Gary M. Gutting, the Notre Dame Professor of Philosophy and Fellow in the Nanovic Institute for European Studies. A.B., St. Louis Univ., 1964; Ph.D., ibid., 1968. (1969)

Janet Kourany, Associate Professor of Philosophy. B.S., Columbia Univ., 1965; Ph.D., ibid., 1977. (1982)

A. Edward Manier, Professor of Philosophy. B.S., Univ. of Notre Dame, 1953; A.M., St. Louis Univ., 1956; Ph.D., ibid., 1961. (1959)

Rev. Ernan McMullin, the John Cardinal O’Hara Professor Emeritus of Philosophy. B.S., National Univ. of Ireland. 1945; B.D., Maynooth College, 1948; Ph.D., Univ. of Louvain, 1954. (1954)

Lenny Moss, Assistant Professor of Philosophy and Fellow in the Nanovic Institute for European Studies. B.A., San Francisco State Univ., 1981; Ph.D., Univ. of California, 1989; Ph.D., Northwestern Univ., 1998. (1999)

Philip L. Quinn, the John A. O’Brien Professor of Philosophy. B.A., Georgetown Univ., 1962; M.S., Univ. of Delaware, 1966; Ph.D., Univ. of Pittsburgh, 1969. (1985)

William M. Ramsey, Associate Professor of Philosophy. B.S., Univ. of Oregon, 1982; Ph.D., Univ. of California, San Diego, 1989. (1989)

Kristin Shrader-Frechette, the F. J. and H. M. O’Neill Professor of Philosophy, Concurrent Professor of Biological Sciences, and Fellow in the Joan B. Kroc Institute for International Peace Studies. B.Sc., Xavier Univ., 1967; Ph.D., Univ. of Notre Dame, 1972. (1998)

The Ph.D. in Literature at the University of Notre Dame is an innovative interdisciplinary program that focuses on the study of literature from a transnational and intercultural perspective. The program combines the forces of a number of departments and programs—Classics (Arabic, Greek, Latin, Syriac), East Asian studies, French and Francophone studies, German, Iberian and Latin American studies (Portuguese, Spanish), Irish studies, and Italian studies. Close ties with Philosophy and Theology (exponents of sources of much basic literary theory) are encouraged; each student takes at least one course from each of those two departments. The Ph.D. in Literature brings together outstanding faculty and resources to enable doctoral students to study literature both within traditional disciplines and across disciplinary and national boundaries.

Designed for the intellectually creative student, the Ph.D. in Literature requires both depth and breadth of language study while offering students curricular flexibility in the design of a degree that is responsive to their own interests in literature. Uniquely tailored to take advantage of the University’s many resources, the program offers an unprecedented level of intellectual and financial support.

Intellectual Strength and Support

Notre Dame is well known as an intellectual center for the study of the ancient world, religion and literature, medieval life and culture, Irish literature and culture, the Renaissance, and modernism. Admitted students enjoy the company of their peers and close association with a diverse and lively group of faculty, not only within the departments listed above but also in numerous other departments and institutes at Notre Dame, such as the Department of English, the Dever Program in Dame Studies, the Erasmus Institute, the Kellogg Institute for International Studies, the Kroc Institute for Irish Studies, the Kroc Institute for International Peace Studies, the Nanovic Institute for European Studies, and the Medieval Institute. These institutes, like the departments, bring distinguished scholars as visiting professors and speakers to campus and hold conferences of international repute. Students will be welcomed as valued and contributing members of this community of scholars.
Online Application
The URL for the Graduate School’s online application is http://graduateschool.nd.edu.

General Requirements for the Doctoral Degree
The Ph.D. in Literature offers an innovative academic framework for the formation of future scholar-teachers in both the classical and modern literary fields and languages and literatures. Guided by the director and by faculty advisers in their primary field, students are expected to fashion individualized courses of study bringing together an integrated blend of courses in their primary field, in related field(s), and/or in literature more broadly construed. The doctoral program has been designed in recognition of and in anticipation of more dramatic changes in the way literature is being taught and studied. The program’s design allows for the development of graduates with multiple interdisciplinary competencies: in a national literature, in a cross-cultural field or genre, in the multiple valencies of a literature as understood from a transnational and even global perspective, and in the instruction of one or more foreign languages.

Students in the program will be required to complete a minimum of 54 credit hours of study (18 courses) during three years of course work, including a minimum of six courses in their primary field of study, five in the primary field and/or related fields, and five specially designed seminars in literature. Students must complete during their first two years of study the program’s specially designed course in literary theory, as well as a team-taught course in the course.

Course Requirements
students will be individual study conducted with an individual professor. The program’s Graduate Studies Manual outlines the rules and procedures governing such courses.

Course Descriptions
Each course listing includes:
• Course number
• Title
• (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
• Course description

61601. Romance Language Acquisition and Instruction (3-3-0)
An introduction to theories of foreign language acquisition and methods of foreign language instruction related to them, including the direct, cognitive, communicative, and input (natural) approaches. Required of teaching assistants in the department.

61603. Foreign Language Acquisition and Instruction (3-3-0)
An introduction to theories of foreign language acquisition and methods of foreign language instruction related to them, including the direct, cognitive, communicative, and input (natural) approaches. Required of teaching assistants in the department.

61604. Practicum in Spanish (1.5-1.5-0)
This weekly practicum is designed for graduate students who serve as Spanish Teaching Assistants in the Department of Romance Languages. The course focuses on the development of organizational and presentation skills needed to excel as a foreign language teacher. Students carry out micro-teaching projects and collaborate to develop a portfolio of their own activities based upon the principles learned in the course.

61605. Practicum in French (1.5-1.5-0)
This course will prepare students to teach elementary French courses. It will cover basic teaching techniques/methods used in the ND French curriculum, setting up and maintaining a grade book, course management, as well as test design and evaluation techniques.

61606. Practicum in Italian (1.5-1.5-0)
This course is designed for graduate students in the M.A. program and the Ph.D. in Literature Program with concentrations in Italian and is mandatory during their first year of teaching. It complements the theoretical basis for foreign language teaching methodology provided in LLRO and gives students hands-on practice with the organizational tasks and pedagogical procedures that are pertinent to their daily teaching responsibilities.
63614. Latin Lyric (3-3-0)
This course examines the lyric poetry of Catullus and Horace, with the basic goal of training the student in the language, preoccupations, and meter of Roman lyric. In the latter part of the course we will look at some examples of Roman Elegy, Propertius, Ovid, and Sulpicia, for purposes of comparison.

63618. Socratic Literature (3-3-0)
This course will study the character and philosophical significance of Socrates within the context of the intellectual ferment of late Fifth Century Athens. The Greek primary texts that constitute the heart of the course are Plato’s Laches and Lysis and sections of Xenophon’s Memorabilia. Issues that arise from these texts, like the ideal of rational character and Socrates’ great interest in Eros, will provide opportunities for student research and classroom discussions.

63801. Goethe and His Time (3-3-0)
In this course we will examine some of the major works written during the Classical period of German literature, between 1750 and 1830. In addition to Goethe himself, we will focus on writings by Klopstock, Lessing, Schiller, Holderlin, Kleist, and Tieck. All readings will be in the original, class discussions and presentations will be in English.

63832. Senior Seminar (3-3-0)
Prerequisite: Senior Spanish majors only. This course may cover an in-depth study of a particular author, theme, genre or century. In addition to treating primary texts, some critical material will be required reading. The course culminates in a substantial research paper. May be taken either fall or spring term.

73610. The Sufferings of the Roman Martyrs (3-3-0)
The course will be concerned with a corpus of some thirty Latin passiones of martyrs who were executed at Rome before the Peace of the Church (A.D. 313), and who then were culted at Roman churches throughout the Middle Ages. Although the passions were composed several centuries after the martyrdoms they describe, they are a unique witness to the topography of sixth-century Rome and to its spirituality, as well as to the origin and development of the cult of saints. The texts are generally brief and only of intermediate difficulty (some elementary knowledge of Latin is a prerequisite for the course), but they provide a good introduction to ‘sermo humili’ of the early Middle Ages.

73611. The Age of Cicero (3-3-0)
Readings in historical and literary texts of the Late Roman Republic, to include the speeches and letters of Cicero, Sallust’s Catilinarian Conspiracy, and the poems of Catullus.

73612. Classical Epic (3-3-0)
 Homer’s Iliad and Odyssey and Virgil’s Aeneid stand at the head of the tradition of European literature. The works of Dante, Milton, and many other major European writers is substantially influenced in both form and theme by the classical epics, and contemporary literature and film continue to explore the questions posed sharply by these Greek and Roman epics. We will read Homer’s Iliad and Odyssey, Virgil’s Aeneid, and Ovid’s Metamorphoses. We will consider both the cultural contexts in which these texts are embedded, and the literary habits that these texts rely upon for their aesthetic and emotional power.

73613. Ovid’s Metamorphoses (3-3-0)
In this course, we translate and discuss selected passages from the Metamorphoses, Ovid’s idiosyncratic poetic history of the world. Topics for our discussions include the spiritual, moral, religious, political, and physical transformations portrayed between the creation story at the beginning and the deification of Caesar at the end of the text; the tension between Ovid’s adherence to Roman traditions and his irreverent, sometimes subversive, artistic originality; the poem’s narrative techniques, poetic style, and structure; the significance of intertextual allusions to Greek drama, Virgilian epic, and Ovid’s own love poetry; the stability of gender; portraits of the poet within the work; and the innumerable faces of love, as presented through characters who are pious, raging with passion, insuperable, violent, infatuated, lovesick, devoted, and much more. Above all, this course aims at clarifying how Ovid’s inexhaustible playfulness and delightful wit contributed to shaping a work of both epic grandeur and lyric intimacy that continues to inspire poets, composers, novelists, painters, and at least one playwright whose version recently made it all the way to Broadway. Daily preparation and active participation in class are essential components of the course; brief written assignments, one mid-term exam, one brief project, and a final exam also count towards the final grade.

73615. Roman Epic: Virgil (3-3-0)
An introduction to the poetry of Virgil, covering selections from the Georgics and the Aeneid.

73617. Greek Tragedy (3-3-0)
Texts selected from Aeschylus, Sophocles, and Euripides. Tragedy as a dramatic genre and as a view of life. Introduction to scholarship in this subject.

73619. Greek and Roman Mythology (3-3-0)
The major mythical tales and figures from the classical world which have influenced world literature. Study of the Olympic and vegetation cults. Homer and Hesiod, national and local myth, Syncretism, Mysteries.

73620. Graduate Seminar: Apuleius (3-3-0)
An investigation of the historical Apuleius. The course examines the Romano-African context into which Apuleius was born, recreates the educational travels to Carthage, Athens and Rome which occupied his early life, and focuses especially on his trial for magic in Sabratha in 158/9, before following him back to Carthage where he spent the rest of his life. Notice will be taken of all of Apuleius’ writings, but special attention will be paid to the Apology, and to the documentary nature and socio-cultural importance of the Metamorphoses. The course is open to students with or without Latin.

73621. Medieval Literature (3-3-0)
Readings of representative plays by Cervantes, Lope de Vega, Tirso de Molina, Ruiz de Alarcón, and Calderón de la Barca in their historical and cultural context. The works will be studied in the light of the theatrical theory of the period as well as the contemporaneous criticism.

73631. Plato Before the Republic (3-3-0)
Plato is the philosopher most difficult to interpret. The range of his interests, the innovative nature and the complexity of his thought, finally the fact that he does not speak in first person but has his main ideas exposed by different characters in his dialogues contributed to this difficulty. After a general introduction into the main problems and positions of Plato scholarship today, we will read some of his dialogues written before his most important work, the “Republic”, dealing with as various topics as virtues, the nature of art, the relation of ethics and religion, the politics of Athens and the essence of knowledge. We will analyze both his arguments and the literary devices by which he communicates them and partly withholds and alludes to further ideas. The dialogues to be read are Ion, Hippetas Minor, Apology, Crito, Euthyphro, Laches, Protagoras, Gorgias, Menexenus and Menon.

73633. Dante and Petrarch Minicourse (1-3-0)
This one credit course consists of a series of seminars dedicated to an exploration of the literary relations between Dante Alighieri (1265-1321) and Francis Petrarch (1304-1374). The seminar will meet on four Tuesday afternoons for two and one half hours during the semester and will feature nine contributions by Albert R. Ascoli (UC Berkeley), Zygmunt Baranski (Cambridge), Theodore Cachey (Notre Dame), Roland Martinez (Brown), Giuseppe Mazotta (Yale), Christian Moews (Notre Dame), Lino Pettile (Harvard), Justin Steinberg (University of Chicago), and Sara Sturm-Maddox (University of Massachusetts).
This course will cover selections from Livy's history, including the foundation legends, Hannibal's attack on Rome, and the suppression of the Bacchanalian cult. Topics to be considered will include Livy's use of sources; Roman military techniques and tactics; Roman expansionism; Livy's relation to the Augustan literary and social agenda; and Livy's place in the history of Latin prose.

This course provides an introduction to St. Augustine's Confessions, through reading of extensive selections from the Latin text, a careful reading of the entire work in English translation, and the application of a variety of critical approaches, old and new.

This course will examine the ideology of troubadour poetry and its influence on French literature of the twelfth, thirteenth, and fourteenth centuries. We will trace this influence from the narrative response to lyric poetry in the romances of Lancelot, Tristan & Isolde, and Guillaume de Dole, through the erotic pseudo-autobiographies (Roman de la Rose, Remède de fortune), to the tendency of lyric cycles to recount stories (Christine de Pizan's Cent Ballades). In these works and others, the confrontation of lyric and narrative tendencies, the combinations of song and speech, and the intertextual implications of hybrid works will be of particular interest. The course will be conducted in French or English, depending on the preferences of the class. Modern French will be provided for all Old French texts, but good reading knowledge of modern French is required. Requirements: One 15-20 page research paper; several class presentations.

This introduction to the study of Old English will focus on the elements of the language preparatory to reading and analyzing a variety of prose and verse texts. Issues for discussion and study will include: current and past constructions of philology, the canon, the politics of editing, issues in translation, interpretative strategies, subject formation, issues in period construction, research tools, possibilities for future work. No prior experience with Old or Middle English is necessary.

The Anglo-Saxons were the earliest people in western Europe to translate the Bible into their vernacular, and a substantial proportion of surviving Old English verse consists of biblical translation and paraphrase. The principal focus of the course will be the biblical poems preserved in the so-called 'Junius Manuscript' (Genesis A, Genesis B, Exodus, Daniel), but these and other relevant poems will be studied in the wider context of early medieval biblical exegetis, in particular the contribution made to biblical interpretation by Anglo-Saxon exegetes such as Archbishop Theodore, Bede, Aelfric and Ælfric.
ideology of Catholic Ireland. This course will examine the development of Irish Jacobitism in its various literary, historical and ideological aspects in addition to placing it within its wider British and European context in the 18th century.

73750. Novel as an Agent of Change (3-3-0)
The course title is suggested by Elizabeth Eisenstein's book title *The Printing Press as an Agent of Change*. The Novel and the development of print are often connected. Jan Watt's "Rise of the Novel" is associated with the same period as that allotted to what we term "the Enlightenment." This view of the history of the genre may well seem defective, once we look at the novels of antiquity. It might be true to say that the novel as a genre has always served as a means of what we can call "enlightenment," at various stages of its being. The Novel has recently been valued as a mirror of history, dealing with the manners and practices of persons within a culture. But the Novel itself may be considered as "an Agent of Change," not just a reflector of it. The Novel enacts the processes (historical and psychological) of change and recognition. Novelistic anagonistics (recognition, or coming to know in a new way) is not seeking a stable ending (as in the oversimplified version of Aristotelian theatre) but enacting a process in which, after every recognition, subsequent recognition must be absorbed. The individual character has to interact with a multifaceted and changeful world, without becoming allowed the leisure for lengthy abstract philosophical reflection. (Indeed, what that individual may be is a novelistic subject in itself.) As Philip Sidney and others have noted, fiction comes between history and philosophy, offering us something different from either though related to both. Novels are also (unlike most traditional works of history and philosophy) often penned by outsiders, foreigners, and women. If we want to know how and why we think both personal and social change is possible, we should look first at the Novel as the biggest and most pervasive cultural exemplar of both cultural and personal metamorphosis.

73751. Gaelic Gothic (3-3-0)
This seminar will discuss the development of the Enlightenment and the Gothic in Irish culture in relation (i) to "internal" excluded others - Catholics, Gaelic culture, (ii) questions of gender, and, (iii) the diversity Irish responses, both at home and abroad, towards other excluded peoples: African-Americans, indigenous peoples in America and Australia, and other cultures on the receiving end of Empire. As if affording a culture of consolation, Romanticism and primitivism became a refuge for many "doomed peoples," (including the Celts), while the Gothic and racial theory provided new modes of countering the threat on the "other" under modernity. The seminar will begin with eighteenth century debates focusing on 'the sublime' in Edmund Burke and the painter, James Barry; the emphasis will then shift to the rise of the Gothic, questions of cultural nationalism, and the emergence of Irish modernity, concentrating on Joyce; and will finish with an analysis of how these concepts have played out in cinema, especially the Irish-American cinema of John Ford, and depictions of immigration in recent Irish films.

73757. Schiller (in German) (3-3-0)
In this course, we will consider Friedrich Schiller as a dramatist, poet, aesthetic philosopher, and historian. We will read several of Friedrich Schiller's most important plays, including *Die Räuber, Kabale und Liebe*, *Die Verschwörung des Fiesko*, *Wallenstein*, Maria Stuart, and *Die Braut von Messina*. In addition, we will read from his letters on beauty (Kallias), and the essays Uber Anmut und Würde, Uber nativ und sentimentale Dichtung und *Die Ästhetische Erziehung des Menschen*. Finally, we will also read selections from his historical works on the Thirty Years' War and on the Netherlands.

73802. 19th-Century German Literature (3-3-0)
This course will provide the students with an opportunity to read, discuss, and analyze representative 19th century novelists by such authors as Kleist, Keller, Meyer, Storm, and Hauptmann. These texts will be treated as both literary and historical documents. The course will examine the literary techniques common to the novelists and offer a historical survey of the various theories of this rich and especially German genre. It will also attempt to access the works through the contextual framework of the social and politico-economic events and trends of the 19th century in German-speaking countries. Finally, particular emphasis will be placed on the psychological implications of the works.

73803. The Fantastic: Theory and Practice (3-3-0)
This course will focus on different forms of the fantastic in Latin American fiction in the 20th century. Beginning with an overview of the works of major 19th century practitioners of the fantastic mode (Hoffmann, Poe, Maupassant, Mérimée, Nerval), the course will concentrate on the following authors and texts: short fiction by Jorge Luis Borges, Julio Cortázar, Gabriel García Márquez, Elena Garro, and Rosario Ferré; selections from *The Book of Fantasy* (by Borges et al.); the short novel *Aura* (Carlos Fuentes); and the novel *The Inventions of Morel* (Adolfo Bioy Casares). Critical literature on the fantastic by Tzvetan Todorov, Irène Bessière, Rosemary Jackson, Keller, Meyer, Storm, and Hauptmann. These texts will be treated as both literary and historical documents. The course will examine the literary techniques common to the novelists and offer a historical survey of the various theories of this rich and especially German genre. It will also attempt to access the works through the contextual framework of the social and politico-economic events and trends of the 19th century in German-speaking countries. Finally, particular emphasis will be placed on the psychological implications of the works.
LITERATURE

73805. Memory, Meaning & Migration (3-3-0)
Walter Benjamin’s much-quoted 1936 essay, “The Storyteller: Reflections on the Works of Nikolai Leskov” notes that while “people imagine the storyteller as someone who has come from afar, they enjoy no less listening to the man who has stayed at home, making an honest living, and who knows the local tales and traditions.” This tension between going away and staying at home, found at the heart of oral storytelling, plays itself out in important ways in the history of Irish migration. A large proportion of those obliged by famine and poverty to migrate from Ireland to the United States and Britain in the 19th and early 20th centuries could neither read nor write, and many spoke only Irish. Oral storytelling was therefore a major means through which migrants communicated their experiences to younger generations and, through return visits by a few, to those at home. Various genres of oral storytelling in Irish and English deal, sometimes obliquely, with migration, while a number of recent scholarly and creative works have compared oral traditions of Irish migration with other narratives of the same experience. Participants in this course will study legends and folktales told in Irish, as well as dictated and transcribed memoirs, scholarly studies, literary texts, and films. Students will be expected to prepare topics for and contribute to class discussion, and to write a total of three papers, the third of which may be a revised draft of the first or second. Translations of Irish-language texts will be available, so no prior knowledge of Irish is required; students taking Irish language, however, will have an opportunity to work with primary material in Irish, and to compare Irish-language texts with their English translations.

73830. Modernization in Latin America (3-3-0)
An overview of the major trends in Spanish-American poetry from the vanguardia, to the present, with an emphasis on poetics and the social inscription of the works. Authors studied include Vicente Huidobro, César Vallejo, Pablo Neruda, Jorge Luis Borges, Gabriela Mistral, José Lezama Lima, Octavio Paz, Ernesto Cardenal, Alejandro Pizarnik, and others.

73831. Dictatorships in Luso-Brazilian Fiction and Film (3-3-0)
A literary and cinematic study of 20th-century dictatorships in Brazil and Portugal, with readings in Luso-Brazilian fiction, history, film and cultural theory. Topics will include authoritarianism, torture, censorship and resistance; colonial wars and the ruin of empire; gender, family and revolution; and the relationship between history, fiction and memory. Close reading and discussion of major works by Ignácio Loyola Brandão, António Lobo Antunes, Lidia Jorge and Maria Isabel Barreno el al (Portugal). Viewing of films by Maria de Medeiros, Manoel de Oliveira, João Botelho (Portugal); Glauber Rocha, Sérgio Rezende and Bruno Barreto (Brazil). Course requirements will consist of active class participation and oral presentations (30%), one short paper (25%), and a research paper (45%).

73834. Modern Italian Poetry (3-3-0)
Addressed to graduate and advanced undergraduates, this course focuses on Italian poetry in the twentieth century. Major Italian poets and poet/translators to be studied include D'Annunzio, Gozzano, Marinetti, Ungaretti, Saba, Montale, Pavese, Quasimodo, Forti-ni, Pasolini, Sanguineti, Zanzotto, Rosselli, Giudici, Magrelli, Valduga and D'Elía. The role of translation in the evolution, transmission and diffusion of modern Italian poetry will also be considered.

73835. Poetic Language Theory, and Performance (3-3-0)
In the 1930s a small group of American poets, following the lead of Ezra Pound and William Carlos Williams, launched a movement called “Objectivism,” which concentrated on the major strains that runs through the entire history of American poetry. This Objectivist strain values over myths, imag- istry over rhetorical subtlety, the vernacular over traditional poetic diction, an investigation of language over an adherence to traditional poetic forms, social and historical subject matter over lyric introspection. In its initial form, Objectivism was also a potent speaker on issues of class and ethnicity, informed most particularly by the Jewish secular- ism that defined its early immigrant practitioners. Although it would be difficult to locate more than a handful of “pure” Objectivists, the Objectivist strain exerts a powerful influence upon a vast range of poets and poetries. This semester we will investigate the contribution of Objectivism to the poetry and poetics of Pound, Williams, Charles Reznikoff, Louis Zukofsky, Lorine Niedecker, George Oppen, Charles Olson, Jack Spicer, Robert Duncan, Lyn Hejinian, and Susan Howe.

73836. Intertexts: France and North Africa (3-3-0)
This course will explore textual relations between French and North-African literary works as one possible opening onto inter-cultural dialogue. We will first look at French writers and artists who visited or resided in Morocco and Algeria from the early nineteenth through the late twentieth centuries and who were seemingly guided by an aspiration to understand the cultures they encountered. We will examine aesthetic representations as well as the travel diaries and correspondence of painters such as Eugène Delacroix, Théodore Chassériau, Eugène Fromentin, and Henri Matisse; the travel narratives of Fromentin (Une année dans le Sahel), Pierre Loti (Au Maroc), and Isabelle Eberhardt (excerpts from Ecrits sur le sable); short stories by Eberhardt; and novels by Albert Camus (L’Exil et le royaume), J.M.G. Le Clézio (Désert), Michel Tourneur (La Goutte d’or), and Didier Van Cauwelaert (Un aller simple). In the latter part of the semester we will explore North-African texts that respond in some way to the works previously examined. Writers will include the Algerians Assia Djebar (Femmes d’Afras dans leur appartement, L’Amour la fantasie) and Malik Mokeddem (Le Siècle des sauterelles), as well as the Moroccan Driss Chraibi (Le Passé simple) and Tahar Benjelloun (Cette aveuglante absence de lumière), Studies by Edward Said ( Orientalism) and Fatimah Mernissi (Beyond the Veil: Male-Female Dynamics in a Modern Muslim Society), among others, will enable us to approach Islamic culture as well as the issues of French colonialism and the condition of women in North Africa. Discussions conducted in French.

73837. Luso-Brazilian Literature and Society (3-3-0)
This course will focus on questions of national identity in the Luso-Brazilian world. We will examine how social and cultural issues are perceived, conceptualized, represented, and understood in and by literature. The course will pay particular attention to how literature depicts important human problems such as gender and race relations, the crafting of national identity and national heroes, class conflict, family structure, and some ideological values such as success, love, happiness, fairness, misfortune, destiny, honesty, equality, and faith. Authors to be studied will include Luís de Camões and Guimarães Rosa, on the Brazilian side, and Miguel Torga, João de Melo, José Saramago and Lidia Jorge, on the Portuguese side. Conducted in English with readings in Portuguese or English (discussion group available in Portuguese). Requirements will include active class participation, two oral presentations, and two papers.

73838. Minority German Writers (3-3-0)
This course explores German-language literature written by authors of non-German heritages. As a seminar it opens up the possibilities of reading a more diverse body of post-1945, and more specific- ily post-Wende, German literature. Secondary texts will help us to understand the social and historical context in which these authors write. The primary reading selections will include works by authors of African, Turkish, Sorbian, Roma and Arab heritages.

73839. 20th-Century German Literature (3-3-0)
This survey course introduces students to the major writers in 20th-century German-language literature. We will be reading, discussing, and writing about poems, short stories, and dramas by authors such as George, Hofmannsthal, Rilke, Trakl, Thomaz Mann, Kafka, Musil, Brecht, Celan, Bachmann, Frisch, Duttenmatt, Enzensberger, Christa Wolf, Peter Schneider, Brinkmann, Hahn, and Koenigsdorf. By also considering these writers’ contexts—the trends and movements they were part of, the activities in the other arts that influenced them, the contempo- rary discourses that surrounded them—we may be able to add depth and nuance to our readings. Thus, depending on student interest and ability, we will familiarize ourselves with the larger environs of 20th-century German-language culture.

73840. History of Italian Cinema (3-3-2)
This course will trace the history of Italian cinema and the development of film culture from the arrival of Edison and the Lumière’s to the fall of the Fascist
regime. For the early period, topics will include: the cinema of attractions and the transition to narrative cinema; film genres and film style: comedies, historical spectacles, melodrama; the discourse of the author; division: distribution and exhibition practices; cultural reception: literary intellectuals and the origins of cinema literature: early film criticism, film theory, and "film fiction." For film in Italy between the wars, topics include: the transition to sound and the question of the lingua; the rebirth of the film industry and discourses of national identity; film comedy, melodrama, and spectacle; Hollywood in Fascist Italy; film magazines and movie-fan culture; the origins of film historiography; the Fascist regime, the Church, and cinema in the 1930s; colonialism in film; theatricality and calligraphism; Ossesione and the discourse of proto-neorealism. Requirements will include: extensive readings in film history and criticism; critical analysis of films; mandatory film screenings; participation in class discussion; a number of class presentations; a research paper.

73841. 20th-Century Spanish Prose (3-3-0) A study of the development of the novel as an artistic genre in 20th-century Spain, from the Spanish-American War of 1898 to modern Spain examined within the context of the social, political, aesthetic, and intellectual crisis of the times in which they were written.

73843. Self-Definition and the Quest for Happiness (3-3-0) Prerequisite: Four semesters of German or the equivalent. Everyone from the ancients to the most technologically conscious CEOs tell us that those who succeed know the difference between the important and the unimportant and they allocate their time accordingly. But how does one make these choices? If in fact success and happiness are synonymous, as some would claim, which way lies success, lies happiness? And what are the guideposts? What really matters? In an age such as ours, does anything have lasting value? Do I really matter? If I am most assuredly defined by my beliefs and my deeds, what then do I believe, what do I do? In the final analysis, who am I? If literature, as so many maintain, not only mirrors but also foreshadows world events, how have several 20th-century authors representing diverse national traditions formulated the answers to these seminal questions? Readings will include F. Scott Fitzgerald, The Great Gatsby; Albert Camus, The Stranger; Max Frisch, Homo Faber.

73845. Colonial Indigenism in Modern Literature (3-3-0) An in-depth study of a particular theme, author or genre in colonial Latin American literature.

73846. Spanish-American Poetry: Avant-Garde and Surrealism (3-3-0) We will trace the images and metaphors with which Spanish American writers and interested foreign travelers have described Latin American Nature. Earthly paradise, green inferno, a wasteland to be populated, or most nurturing aspect of the "madre patria," these images and others we will discuss have both reflected ideological biases and shaped national cultures and identities. We will read a diverse collection of texts (from the Popul Vuh to Sarmiento's Facundo to Neruda's Canto General) from the 19th and 20th centuries, with a few incursions in key colonial texts (Columbus's Diario), along with theoretical texts focusing on nature and identity. In addition to the weekly readings, students will be responsible for one class presentation and the preparation of a significant research paper by semester's end.

73847. Evil and the Lie (English and German) (3-3-0) In an attempt to define the nature of evil and its relation to such phenomena as lying and the preservation of a self-image, this seminar will carefully analyze works spanning the years 1890-1972. Among them will be Wilde, The Picture of Dorian Gray; The Immortalist; and Frisch, Andorra. Further courses acceptable for comparative literature majors will be found listed by the Department of English. Consultation of program director is required.

73848. The War in Spain (3-3-0) Despite the reputed cultural belatedness of the Iberian peninsula during the high Middle Ages, by the fourteenth century the Spanish kingdoms had caught up with their European neighbors and entered a period of general decline. The late Spanish Middle Ages is uniquely defined by the ascendency of the Trastámara, a bastard line that seizes the throne in 1369 when Enrique de Trastámara murders his half brother, King Pedro I of Castile. The Trastámara dynasty engineers the emergence of Spain as Europe's first modern nation-state and world empire and the construction of an orthodox, patriarchal "Spanish" and Catholic identity purified of its ethnic, religious, and political others through propaganda, conquest, conversion, colonization, expulsion, and inquisition. The foundational union of Isabel (Castile) and Fernando (Aragon) marked the culmination of the Trastámara enterprise of political legitimation, centralization, and expansion; the Catholic Monarchs brought to closure seven hundred years of Reconquest, launched Europe's invasion of a new world, laid the foundations for Spain's Golden Age, and crafted the moral, political, and social recuperation of Hispania.

73849. Drama on Political Conflicts (in English) (3-3-0) To understand politics and the moral conflicts involved in it, we have three sources: philosophy, social science, and the arts. The arts are often neglected, but wrongly so, for the insights Aeschylus, Sophocles, Aristophanes, Shakespeare, Schiller, Kleeist, Grillparzer-the authors we will read-have to offer into the logic of power and the morality of political choices are flabbergasting. At the same time, we will develop esthetical criteria that will allow us to evaluate the dramas on literary grounds.

73852. Native American Literature (3-3-0) This course serves as an introductory exploration of the literatures written by Native American authors-oral literatures, transitional literatures (a combination of oral and written expression), and contemporary poetry and prose.

73880. Life-Writing: Biography and Autobiography (3-3-0) Writing about a life, giving a shape to something called a life is a perpetual concern of writers in different parts of the world, and of many different kinds of writers—historians, novelists, psychologists included. Life-writing seems intimately related to theology, as we may see in the New Testament, as in the stories of Moses or Buddha, and in the meditations of Augustine in the fourth century or the Sufi mystic al-Ghazali in the twelfth century. Travel writing (including stories of discovery seem largely life-writing in masquerade, while history engages in extensive accounts of individual life and experience. Poets and novelists have long played with writing lives, and presenting individuals engaged in life-writing, wherein (as in theological discourse) the life is a paradigm and an emblem. The life may involve seeking, wandering through a labyrinth or wilderness, searching for some desired object or relief in alienation and loneliness. The exile or wanderer may turn to autobiography, yet such life-writing is perilous for the writer, the narrator inviting decoding him-/herself while offering us various tropes and devices endeavoring to conceal as well as to reveal.

73881. Foreign Language Acquisition and Instruction (3-3-0) Literature, according to Martin Walser, descends just as irrefutably from religion as human beings do from the apes. Indeed, there is no denying that even during aesthetic modernism, literature, art, and religion are closely intertwined. When art achieved autonomous status in the second half of the 18th century, it did, to be sure, shed its subservient function relative to religion, yet in terms of its topics, themes, and, most particularly, its claim to interpret and give meaning to human existence literature remained tied to religion, in fact became its great rival.

This seminar will examine several stations of this development. Beginning with church hymns during the Renaissance and Barock, we will see how the Bible was discovered as a literary text in the 18th century. At the end of the century, art is conceived as an autonomous, even holy artifact. Poetry, for some, even becomes the medium of human self-definition and the place in which new myths are created. In the Romantic period art and religion become fused into a single unity. A century later, art and religion again come into close contact in lyric poetry of the fin-de-siecle. The seminar concludes with a consideration of the psalm form in 20th-century poetry. Readings will include works by Luther, Paul Gerhardt, Klopstock, Hölderlin, Wackenroder, Stefan George, Rilke, Trakl, Brecht, Celan, and Bachmann.

73883. European Literature and the Vernacular in the Middle Ages (3-3-0) The seminar will show how the vernacular literature of the Middle Ages constitutes the basic root of
European literature, acting as a new model as well as a bridge between classical antiquity and modern culture. The approach will be comparative and intertextual, works from different languages being examined together. Images and themes will be selected in order to show continuity and change: for instance, the theme of love and the "noble heart," the characters of Cipolla and the Pardoner, Troilus from Boccaccio to Chaucer and Shakespeare, the stories of Francesca and Cristo de la Vega, the recognition scenes in Odyssey XXXII, Purgatorio XXX, and Pericles, as well as those in Inferno XV, T. S. Eliot's Little Gidding, and Seamus Heaney's Station Island.

73887. Transatlantic Literature and the History of Travel (3-3-0)

This course approaches early modern Europe and its interactions with the Americas through the lens of a theoretical and practical preoccupation with the history and literature of travel. We will begin with a preliminary theoretical part focused by two primary texts (Gilgamesh and Italo Calvino's Invisible Cities) together with selected theoretical writings (E. Leed, C. Kaplan, D. McCannel, T. Todorov). A "cartography and literature" section dedicated to cartographical and literary sources documenting the transition from medieval to modern ("Atlantic") travel will follow: medieval mappamundis, "Dante's Ulysses," Boccaccio's De canaria, Petrarck: portolan charts, Polemy's Geographia. The balance of the course will be dedicated to the study of a series of early modern Transatlantic "auctores," including Columbus, Vespucci, Vaz de Caminha, Antonio Piagetta, Luís de Camões, Jean de Léry, Philip Sidney, the Inca Garcilaso de la Vega. Discussion of primary texts will be complemented by an anthology of critical readings to include selections from Tom Conley (The Self-Made Man, Stephan Greenblatt (Marvellous Possessions), David Harvey (Spaces of Hope), Frank Lestringant (Mapping the Renaissance World), Tzvetan Todorov (The Conquest of the New World), Michel de Certeau (The Writing of History), and Roland Greene (Unrequited Conquests) among others. Participants in the seminar are invited to develop a research paper based on sources in their primary "national" literary field but with a significant "transatlantic" comparative and/or theoretical component.

73890. Poetry and Philosophy in the 12th Century (3-3-0)

This course will aim to provide a close reading of Bernard Silvestri's "Cosmographia" and Alan of Lille's "De Planctu Naturae" against the background of early twelfth-century philosophical thought and grammatical-rhetorical theory. Although it will be initially necessary to cover the philological and historical ground with some care, the course will also attempt to explore in a more speculative and creative manner the question of the kind of relation between philosophy and literature in general that works like the "Cosmographia" and "De Planctu" suggest. As stimuli to such reflections, we shall pause to examine in some detail such textual phenomena as the philosophical allegory, the hermeneutical and metaphysical implications of number, the notion of self-reflexivity, and the negative symbol. The course is intended to be accessible to students without skill in Latin (although the latter would, obviously, be an advantage). Requirement: one final paper of ca. 20 pp.

73900. Literature of History & Ethnography (3-3-0)

The course on World Literature will focus on the way in which different cultures have told the story of history. Peoples, places, and religious practices have long attracted the attention of historians and travel writers (functions often combined as in the case of Herodotus and Ibn Khaldun). History deals with problems, pain and change, and the literature of history offers a vision of ways of approaching the world. The course, which is team-taught, deals with three major areas of history production: the Arab World, China, and the Western world (with particular focus on ancient Greece).

73902. Philology and Weltliteratur (3-3-0)

Eric Auerbach's essay, from which this course derives its title, serves as a point of departure for exploring the possibility of developing an approach to literary history and literary interpretation that: (a) attends to the historical, cultural and aesthetic specificity of the individual literary work and (b) at the same time brings into relief the complex ways in which cultures interact, overlap, and modify one another. The course will focus primarily on the pertinent works of Vico, Herder, and the German Romantics, Auerbach (and other historicists), Arnold, C. L. R. James, Raymond Williams, and Edward W. Said, as well as selections from the writings of Fanon, Ngugi, Lamming, Cesaire, and others.

73903. Love, Desire and Identity (3-3-0)

A team-taught course treating literature from different traditions, including European, Near Eastern, and Far Eastern. This is a required course for the Ph.D. in literature and should normally be taken in the first year of study.

Themes and topics covered by various works include erotic love, filial and familial love, and love of God, but there are other loves too, such as the love of animals, or pursuits, or of objects. Desire evokes philosophical questions about need, necessity, and the structure of the self, all of which can be and have been dealt with in a variety of ways by different cultures. Both love and desire imply a notion of identity, or of identities to which the individual may be attached or which he or she may be incorporating (or rejecting). Texts studied include ancient Greek novels and some medieval and modern fictions of both East and West. (/ The Tale of Genji; Troilus and Criseyde; Wuthering Heights). The poetry we read ranges chronologically from the very early Shih jing (the first collection of Chinese poems) and the Song of Songs to Sappho and other Greek and Roman authors, through works by Petrarck and Dante to poems and popular songs in Asia and Europe of the present day. A variety of meditative and religious work exploring the nature of love and longing will be included.

76950. Directed Readings - Latino Studies (3-3-0) Directed Readings: Latino Studies

76951. Directed Readings (3-3-0) Directed readings for East Asian Studies: contemporary Japanese fiction from a sociological perspective.

83951. Directed Readings - East Asian Studies (3-3-0) Directed readings for East Asian Studies: 20th Century Novel:

83952. Directed Readings Literature (3-3-0) Readings in the Philippine Novel.
Preparation for the Profession

Notre Dame's innovative literature Ph.D. considers a national literature's disciplinary integrity as part of the underlying foundation that supports a truly interdisciplinary and translinguistic course of study. The built-in flexibility of the program promotes ways of relating literary material across disciplinary divisions in order to facilitate the development and training of future scholars who will be well prepared and positioned to respond to current and developing needs in the language and literature job market.

As a natural component of their professional development, students will apply their teaching assistantships in a variety of venues—language courses, mythology, ancient literature, English composition, and junior-level courses in English literature.

The program also offers a "Preparing for the Profession" doctoral colloquium that discusses a number of issues related to the study of literature from a professional perspective. This will include discussion of new developments in the field as well as the examination of topics of germane importance to the study of literature. In addition, the colloquium will address issues surrounding the development of a dissertation topic, research strategies, and the timely production and completion of a dissertation. Also, this seminar will introduce students to professional scholarly activities such as preparing papers for academic conferences, submitting essays for publication to academic journals, and developing strategies for entering the job market. The program's job placement apparatus works locally with students through everything from producing a letter of application to mock interviews to the production of a "job talk." In addition, the program's faculty make use of their extended network of contacts throughout the profession to make hiring institutions aware of Notre Dame candidates on the job market.

Participating Faculty

The following is a partial list of Notre Dame faculty who came together to develop the Ph.D. program in literature. They form a core group of outstanding scholars who will be joined by numerous other faculty whose interests and expertise will enable students to craft doctoral degrees responsive to their own particular interests in world literatures. For a complete listing of participating faculty and their scholarly interests and current graduate students please visit our Web site at http://www.nd.edu/~litprog.

Faculty

Keith R. Bradley, Chair and the Eli J. Shlabens Professor of Classics and Concurrent Professor of History, Lit.D., Sheffield, 1997.

Theodore J. Cachey Jr., Director of Graduate Studies and Professor in Romance Languages and Literatures (Italian) and the Albert J. Ravarino Director of the Devers Program in Dante Studies, B.A., Northwestern Univ., 1978; M.A., Univ. of California, Los Angeles, 1982; Ph.D., ibid., 1990.

Seamus Deane, the Donald and Marilyn Kenough Professor of Irish Studies and Professor of English, B.A., Queen's Univ., Belfast, 1961; M.A., ibid., 1963; Ph.D., Cambridge Univ., 1966 (1993).

Christopher Fox, Director of the Kenough Institute for Irish Studies, Professor of English and Chair of Irish Language and Literature, B.A., Cleveland State Univ., 1971; M.A., State Univ. of New York, Binghamton, 1974; Ph.D., ibid., 1978. (1980)

Lionel M. Jensen, Chair and Associate Professor of East Asian Languages and Literatures, Concurrent Associate Professor of History, and Fellow in the Helen Kellogg Institute for International Studies, B.A., Williams College, 1976; M.A., Washington Univ., 1980; Ph.D., Univ. of California, Berkeley, 1992. (2000)

Collin Meissner, Assistant Professor American Studies, Ph.D. in Literature, Director of Graduate Studies B.A. Univ. of British Columbia, 1985; Ph.D., University of Notre Dame, 1995

Robert E. Norton, Chair and Professor of German and Russian Languages and Literatures (German) and Fellow in the Nanovic Institute for European Studies, B.A., Univ. of California, Santa Barbara, 1982; M.A., Princeton Univ., 1985; Ph.D., ibid., 1988. (1998)

Dayle Seidenspinner-Núñez, Chair and Professor of Romance Languages and Literatures (Spanish), B.A., Univ. of California, Berkeley, 1968; M.A., ibid.; Ph.D., Stanford Univ., 1977. (1997)

Alain Toumayan, Associate Professor in Romance Languages and Literatures (French) and Fellow in the Nanovic Institute for European Studies, B.A., Univ. of Pennsylvania, 1976; M.A., Yale Univ., 1978; M.Phil., ibid., 1980; Ph.D., ibid., 1982. (1989)

Medieval Institute

The Medieval Institute, established in 1946 and located on the seventh floor of the Hesburgh Library, is a center of research and advanced instruction in the civilization of the Middle Ages, with particular strengths in religious and intellectual history, Mediterranean civilization, Old and Middle English, medieval Latin, theology, and liturgy. The graduate studies curriculum combines programmatic interdisciplinary coursework, training in the technical skills of medieval studies, and linguistic preparation.

The institute's library contains more than 95,000 volumes and various collections of pamphlets, reprints, and photographic materials. The reference collection contains major primary source collections, bibliographic and reference materials, catalogues, journals, and indexes.

The institute's library has long held extensive collections relevant to the Latin culture of the Middle Ages. Holdings in the history of medieval education are unrivaled in North America. Recently, the institute has enlarged its focus to include vernacular and Latin literatures, musicology, liturgy, medieval Judaism, and art history. Microfilms of more than 3,000 medieval manuscripts from European libraries and a collection of more than 200 facsimiles of medieval seals supplement this collection. Over the years the institute has accumulated a valuable collection of medieval manuscripts, incunabula, and other manuscripts, and rare books that are preserved in the Department of Special Collections. Also found there is the John Augustus Zahm, C.S.C., Dante Collection containing early and rare editions and an extensive and valuable set of literary studies of the Divine Comedy from the nineteenth and early twentieth centuries. Recently, the institute acquired 90 medieval coins, likewise housed in Special Collections.
What sets Notre Dame's institute apart is its convenient gathering in one place of most of the printed materials essential to medieval studies. The Reading Room holds major dictionaries, bibliographical guides, reference works, and primary source collections. The Aurik L. Gabriel Libraries Collection in a separate room offers remarkable resources, both published and unpublished, for the history of medieval universities. The institute's Paleography Room contains an extraordinary collection of catalogues, facsimiles, and reference tools to assist research on manuscripts.

Research in the institute is also supported by the University's Milton V. Anastas Collection in Byzantine studies, which has extensive holdings in the intellectual history of the Byzantine empire.

The Frank M. Folsom Ambrosiana Microfilm and Photographic Collection consists of microfilms of the 12,000 medieval and Renaissance manuscripts held in the Biblioteca Ambrosiana in Milan. The collection also contains about 50,000 photographs and negatives of miniatures and illuminated initials from the manuscripts, supplemented by some 15,000 color slides. The Mary Davis Drawings Collection contains photographs, negatives, and color slides of the 8,000 drawings in the Ambrosiana. The institute purchases all volumes related to the Ambrosiana materials and maintains a bibliography of all citations to Ambrosiana manuscripts.

The institute regularly sponsors major conferences and hosts a variety of guest lectures and seminars every year. In fall 2002, the institute inaugurated the Conway Lectures, an annual series of three lectures delivered by a distinguished medievalist and published under institute auspices.

**Degree Programs**

The Medieval Institute does not accept candidates for a terminal Master's degree but does require the Master of Medieval Studies of all students whom it admits into the doctoral program. The programs of the Medieval Institute are rigorous and inter-disciplinary, and make high demands in terms of language skills. Accordingly, the Master of Medieval Studies (hereafter MMS) degree requires two years of full-time study and the Doctor of Philosophy in Medieval Studies requires a further year of full-time study plus a dissertation. Each degree requires a specified number of credit hours, language exams, oral and/or written exams, proficiency in paleography, and research projects. The Graduate School requires that students maintain a 3.0 Grade Point Average in order to be in good standing. Students must also be continuously enrolled on a full-time basis (the number of courses/credit hours necessary to maintain full-time status varies depending on a student's year in the program).

Students admitted with a master's degree from another institution, or from another department at Notre Dame, may take the M.M.S. exams after completing MI 501 and six graduate-level courses; passing the M.M.S.-level Latin exam; passing an exam in at least one modern language; and passing the paleography course if it was offered in the student's first year of enrollment (if paleography was not offered it may be postponed until the following summer or academic year).

**The Master of Medieval Studies**

The M.M.S. requires the successful completion of 31 credit hours of graduate-level work but fully and continuously enrolled M.M.S. students will normally earn forty or more credits in their first two years of study. The apparent discrepancy is attributable to the fact that M.M.S. students are, in fact, prospective Ph.D. students in transition. The credits which M.M.S. students earn above those required for the M.M.S. degree will apply to the Ph.D. provided that a student has been admitted to Ph.D. candidacy.

The program for an M.M.S. student will normally be arranged as follows:

**Semester 1:**
- Christian Latin (or graduate intermediate Latin)
- Elective
- Elective
- MI 501 (one credit, non-graded)

**Semester 2:**
- Medieval Latin
- Elective
- Elective
- Elective

**Summer:**
- Medieval Latin or Paleography

**Semester 3:**
- Paleography
- Second-year Research Tutorial I
- Elective

**Semester 4:**
- Elective
- Second-year Research Tutorial II
- Exam Preparation

Among the eight courses designated as “electives,” four must be chosen so as to satisfy the following requirements: One course each in history (Proseminar I or II), philosophy or theology, vernacular language or literature, art or music. Students have considerable flexibility in choosing the remaining four courses, the research tutorial, and the exam preparation course.

In May of their first year of study each first-year student will meet with the director to discuss his or her progress. All teachers with whom a student has worked in the first year will be asked to submit written reports on that student's work in specific classes. The director will advise students on their progress with two perspectives in mind: Completion of degree requirements and intellectual growth.

By the end of his or her second year an M.M.S. student must have:
1. Passed the M.M.S.-level Latin examination.
2. Passed an examination in one modern language.
3. Passed paleography (if it was offered).
4. Submitted a satisfactory second-year research paper.
5. Passed a 90-minute oral examination.

The M.M.S. oral examination will provide students with an opportunity to display their general competence in two or three fields of study and their emerging mastery in one field. It is expected that the student will be examined by four different professors who represent three fields (for a list of fields, see below). One field (which may be defined chronologically or thematically) will therefore be examined by two professors. It is expected that this field will form the core of the eventual Ph.D. major field. Accordingly, this field will be examined in somewhat greater length and detail than the other two. Students must submit to the director of the Institute, not later than the last day of classes of their third semester of enrollment, the reading lists over which they expect to be examined. These lists must be signed by the professor who will examine the student in that area. The M.M.S. examinations will be administered in the third week of April, unless that is Holy Week in which case the exams will be administered in the fourth week of April.

Second-year research projects will be submitted and collaboratively evaluated on or before April 1 of a student's second year. Prior to the beginning of their third semester of study each student will select a member of the faculty with whom he or she will undertake an intensive program of reading in primary sources (preponderantly in the original language) and scholarly literature with a view to identifying a worthwhile, original research project. Once the topic has been identified, the student and teacher will settle on a plan of work such that the resulting paper can be submitted to the teacher, the director, and one additional member of the faculty. A student who has produced a substantial seminar paper in his or her second semester, or who expects to do so in the third semester, may petition the director to use that paper for the second-year research project. In such cases, students will be expected to expand and polish the paper during the early part of the fourth semester. When this option is elected, students may substitute a different class for the Second-year Research Tutorial I but must still register for Second-year Research Tutorial II.

The Medieval Institute’s M.M.S.-level Latin examination will be administered each fall semester in the week after Thanksgiving and each spring semester in the week after spring break.

In the first week of May of each year the director and the graduate committee will review the accomplishments of the members of the second-year class. There will be four possible recommendations:
MEDIEVAL STUDIES

1. Permission to proceed to the PhD.
2. Permission to repeat/complete a deficient element in the M.M.S. requirements with the expectation that the M.M.S. will be terminal.
3. Award of the M.M.S. as a terminal degree.
4. Dismissal without the M.M.S. degree.

The Doctor of Philosophy in Medieval Studies

The Ph.D. requires one additional year of course work beyond the M.M.S., the successful completion of at least 60 credit hours of study altogether, one additional examination in a modern language, completion of paleography if it was postponed from year two of the M.M.S., successful completion of five written examinations (one of three hours’ and four of two hours’ duration), one oral examination (of 60 to 90 minutes’ duration), presentation of a dissertation proposal, presentation and defense of a satisfactory dissertation.

Third-year course work will involve three elements. First, students will deepen their field of emphasis by adding one examiner to the two who served as M.M.S. examiners. Once again, fields may be defined chronologically or thematically. The student’s adviser will set a three-hour written exam and may take more time than the other examiners in the oral exam. Second, students will add an examiner within their general field of study but normally outside the Medieval Institute. Third, students will be examined by one of their M.M.S. examiners in a field outside their field of emphasis but closely allied to it (e.g. a student of high medieval intellectual history might be examined in scholastic theology or a student in Middle English might be examined on Dante). Third-year students must submit to the director signed reading lists for their examination fields by January 15 of their third year of study. Normally a third-year student will take two or three courses in the fall semester and then devote the spring semester to intensive preparation for the comprehensive examination. Ph.D. written examinations will be administered in the third week of April and oral examinations in the fourth week of April, with adjustments as necessary to accommodate Holy Week.

In the first week of May each year the director and the graduate committee will review the accomplishments of the students of the third-year class. There will be three possible recommendations.

1. Permission to proceed to the dissertation proposal.
2. Requirement to re-take the Ph.D. examinations in the following September with the possibility at that time to recommend continuation or dismissal.
3. Dismissal with only an M.M.S. degree.

The dissertation proposal will be submitted by December 1 in the fall semester of the student’s fourth year. To facilitate preparation of the proposal, rising fourth-year students will be provided with summer stipends to permit them several months of continuous work after the Ph.D. examinations. The dissertation proposal may consist of as many as three parts. Every student must submit a dissertation proposal of 20 to 25 pages. This proposal should answer three basic questions: What questions/problems/issues will this dissertation address? Why should this dissertation be written at all, in other words what will be its original and significant contribution to scholarship? What is the envisaged plan of work? The proposal should include 3 to 5 pages of annotated bibliography. Proposals will be discussed in 60 to 90 minutes by the adviser, the director, another professor from the field of emphasis, and the interdisciplinary examiner from the Ph.D. exams (or an appropriate substitute). At the discretion of the adviser and after consultation among the student, the adviser, and the director students may be asked to submit to the director a polished translation of five continuous pages of a text/source representative of those with which he or she would expect to work. These texts may be in any relevant medieval language. The texts must be chosen jointly by the student and his or her adviser and approved by the director. If possible, only those texts should be chosen which have never been translated into a modern language. Second, students may be asked to submit to the director a highly accurate transcription of at least 100 continuous lines from a manuscript representative of the student’s field of research. As far as possible the transcription should be executed on the basis of a manuscript whose contents have never been edited and published.

When a student and his or her adviser agree that a dissertation is ready to be defended, documents should be filed in the Medieval Institute and the Graduate School to initiate a defense. Defense committees will consist of five members of the faculty, one appointed by the Graduate School and four chosen by the student and his or her adviser in consultation with the director. The director may appoint himself as an examiner of any dissertation submitted to the Medieval Institute. At least one dissertation examiner must come from a department other than the one in which the student’s field of emphasis resides.

**Fields of Study**

Each of these fields of study is vast. No student, or professor, can be expected to know all there is to know within any one of them. Accordingly, fields will be defined, for purposes of study and examination, by reading lists created by students in close consultation with their professors. Reading lists may emphasize primary sources, modern scholarship, or a combination of the two. Students and faculty members will be expected to strike the appropriate balance. As rough guidelines, M.M.S. lists should amount to 25 to 30 books (or the equivalent in articles) and Ph.D. lists should amount to 50 to 60 books (or the equivalent in articles).

Fields of Study (with subfields, or examination fields, as relevant and available):

- Art History
  - Late Antique Art
  - Early Medieval Art
  - Later Medieval Art
  - Byzantine Art
  - Renaissance Art

- History
  - Late Antiquity
  - The Early Middle Ages
  - The High Middle Ages
  - The Later Middle Ages
  - The Renaissance
  - The Mediterranean World
  - The Islamic World
  - Byzantium
  - The Medieval Church
  - Medieval Intellectual History

- Language and Literature
  - Arabic
  - Dante and/or Petrarch and/or Boccaccio
  - Old English
  - Middle English
  - Old French
  - Middle French
  - Old High German
  - Middle High German
  - Patristic and Byzantine Greek
  - Hebrew
  - Late Antique Latin (secular and/or religious)
  - Medieval Latin (secular and/or religious)
  - Renaissance Latin
  - Medieval Spanish Literature

- Manuscript Studies
  - Codicology
  - Palaeography
  - Text Editing

- Music
  - Musicology
  - Music History

- Philosophy
  - Late Antique Philosophy
  - Early Medieval Philosophy
  - High Medieval Philosophy
  - Late Medieval Philosophy
  - Islamic Philosophy
  - Medieval Jewish Philosophy

- Theology
  - Greek Patristic Theology
  - Latin Patristic Theology
  - Early Medieval Theology
  - High Medieval Theology
  - Late Medieval Theology
  - Byzantine Theology
  - Medieval Judaism
  - Medieval Islam
Course Descriptions

Each course listing includes:

- Course number
- Title
- (Lecture hours per week—laboratory or tutorial hours per week—credits per semester)
- Instructor
- Course description
- (Semester normally offered)

Relevant courses in other departments are cross-listed in the Medieval Institute and vice versa.

60001. Introduction to Medieval Studies
(1-1-0)
A one-credit-hour course designed to introduce students to the basic bibliographies, handbooks, and research tools in medieval studies. Professors from various disciplines will participate.

67001. Second-Year Research Tutorial I
(3-3-0)
An intensive program of reading in primary sources (preferentially in the original language) and scholarly literature with a view to identifying a worthwhile, original research project, for completion in the following semester.

67002. Second-Year Research Tutorial II
(3-3-0)
Second-year graduate students in medieval studies produce a substantial, original research paper based on the intensive program of reading in primary sources (preferentially in the original language) and scholarly literature undertaken with a teacher in the previous semester. Alternatively, by permission of the Medieval Institute’s director, students may use the tutorials to expand and polish a paper prepared originally for a previous research seminar.

60003. Introduction to Christian Latin Texts
(4-4-0)
“Introduction to Christian Latin Texts” has two goals: to improve the student’s all-around facility in dealing with Latin texts and to introduce the student to the varieties of Christian Latin texts and basic resources that aid in their study. Exposure to texts will be provided through common readings which will advance in the course of the semester from the less to the more demanding and will include Latin versions of Scripture, exegesis, homiletic, texts dealing with religious life, formal theological texts, and Christian Latin poetry. Philological study of these texts will be supplemented by regular exercises in Latin composition.

60004. Medieval Latin
(3-3-0)
Prerequisite: Both elementary and intermediate Classical Latin or the equivalent, taken recently for college credit. This course is an introduction to the Latin language and literature of the late antique and medieval periods (ca. A.D. 200-1500). Designed to move students toward independent work with medieval Latin texts, the course will emphasize the close reading and careful translation of a variety of representative Medieval Latin texts and documents, with attention to vocabulary and word formation, orthography and pronunciation, morphology and syntax, and prose styles and metrics. The course will also provide an introduction to the principal areas of Medieval Latin scholarship, including lexicis, bibliographies, great collections and repertories of sources, and reference works for the study of Latin works composed in the Middle Ages.

60005. Paleography
(3-3-0)
Prerequisite: Both elementary and intermediate Classical Latin or the equivalent, taken recently for college credit, or MI 40004/60004 or the equivalent. This course is an introduction to the study of medieval writing materials and practices and of Latin scripts from antiquity to the early Renaissance. Designed to provide students with the skills necessary to make use of Latin manuscripts in their research, the course will focus on practical exercises in identifying, transcribing, dating, and localizing the various scripts. It will be of interest (1) to a wide variety of students whose courses are centered in or touch upon the Middle Ages and who wish to work with unpublished Latin materials of the medieval period; (2) to professional Latinists and other humanists who study the classical tradition and the transmission of texts before the age of printing; and (3) to librarians and others with an interest in manuscripts, diplomata, incunabula, and rare books.

60020. Directed Readings (for Graduate Students)
(0-0-0)
Offers graduate students a possibility, normally in their second or third year, to work closely with a professor in preparing a topic mutually agreed upon. Student and professor must sign a form that records the readings.

67020. Editing Medieval Latin Texts
(3-3-0)
In this course, students will be introduced to the principles and basic procedures involved in editing later medieval Latin texts from manuscripts: the reading and transcription of manuscripts, the collation of manuscripts, the preparation of an apparatus criticus and an apparatus fontium, the presentation of critically edited texts in print, etc. Students will learn the importance of paleographic, codicological, philological, and historical-bibliographical analysis in critical editions executed according to the “historical method.” By reference to exemplary critical editions of later medieval Latin works, students will also be introduced to hermeneutical issues involved in editing. Moreover, students will be introduced to the techniques, sources, and instruments of primary research among the manuscripts, and will prepare a term-long heuristic project. Having passed the Medieval Institute Latin examination (or some equivalent) is a prerequisite for enrolling in the course; any exceptions to the prerequisite must be approved by the teacher, after consultation with him.

60021. The Medieval Book
(3-3-0)
A historical survey of the medieval book as a cultural, archaeological, artistic, and commercial object from about A.D. 300 to 1500.

60100. Introduction to Critical Theory
(3-3-0)
Investigation of the principal figures and approaches to literary criticism that developed in the modern era.

60101. Problems in Textual Criticism
(1-1-0)
Textual criticism is the art and science of evaluating evidence of manuscript-readings in the process of establishing a text, and involves understanding of the vagaries of medieval manuscript transmission. This compact spring seminar will offer an opportunity to discuss the problems that are posed by the transmissional histories of texts composed (in Latin and old English) during the Anglo-Saxon period, but comparative material from earlier (classical and biblical) and later texts will also be brought into play. In particular, attention will be given to ways of adjudicating the apparatus criticus that accompanies “critical” editions, and to the different sorts of problems that are posed by texts transmitted in single manuscripts, in autograph or idiograph manuscripts, or in multiple copies, and the ways of determining the genealogical relationship (and representing it in a stemma codicum) between individual manuscripts in cases where a work is preserved in more than one manuscript.

60110. Introduction to Old English
(3-3-0)
Training in reading the Old English language, and study of the literature written in Old English.

60111. Beowulf
(3-3-0)
Beowulf is the longest and earliest surviving heroic poem in any medieval Germanic language, and has been recognized for over two centuries as a literary masterpiece. Yet, on examination, the reasons why it is reckoned a masterpiece are not always clear: its narrative design is frequently oblique and obscure; its language is dense and often impenetrable; and it relates to a Germanic society which can barely be reconstructed, let alone understood, by modern scholarship. The aims of the course will be to understand the narrative design and poetic language of Beowulf, and then to attempt to understand these features of the poem in the context of early Germanic society. The language of Beowulf is difficult and therefore a sound training in old English grammar and a good reading knowledge of old English literature, especially poetry, are essential prerequisites for the course.
60115. Constructing Subjects in Anglo-Saxon England  
(3-3-0)  
This course addresses the question of the very existence of the subject in the early Middle Ages. To frame the question, participants in the course will read some contemporary theorists of subjectivity as well as some patristic writers on the self. The rest of the course will investigate constructions of subjectivity in mainly prose texts written in England before approximately 1100.

60116. The Poetry of Cynewulf  
(1-1-0)  
Among Old English poets, Cynewulf is an enigmatic figure, since nothing is known about him except his name; but he is widely—and rightly—regarded as one of the major pre-Conquest literary figures. Four major poems have come down to us under his name: The Fates of the Apostles; Elene; Juliana; and Christ II. Each meeting of the seminar will focus on one of these poems (in the order given above); the intention will be to assess the style and diction of each poem (rather than to translate them mechanically) through discussion of individual passages. Passages for discussion will be circulated beforehand.

60118. Them 'n Us: Geography and Identity in Anglo-Saxon England  
This course seeks to explore the structures of identity through which Anglo-Saxons recognized themselves and others. We will focus primarily on Old English writings that explore the larger category of the "notus" and "our" relation to it: translations of Orosius's history, Bede's history, the Letter of Alexander to Aristotle, Wonders of the East, Apollonius of Tyre, portions of the Anglo-Saxon Chronicle and other texts. We will be looking particularly at the ways in which Anglo-Saxons peopled the category of "other" and, conversely, imagined themselves. Topics for analysis will include contemporary approaches to identity, ethnicity in early England and the difficulties posed for us by analytic terms deriving from nineteenth- and twentieth-century nationalism, Anglo-Saxon geographic imaginings, contemporary maps, notions of borders (within and without England), foreigners (and laws relating to them), and Anglo-Saxon "orientalism." Requirements: A short, exploratory paper, a final paper (with an eye to publication), a midterm (ungraded but evaluated), two oral presentations.

60130. Latin Literature of Anglo-Saxon England  
(3-3-0)  
A close study of the principal Anglo-Latin authors and texts.

60142. Chaucer: The Canterbury Tales  
(3-3-0)  
A study of the Canterbury Tales read in the original Middle English. Chaucer's comic genius will shape the approach to the text, which has been carefully constituted by its author as a virtual anthology of medieval fictional forms—everything from bawdy stories to saints' lives engaged Chaucer's most mature imaginative energies in this, his last great work. The class will work its way toward an appreciation of the kaleidoscopic subtleties involved in his poetic shaping of this wide, deep, and humanely envisioned text-world.

60143. Early Chaucer  
(3-3-0)  
If Chaucer had never written the Canterbury Tales, his claim upon our attention as one of the greatest poets ever writing in the English language would be secure based on the earlier works that will occupy us as readers/writers/discussants during this term: Book of the Duchesse, House of Fame, Parliament of Fowls and the magnificent Troilus and Criseyde. Additionally we will certainly read some—or all—of the short poems that—along with Canterbury Tales (which we will not read)—comprise the Chaucer canon. No prior experience with Middle English is required. Requirements: a midterm, a final, and a term paper. Text: Larry Benson's The Riverside Chaucer or any scholarly edition of the early poems named above.

60144. Chaucer and Medieval Narrative  
(3-3-0)  
Whether writing at the epic length of Troilus and Criseyde, or compacting his story to the brief compass of the "Manciple's Tale" or "Physician's Tale," Chaucer is a master of narrative. This course will study the features of his narrative style, and analyze the ways in which they create meaning. We shall compare and contrast his works with other examples of medieval narrative, and assess it in the light of modern narratology. We shall consider such things as beginnings and endings, time, the narrating voice, rhetoric, verse-forms, dialogue, the locus of action, structure, mood, and the implied audience. The Canterbury Tales will occupy a central position in the course, but we shall take in other works as it seems profitable to do so.

60145. Writing and Politics in Middle English  
(3-3-0)  
An examination of Middle English political writings.

60160. Works of the Pearl Poet  
(3-3-0)  
A study of the works of the Pearl Poet

60196. Old Norse  
(3-3-0)  
A study of the surviving Norse and Icelandic literature, both in prose and verse, through the medium of the Old Norse language.

63201. Proseminar in Medieval History I  
(3-3-0)  
A chronological proseminar in substance and bibliography required of all students in medieval history.

63202. Proseminar in Medieval History II  
(3-3-0)  
This course is designed to introduce students to major topics under discussion in the history of the high and later middle ages, roughly the years 1100 to 1400. Among the topics to be treated, with the historians now at work on them, are: law, government, and literacy; the church as an institutional and cultural force; social class and mobility as economic realities and cultural images; the university in society and culture; and the cultivation of the human person in literary sensibility and religious devotion. Most of the course will consist of intensive secondary readings, with regular written reports, occasional primary readings, and a major bibliographical paper at the end.

60120. Late Antiquity  
(3-3-0)  
This course will explore the transformation of the Roman World from about A.D. 300 to 600. We will ask: was the "fall" of the Roman Empire a civilizational catastrophe? Or was it a slow, messy process blinding continuity and change? Or was Late Antiquity itself a dynamic and creative period? Our emphasis will fall on: the changing shape of Roman public life; the barbarians and their relations with Rome; the emergence of the Catholic Church; the triumph of Christian culture; literature, art, and architecture in the late imperial world. There will be a mid-term and a final. Students will write either one term paper or a series of shorter papers. Readings will emphasize primary sources.

60121. World of Charlemagne  
(3-3-0)  
The Carolingian (from Carolus, Latin for Charles; Charles the Great—Charlemagne—was the most famous Carolingian) period, roughly the eighth and ninth centuries, was foundational for western Europe. But this was also the time when the mid-Byzantine Empire consolidated its position and when the Abbasid family of caliphs introduced important and durable changes in the Islamic world. This course will focus on the West in the age of Charlemagne, but will draw frequent comparisons with and make continuous reference to Europe's Byzantine and Islamic neighbors. The course will explore such themes as: Europe's Roman and Christian inheritances from antiquity; the peoples of the Carolingian world; kingship and empire; political and social institutions and ideologies; religious and secular law; war and diplomacy; agriculture and trade; the church—pope, bishops, monks, and nuns; theology; art and architecture; Latin and vernacular literature. Reading assignments will combine modern scholarship and primary sources (in translation). Students will write mid-term and final examinations and will choose between several short papers or one long paper. Graduate students will meet weekly with the professor, carry out reading assignments different from those of the undergraduates, and submit a series of short papers.

60213. History of Science, Technology, and Medicine to 1750  
(3-3-0)  
This course will be the first half of a two-semester survey of the main events in the history of natural philosophy and science from Greek antiquity to the early Enlightenment. The first half, will begin with Presocratic reflections and carry the course to the Renaissance.

63214. Italian Renaissance  
(3-3-0)  
This course surveys the intellectual, cultural, social, and political history of Italy in the "long" Renaissance (ca. 1275 to 1525). The course, though proceeding chronologically, will engage with specific themes in turn, including the economic and political
This course will examine contacts between Chris-

tiasm and Islam in the period from the seventh
century to the fifteenth century. Although issues

of religion will be addressed, the course is more

concerned with diplomatic, economic, military, cul-
tural, technological, and intellectual encounters and
exchange. Special attention will be focused on the
regions of Spain, Sicily, and the Crusader States. The
course is designed as a survey, but students may elect
to write either a research paper or three shorter his-
torographical essays. Regular student presentations
will also be required.

20279. Medieval Legal History
(2-2-0)

Studies the formative period of the Anglo-American
legal system using fourteenth-century yearbooks and
other materials from the same period.

20280. Rome, the Christians, and Early Europe
(3-3-0)
The course studies continuity and discontinuity in the
Mediterranean world during a formative period,
the transition from Roman Empire to early medieval
European kingdoms. Christianity played a vital role
during this transformation, but not the only one.
Beginning with a review of Roman institutions, law,
culture, and religion, we will observe the changes
they underwent between ca. 150 C.E. and ca. 750
C.E. At this latter point in time, some people were
still thinking of themselves as living within the Ro-
man empire, even though the local potentate was
a non-Roman king. Also, Roman law had become
Christian law, and Latin was beginning to generate
the languages now collectively described as “Ro-
mance.” On the fringes of Europe, in England and
Ireland, meanwhile, missionaries shared with their
converts not just Christianity but also the Latin lan-
guage and Latin literature along with certain Roman
concepts of culture and political organization.

20300. Early Medieval Philosophy
(3-3-0)

A survey of medieval philosophical literature from
ca. 400 to ca. 1200 based on original texts. We shall
review the most well-known authors and works in
the first instance: Augustine (Soliloquies, De Libero
Arbitrio, Confessions), Boethius (Opuscula Sacra, De
Consolatione Philosophiae, logical works), Eriugena
(Periphyseon), Anselm of Canterbury (Monologion,
Proslogion), the “School of Chartres” (Commentar-
ies on Boethius). However, considerable emphasis
will be placed on major traditions ignored by earlier
histories of medieval philosophy: glossing of Plato
Latinus, Aristotelis Latinus, Macrobius, and Marit-
nus Capella.

20302. Ancient Philosophy for Medievalists
(3-3-0)

An examination of ancient philosophical writings
in the context of their importance for the develop-
ment of medieval philosophy. We will focus on those
sources that form the basis of philosophical systems
during the Middle Ages.

20320. Introduction to Plotinus
(3-3-0)
The course will be divided into two parts: (1) A gen-
eral survey of Plotinus’s philosophy based on writings
of his early and middle periods; (2) A close study of
Plotinus’s longest treatise (divided into four parts by
Porphyry): Enneads III.8, V.8, V.5, II.9. In both parts
of the course, our aim will be not only to understand
Plotinian thought as a system of emanative monism
but also to evaluate the expository and argumenta-
tive techniques by which this thought is organized
into verbal discourse.

20321. Boethius: An Introduction
(3-3-0)
This course will attempt a study of Boethius, one
of the foundational figures of medieval culture, in
an interdisciplinary and open-ended manner. Our
approach will be interdisciplinary in that we shall
simultaneously study philosophical-theological and
literary subject matter and simultaneously apply
philosophical-theological and literary methods. It
will be open-ended in that students will be expected
to react creatively to the topics under review in
terms of their own independent studies and research
e.g., in connecting Latin and vernacular materials).
During the course we shall read a broad selection of
passages in Latin and in English translation drawn
from Boethius’s work in the fields of science (arith-
metic, music), logic, and theology. Part of the course
will be devoted to a close study of De Consolatione
Philosophiae. We shall study Boethius as reading
intertextually the Greek philosophers Plato and
Aristotle and the Greek scientists Nicomachus and
Ptolemy, without forgetting the Latin theology of
Augustine. Turning from Boethius to Boethius in
quotation marks and Boethius “under erasure,” we
shall study Boethius read intertextually by glossators,
commentators, and other writers from the eighth to
the fourteenth century. Requirement: one final essay
(ca. 20 pp.)

60330. Augustine and Anselm
(3-3-0)
An introduction to Augustine’s work concentrating
on his reaction to earlier philosophical materials
(a reaction naturally conditioned by his Christian
outlook). During the course, we shall examine his
relationship to scepticism (e.g., in Contra Academicos),
to Stoic linguistic theory (in De Dialectica), to Pythago-
reanism (in De Quantitate Animae), and especially
to Neoplatonism (e.g., in De Ordine, Soliloquies, De
Immortalitate Animae, De Vera Religione, Confession).
Augustine’s relation to the philosophical generalities
of the handbook tradition will also be an issue. Part
of the course will be devoted to the philosophical
readings in De Civitate Dei. Part of the course will
be devoted to the transmission of “philosophical”
Augustinianism to the Middle Ages.

60331. Augustine and Anselm
(3-3-0)
An introduction to the thought (philosophical and
theological) of Augustine and Anselm of Canterbury.
Since Augustine is one of the few intellectual fore-
runners mentioned by name in Anselm’s main works,
we shall assume that a reading of the Latin Church
Father forms an indispensable foundation for any
serious study of the eleventh-to-twelfth-century
archbishop’s writings. Although we shall study either
at length or in briefer selections the following works
in roughly chronological sequence: (Augustine) On
Free Choice of the Will, On the True Religion, Confe-
sions, On the Trinity, On the City of God, (Anselm)
Monologion, Proslogion, On Truth, On Freedom of the
Will, and On the Fall of the Devil, certain themati-
cally-connected ideas will be placed in relief in order
to reveal the profound coherence and continuity of
the Augustinian and Anselmian speculative systems.
These ideas will include Being, Truth, Mind, and Will together with associated ontological, epistemological, and ethical questions.

63060. Medieval Theory of the Will (3-3-0)
This course will trace the origin and evolution of the concept of the will from Anselm of Canterbury to Duns Scotus, focusing in particular on the emergence of voluntarism at the end of the thirteenth century, according to which the will became a completely self-determining, rational power.

63062. Hermeneutics, Deconstruction, and Medieval Thought (3-3-0)
The aims of this course are both methodological and historical. The methodological part will consist of an introduction to hermeneutics (in a broad sense) as theorized and/or practiced in certain areas of modern continental philosophy. After a brief look at the crucial innovations of Husserl, we shall study carefully chosen extracts (in English translation) of Heidegger (Being and Time and What is Called Thinking), Gadamer (Truth and Method), and Derrida (Of Grammatology, Writing and Difference, Dissemination) in order to illuminate the different (even opposing) ways in which the idea of “hermeneutics” can develop. This general discussion will be combined with specific consideration of the themes of allegory and negativity. The historical part of the course will concentrate on late ancient, medieval, and early medieval readings (Origines: On First Principles; Augustine: On Christian Teaching, Literal Interpretation of Genesis; Proclus: Commentary on Plato’s Timaeus). Here, we shall attempt to advance our comprehension of ancient literature by: 1) looking for parallels with modern hermeneutic techniques, and 2) applying the modern techniques in test cases. The course is intended to be relatively open-ended, i.e., students will be expected to think about the way in which these discussions are internally coherent and also relate to their own areas of interest (which may be elsewhere in philosophy, theology, or literature (Latin or vernacular). Requirement: one final essay of ca. 20 pp.

63063. Poetry and Philosophy in the Twelfth Century (3-3-0)
This course will aim to provide a close reading of Bernard Silvestri’s Cosmographiae and Alan of Lille’s De Planctus Natura against the background of early twelfth-century philosophical thought and grammatical-rhetorical theory. Although it will be initially necessary to cover the philological and historical ground with some care, the course will also attempt to explore in a more speculative and creative manner the question of the kind of relation between philo-

64000. Early Christianity: An Introduction (3-3-0)
This course provides an introduction to the history and thought of the first five hundred years of the Christian church. The approach taken will be largely that of social history; we will try to discover not only the background and context of the major theological debates but also the shape and preoccupations of “ordinary” Christian life in late antiquity: Topics to be studied will therefore include canon formation, martyrdom, asceticism, Donatism, Arianism, and Pelagianism. The class will stress the close reading of primary texts. Requirements include class participation, a final examination, the memorization of a few important dates and places, and two papers, one of which will be an exercise in the close reading of an additional primary source and the other an exploration of early Christian exegesis.

64041. Historical Theology: Medieval (3-3-0)
Development of Christian theology in medieval Western Europe up to the fourteenth century and medieval theologians from Boethius to Ockham. Themes include monastic, scholastic, apocalyptic theology; “authorities” (e.g., Aristotle, Augustine, Pseudo-Dionysius); and reading of the Bible.

64042. Medieval Theology Seminar (3-3-0)
Seminar on a selected theological topic in the medieval period.

64043. Theology of Early Christianity (3-3-0)
This course provides an introduction to the sources, settings, development, and debates of early Christian thought. Concentrating on primary sources in translation from the late first to early sixth century, it will allow students to attain a basic understanding of the early Christian literature that expresses the doctrine (including philosophy and ethics), ritual, and patterns of institutional and personal life of communities spread from the western Mediterranean to Mesopotamia. Secondary treatments will supplement the translated texts.

64044. Moral Theology Seminar: Thomas Aquinas (3-3-0)
In recent years, there has been a resurgence of interest in Aquinas’s ethical thought, but without attention to the context from which it emerged. Yet Aquinas’s moral thought cannot be fully understood unless it is placed in relationship to the views of his immediate predecessors and interlocutors. Furthermore, this approach to the study of Aquinas’s moral theology also provides us with a case study for examining how moral concepts develop over time, and how they are shaped by social and cultural, as well as intellectual factors. In this course, we will examine Aquinas’s writings on the natural law in the context of relevant texts from selected twelfth and thirteenth century authors, including Abelard, Gratian, William of Auvergne, Bonaventure, and Albert the Great. All texts will be made available in translation, although students who wish to read them in Latin will be given the opportunity to do so. Course requirements will include several short papers and a longer paper on a topic to be determined in consultation with the instructor.

64045. St. Bonaventure: Theology and Spirituality in Thirteenth-Century Scholasticism (3-3-0)
Along with Thomas Aquinas and Albertus Magnus, St. Bonaventure is considered one of the leading and most influential theologians of the high Scholastic period. Although he had to abandon his promising career as a university teacher in order to lead the fledgling Franciscan Order as its Minister General, Bonaventure continued his theological work until the end of his life. Critical of the growing influence of Aristotelian thought within theology, he deliberately chose the tradition of St. Augustine, P. -Denis, and Hugh of St. Victor as the basis for his theology. The recent emphasis on his spiritual writings notwithstanding, Bonaventure developed a highly speculative and consistent theology, which spans the whole horizon of Scholastic theology. Providing an introduction to Bonaventure’s life and writings, the course will focus on central aspects of his theology such as the Trinity, creation, Christology, anthropology, and theological epistemology.
60460. Development of Moral Doctrine (1-1-0) An examination of how Catholic moral doctrine has developed in specific areas, viz. marriage and divorce; religious liberty; slavery; and usury. Attention will also be given to more general theory on the development of doctrine in the Catholic Church.

60461. Philosophical Theology: The Metaphysics of Creation (3-3-0) How does free creation challenge a reigning world-view? What key philosophical issues are at stake, and why? We shall trace the debate that ensued among Jewish, Christian, and Muslim thinkers, beginning with al-Farabi and Ibn Sina, and then filtered through Moses Maimonides to Aquinas. By exploring their attempts to secure the privacy of actuality over possibility, in their efforts to formulate the creator as a cause-of-being—a notion novel to the Greeks and apparently less than intelligible to moderns—we hope to unveil the specific challenges which classical and contemporary attempts to formulate the creator/creature relation pose to conventional philosophical discourse, suggesting a relation between faith and reason more internal than often suspected.

60462. The Jewish-Christian Debate in the High Middle Ages (3-3-0) The growth of urban centers in Europe and Iberia during the Middle Ages rekindled the literary debates between Jews and Christians that began in the Early Church. Though Jews and Christians constructed images of the Other that were grounded in earlier arguments from Scripture and augmented them with the new tools of reason and linguistic knowledge. Our seminar will read both Jewish and Christian documents analyzing them in light of the work of modern historians such as Gilbert Dahan, Jeremy Cohen, David Berger, and Gavin Langmuir. In addition to reading the literature, we shall analyze papal policy, noble patronage, and canon law.

60463. Study of the Bible in Church and Synagogue (3-3-0) The Bible formed the core revelatory text of both the synagogue and the early church. Although both communities developed differing collections of books considered to be sacred writings, there was a large body of works shared by the two communities. Students in this course will explore three dimensions of how Scripture was studied in Judaism and Christianity: The first consideration will be the material nature of the Bible. What were the physical characteristics of the book or books that Christians and Jews studied? A consideration of scroll and codex will form the basis for an investigation of how manuscripts transmitted the biblical text from antiquity to the Middle Ages. A second dimension will be the development of lectionary and liturgical approaches to Scripture. Students will explore how the Bible was read in the public worship of the church and synagogue. The genres of homily,Midrash, and liturgical poems or hymnody as liturgical contexts for Scripture will constitute the primary texts for this section of the course. The third part of the course will trace the hermeneutics of both Jews and Christians. What could one know of God and the divine will from the Scriptures?

Works such as Origen's Peri Archon, Augustine's De Doctrina Christiana, St. Benedict's Rule, Hugh of St. Victor's Didascalcion, and Thomas Aquinas's Summa will provide evidence for the Christian community. From the Jewish perspective, students will read portions of the Babylonian Talmud, Saadia Gaon's Book of Beliefs and Opinions, Maimonides's Guide of the Perplexed, and Nachmanide's Introduction to the Commentary on the Pentateuch. Course requirements: 1) preparation of the readings and participation in the seminar, 2) an oral presentation on a topic decided with the instructor, and 3) a seminar paper due at the end of the course.

60464. Medieval Exegesis (3-3-0) Our focus during the semester will be on the relationship between biblical interpretation and the polemical literature written by Jewish and Christian authors from 1050 to 1200. Students will read the recent accounts of this literature by Gavin Langmuir, Anna Sapir Abulafia, Gilbert Dahan, and Jeremy Cohen, along with excerpts from medieval Christian authors such as Abelard, Gilbert Crispin, Guibert of Nogent, Bernard of Clairvaux, Peter the Venerable, Pietrus Alfonsi, and Alan of Lille. Passages from Jewish authors such as Rashī, Rabbi Joseph Kara, Rabbi Samuel ben Meizer, and Rabbi Joseph of Orleans will also be studied. Students will be expected to make an oral presentation and write a paper that provides an explication of the arguments in a polemical work.

60465. Topics in Medieval Theology: The Sacraments (3-3-0) Pastoral necessity as well as heresies and uncertainties about the nature of the sacraments made it unavoidable for the medieval church to reflect upon its most distinctive liturgical rites. Within the context of the formation and growth of scholasticism, the sacraments provided an excellent training ground to test the strength of western theological thought. Due to the influence of Peter Lombard's collection of patristic Sententiae the sacraments finally became a major field within the institutionalized theology at the universities. Our course will focus on those events and texts of the earlier Middle Ages which challenged theologians like Paschasius Radbertus, Berengar of Toure, and Lanfranc of Bec to specify their views about the Eucharist. It will consider the formation of a systematic treatise on the sacraments in the French schools of the twelfth century; and finally present the synthesis of high scholastic sacramental theology in Thomas Aquinas and Bonaventure. Besides the generic questions on the nature of the sacraments as such, special attention shall also be paid to baptism, the Eucharist, confirmation, and penitence.

60466. Medieval Liturgy (3-3-0) The eucharist stands at the heart of western European Christianity in the high Middle Ages. The insistence of church officials on regular reception of the eucharist; the numerous scholastic treatments of the theological issues associated with the eucharist; the recourse by spiritual authors, especially women, to the eucharist to express their most profound religious and devotional insights; the pointed reference to the Christ eucharistically-present to establish Christian identity and to distinguish the members of Christ from others, both within and outside of Western Europe; the development of new rituals focused on aspects of the eucharist; the burgeoning of artistic representations of eucharistic themes—all testify to the centrality of the eucharist in medieval theological and religious consciousness. Through the close reading of representative texts by a wide variety of thirteenth-century authors, and, the study of the different kinds of ‘eucharistic’ art, this course examines the uses made of the eucharist by a broad spectrum of medieval Christians. A special concern of the course is the relation between eucharistic doctrine and religious practice—to what extent have teachings about transubstantiation and real presence shaped religious expression? How has religious experience itself occasioned the refinement of these doctrines?

60467. Medieval Liturgy (3-3-0) The purpose of this seminar is to examine the various sacramental rites in the Middle Ages, especially the Eucharistic liturgy; and to attempt to reconstruct them within the context of liturgical enactment, architectural space, artistic and musical decoration, etc. The seminar must necessarily deal with liturgical texts, but this is only a first step for understanding the broader dimensions of the liturgy. Architectural, artistic, and musical components will be taken into consideration. Numerous commentaries on the liturgy are also an important source for garnering the medieval understanding of the liturgy, especially in its allegorical interpretation. A tangential but key element for the understanding is the devotional and spiritual practices that grew up alongside the official liturgy. Therefore, some attention will be given to these dimensions, including liturgical drama.

60471. Islamic Origins (3-3-0) Few questions in religious studies have proven more contentious than that of Islamic origins. Formerly western scholars debated whether Islam originated from Christianity or from Judaism. In reaction to that earlier debate, contemporary scholars have often portrayed Islam as a fully-independent religious movement, due either to the genius of Muhammad or the inspiration of the Qur’an. At the same time, new theories have sporadically arisen that present profoundly new visions of Islamic origins, theories based on non-Islamic historical sources (Crone/ Cook), theological analogies to Judaism-Christianty (Laeling), or Syro-Aramaic leadings of the Qur’an (Luxenberg). The present seminar, then, is devoted to an investigation of the past and present debate over Islamic origins.
60501. Medieval Spanish Literature: From Reconquest to Renaissance
(3-3-0)
The literature of medieval Spain in light of recent developments in critical theory.

60504. Cervantes: Don Quijote
(3-3-0)
A close reading of Cervantes’ Don Quijote in relation to the prose tradition of the Renaissance: novella, the pastoral romance, the romance of chivalry, the humanist dialogue, and the picaros novel. We will also pay attention to the historical, social, and cultural context of the work.

60531. Introduction to Old French and Anglo-Norman
(3-3-0)
This course is designed to be an introduction to the language and dialects of medieval France, including Anglo-Norman. Readings will include texts written between the twelfth and the fourteenth centuries, such as the Livre de Marie de France, trouvére poetry, the prose Lancelot, Machaut, and Froissart.

60535. Lyric and Narrative in Medieval French Literature
(3-3-0)
A study of narrative transformations of the themes of the courtly lyric in the thirteenth and fourteenth centuries.

60536. Lyric Poetry of the Renaissance
(3-3-0)
An in-depth study of the oeuvre of one or two poets (e.g., Du Bellay), including non-amaroty poetry.

60537. Love Poetry of the Renaissance
(3-3-0)
An in-depth reading of the love lyrics of Ronsard or Maurice Sève, particularly as they relate to the Italian Petrarchist tradition.

60550. History of the Italian Language
(3-3-0)
An advanced introduction to the history of the Italian language from Le origini to the High Renaissance with special emphasis on Dante, Petrarch, and Boccaccio during the medieval period and Bembo, Castiglione, and Machiavelli for the Renaissance.

60552. Dante I
(3-3-0)
Many have considered Dante’s Comedy to be the greatest poetic achievement in Western literature. It is also perhaps the most perfect synthesis of medieval culture, and the most powerful expression of what even today remains the foundation of the Catholic understanding of human nature, the world, and God. This course is an in-depth study, over two semesters, of the entire Comedy, in its historical, philosophical, and literary context, with selected readings from the minor works (e.g., Vita Nuova, Convivio, De vulgari eloquentia). Lectures and discussion will be in English; the text will be read in the original, but all who can follow with the help of a facing-page translation are welcome.

60553. Dante II
(3-3-0)
An in-depth study, over two semesters, of the entire Comedy, in its historical, philosophical and literary context, with selected readings from the minor works (e.g., Vita Nuova, Convivio, De vulgari eloquentia). Lectures and discussion in English; the text will be read in the original with facing-page translation. Students may take one semester or both, in either order.

60554. Petrarch: The Soul’s Fragments
(3-3-0)
Before taking up the Canzoniere we’ll consider the life of Petrarch, his intellectual activity and his other works, including selections from his epistolary collections (Letters on Familiar Matters and Letters of Old Age) and other Latin works, especially the Secretum (Petrarch’s Secret). Our reading of the Canzoniere will utilize Santagata’s recent edition and commentary and will engage critically a variety of hermeneutical and philological approaches to the book. The seminar will be conducted in English but reading knowledge of Italian is essential.

60555. Boccaccio
(3-3-0)
Though one of the most delightful and engaging texts in literature, Boccaccio’s Decameron has been called “the most enigmatic of medieval texts, richly difficult to fathom.” The text that lies behind Chaucer’s Canterbury Tales, and that created the modern short story, the Decameron is a profound meditation on the relation between language and reality, on literature as a life-giving response to human suffering and mortality, and it is a subtle exploration of the concepts of fortune, human intelligence and creativity, love, social order, and religious language and practice. We shall also pay special attention to the representation of women in the Decameron, and to the book’s apparent “feminism.” We will read the text in Italian; a reading knowledge of Italian is thus required, but the enrollment will determine the language of discussion. Open to advanced and qualified undergraduates by permission.

60556. Italian Senior Seminar
(3-3-0)
Prerequisite: A 30- or 40-level course taught in Italian. An in-depth study of a particular author, theme, genre, or century. In addition to treating the primary texts, some critical material will be required reading. This course culminates in a substantial research paper. Taught in Italian.

60600. Latin Literature and Stylistics
(3-3-0)
Provides an introduction to the advanced study of Latin literary texts through close reading of selected texts combined with practice in Latin composition.

60604. Postclassical Satire
(3-3-0)
This survey will begin with introductory readings in classical satire and satiric invective and narrative, and then move on to consider specimens of a variety of late antique and medieval texts written in a satiric mode: satire, invective, parody, mock epic, etc. A sound knowledge of Latin is required. Course requirements include in-class reports, an annotated translation, and an interpretative essay.

60606. Family and Household in the Roman World
(3-3-0)
A survey of the life-course in Roman antiquity. Topics studied will include: marriage, divorce, child-rearing, old age, the way in which family and household were conceptualized by the Romans, and the demography of the Roman world.

60607. The Roman Revolution
(3-3-0)
This course examines the climactic events in Roman history of the late first century B.C. and early first century A.D. that changed Rome from an open republic to a represive military monarchy. Chronologically the course begins with the appearance on the Roman political stage of the unashamedly ambitious Julius Caesar, and ends with the accession of a hereditary autocrat in the person of the morose ruler Tiberius. Exploring a variety of sources, the course focuses on the political tensions and civil commotions of the revolutionary era associated with warlords like Pompey, Crassus, Caesar, and Antony, and concentrates especially on the rise to power of Augustus, the most ruthless warlord of all, and his creation of a personal political regime that was to last in style for centuries.

60633. Medieval Latin Texts
(3-3-0)
A survey of medieval Latin texts, designed to introduce intermediate students to medieval Latin literature and to help them progress in translation skills.

60634. St. Augustine’s Confessions
(3-3-0)
This course provides an introduction to St. Augustine’s Confessions, through reading of extensive selections from the Latin text, a careful reading of the entire work in English translation, and the application of a variety of critical approaches, old and new. An introduction to modern standard Arabic. This course is the equivalent of a full academic year (two semesters) of elementary Arabic. The student will be able to read vocalized literary Arabic texts, have a working knowledge of Arabic grammar and an active basic vocabulary of more than 450 words and/or productive roots (from which many lexical items can be formed).

60661. Islam: Religion and Culture
(3-3-0)
This introductory course will discuss the rise of Islam in the Arabian peninsula in the seventh century of the Common Era and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the life of the Prophet Muhammad, the Qur’an and its role in worship and society, early Islamic history, community formation, law and religious practices, theology, mysticism, and
literature. Emphasis will be on the core beliefs and institutions of Islam and on its religious and political thought from the Middle Ages until our own time. The latter part of the course will deal with the spread of Islam to the West, resurgent trends within Islam, both in their reformist and extremist forms, and contemporary Muslim engagements with modernity.

60662. Canon and Literature of Islam (3-3-0)
This course is an introduction to the religious literature of the Arab-Islamic world. Emphasis is on works from the classical and medieval periods of Islam, roughly from the seventh to the fourteenth century of the Common Era. We will read selections from the Qur’an (the sacred scripture of Islam), the Hadith literature (sayings attributed to the prophet Muhammad), the biography of the Prophet, commentaries on the Qur’an, historical and philosophical texts, and mystical poetry. All texts will be read in English translation. No prior knowledge of Islam and its civilization is assumed, although helpful.

60680. Medieval German Literature (3-3-0)
Prerequisite: Four semesters or equivalent. GE 315 constitutes a survey of German literature from its beginnings during Romanic times until the sixteenth century. Ideas, issues and topics are discussed in such a way that their continuity can be seen throughout the centuries. Lectures and discussions are in German, but individual students’ language abilities are taken into consideration. Readings include modern German selections from major medieval authors and works such as Hildebrandslied, Rolandslied, Nibelungenlied, Iwelin, Parzival, Tristan, courtly lyric poetry, the German mystics, secular and religious medieval drama, Der Achermann aus Böhmen, and the beast epic Reineke Fuchs. Class discussions and brief presentations in German by students on the selections are intended as an opportunity for stimulating exchange and formal use of German.

60681. Der Arturomann/Arthurian Epic (3-3-0)
Come and explore the enduring legend of King Arthur and his court as interpreted by German authors of the high Middle Ages (late twelfth and thirteenth centuries). We spend the majority of the semester on the three best-known and most complete Arthurian epics in the German tradition: Erec and Iwelin by Hartmann von Aue, and Wolfram von Eschenbach’s Parzival, as well as other later German adaptations they influenced. These tales are among the most imaginative and fascinating in the German canon, full of the adventures and exploits of knights and ladies. Our exploration of these texts focuses on their relationship to their French and English predecessors, on the many twists and turns in story line and character development that each individual author creates, and on the information they suggest about “real” life in the medieval world. We also take a look at some of the most interesting modern literary and film adaptations of the Arthurian legend.

60701. Survey of Medieval Architecture (3-3-0)
This course will introduce students to the architecture of the Middle Ages (ca. 500-1400). This introductory course will begin with early Christian architecture and culminates in the great Gothic cathedrals of northern Europe. Students will not only be invited to consider the development of the architectural forms of the church building, but will also be able to consider the degree to which the changing nature of the church building reflects broader issues in the history of Christianity in the Middle Ages.

60720. The Formation of Christian Art (3-3-0)
Art in Late Antiquity has traditionally been characterized as an art in decline, but this judgment is relative, relying on standards formulated for art of other periods. Challenging this assumption, we will examine the distinct and powerful transformations within the visual culture of the period between the third and sixth centuries A.D. This period witnesses the mutation of the institutions of the Roman Empire into those of the Christian Byzantine Empire. Parallel to these social changes we can identify the emergence of a Christian art that defines our basic assumptions about the role of art in a Christian society. The fundamental change in religious identity that was the basis for this development had a direct impact upon the visual material that survives from this period. This course examines the underlying conditions that made images so central to cultural identity at this period.

60721. Early Medieval Art: The Illuminated Book (3-3-0)
This course will investigate the art produced in Western Europe between the seventh and eleventh centuries. Often characterized as a Dark Age, this period in fact demonstrates a fertile, fluid, and inventive response to the legacy of Late Antique Christianity. The course will focus on the production and reception of illuminated manuscripts, using facsimiles of these works as a basis for teaching. Students will become familiar with art-historical methods for the examination of such works and will be invited to contemplate the interplay of word and image that these books propose. Categories of material discussed include: Insular art, the Carolingian scriptoria, Ottonian imperial image making, Anglo-Saxon art, Spanish Apocalypses, and Italian Exultets.

60722. Romanesque Art (3-3-0)
In this course we will examine the place of art in an expanding culture. The eleventh and twelfth centuries witnessed the economic and military expansion of the societies of Western Europe. This growth produced a complex and rich art that can be broadly labeled as Romanesque. We will investigate this phenomenon (or rather these phenomena) through three actual and metaphorical journeys: the pilgrimage to Santiago de Compostela, a journey to the ruins of ancient Rome, and a visit to the Palestine of the Crusades. These journeys, in many ways typical of this period, will provide the means of examining how the art of this period responds to the various new demands of an increasing knowledge provoked by travel.

60723. Gothic Art (3-3-0)
This course studies Gothic monuments—whose commission and made them and how they functioned for different audiences. Among others we consider the following questions: what motives fueled large architectural enterprises? What was their cultural, political, and social significance to women and men, to the laity and clergy, and to viewers from different social classes? How did imagery convey complex theological messages to this varied audience? How did architectural or public images differ from the portable private works of art that became increasingly popular in the late Gothic period?

60724. Byzantine Art (3-3-0)
Byzantine art has often been opposed to the traditions of Western naturalism, and as such has been an undervalued or little known adjunct to the story of medieval art. In order to develop a more sophisticated understanding of this material we will examine the art produced in Byzantium in the period from the ninth to the twelfth century, a period that marks the high point of Byzantine artistic production and influence. Stress will be placed upon the function of this art within the broader setting of this society. Art theory, the notions of empire and holiness, the burdens of the past and the realities of contemporary praxis will be brought to bear upon our various analyses of material from all media. How we, as art historians can write the history of this rich culture will be a central issue of this course.

60725. Fifteenth-Century Italian Renaissance Art (3-3-0)
Open to all students. This course investigates the century most fully identified with the Early Renaissance in Italy. Individual works by artists such as Brunelleschi, Donatello, Ghiberti, Botticelli, and Alberti are set into their social, political, and religious context. Special attention is paid to topics such as the origins of art theory, art and audience, portraiture and the definition of self, Medician patronage, and art for the Renaissance courts of northern Italy and Naples.

60726. Northern Renaissance Painting (3-3-0)
Open to all students. This course traces the development of painting in Northern Europe (France, Germany, and Flanders) from approximately 1300 to 1500. Special attention is given to the art of Jan Van Eyck, Roger van der Weyden, Heironymous Bosch, and Albrecht Dürer. Through the consideration of the history of manuscript and oil painting and the graphic media, students will be introduced to the special wedding of nature, art, and spirituality that defines the achievement of the Northern Renaissance.

63750. Medieval Art Seminar (3-3-0)
Permission required. The subject of this seminar will vary from year to year.
67751. Renaissance Art Seminar
(3-3-0)
Permission required. Seminar on specific subjects in Renaissance art.

60757. Seminar: Venetian and Northern Italian Renaissance Art
(3-3-0)
This course focuses on significant artistic developments of the sixteenth century in Venice with brief excursions to Lombardy and Piedmont. Giorgione, Titian, and Palladio, the formulators of the High Renaissance style in Venice, and subsequent artists such as Tintoretto and Veronese are examined. An investigation of the art produced in important provincial and urban centers such as Brescia, Cremona, Milan, Parma, Varallo, and Vercelli also provide insight into the traditions of the local schools and their patronage.

67780. Promenar in Medieval Music
(3-3-0)
An introduction to the theoretical and practical facets of the discipline of music during the Middle Ages. Readings in Calcidus, Macrobius, Boethius, Isidore, Musica enchiriadis, Guido d’Arezzo, and John of Garland; an examination of the basic genres of chant and their place in the mass and the office hours; as well as tropes, hymns, sequences, and organum. Students are expected to have a working knowledge of Latin.

67801. Research in Biocultural Anthropology
(6-6-0)
The Jerusalem field school will engage students in an experiential learning environment that immerses them in anthropological method and theory. Using the large Byzantine St. Stephen’s skeletal collection as the cornerstone, historical and archaeological information will be synthesized in a biocultural reconstruction of ancient monastic life. Students will conduct original research, share in a field trip program visiting numerous Byzantine sites and area research institutions, and will participate in a lecture program delivered by top scholars in the fields of biological anthropology, classics, and Near Eastern studies.

77001. Field Examination Preparation
(0-0-0)
Offers students a possibility, normally in their second or third year, to work closely with a professor in preparing for one of their field examinations.

77002. Dissertation Proposal Preparation
(0-0-0)
Offers students the opportunity to work with their advisor in preparing their dissertation proposal.

88001. Resident Dissertation Research
(0-0-0)
Independent research and writing on an approved subject under the direction of a faculty member.

88002. Nonresident Dissertation Research
(1-1-0)
Required of nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

Fellows of the Medieval Institute
Amina Afsaruddin, Associate Professor of Classics and Fellow in the Joan B. Kroc Institute for International Peace Studies, A.B., Oberlin College, 1982; M.A., Johns Hopkins Univ., 1985; Ph.D., ibid., 1993.

Charles E. Barber, the Michael P. Grace Professor of Arts and Letters and Associate Professor of Art, Art History, and Design, B.A., Courtauld Inst. of Art, 1986; Ph.D., ibid., 1989.

W. Martin Bloomer, Associate Professor of Classics, B.A., Yale Univ., 1982; M.A. ibid., 1983; M.Phil., ibid., 1984; Ph.D., ibid., 1987.

Calvin M. Bower, Professor of Music, B.Mus., Univ. of Southwestern Louisiana, 1960; M.M., George Peabody College, Vanderbilt Univ., 1963; Ph.D., ibid., 1967.

Theodore J. Cachey Jr., Director of Graduate Studies in Romance Languages and Literatures, Professor of Italian Language and Literature, and the Albert J. Ravarino Director of the Devers Program in Dante Studies, B.A., Northwestern Univ., 1974; M.A., Univ. of California, Los Angeles, 1982; Ph.D., ibid., 1986.

John C. Cavadini, Chair and Associate Professor of Theology, and Executive Director of the Institute for Church Life, B.A., Wesleyan Univ., 1975; M.A., Marquette Univ., 1979; M.A., Yale Univ., 1980; M.Phil., ibid., 1983; Ph.D., ibid., 1988.

Paul M. Cobb, Associate Professor of History, B.A., Univ. of Massachusetts, 1989; M.A., Univ. of Chicago, 1991; Ph.D., ibid., 1997.

Kent Emery Jr., Professor in the Program of Liberal Studies, B.A., Univ. of Virginia, 1966; M.A., Univ. of Toronto, 1968; Ph.D., ibid., 1976. (1985)

Blake Leyzer, Associate Professor of Theology and Concurrent Associate Professor of Classics, B.A., Yale Univ., 1982; M.A., Duke Univ., 1988; Ph.D., ibid., 1991. (1990)

Ralph M. McInerny, the Michael P. Grace Professor of Medieval Studies. B.A., St. Paul Seminary, 1951; M.A., Univ. of Minnesota, 1952; Ph.L., Univ. Laval, 1953; Ph.D., ibid., 1954. (1955)

David O’Connor, Associate Professor of Philosophy and Concurrent Associate Professor of Classics. B.A., Notre Dame, 1980; Ph.D., Stanford, 1985. (1985)

 Gretchen J. Reydams-Schils, Associate Professor in the Program of Liberal Studies and Fellow in the Nanovic Institute for European Studies. B.A., Catholic Univ. of Leuven, 1987; M.A., Univ. of Cincinnati, 1989; Ph.D., Univ. of California, Berkeley, 1994. (1994)

Robert E. Rodes, the Paul J. Schierl/Fort Howard Corporation Professor of Legal Ethics and Professor of Law. A.B., Brown Univ. 1947; LL.B., Harvard Univ., 1952 (1956)

Albert K. Wimmert, Director of Graduate Studies and Associate Professor of German Language and Literature and Fellow in the Nanovic Institute for European Studies. M.A., Univ. of Notre Dame, 1964; M.A., ibid., 1967; Ph.D., Indiana Univ., 1975. (1964)
The master of arts degree in musicology and theory provide the student with intensive professional training in the scholarship of music. These programs are designed to enable the students, upon graduation, to enter a top-level doctoral program at another university. Students in the M.A. programs must pass a reading examination in French, Latin, or German, must submit a master’s thesis to the graduate committee, and must pass a final written comprehensive examination. Students whose interests are in medieval music will benefit from the exceptional resources of the Medieval Institute.

Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

Course numbering does not indicate level of student achievement. Repetition of the course numbering on a transcript indicates further studies.

All courses are usually offered each semester.

50022. Schenkerian Analysis
(3-3-0)
An intensive analysis of selected works by Haydn, Beethoven, and Schenkerian analysis of selected works by Haydn, Beethoven, and Schenker.

50210. History of Opera
(3-3-0)
Topics relating to the history of opera.

50220. Twentieth-Century Analysis
(3-3-0)
Techniques of composition employed by composers of the 20th century.

51360. Composition
(0-0-0)
Prerequisite: Approved background. Creative writing in various forms, conventional and contemporary. Private instruction only.

50400. Organ Music of J.S. Bach
(3-3-0)
An exploration of the 18th-century composer’s work.

50060. Band Arranging
(3-3-0)
Covers the basic orchestral, technical, and formal problems associated with arranging pre-existing material for band. This course will be project-oriented, and instruction will focus on the student’s own arrangements.

50100. Intro to Medieval Plainchant
(3-3-0)
An introduction to the genres and sources of medieval liturgical chant. Genres will be examined within the context of the history of liturgy and as musical forms and styles. Manuscript sources will be studied as documents in the history of musical notation and as foundations for establishing viable editions of melodies and texts. A basic knowledge of musical notation is a pre-requisite. Some knowledge of German or French or Latin is highly desirable.

50112. Handel’s Operas and Oratorios
(3-3-0)
An examination of Handel’s operas (including Rinaldo, Julius Caesar, and Xerxes) and oratorios (including Esther, Israel in Egypt, and Jephtha), with a particular focus on Handel’s approach to drama and musical characterization in each genre, and his appropriation and redefinition of operatic conventions in the context of the English theatrical oratorio.

50150. Church Music
(3-3-0)
A survey of Bach’s sacred vocal music including the Cantatas, the Passions and the B-Minor Mass.

50190. Opera
(3-3-0)
Topics relating to the history of opera.

50220. Twentieth-Century Analysis
(3-3-0)
Techniques of composition employed by composers of the 20th century.

51360. Composition
(0-0-0)
Prerequisite: Approved background. Creative writing in various forms, conventional and contemporary. Private instruction only.

50400. Organ Music of J.S. Bach
(3-3-0)
An exploration of the 18th-century composer’s work.

50060. Band Arranging
(3-3-0)
Covers the basic orchestral, technical, and formal problems associated with arranging pre-existing material for band. This course will be project-oriented, and instruction will focus on the student’s own arrangements.

50100. Intro to Medieval Plainchant
(3-3-0)
An introduction to the genres and sources of medieval liturgical chant. Genres will be examined within the context of the history of liturgy and as musical forms and styles. Manuscript sources will be studied as documents in the history of musical notation and as foundations for establishing viable editions of melodies and texts. A basic knowledge of musical notation is a pre-requisite. Some knowledge of German or French or Latin is highly desirable.

50112. Handel’s Operas and Oratorios
(3-3-0)
An examination of Handel’s operas (including Rinaldo, Julius Caesar, and Xerxes) and oratorios (including Esther, Israel in Egypt, and Jephtha), with a particular focus on Handel’s approach to drama and musical characterization in each genre, and his appropriation and redefinition of operatic conventions in the context of the English theatrical oratorio.

50150. Church Music
(3-3-0)
A survey of Bach’s sacred vocal music including the Cantatas, the Passions and the B-Minor Mass.

50190. Opera
(3-3-0)
Topics relating to the history of opera.

50220. Twentieth-Century Analysis
(3-3-0)
Techniques of composition employed by composers of the 20th century.

51360. Composition
(0-0-0)
Prerequisite: Approved background. Creative writing in various forms, conventional and contemporary. Private instruction only.

50400. Organ Music of J.S. Bach
(3-3-0)
An exploration of the 18th-century composer’s work.
63020. Proseminar  
(0-0-0)  
Haimo  
A seminar in research methods, critical inquiry and critical discourse.

63103. Studies in Medieval Music  
(3-3-0)  
An introduction to the theoretical and practical facets of the discipline of music during the Middle Ages. Readings in Calcidus, Macrobius, Boethius, Isidore, Musica enchiriadis, Guido d’Arezzo, and John of Garland; an examination of the basic genres of chant and their place in the mass and the office hours; as well as tropes, hymns, sequences, and organum. Students are expected to have a working knowledge of Latin.

60120. Experimental Music in America  
(3-3-0)  
Examination of experimental musical techniques from Ives to the present.

60200. Chamber Music  
(0-0-0)  
Study and performance of selected chamber compositions. Intended for music majors or with special permission.

60203. Percussion Ensemble  
(1-1-0)  
This ensemble is organized according to the needs of those who audition through the regular process at the beginning of each semester. It consists of those for whom the larger ensembles are inappropriate. Admission by audition.

60210. Opera Workshop  
(1-1-0)  
A group devoted to the performance of classical operas. Admission by audition.

60213. Opera Scenes  
(1-1-0)  
The course will end with workshop performances of various scenes, accompanied with piano, taking place in early December at a venue to be announced.

60230. Jazz Band  
(3-3-0)  
Open through audition.

60240. Concert Band  
(1-1-0)  
The Fall Concert Band prepares and performs traditional and contemporary works for band in a large concert ensemble setting, rehearsing once per week with one concert near the end of the semester.

60242. Symphonic Band  
(1-1-0)  
The Symphonic Band prepares and performs traditional and contemporary works for band in a large concert ensemble setting, rehearsing twice per week, with a short concert tour and two concerts during the semester.

60243. Marching Band  
(1-1-0)  
Performs for athletic events and special functions. Admission by audition. Permission required; obtain authorization number from Nancy in the Band Building. Does not apply to overload.

60245. University Band  
(1-1-0)  
This ensemble will provide a traditional concert band experience for brass, woodwind and percussion players in the Notre Dame community. Under the direction of Dr. Kenneth Dye and the Notre Dame band staff, the University Band prepares and performs a wide variety of music including everything from marches, overtures and pop melodies to the traditional Notre Dame favorites. Rehearsals take place in the Band Building. Application for membership can be made by contacting the band office.

60246. Varsity Band  
(1-0-0)  
Performs for athletic events and special functions. Admission by audition. Permission required; obtain authorization number from Nancy in the Band Building. Does not apply to overload.

60247. Concert Winds  
(1-1-0)  
The Fall Concert Winds prepares and performs traditional and contemporary works for band in a small, wind ensemble setting, rehearsing once per week with one concert near the end of the semester.

60250. Orchestra  
(1-1-0)  
Performs music from the 18th to the 20th century in several concerts a year. Admission by audition.

60410. Organ Literature  
(2-2-0)  
Concentrated study of the principal literature written for the organ.

60413. Advanced Cello Literature  
(3-3-0)  
Concentrated study of the principal literature written for the string instruments.

60414. Advanced Cello Literature  
(3-3-0)  
Extensive study of cello repertoire with an emphasis on sonatas, concertos, and solo works from the Baroque period to the 20th century.

60420. Wind Literature  
(3-3-0)  
An exploration of the history of the literature for winds from the works of Giovanni and Andrea Gabrieli to the present century.

60490. Orchestral Excerpts  
(1-1-0)  
Excerpts from the standard orchestral literature encompassing styles from the 18th century through the 20th century. Instructed by individual members of the faculty.

The following courses require a background in music and provide individual instruction for graduate students. Unless otherwise noted, the credits per semester, and the lecture and tutorial hours per week are (0-0-0).

61300. Piano  
61301. Organ  
61302. Harpsichord  
61310. Violin  
61311. Viola  
61312. Cello  
61320. Woodwinds  
61321. Brass  
61330. Percussion  
61340. Voice

63401. Piano Literature  
63402. Piano Literature  
(2-2-0)  
Concentrated study of the principal literature written for the keyboard.

63410. String Literature  
(3-3-0)  
Concentrated study of the principal literature written for the string instruments.

63413. Advanced Cello Literature  
(3-3-0)  
Extensive study of cello repertoire with an emphasis on sonatas, concertos, and solo works from the Baroque period to the 20th century.

63420. Wind Literature  
(3-3-0)  
An exploration of the history of the literature for winds from the works of Giovanni and Andrea Gabrieli to the present century.

63490. Proseminar in Chamber Music  
(0-0-0)  
Intensive study of performance techniques in the chamber reperoire.

67900. Special Studies  
(0-0-0)  
Individual study under personal direction of a faculty member.

68390. Qualifying Recital  
(0-0-0)  
For first-year students.

68900. Thesis Direction  
(0-0-0)  
Planning and developing the master’s thesis for M.A. students.
Requirements for the Ph.D. in Philosophy

Entriting students are expected to have the equivalent of an undergraduate major in philosophy. If their major has been in another field they may still be admitted, but in such cases deficiencies may have to be made up on a noncredit basis at Notre Dame. Each applicant for graduate admission to the department is required to furnish, in addition to the materials requested by the Graduate School, a sample of the applicant’s written work in philosophy (approximately 10 to 15 pages in length).

For the doctorate a student must complete a 47 semester-credit-hour residency requirement. Students who enter the doctoral program with an M.A. are normally excused from six to 12 credit hours of graduate course work. Any philosophy graduate student is permitted to take up to six credit hours of approved undergraduate course work in philosophy and up to six credit hours of course work in related fields to satisfy the 47 credit hours. Those who choose to concentrate in such specialized fields as logic and philosophy of science may be required to take courses in other departments in support of their specialization. Students are expected to maintain a minimum B average in all of their course work.

Course Requirements

Doctoral students are required to complete fourteen regular 3-unit seminars, including seminars satisfying breadth requirements in each of the following areas:

1. History of philosophy:
   a. Ancient philosophy
   b. Medieval philosophy
   c. Modern philosophy

2. Metaphysics
3. Epistemology
4. Ethics
5. Philosophy of science
6. Symbolic logic

Designated “core” seminars in metaphysics, epistemology, ethics, philosophy of science, and symbolic logic satisfy the requirements in those areas. The requirements in history of philosophy may be satisfied by taking any of a number of approved graduate courses offered in each historical area. No course may be used to satisfy more than one general area requirement.

Beginning students are encouraged to complete the requirements as early as is feasible, generally within the first two or two-and-a-half years. In addition to the courses listed above, graduate students are required to take a proseminar in philosophy (PHIL 83101) during their first semester, the colloquium requirements...
PHILOSOPHY

Non-Course Requirements

1. History Exam: At the end of the summer following the first year of coursework, students are required to take a six-hour written exam in the history of philosophy. The exam is given in two parts, with three hours covering ancient and medieval philosophy, and three hours covering modern philosophy. This requirement, together with the Oral Comprehensive Exam (See below) constitute the candidacy examination for the Ph.D.

2. Language Requirement: Acquiring the doctoral degree involves passing Graduate Reading Exams in two foreign languages. At least one of these examinations must be completed before the oral comprehensive examination is taken. Though German, French, Greek, and Latin are the standard choices, with the concurrence of the director of graduate studies, some other language may be substituted where the candidate's dissertation is likely to require the use of the alternate language.

3. Second-Year Paper: At the end of the summer following the second year of coursework, students are required to submit a research paper exhibiting their capacity for independent research. For details on the requirements for this paper, see the departmental guidelines.

4. Oral Comprehensive Exam: Typically taken during the third year of residency, the Oral Comprehensive Exam constitutes the second part (see "History Exam," above) of the Ph.D. candidacy exam. It consists of a one-and-one-half-hour oral examination by a board of five faculty examiners. Four votes of "pass" are needed to pass the exam. In exceptional circumstances, the Director of Graduate Studies may give permission for an examining board of four faculty members, in which case three votes of "pass" are required in order to pass the exam.) To maintain financial eligibility, this requirement (together with the Dissertation Proposal, see below) must be satisfied by the end of the eighth semester of enrollment. The purpose of the oral comprehensive examination is to confirm a candidate's readiness to begin significant research in his or her chosen area of concentration. Areas of concentration available in the department for the oral examination and for subsequent dissertation research include:

- ancient philosophy
- medieval philosophy
- history of modern philosophy
- contemporary European philosophy
- epistemology
- ethics
- logic
- metaphysics
- philosophy of language
- philosophy of mathematics
- philosophy of religion
- philosophy of science
- political philosophy

5. Dissertation Proposal: After passing the oral exam, students submit a dissertation proposal, written in consultation with the student's dissertation director. The proposal consists of a ca. 12-page narrative description of the issue to be addressed, its significance in current scholarship, and the main conclusions to be defended; a 3-5 page chapter outline; and a 1-page bibliography. The proposal is evaluated by the Dissertation Proposal Committee, appointed by the Director of Graduate Studies and consisting of the dissertation director together with four other members of the graduate faculty. No more than one member of this committee may come from outside the Philosophy Department. The dissertation proposal counts as "approved" when all five members of the committee have approved it. To maintain financial eligibility, the proposal must be approved by the end of the eighth semester of enrollment. Once the dissertation proposal is approved, a meeting is scheduled for the student and the committee in order for the committee to provide guidance concerning the research and writing of the dissertation.

6. Dissertation and Defense: Having completed the doctoral candidacy requirements and formulated an acceptable doctoral thesis proposal, the candidate is expected to complete a doctoral dissertation during the fourth or fifth year of residence. When the dissertation is completed and approved by the dissertation director, three copies are submitted to the Director of Graduate Studies. These are distributed to three readers, chosen by the Director of Graduate Studies in consultation with the student and dissertation director. The readers will ordinarily be chosen from the members of the Dissertation Proposal Committee. No more than one reader may be from outside the Philosophy Department. After the three readers have approved the dissertation, the Philosophy Department and the Graduate School will arrange for a Dissertation Defense. The director and readers may require revisions of the dissertation as a result of weaknesses revealed in the oral defense. At the end of the defense, the director and readers decide whether the student has passed or failed the defense. Three votes out of four are required to pass the defense.

Evaluation

The faculty as a whole periodically evaluates the progress of all students. Evaluations focus on students' performance in courses, in non-course requirements, and in their roles as teaching assistants and teachers. If the faculty judge at any stage that a student's progress is unsatisfactory, the student may be required to terminate his or her graduate studies. A student may receive a nonresearch M.A. degree in philosophy after finishing 30 credit hours of graduate course work and passing a special M.A. oral candidacy examination. (Continuing students may receive a nonresearch M.A. upon successful completion of the written Ph.D. candidacy examinations (history exam) and 30 credit hours of graduate course work.)

Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

These courses are representative of offerings in the program over a two-year period.

83101. Proseminar
(1-1-0)
Blanchette
Required of all first-year students. An introduction to the methods of graduate research in philosophy.

83102. Colloquium Seminar
(1-1-0)
A one-hour seminar each semester tied to the talks given in the department's ongoing colloquium series. Required of all first-year students.

83103. Colloquium Seminar
(1-1-0)
A one-hour seminar each semester tied to the talks given in the department's ongoing colloquium series. Required of all first-year students.

85104. Teaching Methods: TA Practicum
(1-1-0)
A one-credit course required of all philosophy graduate students before they begin to assist in teaching.

85105. Teaching Practicum
(1-1-0)
A course required of all graduate students before teaching their own courses for the first time. The goal will be for each prospective teacher to produce viable syllabi and rationales for the courses they will be teaching.

83199. Kant, Kuhn & Friedman
(1-1-0)
This one-credit course is devoted to a close, critical reading of Michael Friedman's Dynamics of Reason and related works by Friedman and a few other authors on the role of the a priori in space-time theory.

83201. Plato
(3-3-0)
A detailed and systematic reading, in translation, of the fragments of the pre-Socratics and of the following Platonic dialogues: Euthyphro, Apology, Crito, Meno, Protagoras, Phaedo, Republic, Phaedrus, Symposium, and Theaetetus.

Further details regarding requirements, and regarding the department's many special programs and activities, can be found on the Department's website.
83202. Aristotle (3-3-0)
An investigation of the central concepts of Aristotle's philosophy with emphasis on his metaphysics. Aristotle's doctrines will be examined against the background of Platonic and pre-Socratic thought.

83203. Aristotle's Philosophical Anthropology (3-3-0)
An examination of Aristotle's views on problems in what we call the philosophy of mind and the theory of action. Texts to be read include Books I and II of the Physics, the De Anima, and large chunks of the Nichomachean Ethics, along with snippets from the Parva Naturalia.

83204. Debate Between Plato and Aristotle (3-3-0)
A study of the history of the debate between the two main ancient traditions of philosophy with special reference to the theory that Platonism and Aristotelianism can, in some profound manner, be reconciled.

83205. Socrates and Athens (3-3-0)
A study of the moral upheaval in Athens during the Peloponnesian War, using Thucydides, Aristophanes, Euripides, and Sophocles as primary sources. Then an examination of Socrates as responding to that crisis, using Alcibiades I, Gorgias, and other dialogues.

83206. Moral Perfection and the Exemplary Sage (3-3-0)
A consideration of themes from ancient pagan, Christian, and Jewish reflection on virtue and the sage. In addition to the ancient texts themselves, we will be considering contemporary work by philosophers such as Ansas, Cavell, Foucault, and Hecdot.

83207. Plato (3-3-0)
In his last and longest dialogue, Plato explored the nature and limitations of the rule of law. What are its sources? Intellectual and emotional! Must the laws of society at least believe in a divine foundation? How can people be persuaded to submit? What set of norms and institutions would be best and why? Plato's Laws contains the first explication and analysis of the "mixed regime" that is transformed by later, modern theorists into the "separation of powers," and "checks and balances" of the American constitution. Plato himself seems to think that a regime that attempts to form the character of its citizens would be preferable. We will investigate why.

83208. Hellenistic Ethics & the Subj (3-3-0)
An examination of the very distinctive manner in which Hellenistic Philosophy (Cynics, Epicureans, Stoics, New Academy) defines the subject of knowledge, of action, and of interaction with others in the environment. The first part will study the salient features of Hellenistic Ethics. The second part will focus on Stoicism and its powerful model of the integrated life and virtue as intrinsically relational. The third part will be open to a selection of related themes that serve best participants' interests.

83223. History of Medieval Philosophy (3-3-0)
A semester long course focusing on the history of Medieval Philosophy. It provides a more in-depth consideration of this period than is allowed in PHIL 301. History of Ancient and Medieval Philosophy and may be considered a follow-up to that course.

83224. Early Medieval Philosophy (3-3-0)
A survey of medieval philosophical literature from ca. 400 to ca. 1200 based on original texts. We shall review the most well-known authors and works in the first instance: Augustine (Soliloquies, De libero arbitrio, Confessions), Boethius (Opuscula Sacra, De Consolatione Philosophiae, logical works), Eriugena (Periphysein), Anselm of Canterbury (Monologion, Proslogion), the "School of Chartres" (Commentaries on Boethius). However, considerable emphasis will be placed on major traditions ignored by earlier histories of medieval philosophy: glossing of Plato Latinus, Aristotles Latinus, Macrobius, and Martianus Capella.

83225. Introduction to Plotinus (3-3-0)
The course will be divided into two parts: (1) A general survey of Plotinus' philosophy based on writings of his early and middle periods; (2) A close study of Plotinus' longest treatise (divided into four parts by Prophryne): Enneads III.8, V8, V5, I.9. In both parts of the course, our aim will be not only to understand Plotinian thought as a system of emanative monism but also to evaluate the expository and argumentative techniques by which this thought is organized into verbal discourse.

83226. The Medieval Theory of the Will (3-3-0)
This course will trace the origin and evolution of the concept of the will from Anselm of Canterbury to Duns Scotus, focusing in particular on the emergence of voluntarism at the end of the 13th century, according to which the will became a completely self-determining, rational power.

83228. St. Anselm's Philo/Theology (3-3-0)
An examination of the major philosophical and theological writings of St. Anselm. His Monologion, Proslogion, and Cur Deus Homo will be of central concern, but several lesser-known texts will also be read. Topics discussed in these writings include arguments for the existence of God, the divine nature, the Trinity, the Incarnation, freedom (and its compatibility with divine foreknowledge), and truth.

83239. Augustine and Anselm (3-3-0)
An introduction to the thought (philosophical and theological) of Augustine and Anselm of Canterbury. Since Augustine is one of the few intellectual forerunners mentioned by name in Anselm's main works, we shall assume that a reading of the Latin Church Father forms an indispensable foundation for any serious study of the XIC to XIC archbishop's writings. Although we shall study either at length or in briefer selections the following works in roughly chronological sequence: (Augustine) On Free Choice of the Will, On the True Religion, Confessions, On the Trinity, On the City of God, (Anselm) Monologion, Proslogion, On Truth, On Freedom of the Will, and On the Fall of the Devil, certain thematically-connected ideas will be placed in relief in order to reveal the profound coherence and continuity of the Augustinian and Anselmian speculative systems. These ideas will include Being, Truth, Mind, and Will together with associated ontological, epistemological, and ethical questions.

83240. Aquinas Moral Thought (3-3-0)
A systematic discussion of the main features of the moral teaching of Thomas Aquinas. The Summa theologiae, prima secundae and Thomas's commentary on the Nichomachean Ethics will be the principal sources.

83241. Augustine & Aquinas on Mind (3-3-0)
Aquinas' early discussion of mind displays a significant Augustinian structure that disappears by the time of his last works, a shift that can be described as a more robust Aristotelianism. This course examines the philosophical significance of that shift in Aquinas' thought, and will relate it to questions about the nature of contemporary philosophy of the mind.

83266. Hume (3-3-0)
A careful reading of the Treatise of Human Nature.

83267. Hume's Practical Philosophy (3-3-0)
Hume is not only one of the most revolutionary theoretical philosophers; in his essays he deals with many moral, economical and political questions and defends a peculiar form of liberalism. In the course, we will read the "Treatise of Human Nature" the "Inquiry concerning the Principles of Morals" and his various essays on political issues. A particular accent of the course is to probe into the connections between Hume's epistemology and anthropology and his concrete political views.

83268. Hume: Ethics & Phil of Mind (3-3-0)
An exploration of how modern philosophers in the British empiricist tradition developed new theories of moral psychology and human action. Of this work among them was the Scottish philosopher David Hume.

83269. Human Nature vs Kant Idealism (3-3-0)
This seminar compares and contrasts the philosophical aims of Hume's naturalism and Kant's transcendental idealism, with attention to the 18th-Century background of their views.

83270. Social Contract (3-3-0)
The seminar reads one or more works by a major social contract theorist. (In recent years the seminar has treated one of the following: Hobbes, Locke, Rousseau, and Rawls). The aim is to achieve a criti-
PHILOSOPHY

cal understanding of the theorist’s teaching on the relationships of individual, social, and political life. Participants are expected to take turns presenting short, tightly argued introductions to key passages with a view to focusing discussion on the principle interpretative and theoretical questions posed by the particular text under discussion.

83271. Kant
(3-3-0)
The purpose of the seminar is to become familiar with Kant's practical philosophy and particularly with its implications for political philosophy and the philosophy of history. We will start with Kant's Groundwork and the Critique of Practical Reason, which lay the foundation of his enterprise, continue with Kant's materially most important works Metaphysics of ethics and Anthropology and then deal with the smaller works on the philosophy of history and the relation between theory and practice.

83273. Kant's Third Critique
(3-3-0)An in-depth discussion of Kant's Critique of Judgment, focusing on Kant's aesthetic theory, his views on teleology, and scientific methodology. The reception of Kant's views in post-Kantian philosophy and history of science is also discussed.

83274. Kant's Philosophy of Religion
(3-3-0)
The aim of this course is to cover in some depth and detail major themes in Kant's philosophy of religion. They include: the concept of God, divine attributes, proofs for the existence of God, the moral argument for freedom, the postulates of immortality and God's existence, original sin and radical evil, atonement and divine grace, saving faith and the remarkable anti-nomy, and ecclesiology.

83501. Metaphysics
(3-3-0)
A survey of some of the main topics of metaphysics. Topics to be covered include the metaphysics of modality, mind-body problem, antirealism, and the nature of natural laws. This is the core course for metaphysics. (Each academic year)

83601. Twentieth-Century Ethics
(3-3-0)
A survey of a number of central positions and issues in contemporary ethical theory. The course will begin with an examination of the main metaethical positions developed from 1903 to 1970-intuitionism, emotivism, prescriptivism, and the various forms of ethical naturalism. This will provide a background for a discussion of issues arising from the more recent revival of classical normative theory. This is the core course for ethics. (Each academic year)

83701. Epistemology
(3-3-0)
The aim of this course is to survey and evaluate the major approaches to understanding epistemic value, viz., internalist theories such as coherence and foundationalism, and externalist theories such as reliabilism. This is the core course for epistemology.

83801. Philosophy of Science
(3-3-0)
Howard
An analysis of the distinctive character of science as a complex mode of inquiry. Competing views on the nature of scientific explanation and the ontological import of scientific theory will be discussed in the context of classical and contemporary literature.

83901. Intermediate Logic
(3-3-0)
An introduction to the basic principles of formal logic. The course includes a study of inference, formal systems for propositional and predicate logic, and some of the properties of these systems. The course will concentrate on proving some of the major results of modern logic, e.g., the completeness of first-order logic, the undecidability of first-order logic, the Lowenheim-Skolem theorems, and Goedel's incompleteness theorems.

93301. Hegel
(3-3-0)
A close study of the Phenomenology of Spirit, with special emphasis on Hegel’s epistemology and social theory.

93302. German Idealist Themes
(3-3-0)
A seminar on themes from German Idealism, focusing both on classical texts by Fichte, Schelling and Hegel, and on contemporary texts by Brandom, McDowell, etc.

93303. Contemporary Continental Philosophy
(3-3-0)
An examination of structuralist and post-structuralist developments in contemporary French philosophy.

93304. Theories of Modernity
(3-3-0)
Beginning with a survey of some social science literature on modernity and modernization, the seminar turns to Jurgen Habermas’s defense of modernity (as an “unfinished project”) and to Charles Taylor’s qualified defense. Discussion then shifts to critics of modernity, from Strauss, Voegelin, and MacIntyre to Adorno and Derrida. Some attention will also be given to non-Western critics of “Western” modernity.

93305. Heidegger
(3-3-0)
A close reading of Heidegger’s seminal work Being and Time.

93306. Husserl & Heidegger 1934-38
(3-3-0)
This seminar will focus on the task of evaluating the development of the thought of Husserl and Heidegger in the middle 1930s in light of their respective alterations of their prior accounts and the mutual theoretical conflicts that result.

93307. Heidegger and Praxis
(3-3-0)
In recent years there has been much debate concerning Heidegger’s politics. Although important, the controversy has often had the effect of impeding access to Heidegger’s philosophy and its implications. One of the larger issues often obscured is this: What is the relation between philosophy and politics, between theory and praxis? How can philosophy and praxis enter into a relationship which is mutually enriching while preserving their respective integrity? The seminar explores Heidegger’s philosophy with an accent on his contributions to “practical philosophy” (including ethics and politics). Following a close reading of some of Heidegger’s key texts - from (parts of) Being and Time to the Letter of Humanism and On the Way to Language - the seminar turns to some assessments of the “practical” implications of his thought in our time of globalization, technological dominance, and civilizational conflict.
PHILOSOPHY

93313. Pragmatism (3-3-0)
After some introductory reading from contemporary pragmatism (Rorty, West, Putnam, Brandion, etc.) the course turns to representative basic texts of classical pragmatism (Prizoe, James, and Dewey) to determine the roots of pragmatism so as to understand this perspective and assess the claims of contemporary positions to this designation.

93314. Foucault (3-3-0)
A survey and assessment of Foucault’s philosophical project, through a reading and discussion of some of his major works: The History of Madness, The Order of Things, Discipline and Punish, and The History of Sexuality.

93315. Searle (3-3-0)
An examination of the work of John Searle. Topics to be addressed include the philosophy of action, philosophy of mind, “social reality,” the nature of reference, speech acts, and others.

93316. The Philosophy of Donald Davidson (3-3-0)
A seminar focusing on Donald Davidson’s work in four broad areas: mind, cause, knowledge, and the subjective. To be read are Davidson’s central papers on topics such as: mental anomolism and mental causation, interpretation theory and the rationality assumptions (the principle of charity), the possibility of incommensurable conceptual schemes, the coherence theory of knowledge, self-knowledge and first-person authority.

93317. Postmodern Analytic Philosophy (3-3-0)
A study of several philosophers (Richard Rorty, Charles Taylor, Bernard Williams, Harsha Nussbaum) who combine an analytic commitment to clarity and argument with an interest in the history and critique of modern thought.

93318. Gadamer & Charles Taylor (3-3-0)
An examination of the work of two leading thinkers in the field of interpretive theory: Hans-Georg Gadamer and Charles Taylor. While Gadamer is recognized as the preeminent philosopher of “hermeneutics,” Taylor has underlined the role of understanding/interpretation both in the history of political thought and in the practice of the social and human sciences. The seminar will focus on selected writings of the two thinkers including Gadamer’s Truth and Method and Taylor’s Philosophical Papers.

93319. Philosophical Arguments (3-3-0)
This course will reflect on the nature of arguments for philosophical claims in contemporary analytic philosophy. We will proceed by close readings of key articles in current debates on metaphysical, epistemological, and ethical topics.

93401. Topics in Philosophy of Religion (3-3-0)
A seminar focusing on various topics in philosophy of religion. Recent topics have included ethics, religious epistemology, and religion and politics.

93402. Philosophy and Christian Theism (3-3-0)
How, if at all, does Christian belief bear on the traditional concerns of philosophers? Is there such a thing as Christian philosophy? After considering the bearing of some common views of faith and reason on these questions, we turn to more specific questions in epistemology, ethics, and philosophical anthropology.

93403. Classical Philosophy of Religion (3-3-0)
A critical examination of some classical philosophical theories of religion. The central focus of the course will be issues concerning justification and explanation in religion.

93404. The Problem of Evil (3-3-0)
This seminar is both an examination of the argument from evil and an introduction to current philosophical thinking about the argument. Also discussed is the larger topic of “the problem of evil,” how that problem should be formulated and what the relation is between this problem and the question: How should theists respond to the argument from evil?

93406. Divine Providence (3-3-0)
An examination of the view of providence offered by the proponents of middle knowledge, and the objections raised against this Molinist view by both Thomists and contemporary analytic philosophers.

93407. Divine Action in the World (3-3-0)
A look at a number of topics having to do with divine action in the world. Among those topics will be the following: the nature of causation, occasionalisms vs. secondary causes, miracles, the nature of natural laws (if there are any), whether all laws supervene on quantum mechanics, the connection of concepts of determinism with conceptions of law, etc.

93410. Phil/three Metaphysics of Creation (3-3-0)
How does free creation challenge a reigning worldview? What key philosophical issues are at stake, and why? We shall trace the debate that ensued among Jewish, Christian, and Muslim thinkers, beginning with al-Farabi and Ibn Sina, and then filtered through Moses Maimonides to Aquinas. By exploring their attempts to secure the primacy of actuality over possibility, in their efforts to formulate the creator as a cause-of-being-a notion novel to the Greeks and apparently less than intelligible to moderns—we hope to unveil the specific challenges which classical and contemporary attempts to formulate the creator/creature rela-

tion pose to conventional philosophical discourse, suggesting a relation between faith and reason more internal than often suspected.

93502. Creation and Freedom (3-3-0)
Modern western notions of freedom equate freedom with choice and exalt “doing what I wanna do”—something already exposed by Socrates as effective bondage to our endless needs. When freedom turns out to be bondage, and demands exploitation of other humans and of the earth to satisfy its demands, something seems wrong! We shall examine classical and modern sources to highlight the contrast, locating the signal difference in the presence (or absence) of a creator.

93503. Freedom and Responsibility (3-3-0)
An examination of recent work on freedom, determinism, and moral responsibility, beginning with Peter van Inwagen’s An Essay on Free Will.

93504. Being (3-3-0)
A seminar on ontology or the philosophy of being, examining such questions as the nature and meaning of existence and being, the interpretation of the so-called existential quantifier, non-being, the ontology of fiction, the distinction between the abstract and the concrete, nominalism and realism, the metaphysics of possibility and necessity, the nature of composite and enduring objects, the concept ofousia or substance, and the question why there should be anything at all.

93505. Time and Persistence (3-3-0)
An exploration of central issues in the philosophy of time, with special emphasis on the presentism/four-dimensionalism debate and the tenser/detenser debate.

93506. Realism and Anti-Realism (3-3-0)
An examination of the debate at the intersection of metaphysics and the philosophy of language between realists and anti-realists by focusing on the work of four important Anglo-American philosophers, Dummett, Quine, Putnam, and McDowell.

93507. Topics in Philosophy of Mind (3-3-0)
An examination of both standard and very recent treatments of mental representation and consciousness and an exploration of the various connections that may or may not exist between the two.

93508. Subjectivity & the Self (3-3-0)
A seminar focusing on some central issues concerning self, subjectivity, and agency. Topics include: the subjective/objective contrast, types of subjectivity, self-reference and self-awareness, agency and subjectivity, the objective and subjective perspective in action explanation, and the implications of subjectivity for the mind-body problem.
120

A course investigating the relationship between the concepts of Love, Justice & human flourishing.

93509. Physicalism and the Mind
(3-3-0)
An examination of the nature, motivation, and present status of the contemporary physicalist program, with special attention to the question whether and to what extent, physicalism is successful in accommodating mentality (consciousness, intentionality, subjectivity, and normativity).

93510. Agency, Action and Action Explanation
(3-3-0)
A discussion of questions such as: What is it to be an agent? What is an action? Are actions explained or understood causally or nomologically, or in some other distinctive ways? What roles do “reasons” play in explaining actions?

93602. Contemporary Ethics
(3-3-0)
An examination of key issues in contemporary ethics. Readings will vary from year to year but will be drawn from the most influential contemporary work in moral philosophy.

93603. Virtue & Practical Reasoning
(3-3-0)
An examination of virtue and ethics and one of the major objections to it, i.e. that it cannot guide action.

93604. Locke’s Moral Philosophy
(3-3-0)
A careful, evaluative reading of Locke’s “Letter Concerning Toleration,” his “Second Treatise on Civil Government,” and his “Questions Concerning the Law of Nature,” as well as a more cursory look at his “Some Thoughts Concerning Education.”

93605. Ethical Intuitionism and Particularism
(3-3-0)
A consideration of epistemological issues in ethics through a reading of newly published books by Robert Audi on ethical intuitionism and Jonathan Dancy on particularism.

93606. Ethics and Risk
(3-3-0)
An investigation of classical ethical papers, all in contemporary, analytic, normative ethics, that attempt to develop the ethical theory necessary to deal with legitimate imposition of risk of harm.

93607. Advanced Biomedical Ethics
(3-3-0)
An advanced readings course on current topics in Biomedical Ethics. Topics vary according to interests of students.

93608. Love, Justice & Flourishing
(3-3-0)
A course investigating the relationship between the concepts of Love, Justice & human flourishing.

93609. Development of Moral Doctrine
(1-1-0)
An examination of how Catholic moral doctrine has developed in specific areas, viz. marriage and divorce; religious liberty; slavery; and usury. Attention will also be given to more general theory on the development of doctrine in the Catholic Church.

93610. Justice
(3-3-0)
An attempt to bring together the philosophical and theological literature on justice. A focus of the course will be on the concepts of human justice and God.

93611. Political Liberalism and Religion
(3-3-0)
A consideration, from the point of view of philosophy and legal theory, of whether religious arguments ought to be excluded from political debate on certain issues.

93612. Nature and Modern Democracy
(3-3-0)
From 1951 to 1953, the University of Chicago Press published three sets of the Walgreen Lectures dealing with the intellectual basis of various twentieth-century challenges to democracy. These three books - Yves Simon’s Philosophy of Democratic Government, Leo Strauss’s Natural Right and History and Eric Voeglin’s The New Science of Politics -- have functioned to outline three highly influential and overlapping approaches to defining the crisis of modern democracy and to restoring viable democratic foundations. This seminar-style course focuses on the reading and discussion of these books.

93613. Political Philosophy
(3-3-0)
An exploration of various ethical questions raised by terrorism through an evaluation of competing conceptions of justice. Some questions to be considered include: How should we understand the terrorism that the United States opposes? Is it something only our enemies have engaged in or have we ourselves and our allies also engaged in terrorist acts? Is terrorism always wrong, or are there morally justified acts of terrorism?

93614. Theories of Law
(3-3-0)
What is law? What constitutes a just law? Is there any universally valid, moral foundation for law: human rights, natural law, a categorical imperative, etc.? Or is law purely positive, a product of the will of those possessing political power, its justice merely a matter of following the established procedures? These questions constitute the core of this seminar. We will focus on the contemporary debates on these issues among legal theorists, in particular H.L.A. Hart (The Concept of Law) and John Finnis (Natural Law and Natural Rights), preparing to understand them better through careful study of Thomas Aquinas’s writings on law and justice.

93615. Aesthetics
(3-3-0)
A consideration of some of the fundamental questions in aesthetics and philosophy of art, e.g., the nature of aesthetic representation, expression in art, the concept of beauty, what distinguishes art from ‘mere things’, the structure and function of imagination.

93616. Philosophy and Literature Seminar
(4 -0- 4)
This intensive four-credit seminar is the introduction to the concentration in philosophy and literature and will pursue interdisciplinary approaches to literary, theoretical and philosophical texts.

93802. Scientific Realism
(3-3-0)
A study of the criticisms, defenses, and explications of scientific realism in the writings of van Fraassen, Putnam, Fine, Hacking, Laudan, Psillos, Kukla, and Ganson.

93811. History of the Philosophy of Science
(3-3-0)
Focus on Aristotle, Bacon, Descartes, Galileo, Newton, Vico, Whewell, and Poincaré. The connections between theory of science and epistemology will be emphasized, as will the influence of metaphysics upon the origins of science.

93812. History of the Philosophy of Science 1750 to 1900
(3-3-0)
The second half of the history of “classical” philosophy of science. Themes: the epistemic status of scientific knowledge-claims; the presuppositions, techniques, and modes of inference appropriate to natural science; the ontological status of scientific constructs. We shall begin with Reid and Kant, go on to Comte, Whewell and Mill, and end with Mach and Poincaré.

93813. Leibniz, Newton, and Kant's First Critique
(3-3-0)
A close examination of central aspects of Kant’s Critique of Pure Reason, considered as an attempt to resolve tensions between the model of intelligibility exemplified by Newton’s physics and the model of intelligibility articulated in Leibniz’s Metaphysics.

93821. Science and Social Values
(3-3-0)
A consideration of such questions as: Should science be value free, or should it be shaped by the needs and ideals of the society that supports it? If the former, how can scientists shaped by society contribute to it, and what claim to the resources of the society can scientists legitimately make? If the latter, how can scientists still claim to be objective?
93861. Philosophy of Biology
(3-3-0)
Central issues in the philosophy of science from
the perspective of the life sciences with particular
emphasis upon topics in evolution theory and so-
ciation and upon the topic of intertheoretical
integration in the life sciences (from organic chemis-
try to cognitive neuroscience). Topics to be covered
include: teleology, reductionism and supervenience,
the biological basis of cognition, explanation, scien-
tific realism, theory change, and the critical appraisal
of alternate research strategies.

93871. Philosophy of Space and Time: Kant,
Einstein
(3-3-0)
An introduction to contemporary metaphysics and
its relation to the philosophy of science. Three top-
ics to be covered in depth are: special relativity, the
debate over relative and absolute space, and Kant’s
views on space.

93872. Interpretative Problems in Quantum
Mechanics
(3-3-0)
Intended for graduate students in physics and in the
history and/or philosophy of science who wish to
examine in some reasonable detail the roots, both
historical and philosophical, of quantum mechanics
and the profound conceptual problems to which that
theory has given rise.

93881. Theology and the Natural Sciences
(3-3-0)
A study of issues raised for Christian theology by the
rapid progress of the natural sciences over the last
few centuries.

93882. Religion and Science: Conflict or Concord
(3-3-0)
A look at one of the most interesting and important
topics of the last 500 years, the relation of the newly
emerging modern science to religious belief in par-
ticular Christianity.

93903. Topics in Philosophical Logic
(3-3-0)
This course will cover topics in the metatheory of
modal logic starting with some basic correspondence
theory and moving on to a discussion of complete-
ness and the finite modal property.

93904, 93905, 93909. Workshop in Philosophy of
Math
(3-3-0)
An ongoing research seminar in philosophical logic
and philosophy of mathematics.

93906. Philosophy of Structuralist Mathematics
(3-3-0)
Mathematics today, from geometry to number
theory, works with structures defined entirely by
their relations to one another, with no specific con-
tent. It is a philosophic challenge to see how this can
be done rigorously and what it says about ontology.
Philosophers of mathematics have proposed vari-
ous ideas about it, while hardly looking at the tools
mathematicians actually use. We will study those
tools and how they being foundations of mathe-
matics closer to practice from Dedekind to today.
We will see several philosophies of mathematics
grown from them, and several different categorical formal
foundations for mathematics including topos theory,
and compare with the structuralist ideas of Michael
Resnik and Stewart Shapiro.

93907, 93908. Philosophy of Mathematics
(3-3-0)
A seminar focusing on central topics in the philoso-
phy of mathematics.

93910. Truth and Paradox
(3-3-0)
A study of several approaches to truth and the
paradoxes. The course begins with Tarski’s classic
papers on truth, then moves on to a careful study of
Kripke’s “fixed point” approach, and some of its de-
scentants, particularly Gupta and Belnap’s “revision
theory” of truth. Barwise and Etchemendy’s approach
based on the theory of non-well-founded sets, and
perhaps McGee’s “vagueness” approach.

93911. Proposition/Fact/Truth/Reality
(3-3-0)
An examination of some of the following issues
concerning propositions: What arguments can be
given for thinking that there are propositions? Are
propositions to be taken seriously, or are they merely
convenient fictions? Are they purely theoretical enti-
ties, or are they observable in some way? What are
propositions made of? Are they necessary beings, or
are they contingent beings? Are they abstract, mind-
and-language-independent beings distinguished from
other such beings by having truth-conditions and
having them essentially? Are truth/falsity funda-
mentally and characteristically properties of proposi-
tions? How do propositions relate to fact?

96697. Directed Readings
(0-0-0)
Readings and discussion of chosen philosophical
texts under the personal supervision of a member
of the graduate faculty.

98699. Research and Dissertation
(0-0-0)
Required of students in residence engaged in full-
time dissertation research.

98700. Nonresident Dissertation Research
(1-1-0)
For doctoral candidates not in residence while work-
ing on the dissertation. Required to maintain degree
candidacy.

**Upper-level Undergraduate Courses**

In addition to the courses listed above, certain cour-
ses offered in the department’s undergraduate major
program are open to graduate students for credit or
audit. Such 40000- and 50000-level courses may
be recommended to students whose undergraduate
backgrounds are lacking in certain respects.
PHILOSOPHY  ROMANCE LANGUAGES AND LITERATURES

Alfred J. Freddoso, the John and Jean Oesterle Professor of Thomistic Studies. B.A., St. John Vianney Seminary, 1968; Ph.D., Univ. of Notre Dame, 1976. (1976, 1979)

Gary M. Gutting, Professor and Fellow in the Nanovic Institute for European Studies. A.B., St. Louis Univ., 1964; Ph.D., ibid., 1968. (1969)

Janet Kourany, Associate Professor B.S., Columbia Univ., 1965; Ph.D., ibid., 1977. (2000)

Michael J. Loux, the George N. Shuster Professor of Philosophy. B.A., College of St. Thomas, 1964; M.A., Univ. of Chicago, 1965; Ph.D., ibid., 1968. (1968)

A. Edward Maniates, Professor. B.S., Univ. of Notre Dame, 1953; A.M., St. Louis Univ., 1956; Ph.D., ibid., 1961. (1959)

Ralph M. McNerny, the Michael P. Grace Professor of Medieval Studies. B.A., St. Paul Seminary, 1951; M.A., Univ. of Minnesota, 1952; Ph.L., Univ. Laval, 1953; Ph.D., ibid., 1954. (1955)

Rev. Ernan McMullin, the John Cardinal O’Hara Professor Emeritus of Philosophy. B.Sc., National Univ. of Ireland, 1945; B.D., Maynooth College, 1948; Ph.D., Univ. of Louvain, 1954. (1954)

William M. Ramsey, Associate Professor. B.S., Univ. of Oregon, 1982; Ph.D., Univ. of California, San Diego, 1989. (1989)

Michael C. Rea, Associate Professor. B.A., Univ. of California at Los Angeles, 1991; M.A., Univ. of Notre Dame, 1994; Ph.D., ibid., 1996. (2001)

Kristin Shrader-Frechette, the F. J. and H. M. O’Neill Professor of Philosophy, Concurrent Professor of Biological Sciences, and Fellow in the Joan B. Kroc Institute for International Peace Studies (on leave spring 05). B.A., Edgecliff College, Xavier Univ., 1967; Ph.D., Univ. of Notre Dame, 1971. (1998)

William D. Solomon, Associate Professor and the W. P. and H. B. White Director of the Center for Ethics and Culture. B.A., Baylor Univ., 1964; Ph.D., Univ. of Texas at Austin, 1972. (1968, 1977)

Peter van Inwagen, the John Cardinal O’Hara Professor of Philosophy. B.S., Rensselaer Polytechnic Inst., 1965; Ph.D., Univ. of Rochester, 1969. (1995)

Romance Languages and Literatures

The Program of Studies

The Department of Romance Languages and Literatures offers an M.A. degree in French and Francophone Studies, Italian Studies, and Iberian and Latin American Studies. The primary aim of the master’s program is to provide students with a comprehensive background in the literary and cultural achievements of French-, Italian-, and Spanish-speaking countries, both separately and in relation to each other. Additionally, the master’s program may, with the permission of the department, include advanced courses in related areas of other disciplines, such as art, English, government, history, international studies, music, philosophy, psychology, and theology. Indeed, in the Italian Studies program, such allied courses are considered an integral component of the student’s preparation. This interdisciplinary and comparative approach to the Romance literatures is a hallmark of the master’s program. The various courses of study provided will, in most instances, lead to a career in teaching and scholarship, but they may also serve as fundamental training for those candidates who plan to enter professions where a knowledge of Romance languages plays an auxiliary role.

Students interested in pursuing the Ph.D. in Literature with a focus on French and Francophone, Iberian and Latin American, or Italian studies as a primary field should consult the Ph.D. program in literature listing in this Bulletin for further information.

Admissions

Graduate study in French and Francophone Studies, Italian Studies, or Iberian and Latin American Studies assumes a prior undergraduate major or its equivalent in the respective field. All applicants are required to take the Graduate Record Exam; in addition, if English is neither the applicant’s native language nor language of instruction, the applicant must also submit TOEFL scores. In addition to the materials required by the Graduate School, the applicant should submit a writing sample and an audio-cassette tape to demonstrate the applicant’s ability in the target language; if the applicant is a non-native speaker of English, an audiocassette tape in English should be forwarded as well.
General Requirements

The master’s programs encourage the student to work closely with his/her adviser to design a course of study to suit individual needs, interests, and future goals. All candidates for an advanced degree are expected to take a minimum of 30 credit hours of courses in their field of specialization, including "Introduction to Literary Criticism" and a graduate course in comparative Romance literature.

During the second semester of the first year of graduate study, the student must pass an oral qualifying examination. The master’s candidate will choose from a selection of texts and must demonstrate competency in analyzing a literary text in the target language before the graduate faculty. At this time, faculty members will discuss and evaluate the student's performance in the master's program.

Before taking the comprehensive written examination at the end of the second year, the student must demonstrate competency in a second foreign language by passing a reading exam or through successful completion of appropriate course work.

Students preparing for a career in teaching have the opportunity to teach several language courses before completion of the master’s degree. A preliminary workshop, “Methods of Foreign Language Teaching” and “Practicum in Teaching” are required of all graduate teaching assistants.

Program in French and Francophone Studies

Course requirements. All candidates for a master’s degree in French and Francophone Studies are required to take a minimum of 30 credit hours or 10 courses, in addition to the required courses in pedagogy for teaching assistants (if applicable). "Introduction to Literary Criticism,” required of all students, is taken during the first semester of residence. In addition, the minimum of 10 courses includes at least six courses in French and Francophone literature and one course in comparative Romance literature. Two courses may be in a second national language or in an allied field; students taking both courses in the same national language or in comparative literature will be designated as having fulfilled a minor in that field. Occasionally, at the invitation of the program faculty, these two courses may instead be fulfilled by writing a master’s thesis under the direction of a faculty member in the department. Two of the 10 courses may be at the 40000 level.

Comprehensive Master’s Examination. The written master’s examination is four hours in length and covers the following areas: Medieval, Renaissance, 17th and 18th centuries, 19th century and 20th century. The exam tests the candidate’s knowledge of two areas of concentration and competency in the remaining fields.

Combined B.A./M.A. Program in French and Francophone Studies. The Department of Romance Languages and Literatures offers its majors in French the opportunity to participate in its graduate program through a combination B.A./M.A. degree in French. This program requires students to complete a first major in French (i.e., at least 30 hours of course work) during the normal four-year undergraduate period, followed by a total of 30 credit hours of graduate courses taken during the fourth and fifth years in residence. Six credit hours will be counted toward both the undergraduate and the graduate degrees. During their senior year, participants in this program complete two graduate courses, take the qualifying exam given to all first-year graduate students, and apply to the Graduate School for admission during the spring semester. B.A./M.A. students are eligible for a teaching fellowship during their fifth year that includes a tuition waiver and a generous teaching stipend. Well-qualified students who are interested in this program should contact the director of graduate studies or the graduate coordinator in Italian Studies at the beginning of their junior year.

Program in Iberian and Latin American Studies

Course requirements. All candidates for a master’s degree in Iberian and Latin American Studies are required to take a minimum of 30 credit hours or 10 courses. "Introduction to Literary Criticism,” required of all students, is taken during the second semester in residence. The minimum of 10 courses includes at least six courses in Iberian and Latin American literature and one course in Comparative Romance Literature; when appropriate, a course in art, history, philosophy, or another allied field may substitute for the Comparative Romance Literature course with permission. Two of the 10 courses may be at the 40000 level.

Comprehensive Master’s Examination. For the final written examination, the student chooses six of eight fields in which to be examined. The fields include: medieval, Golden Age, 18th- and 19th-century peninsular, 20th-century peninsular, colonial, Spanish American, Independence through Realism/Naturalism, “modernism” through the Avant Garde, and contemporary Spanish American. For the two fields not examined, the student must demonstrate competency through successful completion of appropriate course work.

Combined B.A./M.A. Program in Iberian and Latin American Studies. The Department of Romance Languages and Literatures offers its majors in Spanish the opportunity to participate in its graduate program through a combination B.A./M.A. degree in Spanish. This program requires students to complete a first major in Spanish (i.e., at least 30 hours of course work) during the normal four-year undergraduate period, followed by a total of 30 credit hours of graduate courses taken during the fourth and fifth years in residence. Six credit hours can be counted toward both undergraduate and graduate degrees. During their senior year, participants in this program complete two graduate courses, take the qualifying exam given to all first-year graduate students, and apply to the Graduate School for admission during the spring semester. B.A./M.A. students are eligible for a teaching fellowship during their fifth year that includes a tuition waiver and a generous teaching stipend. Well-qualified students who are interested in this program should contact the director of graduate studies or the graduate coordinator in Spanish at the beginning of their junior year.
Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

While an individual course may not be offered each year, courses that cover the area of specialization are normally offered within the two years that it takes to complete the degree requirements.

Romance Literatures (LLRO)

60085. Development of Multimedia Materials for Language Teaching
(3-3-0)
This course investigates the parameters involved with multimedia materials development, explores second language acquisition (SLA) research and its impact on language teaching, and analyzes and critiques textbooks and other teaching materials. Participants are asked to write a prospectus, including rationale, audience, methodology, and sample materials.

61075. Practicum in Teaching
(1.5-1.5-0)
This weekly practicum is designed for graduate students who serve as Teaching Assistants in the Department of Romance Languages. The course focuses on the development of organizational and presentation skills needed to excel as a foreign language teacher. Students carry out micro-teaching projects and collaborate to develop a portfolio of their own activities based upon the principles learned in the course.

63050. Introduction to Literary Criticism
(3-3-0)
This course provides extensive coverage of the different issues and approaches in the field of literary criticism and literary theory while also affording the opportunity for in-depth examination of some of the questions raised by these approaches. It begins with a consideration of Saussure’s Course in General Linguistics, and observes how concepts gleaned from this approach are utilized in contemporary theories of language teaching, and analyzes and critiques textbooks and other teaching materials. Participants are asked to write a prospectus, including rationale, audience, methodology, and sample materials.

63762. Immigrant Voices in Contemporary Brazilian Literature
(3-3-0)
This course will trace the history of Brazilian cinema and the development of film culture from the arrival of Edison and the Lumières to the fall of the Fascist regime. For the early period, topics will include: the cinema of attractions and the transition to narrative cinema; film genres and film style; comedies, historical spectacles, melodramas; the discourse of the author; divismo; distribution and exhibition practices; cultural reception: literary intellectuals and the historical spectacles, melodrama; the discourse of the author; divismo; distribution and exhibition practices; cultural reception: literary intellectuals and the history of cinema literature: early film criticism, film theory, and “film fiction.” For film in Italy between the wars, topics will include: the transition to sound and the questione della lingua; the rebirth of the film industry and discourses of national identity; film comedy, melodrama, and spectacle; Hollywood in Fascist Italy; film magazines and movie-fan culture; the origins of cinema literature: early film criticism, film theory, and “film fiction.” For film in Italy between the wars, topics will include: the transition to sound and the questione della lingua; the rebirth of the film industry and discourses of national identity; film comedy, melodrama, and spectacle; Hollywood in Fascist Italy; film magazines and movie-fan culture; the origins of cinema literature: early film criticism, film theory, and “film fiction.”

63928. Literature of Madness and Altered State
(3-3-0)
This course will examine the literary representation of the alteration of consciousness through madness, alcohol, drugs, or other means such as metamorphosis or the proximity of death. The investigation of complex and original configurations of subjectivity and intersubjectivity, and the analysis of unusual experiences of time and space, will afford an explicit formulation of the manner in which the culture of the West has posed the question: “Who am I?” The role of literature and art in this interrogation will also be considered. Texts by Euripides, de Quincey, Balzac, Baudelaire, Nerval, Maupassant, Dostoevsky, Kafka, Mann, Corrázar, Fitzgerald, Beckett, Blan- chot, and Artaud and perhaps a film by Polanski. Secondary readings in Freud, Deleuze, Lacan and Foucault.

63941. Transatlantic Literature and the History of Travel
(3-3-0)
This course approaches early modern Europe and its interactions with the Americas through the lens of a theoretical and practical preoccupation with the history and literature of travel. We will begin with a preliminary theoretical part focused by two primary texts (Gilgamesh and Italo Calvino’s Invisible Cities) together with selected theoretical writings (E. Leed, C. Kaplan, D. McCannel, T. Todorov). A “cartography and literature” section dedicated to cartographical and literary sources documenting the transition from medieval to modern (“Atlantic”) travel will follow: medieval mappamundi, “Dante’s Ulysses,” Boccaccio’s “De canaria,” Petrarca “viator,” portolan charts, Ptolemy’s Geografía. The balance of the course will be dedicated to the study of a series of early modern Transatlantic “autors,” including Columbus, Vespucci, Van de Caminha, Antonio Pigafetta, Luís de Camões, Jean de Léry, Philip Sidney, the Inca Garcilaso de la Vega. Discussion of primary texts will be complemented by an anthology of critical readings to include selections from Tom Conley (The Self-Made Map), Stephen Greenblatt (Marvelous Possessions), David Harvey (Spaces of Hope) Frank Lestringant (Mapping the Renaissance World), Tzvetan Todorov (The Conquest of the New World), Michel de Certeau (The Writing of History), and Roland Greene (Unrequited Conquests) among others. Participants in the seminar are invited to develop a research paper based on sources in their primary “national” literary field but with a significant “transatlantic” comparative and/or theoretical component.

63948. Film and Literary Interactions
(3-3-0)
The historical interactions of film and literature in a broadly comparative and theoretical framework.

63965. Fantastic: Theory and Practice
(3-3-0)
A theoretical and practical approach to the theme of the fantastic in literary texts produced in Spanish-speaking America.
63990. Luso-Brazilian Literature and Society (3-3-0)
This course will focus on questions of national identity in the Luso-Brazilian world. We will examine how social and cultural issues are perceived, conceptualized, represented, and understood in and by literature. The course will pay particular attention to how literature depicts important human problems such as gender and race relations, the crafting of national identity and national heroes, class conflict, family structure, and some ideological values such as success, love, happiness, fairness, misfortune, destiny, honesty, equality, and faith. Authors to be studied will include Manuel António de Almeida, Machado de Assis, Jorge Amado and Guimarães Rosa, on the Brazilian side, and Miguel Torga, João de Melo, José Saramago and Lídia Jorge, on the Portuguese side. Conducted in English with readings in Portuguese or English (discussion group available in Portuguese). Requirements will include active class participation, two oral presentations, and two papers.

63995. Dictatorship in Luso-Brazilian Fiction and Film (3-3-0)
This course explores the role of the dictator as painted in popular fiction and film production.

66000. Directed Readings (3-3-0)
Specialized reading related to the student's area of study.

68599. Thesis Direction (0-0-0)
For students doing thesis work for a research master's degree.

68600. Nonresident Thesis Research (1-1-0)
For master's degree students working in absentia.

French Studies (ROFR)

63050. French Graduate Reading (0-3-0)
A course designed to prepare students for the Graduate Reading Examination. No prerequisites. Open to undergraduate students by permission of the chair.

63075. Teaching Methods II (1.5-1.5-0)
This course is only open to Graduate Teaching Assistants in French in the Department of Romance Languages and Literatures. It will continue to prepare Teaching Assistants to teach elementary French courses. It will cover basic teaching techniques/methods used in the French curriculum, course management, as well as test design and evaluation techniques.

63100. Introduction to Old French (3-3-0)
This course is designed to be an introduction to the language and dialects of medieval France, including Anglo-Norman. Readings will include texts written between the twelfth and the fourteenth centuries, such as the Lais of Marie de France, trouvére poetry, the prose Lancelot, Machaut, and Froissart.

63115. Lyric and Narrative in Medieval French Literature (3-3-0)
A study of narrative transformations of the themes of the courtly lyric in the 13th and 14th centuries.

63118. Visions and Miracles: Religious Literature of Medieval France (3-3-0)
One of the themes of the course will be the overlap between sacred and secular, and the appropriation of secular genres by religious writers.

63220. Lyric Poetry of the Renaissance (3-3-0)
An in-depth study of the oeuvre of one or two poets (e.g., Du Bellay), including non-amatory poetry.

63222. Love Poetry of the Renaissance (3-3-0)
An in-depth reading of the love lyrics of Ronsard or Maurice Scève, particularly as they relate to the Italian Petrarchist tradition.

63316. Pascal (3-3-0)
An in-depth investigation of the scientific, polemical, and apologetic works of Blaise Pascal.

63324. Poets on Poets in Poetry (3-3-0)
In examining the poet as thematic subject of the poem, we will have occasions to read from the works of DuBellay, Ronsard, Hugo, Baudelaire, Verlaine, Valéry et al., as well as offerings from lesser known contemporary writers. The course will, therefore, serve as both a wide-ranging survey of French poetry and as a forum for close reading.

63415. French Enlightenment and the Terror (3-3-0)
This course focuses on great 18th century writers’ influence on the French Revolution.

63601. Literature of the Fin-de-Siècle and the Belle Époque (3-3-0)
Prose and poetry by Huysmans, Rachilde, Noailles, Mallarmé, Barrès, Gide, Proust, Valéry, and Colette, within the context of aesthetics at the turn of the 20th century. Excerpts from the writings of Schönberger, Nietzsche, and Bergson. Discussions of music (Wagner, Debussy) and dance (Duncan, Diaghilev).

63617. Baudelaire (3-3-0)
The purpose of this course will be to undertake a sustained and in-depth study of Baudelaire's poetic and critical works. Our goal will be to arrive at an understanding of Baudelaire's aesthetics that is both detailed and broad. Special attention will be given to his situation with respect to French Romanticism. Several representative secondary works will be considered as well.

63731. Proust: A World Lost and Regained (3-3-0)
Considered by many to be the greatest French novelist of the twentieth century, Marcel Proust remains vastly influential to this day. Not only did he recover a world through his creative exploration of memory, but he also established a new type of novel in which poetic prose alternates with the criticism of art, history, society, politics, and psychology. The semester will be dedicated to reading four volumes from Proust's monumental work, A la recherche du temps perdu, along with some of the most important critical texts written on Proust and La Recherche. Classes conducted in French.

63870. Shifting Tableaux of "Caribbeanness": Postcolonial Discourses in French Caribbean Literature. (3-3-0)
This seminar will explore the particular contributions of the French Caribbean to 20th-century postcolonial theory and criticism. Topics include the early modern imagining of "the uncivilized island savage," postcolonial rearticulations of "Caribbean-ness," and how race, gender, class, and sexuality complicate the term "postcolonialism" in the context of the Caribbean.

63952. Intertexts: France and North Africa (3-3-0)
This course will explore textual relations between French and North-African literary works as one possible opening onto inter-cultural dialogue. We will first look at French writers and artists who visited or resided in Morocco and Algeria from the early nineteenth through the late twentieth centuries and who were seemingly guided by an aspiration to understand the cultures they encountered. We will examine aesthetic representations as well as the travel diaries and correspondence of painters such as Eugène Delacroix, Théodore Chass?riau, Eugène Fromentin, and Henri Matisse; the travel narratives of Fromentin (Une année dans le Sahel), Pierre Loti (Au Maroc), and Isabelle Eberhardt (excerpts from Ecrits sur le sable); short stories by Eberhardt, and novels by Albert Camus (L'Exil et le royaume), J.M.G. Le Clezio (Désert), Michel Tournier (La Goutte d'or), and Didier Van Cauwelaert (Un aller simple). In the latter part of the semester we will explore North-African texts that respond in some way to the works previously examined. Writers will include the Algerians Assia Djebar (Femmes d'Alger dans leur appartement, L'Amour la fantasia) and Malik Mokeddem (Le Siècle des sauterelles), as well as the Moroccans Driss Chraibi (Le Passé simple) and Tahar Benjelloun (Cette aveuglante absence de lumière). Studies by Edward Said (Orientalism) and Fatimah Mernissi (Beyond the Veil: Male-Female Dynamics in a Modern Muslim Society), among others, will enable us to approach Islamic culture as well as the issues of French colonialism and the condition of women in North Africa. Discussions conducted in French.
63953. Discourse & Women in Francophone Literature (3-3-0)
A characteristic trait of feminine Francophone literature in sub-Saharan Africa is the breaking of silence by women in order to affirm their self-reliance. This course contrasts the narrative differences between male and female African writers in Francophone sub-Saharan Literature and deals with women’s social roles in the material transformation of post-colonial Africa.

66000. Directed Readings (0-0-0)
Specialized reading related to the student’s area of study.

76000. Directed Readings (0-0-0)
Specialized reading related to the student’s area of study.

78599. Thesis Direction (0-0-0)
For students doing thesis work for a research master’s degree.

78600. Nonresident Thesis Research (1-0-0)
For master’s degree students working in absentia.

**Italian Studies (ROIT)**

61075. Practicum in Teaching Italian (3-3-0)
This is the second part of the Italian teaching practicum required for first-year graduate students. Students will continue to practice and discuss in-class methods in conjunction with theories of second language acquisition. Emphasis will be given to teaching with multi-media technology materials and students will begin portfolio creation.

63050. Italian Graduate Reading (0-3-0)
This one semester, intensive study of Italian grammar and syntax is intended for graduate students working in the humanities or sciences, who are interested in acquiring reading proficiency in Italian.

63090. The Italian “Questione della Lingua” and the Renaissance History of the Book (3-3-0)
An advanced introduction to the history of the Italian language from Le origini to the High Renaissance with special emphasis on Dante, Petrarch, and Boccaccio during the medieval period and Bembo, Castiglione, and Machiavelli for the Renaissance.

63117. Boccaccio (3-3-0)
A textual analysis of the Decameron, with emphasis on structure and themes. Different critical approaches will be used in the analysis of individual tales, their relationships to the frames and their reflection on Boccaccio’s society.

63120. Topics in Medieval and Renaissance Literature (3-3-0)
A study of the genres, movements, and major writers of the medieval and Renaissance periods. The course varies from year to year, but past topics have included Boccaccio, lyric poetry, Dante’s Paradiso, Petrarch, Machiavelli, and Ariosto.

63211. Calvino & Levi (3-3-0)
A study of all the major novels and selected short stories of Primo Levi and Italo Calvino, the two greatest narrators of the second half of the twentieth century in Italy.

63640. Teatro del novecento (3-3-0)
An exploration of the rich tradition of theatre, drama and spectacle in modern Italian culture. Topics include: the verismo theatrical tradition of Giovanni Verga, Nino Martoglio, and Salvatore Di Giacomo; the Mediterranean tragedies of Gabriele d’Annunzio and the aesthetic and political implications of his poetics of spectacle; Futurist theatre and the European avant-garde; Pirandello’s theatrical art and European modernism(s). The variety theatre, the dialect theatre and the relationship between theatre and cinema will also be examined. Class requirements include thorough preparation of dramatic texts and critical materials, attendance at a number of film screenings outside of class, a number of brief papers and oral presentations, a midterm and a final exam.

63720. Modern Italian Poetry (3-3-0)
Addressed to graduate and advanced undergraduates, this course focuses on Italian poetry in the twentieth century. Italian poets include D’Annunzio, Pascoli, Gozzano, Marinetti, Ungaretti, Saba, Montale, Pasolini, Sanguineti, Zamottot, Rosselli, Giudici, and Luzi. The role of translation in the evolution, transmission and diffusion of modern Italian poetry will also be considered. Requirements include a 20/30 minute seminar presentation, class participation including brief reports on critical readings and a final research paper.

63824. Modern Italian Novel (3-3-0)
The development of the Italian novel from the beginning of the nineteenth century until the 1930s. Writers studied include Foscolo, Manzoni, Verga, Collodi, Palazzeschi, Pirandello, Aleramo, Svevo, and Moravia.

63905. La letteratura di viaggio: storia e critica (3-3-0)
The problematic place of travel within the context of Italian literary history and the relationship of travel to the category of the literary itself is studied in primary source texts of the medieval, Renaissance, and modern periods.

63908. Twentieth-Century Italian Women Writers (3-3-0)
This course examines the development of female discourse in novels of this century, starting with a text by Nobel Prize winner Grazia Deledda and ending with best-selling contemporary author Susanna Tamaro. We will trace and identify the subtexts and variations among women’s voices that are slowly establishing more prominent positions within the Italian literary canon. Class discussions, presentation, and writing assignments will examine themes such as childhood, adolescence, and motherhood; feminist movements in Italy and gender roles within certain historical contexts; and the varied nature of relationships between women and men, or women and other women.

66000. Directed Readings (0-0-0)
Specialized reading related to the student’s area of study.

78599. Thesis Direction (0-0-0)
For students doing thesis work for a research master’s degree.

**Portuguese Studies (ROPO)**

67000. Brazilian Immigrant Fiction (3-3-0)
An advanced level study and analysis of Brazilian letters, especially the literary production known as “unhomely” fiction or Brazilian immigrant fiction.

**Spanish Studies (ROSP )**

63050. Spanish Graduate Reading (5-0-0)
This course is designed to prepare students for the Graduate Reading Examination. No prerequisites.

63150. The Wine in Spain (3-3-0)
Despite the reputed cultural belatedness of the Iberian peninsula during the high Middle Ages, by the fourteenth century the Spanish kingdoms had caught up with their European neighbors and entered a period of general decline. The late Spanish Middle Ages is uniquely defined by the ascendency of the Trastámara, a bastard line that seizes the throne in 1369 when Enrique de Trastámara murders his half-brother, King Pedro I of Castile. The Trastámara dynasty engineers the emergence of Spain as Europe’s first modern nation-state and world empire and the construction of an orthodox, patriarchal “Spanish” and Catholic identity purified of its ethnic, religious, and political others through propaganda, conquest, conversion, colonization, expulsion, and inquisition. The foundational union of Isabel (Castile) and Fernando (Aragon) marked the culmination of the Trastámara enterprise of political legitimation, centralization, and expansion; the Catholic Monarchs brought to closure seven hundred years of Reconquest, launched Europe’s invasion of a new world, laid the foundations for Spain’s Golden Age, and
crafted the moral, political, and social recuperation of Hispania. The seminar will examine the cultural production of this complex and fascinating age — the literary, historical, religious, and political texts generated during the Transatlantic reign — in the context of nation building, the formation of a persecuted society, and the ultimately exclusionary ideology of Isabelline Spain. Texts will include a course packet of selected primary and critical texts plus: Juan Ruiz, Libro de buen amor; Don Juan Manuel, Libro del conde Lucanor, Alfonso Martínez de Toledo, El arcipreste de Talavera; sentimental romances (Griuel y Mendieba, Sierra libre de amor, Cárcel de amor), and Celestina.

63230. Cervantes and His Time (3-3-0)
A close reading of Cervantes’ Don Quijote in relation to the prose tradition of the Renaissance: nóvella, the pastoral romance, the romance of chivalry, the humanist dialogue, and the picaresque novel. We will also pay attention to the historical, social, and cultural context of the work.

63235. Autobiographical Narratives of the Golden Age (3-3-0)
A study of fictional and historical autobiography in the Golden Age with attention to the development of the genre and the social and political problems represented in such texts as Lazarillo de Tormes, Guzmán de Alfarache, El Bucolín, Estebanillo González as well as the spiritual autobiography of Santa Teresa de Jesús, the life of the soldier Alonso de Contreras, and the adventures of Catalina de Erazo, La monja Álférez.

63240. Golden-Age Theatre (3-3-0)
In this course we will read representative plays by Cervantes, Lope de Vega, Tirso de Molina, Ruiz de Alarcón and Calderón de la Barca in their historical and cultural context. The works will be studied in the light of the theatrical theory of the period as well as contemporary criticism.

63370. Nineteenth-Century Spanish Novel (3-3-0)
Two forms of literary representation in the novel from the 1840s to the 1880s: the romantic-melodramatic and the realist-naturalist form.

63422. Generation of ‘27 (3-3-0)
The Generation of 1927, known as the second Golden Age of Spanish poetry, is the name given to a group of poets who wrote during the third and fourth decades of this century. This generation is primarily represented by poets like Alberti, García Lorca, Salinas, Guillén, Cernuda, and Alexandre. Their poetry is as varied thematically and stylistically as it is innovative. One of the purposes of the course is to develop and enhance the understanding of the works they wrote and thereby develop and enhance the understanding of the hermeneutic process of reading poetry. With these aims in mind, the course will focus on the metaphorical experiments these poets introduce, their stylistic development, thematic preoccupations, their relation to the different avant-garde literary movements of the time and their personal aesthetic credos. These aspects will be studied against the intellectual and social background of their time and country.

63430. Twentieth-Century Spanish Prose (3-3-0)
A study of the development of the novel as an artistic genre in 20th-century Spain, from the Spanish-American War of 1898 to modern Spain examined within the context of the social, political, aesthetic, and intellectual crisis of the times in which they were written.

63611. de las Casas: Context/Resonance (3-3-0)
The Spanish conquest of Central and South America generated a crisis of conscience in Spanish universities and in Spain at large. People wanted to know: was the conquest justified, and if not, seeing that it could not be undone, what were the invaders to do? In this prolonged and often bitter debate, Bartolomé de las Casas (1484-1566), Dominican friar and bishop of Chiapa in Mexico, formulated what still are among the most moving and intellectually incisive arguments for the equality of all human beings. He also wrote one of the earliest comparative histories of civilization (the Apologética Historia). The task of the course is to understand the thought of Las Casas and his followers in its sixteenth century context, and then to enquire into the connections between the ideas of Las Casas and contemporary theologians of liberation, in particular Gustavo Gutiérrez.

63658. Modernization and “Modernismo” in Spanish America: A Critical View (3-3-0)
An in-depth study of processes of modernization in Latin America and the literary production, written between 1880 and 1910, as responses as well as aesthetic and ideological propositions to the socio-political transformations of the region. Special attention will be paid to the lyric production, but other aesthetic systems, such as narrative fiction (short stories and novels), and essay will be studied.

63722. Spanish-American Poetry: The Avant Garde (3-3-0)
An in-depth exploration of Spanish-American avant-garde poetry and its legacies. Emphasis will be on close readings of the texts along with recent developments in critical theory. The poets to be considered are: Vicente Huidobro, Jorge Luis Borges, Oliverio Girondo, César Vallejo, Pablo Neruda, Octavio Paz, Nicanor Parra, and José Emilio Pacheco.

63918. Nature and Latin American Identity (3-3-0)
In this graduate seminar we will trace the images and metaphors with which Spanish American writers and interested foreign travelers have described Latin American Nature. The goals of this class are primarily two: 1) to explore images of Latin American nature; 2) to understand how these images impinge on other issues, such as national identity. We will read a diverse collection of texts (by authors such as Sarmiento, Gallegos, Rezúa, Neruda, but also Humboldt and Darwin) from the 19th and 20th centuries, with a few incursions into key colonial texts (the Popol vuh, Columbus, Carvajal), as well as selected theoretical readings.

63960. Contemporary Spanish-American Poetry (3-3-0)
An overview of the major trends in Spanish-American poetry since the “vanguardia,” with an emphasis on poetics and the social inscription of the works. Authors studied include José Lezama Lima, Octavio Paz, Ernesto Cardenal, Alejandra Pizarnik, Nancy Moraín, Raúl Zurita, and others.

63970. Modern Spanish-American Novel (3-3-0)
Studies, through representative works, the modern aesthetic, cultural, and historical tendencies that characterize the 20th-century Spanish-American novel.

63975. Spanish-American Short Story (3-3-0)
An overview of the principal tendencies of short narrative in 20th-century Spanish America, as well as major trends in narratological theory. Among the authors discussed are Horacio Quiroga, Jorge Luis Borges, Julio Cortázar, Rosario Ferré, Antonio Skármeta, and Luisa Valenzuela.

66000. Directed Readings (0-0-0)
Specialized reading related to the student’s area of study.

76000. Directed Readings (3-3-0)
Specialized reading related to the student’s area of study.

78599. Thesis Direction (0-0-0)
For students doing thesis work for a research master’s degree.

78600. Nonresident Thesis Research (1-0-0)
For master’s degree students working in absentia.

Master of Arts Program

The master of arts in theology is a terminal degree for individuals who desire advanced theological training. Graduates of this program should be able to serve as theological resources in variety of settings. Recipients of this degree will have received instruction in the classical areas of theological inquiry while acquiring expertise in one.

The program serves the following constituencies:

• those seeking to teach theology at the high school level;
• those seeking to serve the church or diocese in an enhanced capacity;
• those pursuing theological training to augment their work in other professional contexts (i.e., hospitals, social work, etc.);
• those desiring personal enrichment.

Students seeking to go on for doctoral work in theology, or desiring more extensive preparation for teaching, should consider applying to the M.T.S. program.

Applicants must have GRE scores of 1500 or better, 1000 and 4/6 in the new test, and at least two three-credit courses for credit in theology or religious studies on their official transcripts.

Program Description

The M.A. in theology is a 42 credit-hour degree. M.A. students may take courses during the summer and/or academic year for credit towards their degree.

There are six areas of concentration for the M.A. in theology: biblical studies, history of Christianity, liturgical studies, moral theology, spirituality, and systematic theology.
Apart from liturgical studies, an area of concentration is normally constituted by:

- six courses in the area of concentration;
- one course each in five other areas;
- three free electives.

**Liturgical Studies**

Basic requirements (21 credits) include: Liturgical history, liturgical theology, ritual studies, Eucharist, Christian initiation, liturgical prayer, and liturgical year. Students in liturgical studies will also pursue one course each in five other areas (15 credits), and two free electives (6 credits).

Those needing a more general and flexible program of studies may pursue a general M.A. program, in which the course of study is planned in consultation with the director. The sole requirement is the inclusion of at least one course in each area of study. This may be of particular interest to those teaching theology in high school who wish to use the M.A. to enhance their effectiveness in teaching in a number of different areas.

**Comprehensive Exams**

In the last semester of course work, students should prepare five questions that they would like to explore in the comprehensive exams. These questions will guide both the student and the adviser in the construction of exam bibliographies. The student should then meet with the area adviser to refine these questions and construct her/his bibliography. A bibliography should be made up of 20 books, with 12 books from the bibliography in the area of concentration and two books from each of the other four areas. The bibliography should also contain five recent journal articles, so that students become acquainted with the journals in their fields of study. The bibliographies must be approved both by the area adviser and the M.A. director no later than one month before the student hopes to take exams. M.A. exams are given in November, April, and July. Students must be enrolled and registered for a thesis research class during the semester they plan to take their exams.

The exam board, to be chosen by the M.A. director in consultation with the area adviser, will be made up of two faculty from the area of concentration, and one faculty from another area. Students pursuing the general M.A. degree may have an exam board chosen from three different areas. The student may confidentially choose the inclusion of one member of the board (subject to availability), and the exclusion of one faculty member. Each member of the exam board will submit three questions, framed in light of the five questions proposed by the student, to the area adviser, who will then formulate five questions, and submit them to the summer M.A. director for final approval.

The comprehensive exams themselves are made up of written and oral exams. The student will be asked to answer three of the five questions during the four-hour written exams, given on the Monday of exam week. These written answers will then be distributed to the board members, and will form the basis of the 40-minute oral exam on Wednesday or Thursday of the same week. During the oral exams, questions not answered by the student on the written exam may be addressed, as may books on the bibliography and courses taken by the student. Evaluation of the student’s performance will be made on the basis of both the written and oral exams.

**Applications**

Applications to the summer M.A. program are due May 1 and must include an application form, a statement of intent, transcripts of degrees and course work, three letters of recommendation, and GRE scores. All application materials should be directed to the Graduate School.

**The Master of Theological Studies Program**

The master of theological studies (M.T.S.) is specifically designed to train graduate students for future doctoral work in the various disciplines within the study of theology. The M.T.S. is a 48-credit-hour degree designed to give students exposure to the full range of theological studies while also allowing them to develop competence in an area of concentration. Along with two years of full-time course work, the M.T.S. also includes participation in the master’s colloquium, competency in one modern language, and a comprehensive oral exam to be given at the end of the second year of course work. Biblical studies and history of Christianity also have ancient language requirements.

In order to introduce every M.T.S. student to the full range of theological education, every student in the program must take at least six credit hours in biblical studies, six in the history of Christianity, three in liturgical studies, three in moral theology, and three in systematic theology. There are five areas of concentration. Students must take at least 15 credit hours in the area of their concentration. Students may choose from a broad range of courses offered at the 500 level. They may also take Ph.D. seminars, provided they first secure the permission of the course instructor and the M.T.S. director.

**Areas of Concentration**

**Biblical Studies:** The concentration in biblical studies involves 15 credit hours in biblical studies, six in history of Christianity, three in liturgical studies, three in moral theology, and three in systematic theology. In place of electives, biblical studies students will take nine credit hours in one ancient language (Greek, Hebrew, or Latin) and nine credit hours in another ancient language.

**History of Christianity:** The concentration in history of Christianity involves 15 credit hours in history of Christianity (with the possibility of three to be taken outside the department), six in biblical studies, six in systematic theology, three in liturgical studies, and three in moral theology. Six credit hours will normal-
Comprehensive Exams

The comprehensive exams are administered toward the end of the final semester of course work. M.T.S. students are asked to submit two research papers written in their second year of courses that indicate the nature and direction of their studies. A board of three faculty, appointed by the M.T.S. director on the basis of course work taken by the student, administers a 60-minute oral exam, which explores the student's competency in the area of concentration and the student's ability to think creatively and synthetically.

Prerequisites

- a bachelor's degree
- a background in the humanities (preferably including theology or related disciplines) and/or the social sciences
- Graduate Record Examination scores with an aggregate score of at least 1800, or 1200 and 4.5/6 for the new exams

Tuition Scholarships

Students admitted to the M.T.S. program receive full-tuition scholarships for the duration of their program.

Applications

Applications to the M.T.S. program are due February 1 and must include an application form, a statement of intent, transcripts of degrees and course work, three letters of recommendation, and GRE scores. All application materials should be directed to the Graduate School.

The Master of Divinity Program

The master of divinity (M.Div.) is a professional theological degree designed to prepare students for learned and effective ministry in the Roman Catholic Church. The studies of Scripture, the history of Christian tradition, systematic theology, liturgy, and Christian ethics are joined to field experience, training in pastoral skills, and formation to form a comprehensive ministerial curriculum.

The Program of Studies

The program of studies leading to the master of divinity (M.Div.) degree normally extends over six semesters and encompasses 83 semester credits. Credit requirements are usually allocated as follows:

<table>

Field Education

Field education serves as an integral complement to the theological and pastoral education of ministry students, as well as to their spiritual formation and vocational preparation. In concert with these other dimensions of the M.Div. program, field education provides those preparing for ministry varied opportunities for acquiring ministerial skills, for integrating their ministerial experiences through theological reflection, and ultimately for developing their ministerial identities. To make these opportunities possible, field education consists of the following:

- weekly service at a ministerial site during each of the three academic years in the M.Div. program;
- regular individual supervision with an experienced mentor at the ministry site;
- weekly seminars utilizing case study method and conversations about contemporary theological and ministerial issues.

John S. Marten Program in Homiletics and Liturgics

Inaugurated in 1985 through an endowment by the John S. Marten family, this program annually offers courses in both homiletics and liturgical celebration for students whose ministry will involve the preaching of God’s word and leadership in worship. Through the Marten program, M.Div. students benefit from symposia and workshops on preaching in contemporary society, and the program occasionally hosts a visiting professor to offer additional courses in those areas. The vision and generosity of the Marten family ensure the continuance of deep spiritual renewal of local faith communities—a major thrust of Vatican II—and adds a significant dimension to theological education at Notre Dame.

Lay Ministry and Seminary Formation

The Lay Ministry Formation Program (LMFP) is integrally related to the comprehensive curriculum of students preparing for lay ecclesial ministry. Weekly formation events include participation in various forms of communal prayer, including Eucharist, and in facilitated conversation designed to foster ministerial identity, to enhance human and spiritual development, and to promote personal qualities for ministry. Both lay and seminarian formation experiences (sometimes through joint events) support students and foster authentic Christian community.

Moreau Seminary, located on the Notre Dame campus, provides for the spiritual formation of the congregation's seminarians pursuing the master of divinity degree. The Congregation of Holy Cross also offers a one-year candidate program at Moreau Seminary for college graduates who qualify and who have a strong interest and desire in taking a step toward investigating a vocation in priesthood or brotherhood in Holy Cross.

For information to assist in discernment of a vocation to the Congregation of Holy Cross, please contact the Director of Vocations at (574) 631-6385 or vocation.1@nd.edu.

Prerequisites

1. The completion of a bachelor's degree.
2. Evidence of a capacity for graduate level scholarship. Such evidence is gleaned from applicant scores on the general test of the Graduate Record Exam, from transcripts of study for the bachelor’s and any graduate degree, and from letters of recommendation from three instructors or professors.
3. At least 18 credit hours in philosophy or related disciplines, and 12 semester credits in theology or religious studies.
4. Evidence of psychological and spiritual maturity sufficient to engage in this ministry preparation program. To this end, an additional recommendation supporting the applicant’s capacity for ministerial leadership is required.
5. At least one year of full-time service work, preferably in ministry in the Catholic Church, or the equivalent.

The Application and Admission Process

Prospective students must first file a pre-application form directly with the M.Div. program, and submit an autobiography written according to a form specified by the M.Div. director.

Applications must be submitted to the Graduate School by February 1. Applicants are admitted to the program to begin studies in the fall semester only.

In addition to the statement of intent required by the Graduate School’s application, prospective students must provide a letter of intent specific to the M.Div. program, setting forth their goals for Christian ministry and detailing how the M.Div. program will assist them in meeting those goals.

Finally, a personal interview is normally required and is held at the University with the admissions committee of the M.Div. program.

To receive more information and the pre-application form, please contact:

The Doctoral Program

Doctoral studies at Notre Dame provide the opportunity for advanced study in theology through specialization in one of five areas.

Christianity and Judaism in antiquity covers four disciplines: the Hebrew Scriptures; Judaism, especially second temple and early rabbinc Judaism; the New Testament and Greco-Roman world; and other Christian sources to the early medieval period. These are frequently studied in isolation from one another; in CJA they are studied together for their mutually illuminating interrelationships. At the same time, the integrity of each discipline is respected. Judaism is explored in its own right as well as in its relationship to Christianity. Christianity is explored by itself as well as in its dependence upon Judaism and its conscious emerging distinction from Judaism. Both are explored within the larger contexts of the ancient near East and the Greco-Roman world, which are also studied in their own right.

History of Christianity explores the study of the history of Christianity in its rich complexity. The program focuses on three major periods: ancient, medieval, and Reformation-modern. The University has particularly strong library holdings and faculty resources in the ancient and medieval periods.

Liturgical studies advances the study and understanding of the worship life of the Christian church in its various traditions. The program is inspired by the conviction that liturgy, in its several and diverse manifestations, is the key to the church's identity, ethos, and orientation toward God and the world. It integrates three subdisciplines: liturgical history, liturgical theology, and ritual studies.

Moral theology/Christian ethics studies a number of subdisciplines including foundational, medical, and social ethics. The program encourages interaction with philosophical ethics. While the program concentrates on the Roman Catholic tradition, it engages and is open to a variety of traditions.

Systematic theology engages in the disciplined and critical inquiry into the major tenets of Christian faith, especially as understood within Catholicism. The program addresses a wide range of concerns including the historical development of theology, constructive issues, and comparative theology.

Course of Studies

1. Residency

The period of “residency” normally consists of two years of course work for those who have a master's degree in theology. In the rare case of a student admitted without master's level work, the period of residency is three years.

Major Fields. Within the program areas, students concentrate their course work in a major field. These major fields are defined as follows:

- Christianity and Judaism in antiquity
- Hebrew Bible and Judaism
- New Testament and early church
- History of Christianity
- Early church
- Medieval studies
- Reformation and modern studies
- Liturgical studies
- Moral theology/Christian ethics
- Systematic theology

Course Requirements. Students are expected to take 14 courses during residency: eight of these must be in the major field of study; three must be outside the major fields; and three are electives.

Language Requirements. Students are required to pass examinations in three languages, Greek or Latin, French, and German. Students in systematic theology may substitute Spanish for French or German. The level of competence required is the ability to read standard theological sources pertinent to the area of study with the aid of a dictionary. Students in the history of Christianity program must know the ancient language at an advanced level. Students in liturgical studies are required to know four languages, all at the basic level. Students in Christianity and Judaism in antiquity are required to pass examinations in five languages: one ancient at an advanced level, one ancient at an intermediate level, one ancient at a beginning level, and two modern languages. The language requirement should be fulfilled as soon as possible and must be fulfilled by the end of the second summer of residence.

Advising. When a student enters the program, the faculty member who serves as the coordinator for the area of studies will function as a preliminary adviser. During the second semester in residency, each student, after appropriate consultation, selects an adviser in his or her area of research interest.

Evaluation. At the end of each semester the entire graduate faculty of the department will evaluate the progress of students. These evaluations are designed to facilitate the progress of students through the program and to identify both strengths and weaknesses. Area coordinators write letters to the students reporting the conclusions of the evaluation. These provide more specific commendations and recommendations than course grades. If there is serious doubt about the student's ability to complete the Ph.D. degree, he or she may be asked to leave the program.

2. Independent Study

After the period of course work, students spend a period of time, normally nine months, of independent study organized around a series of topics. These topics are meant to expand the students' intellectual breadth and skills and involve matters of inquiry that extend beyond their course work. After consultation with the adviser, the student will propose a series of 10 topics, seven in the major field of study and three outside the major field. At least one of the topics in the major field will deal with the subject on which the student intends to write a dissertation. The program of independent study is approved by a committee and forms the basis for candidacy examinations.

3. Candidacy Examinations

Offered only twice a year, in October and March, the examinations are usually taken in the second semester after the two-year residency. The exams consist of three days of written examinations and a 90-minute oral examination. Successful completion of the written examinations is required for admission to the oral examination.

4. Dissertation Proposal

The dissertation proposal is to be submitted at the beginning of the semester following oral candidacy examinations.

5. Dissertation

The completed dissertation must be submitted within eight years from matriculation into the program. After approval by a committee composed of the dissertation adviser and three other readers, the dissertation is defended orally.

Prerequisites

- a bachelor's degree;
- a master's degree or the equivalent with a concentration in the proposed field of study;
- cumulative GREs in the pre-October 2002 format of at least 1800; comparable scores in the post-October 2002 format;
- facility in some of the languages required for study in the program: Greek, Latin, Hebrew, French, and German.

The graduate programs are open to all qualified students regardless of religious affiliation.

Scholarships

The doctoral program requires a full-time commitment. For this and other reasons, each doctoral student receives full funding. The funding may come from the University or an outside source. Funding is full tuition plus a stipend for five years. The University provides three funding programs: department fellowships, minority fellowships, and presidential fellowships. In addition, students receive some benefits for travel to professional conferences and summer dissertation support.
Applications
Applications to the Ph.D. program are due January 15, and must include an application form, a statement of intent, transcripts of degrees and coursework, three letters of recommendation, and GRE scores. All materials should be directed to the Graduate School. Applicants are accepted for matriculation in the fall semester only.

Course Descriptions
Each course listing includes:

- Course number
- Title
- (credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

The courses are offered regularly by the department in the course of any two-year period. They are divided into three categories: (1) master’s; (2) courses specifically for M.Div. students; and (3) doctoral courses. For a complete listing of 40000-level courses open to graduate students, please refer to the theology section in the Bulletin of Information, Undergraduate Programs.

60002. Elementary Biblical Hebrew I (3-3-0)
Prerequisite: Six hours of theology. This is a two-semester introductory course in biblical Hebrew; under normal circumstances, the student must complete the first to enroll in the second. The fall semester will be devoted to learning the grammar of biblical Hebrew.

60003. Elementary Biblical Hebrew II (3-3-0)
Prerequisite: Six hours of theology. This is the second part of a two-semester introductory course in biblical Hebrew normally offered in the Spring; under normal circumstances, the student must complete the first to enroll in the second. The fall semester will be devoted to learning the grammar of biblical Hebrew. The spring semester will be divided into two parts. For the first six weeks we will finish and review the grammar. In the remaining part of the course we will read and translate texts from the Hebrew Bible, Qumran, and Rabbinic literature. The course will focus on developing reading and comprehension skills in biblical Hebrew through the study of biblical texts. In addition, students will learn how to use reference grammars, concordances, and apparatus to the Biblica Hebraica. The course encourages students to think about the grammatical forms and their implications for biblical interpretation.

60004. Medieval Latin Survey (3-3-0)
This survey of Medieval Latin texts emphasizes literary texts, but some attention will be given to more technical writing as well.

60006. Intermediate Hebrew (3-3-0)
The course builds on the lessons learned in Elementary Hebrew and offers the opportunity to increase one’s knowledge of Hebrew by reading and analyzing passages from the Hebrew Bible. There will also be some reading selections from other texts such as the Dead Sea Scrolls.

60007. Aramaic (3-3-0)
Prerequisite: One year of Hebrew or Syriac. In addition to covering the grammar and syntax, the principal goal will be to read the biblical texts in Aramaic (Ezra 4:8-6:18; 7:12-26; Daniel 2:4b-7:28). As time permits, we will also read selections from Old Aramaic monumental inscriptions, Imperial or Achemenid Aramaic (e.g., Elephantine papyri), and Jewish literary Aramaic from the later period (e.g., Genesis Apocryphon).

60008. Greek: Euripides (3-3-0)
This course will consist of in-depth readings of selections from a number of Euripidean plays, along with a detailed examination of the dramatic, literary, religious and philosophical backgrounds against which they were composed, performed and received. We will be primarily concerned with the language and formal characteristics of the works themselves, but will attend also to the ways in which those works helped define the revolutionary intellectual milieu of late fifth-century Athens, and the methods by which they have been analyzed and explained in 19th- and 20th-century scholarship.

60009. Coptic (3-3-0)
This course introduces students to Coptic, the final descendant of ancient Egyptian. Coptic is important for an who are interested in the historical Jesus, Gnosticism, textual criticism of the New Testament, asceticism, or early Christian history. We will work our way through a grammar, and then read a selection of texts including excerpts from the Gospel of Thomas and some fragments only from the Martyrdom of Polycarp. The course is designed to enable students who have no previous training in Coptics to read simple to moderately difficult texts. Its serves to fulfill the third ancient language requirement for Ph.D. students in CJA.

60012. Advanced Greek (3-3-0)
Close reading of a selection of Greek inscriptions and literary texts that deal with aspects of Greek religion from the fifth century BCE to the second century CE. While the focus will be on the reading and understanding of Greek texts, the first half of the course will include an introduction to Greek epigraphy (pagan and Christian) as well as to epigraphical tools and resources, while the second half will center on reading selections from a number of Hellenistic authors who provide important descriptions of Greek religious practices (Plutarch, Pausanias and the Greek magical papyri). During the semester, Smyth’s Greek Grammar will be systematically read through and discussed when relevant. There will in addition be a lexicographical component of the course in which each student will prepare a study of a particular Greek lexeme.

60014. Liturgical Latin: A Workshop (3-3-0)
The workshop is intended to serve both graduate students and active scholars who wish to develop a deeper knowledge of Latin liturgical texts. It is designed to provide an experience of the genres and idiom of liturgical Latin. Note that by “liturgical texts” we mean not only liturgical texts as ordinarily understood (prayers, readings, chant-texts, hymns, etc.), but rubrics and other liturgical directives and commentaries as well. We will focus on liturgical texts associated with feast of the Purification (Candledas, Hypapante). Candlemas seems a good choice, for it furnishes the texts of Divine Office and Mass as well as those of the blessings of the candles and the Candlemass Procession. A reading knowledge of Latin is required for this course.

60101. Old Testament Wisdom (3-3-0)
As time permits, the course will include a close reading of selected texts from the Writings, (Proverbs, Job, Qoheleth, Canticle, a selection of Psalms), a study of relevant genres (proverb, parable, riddle, instruction), selected themes including the relation of wisdom to law and pre-existent wisdom, the contribution of these writings to theology, education in Israel, and early Judaism.

60102. New Testament Introduction (3-3-0)
An intensive presentation of all the major areas of study pertinent for the understanding and study of the literature of the canonical New Testament in its historical, social and literary context, as well as an introduction to the various methodologies which have been applied to the study of the New Testament, including historical criticism, form criticism, redaction criticism, source criticism, textual criticism, canon criticism, narrative criticism and social science criticism. Modules on developments and trends in the history of New Testament research and on various developments in the discipline of New Testament theology from the Enlightenment to the 21st Century will also be included.
60104. Pentateuch  
(3-3-0)  
Intended primarily for M.A., M.T.S., and M.Div. students, this course promotes close and critical reading of biblical texts and disciplined theological reflection on them. Participants will be expected to read the Pentateuch in its entirety and have a sound idea of its contents and structure. Much of the basic information needed will be acquired through reading; class meetings will concentrate on theological issues arising out of the biblical and secondary reading. Topics include the following: doctrine of creation; holiness and sin; biblical law and Christian ethics; covenant: grace and obligation; Exodus, Passover, liberation; wilderness themes: providence, guidance, institutions; community models.

60105. Introduction to Hebrew Bible  
(3-3-0)  
This course provides an overview and critical study of the Hebrew Scriptures in their literary, historical, and theological contexts. The focus will be principally on reading and gaining an informed understanding of the biblical text, but this will be done against the background of the history, literature, and religions of the magnificent civilizations in the ancient Near East. Further aspects include analysis and use of the tools of historical-critical scholarship; ancient mythology; the processes by which the Scriptures were composed; Old Testament theology; and contemporary theological issues. The course is designed to prepare students both for graduate biblical studies and for intelligent effectiveness in the contemporary church.

60106. Prophets  
(3-3-0)  
We expect to cover the historical development of prophecy in Israel and early Judaism inclusive of early Christianity. Our method of work combines survey by means of set readings and “close readings” of selected prophetic texts. Attention will be given to comparative material in ancient and other cultures and to the sociological coordinates of prophetic phenomena, including ecstacy. Participants will be invited to reflect on the theological significance of prophetic mediation and the place of prophecy in Christian life today.

60107. Redemption and Suffering: An Anceint Judgment  
(3-3-0)  
What were the theologically significant effects of the destruction of the Temple in 586 BCE and in 70 CE? Traditionally scholarship has responded by claiming that the divine revelation eventually withdrew from the Jewish tradition and that prophecy ceased. More nuanced accounts speak of a transformation from prophecy into scribalism, in which divine revelation conveyed by the prophet is replaced by an inherited and inspired text, which is read by an authorized interpreter. While revelation and inspiration persisted, there was a gradual but significant transformation in the role of the divine and of the interpretation of destruction and exile. This course studies how suffering, destruction and exile come to be recast as part of the salvation history of Judaism. We will study texts from ancient Judaism (Hebrew Bible, Dead Sea Scrolls, Pseudepigrapha, Apocrypha, Rabbinic Midrash).

60108. Wisdom  
(3-3-0)  
The first part of the course offers an introduction to biblical wisdom literature and a study of the books Proverbs, Job, Ecclesiastes, the Wisdom of Ben Sira, and Wisdom. After this comes an analysis of the Book of Psalms.

60109. The Psalter  
(3-3-0)  
The Book of Psalms will be studied from a theological perspective. The study will begin with an examination of the origins of Psalmody in ancient Israel. From there we will consider how the Psalter emerged as the prayer book of synagogue and church and how theological usage influenced its reception and interpretation. The bulk of the course will consist of a close reading of a selection of Psalms through the eyes of both modern and pre-modern interpreters.

60110. Dead Sea Scrolls and the Bible  
(3-3-0)  
The course provides an introduction to the more than 800 mostly fragmentary texts called the Dead Sea Scrolls, to the site where they were found, and to the community responsible for them. The texts and community will be studied in the context of developments within Judaism at the time. A special focus of the course will be on the contributions that the Dead Sea Scrolls have made to the study of the Old and New Testaments and of Early Judaism.

60111. Exegesis: Gospels  
(3-3-0)  
This course aims to assist students in learning to do a critical reading of a gospel, in this case, the Gospel of Matthew. The parameters of this course are: (1) critical investigation of the sources of the gospels, (2) acquaintance with the literary forms which make up the gospels, in particular the elements of the encomium, (3) the literary structure of the gospel in general and the arrangements of its parts, (4) the distinctive understandings of both God and Jesus in the gospel, and (5) knowledge of the historical and cultural background of Jesus and his interpreters. The focus will be on Matthew, but this means that Mark will also be studied, as well as the Q source and materials in Luke that impinge on Matthew (such as genealogy; birth narratives, resurrection appearances). As Virgil said about the devious Greek who tricked the Trojans to take the horse inside the city, “From one example, you know them all.” Matthew, carefully studied, equips one to read the rest.

60113. Gospel of John  
(3-3-0)  
The course will seek to improve exegetical skills, to grasp the structure of the gospel of John, and to explore John’s relationship to the letters and its function and history in the community and milieu in which it was written. The course will consider issues of genre, context, and theology, including the wisdom traditions from the gospel’s Christology, its understanding of community that affirms the autonomy of the believer, the significance of prophecy in Christology and community life, the ways the women and men participated in the community, the community’s combination of resentment toward and relatedness to “the Jews,” and their rejection of the Roman imperial order.

60114. Pauline Writings  
(3-3-0)  
An exploration of the historical Paul and his reception in the early church. The course has four basic units. First, we will reconstruct Paul’s life and explore the significance of specific events for his thought. Second, we will work through the uncorrected letters highlighting crucial issues. Third, we will attempt to explore Paul’s thought systematically. Finally, we will consider the reception of Paul by the early church in the first two centuries. We will use his ancient Receptionsgeschichte to raise the issue of his contemporary reception. The course also serves to introduce students to the critical study of ancient texts at a graduate level. This will entail the introduction and use of numerous contemporary methodologies.

60117. Old Testament Theology  
(3-3-0)  
This course will offer entry into the complexities of the Hebrew Bible with attention to the historical, literary, and theological issues that confront a critical reading of it. The course will explore the tension between historical claims made in and for the Bible on the one hand, and the interpretive, ideological voices on the other hand that move from the historical to the canonical. Students will be expected to deal with specific biblical texts as well as a broad range of critical data.

60118. Parables  
(3-3-0)  
There are thirty-five different parables attributed to Jesus in Q, Mark, Matthew, Luke, and the Gospel of Thomas. The course will introduce the study of parables and then work through individual parables. Our analysis of the parables will concentrate on the ways in which the parables change forms and meanings as they move through four different contexts: the historical Jesus, the oral telling of parables in the early church, the written parables in the gospels, and contemporary settings. We will do this by concentrating on the use of parables by the historical Jesus and by each of the first three evangelists. In the latter case we will attempt to understand both how the placement of parables in the gospels affects the meaning of the parables and, conversely, how the parables help to shape the message of the larger gospels.
THEOLOGY

60120. Women and the Origins of Christianity (3-3-0)
The course is a survey of the New Testament and other literature from its context from a feminist perspective. It will delineate patterns of gender in the theology and structure of these works, attempt to retrieve the participation of women in the movements behind them, and consider the impact of the texts and their contexts in gender relations, sexual politics and arrangements of race and class in the 21st century.

60121. Early Christianity: An Introduction (3-3-0)
This course provides an introduction to the history and thought of the first 500 years of the Christian church. The approach taken will be largely that of social history; we will try to discover not only the background and context of the major theological debates but also the shape and preoccupations of "ordinary" Christian life in late antiquity. Topics to be studied will therefore include canon formation, martyrdom, asceticism, Donatism, Arianism, and Pelagianism. The class will stress the close reading of primary texts.

60122. Memory and Prophecy (3-3-0)
In the last decades, significant theological trends have emerged both from poor countries and from marginalized groups within wealthy countries. Why have they emerged from different Christian churches of our time? This course will explore this question taking the case of Latin American theology. In particular, it will consider the implications of the "preferential option for the poor" for the areas of theological reflection, pastoral work, and spirituality. Special attention will be paid to the biblical foundations of that option as summed up in two crucial concepts: memory and prophecy. The 16th Century Dominican, Bartolomeo De Las Casas, said, "Of the lease and most of forgotten people, God has a very fresh and vivid memory." The Bible invites us to make God's memory our own, and one component of that memory is the remembrance of the "least ones." The announcement of the Gospel is linked to the advice received by Paul to "remember the poor" (Gal. 2:10). Theologically, poverty is the negation of creation. Poverty means death. Thus, the option for the poor also manifests in the prophetic opposition to that which means death for the poor. The course will examine what memory and prophecy signify for living a Christian life and doing theology in light of some of the major challenges to Christian faith today.

60125. The Apocalypse (3-3-0)
The final book of the New Testament has generated a great deal of speculation from the second century to our own. The enigmatic symbols and repetition of major structural units within the book have engendered conflicting theories of interpretation. This course explores the Apocalypse of John as an early Christian apocalyptic work that drew heavily on Jewish predecessors for its symbols but infused them with a Christian message that spoke to its readers in the late first century and continues to carry theological meaning today.

60126. The Seven Mountains of Matthew with the Great Discourses (3-3-0)
This course will consist of lectures and discussion on Matt 4:1-11; 5-7; 10; 13; 18; 23-25; 28:1-6:20. The accent will be on the Jewish and biblical background and contemporary applications.

60201. Introduction to Christian Latin Texts (Medieval Latin I) (3-3-0)
This class has two goals: to improve the student's all-around facility in dealing with Latin texts and to introduce the student to the varieties of Christian Latin texts. Medieval Latin II, a survey of medieval Latin texts, follows this course in the spring term.

60202. Prayer in Catholic Tradition (3-3-0)
This course will investigate various modes of prayer in the Catholic tradition with attention paid to both private and communal prayer. We will investigate topics like: the sources of Catholic prayer (especially the psalter); the concept of lectio divina; some traditional schools of prayer; the character of contemplative prayer; the relationship of prayer and action. We will pay particular attention to two classic works: Teresa of Avila's The Interior Castle and Thomas Merton's New Seeds of Contemplation which will be required texts.

60203. The Call of the Desert (3-3-0)
The desert is a central image in the Christian spiritual imagination. As a locus of encounter with the holy, the desert has figured importantly from the time of the Hebrew peoples' encounter with Yahweh at Sinai, to Jesus' sojourn in the Judean wilderness, to the upwelling of early Christian monastic life in Egypt, and beyond. As a metaphor evoking the human longing for God, the image of the desert recurs throughout the Christian mystical tradition, in art and in communities for whom the desert is the central image of the spiritual life. This course will examine the significance of the desert for Christian spirituality, employing an interdisciplinary approach to ask: what is at the root of the human longing to enter the desert? The course will focus on a critical exploration of Athanasius's Life of Antony and the early Christian monastic movement as a whole as a way of considering what it is that drew women and men into the desert in the fourth century. Students will also be invited to examine the significance of the desert as it is expressed in Christian mystical texts, in art, in literature and poetry, and natural history writing. The work of the course will be concentrated around the question of what it might mean to retrieve the image of the desert as a central part of contemporary Christian spiritual life.

60204. Historical Theology: Medieval (3-3-0)
The Middle Ages brought about a broad spectrum of theological thought and literature. Both traditional and innovative medieval theologians eventually made theology a "science." Through exposing the faith to rational inquiry, medieval theology remained a thoroughly biblical endeavor. The Middle Ages also produced a great number of classics of Christian spirituality.

The course will focus on single theologians as well as on important controversies and theological ideas. Particular emphasis will be given to the leading figures of the 12th and the 13th century, such as Anselm of Canterbury, Peter Abelard, Bernhard of Clairvaux, Hugh of Saint Victor, Albert the Great, Bonaventure, Thomas Aquinas and Duns Scotus.

60205. Medieval Theology (3-3-0)
A survey of Christian theology in Western Europe from the 12th century to the end of the Middle Ages. Although the Middle Ages witnessed considerable diversity in the doing of theology, in terms of both setting (e.g., monastery; university; nascent cities) and style (e.g., monastic; scholastic; vernacular and lay), medieval theologians of varying stripes were united by their common concern for wisdom. This course evaluates the medieval achievement in theology by reflecting on the pursuit of Christian wisdom in such leading authors as Anselm, Bernard of Clairvaux, Bonaventure, Aquinas, Mechthild of Magdeburg, and Marguerite Porete.

60206. Historical Theology: Reformation (3-3-0)
An examination of the development of Christian thought from the Council of Constance in 1415 to the First Vatican Council in 1869-70, with special attention given to the impact of the Reformation and the Enlightenment on the formation of Christian theology.

60207. Reformation Theology: Calvin's New Testament (3-3-0)
Course Description: John Calvin dedicated his life to restoring what he called "the genuine sense of Scripture" to the Latin catholic church, in direct indebtedness to the efforts of Lorenzo Valla, Desiderius Erasmus, and Faber Stapulensis before him, as well as contemporaries such as Luther, Oecolampadius, Melanchthon, Bucer, and Bullinger. This course will examine the ways Calvin interpreted certain representative texts of the New Testament in order to see if we might discern the distinctive ways in which he sought to arrive at the genuine sense of Scripture, so that he might draw general and fruitful doctrine for the church. We will begin with his first commentary, on Romans, which serves as the pathway to the whole of Scripture. We will then turn to First Corinthians, in order to see how he deals with issues of ecclesiology and the sacraments. The Epistle to the Hebrews will be examined next, as it serves as
the template by which Calvin interprets the whole of the Hebrew Bible, as well as the basis of his polemic against Roman views of the Mass and priesthood. We will end with the Gospel of John, which shows Calvin's engagement with the patristic tradition of Biblical commentary, especially Irenaeus, Origen, and Augustine.

60208. St. Anselm's Philosophy and Theology (3-3-0)
An examination of the major philosophical and theological writings of St. Anselm. His Monologion, Proslogion, and Car Deo Homo will be of central concern, but several lesser-known texts will also be read. Topics discussed in these writings include arguments for the existence of God, the divine nature, the Trinity, the Incarnation, freedom (and its compatibility with divine foreknowledge), and truth.

60209. Monastic Way in the History of Christianity (3-3-0)
Although often hidden from view, even hidden from view in the church, the monastic way is one of the oldest expressions of Christian devotion to God and neighbor, usually pursued alone communally. The purpose of this course is to explore how Christian men and women have lived this life, from earliest Christianity to the present. To that end, we will read the writings of monks of eastern and western Christianity, paying close attention to monastic voices from antiquity (such as Anthony, Evagrius, Basil and Benedict), medieval Christianity (e.g. Adeil of Rievaulx, Bernard of Clairvaux, Hildegard of Bingen as well as Gregory Palamas and Theodoret the Studite) up to the present day (Seraphim of Sarov, Thomas Merton, Mother Maria Skobtsova). The primary format of the class will be discussion, aided by the composition of short essays throughout the course.

60210. Topics in Early Christianity (3-3-0)
This course will be an examination of traditions of biblical interpretation in the early church. Since the greatest proportion of exegetical literature in the early church was homiletic, this course will also entail an examination of traditions of preaching. We will devote considerable attention to ancient allegorical schools of interpretation (Origen), to reactions against it (“Aنتيشه” exegesis), and to Western exegesis (Augustine, Gregory the Great). We will also look at the uses of the Bible in ascetical literature (desert fathers and mothers, etc.).

60211. Topics in Medieval Theology (3-3-0)
Pastoral necessity as well as heresies and uncertainties about the nature of the sacraments made it unavoidable for the medieval church to reflect upon its most distinctive liturgical rites. Within the context of the formation and growth of scholasticism, the sacraments provided an excellent training ground to test the strength of western theological thought. Due to the influence of Peter Lombard’s collection of patristic “Sententiae” the sacraments finally became a major field within the institutionalized theology at the universities. Our course will focus on those events and texts of the earlier Middle Ages which challenged theologians like Paschasius Radbertus, Berengar of Tou and Lanfranc of Bec to specify their views about the Eucharist. It will consider the formation of a systematic treatise on the sacraments in the French schools of the 12th century, and finally present the synthesis of high scholastic sacramental theology in Thomas Aquinas and Bonaventure. Besides the generic questions on the nature of the sacraments as such, special attention shall also be paid to baptism, the Eucharist, confirmation and penance.

60213. Eucharist in the Middle Ages (3-3-0)
The eucharist stands at the heart of western European Christianity in the high middle ages. The insistence of church officials on regular reception of the eucharist; the numerous scholastic treatments of the theoretical issues associated with the eucharist, the recourse by spiritual authors, especially women, to the eucharist to express their most profound religious and devotional insights; the pointed reference to the Christ eucharistically-present to establish Christian identity and to distinguish the members of Christ from others, both within and outside of western Europe; the development of new rituals focused on aspects of the eucharist; the burgeoning of artistic representations of eucharistic themes-all testify to the centrality of the eucharist in medieval theological and religious consciousness. Through the close reading of representative texts by a wide variety of 13th-century authors, and, of the study of the different kinds of ‘eucharistic’ art, this course examines the uses made of the eucharist by a broad spectrum of high medieval Christians. A special concern of the course is the relation between eucharistic doctrine and religious practice-to what extent have teachings about transubstantiation and real presence shaped religious expression? How has religious experience itself occasioned the refinement of these doctrines?

60214. Jews and Christians throughout History (3-3-0)
In the closing days of the II Vatican Council Nostra Aetate (Declaration on non-Christian Religions) reversed a negative attitude of the Catholic Church toward Judaism and the Jewish people. This remarkable change promoted “dialogue” with Jews, and positive changes in the ways in which Judaism was presented in Liturgy and Catechesis. Reactions from the Jewish communities were diverse: from rejection to welcoming. This course will explore a number of issues which emerge from the history of Christian thought and theology: How did a negative image of Judaism develop within Christianity? In what ways did these unfavorable teachings contribute toward violence against the Jews? What is the relationship between Christian anti-Jewish teachings and AntiSemitism? Is there any correspondence to Christian hostility within Judaism? In what ways have Jewish authors reacted to Christian tradition? We shall also want to construct a more positive theology for the future. How can Jews and Christians develop religious responses to modernity? In what ways can a study of Judaism by Christians, or Christianity by Jews, help either community to understand itself better? How can Christians and Jews develop a theology of “the other” which is not triumphalist, but empathetic.

60215. St. Bonaventure: Theology and Spirituality in 13th-Century Scholasticism (3-3-0)
Along with Thomas Aquinas and Albertus Magnus, St. Bonaventure is considered one of the leading and most influential theologians of the high Scholastic period. Although he had to abandon his promising career as a university teacher in order to lead the fledgling Franciscan Order as its Minister General, Bonaventure continued his theological work until the end of his life. Critical of the growing influence of Aristotelian thought within theology, he deliberately chose the tradition of St. Augustine, P.-Denis and Hugh of St. Victor as the basis for his theology. The recent emphasis on his spiritual writings notwithstanding, Bonaventure developed a highly speculative and consistent theology, which spans the whole horizon of Scholastic theology. Providing an introduction to Bonaventure’s life and writings, the course will focus on central aspects of his theology such as the Trinity, creation, christology, anthropology and theological epistemology.

60216. Boethius: An Introduction (3-3-0)
The course will attempt a study of Boethius, one of the foundational figures of medieval culture, in an interdisciplinary and open-ended manner. Our approach will be interdisciplinary in that we shall simultaneously study philosophical-theological and literary subject matter and simultaneously apply philosophical-theological and literary methods. It will be open-ended in that students will be expected to react creatively to the topics under review in terms of their own independent studies and research (e.g., in connecting Latin and vernacular materials). During the course we shall read a broad selection of passages in Latin and in English translation drawn from Boethius’ work in the fields of science (arithmetic), music, logic, and theology. Part of the course will be devoted to a close study of De Consolatione Philosophorum Plato and Aristotle and the Greek scientists Nicomachus and Prolemy, without forgetting the theology of Augustine. Turning from Boethius to Boethius in quotation marks and Boethius “under erasure,” we shall study Boethius read intertextually by glossators, commentators, and other writers from the eighth to the 14th century.

60217. Theology of the Early Church (3-3-0)
This course examines the major developments in early Christian thought in the context of the church’s life, from the first through the mid-fifth centuries. Primary sources will be read in order to understand two major areas. The theology of early Christianity, derived largely from its reflection on scripture, will be considered in the following areas: the theology of the Trinity, the person and work of Christ, and the doctrine of creation/ eschatology. In addition, students will consider the practices of early Christianity, including catechesis and sacraments, the role of the threefold church office, works of charity, devotion both communal and private, and asceticism, especially as expressed in the monastic life.

60218. Christian Spirituality (3-3-0)
This course intends to introduce the student to (1) the methodologies for studying Christian spirituality; (2) some theological reflections on the Christian way of life “in the Spirit”; and (3) a consideration of the structure of some “schools” of spirituality within the Christian tradition.
60219. Latin American and U.S. Latino Theology (3-3-0)

Theologies rooted in the poverty, struggles, and faith of the Hispanic peoples in Americas have undergone dramatic shifts and developments since the Second Vatican council. Focusing on two of their most important architects, Gustavo Gutierrez and Virgilio Elizondo, this course will examine Latin American liberation theologies and U.S. Latino theologies in comparative perspective, with a view not only to understanding how their different contexts shaped their theologies, but also in order to uncover their features that transcend those contexts. The course will consist of lectures from the co-instructors, readings of major works by Gutierrez and Elizondo, and in-class discussion, both among the course participants and occasionally with Gutierrez and Elizondo themselves. The primary course requirement will be a research project developed by each student in consultation with the co-instructors which either compares Latin American liberation theology with U.S. Latino theology on a significant theological theme, or considers an important theme in the current or future development of these theologies.

60220. Missionary Encounters (3-3-0)

This course will study the missionary activity of the church. After a brief look at mission and evangelization in the New Testament and the early church, we will then explore several important moments of missionary contact in the Americas, Africa, and Asia in the modern (post-Columbian) period. The course will conclude with a look at contemporary missionary practice and theory.

60221. Catechesis: History & Theory (3-3-0)

Catechesis aims to "put people not only in touch, but also in communion and intimacy, with Jesus Christ" (General Directory for Catechesis 80, quoting Catechism Tradendae 5). What is catechesis and how has it pursued this aim throughout the history of the church? How should it pursue this aim in contemporary parish life? This course will enable students to explore catechesis at selected periods in the history of the church, to gain awareness of developments in practice and in theoretical approaches, and to acquire and demonstrate a working familiarity with contemporary catechetical literature. Readings will include a variety of sources from antiquity to the present. Special emphasis will be placed on some classical mystagogical sources and on contemporary church documentation. Students will be encouraged to apply these sources to issues in parish catechetical leadership today. (Permission Required)

60222. Christian Doctrine/Catechists (3-3-0)

This course is intended to serve as a resource for catechists and religious educators. It provides a basic theological introduction to the material represented in Pillars I and II of the Catechism of the Catholic Church: the Creed and the Sacraments. The course is specifically designed to cover this material in a way that will provide facility in teaching it in a variety of contexts. Readings will come not only from the Catechism, but from various primary sources, both traditional and contemporary illustrative of the theology that forms its background. The course will be especially useful for anyone wishing to acquire an understanding of the basic doctrines of the Catholic faith and of the theological integration of these doctrines.

60224. The Vulgate and Related Texts (3-3-0)

Readings in the Latin of the Vulgate, texts by Jerome associated with his translation and readings from Augustine (de Doctrina Christiana) concerning how Scriptures should be read. Latin readings will be at an intermediate level, and some review of grammar will be offered.

60230. Eucharist and Spirituality (3-3-0)

Occurring during "The Year of the Eucharist," this course will take a cue from Lumen gentium assertion that Eucharist is "the source and summit of the Christian life," in order to explore the Eucharistic action as the source and summit of the church's spiritual life. This course will also follow the lead of Yves Congar who saw The Life of the Church as One Long Epicleisis, by examining the implications of epiclesis as the key to understanding spirituality shaped by the activity of the Holy Spirit in the Eucharist. We shall ask: what is the theological spirituality of the Eucharist that arises through, with and in Christ and in the unity of the Holy Spirit and which honors the Father for ever and ever?

60231. Classic Christian Mystics to the Reformation (3-3-0)

What is mysticism? What role does it play in Christian-ity broadly conceived? In order to understand the nature of mysticism, it is important to study the major mystics who helped shape the Christian mystical tradition, both in the East and in the West. The purpose of the course is to gain an initial an acquaintance with ten classic Christian mystics of the period c. 200 to c. 1500 as an introduction to the historical development and major themes of Christian mysticism. The emphasis will be on reading primary sources in translation in order to understand the nature of mystical texts, their special modes of communicating God's presence, and the relation of mysticism to other aspects of Christian belief and practice. Mystics to be considered include: Origen, Gregory of Nyssa, Augustine, Dionysius (Pseudo-Dionysius), Bernard of Clairvaux, Bonaventure, Meister Eckhart, Catherine of Siena, Julian of Norwich, Nicholas of Cusa.

60232. Reformation History (3-3-0)

An examination of the theology of such major Protestant figures as Luther, Zwingli, Calvin, Melanchthon, Menno Simons and Thomas Cranmer in the context of competing Catholic visions of reform. Requirements: 8-10 page paper submitted with final exam.

60401. Sacramental Theology (3-3-0)

This course presents an integrated overall view of the history, theology and pastoral praxis of sacrament in a modern, multicultural world.

60402. Liturgical History (3-3-0)

Survey of liturgical history and sources with regard to both Eastern and Western rites. Fundamental liturgical sources including basic homiletic and catechetical documents of the patristic period. Basic introduction to the methodology of liturgical study. Requirements will include short papers and exams.

60403. Christian Initiation (3-3-0)

This course will trace the development and interpretations of the Rites of Christian Initiation in East and West from the New Testament period to the modern period of ecumenical convergence. In light of this historical investigation some modern forms of these rites (e.g., RCIA, LBW, BCP, etc.) will be considered critically. Requirements include two take-home exams, short papers on assigned questions, and an oral presentation on a selected modern rite.

60404. Eucharist (3-3-0)

The church makes the Eucharist and the Eucharist makes the church. A biblical, historical, systematic, and liturgical treatment of the Eucharist, emphasizing pastoral considerations.

60405. Liturgical Prayer (3-3-0)

A study of the theology and practice of liturgical prayer in the Christian tradition past and present.

60406. Liturgical Theology (3-3-0)

The theology of Christian festive celebrations, the historical development of the festive cycles and their meaning for Christian worship today.

60407. Liturgical Theology - Word and Sacrament (3-3-0)

"Liturgical theology" is often treated as an exploration of "liturgy as a source of theology," or "liturgy as theologia prima," approaches that have definite merit. This course, however, will focus on word and sacrament as sacred realities, taking up questions concerning theologies of the word and of the sacraments, and will examine sacraments in genre, as well as theological approaches to the word of God. The starting point will be an examination of the "medieval sacramental synthesis," but will move from there to contemporary approaches to word and sacraments.

60408. Ritual Studies (3-3-0)

The pastoral liturgist is one who fosters critical praxis in the liturgical life of a local church. This course is designed to introduce students to ritual studies through a treatment of ritual, symbol, language, myth and story, time and space, music, and art. Students will discuss and employ a method for analysis of worship events.

60409. Liturgical Catechesis (3-3-0)

Drawing on select primary sources for Roman Catholic liturgy and catechetics, this course will explore the principles, content, and methods of liturgical catechesis and catechesis on the liturgy by means of comparative analyses of texts. Emphasis will be on practical applications.

60410. Music for the Rites (3-3-0)

20th-Century papal, conciliar, curial, maisterial, and scholarly directives for and reflections on worship music are studied. We examine music in contemporary Roman Rite worship: Eucharist, Christian initiation, reconciliation, anointing, marriage, ordination, funerals, and
Liturgy of the Hours, Readings, lecture discussion, literary review, worship music analysis and critique, and class presentation comprise the course.

60411. Liturgical Law (3-3-0)
This course introduces and outlines the canon law of the Latin Catholic Church regarding the regulation of the liturgy. The liturgical laws in the 1983 Code of Canon Law, select norms in liturgical books, the 1993 Directory for the Application of the Principles and Norms on Ecumenism, and other significant documents will be examined. The course will also deal with the principles of interpretation of canon law to enable the liturgist to evaluate and understand the many types of ecclesiastical documents, especially those of a juridic nature.

60412. History of Liturgical Music (3-3-0)

60413. The Theology of Liturgical Ministries (3-3-0)
This course seeks to acquaint students with the history and theology of liturgical ministries within the church, with special focus on ministries of music (cantor, psalmist, leader of song, pastoral musician). Particular attention will be paid to the emergence of lay ministries following the II Vatican Council. Readings will include: Joseph Gelineau, Liturgical Assembly, Liturgical Song (Studies in Church Music and Liturgy; Portland: Oregon Catholic Press, 2002); Roles in the Liturgical Assembly, trans. Matthew J. O’Connell (Collegeville, MN: The Liturgical Press, 1981); Edward P. Hahnhenberg, Ministry: A Relational Approach (New York: Crossroad, 2003).

60414. Liturgical Year for the Pastoral Musician (3-3-0)
This course is an overview of Sunday and the major seasons of the year for liturgical musicians. It considers key principles of the liturgical year and applies a basic historical and theological understanding of each season to liturgical planning and the selection and evaluation of liturgical music repertoire.

60415. Liturgical History (3-3-0)
This course will show where we are by pausing to remember where we have been. Liturgical form, theology, and practice has unfolded in living interaction with the various settings in which liturgy has been celebrated. We will survey those settings (predominately in the west), identify significant liturgical books and formal developments, and consider the impact this has had in sacramental theology.

60416. Liturgical Theory (3-3-0)
A study of the classic maxim “lex orandi, lex credendi” in terms of its origins, meaning and contemporary relevance. Particular attention to the theological meaning of the constitutive elements of liturgy including Word, symbol, eucharology and the arts. Specific applications will concern liturgical translation, recent magisterial documents and the implications which liturgical theology has for spirituality.

60427. Christian Initiation (3-3-0)
This course will trace the historical development of the liturgies and theological interpretations of Christian Initiation in East and West from the New Testament period to the modern period of ecumenical convergence. In light of this historical investigation some modern forms of these rites (e.g., RCIA, LBW, BCP, etc.) will be considered theologically and ecumenically with an eye toward pastoral appropriations and implications.

64601. Foundations of Moral Theology (3-3-0)
As John Mahoney noted in his The Making of Moral Theology, the term ‘moral theology’ (theologia moralis) refers to a distinctive science thematically separate from all of the other branches of theology but of relatively recent vintage. It has only been in use since the Thomist renaissance at the end of the 16th Century, in the wake of the Council of Trent. Even so, the systematic consideration of Christian morality or ethics is both much older than this and has a wider scope than this recent Roman Catholic influence. It is the purpose of this course to investigate the development of Roman Catholic moral theology against its wider historical horizon. This course is an introduction to the study of the basic elements of Roman Catholic moral experience and understanding as well as the criteria of Christian moral judgment and action, including the data of moral knowledge, theories of the ultimate end of human nature, ontic and epistemic aspects of sin, moral agency, the conscience, theories and methods for moral decision making and the three dominant forms that moral theological thinking has taken in the history of the Roman Catholic Church (aestetical, deontological and consequentialist). This study will be accomplished, historically, through a series of readings from major Roman Catholic moral theologians/ethicists (and their influences) including: pre-Christian philosophical sources, ancient medieval, modern and contemporary approaches to Christian moral theology/ethics and their philosophical influences. The culmination of this study will be a close reading of John Paul II’s Veritatis Splendor with the previous readings at its backdrop.

60602. Fundamentals of Moral Theology (3-3-0)
This course offers an overview of the fundamental principles of Catholic moral theology. Drawing on biblical and patristic sources, and with Thomas Aquinas as our guide, we shall cover the following themes: happiness, human acts, the emotions, virtues and vices, law and grace. We shall present these themes from within a perspective that views the moral life as a vocation to live in Christ and be guided by the Holy Spirit.

60603. Social Ethics (3-3-0)
Analysis of basic issues and alternatives in Christian social ethics. The nature of the church as moral decision maker, relation between church and society, and the place of social science for social ethics.

60604. Christian Ethics and Contemporary Culture (3-3-0)
This course examines major themes in recent Christian ethics in light of the broad moral context of modern western societies. The course focuses on themes such as moral order, virtue and the problem of Christian community in a post-Christian era. Authors include Oliver O’Donovan, Jean Porter, Lisa Cahill, John Howard Yoder, John Courtney Murray, John-Paul II, Richard Rorty and Charles Taylor. No prior work in Christian ethics is assumed.

60605. Faith, Morality & Law (3-3-0)
This course will look at the relationship between faith, morality and law in the Christian tradition. Section One will look at the relationship between the moral law and the Christian life, looking at relevant scriptural passages, as well as classic Protestant and Catholic views on the subject. Section Two will consider the proper relationship of civil law and morality in civil society. Students will be introduced to the prevailing secular views on the topic, as well as the Catholic view expressed in Evangelium Vitae. In Section Three, we will look at the responsibilities of Christians in the face of unjust laws or legal systems. We will consider whether there and when there is an obligation to civil disobedience, looking at St. Thomas More, the Berrigans, and Martin Luther King Jr.

60606. Christian Social Ethics (3-3-0)
This course provides a basic introduction to Christian social ethics for the master-level student. Participants will pursue three goals: to identify and investigate central and foundational issues in the field (e.g., the relation of person to society, the meaning of justice, its relation to love and power); to examine sources and methods employed when Christians attempt to speak normatively about societal matters; to probe select loci of debate in recent North American Christian social ethics (e.g., questions concerning economic justice; class, race-ethnicity and gender; sexuality and family). Readings will be drawn from the rich ecumenical literature of contemporary Christian social ethics, with an accent on Catholic social thought.

60607. Virtue and Sin in the Christian Tradition (3-3-0)
There has been considerable interest recently in recovering traditions of reflection on the virtues as a resource for Christian ethics. In this course, we will explore this tradition through an examination of three of its key figures, namely Augustine, Aquinas, and Jonathan Edwards. Through a close reading of primary texts (in English) and contemporary writings on these texts, we will reflect on what these authors understood by virtue, how their virtues of virtue both interpret a past tradition and influence their successors, and how those theories might be relevant to Christian ethics today. Course requirements will include several short papers and a longer paper on a topic to be determined in consultation with the instructor.
60608. Virtue and Hypocrisy (3-3-0)
If, as Aristotle taught, we become virtuous by doing virtuous deeds, then there is a time during the process of developing the virtues when our virtuous deeds might be viewed as deceptive, as presenting a certain claim about our "inner" character that is not (yet) true. Beginning with late humanism and extending into the modern period, we see a growing sense that honesty or sincere self-presentation is the key element of moral goodness, and an accompanying suspicion of virtuous actions as external show. This preoccupation with the role of "acting" in moral development is reflected not only in works of theology and philosophy but also in aesthetics, theory of drama, plays, and novels. This course will explore this set of concerns, relating them to the apparent decline of an ethics of virtue during the early modern period and to tensions between and Augustinian focus on purity of heart and an Aristotelian focus on cultivating of virtuous habits. Our starting point will be contemporary discussions of habituation and of the relationship between Christian ethics and virtue ethics (Macthynre, Hauerwas, Meliaender, Potter). We will briefly consider the Aristotelian understanding of habituation into the virtues and Aquinas' account of the relationship between the natural and supernatural virtues before turning to the early modern period. Thinkers studied in the course include: Erasmus, Luther, Bunyan, Pascal, Shakespeare, Diderot, Lessing, Rousseau, Kant.

60609. Christian Ethics and Pastoral Practice (3-3-0)
Following a general review of themes in Christian ethics, including conscience, sin, Scripture and the moral life, natural law, and the authority of church teaching, we will consider ethical issues that have pastoral dimensions. We will focus on effective pastoral translation of church teaching and moral theology in the areas of bioethics, sexuality, and social justice. We will also study the professional ethics of pastoral leadership.

60610. Christian Attitudes Toward War, Peace, and Revolution (3-3-0)
This course is a survey of Christian understandings of war, peace, and revolution from the time of Christ and the early church to the present. Emphasis will be placed on the way in which theological convictions in the areas of Christology, pneumatology, eschatology, ecclesiology, and so on, have shaped Christian teaching on the nature of peace and the permissibility of using violence. Cases will be used to examine certain aspects of just war theory, with the purpose of addressing the question: is just war theory applicable to warfare in the era of the modern nation state? Other issues will be taken up as well, including the military chaplaincy, ROTC in Catholic colleges and universities, the role of Christian churches in mobilizing for war, and the use of violence in revolution. Texts will include: Reinhold Niebuhr, Moral Man and Immoral Society; John Howard Yoder, Christian Attitudes Toward War, Peace, and Revolution: A Companion to Bainton; U.S. Catholic Bishops, The Challenge of Peace; and others. Undergraduates should receive permission to take this course.

60611. War, Peace and Conscience (1-1-0)
A critical survey of the theology of war, peace, and conscience in the Catholic tradition. Focus will be placed on pacifism in the early church, the emergence of the just war theory, and the struggle to adhere to these moral positions in the context of the modern state and modern warfare.

60612. Human Rights and Christian Ethics (3-3-0)
After many years of neglect, the natural law tradition is once again being considered as a source for Christian ethics, by Protestant as well as Catholic thinkers. This renewed interest is motivated by a number of considerations: the desire to find a secure basis for morality, in light of post-modern critiques; the challenges of bioethics and environmental ethics; a concern to safeguard universal human rights; and a desire to offer a Christian perspective on recent work on ethics and evolution. In this course, we will explore these diverse perspectives on the natural law through a critical/constructive reading of key texts from each approach. Our focus throughout will be on contemporary authors who either write from a perspective of Christian ethics or who have been influential in this field, including Germain Grisez, John Finnis, Leon Kass, Martha Nussbaum, Stephen Pope and Christine Trania.

60613. Development of Moral Doctrine (1-1-0)
An examination of how Catholic moral doctrine has developed in specific areas, viz. marriage and divorce; religious liberty; slavery; and usury. Attention will also be given to more general trends on the development of doctrine in the Catholic Church.

60616. Biomedical Ethics (3-3-0)
Our century has been called "The Biotech Century," and for good reason; almost every week we read about a new biomedical breakthrough that seems sure to change our lives. This course probes behind the headlines and sound bites to develop skills to think about these fast-breaking developments as well as routine but no less important issues. We will explore issues related to the status of human life with respect to its beginning and end, the meaning of human life with respect to suffering and care, and the perfection of human life with respect to efforts to enhance human characteristics. Drawing on the Catholic and other Christian traditions as well as secular philosophical approaches, we will study how Christian ethics both engage and critique our attitudes and practices of biomedical care and research.

60617. Love and Sex in the Christian Tradition (3-3-0)
Christian reflections on sexuality comprise one of the richest, yet most controversial aspects of the Christian moral tradition. In this course, we will examine Christian sexual ethics from a variety of perspectives through a study of historical and contemporary writings. Topics to be considered include Christian perspectives on marriage and family, the ethics of sex within and outside of marriage, contraception, divorce and remarriage, and homosexuality. We will be especially concerned with recent debates on these topics within the Catholic community, but we will also be considering voices from Protestant and other traditions. We will give special attention to the practical implications of Christian sexual ethics in pastoral and educational contexts.

60801. Fundamentals of Systematic Theology (3-3-0)
This course is a graduate-level introduction to the nature, tasks, and methods of systematic theology. It will proceed through a focus on 20th-century theological contributions to the doctrine of revelation, with special attention being given to the sources and methods used by major theologians. In addition to refining our understanding of the Christian doctrine of revelation, this study should result in a clearer grasp of such basic theological topics as: the relation of faith and reason, the use of Scripture and tradition as theological sources, the significance of contemporary experiences, and the theological importance of praxis.

60802. Hermeneutics: Ancient and Modern (3-3-0)
An examination of Karl Rahner's theology of revelation with an emphasis on its anthropological foundations and practical consequences.

60803. Hermeneutics: Ancient and Modern (3-3-0)
This course will be a study of general hermeneutics (with special reference also to philosophical-theological and literary hermeneutics) through the staging of an encounter between classic texts dealing with this subject from the late ancient period and from the 20th century, respectively. From the earlier time-period the texts will include Origen: On First Principles, Augustine: On Christian Teaching, On the Literal Interpretation of Genesis, Proclus: selections from exegetical works dealing with Homer and Plato; from the later time period Heidegger: Being and Time, What is Called Thinking, selections from exegetical works dealing with Heiderlin, Gadamer: Truth and Method, and Derrida: Of Grammatology. In addition to studying the texts carefully--the first requirement of an exegete--we shall constantly ask questions such as the following: What is the relation between hermeneutics and "reality"? Is there a significant difference between philosophical-theological and literary hermeneutics? If so, what is that difference? In the last analysis, can one have a theory of hermeneutics or merely practice it?

60804. A language, Symbol, and Vision (3-3-0)
Our aim will be to study three issues which are absolutely central to medieval thought and culture from the end of the patristic period to the Renaissance (and indeed also beyond these limits). The danger of excessive generality in such an approach will be avoided (1.) by isolating a group of seminal texts from the late ancient or early medieval period for careful scrutiny (wherever possible, in English translation); (2.) by treating these texts as conceptual nuclei for broader linguistic, hermeneutic, and psychological theories which were widely held and discussed. The texts will be drawn from Origen, Ambrose, Augustine, Jerome, Macrobius, Boethius, Dionysius the Areopagite, and Isidore of Seville. Although a major aim of the course is to introduce important writers to the students and to pursue historical and literary matters, we will also find time to reflect on philosophical
THEOLOGY

60806. Ecclesiology
(3-3-0)
An examination of the nature and mission of the church, with special emphasis on the Second Vatican Council, its theological and doctrinal antecedents, and postconciliar developments.

60807. Aesthetics and Theology
(3-3-0)
This course takes as its major focus the theological aesthetics of Hans Urs von Balthasar, *The Glory of the Lord*. Beginning with the first volume, *Seeing the Form*, we will consider the case that he makes for an aesthetics that is thoroughly theological in character. We will keep steadily in mind the poetry of Gerard Manley Hopkins and the reading of it proposed in *Studies in Theological Style*. From time to time we will look at relevant passages by von Balthasar's contemporaries, Karl Barth and Karl Rahner.

60808. The Mystery of God
(3-3-0)
The general aim of the course is to introduce the student to the Catholic tradition of reflection on the triune God who always remains mysterious even in, or precisely in, his revelation in history and in our lives. The pedagogic aim is familiarity with the tradition that is the church's common possession.

60809. Theology of Edward Schillebeeckx
(3-3-0)
This course explores the theological insights inherent in the religious practices and spiritual traditions of African American, Latino/a, and European American Catholics. Particular emphasis is given to popular piety as a source for theology and the ways theologians and pastoral ministers can critically engage popular religious traditions.

60810. Theology of Edward Schillebeeckx
(3-3-0)
The theological project of Edward Schillebeeckx traces one trajectory in the development of Catholic theology in the 20th century. This course will explore the evolution in Schillebeeckx's thought from an early sacramental and dogmatic theology grounded in the thought of Thomas Aquinas, through the turn to history and eschatology in the mid 1960s, to his later focus on radical suffering (negative contrast experience) as the necessary starting point for contemporary theology. If numbers permit, the course will proceed as a seminar that will include background lectures and discussion based on a close reading of selected portions of major works including *Revelation and Theology*, Christ the Sacrament of the Encounter with God, God the Future of Man, Understanding of Faith, and the christological trilogy Jesus: An Experiment in Christology. *Christ: The Experience of Jesus as Lord, and Church: The Human Story of God.*

60811. Theologians of Grace
(3-3-0)
Daniel Dennett, a philosopher at Tufts University, has argued that the modern theory of evolution has not only made it intellectually possible and satisfying to be an atheist, but mandatory. What is the history of this anti-theistic use of Darwin, and how have Christian theologians responded? This course offers an advanced survey of attempts by Christian theologians (both Protestant and Catholic) to come to grips with the challenges raised by the Darwinian revolution. We will begin with an overview of the role of the so-called argument from design in eighteenth-century and nineteenth-century Christian theology. Then we will consider two paradigmatic late nineteenth-century reactions to Darwin: that of Charles Hodge (*What is Darwinism?*) and of John Zahm, C.S.C. (*Evolution and Dogma*). From there we will study the largely negative mood of the early twentieth century, with particular attention to the rise of creationism. We will conclude by looking at three influential contemporary responses to Darwin: the modified creationist attack on Darwinism represented by the so-called "intelligent design" argument; the use of Darwin to attack the coherence of Christian faith by figures such as Daniel Dennett and Richard Dawkins; and the argument by John Haught and Denis Edwards (building on Teilhard de Chardin) that the Darwinian revolution can in fact support and enrich Christian faith and theology. This course will build on the study of the Darwinian Revolution. Students who have not had this course are welcome to take *Theology After Darwin,* as long as they agree to do a modest amount of reading (three or four chapters) from *The Cambridge Companion to Darwin* prior to the beginning of the course in August.

60812. Conversion to Christ and Modernity
(3-3-0)
This course will examine the expansion of Christianity in the modern period, attending both to various historical encounters of Christianity with cultures and peoples in the past five centuries as well as to the theological innovations that accompanied such encounters. Building on a study of several well-documented cases from various places and times, an analysis will be made of the dynamics of conversion from theological as well as other perspectives. The larger historical and social consequences of conversion to Christianity will also be examined.

60813. Theologians of Grace
(3-3-0)
This course explores the diverse theological and doctrinal ways of speaking about the mystery of grace—human experience of the gratuitous love of God. Beginning with the biblical roots of the doctrine, the course will trace key moments in the historical development of the Christian traditions, understanding of grace and contemporary efforts to appropriate and reformulate that tradition in the context of secularization, radical suffering, and religious pluralism. Particular attention will be given to the twentieth-century nature-grace debates in the Catholic tradition to post-Vatican II theologies of grace/salvation.

60814. Theology and Spirituality
(3-3-0)
The course explores the fundamental connections between theology and spirituality in relation to 'The Self, holiness and spiritual transformation'. The course examines different understandings of human identity, of Christian discipleship and of the process of spiritual transformation. The first part will consider basic methodological questions and some classic theological understandings of human identity. The second part will examine how a selection of major texts in Christian spirituality address such related themes as embodiment, sin and alienation, the process of spiritual transformation and the nature of holiness.

60815. Topics in Spirituality
(3-3-0)
The Sacredness of Place. 'Place' is a fundamental category of human culture and an important metaphor in relation to human identity and understandings of the sacred. Western cultures are said to be experiencing a postmodern 'crisis of place'. A sense of dislocation and rootlessness. Because of the close relationship between 'place' and our sense of the sacred, the subject is an important framework for approaching spirituality as well as for theology and liturgical studies. This course will examine: key theological foundations for a spirituality of place; the tension between 'place' and 'placelessness' in the Christian tradition; the theme of 'place' in monastic and mystical traditions; church architecture and 'place'; the design of modern cities and the future of place.

60816. Ignatian Spirituality
(3-3-0)
The approach to prayer, self-examination, and Christian commitment outlined by St. Ignatius of Loyola in his Spiritual Exercises has exercised a powerful influence on Christian men and women of all kinds since the early sixteenth century. The Exercises are not only the source of the founding impulse of the Society of Jesus, but have also served through the centuries as the central model of discerning prayer and inner-worldly mystical contemplation for many communities of men and women, as well as for Christian laypeople in all the churches. In this one-week course, we will study Ignatius's own experience of God's work in his life, as presented in his Autobiography, journal and letters, then look at the basic theological themes and structure of the Exercises, and finally reflect on the incarnation of this vision of discipleship in the constitutions of the Society of Jesus. We will also ask how Ignatius's way of prayer self-commitment to Jesus can serve as an instrument for our own Christian lives.

60817. Myth and Story
(3-3-0)
An interpretation of myth starting from the question "What kind of story are we in?" and "What kind of story am I in?" and dealing with (a) the life story, (b) the spiritual adventure, and (c) the journey with God in time.

60818. Selected Themes in Comparative Theology
(3-3-0)
The purpose of this course is to introduce you to some important recent literature in comparative theology. We will attempt to evaluate the possible significance of theological ideas and religious experiences from Hinduism, Buddhism and Islam for Christian thinking on God, christology, grace and eschatology.
This course is designed to introduce you to the basic teachings and spiritualities of Hinduism, Buddhism and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate Mystery, the overcoming of suffering etc. That is to say, we will not only attempt to comprehend these religions according to their own self-understanding, but we will also endeavor to appraise their significance in relation to Christian faith, both in the challenge and enrichment they present. We will also examine some traditional and contemporary Catholic and Protestant approaches to the truth claims of other religions. Our own search to know how the truth and experience of other faiths are related to Christian faith will be guided by the insights of important Christian contemporaries who have entered deeply into the spirituality of other traditions. By course end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. This course is especially recommended as a preparation for teaching high school and introductory university-level courses.

60820. Hindu and Christian Interaction (3-3-0)
The purpose of this course is to introduce you to some important recent literature in comparative theology. We will attempt to evaluate the possible significance of theological ideas and religious experiences from Hinduism, Buddhism and Islam for Christian thinking on God, christology, grace and eschatology.

60821. Modern Theology (3-3-0)
Nineteenth-century Christian theologians were challenged both to defend the legitimacy of Christian faith and theology in an increasingly secularized intellectual culture and to develop an authentic response to a dark underside of scientific, technological, and economic progress that became more and more apparent as the century progressed. In many ways their successes and their failures still set the agenda for theologians today. This course offers a survey of their responses, with a view to understanding the situation in which theology still has to take its bearings. The primary figures we will cover are Immanuel Kant, G. W. F. Hegel, Friedrich Schleiermacher, Johann Sebastian Drey, Soren Kierkegaard, John Henry Newman, and Karl Barth, but we will also attend to other theologians (anti-theologians), such as Ludwig Feuerbach, D.F. Strauss, and Friedrich Nietzsche.

60822. Theology and Practice Lay Ministry (3-3-0)
Starting with the contemporary experience of the Church, this course will explore the ministry of the laity and some of the issues relevant to this unfolding reality. These will include theological perspectives drawn from Scripture and Vatican II, practical concerns attendant on the evolution of new patterns of Church life, and exploration of possible future developments.

60823. Feminist and Multicultural Theologies (3-3-0)
An exploration of how the voices of women have helped to reshape theological discourse and to bring to light new dimensions of the living Christian tradition. Like other liberation theologies, feminist theologies take the experience of suffering and missing voices in the tradition as the starting points for theological reflection on the mystery of God and all of reality in relation to God. Using the writings of feminist, womanist, Latina, mujerista, Asian, and Third World theologians, this class will focus on the following questions and areas of theology: the theological task and vocation, the significance of gender and social location in the fields of theological anthropology and Christology, theologies of the cross in the face of contemporary suffering, the mystery of God, and implications of women's spirituality in our day. Students will have the opportunity to join an optional reading group that will focus on classic texts in the development of feminist theologies.

60824. Education in Faith: Catechesis in Catholic Schools (3-3-0)
This course is designed to assist current or prospective teachers of religion/theology at the junior-high and high school levels in the catechesis of young adults in Catholic schools. The course is open to Theology Department students at the undergraduate and graduate levels (including those enrolled only for the Summer Session), to M.Ed. students serving in the Alliance for Catholic Education, and to Notre Dame undergraduates with minors in Education, Schooling, and Society. Within class sessions designed to be highly dialogical, interactive, and prayerful, participants will explore both theological and practical/pedagogical dimensions of the process of catechesis. Required readings are drawn from The Catechism of the Catholic Church, from publications of the United States Catholic Conference (notably the General Directory for Catechesis, the National Catechetical Directory for Catholics in the United States, and the Guide for Catechists), and from the works of several theologians and educational theorists who have contributed significant responses to the two central questions addressed in this course: “What is Catechesis?” and “How Do We Engage in Catechesis in the Context of Catholic Schools?” During this course, participants will explore all of the central tasks that constitute the holistic process of catechesis as delineated in the general and national Catholic catechetical directories and other catechetical documents and as adapted for use in Catholic schools: communicating knowledge of the mystery of God’s self-revelation; fostering maturity of faith and moral development; sharing and celebrating faith by forming Christian communities of prayerful people; promoting Christian service and social justice; and witnessing to faith through pedagogy and by the example of authentic spiritual lives.

60825. Option for the Poor; Bible and Spirituality (3-3-0)
The sentence “preferential option for the poor” is well known, but it is not always well understood. It expresses the experience and the reflection of many Christian people from Latin America. It was present in the Latin American Bishops’ conferences of the last decades and today it belongs to the universal ecclesial magisterium. Pope John Paul II has several times mentioned this perspective in his addresses. This option has numerous consequences in the personal, social and political life of Christians and in the witness of the whole Church. We know how difficult, painful and rich this testimony has been.

The purpose of the course is to provide some elements in order to underline the meaning and the scope of the option for the poor. We need to recall that it is, first of all, a way to be Christian, a disciple of Jesus. This is what we call spirituality. From this deep level we can understand that in a second moment it is an inspiration for doing theology. Talk about God comes after the silence of prayer and after the commitment to others. It is a discourse that is rooted into a faith lived in community and thus inserted into a history of the transmission and acceptance of the Christian message. In order to do that this class will explore the biblical foundations of the option for the poor, revisiting several scriptural texts. In addition, we are going to pay attention to the witness of some great Christians like Bartolome de Las Casas (Dominican missionary from the 16th century), Pope John XXIII and others.

60826. Theology and the Arts (3-3-0)
Christian faith is expressed and shaped by a variety of media: the narratives of sacred scripture, the propositions of ecumenical councils, the moral witness of saints, etc. This course will explore how musical, visual, and literary arts have mediated Christian faith in a variety of cultural contexts. From theological perspectives we will explore and analyze musical compositions, visual arts, and literary works. From artistic perspectives we will explore how beauty signals transcendence and configures the theological task.

60827. Diverse Ministries: Understanding of Ordination (3-3-0)
The course will relate the question of ministries to the theology of the Church especially in the light of the role of the Holy Spirit in the structuring of the Church. In this context, the articulation between ordained ministries, lay ministries and the responsibility of all will be made evident. Methodological and epistemological issues will be raised in the use of exegesis, the history of dogmatic and sacramental theology and the analysis of current ministerial practices as well as the process of ordination.

60828. Culture, Religion & Evangelization (3-3-0)
This course will examine the theological basis of inculcation, its historical development, ecclesial documentation, and the implications for ecclesiology, liturgy, catechesis, and the theological elaboration. The course will include lectures, videos, class discussion and practical exercises.

60829. Creation and Freedom (3-3-0)
Modern western notions of freedom equate freedom with choice and exit “doing what I wanna do” something already exposed by Socrates as effective bondage to our endless needs. When freedom turns out to be bondage, and demands exploitation of other humans and of the earth to satisfy its demands, something seems wrong! We shall examine classical and modern sources to highlight the contrast, locating the signal difference in the presence (or absence) of a creator.

THEOLOGY
60830. Actuality of the Preferential Option for Poor (3-3-0)
This class will explore the relevance of the option for the poor in contemporary society. We will look at the multifaceted reality of poverty and the challenges that poverty poses to the lived reality of faith and the understanding of this faith. In other words, we will examine the complex reality of poverty, the role of the poor in history and the important theological reflection that emerges from the life of the poor. In the process we will reflect on the God of life from the perspective of the liberating truths of the gospel, the concrete experience of the poor and the teachings of the Church.

60831. Liberation Theology: Situation and Task (3-3-0)
Theology is always a dialogue between faith and concrete historical situations, including the reflections on people's concrete experiences in history. The context and the meaning of this dialogue “from a Christian perspective” is testimony of the reign of God that the Gospel proclaims. For this it is necessary, as noted by John XXIII and the Second Vatican Council, to be attentive to the signs of the times.

In this perspective we can say that we have three main dimensions of the Christian life that comes from faith and, as a consequence, from theological reflection: modernity and post-modernity, poverty in the world and the diversity of religions in the world. These last two are, without a doubt, ancient realities, but, for a long time, Christian theology has not perceived the radicality of the questions of faith that comes from them.

This class will explore these points, taking account of the authentic challenges that they present and the elements necessary for a new hermeneutic from which to think about faith in this context. On the other hand it is clear that, for various reasons, it is not possible to confront these challenges in a disconnected way since they are ultimately interrelated.

60832. Ecclesial Ministry (3-3-0)
This course studies the theology of ecclesial ministry -- lay and ordained. Taking into account the biblical background and historical developments, the course focuses on the post-conciliar discussion of ecclesial ministry in the Roman Catholic Church. In seminar format, students will work together to (1) understand church teaching and recent theological debate on the theology of ministry and priesthood and (2) gain a vocabulary and principles for articulating their own ministerial identity.

60833. Muslim and Christian Interaction (3-3-0)
This course has a twofold aim. It not only provides an introduction to the world of Islam but also attempts a comparison and evaluation of Islamic and Christian theological themes from both a systematic and historical perspective. Topics such as the nature of God and the process and content of divine revelation; the person and function of Muhammad and Jesus as exemplars of faith; the role and nature of sacred scripture and tradition; the place and nature of piety and practice in everyday life; the way that each religion sees itself in relation to other faiths; change that each tradition has undergone in the modern period; these and other topics will be treated with the intention of deeper understanding and appreciation of the other.

60834. Christianity and Islam: Dialect and Relationships (3-3-0)
In this course we will analyze the history of the Muslim-Christian conversation. We will begin with the Qur'an and the earliest Christian writings on Islam and continue with medieval polemical and apologetical works (in English) by Arab and European authors. Turning to the contemporary period we will look, on one hand, at missionary tracts aimed at converting (focusing on material on web sites), and, on the other, at efforts to seek mutual understanding through dialogue (including the development of the Church's teaching on Islam). Finally, we will consider the contribution to this conversation of more recent religious movements -- including Baha'ism, Ahadism and the Nation of Islam -- and the impact of September 11 on this conversation.

60835. Canon Law (3-3-0)
Note: M.A.-M.Div. students only. The purpose of this course is to provide students studying for ministry with an introduction to the law of the Roman Catholic Church. General principles for the interpretation of canon law as well as its history, and its relationship to theology and pastoral praxis are discussed. Although attention is given to the laws and canonical jurisprudence concerning marriage, other selected canonical topics of value to those in ministry are considered as well.

60841. Doctrine of the Triune God (3-11-0)
This course will first examine the biblical roots for the doctrine of the Trinity and the development of this doctrine in the teaching and theology of the Church. Then the course will take up systematic questions, such as the viability of the language of ‘one nature and three persons,’ the personal existence of the Holy Spirit, the actions of the Trinity, and naming or re-naming the Trinity. The course will end with reflections on the Trinity in art, literature and liturgy.

60842. Thomas Merton (3-11-0)
This course will look at the significance of Thomas Merton as a contemporary spiritual master. During the course we will read from the journals of Merton abridged in The Intimate Merton, selected spiritual writings from Thomas Merton: Spiritual Master and as much of New Seeds of Contemplation as can be covered in the time frame given to us. Particular emphasis will be placed on his theology of prayer; his critique of culture; and the linkages he makes between contemplation and social justice.

60843. The Option for the Poor: Spirituality Biblical Foundations (1-1-0)
The sentence, preferential option for the poor is well known. It expresses the experience and the reflection of many Christian people from Latin America. It was present in the Latin American Bishops conferences of the last decades and today it belongs to the universal ecclesial magisterium. This option has numerous consequences in the personal, social and political life of Christians and in the witness of the whole Church.

The purpose of the course is to provide some elements in order to underscore the meaning and the scope of the option for the poor. We need to recall that it is first of all, a way to be Christian, a disciple of Jesus. This is what we call spirituality. From this deep level we can understand that in a second moment it is an inspiration for doing theology. Talk about God is rooted into a faith lived in community and thus inserted into a history of the transmission and acceptance of the Christian message. In order to do that this class will explore the biblical foundations of the option for the poor, revisiting several scriptural texts.

60844. Introduction to Karl Rahner (3-0-3)
In this class we will explore the thought of Karl Rahner, one of the most influential theologians in the history of the church. We will read and discuss chapter by chapter his Foundations of Christian Faith, the required text, which provides a general overview of his theology. In each class, I will summarize the major ideas in the chapter, offer an opportunity for questions, and lead a discussion of the practical implications of his thought.

65931, 65932. Field Education I: Images and Models of Ministry (2-2-0)
Field education is an integral component of education for pastoral ministry. Through field education, students pursue the integration of theological competence with pastoral skill in a developing identity as a public minister. For first year students, the specific goals are to provide initial approaches, of both theoretical and practical kinds, to two sets of foundational questions: What is theological reflection? How is it done? What are some resources upon which to draw for theological reflection in ministry?

What does it mean to be a minister? How does one go about constructing one’s self-understanding as a lay or ordained minister today in the Catholic Church? Where is one’s place within the larger mission of the Church? What resources might inform, shape, and sustain one’s identity in ministry?

The goal is approached through a threefold constellation of learning contexts: field work in a ministry placement, supervision of that work, and the field education seminar. The primary learning dynamic for the seminar is dialogical and includes conversation about assigned texts, as well as shared reflection on field experiences.

60932. Introduction to Spiritual Direction (3-3-0)
This course will be an introduction to the theological foundations, theory, practice, dynamics and major issues in the pastoral practice of spiritual direction. Course will utilize case studies, lectures, theological reflection on personal experiences and group work.

60933. Pastoral Counseling II (3-3-0)
Building on the skills learned in Fundamentals of Pastoral Care and Counseling, this course presents students with practical skills to bring God's healing touch to some of the psychotherapeutic situations central to contemporary ministry, such as grief and loss, substance abuse, marital and family conflict, and crisis intervention.
After laying a theoretical foundation in psychodynamic, cognitive behavioral, and humanistic theories of counseling, the course will integrate and apply these theories in a pastoral way to some of the counseling situations encountered in ministry. In addition to learning and applying basic counseling theory and skills, students will learn some of the theory, skills and perspectives unique to the various settings and counseling situations mentioned above. In addition to learning when and how to help as pastoral ministers, students will learn to recognize situations and psychopathologies which call for more professional attention and referral. Throughout the course, students will be challenged to find and integrate a pastoral perspective and identity in their counseling. Students will be assigned readings from primary and secondary sources, be expected to participate fully in classroom discussions and roleplays, and be asked to write four short integration papers and short journal assignments.

65933, 65934. Field Education II: Articulating Faith (2-2-0)
The goal of the second year of field education is facility in articulating the Christian faith, particularly as understood in Roman Catholic tradition, and in fostering the development of faith with others. In the field education seminars, students explore the role of catechesis in ministry and continue to integrate theory and praxis toward collaborative ministry and community building in fostering the reign of God. The goal is approached through a threefold constellation of learning contexts: field work in ministry placement, supervision of that work, and the field education seminar. The primary learning dynamic for the seminar is dialogical and includes conversation about assigned texts, shared reflection on field experiences, and faith-sharing.

65943. Tour Contemporary Ministry Among Latinos (1-1-0)
Ministry in the Latino communities is a fun ministry because its potential is only limited by the pastoral team’s imagination! The rituals and activities which are most effective are not regulated by liturgical or canonical directives, only by a tradition that is constantly renewing itself.

65945. Pastoral Administration (1-1-0)
A basic introduction to the administrative dimensions of pastoral ministry, including staff development, planning, programming, and finances. This is a required skills course for second-year M.Div. students.

65946. Liturgical Celebration and Ministry I (2-2-0)
A study of the structure of the Eucharistic Rite and the Liturgy of the Hours with emphasis on ministerial roles.

65947. Liturgical Celebration and Ministry II (1-1-0)
A study of the structure of the Eucharistic Rite and the Liturgy of the Hours with emphasis on ministerial roles.

65948. Preaching I (2-2-0)
An introduction to homiletics.

60949. Preaching II (2-2-0)
A continuation of Preaching I, this course treats exegesis for preaching, methods of homily preparation and delivery.

60950. Preaching III (2-2-0)
A continuation of Preaching II, with emphasis on the theological dimensions of preaching. The main work of the course will be preparation, delivery, and review of homilies. Assigned readings to be discussed in class. In addition to preaching and reading assignments, each student will prepare a short paper on a theology of preaching.

60951. Reconciliation Ministry (1-1-0)
Reconciliation Ministry is designed to: (1) introduce ministry students to the history and theology of the sacrament of reconciliation; (2) provide an initial "con-fessional experience" (practicum) from which students can benefit from guidance, supervision, and constructive criticism; (3) assist students in understanding the importance of penance/reconciliation in the life and ministry of the church.

60952. Fundamentals of Pastoral Care (1-1-0)
Self-assessment of skills for ministry. This is a required course for first year M.Div. students.

60994. Field Education III: Leadership in Ecclesial Ministry (2-2-0)
During their third year of field education, Master of Divinity students explore issues of leadership, power, and authority in the role of the public minister. The goal is to complement the growth in pastoral skills already attained in the first two years with the acquisition of proficiency in skills for collaborative leadership in the contemporary Church. The goal is approached through a threefold constellation of learning contexts: field work, supervision, and the field education seminar. The primary learning dynamic for the seminar is dialogical and includes conversation about assigned texts, shared reflection on field experiences, and faith-sharing.

63001. Synthesis Seminar (2-2-0)
Note: Third-year M.Div. students only. The Synthesis Seminar is both a point of arrival and a point of departure-arrival, in that it seeks to ingrate the course of formal studies with one’s theology of ministry, and departure in that it is provisional, leaving one with questions for the journey.

Each participant chooses a topic that will serve as a focus for synthesis. Synthesis is the operative word; this is not research on an entirely new topic. Synthesis should illustrate both theological and ministerial preparedness. In developing the topic, attention is to be paid to at least three theological areas (Scripture, ecclesiology, patristics, ethics, and practical theology).

63201. Intensive Course: Thomas Aquinas (4-4-0)
Recent years have seen new interest in the theology of Thomas Aquinas. Much of Catholic thought and life from the end of the Middle Ages through Vatican II has drawn from his thought. “The Theology of Thomas Aquinas” is a single course but it has two tracks. The morning session, taught by Thomas O’Meira, O.P., will introduce students to the patterns and themes of the Summa theologica. The afternoon session, led by Joseph Wawrykow, will consider Aquinas’ Christology in the Summa and in other representative works. Complementing the classroom lectures, by other members of the University faculty will examine the significance of Aquinas in (for instance) literature, politics and art. Although this is an advanced introduction, the course is suitable for those with little exposure to Aquinas. Please note: The usual 50 percent tuition reduction for Notre Dame Alums does NOT apply to the Intensive Course.

63202. Intensive Course: Augustine (4-4-0)
Augustine is arguably the single most influential theologian in the West. There is in almost every Western theologian some strain that is Augustinian, and many of the disputes in Western Christendom can be regarded as arguments pitting one strain of Augustinian tradition against another. The study of Augustine, therefore, is essential for an understanding of most subsequent Christian theology. This course attempts to introduce students to the study of Augustine in an attempt to gauge the specific and distinctive character of his theology over a broad range of issues. Special attention will be given to the development of Augustine’s thought. The class hopes to be useful to students who approach Augustine from a variety of perspectives and interests, and as such will have a strongly textual, rather than thematic, principle of organization, emphasizing the reading of whole works rather than excerpts topically arranged. Although this is an advanced introduction, the course is suitable for those with little exposure to Augustine.

63203. Intensive Course: Hans Urs von Balthasar (4-4-0)
This intensive course serves as an introduction to the wide-ranging thought of the Swiss Catholic theologian, Hans Urs von Balthasar. It has three major foci: (1) Balthasar’s attempt to relink theology and spirituality, a link that has been broken in the modern period. Balthasar’s reflections on the intrinsic relation of holiness and theology, on the non-scientific practice of biblical interpretation, and on prayer will all come in for consideration. (2) Balthasar’s fundamental option for an essentially christocentric rather than anthropocentric point of view. Here his difference in fundamental starting point from much of modern and contemporary Catholic theology will be examined. (3) Balthasar’s innovative concentration on the centrality of beauty to theology, and the necessity for thinking of God as beautiful as well as good and true. Although it will not be a specific focus, the ecumenical context and orientation of Balthasar’s work, and specifically its relation to Protestantism and the Eastern Orthodox, will be kept to the fore.
THEOLOGY

63801. Intensive Course: St. John of the Cross (4-4-0)
This intensive course will explore the writings of John of the Cross (1542-1591), saint and doctor of the church. The course will develop a hermeneutic with which we can study and comment on the poetry, sayings, letters, and commentaries composed by this great Spanish mystic. We will further inquire what John of the Cross’s mysticism can contribute to a contemporary theology of religious experience and how it might heal the breach between theology and spirituality. Special efforts will be made to create collaborative approaches to the writings of John. The professors will attempt to model this collaboration through their joint presentations and interactions. The course will be based on The Collected Works of Saint John of the Cross edited by Kieran Kavanaugh, OCD. Participants are requested to get the 1991 edition of that book.

63802. Power to Communion (3-3-0)
Prerequisite: Six hours of theology. This seminar explores the present and the future of the Catholic Church, placing emphasis on how its future is foreshadowed in the growing ecclesial interdependence that exists between the churches of North and Latin America. Emphasis is placed on the growing involvement of the laity in Latin America and where this may lead the North American church. In a particular way, attention is given to the role of small Christian communities.

64102. New Testament Theology (3-3-0)

64201. America and Catholicism: Religion and Culture in Tension (3-3-0)
This course will examine the relationship, indeed the tension, between Roman Catholicism and American culture during the nineteenth and twentieth centuries. It will begin with a study of the influence of democracy on American Catholicism during the republican era, 1780-1820. Then it will focus on how immigration transformed the church in the U.S. We will study such issues as national identity, devotional life, gender, and doctrine over the course of the nineteenth and twentieth centuries. We will also look at more recent history, examining how American cultural values have challenged the Catholic church in the U.S. Readings for the course will include In Search of an American Catholicism: A History of Religion and Culture in Tension by Jay P. Dolan and also John McGreevy’s, Catholicism and American Freedom as well as a course packet of articles.

64202. In God’s Image: Mystery of Creation (1-1-0)
This course offers a rich exploration of the Christian doctrine of creation. This course covers not only the basics of the doctrine, but provides participants the opportunity for deepening reflection by exploring how the Christian tradition has reflected on this doctrine, from biblical accounts in the book of Genesis through the early church fathers (specifically Irenaeus and Augustine). Participants can expect to gain a deeper understanding and appreciation for the doctrine of creation and its centrality to our faith, as it involves perennial questions concerning the origin and identity of the human race and the universe, the mystery of suffering and evil, and explores the continued relevance of the Christian tradition concerning this doctrine in our present day, faced with global and environmental issues that have arisen in the last century.

64801. Christology (3-3-0)
Who was Jesus Christ? What was his mission? What does it mean for Christians to affirm that he was both God and Man? Jesus Christ’s historical and ontological identity is at the basis of any understanding of Christian or Christian theology. Without an understanding of this identity, the Christian tradition is incoherent. Theologically, Jesus’s identity has necessary linkages to all the divisions of theology but especially to the Christian doctrine of God, anthropology, soteriology, sacramentalism and spirituality.

Although the Trinity is rightly termed the central doctrine of the Christian tradition, Christians believe that Jesus Christ, in his message and person, was the primary revelation of this tri-personal God. Therefore, according to the order of revelation, Christology precedes Trinitology. Some systematic theologies mirror this according to the principle that the modus docendi (way something is taught) should follow the modus inveniendi (the way something is discovered). One might further say that most trinitological doctrines stand or fall on the basis of how well their foundations are constructed in Christology.

In this course, we will examine the historical development of Christology from the age of the New Testament to the late 20th/early 21st century. Particular emphasis will be placed on the New Testament data and on conciliar dogmatic formulations in their historical settings, especially as these have determined the course of theological development. Issues addressed will include: the nature of the hypostatic union, the consciousness of Jesus Christ, the necessity of the incarnation, the works of Jesus Christ, the suffering of Jesus Christ, the necessity of the atonement, etc.

64802. Christology (3-3-0)
This course examines the contemporary Christology: the meaning of the doctrine of Chalcedon, the theological significance of the historical Jesus, the theological role of belief in the resurrection of Jesus Christ, and the understanding of Jesus Christ as redeemer. It pursues these issues by studying the Christologies of Karl Rahner, Gerald O’Collins, Brian McDermott, and Jon Sobrino.

66001. Directed Readings (0-0-0)
Research and writing on an approved subject under the direction of a faculty member.

67001. M.T.S. Colloquium (0-0-0)
Required for all M.T.S. students.
83002. Advanced Hebrew (3-3-0)
For Ph.D. candidates who require Hebrew as a major research language. Others should consult instructor before registering.

83101. Hebrew Bible Seminar (3-3-0)
The topic of the seminar is the history of the high priesthood in the second temple period (516 BCE-70 CE). The high priest appears to have been the leading official in Jerusalem for much of the period, and diverse sources preserve information about the office itself and about the men who held it. The earliest ones are in the Hebrew Bible (Hagga, Zechariah, Ezra, Nehemiah, with relevant pentateuchal passages), while some books found only in the Septuagint add more information (1-2 Maccabees especially). Also important are the writings of Josephus, the gospels and Acts, and a variety of other sources. We will examine all of these in order to determine what can be said about the high priests and their roles.

83102. Hebrew Bible Seminar (3-3-0)
Literary, textual, historical, and exegetical studies in the Book of Isaiah in its Rabbinic (MT), Qumran, and Septuagintal forms. This seminar will explore the approaches and results of four major commentaries recently published by J. Blenkinsopp, B. Childs, K. Balzter, and M. Sweeney. The complex process of the composition and redaction of the book viewed from historical, literary, canonical-process, and theological perspectives. Study of manuscripts of Isaiah, especially the Qumran scrolls and the Septuagint. The interpretation of Isaiah at Qumran, in the New Testament, and in early Jewish and Christian authors. Both Hebrew and Greek are required.

83105. Hebrew Bible Seminar: Dead Sea Scrolls (3-3-0)
The seminar will focus on the Book of Daniel, examining its various parts in their historical and literary environments. Among the subjects to be treated are the teachings in the book, the place of the work in a developing apocalyptic tradition, the differing versions of Daniel, its historical setting, and its use by the Qumran community. We will also pay attention to the history of scholarship on the book. Topics for this seminar will vary.

83107. Introduction to the Hebrew Bible (3-3-0)
This course provides an overview and critical study of the Hebrew Scriptures in their literary, historical, and theological contexts. The focus will be principally on reading and gaining an informed understanding of the biblical text, but this will be done against the background of the history, literature, and religions of the magnificent civilizations in the ancient Near East. Further aspects include analysis and use of the tools of historical-critical scholarship; ancient mythology; the processes by which the Scriptures were composed; Old Testament theology; and contemporary theological issues. The course is designed to prepare students both for graduate biblical studies and for intelligent effectiveness in the contemporary church.

83109. New Testament Theology (3-3-0)
This lecture course focuses on the problem of the theological unity of the New Testament and the various ways in which the supposition of theological unity has been conceptualized by New Testament scholars, as well as the perspectives of those scholars who have criticized the entire enterprise. One of the main emphases will be the pervasive issue of the Christology of the New Testament. The course will involve intensive reading assignments and four short papers (4-5 pages), and a midterm and final examination. Texts for the course include Heikki Raisaenen's, Beyond New Testament Theology, Rudolf Bultmann's New Testament Theology, Georg Strecker's Theology of the New Testament (2000) and Larry W. Hurtado's Land Jesus Crist: Devotion to Jesus in Earliest Christianity (2003). This course is designed primarily for PhD students in Theology in areas other than Christianity and Judaism in Antiquity, so competence in Greek is not required, though special provision will be made for those who do have competence in that language as well as in German and/or French.

In the early 1970s Nils Dahl published a small but potent article "The Neglected Factor in New Testament Theology: God." This seminar seeks to un-neglect God in the following ways: (1) Greco-Roman philosophy developed a formula for its god-talk, which is very influential in reading Paul; (2) many NT writers talk about the nature of God: [a] God's two attributes - mercy and justice, and [b] God's two powers-creative and executive; (3) the social sciences are indispensable for considering: [a] “be ye holy as I am holy”; [b] honor, glory, and praise; and [c] patron/benefactor and client. (4) In addition, one must consider God in terms of providence (Acts) and debates over theodicy. (5) Always lurking are issues of God's justice (faithfulness and loyalty). (6) No consideration of God is complete without attention to worship: prayer, sacrifice, doxology. Finally, who else is called “god”? Moses in Exodus 7:1, but also Jesus in John and Hebrews. This course then has two foci: un-neglect about what is said about God (survey of documents, themes, etc.) and creative research by seminar members to aid in un-neglecting God.

83111. New Testament Seminar (3-3-0)
There is a diverse body of material that extends Paul’s career beyond his own lifetime: biographical interest evident in the canonical Acts and non-canonical Acts of Paul, various appropriations of his letters among his disciples in the Deutero-Pauline tradition, efforts to fill in or expand his corpus through pseudonymous correspondence such as 3 Corinthians or the letters between Paul and Seneca, and finally, polemical material, especially in Jewish Christian circles. This seminar will examine the place of Ephesians within the larger Pauline tradition. Members of the seminar are invited to develop their own perspective. My working thesis is that Ephesians is unique in its use of the Pauline tradition. For the author of Ephesians the letters of Paul are inadequate in and of themselves: they are too context specific. Similarly later traditions about Paul, especially Colossians, are inadequate. Looking back on Paul’s career and letters, Ephesians views Paul as the catalyst of the movement that shaped the church as the author knew it at the end of the first century. The letter situates Paul’s lifetime accomplishment (the rapprochement between Jews and Gentiles) and thought (salvation by grace through faith) into a new framework, “the eternal purpose of God.” Paul and his message are no longer for a specific community or group of communities, but for all of the churches. The Apostle to the Gentiles has become the Apostle of the Church.

The seminar will fall into two major parts: first, we will work through the text of Ephesians. Each member of the seminar will select a portion of the Pauline tradition for which he or she will responsible as we work through text. The thrust of the work will be comparative. The second part of the seminar will consist of presentations in which each member of the seminar will summarize her or his assessment of Ephesians in the Pauline tradition in light of the material through which he or she has worked.

83201. Jewish and Christian Debate during the High Middle Ages (3-3-0)
The growth of urban centers in Europe and Iberia during the Middle Ages rekindled the literary debates between Jews and Christians that began in the Early Church. Both Jews and Christians constructed images of the Other that were grounded in earlier arguments from Scripture and augmented them with the new tools of reason and linguistic knowledge. Our seminar will read both Jewish and Christian documents analyzing them in light of the work of modern historians such as Gilbert Dahan, Jeremy Cohen, David Berger and Gavin Langmuir. In addition to reading disputations literature we shall analyze papal policy, noble patronage and canon law.

83202. Historical Jesus and Historical Law (3-3-0)
This seminar will focus on two problematic entities and their still more problematic intersection: the historical Jesus, as reconstructed by the so-called Third Quest, and the Mosaic Law as it was actually preserved, understood, and lived by Palestinian Jews at the turn of the era. In the first classes, the professor will give introductory lectures on the concepts, sources, and criteria used in the quest for the historical Jesus and offer some observations as to how the quest for the historical Jesus relates to the
THEOLOGY

problem of the Law in the first century. The students will be asked to pick from a list of topics a specific problem related to Jesus and the Law; they will then research the topic and write a seminar paper, which will be distributed and then discussed at a session of the seminar. The seminar papers will then be rewritten in light of the class discussion and resubmitted to the professor. To guarantee that the whole is not lost in examining its parts, weekly readings covering an overview of the historical Jesus will also be discussed in each session.

83204. Early Christianity Seminar (3-3-0)
Studies of selected patristic texts and early Christian history. (Offered with varying topic each spring)

83205. Augustine and Anselm (3-3-0)
An introduction to the thought (philosophical and theological) of Augustine and Anselm of Canterbury. Since Augustine is one of the few intellectual forerunners mentioned by name in Anselm’s main works, we shall assume that a reading of the Latin Church Father forms an indispensable foundation for any serious study of the XIC to XIC archbishop’s writings. Although we shall study either at length or in briefer selections the following works in roughly chronological sequence: (Augustine) On Free Choice of the Will, On the True Religion, Confessions, On the Trinity, On the City of God, (Anselm) Monologion, Proslogion, On Truth, On Freedom of the Will, and On the Fall of the Devil, certain thematically-connected ideas will be placed in relief in order to reveal the profound coherence and continuity of the Augustinian and Anselmian speculative systems. These ideas will include Being, Truth, Mind, and Will together with associated ontological, epistemological, and ethical questions.

83206. Our Lady of Guadalupe (3-3-0)
Our Lady of Guadalupe has been at the heart of Mexican and Mexican American faith and identity for nearly five centuries; within Roman Catholicism she is officially acclaimed as the patroness of the Americas. This seminar explores the origins and development of the Guadalupe tradition; the Nican mophua, which millions of devotees acclaim as the foundational narrative of that tradition; and theological writings about Guadalupe from Miguel Sánchez’s Imagen de la Virgen María, Madre de Dios de Guadalupe (1648) down to the present day. Requires a reading knowledge of Spanish.

83207. Historical Seminar: Medieval (3-3-0)
Seminar on a selected theological topic in the medieval period.

83208. Medieval Exegetics: Biblical Interpretation in the Middle Ages (3-3-0)
Our focus during the semester will be on the relationship between biblical interpretation and the polemical literature written by Jewish and Christian authors from 1050-1200. Students will read the recent accounts of this literature by Gavin Langmuir, Anna Sapir Abula1050-1200. Students will read the recent accounts of literature written by Jewish and Christian authors from ship between biblical interpretation and the polemical (3-3-0)

83210. Historical Theology Seminar: Modern Theology (3-3-0)
This course is an advanced survey of some important figures and schools in 19th century Christian theology. The figures covered are selected in large measure for their importance for understanding 20th century theology, insofar as the most important figures in 20th century theology either continued solutions worked out by Kant, Schleiermacher and Hegel to the problems that the Enlightenment raised for theology, or took up and continued critiques of their solutions first forged by figures whom Paul Ricoeur has named the “masters of suspicion” (Marx, Nietzsche, Freud). Thus, while we cover these figures in their own historical context in order to understand their theologies (or anti-theologies) on their own terms, we will also be attentive to the ways that they set the stage for twentieth century movements such as transcendental Thomism, feminist and liberation theologies, and postmodern theories. Course requirements: three ten-page analytical papers and a take-home exam.

83211. Modern Theology and the Emergency of Secularity (3-3-0)
A number of recent works attempt to reassess our view of modern theology by painting in broad strokes key developments of the 17th and 18th centuries. Did theology create its own crisis by turning to philosophy and away from its own proper resources of scripture and religious experience? Can we discern a counter-history, a lineage of thinkers who kept alive an alternative approach faithful to theology? Do rationalist and enlightenment trends represent a wrong turn or a necessary developmental stage? Is secularity, and are we in the midst of a process of secularization? We will examine Blumenberg’s The Legitimacy of the Modern Age, Michael Rosen’s Modern Atheism, William Placher’s The Domestication of Transcendence, and relevant portions of Milbank’s Theology and Social Theory, along with primary texts which are central to the arguments of these works. In addition to grappling with this particular period, we will discuss broader issues of how the history of theology can be a form of constructive theology and how historical theology differs from other, “secular” forms of history.

83212. Modern and Contemporary Ethics: Protestant (3-3-0)
In this seminar, we will read through major 20th century figures in Protestant ethics, including Barth, both Niebuhrs, Hauerwas, Ramsey, and Gustafson. We will focus on the interplay between theological and ethical issues in these authors, paying particular attention to the ways in which they build on, and stand in conversation with one another. This course is intended for doctoral students; others will need permission of the instructor.

83213. Study of the Bible in Church and Synagogue (3-3-0)
The Bible formed the core revelatory text of both the synagogue and the early church. Although both communities developed differing collections of books considered to be sacred writings, there was a large body of works shared by the two communities. Students in this course will explore three dimensions of how Scripture was studied in Judaism and Christianity.

The first consideration will be the material nature of the Bible. What were the physical characteristics of books or books that Christians and Jews studied? A consideration of scroll and codex will form the basis for an investigation how the manuscripts of transmitted the biblical text from antiquity to the Middle Ages.

A second dimension will be the development of lectionary and liturgical approaches to Scripture. Students will explore how the Bible was read in the Church and Synagogue as part of public worship. In this segment of the course the genres of homily and Midrash and liturgical poem or hymnody will be studied.

The third approach will trace the theoretical or hermeneutics of the Bible. Works such as Origen’s Peri Archon, Augustine’s De Doctrina Christiana, St. Benedict’s Rule, Hugh of St. Victor’s Disassidulion and Thomas Aquinas’s Summa will provide evidence for the Christian community. From the Jewish perspective students will read portions of the Babylonian Talmud, Saadia Gaon’s Book of Beliefs and Opinions, Maimonide’s Guide of the Perplexed, and Nachmanide’s Introduction to the Commentary on the Pentateuch.

In addition to reading primary sources in translation, students will read from modern authors such as Beryl Smalley, Henri de Lubac, Jeremy Cohen and Sara Kamin who have contributed to the historiography of biblical exegesis.

83214. Syriac Christianity (3-3-0)
This seminar is designed as a basic introduction to the life and worship of the Syriac family of churches. Syriac churches belong to the Oriental (i.e. non-Byzantine) branch of Christianity. Syriac tradition represents the unique phenomenon of a Semitic Christian tradition that is little affected by Greco-Latin influence. The first part of the seminar will consider the main lines of the historical development of Syriac Christianity: its Judaism-Christian origins; its distinctive Aramaic versions of the Bible with roots in the synagogue; and the ongoing interaction between Syriac liturgical development and Judaism. The second part of the seminar will take up
specific topics that define the life and worship of Syriac Christianity: the Liturgical Year, Liturgical Books, Eucharistic Prayers, the Role of Liturgical Poetry, Pental- lental Incense Rites, Liturgy of the Hours, Origins of Mariori. This seminar will be of interest to students in HC, CIALS, and ECS.

83401. Early Christian Liturgy
(3-3-0)
An introduction to the liturgical sources, ancillary docu- ments, and methodologies for the study of Christian liturgy in the churches of the first four centuries of the Christian era. The course concentrates on the Eucharist and its anaphora, the rites of Christian initiation, the origins and early evolution of the liturgical year, and the Liturgy of the Hours.

83402. Eastern Liturgies
(3-3-0)
Topics vary from year to year.

83403. Medieval Liturgies
(3-3-0)
The purpose of this seminar is to examine the various sacramental rites in the Middle Ages, especially the Eucharistic liturgy, and to attempt to reconstruct them within the context of liturgical enactment, architectural space, artistic and musical decoration, etc. The seminar must necessarily deal with liturgical texts, but this is only a first step for understanding the broader dimen- sions of the liturgy. Architectural, artistic and musical components will be taken into consideration. Numerous commentaries on the liturgy are also an important source for garnering the medieval understanding of the liturgy, especially in its allegorical interpretation. A tangential but key element for the understanding is the devotional and spiritual practices that grew up alongside the official liturgy. Therefore, some attention will be given to these dimensions, including liturgical drama.

83404. Reformation Liturgy Seminar
(3-3-0)
This course will explore the most important Christian liturgies that appeared during the Reformation(s) of the 16th and 17th centuries in Europe. Beginning with a discussion of Martin Luther’s writings on sacramental theology (plus his proposals, in Latin and German, for liturgical reform), the course will move to a study of Reformed liturgy (Zwingli, Bucer, Calvin, Knox); Angli- can liturgy (the 1549 and 1552 prayer books of Edward VI and subsequent [e.g., Elizabethan] revisions of the Book of Common Prayer); the response of the “Catholic Reformation” (sometimes called the “Counter-Reforma- tion”); and the Puritan liturgy (Middleburg, John Cot- ton, the Westminster director). Following these historical investigations, individual rituals will be examined in greater detail, among them: the rites of Baptism and Confirmation, Eucharist, Marriage, and Christian Burial.

83405. Modern Liturgies Seminar
(3-3-0)
The purpose of this course is to introduce students to the movements, documents, issues, and personalities that gradually coalesced to form what is commonly called (in Europe and North America) “the modern liturgical movement.” The period covered stretches from ca.1600 to 2000 C.E., and deals with historical developments in both post-Reformation Europe and North America, and among both Roman Catholic and Protestant churches.

83406. Liturgical Theology
(3-3-0)
“Liturgical theology” is often treated as an exploration of “liturgy as a source of theology,” or “liturgy as theologia prima,” approaches that have definite merit. This course, however, will focus on word and sacrament as sacred realities, taking up questions concerning theologies of the word and of the sacraments, and will examine sacra- ments in genre, as well as theological approaches to the word of God. The starting point will be an examination of the “medieval sacramental synthesis,” but will move from there to contemporary approaches to word and sacraments. Students will have the option of choosing various assignments, but all will prepare a final paper and a “take-home” midterm examination. Depending on class size, students may have the opportunity for in-class “oral presentations.”

83407. Ritual Studies
(3-3-0)
Analysis of the levels of meaning to be found in an ob- served rite in light of selected ritual theorists.

83408. Topics in Liturgical Study: The Sanctus
(3-3-0)
This course will examine the origins, evolution, variant structures, and theologies of the Anaphora, Praxis, Canon, or Eucharistic Prayer, the central prayer of the central act of liturgical worship within the Christian community. The primary focus of this course is the study of the classic liturgical sources of Christian antiquity, although some current official liturgical texts may also be examined critically.

83601. Ethics Seminar: Methods
(3-3-0)
A selection of American, European, and Latin-American authors, with emphasis on ecumenical interaction and sensus-formation within the discipline. (Topic changes each fall.)

83602. Ethics Seminar: Modern Moral Thought
(3-3-0)
In the wake of 16th-century confessional strife, ethi- cal reflection was typified by an attempt to prescind from theological controversies and to model ethics on scientific and mathematical theories. At the same time, thinkers worked from inherited understandings of the virtues, divine commandments, and natural law. In the first half of the semester, we will focus on the tradition of modern natural law in the 17th century, contrasting it with earlier natural law thinking and considering the reasons for its decline after Locke. In the second half, we will turn to the 18th-century moral sense school, exploring the ways it sought to avoid problematic aspects of modern natural law theory, in particular its theological voluntarism and its elitism. Throughout, we will seek to delineate how the issues that emerged in this period set the terms for all subsequent moral thought, and reflect on the ways in which this period defined moral philosophy over against moral theology. In addition to primary readings taken from J. B. Schneewind’s Moral Philos- ophy from Montaigne to Kant and Jonathan Edwards’ The Nature of True Virtue, we will read selected chapters from Schneewind’s The Invention of Autonomy, along with short selections by Bonnie Kent, G. Scott Davis, and Alasdair Maclntyre.

83603. Protestant Social Ethics in the 20th Century
(3-3-0)
Questions of theological anthropology lie at the heart of highly disputed theological, ecclesial, ethical, and politi- cal issues, yet the discipline itself is in question. This seminar will focus on diverse contemporary approaches to the field of (Christian) theological anthropology. The goal of this survey of selected Catholic, Protestant, and Orthodox theologians will be to identify the questions and resources within the tradition that are most in need of critical engagement and constructive development today.

Issues to be engaged include: 1) the nature/grace disputes in the Catholic tradition at the beginning of the 20th century and their ongoing influence; 2) the relationship between anthropology, christology, and trinitarian theol- ogy and the appropriate starting point for theological anthropology; 3) theological understandings of person- hood; 4) the impact of global human suffering and eco- logical devastation on Christian understandings of what it means to be human; 5) human differences, structural inequalities, and the possibility of human solidarity.

83604. 20th Century Roman Cath. Thoug
(3-3-0)
Using Vatican II’s call for renewal as a fulcrum, this semi- nar will examine key figures and movements in Roman Catholic moral theology in the twentieth century. As we trace the challenges to and developments in method from the manuals to the moral encyclicals of John Paul II, we will be concerned in particular with the question of sources for Christian ethics. How are we to conduct the search for truth as a moral community? What properly shapes moral discernment for people of faith? What is a fruitful exchange between theology and science, philoso- phy, culture?

83605. Virtue and Virtues
(3-3-0)
During the second half of the twentieth century, moral philosophers and scholars of Christian ethics turned to what had once been an unfashionable topic, namely, the nature of virtue and the role of the virtues in the moral life. This turn was motivated by a number of differ- ent factors, including dissatisfaction with Kantian and consequentialist models of morality, a conviction of the inadequacy of moral rules, growing interest in character and the moral emotions, and a focus the community as context for moral discernment. By the same token, it has given rise to a wide range of approaches to virtue and the virtues, ranging from fairly traditional Aristotelian/ Thomist accounts to pragmatist and post-modern virtue theories. More recently, this topic seems to have played out among philosophers, but it continues to be central to Christian ethics – suggesting that the idea of virtue is in some way particularly relevant to theological reflection.

In this course, we will examine the development of virtue ethics in recent Christian ethics through a close reading and critical analysis of central works in that develop- ment, including the writings of Haring, Gillemann, Hau- erwas, and Nelson. We will focus on theological works, but we will also read from some philosophers who have been influential in the theological discussion (MacIntyre, Nussbaum). I will try to divide the readings roughly be- tween Protestant and Catholic authors. And for those of
you who may have had my "Virtue and Sin" class, the focus this time will be on contemporary authors -- no one earlier than about 1930. Course requirements include two or three class presentations and a longer paper based on one of the presentations.

83607. Theological Perspectives in Medical Ethics (3-3-0)
This seminar will explore contemporary questions in medical ethics in the context of Christian theological commitments. The seminar will focus, in part, on methodology and the issues surrounding the use of religious language in policy debates within a pluralistic society. We will also consider a set of problems in medicine that raise important theological as well as ethical questions, e.g., developments in reproductive and genetic technologies.

83608. History of Theology, Ethics, and the Social Order (3-3-0)
The aim of this course is to do close readings in the history of theological social theory and to ask how the theological, ethical, and social claims are related by the writer(s) in question.

83609. Topics: Christian Doctrine and Ethics (3-3-0)
An exploration of the connection between central doctrinal beliefs of Christians and how they bear on Christian ethical reflection. Doctrines to be examined include the incarnation, pneumatology, nature and grace, and eschatology. Authors include Athanasius, Gregory of Nyssa, Augustine, Aquinas, Luther, Pascal, Blondel, de Lubac, von Balthasar, Rahner, and several contemporary ethicists. Requirements: readings, weekly papers for the first half semester and a long research paper for the second half.

83610. Theological Ethics: US Catholic Social Ethics (3-3-0)
An examination of the work of John Courtney Murray and his successors and the role they have played in shaping the discourse of Catholic social ethics in the United States. Readings will include several weeks of the writings of Murray along with commentators and interpreters (e.g., Leon Hooper and Joseph Komonchak), to be followed up with works by some of Murray's self-declared successors, including most or all of the following: Bryan Hehir, David Hollenbach, John Coleman, Leslie Griffin, Lisa Cahill, George Weigel, Michael and Kenneth Himes, John Noonan, and Michael Novak. Particular attention will be paid to such methodological issues as the place of natural law in liberal democratic politics, the nature of political community and the modern state, and the place of the Tocqueville-Niebuhr-Gustafson tradition in Catholic social ethics. Requirements will include weekly papers for the first half of the semester, one long paper to be presented in class during the second half of the semester, and a final reflection paper.

83611. Mercy and Justice (3-3-0)
Explores the meaning of mercy, particularly in its relationship to justice. Examines four major topics: (1) mercy in its relation to retributive justice, focusing on the role of mercy or clemency in the case of criminal sentencing, as well as broader questions of retribution and wrongdoing such as whether there can or should be criteria for the exercises of mercy, whether mercy can be exercised unjustly, and the relationship of forgiveness to mercy; (2) mercy in its relation to distributive justice, focusing on the corporal works of mercy and issues such as the relationship between justice and "private charity"; (3) mercy in its relationship to social justice or the social face of mercy, and (4) divine mercy, focusing on the various ways theologians have attempted to reconcile divine mercy and divine justice. Readings for the class will be interdisciplinary, and will include materials from legal, philosophical and theological sources.

83612. Philosophical Theology (3-3-0)
How does free creation challenge a reigning worldview? What key philosophical issues are at stake, and why? We shall trace the debate that ensued among Jewish, Christian, and Muslim thinkers, beginning with al-Farabi and Ibn Sina, and then filtered through Moses Maimonides to Aquinas. By exploring their attempts to secure the primacy of actuality over possibility, in their efforts to formulate the creator as a cause-of-being-a-notion novel to the Greeks and apparently less than intelligible to moderns-we hope to unveil the specific challenges which classical and contemporary attempts to formulate the creator/creature relationship pose to conventional philosophical discourse, suggesting a relation between faith and reason more internal than often suspected.

83801. Doctrine of God (3-3-0)
This seminar focuses on contemporary understandings of the Trinity. The major focus will be on views that operate within terms defined by Rahner's paradigm shift to the economy of salvation. Here the emphasis will fall on important differences in emphases that this paradigm shift allows, and their varying degrees of hospitality to talk of the immanent Trinity and divine possibility. Authors covered include LaCugna, Molmtohann, and von Baluthasar.

Isn't the economic turn in contemporary discussion of the Trinity a leitmotif in the course? The topic of divine possibility. Does the economic turn make it either necessary or advisable to surrender, or at least to seriously qualify, the Patristic axiom of divine impassibility?

83805. Systematic Seminar: Christ (3-3-0)
Seminar on selected topics concerning Jesus.

83806. Ecclesiology (3-3-0)
The course will examine the principal ecclesiological themes articulated in the documents of the Second Vatican Council, e.g., sacramentality, community, authority, collegiality, servanthood, ecumenicity. The conciliar ecclesiology will be situated in its wider historical and theological contexts, taking particular note of the pre-conciliar ecclesologies of the various Christian traditions and of developments generated by the council.

83807. Systematic Seminar: Topics in Systematic Theology (3-3-0)
Seminar on selected sources and theologies about systematic theology.

83809. Systematic Seminar: Theological Anthropology (3-3-0)
Questions of theological anthropology lie at the heart of highly disputed theological, ecclesial, ethical, and political issues, yet the discipline itself is in question. This seminar will focus on diverse contemporary approaches to the field of (Christian) theological anthropology. The goal of this survey of selected Catholic, Protestant, and Orthodox theologians will be to identify the questions and resources within the tradition that are most in need of critical engagement and constructive development today.

Issues to be engaged include: 1) the nature/grace disputes in the Catholic tradition at the beginning of the 20th century and their ongoing influence; 2) the relationship between anthropology, christology, and trinitarian theology and the appropriate starting point for theological anthropology; 3) theological understandings of personhood; 4) the impact of global human suffering and ecological devastation on Christian understandings of what it means to be human; 5) human differences, structural inequalities, and the possibility of human solidarity.

83810. Theological Method (3-3-0)
This seminar will explore central methodological issues underlying the diversity and pluralism within contemporary theology. It will be divided into three major units. The first and second parts of the seminar will focus on
two fundamental issues that have organized the “turn” to method in modern theology: the interpretation of classic texts and events from the past (hermeneutics), and the insistence on praxis as a broader category contextualizing theoretical reflection (liberation theologies). For each of these we will (1) read philosophical sources (e.g., work in philosophical hermeneutics or critical theory), (2) analyze in detail the particular way that these sources are deployed by one or two representative theologians in order to craft a theological discourse that is responsive to a particular challenge to theology posed by late modernity, and (3) investigate how these methodological decisions shape the approach to a particular topic in systematic theology (for Fall of 2001, Christology). In the final weeks of the seminar we will evaluate critiques of the “turn to method” in each of the prior two categories. The primary figures to be considered are Hans Georg Gadamer, Paul Ricouer, David Tracy, Jon Sobrino, Gustavo Gutiérrez, and Ignacio Ellacurí–a. Course requirements: close reading of assigned texts, active seminar participation, and a final research paper that considers a different theologian of the students choice.

83811. John Henry Newman as Theologian (3-0-0)
This seminar will investigate the main themes of John Henry Newman’s theological vision. After a consideration of the Apologia Provita Sua we will look backwards to his essay on the development of Christian doctrine and forward to his Grammar of Assent (in the context of his university sermons). A full research paper will be expected as well as regular in seminar reports during the course of the term.

83812. Eschatology (3-3-0)
Eschatology, the study in Christian theology of “the last things,” can also be understood as the study of Christian hope, as an attempt to understand Christian redemption more fully as a yet unfulfilled promise. The traditional discussions of death, resurrection of the body, purgatory and the parousia can then be grasped as reflections on what we ultimately hope for (for ourselves, for humanity, for all of creation). The revival of interest in eschatology in the twentieth century has focused largely on Christian hopes for history and for humanity as a whole, although there has been some attention to issues of individual salvation as well. More recently, hope for the cosmos, for a “new earth,” has reemerged in ecological theologies. This course will examine these major twentieth century eschatological debates, with a particular focus on the diverse methods and insights of political, liberation, latino/a, and feminist theologies.

83813. Comparative Theologies (3-3-0)
The purpose of this seminar is to introduce students of systematic theology to recent developments in theological dialogue between Christianity and other religions, and to deepen their theological understanding of God, christology, grace, eschatology and religious experience through the encounter with three specific faiths: Hinduism, Buddhism and Islam. This course presupposes no previous knowledge of other religions; it is designed to provide the student with a solid theological foundation for further scholarly research or for incorporation in the classroom. Required: oral presentation, class discussion, two analytical papers.

86001. Directed Readings (v-0-0)
Research and writing on an approved subject under the direction of a faculty member.

87001. Special Studies (v-0-0)
Research and writing on an approved subject under the direction of a faculty member.

87002. Preparing for an Academic Career in the Humanities (1-1-0)
There are a number of issues relating to the culture of academic life that are typically left unaddressed in formal course work and degree programs, but which are of concern for those who plan to spend their careers in academic life. This course introduces doctoral students, especially those in the humanities, to a number of these in an effort to promote professional development. This course is built around four major areas: academic positions and expectations, teaching and teaching skills, research, and service. We will explore a wide range of topics for each of these areas, including the preparation of a C.V., an explanation of the tenure process, syllabus construction, the use of technology in teaching, establishing a research agenda, participation in professional societies, external grants, citizenship in the university and society, and principles for a successful career. The course emphasizes the practical requirements of the professorate. It is designed for those in the job market but is open to anyone who want to learn about the requirements of academia.

88101. CJA Research and Resources Seminar (3-3-0)
A 12-week seminar designed to introduce advanced students to the critical texts, indices, reference works, journals, linguistic tools, systems of abbreviation, searching strategies, textual methods, and electronic resources available for the study of the four fields encompassed by the Christianity and Judaism in antiquity section of the Theology Department. Three weekly sessions will be devoted to each of these four fields: Hebrew Bible, Judaism, New Testament, and early Christianity. Seminar sessions will be run by faculty members with expertise in the area of students represented during that session. The grade for the successful completion of this course will be “S” (satisfactory), and it is open for students from other areas who wish to take one, two, or three of the three-week segments. This seminar is required of all CJA students.

88401. Dissertation Research Seminar (3-3-0)
For students in final semester of course work to begin collegially the basic research for their dissertation topics. Required for liturgy students; elective for others.

90699. Research and Dissertation (0-0-0)
Research and dissertation for resident doctoral students.

98700. Nonresident Dissertation Research (0-0-0)
Required of nonresident graduate students who are completing their dissertations in absentia and who wish to retain their degree status.

**Faculty**

J. Matthew Ashley, Director of Graduate Studies, Associate Professor, and Fellow in the Center for Social Concerns. B.S., St. Louis Univ., 1982; M.T.S., Weston School of Theology, 1988; Ph.D., Univ. of Chicago Divinity School, 1993. (1999)

David A. Clairmont, Assistant Professor. B.B.A., Univ. of Notre Dame, 1996; M.A. Univ. of Chicago Divinity School, 2000; Ph.D., ibid., 2005. (2005)

Robert A. Krieg, Professor and Fellow in the Nanovic Institute for European Studies, B.A., Stonyhill College, 1969; Ph.D., Univ. of Notre Dame, 1976. (1977)

Josephine Massynbaerde Ford, Professor Emerita, B.A., Univ. of Nottingham, 1957; B.Div., King's College, Univ. of London, 1963; Ph.D., Nottingham Univ., 1965. (1965)

Timothy Matovina, Director of the Cushwa Center for the Study of American Catholicism and Associate Professor, B.A., Indiana Univ., 1978; M.Div., Toronto School of Theology, St. Michael's College, 1983; Ph.D., Catholic Univ. of America, 1993. (2000)

Gerald McKenny, Director of the Reilly Center for Science, Technology, and Values, and Associate Professor, B.A., Wheaton College, 1979; M.Div., Princeton Theological Seminary, 1982; Ph.D., Univ. of Chicago, 1989. (2001)

Robin Darling Young, Associate Professor. B.A., Mary Washington College, 1972; M.A., Univ. of Chicago, 1975; Ph.D., ibid., 1981. (2002)

Matthew C. Zyniewicz, Director of M.A. Program (Summer), Assistant Chair and Associate Professional Specialist. B.A., Univ. of Notre Dame, 1988; M.Div., ibid., 1993; M.A., ibid., 1996; Ph.D., ibid., 2000. (2001)
In the Division of Science, programs in graduate study leading to the degree of doctor of philosophy are offered in the fields of biological sciences, biochemistry, chemistry, mathematics, and physics. Programs leading to the degree of master of science are also available in these departments.

In its programs of research and instruction, the Division of Science proposes: (1) to educate ethically grounded scientists of disciplined intelligence who can participate fruitfully in the affairs of human society; (2) to conduct research dedicated to the discovery and integration of truth and to train additional scientists with comparable skills and ideals; and (3) to interpret the principles and discoveries of science, with their implications and significance, by lectures, research, articles, and books.

Graduate students in the Division of Science are encouraged to cross departmental lines of instruction and to participate in interdisciplinary programs to broaden their outlook and promote the integration of the sciences in areas of overlap.

**Biological Sciences**

**Chair:** Charles F. Kulpa Jr.

**Director of Graduate Studies:**

Gary A. Lamberti

Telephone: (574) 631-6552

Fax: (574) 631-7413

E-mail: biosadm@nd.edu

Web: http://biology.nd.edu/

The program of study involves assisting in the instruction of undergraduate or graduate laboratory courses. This requirement may be automatically fulfilled if the student has a graduate assistantship for financial aid.

The student must pass a comprehensive examination prior to using the remainder of the credit hours in thesis research. A student may include nine of the 24 credit hours in thesis research.

The master’s degree is a 24-credit-hour program requiring the satisfactory completion of a minimum of 15 credit hours of course work, passing a research proposal review, and completing a suitable master’s thesis. A student may include nine of the 24 credit hours in thesis research.

For the degree of doctor of philosophy, the student is expected to complete a 54-credit-hour requirement. This is composed of at least 24 credit hours of course work and the remainder as dissertation research.

The student must pass a comprehensive examination consisting of both an oral and a written examination, write and officially have approved a dissertation on research conducted under the direction of an adviser and committee, and pass a defense of the dissertation.

Students in the doctoral degree program must also fulfill a one-year teaching requirement that usually involves assisting in the instruction of undergraduate or graduate laboratory courses. This requirement may be automatically fulfilled if the student has a graduate assistantship for financial aid.
Incoming graduate students may be assigned an interim faculty adviser by the director of graduate studies. These assignments are made with consideration of the specific academic interests of the student. It is the responsibility of the interim adviser to guide the student’s program until a research adviser is selected. By the end of the first semester of the second year of residence, the Ph.D. student must have chosen a faculty member as a research adviser and have begun a research program. The master’s student should choose an adviser by the end of the first year of residence. The student, in consultation with his or her adviser, selects an advisory committee. The members of this committee will contribute guidance, expertise, and stimulation to the student in his or her graduate program and will serve as the examining committee for the candidacy examinations and for the final defense.

Financial Assistance

Students are offered financial assistance on a competitive basis, with consideration given to grades, GRE examination scores, recommendations, and other factors. The University offers three types of support to full-time graduate students: fellowships, graduate and research assistantships, and tuition scholarships. Students may receive one type of support or a combination of types. A number of fellowships for women and minorities are available. To be considered, Biological Sciences requires that all application materials must be received by the Graduate Admissions Office by January 15.

Most graduate students in Biological Sciences are awarded full-tuition scholarships and are supported as teaching or research assistants (TAs or RAs). A student supported by a teaching assistantship typically works 10 to 12 hours per week. Typical duties include teaching in an undergraduate laboratory section, setting up the laboratory, and grading papers. The student also takes classes and is expected to carry on thesis research. TA appointments are for nine months and are generally supplemented with a two- or three-month summer stipend from individual faculty research grants and/or departmental funds. A student supported by a research assistantship registers for some classes and carries out thesis research under a faculty research adviser. RA support comes from government, industrial, or private grant funds. RA appointments are generally for 12 months.

Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester — lecture hours per week—laboratory or tutorial hours per week)
- Course description

50527. Stream Ecology
(3-3-0)
Prerequisite: General Ecology (BIOS 30312) or equivalent, and consent of instructor. This course explores the interaction of biological, chemical, and physical features of streams and rivers. Human impacts on flowing waters are explored, along with current theory of stream ecology.

51527. Stream Ecology Laboratory
(3-1-0)
Pre/Corequisites: BIOS 50527
Quantitative analysis of stream biota and periodic physical features is conducted during field laboratory sessions.

50531. Molecular Biology I
(3-3-0)
The first of a two-semester sequence that will provide an introduction to molecular biology, molecular genetics, and nucleic acid biochemistry. Lecture topics include physical chemistry of nucleic acids, bacterial genetics, principles of cloning, DNA replication and recombination, prokaryotic and eukaryotic transcription, and RNA processing and translation. Listed also as CHEM 50531.

50532. Molecular Biology II
(3-3-0)
Prerequisite: BIOS 50531. The second semester of the sequence. Lecture topics include: transposable elements, yeast genetics, gene families, molecular aspects of development, animal viruses, and computer-assisted analysis of nucleic acids and proteins. Listed also as CHEM 50532.

50544. Environmental Justice
(3-3-0)
Students will examine methodological and ethical problems in current environmental impact assessments (EIAs) and technology assessments (TAs). The goal of the course is doing project-based philosophical analysis of current EIAs and TAs that typically are used to discriminate against poor people and minorities. Most noxious and polluting facilities are sited in poor and minority neighborhoods. Cross-listed with GSC 40474, PHIL 40470 and STV 40496.

60508. Population Genetics
(3-3-0)
Prerequisite: Introductory genetics (BIOS 20250 or BIOS 20303) or equivalent. This course will describe and mathematically analyze the processes responsible for genetic change within populations.

60515. Vector Genetics
(3-3-0)
Prerequisite: A course in genetics (BIOS 20250 or BIOS 20303) or equivalent. This course will be expected to give oral presentations based on critical review of primary literature as well as written reports.

60530. Immunobiology of Infectious Disease
(3-3-0)
This course provides a critical overview of various infectious organisms and how they interact with their host. Examples will include intracellular and extracellular pathogens, generation of toxins, molecular mechanisms of invasion, and immune activation and protection. Students will be expected to give oral presentations based on critical review of primary literature as well as written reports.

60535. Comparative Endocrinology
(3-3-0)
Prerequisite: Consent of instructor. A systematic comparative analysis of chemical mediation in biological systems with special emphasis on vertebrate species. A study of the structure and function of endocrine tissues, the biochemistry of hormones and their effects on the physiology and behavior of organisms. (On demand)

60539. Advanced Cell Biology I
(3-3-0)
Prerequisite: Consent of instructor. An upper-level course directed at graduate students and advanced undergraduates with previous background in cell and molecular biology. The course focuses on the molecular basis and regulation of cell structure and function, covering key topics that include membrane structure, function, and transport, cellular energetics, organelle biogenesis, protein trafficking, vesicular transport, signaling, and cytoskeletal function. (On demand)

60540. Advanced Cell Biology II
(3-3-0)
Prerequisite: Consent of instructor. A continuation and expansion of topics presented in Advanced Cell Biology I.
BIOLOGICAL SCIENCES

60562. Aquatic Insects
61562. Aquatic Insects Laboratory
(3-4-3)
Prerequisite: A course in entomology, invertebrate zoology, or ecology and consent of instructor. The taxonomy and ecology of insects having aquatic stages in their life cycles.

60570. Topics in Cell Biology
(v-v-0)
Subject matter changes depending on students' needs, ranging from cancer to chemistry of cell organelles to current concepts in modern molecular cell biology.

60571. Topics in Physiology
(v-v-0)
Subject matter changes depending on students’ needs. Prospective subjects include invertebrate and vertebrate physiology.

60573. Topics in Ecology
(v-v-0)
Prerequisite: Consent of instructor. Subject matter changes depending on students' needs. Prospective subjects include systems analysis in ecology or biogeography.

60574. Topics in Evolutionary and Systematic Biology
(v-v-0)
Prerequisite: Consent of instructor. Subject matter changes depending on students’ needs. Prospective subjects include numerical taxonomy and population genetics.

60575. Topics in Developmental Biology
(v-v-0)
Prerequisite: Consent of instructor. Subject matter changes depending on students’ needs. Prospective subjects include developmental physiology, determination and differentiation, extracellular matrix, and invertebrate development.

60577. Topics in Genetics/Molecular Biology
(v-v-0)
Prerequisite: Consent of instructor. Selected topics in molecular biology as reflected by the current literature.

60579. Topics in Parasitology and Vector Biology
(v-v-0)
Prerequisite: Consent of instructor. Subject matter changes depending on students’ needs. Prospective topics include specific diseases (e.g., Malaria, dengue), molecular genetics of vectors, bioinformatics, and others.

60581. Graduate Seminar
(1-1-0)
Advanced level, current topics in ecology. An introductory course in the area or consent of the instructor is usually required.

60582. Graduate Seminar
(1-1-0)
Advanced level, current topics in developmental biology. An introductory course in the area or consent of the instructor is usually required.

60583. Graduate Seminar
(1-1-0)
Advanced level, current topics in physiology, neurobiology or behavior. An introductory course in the area or consent of the instructor is usually required.

60584. Graduate Seminar
(1-1-0)
Advanced level, current topics in genetics and molecular biology. An introductory course in the area or consent of the instructor is usually required.

60585. Graduate Seminar
(1-1-0)
Advanced level, current topics in parasitology/vector biology. An introductory course in the area or consent of the instructor is usually required.

60586. Seminars
(1-1-0)
Advanced level, current topics in cell biology or microbiology. An introductory course in the area or consent of the instructor is usually required.

63680. BBMG Seminar
(0-0-0)
Special seminar series for MBP participants.

67500. Biological Sciences Colloquium
(0-0-0)
Presentation of seminars by visiting faculty. Notre Dame faculty, Postdoctorals, graduate students, and others as scheduled. While seminar attendance is expected of all graduate students on a regular basis, first-year graduate students are required to complete two semesters of colloquium.

68599. Thesis Direction
(0-0-0)
Research and direction for resident master's students.

70558. Electron Microscopy
(1-0-0)

70559. Light Microscopy
(1-0-0)
Characteristics and biological applications of modern cutting-edge light microscopy.

77671. Special Problems I
77672. Special Problems II
(v-v-0)
Special topics in the field of interest of individual graduate students or visiting scholars.

88600. Nonresident Thesis Research
(1-0-0)
Students away from campus register for one credit hour each semester during regular academic year only.

90590. Principles of Grantmanship
(v-v-0)
Principles of grantmanship is designed to introduce graduate students to the process of applying for grants.

98699. Research and Dissertation
(v-v-0)
Research and dissertation for resident doctoral students.

98700. Nonresident Dissertation Research
(1-0-0)
Students away from campus register for one credit hour each semester during regular academic year only.

### The Program of Studies

The graduate programs in chemistry and biochemistry at Notre Dame are directed toward the master's and doctoral degrees. Applications are taken from students seeking a degree in either chemistry or biochemistry.

The Ph.D. program is designed to prepare the student for a career in research or college-level teaching in chemistry, biochemistry, and related fields. Advanced courses in several areas of chemistry and biochemistry are available (see list below) along with regular seminars and special topics courses. Students usually begin active research during the spring semester of their first year. Admission to candidacy for the doctoral degree occurs after completion of written and oral examinations in the area of specialization.

The department considers teaching an integral part of the education of a graduate student. Teaching performance, therefore, is considered as part of the semianual graduate student evaluations. A minimum of one year of teaching experience is required of all advanced degree-seeking students.

Both the Ph.D. and master's degrees require a dissertation based upon experimental and/or theoretical research. The department participates in interdisciplinary programs involving the Departments of Biological Sciences, Physics, and Engineering. These programs include the Keck Transgene Center, the Walter Cancer Research Center, the Radiation Laboratory, the Center for Environmental Science and Technology, and the Center for Nano Science and Technology. A student normally selects his or her area of research and thesis adviser by the end of the first semester.

The Department of Chemistry and Biochemistry has excellent facilities for research, including most modern instruments for investigations in the major areas of chemistry and biochemistry. In addition to equipment found in the research laboratories of individual faculty members, department facilities include the Lizzadro Magnetic Resonance Research Center, the Molecular Structure and Mass Spectrometry Facilities, and the Surface Science Laboratory. The latter is maintained jointly by the Department of Chemistry and Biochemistry and the Department of Electrical Engineering. In addition to holdings in Hesburgh Library, all the major chemical, biochemical, and biophysical specialty journals are available in the Chemistry-Physics Research Library located in Nieuwland Science Hall. Other relevant holdings are found in the Life Sciences Library located in Galvin Life Sciences Center. The Radiation Research Laboratory, which is operated by the U.S. Department of Energy, is one of the world’s leading research centers in radiation chemistry and draws scientists from all over the world to the Notre Dame campus. The laboratory has a staff of approximately 20 research scientists, two of whom have joint appointments in the Department of Chemistry and Biochemistry (see Radiation Laboratory in this Bulletin).

Currently, there are over 140 graduate students and approximately 50 postdoctoral investigators in the department. Visiting scientists from the United States and foreign countries are often in residence.

### Course Descriptions

Each course listing includes:

- **Course number**
- **Title**
- **(Credits per semester — lecture hours per week—labatory or tutorial hours per week)**
- **Course description**

50531. Molecular Biology I (3-3-0)

The first of a two-semester sequence that provides an introduction to molecular biology, molecular genetics, and nucleic acid biochemistry. Topics include: physi-
al chemistry of nucleic acids, bacterial genetics, principles of cloning, DNA replication and recombination, prokaryotic and eukaryotic transcription, and RNA processing and translation. Listed also as CHEM 60531 and BIOS 60531.

50532. Molecular Biology II (3-3-0)
The second semester of the sequence. Lecture topics include: yeast genetics and molecular biology; retroviruses and transposable elements; transgenic mice; and special topics covering cell cycle regulation, oncogenes, development in Drosophila, signal transduction, and cloning of human disease genes. Listed also as CHEM 60532 and BIOS 60532.

60521. Biomolecular Structure and Function (3-3-0)
The properties and functions of biological macromolecules, including proteins, nucleic acids, lipids, and carbohydrates. Physical and chemical principles are utilized to understand biological processes. Protein structure and function will be emphasized.

60522. Glycobiology (1-1-0)
Structure and function of glycoconjugates. Includes analysis of mono-, oligo-, and polysaccharides by chemical, NMR and mass-spectrometry approaches; biosynthesis and regulation of glycoproteins and glycolipids; role of glycosylation and glycoconjugates in cell adhesion, inborn disorders, and cancer cell metastasis.

60523. Membrane Biochemistry and Transport (1-1-0)
The physical and chemical properties of biological membranes and membrane function. Topics include membrane energetics, transport, maintenance of gradients, membrane targeting, and membrane fusion and budding.

60524. Metabolic Regulation and Cell Signaling (2-2-0)
A study of the chemical reactions and pathways characterizing living systems: mechanisms, regulation, energetics, and integration. Topics include anabolism and catabolism of fundamental biomolecules, energy production and storage, mechanisms of intracellular signal transduction and relationships to disease states.

60535. Medicinal Chemistry (3-3-0)
The chemical, biological, and medical aspects of medicinal agents. The course will include CNS depressants, CNS stimulants, benzodiazepines, cardiovascular agents, analgesics, cascades (arachidonic acid, renin, peptides) antibiotics, cancer, transmitters, teratogens, metabolism, drug design, cholesteryl, anti-inflammatory agents, antibiotic agents, Alzheimer’s and Parkinson’s diseases.

67598. The Congress: Science and Technology Policy (2-2-0)
This course is interdisciplinary in nature and should be of interest to many students and faculty – especially those in the colleges of science, engineering and business, as well as public policy/government/political science departments in arts and letters, and the law school. This course will describe the legislative framework in which Congress makes science and technology policy, and the process by which Congress provides funding for S & T programs.

63603. Research Perspectives in Chemistry and Biochemistry (2-2-0)
Lectures by the faculty of the Department of Chemistry and Biochemistry.

63604. Effective Scientific Presentations (2-2-0)
Students are instructed in the skills needed to give research-quality scientific presentations.

60610. Organometallic Chemistry (3-3-0)
Structure and reactions of organometallic compounds and applications to synthetic and catalytic reactions.

60614. Advanced Inorganic Chemistry (3-3-0)
A course in modern inorganic chemistry, incorporating the chemistry of clusters, organometallic chemistry, bioinorganic chemistry and photochemistry. Emphasis is placed on a molecular orbital approach to topics in main group and transition metal chemistry. Aspects of solid-state chemistry are also included.

61624. Advanced Biochemical Technique (6-4-2)
Prerequisite: Permission of instructor. Advanced laboratory in biochemical techniques with emphasis on protein purification, enzyme kinetics, and Nucleic acid isolation and manipulation.

60631. Advanced Organic Chemistry I (3-3-0)
Covalent and non-covalent bonding in organic molecules, reactive intermediates and reaction mechanisms.

60632. Advanced Organic Chemistry II (3-3-0)
The chemistry of organic functional groups including preparations, reactions, interconversions and transformations. Reagent and reaction design with emphasis on chemo-, regio-, and stereo-selectivity including asymmetric synthesis.

60634. Structure Elucidation (3-3-0)
The interpretation of data from NMR, IR, MS, UV-Vis, and X-ray crystallography with an emphasis on the practical, rather than the theoretical point of view.

60641. Statistical Mechanics I (3-3-0)
Foundations of statistical mechanics; canonical, microcanonical, and grand canonical ensembles; thermodynamic properties of chemical substances in terms of partition functions; chemical equilibrium; thermal radiation; quantum statistics; and chemical kinetics and the approach to equilibrium.

60649. Quantum Mechanics (3-3-0)
A survey of quantum mechanics at an intermediate level, oriented toward problems of chemical interest. Relevant mathematical concepts are developed, including Dirac notation, matrix algebra, orthogonal functions, and commutator relations. Topics covered include harmonic oscillators, central field problems, wave packets, angular momentum, and approximation methods.

78599. Thesis Direction (0 -0-0)
Research and reading for master’s students

90615. Inorganic Mechanisms (3-3-0)
A general treatment of the mechanisms of inorganic reactions, including an examination of the sources of mechanistic data.

90616. Solid State and Cluster Chemistry (3-3-0)
A survey of synthesis, structure (geometric and electronic), spectroscopic, dynamic properties, and reactivity of solid state and molecular cluster compounds of the main group and transition metal elements.

90617, 90618. Special Topics in Inorganic Chemistry (0 -0-0)
Recent offerings have included: Advanced Laboratory Techniques in Inorganic Chemistry; MOs in Organometallic X-ray Crystallography.

90620. Bioinorganic Chemistry (3-3-0)
The role of metals in biological systems.

90623. Enzyme Chemistry (3-3-0)
Physical and chemical properties and mechanism of action of enzymes and their role in metabolic processes.

90625. Molecular Biophysics (3-3-0)
An investigation of the forces that drive intra- and inter-molecular recognition, including hydrophobicity, electrostatics, and configurational entropy. Topics include the thermodynamics of protein folding and ligand binding and their relationships to chemical properties and three-dimensional structure; mathematical treatment of folding, binding, and linkage via partition functions; and the determinants of ligand binding specificity and kinetics. Advanced theory supplemented with primary literature.
CHEMISTRY AND BIOCHEMISTRY

90626. NMR Spectroscopy in Chemistry and Biochemistry (3-3-0)
A survey of modern NMR methods used to determine molecular structure and conformation, study chemical and biochemical reactivity, and probe metabolic processes in biological systems. 1D, 2D, and 3D spectroscopy and MRI/MRS are treated.

90627. Special Topics in Biochemistry (0-0-0)
Recent offerings have included: Glycoconjugates; Spectroscopy in Biochemistry; Chemistry and Biology of RNA.

90628. Special Topics in Biochemistry (0-0-0)
Recent offerings have included: Glycoconjugates; Spectroscopy in Biochemistry; Chemistry and Biology of RNA.

93635, 93636. Seminar in Organic Chemistry (1 -1 -0)
Lectures on the topic of organic chemistry.

90638. Special Topics in Organic Chemistry (0 – 0 – 0)
Recent offerings have included: Advanced Physical Organic Chemistry; Computers in Chemistry; Enzymes in Organic Synthesis; Bioorganic Chemistry.

90639. Synthetic Organic Chemistry (3-3-0)
A systematic and critical study of the synthetic methods of modern organic chemistry including the development of multistage syntheses and organometallic reagents.

90647, 90648. Special Topics in Physical Chemistry (0-0-0)
Current topics of modern theoretical physical chemistry.

90650, 90651. Computational Chemistry I (3-3-0)
An overview of the fundamental theory, methodology, and applications of computational chemistry. Topics include molecular dynamics and Monte Carlo simulations, as well as a wide range of quantum chemistry methods. Applications center on organic molecules and biological systems such as proteins and DNA. Hands-on computer experience is an integral part of these courses.

90652. Molecular Spectroscopy (3-3-0)
A study of the interaction of light with matter, at the single- and multi-photon level. Topics include group theory, molecular vibrational analysis, nonseparability of electronic, vibrational, and rotational motion, angular momentum coupling, and time-independent and time-dependent perturbation theory.

90653. Surface Chemistry (3-3-0)
The chemistry and physics of surfaces and interfaces. Topics covered include an overview of the fundamentals of crystal structure and solid-state physics; the differences between surface and bulk properties; the effect of defects, impurities, and local structure on surface properties and reactivity; the practical and theoretical details of scanning-probe techniques for investigating surfaces; and nanotechnology.

90697. Directed Readings (0 -0 -0)
Reading and research on specialized topics that are immediately relevant to the student’s interests and not routinely covered in the regular curriculum.

93601, 93602. Seminar in Chemistry (0 -0 -0)
Prerequisite: Registration as graduate student in chemistry. Lectures by invited speakers.

93611, 93612. Seminar in Inorganic Chemistry (1-1-0)
Lectures on the topic of inorganic chemistry.

93621, 93622. Seminar in Biochemistry (1-1-0)
Lectures on the topic of biochemistry.

93643, 93644. Seminar in Physical Chemistry (1-1-0)
Lectures on the topic of physical chemistry.

93645, 93646. Seminar in Radiation Chemistry (1-1-0)
A continuing informal discussion of areas in radiation chemistry.

93680. Seminar in Biochemistry, Biophysics and Molecular Biology (1-1-0)
Lectures on the topics of biochemistry, biophysics, and molecular biology.

98698. Research and Dissertation (0 – 0 – 0)
Research and dissertation for resident doctoral students.

98699. Visiting Student Research (0 – 0 – 0)
Research for visiting students.

98700. Nonresident Dissertation Research (1-0-0)
Required of nonresident graduate students who are completing their dissertations in absentia and who wish to retain their degree status.

Faculty
Brian M. Baker, Assistant Professor. B.S., New Mexico State Univ., 1992; Ph.D., Univ. of Iowa, 1997. (2001)
Seth N. Brown, Associate Professor. B.S., Massachusetts Institute of Technology, 1988; Ph.D., Univ. of Washington, 1994. (1996)

Ian C. Carmichael, Professor and Director of Radiation Laboratory. B.Sc. Hon., University of Glasgow, 1971; Ph.D., University of Glasgow, 1974. (2004)

Francis J. Castellino, Dean Emeritus of Science, the Kleiderer-Pezold Professor of Biochemistry, and Director of the Keck Center for Transgene Research. B.S., Univ. of Scranton, 1964; M.S., Univ. of Iowa, 1966; Ph.D., ibid., 1968. (1970)

Bakshy Chibber, Research Associate Professor. B.Sc., Indian Institute of Technology, 1968; Ph.D., Univ. of Waterloo, 1972. (1982)

The Program of Studies

The purpose of the doctoral program in mathematics is to assist students in developing into educated, creative, and articulate mathematicians. The program consists of basic courses in the fundamentals of algebra, analysis, geometry, logic, topology and ; more advanced topics and seminars; and approximately two to three years of thesis work in close association with a member of the faculty. Limited enrollment and the presence of active groups of strong mathematicians provide excellent opportunities for research in algebra, complex analysis, partial differential equations, logic, algebraic geometry, differential geometry, topology, and applied mathematics. Most students complete the program within five years; some finish in four years; a few in three.

Students are supported by fellowships and teaching assistantships. Students’ teaching responsibilities are integrated into their professional development as mathematicians.

First-year students have no teaching duties and usually devote themselves full time to courses. The written candidacy examinations are taken by the beginning of the second year. The oral candidacy examination is taken during the second year. A reading knowledge of one approved language, in addition to English, is required. Ideally, the language requirement is completed by the end of the year. For more about these, see the Doctoral Regulations on the website.

The Department of Mathematics has its own building with good computer facilities and a comprehensive research library of nearly 35,000 volumes that subscribes to 275 current journals. Graduate students are provided with comfortable office space and are assured a stimulating and challenging intellectual experience.

**Areas of Research**

**Applied Mathematics**

The Department of Mathematics has about half-a-dozen faculty members actively involved in a variety of areas of mathematics and its applications to physics, engineering, biology, and problems arising from industry. The research disciplines they are pursuing, often in conjunction with members of other departments at Notre Dame, include the following: numerical analysis of PDE and of polynomial systems, nonlinear dynamical systems and partial differential equations, control theory, mathematical biology, optimization theory, interior point algorithms, coding theory, and cryptography.

**Applied PDE.** Partial differential equations arise from various applications in the real world; the important role of mathematical analysis and numerical study is to provide qualitative and quantitative information about the system being considered. The objectives are: to study the existence, uniqueness, convergence, and asymptotic behavior of the solution; to establish mathematical theory about the model; to study the special properties of the solution.

There are many exciting examples of such problems where faculty at Notre Dame are involved.

1. Free boundary problems (a PDE problem where the domain is moving) appear in material with solid and liquid states, in cell growth problems from biology, in semiconductor manufacturing through film growth.
2. Homogenization problems. Many systems from engineering and industry have two or more different scales which are treated through homogenization technique, an important technique which is very useful for obtaining important features of the system.
3. Blowup problems. In many reaction diffusion systems with nonlinear source terms, finite time blowup may occur. Understanding the exact behavior of the blowup will be very helpful in understanding the system.

Contact: Assistant Professor. B.S., Yale Univ., 1993; Ph.D., Stanford Univ., 1999. (2001)
Coding and Cryptography. In collaboration with several faculty in the electrical engineering department we investigate the algebraic properties of block codes and convolutional codes. Coding theory is concerned with the storage and transmission of information and the ability to recover the information as completely as possible even if some of the data are lost. A good example is the genetic code stored in a DNA molecule or the ISBN used by book publishers. Coding theory is widely applied in data communication and mathematically it is interconnected with algebraic geometry on the algebraic side and with information theory on the analytic side. For about three years, one to two faculty members and several graduate students have been working on the construction of new one-way trapdoor functions to be used in the next generation of public key cryptography.

Computation and Numerics. One on-going project, being carried on with mathematicians and engineers at other institutions, is the development of the new area of numerical algebraic geometry. This area is to algebraic geometry what numerical linear algebra is to linear algebra. Its goal is the development of efficient numerical algorithms to solve systems of polynomials in several variables. This amounts to the development of numerical techniques to manipulate algebraic varieties. The approach taken is to numerically model the classical notion of generic points by random points on irreducible components of the solution set. Classical interpolation techniques combined with homotopy continuation techniques are used to numerically do what elimination theory does in computer algebra programs. One recent success is the development of numerical techniques to decompose a complex algebraic variety into its irreducible components. In particular, this gave the first homotopy algorithm to find the exact set of isolated solutions of a system of polynomials. Previous homotopy algorithms find a finite set of solutions containing the isolated solutions, but often also containing solutions from positive dimensional components.

Another project, involving mathematicians, engineers, and scientists from Notre Dame and elsewhere, is the development of numerical and analytical techniques for the solution of free boundary and boundary value problems. Such problems arise in fluid mechanics (free surface fluid flows), biology (tumor and blood vessel growth), and electromagnetics and acoustics (direct and inverse scattering of radiation from complicated geometries), to name just a few. The techniques currently being investigated are geometric perturbation theory (the "small parameter" is the deformation of the free or complicated boundary from a canonical geometry) coupled with analytic continuation techniques (e.g., Padé approximation). This area of research involves rigorous mathematical analysis for the justification of the proposed perturbation series coupled with numerical implementation of these algorithms and large-scale computational simulations to gain new insight into the underlying physical models.

Mathematical Biology. Several members of the department are participating in an interdisciplinary biocomplexity program at Notre Dame which is supported by NSF. Biocomplexity is the study of the unique complex structures and behaviors that arise from the interaction of biological entities (molecules, cells, or organisms). While physical and chemical processes give rise to a great variety of spatial and temporal structures, the complexity of even the simplest biological phenomena is infinitely richer.

The biocomplexity group, which consists of researchers from the physics, mathematics, and computer science and engineering departments, studies multicellular aggregates, such as embryonic and mature tissues, which often share the properties of "excitable media" and "soft matter," familiar to modern condensed matter physics and dynamical systems theory. Changes in tissue shape and form during development and repair, skeletal formation, gastrulation, segmentation, are well suited to analysis by physical and mathematical concepts, particularly in conjunction with modern knowledge of cell's adhesive forces and the molecular composition and rheology of cytoplasm and extracellular matrix.

Optimization. Optimization is an interdisciplinary area of applied mathematics. Recently there have been breakthrough developments in the area of interior-point algorithms of optimization which enabled researchers to solve important large scale problems in electrical engineering, mechanical engineering, portfolio allocation, protein folding, and many other areas. Most of the departments in the University have faculty who use optimization as an important tool for solving problems.

Algebraic Geometry and Commutative Algebra

The roots of algebraic geometry and commutative algebra are to be found in the 19th-century study of algebraic equations in relation to the geometry of their solutions. Such a line of investigation goes back at least to Descartes and the idea of coordinatizing the plane. Commutative algebra and algebraic geometry study the solutions of those equations by forming an algebraic object, called a ring, given by polynomial functions on the set of solutions. While commutative algebra deals with the algebraic structure of such a ring, algebraic geometry focuses on the geometry of solution sets. Such sets include parabolas, spheres, Euclidean space, projective spaces, and a vast array of beautiful and intricate concrete curves, surfaces, and higher dimensional sets. For example, to study the set of solutions of the parabola $y=x^2-3x+1$ in $\mathbb{C}^2$, we construct the ring $\mathbb{C}[x,y]/(y-x^2+3x-1)$ where $C$ represents the complex numbers. This ring represents polynomial functions on the parabola. In the same way we study the solution set of a system of any number of polynomial equations by relating the algebraic structure of its ring of polynomial functions to the geometry of the set.

In the Department of Mathematics research is conducted in many parts of this subject, including adjuction theory, Castelnuovo theory, curve theory, various aspects of the projective classification of varieties, the study of group actions, liaison theory, minimal free resolutions, Rees algebras, and the numerical analysis of polynomial systems. There is also activity in nearby areas dealing with coding theory, cryptography and nonlinear partial differential equations. (See the section on interdisciplinary mathematics.)

The main areas of focus in research on algebraic geometry and commutative algebra include:

Theory of Infinitesimals. This study involves using polynomials to construct the "simplest possible" geometric object obeying certain restrictions; for example, a surface containing certain points and having specified tangents and curvatures. This has immediate application to the study of infinitesimal interpolation in science overall, as well as to the analysis of singularities and deformations in algebraic geometry.

Commutative Noetherian Rings. Properties of ideals in a commutative Noetherian ring $R$ are studied; more precisely, with invariants associated to an ideal as well as to structures of various algebras associated to an ideal as the Blowup algebras. These are algebraic constructions that are related to an essential step in the process of desingularization, the blowup of a variety along a subvariety. For example, a curve that has a singular point (such as the solution set of $y^2=x^3$ in the plane) may be "treated" by blowing up the point (in this case the origin).

Liaison Theory. This deals with the idea that when the em union of two solution sets is especially nice, then a good deal of information about one may be gleaned from information about the other. Several aspects of liaison theory (also called linkage theory) are studied in our department. It is an old theory, but developments of the last five years or so have reestablished it as an exciting area.

Minimal Free Resolutions. The minimal free resolution of an ideal describes all the generators of the ideal, all the relations among the generators, the relations among the relations, etc. Current interest includes finding the minimal free resolutions for ideals of generic forms and ideals of fat points.

Differential Geometry

The striking feature of modern differential geometry is its breadth, touching so much of mathematics and theoretical physics. It uses a wide array of techniques from areas as diverse as differential equations, real and complex analysis, topology, Lie groups, and dynamical systems. Activity at Notre Dame covers the following areas at the forefront of current research:

Submanifold Geometry. The geometry of a space is often reflected in its distinguished classes of submanifolds. Our research in this area includes minimal submanifolds, surfaces of constant mean curvature, isoparametric submanifolds, and volume minimizing cycles. Such submanifolds are themselves of physical interests (membranes, soap films, soap bubbles, and supersymmetric cycles). Umbilic points of immersed surfaces have also been extensively studied. This theory has connections to compressible plane fluid flow and general relativity.
Global Differential Geometry. One of the most important areas of differential geometry is the study of how curvature influences the topological and analytic structures of Riemannian or Kahler manifolds. Our research in this area includes results on the Euler number of Kahler manifolds, complex surfaces of positive bi-sectional curvature, A-genus and metric of positive scalar curvature, Witten genus and metric of positive Ricci curvature, spectrum of the Laplace operator, connections between manifolds of negative curvature, dynamical systems and ergodic theory, closed geodesics and marked length spectrum, harmonic functions on non-compact spaces with Gromov's hyperbolicity, splitting theorems, isoperimetric inequalities, minimal volume and CR-structures on spaces with non-positive curvature.

Partial Differential Equations and Riemannian Geometry. Many geometric problems are equivalent to problems in the theory of partial differential equations. Indeed, some properties of partial differential equations are best interpreted in a geometric way. Prescribing the curvature of surfaces in three-dimensional space, the isometric imbedding problem, variational problems in Riemannian geometry such as the Yamabe problem—all of these are geometric questions which involve a deep understanding of nonlinear partial differential equations.

Gromov-Witten Invariants and Quantum Cohomology. String theory has been a great source of inspiration for many exciting new developments in mathematics, one of which is the theory of Gromov-Witten invariants and quantum cohomology. It has profound applications in symplectic geometry, algebraic geometry, and integrable systems. Our research here has been focused on the generating function of Gromov-Witten invariants and its relation with the Virasoro algebra.

Algebra—Lie Theory

The notion of a Lie group had its origins in the study of the “continuous symmetries” of differential equations. Lie theory has subsequently become an enormously rich and beautiful theory with fundamental applications in mathematics (e.g., group theory, differential equations, topology, harmonic analysis, differential geometry), physics, and chemistry.

The algebra group at Notre Dame studies the representation theory, structure and geometry of semisimple Lie groups and Lie algebras, Kac-Moody Lie algebras and groups, finite and algebraic groups, and quantum groups, using a variety of algebraic, geometric and combinatorial methods. Our research involves the detailed study of specific representations (e.g., constructing and parametrizing representations, determining their dimensions, tensor products, extensions, etc), the study of spaces with Lie group actions and their connections to representations, and the study of global properties of representation categories.

Detailed Study of Representations. The character table of a finite group provides a rich collection of invariants of the group; classically, the “characters” correspond to ordinary (complex) representations. Of course, modular representations provide even more invariants. Some aspects of the classification of finite simple groups relied on the availability of precise information about the nature of representations for the finite Lie type groups. A finite Lie type group is closely related to the group of rational points of a simple algebraic group over a field of positive characteristic. We study mainly the “rational” representation theory of these algebraic groups; one may typically obtain from such study information on the modular representations of the corresponding finite Lie type groups.

Representation Theory and Geometry. One can often study representations of a group by constructing the group as the symmetries of a geometrical object and considering some class of functions on the object. For example, the rotation group in three variables may be regarded as the symmetry group of the two-dimensional sphere, and the representations of the rotation group arise from decomposing functions on the sphere according to the action of the Laplace operator. In more sophisticated settings, representations are associated to geometric objects with singularities, and it is a subtle and interesting question to understand the relation between the singularities and the corresponding representations.

One can also study the reverse problem and use representation theory to study geometrical problems, including classical 19th-century intersection theory. In particular, a certain kind of geometric structure called a Poisson structure yields a new approach to intersection theory problems. The Poisson structure is closely related to quantum groups.

Global Structure of Lie Representation Categories. There are many important relationships which have emerged in recent years between categories of finite or infinite-dimensional representations of algebraic groups, affine Lie algebras, and quantum groups. In all these theories, an important role is played by the Weyl group, which is a crystallographic Coxeter group. We have initiated the study of certain representation theories naturally associated to (possibly non-crystallographic) Coxeter groups and begun to study, for crystallographic Coxeter groups, the relationships of such categories with categories of representation-theoretic or geometric interest in Lie theory. We have also begun to study certain very similar representation categories which are less directly related to classical Lie theory.

Partial Differential Equations

Partial differential equations is a many-faceted subject. Our understanding of the fundamental processes of the natural world is based largely on partial differential equations. Examples are the vibrations of solids, the flow of fluids, the diffusion of chemicals, the spread of heat, the interactions of photons and electrons, and the radiation of electromagnetic waves. Today partial differential equations have developed into a vast subject that interacts with many other branches of mathematics such as complex analysis, differential geometry, harmonic analysis, probability, and mathematical physics.

The Laplace equation and its solutions, the harmonic functions, form a link between partial differential equations and complex analysis, since analytic functions are the solutions to the Cauchy-Riemann equations. Boundary behavior of analytic functions on a domain is studied through the Neumann problem, which is a boundary value problem for an elliptic (Laplace-like) operator. Furthermore, nonelliptic equations appear as natural objects in the study of manifolds that are boundaries of domains. These equations are similar to the degenerate elliptic equations arising in sub-Riemannian geometry and diffusion processes. Solvability and regularity of solutions to such equations form an active direction of research. The methods involved include subelliptic estimates and microlocal analysis.

Another direction of research is devoted to nonlinear elliptic partial differential equations with emphasis on second order equations. Differential geometry provides a rich source of such equations. Examples are the minimal surface equation and the Monge-Ampere equation. One important property studied by researchers in this field is the regularity of solutions, in particular the impact of regularity of coefficients and boundary values on that of solutions. An active area is the study of properties of geometric objects associated to solutions, e.g., level sets of solutions. Studies are focused on the geometric structure of these sets, and methods are from geometric measure theory.

Yet another direction involves the study of nonlinear evolution equations arising in mathematical physics such as the Euler equations of hydrodynamics or various infinite dimensional analogues of completely integrable Hamiltonian systems like the Korteweg-de Vries equation. A large amount of work is devoted to the study of the corresponding Cauchy problem for such equations. Recent developments in the area involve the use of harmonic analysis techniques to establish existence and uniqueness of solutions under low regularity initial data.

In fact, there is a very close connection between partial differential equations and harmonic analysis, starting with Fourier series and the heat equation and continuing with fundamental solutions, the construction of inverses to elliptic equations and pseudo-differential equations, the solution to wave equations and Fourier integral operators, to spectral analysis, and asymptotic techniques methods. Harmonic analysis techniques form a major part of the modern theory of linear and nonlinear partial differential equations.

The research of the partial differential equations group also includes the study of free boundary problems, reaction-diffusion equations, variational inequalities, homogenization problems, and other equations arising from industrial applications.
Mathematics

Logic

The research in mathematical logic at Notre Dame is mainly in two broad areas: computability theory and model theory. Computability theory concerns computability and complexity, often measured by Turing degree. A set is computable if there is a program for computing its characteristic function on an ideal computer that never crashes. Set A is Turing reducible to set B if there is a program for computing the characteristic function of A on a computer equipped with a CD-ROM giving the characteristic function of B. Turing reducibility is a partial ordering on the set of subsets of the natural numbers, and the Turing degrees are the equivalence classes of the corresponding equivalence relation. A set is computably enumerable if it is the range of a computable function, or, equivalently, the domain of a partial computable function. The set E of all computably enumerable subsets of the natural numbers forms a lattice under the operations of union and intersection. Soare showed that the collection of “maximal” sets is a definable orbit in E. There is ongoing work on automorphisms and the relation between complexity and structural properties, definable in the lattice.

Well-known theorems may pose interesting problems in computability. This is true, in particular, for Ramsey’s theorem, on which there is recent work. There has been quite a lot of work on computability and complexity in familiar kinds of mathematical structures—groups, linear orderings, Boolean algebras, etc. Much of this work has involved connections between definability and complexity. There has also been work on complexity of models of arithmetic. The standard model, consisting of the natural numbers with addition and multiplication, is computable; i.e., the operations are computable.

Tennenbaum showed that no non-standard model can be computable. A recent result says that for any non-standard model there is an isomorphic copy of strictly lower Turing degree.

The other broad area of active work is model theory, particularly classification theory and o-minimality.

In recent years, methods developed in the context of stability theory have been used to analyze structures such as pseudofinite fields, pseudo-algebraically closed fields, difference fields, and quadratic forms over finite fields. This research has yielded applications to arithmetic number theory. Model-theorists now have a good understanding of how these dependence relations fit in a general framework. Ongoing work generalizes techniques from the geometrical stability theory of superstable theories to this broader class. This research is likely to give insight into the model-theoretic properties of bilinear forms and groups definable in structures such as those mentioned above.

The standard example of an o-minimal structure is the field of real numbers. In the early 1980s, it was noticed that many properties of semi-algebraic sets (sets definable in the field of reals) can be derived from a very few axioms, essentially the axioms defining o-minimal structures. After Wilkie proved that the exponential field of real numbers is o-minimal, the subject has grown rapidly. From a model-theoretic point of view, these structures resemble strongly-minimal structures, and many tools and methods of classification theory can be adapted to o-minimal structures. This remarkable combination of tools from stability theory and methods of semi-algebraic and subanalytic geometry provides elegant and surprisingly efficient applications not only in real algebraic and real analytic geometry, but also in analytic-geometric categories (e.g., groups of Lie type) over arbitrary real closed fields.

Topology

There is a large topology group at Notre Dame, and the research of its members covers a wide area of currently active areas. For a more detailed view of our current research one can consult the departmental Web page and its information about individual faculty members.

Basic algebraic topology is one active area of research here. Research continues on various types of homotopy theory, both stable and unstable, often from an axiomatic point of view. One area of application is to the study of Lie groups by homotopy theoretic methods. Other problems in homotopy theory under active consideration are problems that elucidate the influence of topology on differential geometry. A particular interest is in questions of which manifolds support metrics, the curvature of which is positive in various senses and of how many such metrics there are.

Controlled topology is another area of active research. One direction concerns various aspects of rigidity, which loosely means describing the ways that a discrete group can act on Euclidean space. This problem is a rich source of inspiration and has lead to groundbreaking work on stratified spaces by many people, not just at Notre Dame. Work on various foundational issues in controlled topology leads to the study of stratified spaces.

Basic geometric topology is an area that overlaps some of the above. Work not previously mentioned includes work on how algebraic invariants of a manifold affect the homotopy type of its group of topological or differentiable symmetries. This leads to further problems in algebraic topology and in algebra. There is also research on the classification of various geometrically interesting manifolds.

Algebraic K-theory is an active area of research as well. Ongoing research investigates the link between algebra and topology that lies at the center of K-theory. Contributions have been made to the study of L-theory, the quadratic analogue of K-theory that figures prominently in applications to topology of the study of manifolds and stratified spaces.

Research in low-dimensional manifolds is yet another area represented at Notre Dame. Research in gauge theory is applied to the study of four dimensional manifolds as well as more traditional techniques applied to the algebraic topology of four manifolds, their topological classification, and their differentiable classification. There is also research in three manifolds and the four manifolds they bound using gauge theory, especially the invariants based on the Sieberg-Witten equations.

Course Descriptions

The following course descriptions give the number and title of each course. The basic course sequences numbered 60350 – 60520 are given every year, as is the basic course 60690. Other basic courses are given approximately every other year. Seminars 671-686, and reading and research courses 698-700 are offered every year. Other courses, with numbers up to 666, are topics courses. Each year topics courses are offered in algebraic geometry, differential geometry, algebra, partial differential equations, complex analysis, topology, logic, and applied mathematics. The particular topics change (probably never repeating), and the instructors rotate within groups. Thus, students are exposed to a variety of topics in which various members of the faculty have interest and expertise. The list below includes the courses offered every year, plus a typical selection of topics courses.

Each course listing includes:

• Course number
• Title
• (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
• Course description

60210. Basic Algebra I
60220. Basic Algebra II
(3-3-0), (3-3-0)
Standard results in group theory and ring theory; modules, linear algebra, multilinear algebra; Galois theory; Wedderburn theory; elements of homological algebra; introduction to an advanced topic in algebra.

60350. Basic Real Analysis I
60360. Basic Real Analysis II
(3-3-0), (3-3-0)
This course includes a rigorous review of the calculus of several variables, general measures and Caratheodory’s Theorem, Borel measures in real line and the Lebesgue measure, integration and the dominated convergence theorem, modes of convergence, product measures and the Fubini theorem, the n-dimensional Lebesgue integral and the change of variables theorem. Also, it may include topics from L^p spaces, signed measures, functional analysis, and Fourier analysis.

60370. Basic Complex Analysis I
60380. Basic Complex Analysis II
(3-3-0), (3-3-0)
Analytic functions; Cauchy’s theorem; Taylor and Laurent series; singularities, residue theory; complex manifolds; analytic continuation; conformal mappings; entire functions; meromorphic functions.

60430. Basic Topology I
60440. Basic Topology II
(3-3-0), (3-3-0)
Topological spaces and metric spaces; the fundamental group and covering spaces; homology theory; basic theorems in algebraic topology.
60510. Basic Modern Logic I
60520. Basic Modern Logic II
(3-3-0), (3-3-0)
Propositional calculus and predicate logic, completeness, compactness, omitting types, results on countable models; recursive and recursively enumerable sets, Turing degrees, the Friedberg-Muchnik theorem, minimal degrees; axioms of ZFC, ordinals and cardinals, constructible sets.

60610. Discrete Mathematics
(3-3-0)
The course will provide an introduction into different subjects of discrete mathematics. Topics include (1) Graph Theory: Trees and graphs, Eulerian and Hamiltonian graphs; tournaments; graph coloring and Ramsey’s theorem. Applications to network. (2) Enumerative Combinatorics: Inclusion-exclusion principle, Generating functions, Catalan numbers, tableaux, linear recurrences and rational generating functions, and Polya theory. (3) Partially Ordered Sets: Distributive lattices, Dilworth’s theorem, Zeta polynomials, Eulerian posets. (4) Projective and combinatorial geometries, designs and matroids.

60620. Optimization
(3-3-0)
Vector spaces and convex sets; convex Hull; theorems of Carathéodory and Radon; Helly’s Theorem; convex sets in Euclidean space; the Krein-Milman theorem in Euclidean space; extreme points of polyhedra; applications; the moment curve and the cyclic polytope; the cone of nonnegative polynomials; the cone of positive semidefinite matrices; the idea of semidefinite relaxation; semidefinite programming; cliques and the chromatic number of a graph; the Schur-Horn theorem; and the Toeplitz-Hausdorff theorem.

60630. Geometric Methods for Dynamical Systems
(3-3-0)
An introduction to the theory of nonlinear dynamical systems. Topics include: geometry of the phase space, symplectic structures, variational methods, nonlinear Hamiltonian systems, bifurcation theory, perturbation theory and transition to chaos, discrete dynamical systems, lattice based models, theory of pattern formation with examples from physics and biology.

60650. Applied Analysis
(3-3-0)

60660. Differentiable Manifolds
(3-3-0)
Topics covered will include: differentiable manifolds, vector fields, differential forms, and tensor analysis; inverse and implicit function theorems, transversality, Sard’s theorem, Morse theory, integration on manifolds, Stokes Theorem, de Rham cohomology.

60670. Differential Geometry
(3-3-0)
This course provides an introduction to modern differential geometry. Topics include: Riemannian manifolds, connections, parallel translation, geodesics, the exponential map, the torsion and curvature, Jacobi fields, first and second variation of arc length, cut loci and conjugate loci, and elementary comparison theorem.

60690. Numerical Analysis I
60790. Numerical Analysis II
(3-3-0)

60850. Probability
(3-3-0)
A thorough introduction to probability theory. Elements of measure and integration theory. Basic setup of probability theory (sample spaces, independence). Random variables, the law of large numbers. Discrete random variables (including random walks); continuous random variables, the basic distributions and sums of random variables. Generating functions, branching processes, basic theory of characteristic functions, central limit theorems. Markov chains. Various stochastic processes, including Brownian motion, queues and applications. Martingales. Other topics as time permits.

60860. Stochastic Modeling
(3-3-0)
This course is a sequel to Math 60850 (Probability). It gives an introduction to stochastic modeling and stochastic differential equations, with application to models from biology and finance. Some topics covered will be: stochastic versus deterministic models; Brownian motion and related processes, e.g., the Ornstein-Uhlenbeck Process; diffusion processes and stochastic differential equations; discrete and continuous Markov chain models with applications; the long run behavior of Markov chains; the Poisson processes with applications; and numerical methods for stochastic processes.

60920. Probabilistic Aspects of Linear Control and Optimization
(3-3-0)
We present a variety of probabilistic techniques for the analysis of control and optimization problems: measure concentration results, Markov chains, large deviations, martingales. We describe various applications in control and optimization.

60950. Topics in Applied Partial Differential Equations
(3-3-0)
Elements of variational calculus with application to: theory of interfaces; existence of solitons, vortices and bubbles; image segmentation; control theory. Implicit function and fixed-point theorems with application to: Bose-Einstein condensation; existence of discrete breathers; existence of small data solutions of nonlinear Schroedinger, heat and wave equations; economics. Gradient and Hamiltonian systems: energy conservation versus energy dissipation; stability of stationary solutions and traveling waves; stability of periodic solutions and Floquet theory.

70220. Topics in Lie Groups
(3-3-0)
Lie groups and representation theory are important topics in many parts of mathematics and physics, including algebra, differential geometry, mathematical physics, and differential equations. This course is designed to introduce students from various parts of mathematics and physics to this area. Prerequisites are minimal; a solid background in linear algebra is the most important one. The course covers Lie groups from the point of view of matrix groups. We will introduce the Lie algebra and the exponential mapping, and investigate the relationship between Lie groups and Lie algebras. Then we will cover elementary representation theory. The last part of the course will gradually introduce the machinery of semisimple groups and Lie algebras, starting with the representations of SU(2) and SU(3) as motivating examples.

70410. Topics in Algebraic Geometry
(3-3-0)
Topics from recent years include geometry of compact complex surfaces, complex adjunction theory, intersection theory of algebraic schemes.

70670. Differential Geometry
(3-3-0)
This course provides an introduction to modern differential geometry. Topics include: Riemannian manifolds, connections, parallel translation, geodesics, the exponential map, the torsion and curvature, Jacobi fields, first and second variation of arc length, cut loci and conjugate loci, and elementary comparison theorem.

70750. Partial Differential Equations
(3-3-0)
This is a one semester course that cover basic PDE theories. We will cover: 1. Transport equations. 2. Laplace equations: Green’s identity, fundamental solutions, maximum principles, Green’s functions, Perron’s methods. 3. Parabolic equations: Heat equations, fundamental solutions, maximum principles, finite difference. 4. Wave equations: spherical means, d’Alembert’s formula, Kirchhoff’s formula, Poisson’s formula. 5. First order equations: Characteristic methods, Cauchy problems, vanishing of viscosity - viscosity solutions. Hamilton-Jacobi equations, Hopf-Lax formula. 6. Real analytic solutions: Cauchy-Kowalevski theorem, Holmgren theorem.
70870. Introduction to Ergodic Theory
(3-3-0)
We present some global properties of dynamical systems where individual orbits seem very erratic. We first study the case example of hyperbolic automorphisms of the torus, then go to more general hyperbolic maps, then to maps which look like hyperbolic, but satisfy only weaker conditions.

70950. Topics in Applications: Partial Differential Equations
(3-3-0)
Topics in partial differential equations and applications related to the instructor's research interests.

80210, 80220. Topics in Algebra
(3-3-0)
Basic properties of polytopes and polyhedra with an emphasis on counting the numbers of faces using techniques from commutative algebra and representation theory.

80350, 80360. PDE Methods in Complex Analysis
(3-3-0)
Topics from partial differential equations, linear and nonlinear, depending on the instructor's research interests.

80440. Ends of Manifolds and Maps
(3-3-0)
Topics related to the instructor's research interests.

80510. Topics in Logic: Computable Structures and the Hyperarithmetical Hierarchy
(3-3-0)
Topics considered depend on the instructor's research interests.

80520. Topics in Logic-Finite Model Theory
(3-3-0)
Topics related to the instructor's research interests.

80610. Topics in Algebraic Geometry
(3-3-0)
Topics related to the instructor's research interests.

80770. Low Density Parity Check Codes
(3-3-0)
This course will serve as an introduction to recent research in LDPC codes for students who have already been exposed to the basics of error control codes. The first half of the course will focus on the construction of linear block codes characterized by sparse parity check matrices and the performance of those codes when used over noisy communication channels and decoded with the belief propagation (i.e., message passing) algorithm. The second half of the course will address recent and ongoing research results related to LDPC codes and iterative decoding.

80780. Topics in Applied Math
(3-3-0)
Topics related to the instructor's research interests.

Other Graduate Courses
56800. Directed Readings
(0-0-0)
Readings not covered in the curriculum which relate to the student's area of interest.

58900. Thesis Direction
(0-0-0)
Prerequisite: Consent of director of graduate studies in mathematics. Students in the Applied Mathematics masters program have the option of writing a thesis on an advanced subject under the direction of a faculty advisor.

86700. Directed Readings
(0-0-0)
Readings not covered in the curriculum which relate to the student's area of interest.

88900. Research and Dissertation
(0-0-0)
Corequisite: MATH 93210 Research and dissertation for resident graduate students.

93210. Research Seminar
(0-0-0)
Corequisite: MATH 88900 Topics vary by semester.

98900. Nonresident Dissertation Research
(1-1-0)
Required of nonresident graduate students who are completing their dissertations in absentia and who wish to retain their degree status.

Faculty

Algebra
Katrina D. Barron, Assistant Professor. A.B., Univ. of Chicago, 1987; Ph.D., Rutgers Univ., 1996. (2001)
Alexander J. Hahn, Director of the Kueh Center for Teaching and Learning, Professor of Mathematics, and Fellow of the Nanovic Institute for European Studies. B.S., Loyola Univ., Los Angeles, 1965; M.S., Univ. of Notre Dame, 1968; Ph.D., ibid., 1970. (1972)

80870. Topics in Applied Math
(3-3-0)
Topics related to the instructor's research interests.

Applied Mathematics
Michael Gekhtman, Associate Professor. B.S., Kiev State Univ., 1985; Ph.D., Ukrainian Academy of Science, 1990. (1999)
Brian Hall, Associate Professor B.A. and B.S., Cornell Univ., 1988; Ph.D., ibid., 1993. (1999)
Beihua Fu, Professor. B.S., East China Normal Univ., 1982; M.S., ibid., 1984; Ph.D., Univ. of Minnesota, 1990. (1990)
Cecil B. Mast, Associate Professor Emeritus. B.S., DePaul Univ., 1950; Ph.D., Univ. of Notre Dame, 1956. (1959)
MATHEMATICS  M.D./PH.D

Complex Analysis
Jeffrey Diller, Associate Professor. B.S., Univ. of Dayton, 1988; Ph.D., Univ. of Michigan, 1993. (1998)
Pit-Mann Wong, Professor. B.Sc., National Taiwan Univ., 1971; Ph.D., Univ. of Notre Dame, 1976. (1980)

Differential Equations
Matthew Gursky, Director of Undergraduate Studies and Professor. B.S., Univ. of Michigan, 1986; Ph.D., California Inst. of Technology, 1991. (2001)
Qing Han, Professor. B.S., Beijing Univ., 1986; M.S., Courant Institute, 1991; Ph.D., ibid., 1993. (1994)
A. Alexandrou Himonas, Associate Chair and Professor. B.S., Patras Univ., 1976; M.S., Purdue Univ., 1982; Ph.D., ibid., 1985. (1989)

Differential Geometry
Xiaobo Liu, Associate Professor. B.S., Tsinghua Univ., P.R. China, 1987; Ph.D., Univ. of Pennsylvania, 1994. (1999)
Brian Smyth, Professor. B.S., National Univ. of Ireland, 1961; M.S., ibid., 1962; Ph.D., Brown Univ., 1966. (1966)

Logic
Abraham Goetz, Associate Professor Emeritus. M.S., Univ. of Wroclaw, 1949; Ph.D., ibid., 1957. (1964)
Julia F. Knight, Director of Graduate Studies and the Charles L. Huisking Professor of Mathematics. B.A., Utah State Univ., 1964; Ph.D., Univ. of California, Berkeley, 1972. (1977)
Vladeta Vuckovic, Associate Professor Emeritus. M.S., Univ. of Belgrade, 1949; Ph.D., ibid., 1953. (1963)

Topology
Francis X. Connolly, Professor. B.S., Fordham Univ., 1961; M.S., Univ. of Rochester, 1963; Ph.D., ibid., 1965. (1971)
John E. Derwent, Associate Professor Emeritus. B.S., Univ. of Notre Dame, 1955; Ph.D., ibid., 1960. (1963)
Stephan A. Stolz, the Rev. John A. Zahm, C.S.C., Professor of Mathematics. B.S., Univ. of Bielefeld, 1975; M.S., Univ. of Bonn, 1979; Ph.D., Univ. of Mainz, 1984. (1988)
E. Bruce Williams, Professor. B.S., Massachusetts Institute of Technology, 1967; Ph.D., ibid., 1972. (1975)

M.D./Ph.D. Joint Degree Program

Director:
To be announced

Telephone: (574) 631-5574
Fax: (574) 631-7821
Location: 1234 Notre Dame Ave., South Bend, Indiana 46617
E-mail: scbme.1@nd.edu
Web: http://galen.sbme.nd.edu

The Program of Studies
The University of Notre Dame and Indiana University School of Medicine offer a joint M.D./Ph.D. degree for exceptional students interested in academic medicine. This unusual partnership between a private Catholic university and a state-supported medical school was formed in 1995. The program draws on the strengths of the medical faculty and the research excellence of the graduate program faculty to train scientists who can bridge the gap between clinical medicine and basic life sciences.

The Indiana University School of Medicine – South Bend (IUSM – SB) has just moved into a new facility that also houses Notre Dame’s Keck Center for Transgene Research. This facility offers expanded opportunities for joint degree students.

General Requirements
To earn the joint degree, students will complete the first two years of medical school at IUSM – SB, and continue at Notre Dame for three more years to pursue the University’s doctoral degree through the Graduate School. The last two years of medical school then will be completed at the Indiana University School of Medicine’s main campus in Indianapolis.

Program descriptions and requirements, as well as course and faculty listings for all of Notre Dame’s doctoral programs, may be found elsewhere in this Bulletin. Students in the M.D./Ph.D. program may pursue the doctoral degree in any of these disciplines. Course and faculty listings specific to the medical training may be found below.

Admission
Admission to the program requires separate applications to the Notre Dame Graduate School and the IUSM – SB. The Graduate School will accept MCAT scores in place of the GRE scores required of all applicants. The parallel applications will be coordinated and tracked by the South Bend Center for Medical Education, which serves as the central office for the combined degree program. Representatives from Notre Dame and the I.U. School of Medicine monitor and oversee the program.
Application to the joint degree program will not jeopardize a student’s application to either the Graduate School or the School of Medicine. The student may be admitted to either school independently. Students admitted into the joint degree program will receive both tuition and stipend assistance.

For information and application materials, interested students should contact the EUSM – SB.

Course Descriptions

The following courses are central to center programs. Each course listing includes:

- **Course number**
- **Title**
- **(Credits per semester—lecture hours per week—laboratory or tutorial hours per week)**
- **Course description**

**60501. Gross Anatomy**

**61501. Gross Anatomy Laboratory**

**60502. Histology/Embryology**

**61504. Human Physiology**

**61505. Histology Laboratory**

**60512. Introduction to Clinical Medicine I: Behavioral Science**

**70651. Introduction to Clinical Medicine II**

**60556. Medical Microbiology**

**61556. Medical Microbiology Lab**

This course covers a diverse range of topics in medical microbiology and immunology, including host defense and recognition mechanisms, virology, bacteriology, parasitology, mycology, and contemporary topics in infectious disease. Primary emphasis is on biology and pathogenic mechanisms of individual organisms, and issues relating to host-microbe relationships.

**60667. Biochemistry**

**70604. Pharmacology**

**70605. Medical Genetics**

**70653. General Pathology**

**71653. General Pathology Laboratory**

The study of disease and its relationship to structural and functional abnormalities of specific organ systems. Emphasis is placed on both pathologic anatomy and clinical manifestations of disease. Additional programs in biomedically related sciences appear elsewhere in the Bulletin under the program in Biological Sciences (parasitology, vector biology, virology, bacteriology, and chemistry and biochemistry).

**Faculty**

Kenneth R. Olson, Adjunct Professor (biological sciences) and Concurrent Professor of Chemical and Biomolecular Engineering. B.A., Univ. of Wisconsin, LaCrosse, 1969; M.S., Michigan State Univ., 1970; Ph.D., ibid., 1972. (1975)

The Molecular Biosciences Program

**Director:**

Paul W. Huber, Professor of Chemistry and Biochemistry

**Telephone:** (574) 631-6042

**Location:** 437 Stepan Chemistry

**E-mail:** phuber@nd.edu

**Web:** [http://www.nd.edu/~science/graduate/MBP.html](http://www.nd.edu/~science/graduate/MBP.html)

Current research probing the molecular details of the biological sciences requires simultaneous application of genetic, biochemical, and molecular biological principles and expertise. The Molecular Biosciences Program (M.B.P) provides a broad range of training opportunities for students seeking career within this active research field. Faculty participants of the Department of Biological Sciences and the Department of Chemistry and Biochemistry administer the M.B.P within the College of Science. Students interested in the M.B. program should apply for admission to the Department of Biological Sciences or Chemistry and Biochemistry depending on their research interests.
Research Facilities

The Department of Biological Sciences, housed in the modern Galvin Life Sciences complex, has excellent facilities for all laboratory research in molecular biology. Facilities and training opportunities are available in genetics, molecular and cell biology, and developmental biology. The Department of Chemistry and Biochemistry has training opportunities in the fields of gene expression, protein structure and enzyme kinetics. Many M.B.P. faculty have research activities within the newly established Walther Cancer Center and Keck Transgene Center.

The University maintains modern research facilities in support of the Molecular Biosciences Program. The Biosciences Core Facility maintains instrumentation for DNA, RNA, and peptide synthesis, amino acid and carbohydrate analysis, and protein and peptide sequencing. The Department of Biological Sciences houses an optics facility for confocal microscopy and scanning and transmission electron microscopy and a new flow cytometry facility equipped with a Coulter Epics XL flow cytometer and a Coulter ALTRA flow sorter. The College of Science NMR Facility contains state-of-the-art high field spectrometers that support both chemical and biological nuclear magnetic resonance research. The Mass Spectrometry Facility is equipped to analyze high mass biomolecules and determine exact masses of low and medium size molecules. The Freimann Life Science Center provides a modern animal care facility. The staff of certified veterinary technicians ensures proper care and use of laboratory research animals. Several science libraries are found on campus in Nieuwland Science Hall, the Radiation Laboratory, and the Galvin Life Sciences Building. Additional resources are available in the main campus Hesburgh Library.

Degree Requirements

Students participating in the Molecular Biosciences Program must complete the degree requirements of either the Department of Biological Sciences or the Department of Chemistry and Biochemistry. Several courses are designed for all M.B.P. students, and are usually taken during the first year of graduate school. There are additional elective courses in each department to allow for specialization within the M.B.P. Students in the Biological Sciences are required to take Molecular Biology I and II, Fundamentals of Biochemistry, and five elective courses. These are designed for all M.B.P. students, and are usually taken during the first year of graduate school. There are additional elective courses in each department to allow for specialization within the M.B.P. Students in the Biological Sciences are required to take Molecular Biology I and II, Fundamentals of Biochemistry, and five elective courses. These are designed for all M.B.P. students, and are usually taken during the first year of graduate school.

All M.B.P. students must pass both oral and written comprehensive examinations. Students will conduct original research and write an approved dissertation on this work. The work is conducted under the direction of an adviser participating in the M.B.P. Students in the program also must complete a one-year teaching requirement that usually involves assisting in the instruction of laboratory courses within their discipline. All students participate in the seminar activities of the program.

Course Descriptions

Both required and elective courses of the Molecular Biosciences Program are categorized according to the department offering the course. Please refer to the section on degree requirements for more information.

Biological Sciences

Developmental Genetics
Analysis of the cellular and molecular genetic mechanisms underlying animal development, with emphasis on major vertebrate and invertebrate model systems.

Immunology
An introductory course emphasizing the cells and tissues of the immune system and the nature and function of antigens and antibodies.

Molecular Biology I
Physical chemistry of nucleic acids, bacterial genetics, principles of cloning, DNA replication and recombination, prokaryotic and eukaryotic transcription, RNA processing and translation. Listed also as CHEM 531.

Molecular Biology II
Yeast genetics and molecular biology; retroviruses and transposable elements; recombinant DNA tools and applications in Drosophila, yeast, and mice. Listed also as BIOS 532.

Advanced Cell Biology I
The basic biochemical, structural, and biophysical properties of key systems involved in membrane transport, protein trafficking, bioenergetics, cell signaling, vesicular transport, organelle biogenesis, and cytoskeletal functions.

Advanced Cell Biology II
The biochemical, structural, and biophysical properties of key systems involved in cellular adhesion, cell cycle regulation, programmed cell death (apoptosis), and the relationship to mechanisms of disease leading to carcinogenesis, aging.

Immunobiology of Infectious Diseases
Course focuses on the cellular and molecular mechanisms behind human diseases. Specifically, the design and effects of drug treatments on microbial and cellular processes and the development and implementation of vaccines.

Topics in Tumor Biology
Course examines the cell and molecular basis of tumor genesis and development in specific cancer cell types.

Chemistry and Biochemistry

Fundamentals of Biochemistry
Chemistry of carbohydrates, amino acids, proteins, nucleotides, nucleic acids, lipids, and enzymes.

Intermediary Metabolism
A study of the chemical reactions characteristic of living systems.

Molecular Biology I
Physical chemistry of nucleic acids, bacterial genetics, principles of cloning, DNA replication and recombination, prokaryotic and eukaryotic transcription, RNA processing and translation. Listed also as BIOS 531.

Molecular Biology II
Yeast genetics and molecular biology; retroviruses and transposable elements; recombinant DNA tools and applications in Drosophila, yeast, and mice. Listed also as BIOS 532.

Enzyme Chemistry
Physical and chemical properties and mechanism of action of enzymes and their role in metabolic processes.

NMR Spectroscopy in Chemistry and Biochemistry
A survey of modern NMR methods used to determine molecular structure and conformation, study chemical and biochemical reactivity, and probe metabolic processes in biological systems.

Chemical Basis of Gene Expression
Emphasis is placed on eukaryotic gene structure, replication, transcription, and translation.

Advanced Organic Chemistry I and II
The theoretical basis of organic chemistry and a detailed study of the preparation and reactions of organic compounds.

Synthetic Organic Chemistry
A systematic and critical study of the synthetic methods of modern organic chemistry, including the development of multistage syntheses.

Teaching, Research Fellowships

Financial support is available to all students. The Molecular Biosciences Program nominates outstanding applicants for University-wide fellowships, some of which are specific for female and minority candidates. The M.B.P. also administers program-specific fellowships that support incoming and matriculating students. Research assistantships are available in many of the research laboratories, and teaching assistantships are available to all students. Teaching assistantships typically involve 10 to 12 hours of work per week teaching within an undergraduate laboratory course. All M.B.P. students are awarded full-tuition scholarships.

Teaching, Research Fellowships

Financial support is available to all students. The Molecular Biosciences Program nominates outstanding applicants for University-wide fellowships, some of which are specific for female and minority candidates. The M.B.P. also administers program-specific fellowships that support incoming and matriculating students. Research assistantships are available in many of the research laboratories, and teaching assistantships are available to all students. Teaching assistantships typically involve 10 to 12 hours of work per week teaching within an undergraduate laboratory course. All M.B.P. students are awarded full-tuition scholarships.
Application and Admission

Students interested in the Molecular Biosciences Program must apply for admission to one of the departments involved in the program, Biological Sciences or Chemistry and Biochemistry. Applicants should choose the department that best serves their training goals. Each department has different degree requirements, as described above. Usually the research advisor will be in the same department as the student, although this is not a necessity.

To apply to this program, please submit a completed Graduate School application form. On this application, you must specify to which of the host departments (Biological Sciences or Chemistry and Biochemistry) you are applying, and specify that your area of interest or specialization will be the Molecular Biosciences Program. Transcripts of all previous academic credits, three recommendation forms from undergraduate instructors aware of your qualifications, and a statement of purpose are also required.

Graduate Record Exam (GRE) General Test scores must also be submitted and your choice of one Advanced Study Examination. The GRE advanced test is required for consideration within the Department of Biological Sciences and is highly recommended for the Department of Chemistry and Biochemistry. Information about these tests can be obtained from:

GRE ETS
P.O. Box 600
Princeton, NJ 08541-6000

Faculty and Research

Biological Sciences

John H. Adams, molecular interactions of malaria merozoites with host erythrocytes and genetic/anticodon variation of Plasmodium.

Cris lyn D’Souza-Schorey, Small GTPases in cell signaling and membrane trafficking.

John G. Duman, Physiological and biochemical adaptations to subzero temperatures, especially (1) structure and function of antifreeze proteins and ice nucleating proteins, and (2) studies of transgenic plants expressing insect antifreeze proteins.

Malcolm J. Fraser Jr., baculovirus molecular genetics, transposons, transgenic engineering of insects.

David R. Hyde, molecular genetics of Drosophila vision, molecular genetics of eye development and retinal degeneration in zebrafish, mechanisms of neuronal regeneration in zebrafish.

Alan L. Johnson, ovarian follicular growth, differentiation, and atresia; apoptosis.

Lei Li, molecular genetic basis of visual disorders, circadian clock and olfactory centrifugal inputs on visual sensitivity.

Joseph E. O’Tousa, maturation, structure, and function of rhodopsin, molecular genetics of retinal degeneration, control of cell death processes.

Jeffrey S. Schorey, molecular and cellular processes of mycobacterium-host cell interactions.

Neil F. Shay, molecular, cellular, and physiological aspects of nutrition and nutrient deficiencies.

Martin P. R. Tenniswood, tumor biology, apoptosis in hormone-dependent cancers.

Kevin T. Vaughan, dynactin complex, dynein-mediated organelle transport.

JoEllen J. Welsh, breast cancer, apoptotic mechanisms.

Chemistry and Biochemistry

Brian M. Baker, biophysical chemistry of macromolecular interactions, receptor-ligand interactions in immunity.

Subhash C. Basu, regulation of glycosyltransferases during development, DNA polymerase-associated lectin in eukaryotic DNA replication.

Francis J. Castellino, in vivo and in vitro structure-function relationships of blood coagulation and fibrinolysis proteins.

Patricia L. Clark, protein folding in cellular environments, ribosomal interactions with polypeptide chain conformations.

Holly V. Goodson, dynamics of microtubule assembly, regulation of cytoskeletal structure.

Paul Helquist, design, synthesis, and mechanism of antibiotics and anticancer agents.

Paul W. Huber, RNA-protein interactions, RNA localization, regulation of transcription.

Marvin J. Miller, synthetic and bioorganic chemistry, microbial iron transport agents, amino acids, peptides and ß-lactam antibiotics.

Thomas L. Nowak, mechanisms of enzyme activation and catalysis, carbohydrate metabolism, biochemical applications of NMR spectroscopy.

Anthony S. Servianni, biomolecular structure determination via isotope-edited NMR methods.

Bradley D. Smith, biomimetic chemistry, biomembrane fusion, phospholipid flip-flop, antimicrobial agents.

Olaf G. Wiest, physical and computational organic chemistry protein-ligand interactions, rational drug design.

Further Information

For additional information about the Molecular Biosciences Program, write Dr. Paul W. Huber, at the addresses given above.

For information specific to the departments involved in the Molecular Biosciences Program, please write the corresponding graduate director:

The Program of Studies

The graduate physics program at Notre Dame offers students a broad range of choice of research areas for a Ph.D. degree. Almost all areas of study in physics are represented within the department, including astrophysics, biophysics, atomic, condensed-matter, high-energy, nuclear, and statistical physics. This program combines course work and research, preparing the student for a career in university, industrial, or governmental research or in college or university teaching. Students take a sequence of basic courses in the fundamental areas of physics. In addition, the student will take advanced courses and seminars in specialized areas. Students join in a physics research program of the department within the first year.

The graduate program is primarily a doctoral program, leading to the degree of doctor of philosophy. The department ordinarily will not accept students who intend to complete only the master’s degree. However, a program leading to the degree of master of science is available; it involves satisfactory completion of graduate course work without any thesis requirement.
The master of science nonresearch program requires 24 credit hours of approved course work and passage of an oral Master's examination. Each program of course work is chosen in consultation with a faculty adviser. Interdisciplinary programs between physics and chemistry or biology are also available.

Requirements for the Ph.D. include thirty-six credit hours in courses, seminars, and research. Courses taken include Methods of Theoretical Physics I (PHYS 70001), Methods of Theoretical Physics II (PHYS 70002), Methods of Theoretical Physics III (PHYS 70003), Quantum Mechanics I (PHYS 70004), Quantum Mechanics II (PHYS 70005), and Quantum Mechanics III (PHYS 70006). Electrodynamics (PHYS 70007, 70008, and 80003), Electromagnetism and Electrodynamics (PHYS 70006 and 80001), and Statistical Thermodynamics (PHYS 80002). Three physics electives are required, generally chosen from the set of astrophysics, atomic physics, condensed matter physics, elementary particle physics, and nuclear physics (PHYS 70201, 80301, 80501, 80601, and 80701, respectively). There is no foreign language requirement for a Ph.D. in physics. Students who have satisfactorily completed courses equivalent to the required courses listed above will have the corresponding requirements waived or transferred. Students lacking the background to begin the basic curriculum may be advised to take some advanced undergraduate courses. Additional courses, supplemented by colloquia and informal seminars on topics of current interest, are available to the advanced student.

In addition to course work, there are three examinations to be passed for a Ph.D., a written qualifying examination on undergraduate physics, a written and oral Ph.D. candidacy examination, and an oral Ph.D. dissertation defense. Students first take the qualifying exam in the fall of their first year, and must pass it by the end of the second year. The candidacy examination is typically taken in the third year, after course work is complete. In this exam, the candidate must present a research proposal, demonstrate the ability to perform the proposed research, and show a broad understanding of physics. The post-candidacy student then concentrates on research, and generally writes the doctoral dissertation within three years of the candidacy examination. A dissertation is required and must be approved by the student’s doctoral committee and defended orally by the student at the final examination, the Ph.D. defense.

To remain in good standing, students are required to maintain a 3.0 grade point average, to pass the qualifying examination by the end of the second year, to pass the candidacy exam by the end of the fourth year, and to complete the Ph.D. degree program by the end of the eighth year. The minimum residence requirement for the Ph.D. degree is four consecutive semesters and may include summer session.

Research Areas

Astrophysics

Astrophysics research at Notre Dame is directed toward the study of astrophysical origins. The group’s activities contribute to the recently established Center for Astrophysics. The center supports interdisciplinary research in three basic areas: theoretical astrophysics and cosmology, ground-based optical astronomy, and space science.

Ground-Based Astronomy. The flagship of Notre Dame’s ground-based observational effort is the partnership with the Large Binocular Telescope (LBT) in Arizona. Notre Dame has joined a consortium of other universities for construction and use of this telescope. The members of this consortium are excitedly anticipating the arrival of first light in early 2004. The LBT will be one of the most powerful and versatile telescopes in the world. It will be the premier instrument for many astronomical problems ranging from studies of the early universe to searches for planets in other star systems.

Current observational programs involve a variety of telescopes around the world including the Keck Observatory in Hawaii and the Hubble Space Telescope. Ongoing research includes studies in the mysterious dark energy which is accelerating the expansion rate of the universe, studies of distant supernovae and gamma-ray bursts, studies of planet formation in young stellar systems, and studies of gravitational microlensing to search for dark matter and planets in the Galaxy.

Theoretical Research. Ongoing theoretical research includes all aspects of the origin and evolution of the universe, galaxies, stars, planets, and the interstellar medium. The astrophysics theory group has pioneered the development of modern numerical methods for hydrodynamic simulations of complex astrophysical systems. Theoretical work concerning the formation and evolution of galaxies, stars and the interstellar medium is being investigated with complex adaptive mesh magnetohydrodynamics. The group is also doing cosmological simulations of the origin and evolution of the very early universe, from the birth at the Planck scale, through inflation and various particle-physics processes, primordial nucleosynthesis, the emission of the cosmic microwave background, and the formation of large-scale structure and galaxies. These simulations are used to constrain theories for the nature of space-time and the origin of the universe. General relativistic numerical hydrodynamic simulations are also being performed as a means to understand exploding supernovae, black-hole and neutron star formation, and the formation of jets and electromagnetic bursts from accreting systems.

Another focus is theoretical nuclear astrophysics. This includes nucleosynthesis in the big bang, in supermassive population III stars, during late stellar evolution (AGB stars), and explosive nucleosynthesis on accreting white dwarfs (novae), accreting neutron stars (X-ray bursts), and supernovae. The nucleosynthesis is simulated using complex nuclear reaction network models for stellar hydrostatic and/or hydrodynamic conditions. The nuclear-physics input is derived from nuclear structure and nuclear reaction models. The reaction flow is studied within the time scales of static or explosive stellar burning. Energy generation and nucleosynthesis are calculated and compared with observed luminosities and elemental abundance distributions.

Space Science. Research in space science divides into studies of cosmic-ray air showers and the development of a new Notre-Dame satellite mission. In cosmic-ray research, an extensive air shower array (Project GRAND) is used to study cosmic rays and measure angles with high precision. The production mechanisms for UHE cosmic gamma rays and stellar sources such as Cygnus X-3 and Hercules X-1 are being studied along with a search for an association with gamma-ray bursts.

The group’s newest endeavor is the proposed Deep Impact Microlensing Explorer Mission (DIME) in which Notre Dame’s contribution will be as the Science Analysis center. Scientists at Notre Dame will utilize the onboard telescope to make parallax measurements of distant gravitational microlensing events. These observations will be crucial to characterize the nature of dark matter in the Galaxy.

Atomic Physics

Experimental Program. The experimental atomic physics program at Notre Dame is directed toward the study of the structure, excitation, and de-excitation characteristics of atoms and ions. This work stimulates advances in the theoretical understanding of atomic systems at the most fundamental level, where relativistic and field-theoretic aspects of the atoms become important.

An experimental laser spectroscopy program focuses on precision measurements of transition amplitudes and energies. These measurements are of interest to the study of parity nonconservation effects in atoms which is motivated by the study of weak interactions and are part of a low energy test of the standard model. High-resolution spectroscopic techniques are also used in other applications. This program involves the use of tunable dye lasers and diode lasers. Highly stripped heavy-ion beams of 10-100 MeV energy are produced at the accelerator facilities of the Nuclear Structure Laboratory. Experiments are also performed at other off-site heavy-ion accelerators. Present investigations concentrate on the precision atomic spectroscopy of highly ionized atoms and the measurement of lifetimes of selected atomic states in these ions. The spectroscopic measurements test current relativistic and quantum electro-dynamic calculations of atomic structure for few-electron ions. The lifetime results reflect the effects of both electron correlations and relativistic contributions in the de-excitation rates of excited atomic states. These data are also important to the diagnostics and modeling of high-temperature astrophysical and laboratory plasmas.
At APAL, the Atomic Physics Accelerator Laboratory in the Nieuwland Science Hall basement, fast heavy ions (up to 200 keV energies) are used for Doppler-free laser studies of atomic hyperfine structures, precision lifetime measurements, and other studies of atomic collisions and structures.

**Theoretical Program.** Notre Dame atomic theorists work on problems at the interface of atomic and particle physics. Recently, they have been involved in calculations of electron electric dipole moment enhancement factors in heavy rare-earth ions in support of experiments to detect time-reversal (T) violation. The atomic theory group produced the most accurate available prediction of parity nonconserving (PNC) amplitude in cesium, which, when combined with experiment, served as a stringent test of the standard model. Systematic calculations of the PNC amplitudes induced by the nuclear anapole moment have also been carried out. Recently, the atomic theory group calculated isotope shifts in ions of interest in the search for time-variation of the fine-structure constant. Higher-order corrections to quantum field theories for hydrogen, helium, and positronium are other subjects of current investigations. In a different but related atomic theory project, ab initio studies of transport properties of warm-dense plasmas are underway.

**Condensed Matter and Biophysics**

Condensed matter (CM) research at Notre Dame encompasses topics of research ranging from "hard" CM problems such as semiconductor or superconductor systems to "soft" CM problems such as studies of multicellular aggregates or the application of network theory to biological systems. The topics studied are described below:

**Physics on the Nanoscale.** Single-electron charging effects and related phenomena are explored to probe the basic physics of few-atom clusters, fullerenes and other exotic systems comprised of only a few atoms. The growth and self-assembly of quantum dots, quantum wires, and heterostructures in semiconductor systems is also studied extensively. Work on heterostructures includes the development of blue-light semiconducting lasers. Self-organized quantum dots and other nanophase systems are grown and characterized using optical, magnetic, transport, and x-ray techniques. Facilities include a dual-chamber molecular beam epitaxy machine, extensive facilities for optical and magneto-optical studies of nanoscale systems with micrometer-scale and sub-micrometer-scale (near field) resolution, and instrumentation for the study of electrical transport and magnetic properties.

**Semiconductor Physics and Magnetism.** Thin-film II–VI, III–V and other semiconductor samples are prepared by molecular beam epitaxy. III–V semiconductors which incorporate Mn ions in the lattice are ferromagnets and are expected to play a key role in future "spintronic" devices. These, as well as other magnetic samples, are studied by a variety of experimental techniques including laser magneto-spectroscopy, x-ray and neutron scattering, and electron transport. Facilities include extensive capabilities for the study of electrical properties, magnetization, and state of the art apparatus for the study of magnetic resonance. In addition, magnetic properties of solids are studied by neutron scattering, carried out off campus at the National Institute for Standards and Technology and at the University of Missouri Research Reactor Center (MURR).

**Structural Studies.** X-ray scattering and X-ray absorption fine structure (XAFS) are used to study the surfaces and internal interfaces of solids and liquids, phase transformations and ordering phenomena in condensed-matter systems. Examples of recent studies include atomic-scale structure of "highly correlated" magnetic materials, interfaces and structure of magnetic semiconductors, the structure of complex nanophase materials, the structure of metalloproteins, and environmental systems on the molecular scale. Because of the unique advantages of x-ray synchrotron radiation, these experiments are conducted at national facilities located at the Advanced Photon Source, Argonne National Laboratory, where Notre Dame is a major participant.

**Superconductivity and Vortices.** High-temperature superconductors are studied from the perspective of microwave absorption and other techniques with a view to probing fundamental mechanisms. These include investigations of the response of high-temperature superconductor thin-film systems to ultrashort duration, far-infrared light to evaluate potential applications for and the intrinsic electronic properties of these novel materials. New materials are synthesized using the traveling solvent float zone (TSFZ) technique in a mirror furnace-based system. In a separate effort, new superconducting systems based on dilute-doped elemental superconductors are being developed for micro-refrigerators and transition-edge x-ray sensors for space missions. Facilities include thermal evaporation and multi-source sputtering systems. Combined, the two techniques allow a study of how the superconducting gap and the vortex lattice symmetry and ordering phenomena in condensed-matter systems evolve as a function of temperature and field. On-site facilities include a low-temperature, ultra-high vacuum STM (under construction) while another project, Monte Carlo simulations are used to study the microstructure of strained semiconductor alloys and compounds.

Finally, the tools of statistical mechanics are applied to understanding real networks, including metabolic and genetic networks, social networks, the Internet, and the World Wide Web. A special focus is towards understanding the implications of the scale-free characteristics of real networks, a concept developed at Notre Dame.

**Biophysics.** The department hosts an active program in biophysics, focusing on modeling the structure and development of various biological systems. A strong focus is on understanding the topological properties of cellular networks—the networks formed by the Interactions between metabolites, genes and proteins, modeling both their structure and dynamical behavior. Using techniques from statistical mechanics, models of "convergent extension" cell rearrangements have been developed as a way to understand one step in embryonic development. At a higher level, multicellular aggregates, such as embryonic and mature tissues, are modeled. These systems often share the properties of "excitable media" and "soft matter," familiar to modern condensed matter physics and dynamical systems theory. Biological research is carried out in collaboration with other groups on the campus, involving faculty from biochemistry and biology, under the coordination of the Center for Biocomplexity.

**High Energy Physics**

**Experimental Program.** An understanding of the fundamental constituents of matter and the forces with which they interact is sought in high energy physics experimental programs that are performed at colliding beam accelerator facilities of two complementary types: Hadron colliders and electron-positron colliders. Each of these programs has a current, operating experiment and a future experiment in either the construction phase or the research and development phase.

The hadron collider program is based upon the currently operating Tevatron 2 Collider and DØ experiment at Fermilab to be followed (starting in 2007) by the CMS experiment at the CERN Large
Hadron Collider (LHC). The physics objectives of this program are to study top and beauty physics, electroweak bosons W and Z, QCD processes, and to search for evidence of electroweak symmetry breaking (such as Higgs bosons or technicolor), supersymmetry, extra (hidden) spatial dimensions, and other new phenomena. This program has provided many important physics results over the last decade, among them the discovery of the top quark in 1995. Notre Dame graduate students have written dissertations in all these research areas. Additionally, Notre Dame has been involved in the recent upgrade of the DØ detector to magnetic tracking, being a pioneering group in the development of scintillating-fiber tracking technology. Notre Dame manages the operation of the Central Fiber Tracker for DØ, directs the offline track reconstruction effort for the experiment, and is involved in the building of an improved level-1 track trigger processor for enhanced detector performance at increased luminosity. Fiber-optic techniques are also critical to the operation of the CMS hadron calorimeters at the LHC, and Notre Dame has been extensively involved in the design and construction of key elements of the electro-optical readout of these CMS detector subsystems, and has been engaged in R and D on new scintillator and waveshifter materials for improved calorimetry performance under high luminosity operation.

The electron-positron collider program is based upon the currently operating BaBar experiment at SLAC. This program, too has provided remarkable physics results, notably the observation by BaBar of CP violation in the b-quark system in 2000 - the first observation of CP violation outside of K decays, which were discovered in 1964. Physics goals include systematic study of CP violating effects in a variety of decay modes in the b-system as well as studies of rare decays of beauty and charm mesons. Luminosity increases for the BaBar experiment are planned, and Notre Dame is engaged in refinements of the readout electronics of the central tracking chamber to improve track reconstruction. A variety of R and D projects are underway for the future Linear Collider including, for detectors: scintillator and waveshifter development for fast triggering, calorimetry, muon detection, and tracking; and for accelerators: beam controls and diagnostics systems.

Theoretical Program. In theoretical high energy physics, refinements are pursued in the phenomenology of the standard model as well as 'new' physics beyond the standard model, particularly supersymmetry. This new physics can be manifested by its presence in CP asymmetries like the one recently measured at SLAC, the first new CP measurement in 40 years. Also being analyzed is supersymmetry and other attempts to tie the electroweak symmetry breaking in the standard model to a more fundamental understanding of nature, including connections to cosmology such as the dark matter and dark energy. Baryo- and lepto-genesis in the Universe is also studied as well as scenarios with extra space dimensions and even multidimensional time.

Nuclear Physics

Experimental Research. The nucleus is a tiny object with a very wide reach. Indeed, nuclear physics encompasses an enormous variety of phenomena—from the very beginnings of life (the CNO cycle), to determination of the age of stars and their demise in a fiery cataclysm (supernovae). In between, one finds applications of nuclear physics in fields as diverse as medicine, radiocarbon dating, energy, national security, and even detecting art forgeries. The nucleus, as a quantal many-body system, provides the bridge between quarks at one end and solids at the other. Probes of nuclear properties can answer many questions relating not only to the microscopic behavior of quantum systems, but also to the macroscopic behavior of the very largest stars.

Nuclear physics research in the department aims at studying the structure and dynamics of nuclear systems, especially in their relation to astrophysical phenomena. Work is carried out in the Nuclear Structure Laboratory, as well as a large number of accelerator facilities around the world.

A pioneering focus in the Nuclear Physics Laboratory has been the development and application of short-lived radioactive ion beams (RIB) for studies of the structure of nuclei at the very limits of particle stability. Examining nuclear matter under extreme conditions is crucial for understanding of the fundamental properties of nuclear forces, and development of the unified nuclear theory. An opportunity is provided by studies of exotic nuclei near and beyond the line of particle stability (drip line). Knowledge of the properties of exotic nuclei is also important for understanding of many astrophysical processes. Currently there is a focus on the spectroscopy studies of very neutron- and proton-rich nuclei and on investigation of mechanism of reactions induced by RIBs.

Research in nuclear structure focuses on the fundamental modes of motion in nuclei. Among the novel aspects of nuclear dynamics under investigation are wobbling motion (akin to that of a wobbling top), breakdown of chiral symmetry (the nucleus demonstrating left- and right-handedness), and anti-magnetic rotation (symmetric rotation of nucleonic currents). The "bulk" properties of nuclei are investigated by means of high-energy nuclear vibrations (the "giant resonances") to determine the incompressibility of nuclear matter, a crucial component of the nuclear equation of state that is critical to determining the properties of matter in the core of neutron stars.

A major research initiative of the laboratory is understanding the origin of the elements in the universe. This effort is the cornerstone of the newly-established Joint Institute for Nuclear Astrophysics (JINA), a national Physics Frontier Center. Measurements of nuclear reaction rates and decay processes at stellar temperatures and densities comprise a strong part of the experimental effort in nuclear astrophysics. The goal is to understand the origin and distribution of the elements in the universe. Research is directed towards simulating stellar nucleosynthesis in the laboratory, understanding late stellar evolution and explosive nucleosynthesis in novae and supernovae, and explaining the origin of the very high luminosity observed in stellar x-ray outbursts.

Developing Accelerator Mass Spectrometry techniques for astrophysics is another research focus of the laboratory. Accelerator Mass Spectrometry has traditionally been used to detect environment tracers at or below their natural abundance level (10Be, 14C, 36Cl). Its main attribute is its power to accelerate and analyze ions of radioactive nuclei with extremely high sensitivity. Many aspects of this powerful technique can be used for research involving radioactive-beam physics, as well as the study of low cross-section nuclear reactions which are important in stellar evolution. That is the case where counting rates and voltages are very low and there are high isotopic backgrounds.

The major experimental facilities in the laboratory include an FN Tandem accelerator that can provide up to 11 MV terminal voltage for the acceleration of light and heavy ions; the Twissol radioactive beam facility, based on two, coupled, 6 Tesla-meter superconducting solenoids for the focusing of the radioactive beam particles onto a target; a 4 MV KN and a 2 MV JN Van de Graaff accelerators capable of delivering the intense, low-energy beams necessary for recreating stellar conditions in the laboratory; a number of clover- and Compton-suppressed Ge detectors for gamma-ray spectroscopy measurements and, a superconducting solenoid system for decay studies. A recoil-mass spectrometer is currently in the design stage and is expected to be operational by 2005.

In addition to the high level of activity within the nuclear laboratory, the nuclear group's research is complemented by experiments done at various national facilities including the superconducting cyclotron at Michigan State University, and accelerator facilities at the Argonne, Berkeley, Oak Ridge, Los Alamos, and Thomas Jefferson National Laboratories. On the international scene, Notre Dame scientists also utilize the High Flux Beam Reactor at Grenoble, France, the GANIL facility in Caen, France, the ISOLDE radioactive ion facility at CERN, Switzerland, and various accelerator facilities in Belgium, France, Germany, Japan, and the Netherlands.

There is also a lively inter-disciplinary programs in radiation chemistry, bio-mechanics, materials testing, and elemental analysis of archaeological samples. The analysis of archaeological samples is a new initiative with the Snite Museum of Art at Notre Dame and uses the proton-induced x-ray emission (PIXE) technique. Collaborations with industries are also being carried out in testing new detectors and determining the durability of artificial human body components.

Theoretical Research. The structure of exotic nuclei, including those with unusual numbers of protons and neutrons, and rapidly spinning nuclei are the focus of the theoretical effort. The structure of such exotic nuclei is likely to become accessible to experimental studies with the development of new
national and international facilities. Also investigated are transitions from the superconducting to the normal state in rapidly rotating nuclei, pair correlations in very proton-rich nuclei, and the properties of very neutron-rich nuclei, which play an important role in astrophysical processes. A recent result is the discovery of magnetic and chiral rotation of nuclei.

The methods of many-body theory of finite systems are quite general and can be applied both to nuclei and non-nuclear mesoscopic systems, including atomic clusters and quantum dots.

**Education and Outreach**

**QuarkNet**. QuarkNet is a federally funded national program partnering high school teachers with particle physicists working on high-energy colliding beam experiments at Fermilab, CERN and SLAC and on non-accelerator and fixed target experiments. Notre Dame is directly involved in the management of the National QuarkNet Program and also operates the Notre Dame QuarkNet Center located adjacent to the campus where high school teachers and students can participate “hands-on” in construction of state-of-the-art particle physics detectors.

**Research Experiences for Teachers (RET)**. Notre Dame operates a Research Experience for Teachers (RET) program; which pairs high school teachers from the North Central Indiana/Southwest Michigan region with physics faculty in the department. Teachers in RET participate in a paid eight-week program of summer research and receive academic graduate research credit.

In principle, research is possible in any area of physics depending upon the mutual interest of the teacher and faculty mentor. Twelve high school teachers are supported in this program each summer.

**Joint Institute for Nuclear Astrophysics (JINA)**. The Joint Institute for Nuclear Astrophysics (JINA) is funded by the NSF as a Physics Frontier Center. It is a research collaboration focused at the intersection of nuclear physics and astrophysics. JINA offers a wide range of educational outreach programs at all levels: K-12, undergraduate and graduate. For graduate students, JINA’s educational outreach program offers collaboration opportunities in the exciting field of nuclear astrophysics, including research fellowships for graduate work at or from JINA sites (Notre Dame, Michigan State University, University of Chicago, Argonne National Laboratory, University of Arizona, University of California Santa Barbara, University of California Santa Cruz, and Los Alamos National Laboratory). One fellowship program offers a full year of research experience at Notre Dame for minorities and women to explore the field of nuclear astrophysics. JINA offers professional development training to K-12 teachers and graduate students may participate in these workshops and camps. JINA also has research experience programs for high school teachers and students in which graduate students mentor teachers and work with them in the lab. For more information on JINA and its educational outreach programs, go to http://www.jinaweb.org.

**Course Descriptions**

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

68098. Directed Research - Physics Teaching (v-v-v)

Directed research courses are for high school teachers participating in research in the physics department, for example as participants in the RET (Research Experience for Teachers), QuarkNet, or similar programs which partner high school teachers with physicists. Research areas include atomic physics, biophysics, condensed-matter physics, nuclear physics, particle physics, and astrophysics. Instruction will be given in modeling physics phenomena in a classroom setting. Emphasis is given to applications in high school physics teaching. Additionally, students will participate in directed research associated with current experiments being carried out by department faculty. Students maintain a research logbook and submit a written research summary at the conclusion of the research period. (Offered as needed)

68099. Directed Research (v-v-v)

Directed Research courses are for high school teachers participating in research in the physics department, for example as participants in the RET (Research Experience for Teachers), QuarkNet, or similar programs which partner high school teachers with physicists. Research areas include atomic physics, biophysics, condensed-matter physics, nuclear physics, particle physics, and astrophysics. Participants will be introduced to research physics in informal lectures with faculty, with course notes and reference texts available. Additionally, they will participate in directed research associated with current experiments being carried out by department faculty. Students maintain a research logbook and submit a written research summary at the conclusion of the research period. (Offered as needed)

Additional directed research (offered as needed and listed by topic) includes:

- 68299. Directed Research in Astrophysics
- 68399. Directed Research in Atomic Physics
- 68499. Directed Research in Biophysics
- 68599. Directed Research in Condensed Matter Physics
- 68699. Directed Research in Particle Physics
- 68799. Directed Research in Nuclear Physics

73000. Physics Colloquium (0-1-0)

A discussion of current topics in physics by guest lecturers and members of the faculty. (Every semester)

70003. Methods of Theoretical Physics I (3-3-0)

A study of the methods of mathematical physics. Topics include linear vector spaces, matrices, group theory, complex variable theory, infinite series, special functions, and differential equations.

70005. Theoretical Mechanics (3-3-0)

Lectures and problems dealing with the mechanics of a particle, systems of particles, and rigid bodies. The Lagrangian and Hamiltonian formulations of classical mechanics; theory of small oscillations. Introduction to special relativity. Introduction to nonlinear dynamics and chaos; bifurcation theory.

70006. Electromagnetism (3-3-0)

Electrostatics; Laplace’s and Poisson’s equations; Legendre’s and Bessel’s equations; Green’s functions; static multipole expansions; magnetostatics; magnetic vector and scalar potentials; Maxwell’s equations; plane waves. (Every year, spring)

70007. Quantum Mechanics I (3-3-0), (3-3-0)

General Hilbert Space formulation of Quantum Mechanics; Schrödinger vs. Heisenberg picture; symmetries and conservation laws; Feynman path integrals; harmonic oscillator; the Coulomb problem; the Bohm-Aharonov effect; the theory of angular momentum; EPR correlations and Bell’s inequality; Bose-Einstein and Fermi-Dirac statistics; elementary approximation methods; scattering theory.

70010. Methods of Experimental Physics 71010. Experimental Physics Laboratory (3-2-2) Berry

A lecture and laboratory course on methods of all aspects of modern experimental physics, from instrumentation and data acquisition to statistical treatment of data. The course is designed around ten experiments in different areas of physics. The course includes learning about equipment design, various detection systems, electronic pulse-processing, and computer interfaces.

77031, 77032. Current Topics in Physics (v-v-v), (v-v-v)

Discussions of topics of current interest in physics. (Offered as needed)

70050. Relativity: Special and General (3-3-0)

An introduction to relativity, both special and general. Special relativity: Lorentz transformations of events, geometry of space-time, relativistic kinematics (energy-momentum), Lorentz transformations of electromagnetic fields. General relativity: gravity and light, principle of general covariance, Einstein’s field equations, Schwarzschild solution, precession of perihelions of planets, deflection of light, black holes. (Every year, spring)
A study of the physical problems associated with stellar motions; energy generation and radiation; astronomical distances; celestial mechanics; galactic dynamics; cosmic rays; interstellar matter; thermodynamics; and equations of state of various stellar models. Observational techniques and methods of computation will be discussed. (Every year, fall)

Scattering and diffraction; special relativity; covariant formulation; radiation from charges; multipole expansions; radiation damping. (Every year, fall)

Review of basic elements of phenomenological thermodynamics; kinetic theory and transport equation; dilute gases in equilibrium; classical statistical mechanics; microcanonical, canonical and grand canonical ensembles; quantum statistical mechanics; the renormalization group, critical phenomena and phase transitions. (Every year, spring)

Advanced topics in nonrelativistic quantum mechanics: advanced approximation methods, partial wave expansions, and the optical theorem, Berry's phase; relativistic quantum mechanics; the Dirac equation, the electromagnetic interactions of the Dirac particle, the fine structure of atoms, Klein's paradox; diffraction; Bloch electrons; band structure and the Fermi surface; cohesive energy; classical and quantum theory of the harmonic crystal, phonons; dielectric properties of insulators; semiconductors; paramagnetism and diamagnetism, magnetic ordering; superconductivity.

Further topics, covered in Condensed Matter Physics II, are chosen from such areas as: critical phenomena; high-temperature superconductivity; quantum fluids; spin glasses; quantum Hall effect; “soft” condensed-matter phenomena; the Fermi surface; cohesive energy; paramagnetism and diamagnetism, magnetic ordering; superconductivity.

General formulation of quantum field theories; the spin-statistics theorem; CPT invariance and its tests; local gauge theories; symmetries, conservation laws, Ward identities and anomalies; Feynman path integrals; Feynman rules for Abelian and non-Abelian gauge theories; ghosts; the general renormalization program for gauge theories and the renormalization group; asymptotic freedom and duality; spontaneous realization of symmetries and the Higgs mechanism; grand unification; and supersymmetry. (Offered as needed)

The nucleus as a Fermi gas; the Von Weizsacker formula; radiation from charges; multipole expansions; radiation damping. (Every year, fall)

General structure and properties. Spectroscopy of simple and complex atomic systems; the Schrödinger and Dirac equations, Hartree-Fock methods, allowed and forbidden radiative transitions, and hyperfine splitting. Further topics that may be covered are laser–atom interactions, laser cooling and trapping, photoionization, atomic collisions, many-body perturbation theory, quantum electrodynamics, and atomic parity nonconservation. (The first semester is offered every fall; the second semester, PHYS 90302, is offered as needed.)

A course will cover properties of the quantized electromagnetic field as it interacts with atoms and other forms of matter. The interaction of light with matter is the basis for the phenomena of photoelectric detection, measurement, and nonlinear optics which will be used to investigate the quantum mechanical nature of photon correlations, coherent states of light, squeezed states, and the basics of quantum computing. (Offered as needed)

Discussions of research and current literature in atomic physics. (Every semester)

Discussions of research and current literature in atomic physics. (Every semester)

Discussions of topical concepts in physics. (Offered as needed)

Research and dissertation for resident graduate students. Graded with letter grade.

Research and dissertation for resident graduate students. Graded satisfactorily/unsatisfactorily.
Richard E. Azuma, Adjunct Professor. B.S., University of British Columbia, Canada, 1951; Ph.D., The University, Glasgow, Scotland, 1959. (2003)

Dinshaw Balsara, Assistant Professor. M.S. (Physics), Indian Inst. of Tech., Kanpur, 1982; M.S. (Astronomy), Univ. of Chicago, 1989; Ph.D., Univ. of Illinois at Urbana-Champaign, 1990. (2001)

Michael C. F. Wiescher, the Frank M. Freimann Professor of Physics and Director of the Joint Institute for Nuclear Astrophysics. Vordiplom, Univ. Munster, 1972; Diplom, ibid., 1975; Ph.D., ibid., 1980. (1986)

James R. Wilson, Adjunct Professor. B.S., University of California, Berkley, 1943; Ph.D., ibid., 1952. (1996)

Andreas Woehl, Research Assistant Professor. M.S., University of Stuttgart, Germany, 1986; Ph.D., Johannes Gutenberg Univ. Mainz, Germany, 1992; Certificate in Medical Physics, Univ. of Kaiserslautern, Germany, 1999. (2003)
The Division of Social Sciences

The Division of Social Sciences offers programs of graduate study leading to the Ph.D. in economics, political science, psychology, and sociology. Programs leading to the master of arts degree are also available, including an interdisciplinary master's degree in peace studies, as well as a master of education degree.

The division seeks to professionally develop graduate students by providing them with a thorough analysis of current theoretical developments in the various disciplines, training in modern research techniques, personal contact with faculty and their research efforts, and a program tailored to the students' individual professional needs and interests.

Centers and institutes provide a framework for multidisciplinary approaches to issues in the social sciences. The Helen Kellogg Institute for International Studies promotes comparative international research on themes relevant to contemporary society. Building on a core interest in Latin America, the Kellogg Institute fosters research on many regions of the world, attempting to expand understanding of democracy, development, social justice, and other important international goals challenging humankind. The Joan B. Kroc Institute for International Peace Studies is a leader in addressing political, cultural, religious, social, and economic factors that lay the foundation for peace. Descriptions of these and other research centers may be found elsewhere in this bulletin.

Economics

Chair: Richard A. Jensen
Director of Graduate Studies: Kali P. Rath

The University of Notre Dame has recently approved a restructuring of its Economics Department. As a result, changes are being introduced in both the organization of the faculty and the structure and content of its master's and doctoral programs. The restructured graduate program will be located in the newly created Department of Economics and Econometrics. New students will be admitted to the program beginning in the fall of 2006. As the transition is completed, information will be made available on the departmental website.

The Program of Studies

The goal of the graduate program in economics and econometrics is to graduate students who have the expertise to assist in the solution of the economic problems facing humanity. Graduates in economics from the University of Notre Dame will be distinctive for their combination of technical competence, familiarity with alternative approaches, and concern for values in economics.

The program in economics, designed to fulfill the above goals, rests on the following principal elements:

1. A solid foundation in micro- and macroeconomic theory, statistics and econometrics, political economy, history of economic thought, and methodology.
2. Training in the analysis of the creation and distribution of wealth, the causes of poverty and inequality, and the formulation of policies to alleviate poverty and promote the development of urban centers, backward regions, and underdeveloped countries.
3. Full use of the variety of methodologies, including neoclassical, post-Keynesian, neo-Marxian, and institutionalist, available for the study of economic relations and events.

The graduate doctoral program consists of four major elements: (1) graduate core courses required of all Ph.D. students, (2) field and other elective courses, (3) workshops, and (4) dissertation work. In addition to the core courses, doctoral students take a minimum of nine other courses, including three courses in a field of specialization. The graduate economics program offers three fields of specialization: development and international economics; economic theory, history of economic thought, and methodology; and institutions (such as law, financial, industrial, and public institutions). Students are alternatively allowed to tailor their own field clusters. Each of the field clusters offers a unique approach to the field that distinguishes the Notre Dame program from others. It is expected that after completing the course work, students will do their advanced study and research in one of the fields where Notre Dame and the faculty excel.

Doctor of Philosophy

The requirements for the Ph.D. are a minimum of 16 graduate courses, including seven core courses and a three-course field cluster requirement; successful completion of comprehensive examinations in macroeconomic theory, microeconomic theory, and political economy; a written dissertation; and fulfillment of University requirements with respect to grade point average and residency. The typical doctoral program takes four years, although it can be accomplished in less time, especially if the student has had some previous graduate work. Normally, students complete their course work within two years, write their comprehensive examinations at the end of the first year, participate in workshops, and in the third year develop and present a dissertation proposal. After a director and three readers have agreed to serve on the student’s dissertation committee, the student carries out the proposed research with their advice and guidance.

Master of Arts

Both a research and a nonresearch M.A. degree are available. The basic requirements for each are 60001, 60011, 60101, 60201, and 70811, a total of 30 credit hours, and successful completion of the M.A. comprehensive examinations covering macroeconomic theory, microeconomic theory, and political economy. For the research M.A., a thesis (which counts six credits toward a 30-credit-hour total) is required. The nonresearch M.A. entails 30 credit hours of regular course work, but no thesis requirement.
ECONOMICS

Special Features
The economics program is flexible enough to accommodate the needs and background of the individual student so that courses in a number of other areas can be added easily and logically.

In addition to regular seminars and workshops, the economics department sponsors lectures, seminars, round table discussions, and conferences with guest economists from around the world.

Other features of the program include a high faculty-student ratio, Macintosh computers, IBM PCs, and computer terminals throughout the campus area.

Course Descriptions
Each course listing includes:
- Course Number
- Title
- (Credits per semester–lecture hours per week–laboratory or tutorial hours per week)
- Course Description

General Economics

60001. Mathematics for Economists
(3-3-0)
Exposition of mathematical methods used in economic theory and analysis, with application of these methods to economic theory. Major methods covered include differential and integral calculus and matrix algebra. Recommended for students planning to go to graduate school in economics.

60011. Statistics
(3-3-0)
Exposition of statistical techniques with applications in development, labor theory, and public policy economics. Testing hypotheses in economic theory and estimating behavioral relationships in economics.

60101. Microeconomic Theory I
(3-3-0)
Mathematical presentation of neoclassical models of consumer behavior, behavior of the firm, and analysis of markets under perfect and imperfect competition. Analysis of market failures, choice under uncertainty, and the economics of information.

60201. Macroeconomic Theory I
(3-3-0)
An overview of alternative static macro models (such as Keynesian, monetarist, new classical, new Keynesian, and post-Keynesian models); microeconomic foundations of macroeconomics; an introduction to business cycles, growth, and open economy issues.

63673. Seminar in International Economics
(3-3-0)
Special topics in international trade and open economy macroeconomics. Subject matter to vary from year to year.

70009. Seminar in Economic Theory
(3-3-0)
Special topics in economic theory. Subject matter to vary from year to year.

70016. Topics in Applied Econometrics
(3-3-0)
Applications of econometric techniques to economic problems in the fields of micro, macro, and international economics.

70051. Game Theory and Applications
(3-3-0)
The objective is to develop the basic concepts of game theory and to apply them to understand strategic interactions in both market and nonmarket environments. Specific topics include subgame perfect equilibrium in repeated games, folk theorems, stick and carrot strategies, bargaining, incentive and mechanism design, signaling games, and strategic voting.

70322. Labor Economic Theory
(3-3-0)
Three paradigms in labor economic theory: neoclassical, radical, and institutional. Theories of time use, household formation, women's employment, wage determination, efficiency wages, labor market dynamics, and unemployment are among the areas covered.

70361. Industrial Organization
(3-3-0)
Introduction to the study of industrial structures and their relationship to economic performance. Competing theories of the determinants of structure at the level of individual industries and sectors and the role of structure in the competitiveness of firms in the regional, national, and global economy. Role of competitive forces in relatively regulated environments and role of regulation and industrial policy in creating successful industries.

70421. Financial Institutions, Markets, and Instability
(3-3-0)
An examination of the workings of the financial system. Topics include financial crises and the business cycle, institutional and structural change affecting financial markets and institutions, the global financial system, financial fragility, regulatory policy and financial restructuring, the political economy of central banking, and money and credit in the economy.

70552. Open Economy Macroeconomics
(3-3-0)
Macroeconomic theory and policy in open economies. Balance of payments accounting, basic theory of fiscal and monetary policy under international exchange rate regimes, and recent developments in the area of exchange rate economics. Implications of the social issues for current policy issues in the areas of stabilization policies and international borrowing.

70811. Political Economy
(3-3-0)
Alternative approaches to political economy, including classical, Marxian (both classical and contemporary), post-Keynesian, institutional, feminist, and neoclassical approaches. Methods of analysis in these approaches are illustrated by examining the basic concepts of political economy such as class, state, gender, race, power, institutions, crisis, and development as well as concrete historical and contemporary issues.

70813. Problems in Political Economy
(3-3-0)
Alternative theories (institutionalist, Marxist, and post-Keynesian) and their application to researchable problems. Major emphasis on preparation for writing a dissertation using an alternative methodology.

70814. International Political Economy
(3-3-0)
This seminar explores the interaction between politics and economics in the international system, with an emphasis on the theoretical development of the subfield of international political economy. We will investigate the balance between cooperation and conflict, the effect of international institutions on economic relations, and the mutual impact of domestic and international politics. Throughout the course, we will consider how well models developed in other fields of political science or economics can be applied to international political economy. We will also attempt to identify the "state of the art" in the study of international political economy.

70815. Political Economy Postindustrial Societies
(3-3-0)
This course investigates the nexus between politics and economics in the postindustrial societies. After a brief discussion of the theoretical principles of economic liberalism, the course focuses on the impact of economic factors and conditions on politics and the political and economic consequences of the organization of the world economy along free market principles. It concludes by scrutinizing the relationship between domestic politics and the project for deeper economic integration in the case of the European Union.

70821. History of Economic Thought and Methodology
(3-3-0)
Introduction to the history of economic thought and methodological issues in economics. Survey of preclassical, classical, Marxian, marginalist, and other approaches. Issues in the philosophy of science concerning explanation, verification, and prediction.

70831. The Computer as Social Phenomenon
(3-3-0)
This course takes the perspective of "science studies" and applies it to issues that do not fit easily into either computer science or economics. These include: Does the computer have a well-defined existence?
How has the computer influenced our theories of human nature? Is the "new information economy" a real phenomenon? It also deals with some emerging issues in Internet commerce.

80324. Seminar in Labor Economics  
(3-3-0)  
Special topics in labor economics. Subject matter to vary from year to year.

80594. Seminar in Development Economics  
(3-3-0)  
Special topics in development economics. Subject matter to vary from year to year.

**Economics and Econometrics**

60013. Econometrics II  
(3-3-0)  
A survey course in practical, applied econometric techniques. Students learn how to make effective use of such techniques as spline regression, switching regressions, disequilibrium models, robust regression, nonlinear estimation, logit, probit, tobit, censoring, truncation, and event history analysis. Extensive computer applications.

73001. Workshops in Economic Theory, History of Economic Thought and Methodology  
(1-1-0)  
A forum for students to present their current research in economic theory, history of economic thought, and methodology, and to discuss various papers and research of interest to the participants.

73501. Workshops in Development and International Economics  
(0-0-0)  
A forum for students to present their current research in development and international economics and to discuss various papers and research of interest to the participants.

70553. International Finance  
(3-3-0)  
Empirically based examination of exchange rate and balance-of-payments issues and the debt problem.

73801. Workshops in Institutions  
(0-0-0)  
A forum for students to present their current research in institutional economics (concerning labor, financial, industrial, and public institutions) and to discuss various papers and research of interest to the participants.

76911. Directed Readings  
(0-0-0)  
By arrangement with individual instructors. Satisfactory/unsatisfactory grading with variable number of credit hours.

77911. Special Studies  
(1-1-0)  
Prerequisites: written consent of instructor. Independent study under the direction of a faculty member. Course requirements may include substantial writing as determined by the director. They will disenroll a student early for failure to meet course requirements. Students who have been disenrolled or who have failed at the end of the first semester are disqualified for Special Studies in the following term.

**Economics and Policy Studies**

61011. Computing for Social Sciences  
(1-1-0)  
This is a laboratory course designed to introduce first-year graduate students to the basic computational and statistical techniques used in social science quantitative research. The main goal of the course is to show students how to build and access a data set for analysis. As such, it is complementary to the core statistical and econometrics course offered in the social sciences. Students will be exposed to the different operating systems available at Notre Dame, and to a variety of statistical software applications. Topics treated include reading data in different formats and checking it for errors, carrying out exploratory analyses, recoding and creation of new variables, merging data sets, performing extracts, and moving a data set between different operating environments.

60012. Econometrics I  
(3-3-0)  
Properties of estimators, methods of estimation, general linear regression model, maximum likelihood estimation, nonlinear regression models, Karnaugh maps, hypotheses testing with likelihood ratio, Wald, Rao tests, ANOVA, and spline regression methods.

60102. Microeconomic Theory II  
(3-3-0)  
General equilibrium analysis, welfare economics, and game theory. Issues in applied microeconomics. Discussion of alternative approaches to microeconomics.

60202. Macroeconomic Theory II  
(3-3-0)  
Analysis of recent contributions and controversies in macroeconomic theory emphasizing alternative approaches such as new classical, new Keynesian, and post-Keynesian approaches. Macroeconomic dynamics involving the analysis of growth distribution and cycles.

60801. Economics for Non-Economists  
(3-3-0)  
This is a course for graduate students in Government, Sociology, Theology, Philosophy, Peace Studies, and History. It is an intensive study of micro- and macro-economic theory with applications to public finance, international trade, theories of justice, economic history, and other areas as required by the interests of students.

61901. Grant Writing for Social Sciences  
(3-3-0)  
This course will provide an overview of the grant writing process in the social sciences focusing on the deadlines and regulations of the funding institutions.

70321. Labor Institutions  
(3-3-0)  
Wage and benefit determination under collective bargaining and the decline of union bargaining power, and labor market segmentation including dual labor market analysis and the labor process debate.

70411. Monetary Economics  
(3-3-0)  
Major theoretical and empirical studies on the demand for and the supply of money, the impact of money in alternative macroeconomic models, and major topics in monetary policy.

70561. Development Economics  
(3-3-0)  
A general introduction to the field of development economics, with concentration initially on questions of a macrostrategic nature. The final topic is macro-analysis of country development programs, examining country studies, and macro models.

70841. Latin American Politics  
(3-3-0)  
This course examines the political and institutional framework underpinning the transition to an economic order in which market forces play a predominant role in the allocation of resources throughout Latin America. After reviewing the post-war economic model of protected, state-led industrialization and contending theoretical perspectives on economic liberalization, it analyzes the roles of various political and social actors and institutions in shaping first and second generation economic reforms. The focus is on the executive, party, legislative, and sub-national political institutions that shape and constrain state and market-oriented reform and economy policy-making. The latter part of the course examines the impact of economic liberalization on electoral cleavages, political representation, and the changing foundations of citizen association and participation.

73901. Non-resident Dissertation Research  
(1-1-0)  
Required of nonresident graduate students who are completing their dissertations in absentia and who wish to retain their degree status.

77951. Thesis Direction  
(0-0-0)  
This course is taken by a student wishing to earn a research master's degree. The student works under the guidance of one or more faculty member to produce a master's thesis.
Faculty

Frank J. Bonello, Associate Professor, B.S., Univ. of Detroit, 1961; M.A., ibid., 1963; Ph.D., Michigan State Univ., 1968. (1968)

Kasey Buckles, Assistant Professor, B.A., Univ. of Kentucky, 1000; M.A., Boston Univ., 2003; Ph.D., Boston Univ., 2005. (2005)

Teresa Ghilarducci, Director of the Higgins Labor Research Center, Associate Professor, Fellow in the Nelson Institute for European Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies. A.B., Univ. of California, Berkeley, 1978; Ph.D., ibid., 1984. (1983)

Kwan Suk Kim, Professor, B.A., Seoul National Univ., 1959; M.A., Univ. of Minnesota, 1961; Ph.D., ibid., 1967. (1967)

Nelson C. Mark, the DeCrane Professor of International Studies and Fellow in the Helen Kellogg Institute for International Studies. B.A., Univ. of California at Santa Barbara, 1978; Ph.D., Univ. of Chicago, 1983. (2002)

Kajal Mukhopadhyay, Research Assistant Professor and Associate Director in the Laboratory for Social Research and Concurrent Research Assistant Professor of Economics. B.A., Indian Statistical Institute, 1987; Ph.D., Indiana Univ., Bloomington, 1996. (1996)

James J. Rakowski, Associate Professor, B.A., Creighton Univ., 1963; Ph.D., Univ. of Minnesota, 1968. (1967)

Jaime Ros, Professor, B.A., Univ. of Paris XII, 1971; M.A., National Univ. of Mexico (UNAM), 1974; Diploma in Econ., Cambridge Univ., 1978. (1990)

David F. Ruccio, Professor, B.A., Bowdoin College, 1976; Ph.D., Univ. of Massachussets at Amherst, 1984. (1982)

Roger B. Skurski, Professor Emeritus. B.S., Cornell Univ., 1964; M.S., Univ. of Wisconsin, 1967; Ph.D., ibid., 1970. (1968)

Charles K. Wilber, Professor Emeritus. B.A., Univ. of Portland, 1957; M.S., ibid., 1960; Ph.D., Univ. of Maryland, 1966. (1975)

The Program of Studies

The master of education (M.Ed.) program is housed in the Institute for Educational Initiatives, which provides research leadership in education and fosters efforts in education that are informed by social science research. The only clients for this master’s program are students entering in the Alliance for Catholic Education. (The ACE program is described in the “Centers, Institutes, and Laboratories” section of this Bulletin.)

Students in this program work toward licensure, consistent with the standards in the state of Indiana, in each of the following areas: middle childhood (i.e., elementary education), early adolescence (middle school), adolescence and young adulthood (high school), English language arts, social studies, science, mathematics, and foreign languages. Like most teacher accreditation programs at the master’s level, content-area courses must be completed before entering the master’s program, which provides education course work only.

A total of 37 (39 for elementary) credit hours of course work and teaching experience are required, with an overall grade point of at least 3.0. Half of the course work will occur in two summer sessions, with 10 to 12 credits earned in each. The faculty who teach in the M.Ed. program are drawn from a variety of disciplines and colleges within and, in some cases, from outside the University.

The first summer includes practice teaching in South Bend-area elementary and secondary schools as well as nine or 10 credit hours of course work. During each semester of the first school year, students take three credits of supervised teaching experience at an assigned Catholic school in the southern United States and during the second semester, students take two credits of a distance learning seminar. In the second summer, students again take 10 or 11 credit hours of course work. During the second school year, students each semester once again participate in a three-credit supervised teaching experience in their assigned school and in a one-credit distance learning seminar that focuses on state standards and assessment methods. Throughout the two years, supervision is accomplished by measuring students against professional performance indicators while students build a teaching portfolio documenting their progress in developing as a teacher.

The master of education (M.Ed.) program is housed in the Institute for Educational Initiatives, which provides research leadership in education and fosters efforts in education that are informed by social science research. The only clients for this master’s program are students entering in the Alliance for Catholic Education. (The ACE program is described in the “Centers, Institutes, and Laboratories” section of this Bulletin.)

Students in this program work toward licensure, consistent with the standards in the state of Indiana, in each of the following areas: middle childhood (i.e., elementary education), early adolescence (middle school), adolescence and young adulthood (high school), English language arts, social studies, science, mathematics, and foreign languages. Like most teacher accreditation programs at the master’s level, content-area courses must be completed before entering the master’s program, which provides education course work only.

A total of 37 (39 for elementary) credit hours of course work and teaching experience are required, with an overall grade point of at least 3.0. Half of the course work will occur in two summer sessions, with 10 to 12 credits earned in each. The faculty who teach in the M.Ed. program are drawn from a variety of disciplines and colleges within and, in some cases, from outside the University.

The first summer includes practice teaching in South Bend-area elementary and secondary schools as well as nine or 10 credit hours of course work. During each semester of the first school year, students take three credits of supervised teaching experience at an assigned Catholic school in the southern United States and during the second semester, students take two credits of a distance learning seminar. In the second summer, students again take 10 or 11 credit hours of course work. During the second school year, students each semester once again participate in a three-credit supervised teaching experience in their assigned school and in a one-credit distance learning seminar that focuses on state standards and assessment methods. Throughout the two years, supervision is accomplished by measuring students against professional performance indicators while students build a teaching portfolio documenting their progress in developing as a teacher.
In addition to the credit-hour and GPA requirements, students must complete two years of service in teaching with supervised teaching grades of not less than 3.0. The teaching portfolio is evaluated by both University faculty and master teachers, who provide recommendations for continued development.

During the summer sessions, students live in community in Notre Dame residence halls, participating in presentations and programs aimed at stimulating their academic understanding of education, especially as it relates to community and spiritual development.

Admission Requirements

The M.Ed. program seeks to admit individuals who have the competence and commitment to be outstanding teachers and who are willing to serve for two years as teachers in cooperating Catholic schools. Competence for admission is assessed through evaluation of written essays, interviews, grade point average (at least a 3.0 in the major), standardized test scores, and letters of recommendation. Commitment to the community and spiritual ideals of the program is necessary.

Admission is a two-stage process. A selection committee composed of Notre Dame faculty, administrators, and staff assesses the candidates, identifying approximately 80 who will be asked to join the program. These 80 students will then be invited to apply to the Graduate School for admission. From this point on, the admissions process is identical to that of every other master’s program at the University.

Course Sequence

All ACE students are placed in one of three developmental level curricular tracks: elementary, middle school, or high school, depending on their ACE developmental level curricular tracks: elementary, middle school, or high school, depending on their ACE developmental level. These tracks are then placed in a content area: mathematics, science, social studies, English/language arts, or foreign language. The particular methods and content courses will depend on the developmental level track.

Additional course numbers are available for the Introduction to Teaching and the Practicum classes.

1. First Summer (11/13 credits)

All tracks:

60022. Introduction to Teaching (Elementary, Middle, High School)
60312. Practicum (Elementary, Middle, High School)
60040. Introduction to Computers in Education
60060. Teaching in Catholic Schools or 60070 Teaching Religion in Catholic Schools
63500. Integrative Seminar

Elementary: 60182. Teaching of Reading; 60132. Mathematics in Elementary Education I; 60102 Effective Elementary Classroom Teaching.

Middle school: 60204. Introduction to Middle School Teaching; 60605, 60625, 60645, 60665, 60685. Seminar in Content Area I.

High school: 60256. Introduction to High School Teaching; 60605, 60625, 60645, 60665, 60685. Seminar in Content Area I.

Elective: 60830 Folk Choir

2. First School Year: all tracks (8 credits)

65950. Supervised Teaching (two semesters)
65930. Clinical Seminar (one semester)
60410. Topics in Educational Psychology (second semester)

3. Second Summer (10/12 credits)

Elementary: 60312. Exceptionality in Childhood; 60452. Child Development and Moral Education; 60142. Language Arts in Elementary Education; 60162. Content Methods for Elementary Education; 63500. Integrative Seminar

Middle school: 60324. Exceptionality in Early Adolescence; 60455. Development and Moral Education in Adolescence; 60705, 60725, 60745, 60765, 60785. Seminar in Content Area II; 63500. Integrative Seminar

High school: 60336. Exceptionality in Adolescence; 60455. Development and Moral Education in Adolescence; 60705, 60725, 60745, 60765, 60785. Seminar in Content Area II; 63500. Integrative Seminar; 60840. Teaching Art across the Curriculum; 60860. Contemporary Educational Technology; or 60880. Coaching and Youth

4. Second School Year: all tracks (8 credits)

65950. Supervised Teaching (two semesters)
65930. Clinical Seminar (two semesters)
60715, 60735, 60755, 60775, 60795. Assessment in Content Area II, or 60172 Assessment in Elementary Education

Course Descriptions

Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

60020. Introduction to Teaching (0-0-0)

An introduction to the meaning and practice of contemporary teaching, including classroom organization and management, and to historical highlights in public and Catholic education.

60022. Introduction to Teaching - Elementary (1-1-0)

Corerequisite: EDU 60020

An introduction to elementary teachers to the meaning and practice of contemporary teaching, including classroom organization and management, and to historical highlights in public and Catholic education.

60024. Intro to Teaching - Middle Sch (1-1-0)

Corerequisite: EDU 60020

An introduction to middle school teachers to the meaning and practice of contemporary teaching, including classroom organization and management, and to historical highlights in public and Catholic education.

60026. Intro to Teaching -High School (1-1-0)

Corerequisite: DU 60020

An introduction for high school teachers to the meaning and practice of contemporary teaching, including classroom organization and management, and to historical highlights in public and Catholic education.

65032. Practicum - Elementary (2-1-1)

An intense practicum in the South Bend elementary area schools during the summer. The experience will include approximately 5-6 weeks of closely supervised teaching experience as well as weekly reflections on that experience. Extensive planning of instruction is required.

65034. Practicum - Middle School (2-1-1)

An intense practicum in the South Bend area middle schools during the summer. The experience will include approximately 5-6 weeks of closely supervised teaching experience as well as weekly reflections on that experience. Extensive planning of instruction is required.

65036. Practicum - High School (2-1-1)

An intense practicum in the South Bend area high schools during the summer. The experience will include approximately 5-6 weeks of closely supervised teaching experience as well as weekly reflections on that experience. Extensive planning of instruction is required.

60040. Introduction to Computers in Education (0-1-0)

Introduction to instructional computing via hands-on experience with productivity/instructional software. Introduction to social, moral and technological issues of educational computing through literature, lecture, and discussions.

60060. Teaching in Catholic Schools (1-1-0)

An overview of six core topics of Catholic teaching along with a discussion of their influence and impact on Catholic school culture and teaching.

60070. Teaching Religion in Catholic Schools (1-1-0)

An overview of six core topics of Catholic teaching along with initial planning with grade level master teachers to teach these topics in Catholic schools.

60102. Effective Elementary Classroom Teaching (2-4-0)
The development of knowledge, skills, and dispositions essential for elementary teachers: lesson and unit planning, yearly planning, cross-curricular planning, and effective teaching strategies in the K-6 classroom. Topics will also include grouping for instruction and differentiated instruction, motivation, effective use of learning centers, use of texts, student learning standards, and multiple resources.

601812. Teaching of Reading/Instruct
(3-3-0)
An exploration of the research and instructional strategies of reading instruction including emergent literacy, reading readiness, phonemic awareness, phonics, word recognition, vocabulary development, fluency, cultural literacy, and reading comprehension, as well as particular strategies for reading remediation. The second part of the course will enable students to conceptualize and construct effective unit and lesson plans.

60122. Elementary Language Arts Assessment
(1-10-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in the elementary Language Arts classroom. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

6032. Mathematics in Elementary Education I
(2-2-0)
The effective use of teaching materials and strategies in the elementary classroom (K-6) for the teaching of mathematics. Readings will be selected from the National Council of Teachers of Mathematics.

60142. Language Arts in Elementary Education
(2-8-0)
An integrated approach to literacy instruction designed to help children make sense of the world through literacy expression. The unit template for planning is used to provide structure and process for inclusion of all language arts elements including grammar, spelling, writing, phonics, literature, and speaking and listening skills. An introduction to children's literature, methods for determining quality literature, and the use of reference materials for selecting literature for specific purposes is included.

60162. Content Methods for Elementary Education
(2-2-0)
A program of reading which will enable participants to develop effective units of study which integrate reading, writing, mathematics, social studies and science. Readings will be selected from the publications of the major professional associations in elementary curriculum.

60172. Assessment in Elementary Education
(1-1-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in Elementary Education. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

60204. Introduction to Middle School Teaching
(3-3-0)
An introduction to the culture and dynamics of the middle school classroom. Central to the course is instructional planning that emphasizes unit planning based on goals derived from state standards and assessments which measure student progress in meeting these goals. Lesson planning based on unit goals focuses on an integrative survey of strategies and methods that lead to effective daily instruction.

60256. Introduction to High School Teaching
(3-3-0)
An introduction to the culture and dynamics of the high school classroom. Central to the course is instructional planning which emphasizes unit planning based on goals derived from state standards and assessments that measure student progress in meeting these goals. Lesson planning based on unit goals focuses on an integrative survey of strategies and methods that lead to effective daily instruction.

60312. Exceptionality in Childhood
(3-3-0)
A survey in exceptionality with emphasis on the elementary-aged child is followed by in-depth study of the common learning problems in the elementary grades, especially reading, writing and mathematics disability. Both teaching strategies and assessment are considered.

60324. Exceptionality Early Adolescence
(3-3-0)
A survey in exceptionality with emphasis on the middle grades child is followed by in-depth study of the common learning problems in the middle school, especially reading, writing and mathematics disability. Both teaching strategies and assessment are considered.

60336. Exceptionality in Adolescence
(3-3-0)
A survey in exceptionality with emphasis on the high school student is followed by in-depth study of the common learning problems in the high school, especially reading, writing and mathematics disability. Both teaching strategies and assessment are considered.

60410. Topics in Educational Psychology
(2-2-0)
Readings and reflections on topics in Educational Psychology relevant to the experiences of first year teachers: Intelligence and Assessment, Instruction and Learning, Motivation, and Effective Teaching.

60452. Child Development and Moral Education
(3-3-0)
A systematic treatment of the cognitive, social, biological, and personality development relating to education and an examination of the theoretical and research bases of moral development and their implications for the classroom, with an emphasis on childhood.

60455. Development and Moral Education in Adolescence
(3-3-0)
A systematic treatment of the cognitive, social, biological, and personality development relating to education and an examination of the theoretical and research bases of moral development and their implications for the classroom, with an emphasis on adolescence.

63500. Integrative Seminar
(1-1-0)
An integration of the professional, communal, and spiritual dimensions of the ACE program. Participants engage in active listening as well as interactive and collaborative learning exercises to integrate these pillars of ACE in their professional service to Catholic schools.

60605. English Language Arts Education I
(2-2-0)
The development of class experiences, activities and content specific methods for middle and high school classes, based on readings selected from the publications of the National Council of Teachers of English and current research and theory.

60625. Social Studies Education I
(2-2-0)
The development of class experiences, activities and content specific methods for middle and high school classes, based on readings selected from the publications of the National Council for the Social Studies and current research and theory.

60645. Foreign Language Education I
(2-2-0)
The development of class experiences, activities and content specific methods for middle and high school classes, based on readings selected from the publications of the American Council for the Study of Foreign Language and current research and theory.

60665. Mathematics Education I
(2-2-0)
The development of class experiences, activities and content specific methods for middle and high school classes, based on readings selected from the publications of the National Council of Teachers of Mathematics and current research and theory.

60685. Science Education I
(2-2-0)
The development of class experiences, activities and content specific methods for middle and high school classes, based on readings selected from the publications of the National Science Teachers Association and current research and theory.

60840. Teaching Art Across the Curriculum
(3-6-0)
Introduction to art and art activities that enhance and can be effectively integrated into a broad range of curricular areas for all age levels.
EDUCATION

60705. English Language Arts Education II
(3-3-0)
A review of class experiences, activities and content specific methods within the context of unit goals and assessments for middle and high school classes, based on readings selected from the publications of the National Council of Teachers of English and current research and theory.

60715. English Language Arts Assessment
(1-1-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in English/Language Arts. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

60725. Social Studies Education II
(3-3-0)
A review of class experiences, activities and content specific methods within the context of unit goals and assessments for middle and high school classes, based on readings selected from the publications of the National Council for the Social Studies and current research and theory.

60735. Social Studies Assessment
(1-1-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in Social Studies. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

60745. Foreign Language Education II
(3-3-0)
A review of class experiences, activities and content specific methods within the context of unit goals and assessments for middle and high school classes, based on readings selected from the publications of the National Council for the Study of Foreign Language and current research and theory.

60755. Foreign Language Assessment
(1-1-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in Foreign Language. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

60775. Mathematics Assessment
(1-1-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in Mathematics. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

60785. Science Education II
(3-3-0)
A review of class experiences, activities and content specific methods within the context of unit goals and assessments for middle and high school classes, based on readings selected from the publications of the National Science Teachers Association and current research and theory.

60795. Science Assessment
(1-1-0)
Readings on the theories for and practice in the strategies to construct traditional and performance assessments in Science. The ability to analyze the results in terms of stated unit goals, to reflect on the effectiveness of the unit planning, and to adjust future units to re-teach core knowledge and skills will be emphasized.

60830. Folk Choir
(1-1-0)
Work with the folk choir, which continues to build the repertoire for Catholic school use.

60860. Contemporary Educational Technology
(2-2-0)
Integrates computing skills and critical thinking strategies required to use modern technology for enhanced teaching and learning. Credit awarded in the spring semester, with registration required in a summer session and subsequent fall and spring semesters.

60880. Coaching and Youth
(1-1-0)
Readings and discussion on the social scientific research on coaching strategies that promote the social development of youth through sport; applications of research findings are emphasized.

65930. Clinical Seminar
(1-0-1)
The course focuses on the development of the teacher as a professional. Reflective analysis relative to best practices and current research is documented. Evidence is accumulated in the form of written guided reflections, which are placed in a growing professional portfolio.

65950. Supervised Teaching
(2-0-2)
The course focuses on classroom teaching. It includes the observation of classroom teaching, examination of instructional and planning materials, meetings with the ACE teacher, mentor teacher and building principal, and the collection of field notes and evaluations for formative and summative assessment.
73607. Grant Writing and Development
(1.5-1.5-0)
This course emphasizes professional development, public relations, grant writing techniques, and the creation of development plans. Topics include aligning the organization’s strengths with granting agencies’ priorities, techniques for writing clear and fundable proposals, community networking, identification and cultivation of benefactors, planned giving, and the development and execution of major campaigns.

73608. Board Relations and Management
(1.5-1-0-0)
This course focuses on the development, composition, role, and responsibilities of school boards. Topics include diocesan school boards, parish boards, Canon Law, the role of the bishop and pastor, and various possible models of governance for parish elementary school, regional, multi-parish schools, and diocesan and private high schools.

73609. Educational Law
(3-3-0)
An overview of various state, federal, and canonical legislation affecting Catholic schools with an emphasis on comparing and contrasting public and nonpublic school law. Participants will read and analyze legal cases, decisions rendered, and the legal reasoning behind decisions. Real and fictional cases will be discussed.

73633. Media Relations for Principals
(1-12-0)
A skills-based practicum focusing on public relations, school marketing, crisis communications, and media management. Participants will be videotaped in simulations of television interviews, news stories, and commercials for schools.

73634. Facilities Management for Catholic Schools
(1-16-0)
An overview of preventative maintenance for schools, including the relationship of maintenance to asset integrity, contract specifications, utilities management, personnel, and the use of professional vendors. Case studies and a school site visit will be included.

73635. History and Philosophy of Catholic Education in the USA
(1-8-0)
Catholic schools in the USA have historically offered a counter-cultural alternative to public school education. This course analyzes various historical episodes of that tendency with a view to helping participants arrive at their own historically grounded philosophy of education.

75610. Internship: Curriculum and Instruction
(3-3-0)
Proceeding from an overview of dominant curriculum theory and curriculum trends, this course will focus on providing the leadership necessary for school-wide curriculum evaluation and instructional improvement. Using a broad definition of curriculum, the course will review current research as it applies to concrete questions of practice in schools and classrooms. A field-based project with curriculum design and instructional improvement will be required of all participants.

75612. Internship: Supervision Staff
(3-3-0)
This course considers the importance and difficulty of motivating educators to seek lifelong personal improvement as reflective, professional practitioners. Strategies of adult motivation and techniques of adult behavioral change will be addressed. Current models of staff evaluation will be analyzed and compared, with a field-based component, giving course participants the opportunity to implement specific techniques and methods.

Peace Studies

The Program of Studies
The Joan B. Kroc Institute for International Peace Studies offers an interdisciplinary master’s degree in peace studies. Graduate work in peace studies at the Institute is international in character and designed to equip students with both theoretical understanding and practical skills.

The master’s program attracts highly qualified students from all continents and cultural regions of the world, with three-fourths of the students coming from outside the United States. In a selective process, the Institute accepts 15 - 20 students annually in its two-year master of arts program. The Institute particularly seeks students from war-torn areas or regions where violence could erupt, and actively seeks to ensure cultural, religious, and socioeconomic diversity among participants. Peace studies students engage in community building as they share their diverse perspectives on the problems of peace and justice facing the world. The program prepares students for careers in scholarly research, teaching, public service, religious leadership, political organizing, and social action.

The master’s degree program in peace studies is a rigorous academic program. All students enroll in a series of core (required) and elective courses, select a program theme, engage in a five to six month field experience, participate in the Master’s Colloquium on Effective Peacebuilding, and produce a substantive master’s project. Students indicate their interest in one of five academic themes at the time of application to the program and develop a specialization during their course of study. The Director of Academic Programs assigns the student to a faculty member who serves as a mentor and guide as the student progresses through the program. The Director of Academic Programs serves as co-advisor for all students, and other Kroc faculty and staff are available for guidance on specific issues.

Theme: Religion, Conflict and Peace examines the religious and ethical contexts of violence and nonviolence across a range of traditions with emphasis on “lived religion.” Dialogue among diverse faith communities and the role of religion in conflict transformation in peacebuilding are a particular thrust of this area of study. Cognate fields: comparative religion; philosophy; theology; history.

Theme: Political Economy of War, Peace and Sustainable Development examines the relationship between economy (interpreting economics in a broad sense to include political and sociological factors) and war and peace, discussing concepts, theories and empirical findings regarding causes, consequences, and conduct of armed conflict. Special attention is given to the political economy of development and the global economy. Possible topics include: poverty, the environment, development strategies and politics, foreign aid, globalization, economic stabilization and structural adjustment, civil wars, terrorism, economic sanctions, and economic reconstruction. Cognate fields: economics; political science; sociology.

Theme: Culture, War and Peace investigates the problems of ethnic, gender-related and communal violence, and looks at interpretations of war and peace in cross-cultural context. This focus area delves into the experience of individuals and communities in conflict and explores the methods of grassroots research, activism, and expression in survival, healing and peacebuilding. Cognate fields: anthropology; sociology; cultural and gender studies; the arts.

Theme: Conflict Analysis and Transformation attends to strategies, theories, and case studies of conflict transformation, resolution, and reconciliation. Nonviolent social movements as forces for peacebuilding are also considered as part of this focus area. Methods of mediation and negotiation at levels from individual to community to nation are studied. Cognate fields: political science; psychology; law; sociology.

Fax: (574) 631-6973
The Field Experience
A key component of the Kroc M.A. program is the five to six month field experience in which students integrate theories of peacebuilding with work in non-governmental organizations and other institutions concerned with conflict resolution, peace studies, economic development, human rights or justice. This is an opportunity for students to acquire comparative experience outside their home country. Only students who are unable to leave the United States because of visa or travel restrictions beyond their control are allowed to complete their field experience in the United States. Students work towards their master's project, bringing data and a fresh perspective back to the Institute when they return to campus for the final semester. In 2005, field sites locations included Jerusalem, Kampala (Uganda), Nairobi (Kenya), Cape Town (South Africa), Phnom Penh (Cambodia), Mindanao (Philippines), and Jakarta (Indonesia).

Master's Colloquium and Project
All students attend a Master's Colloquium on Effective Peacebuilding during the final semester. In this forum, theory and practice are brought together in critical discussion, and students from all five thematic areas engage in dialogue with each other and with Kroc faculty. Each student will produce an individual project stemming from his or her work during the field semester, which will serve as the final product of their master's degree work. These projects may take the form of academic papers or other formats as agreed upon by faculty advisors, seminar leaders, and the Director of Academic Programs. The master's project is the student's opportunity to use experiences and information from the program to make a unique contribution to peace studies and peacebuilding.

Requirements for Graduation
- Completion of the following core classes:
  - Global Politics and Peacebuilding
  - Culture & Religion in Peacebuilding
  - Political Economy of War and Peace
  - Conflict Transformation and Strategic Peacebuilding
- Master's Colloquium on Effective Peacebuilding
- Selection of a theme and completion of a minimum of two elective courses within that theme
- Completion of a practicum or field experience
- Demonstrated proficiency in English plus one other language
- Minimum of 42 graduate credit hours (12 - 15 courses plus the 6-credit field experience)
- A minimum grade point average of 3.0 on a 4.0 scale (a "B" average)
- Continuous enrollment in the Graduate School of the University of Notre Dame for the duration of the two-year program
- Demonstrated proficiency in English plus one other language
- Completion of a practicum or field experience
- Minimum of 42 graduate credit hours (12 - 15 courses plus the 6-credit field experience)
- A minimum grade point average of 3.0 on a 4.0 scale (a "B" average)
- Continuous enrollment in the Graduate School of the University of Notre Dame for the duration of the two-year program

Course Descriptions
The following list includes IPS courses offered on a regular basis. Many, although not all, are offered on an annual basis. In addition to the classes listed here, students may select courses cross-listed from other departments in completing the Peace Studies curriculum.

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

50604. Genocide, Witness, and Memory (3-3-0)
How are episodes of mass killing experiences survived and remembered? In this course we consider political, social and cultural trauma as expressed in memoir, documentary, fiction, and academic text. Witness as an ethical stance is examined; the role of memory in shaping morality is questioned. (Does “Never Again” actually work?) We also look at the perpetrators of genocidal killing: Who are they? What prompts their actions? Moreover, are any of us incapable of this kind of violence?

60102. Culture and Religion in Peacebuilding (3-3-0)
This core course in the graduate studies curriculum examines the religious and cultural contexts of war and peace. Drawing on readings from history, theology, anthropology, sociology, and literature, we examine the origins of violent conflict, communal and individual identities, conceptions of justice across religious traditions and cultures, and the roles of religion and culture in peacemaking. Humanistic as well as social scientific methods in peace studies research and writing are considered. (CORE)

60103. Political Economy of War and Peace (3-3-0)
Reviews key economic concepts and methods relevant to peace research, and examines the relation between political economy issues and war and peace. It examines the political economy of the causes of war, including the roles of arms races, poverty, inequality, ethnicity, natural resources, the environment, and globalization. It explores the economic consequences of war and military expenditures, including those on human development indicators and economic growth. Finally, it discusses the political economy of the prevention of conflict and of post-war reconstruction. For Kroc M.A. students; others by permission only. (CORE)

60104. Conflict Transformation and Strategic Peacebuilding (3-3-0)
This required course will introduce students to the key concepts related to conflict transformation and peacebuilding theory and practice as an integrated framework. The primary purposes are to familiarize students with approaches to promote constructive and strategic change processes in settings of deep-rooted conflict and provide them with opportunity to integrate the theory with practical aspects of designing and implementing those strategies on the ground. During class time, students will be exposed to case studies, simulations, inductive theory development, and elicitive approaches to conflict intervention. For Kroc M.A. students; others by permission only. Spring (CORE)
60201. International Law (3-3-0)
Introduces the international legal system and its lawmaking process. Begins by discussing the means by which state and non-state actors develop norms governing transnational conduct such as the sources of international law. Also includes a discussion of international legal personality including the concept of states and state sovereignty; the law of international obligations; jurisdiction; dispute settlement; and enforcement. A special section will be devoted to the relationship of international and municipal law in the United States and selected other countries. Intended for those students with no prior study in international law.

60202. Theories of International Relations (3-3-0)
This course provides a survey of major theoretical traditions and their applications in the study of international relations. The course explores recent changes in and debates on the key theoretical approaches; especially neoliberalism, liberal institutionalism, and structural theories. A main objective of the course is to clarify and assess various methodological commitments, ranging from empiricism to constructivism, that are built in these theoretical ideas and their consequences for the design and conduct of research. The course does not dwell upon the practice of international relations, but it makes an effort to link up theories and methods surveyed with the real world. This happens by tracing the long-term developments in security (war, peace, and deterrence) and economic (protectionism, free trade, and globalization) strategies by state and non-state actors. In this context, there will be a special focus on the international political and economic orders and their historical transitions. The students are expected to read carefully the assigned material, participate actively in the class discussions, write a publishable book review, develop a research design, and complete a final examination.

60203. International Organizations (3-3-0)
International organizations (IOs) and institutions are pervasive in international relations. IOs can facilitate cooperation as well as institutionalize competition and conflict, including warfare. This course will examine the origins, roles, and prospects for IOs, with an emphasis on understanding change in intergovernmental organizations such as the UN system and regional organizations. Each student will present a briefing on a selected IO and write a research paper on some aspect of IO politics.

60204. International Migration and Human Rights: Research and Policy (3-3-0)
This seminar focuses on research reports on U.S. immigration from Mexico and critiques research methods and basic differences in the interpretation of data. A review of the literature is discussed with an emphasis on policymaking on immigration in the U.S. and Mexico. A comparison is made between the debate concerning migrants’ human rights in various parts of the world. A critique of scientific theories focusing on the relationship between international migrations and human rights is also included.

60205. International Migration: Mexico/US II (2-2-0)
A three-week course which refers to a review of basic questions on international migration, with emphasis on immigration to the United States and the methods through which these questions have been adequately or inadequately answered. The numbers, impact, nature, structure, process and human experience will be discussed in terms of the research methods commonly used to approach them. Spring.

60206. Regional Human Rights Protection (3-3-0)
Studies the regional systems that currently exist to protect human rights in the Americas, Europe and Africa. Compares the rights guaranteed and the procedures established to enforce them. Addresses selected topics such as the death penalty, impunity and disappearances. Emphasizes the mechanisms for bringing a case and the remedies available. Includes discussions of a potential Asian human rights protection system. Prerequisite: International Law (LAW 74401)

60207. Universal Protection of Human Rights (3-3-0)
A foundational course in international human rights law. Focuses primarily on examples from United Nations-related human rights regimes, and examines: the historical and jurisprudential bases of international human rights law, the normative frameworks of the principal universal human rights treaties and of customary international law and the institutional mechanisms for interpreting, monitoring compliance with and enforcing those norms. Prerequisite: There are no prerequisites for this course, although it is recommended that students take International Law (LAW 653).

60208. International Humanitarian Law (3-3-0)
Examines the body of norms applicable to armed conflict, and its relationship with other aspects of international law, particularly international human rights law, international criminal law and international organizations. Discusses international-law standards for the legitimate use of force and the legal regulation of warfare. Gives students a sense of the contents of the Geneva Conventions of 1949 and Additional Protocols of 1977, the Hague Conventions of 1899 and 1907, several thematic conventions such as the recent Land Mines Convention, and customary international-law norms binding on the parties to war. Emphasizes the notion of limitations on weapons and tactics of war, of the principle of distinction between combatants and civilians, and on the rule of proportionality. Discusses special rules designed for civil wars, and the regimen to be applied in protracted civil strife, “failed states” and international peace-keeping operations. Covers responsibility for the violation of those norms, in terms of both states and individuals, stressing the unavailability of the defense of obedience to orders and the doctrine of command responsibility. Explores specific examples of implementation of the laws of war, including international war-crimes tribunals and a future International Criminal Court.

60209. International Economic Law (3-3-0)
Our attention will be focused on the scope and meaning of the work of the UN Counter-Terrorism Committee (CTC) which was established by the Security Council Resolution 1373 on September 28, 2001. Working under the direction of the project research director, each participant will engage in an intense investigation of one of the numerous topics or queries relevant to the study.

60210. U.N. and Counterterrorism (3-3-0)
This course begins by considering factors that impede cooperation among self-interested states co-existing in the anarchic international system, even when they share common interests such as liberalizing trade or avoiding wars. We then survey a variety of strategies that states and other actors may employ to improve the likelihood of international cooperation, and investigate the ways in which international institutions may lead to greater international cooperation than in their absence. Students will be asked to connect theoretical arguments about cooperation dilemmas in international life to substantive issues of their own choosing in a major research project.

60211. International Environmental Law (3-3-0)
Studies the body of international legal norms that regulate behavior in the field of environmental protection and sustainable development at national, regional and global levels. Reviews the established regimes as well as new and emerging principles and approaches. Addresses the place and role of international environmental law in the system of international law. Focuses on major processes, techniques and dynamics of international environmental lawmaking and enforcement, and evaluates the system of international environmental governance. Considers the role of environmental security in the system of international security.

60212. International Criminal Court (3-3-0)
By reading ‘a great book’ each week, this course examines in detail theories about international relations focusing on security studies and American foreign policy. The books cover a number of topics, and their theoretical focus ranges from structural, state-level, policy process, to decision-making. We may also review the history of American foreign policy, and assess prominent policy problems currently facing decision-makers. We will work extensively on formulating, critiquing, and testing theories, with a
60301. Modern Religion, Conflict, and Violence (3-3-0)
This course will focus on modern religion and its capacity for inspiring both deadly conflict and non-violent social change. The first part of the course examines the politically charged religious resurgence around the world—origins, ideologies, social organization, leadership, political impact, cultural influence. Movements to be considered include Sunni Islamist parties and movements in Egypt, Algeria, Sudan, Jordan, Palestine, Pakistan, and Indonesia; Shi’ite movements in Iran and Lebanon; Jewish extremists in Israel and New York; Hindu nationalists in India; Sikh radicals in the Punjab; Buddhist nationalists in southeast Asia; Protestant fundamentalism and the Christian Right in the United States; Roman Catholic traditions in the United States and Europe. The second part of the course compares modern religious communities, traditions and groups that pursue social change through conflict resolution, nonviolence, human rights activism, and the like. Cases include The Community of Sant’Egidio, Socially Engaged Buddhists, The World Conference on Religion and Peace.

60302. Christian Attitudes Toward War, Peace, and Revolution (3-3-0)
This course is a survey of Christian understandings of war, peace, and revolution from the time of Christ and the early church to the present. Emphasis will be placed on the way in which theological convictions in the areas of Christology, pneumatology, eschatology, ecclesiology, and so on, have shaped Christian teaching on the nature of peace and the permisibility of using violence. Cases will be used to examine certain aspects of just war theory, with the purpose of addressing the question: is just war theory applicable to warfare in the era of the modern nation state? Other issues will be taken up as well, including the military chaplaincy, ROTC in Catholic colleges and universities, the role of Christian churches in mobilizing for war, and the use of violence in revolution. Texts will include: Reinhold Niebuhr, Moral Man and Immoral Society; John Howard Yoder, Christian Attitudes Toward War, Peace, and Revolution: A Companion to Bainton; U.S. Catholic Bishops, The Challenge of Peace; and others. Undergraduates should receive permission to take this course.

60304. Ethics and International Relations (3-3-0)
Ethics and International Relations explores diverse international issues through normative political philosophy and case studies. It is suitable for students of political theory and international relations alike. Topics include the justice of war, the problem of killing innocents, terrorism, nuclear weapons, intervention, human rights and pluralism, distributive justice, the status of borders, globalization and development, and women’s rights. These will be explored through competing moral frameworks, including duty-based and consequentialist frameworks.

60401. Globalization and Multinational Corporate Responsibility (1.5-1.5-0)
Globalization is galloping across our world at a dramatic pace - enhancing global productivity but leaving many people behind in the process. As the key integrating institutions, multinational enterprises deserve much of the credit for the productivity, but are also inextricably involved in the associated social destruction. The objective of this course is to enhance the awareness and understanding of future business executives, governmental officials, or managers of nongovernmental organizations about the evolving role of the multinational enterprise, and how that role should be managed. The course is offered jointly with the graduate Peace Institute students enrolled in IIPS 611.

60402. Problems in Political Economy (3-3-0)
This seminar course on globalization is concerned specifically with policy problems such as poverty, unemployment, quality of worklife, energy and the environment, corporate power, military power and discrimination. Alternative policy prescriptions and methods of analysis are discussed. Orthodox, conservative and liberal views are studied and later compared with nontraditional approaches to the analysis of global capitalism and its institutional modifications. Special topics include: Capital Mobility, Foreign Direct Investment, International Trade, Free-Trade Agreements, The IMF, Outsourcing to Developing Countries, Immigration, and Labor Solidarity.

60403. Economics for Non-Economists (3-3-0)
This introduction to economics for non-economists covers four main topics: the existence of different economic theories and their history; the concepts of supply and demand and the neoclassical theory of value; other theories and approaches to economics; and, finally, the contemporary use of economic analysis on specific topics and themes (from ethics and global inequality to war and third world development).

60404. International Political Economy (3-3-0)
This seminar explores the interaction between politics and economics in the international system, with an emphasis on the theoretical development of the subfield of international political economy. We will investigate the balance between cooperation and conflict, the effect of international institutions on economic relations, and the mutual impact of domestic and international politics. Substantive topics include the international trade system, the international monetary and financial systems, the role of the global economy in economic development, and the impact of economic globalization on domestic societies. Throughout the course, we will consider how well models developed in other fields of political science or economics can be applied to international political economy. We also will attempt to identify the “state of the art” in the study of international political economy. This course serves as a basis for future research in the fields of international political economy, international relations, and comparative political economy. It also prepares students for the international political economy component of the international relations comprehensive exam. Students are expected to participate in all class sessions, to write several short papers, and to write and present a research design at the end of the course.

60405. Political Economy of Postindustrial Societies (3-3-0)
This course investigates the nexus between politics and economics in the postindustrial societies. After a brief discussion of the theoretical principles of economic liberalism, the course focuses on the impact of economic actors and conditions on politics and the political and economic consequences of the organization of the world economy along free market principles. It concludes by scrutinizing the relationship between domestic politics and the project for deeper economic integration in the case of the European Union.

60406. Development Economics (3-3-0)
A general introduction to the field of development economics, with concentration initially on questions of a macrostrategic nature. The final topic is macro-analysis of country development programs, examining country studies, and macro models.

60502. Gender and Violence (3-3-0)
This upper-level anthropology course focuses on the problematic intersection between gender and violence. The question of male aggression and female passivity is explored, with attention to female fighters and male practitioners of non-violence. Women in circumstances of war, trauma and healing are studied for the insight such study may provide for peacebuilding initiatives. Gender in the military, gender and violence ritual cross-culturally, and rape as a sociopolitical phenomenon are among the other topics considered. Primary source readings complement intensive class discussion; substantial writing and speaking buttress academic skills.

60503. Protests, Riots, and Movements (3-3-0)
This course is concerned with how people act together to pursue collective political aims via extra-institutional forms of behavior: When and why do people go outside the conventional political structure to address social issues important to them? During the course, we examine political behavior ranging from the relatively mild (like a letter writing campaign) to the severe (like rioting, looting, and killing). We also discuss aspects of collective behavior that are less political in nature (like panics and fads). Some of the social movements we discuss include the civil rights movement, the women’s movement, the anti-war movement, the gay and lesbian movement, pro-life and pro-choice movements, and the environmental movement (among many others). In the end, we try to explain how grievances, resources, the
political environment, repression, individuals, decision making, and movement tactics all contribute to the success and failure of protest movements, their impact on social change, and the future of activism.

60504. Multicultural Psychology (3-3-0)
This course provides students with theory, knowledge, and skills in diversity issues pertaining to clinical and counseling psychology. (Spring)

60505. Democratic Theory & Multiculturalism (3-3-0)
We live increasingly in a multicultural world. But is this trend compatible with democracy? In recent decades, democratic theory has been a battle field between “liberals” and “communitarians.” In both camps, multiculturalism is problematic. Liberals give primacy to autonomous individuals, outside cultural contexts. Communitarians stress community values, neglecting the multiplicity of cultural and religious values. The seminar explores the possibility of a multicultural democracy, beyond liberal detachment and communitarian parochialism. Starting from the liberal-communitarian debate, the seminar proceeds to a discussion of multicultural democracy both on the domestic level and on that of “cosmopolitan democracy.” Some of the texts used are Charles Taylor’s Multiculturalism, Bhikhu Parekh’s Rethinking Multiculturalism, Iris M. Young’s Inclusion and Democracy, Seyla Benhabib’s Democracy and Difference, and David Held and Archibugi’s Cosmopolitan Democracy.

60601. International Conflict Resolution (3-3-0)
This course explores the theoretical and applied literature related to the causes of and responses to international conflict, using case studies and current events to complement the readings. In addition, the course will introduce students to selected conflict analysis and conflict resolution skills and techniques. Students should be prepared to read extensively and participate in class discussions and activities. Course requirements include a research paper and a series of short written assignments.

60602. Politics of Reconciliation (3-3-0)
As countries all across the world have made transitions away from war and authoritarianism over the past couple of decades, reconciliation has emerged as a major approach towards dealing with past injustices. Philosophers, theologians, political scientists and other scholars have embraced the concept, too. But it also remains highly controversial, criticized for betraying victims, inappropriately imposing religion in political orders, imposing forgiveness on victims, and for creating divisions. What is reconciliation? What are the warrants for it? What is its relevance for politics? What criticisms of it are valid? This course will examine reconciliation through political philosophy, theology, and comparative case analysis.

60603. Ethnic Conflict and Peace Processes (3-3-0)
This team-taught course focuses on the ethnic conflicts that are found across the world today, and considers the special issues of peacebuilding where ethnicity is implicated. A review of theories of ethnicity is followed by in-depth consideration of the following cases: Kashmir, Punjab, Cyprus, Northern Ireland, Israel/Palestine, South Africa, Sri Lanka, and Spain (Basques). Students work in teams to develop plans toward peacebuilding in these and other areas of their choosing. What works and what doesn’t work where racial, religious, linguistic, and other “primordial” affiliations entangle with political conflict? We review successes and failures and propose possible new approaches.

60604. Dispute Resolution (3-3-0)
Surveys the growing alternative dispute resolution field, giving attention to ADR theory and its application in particular settings. Through a modest amount of role-play and skills training, explores the nature of particular dispute resolution processes such as negotiation, mediation and arbitration. Individual projects focus on ADR in specific, real-life settings.

63401. Globalization & Multinational Corporate Responsibility (1-5-1-5-0)
This research seminar is an option for students who have taken Part I of Globalization & Multinational Corporate Responsibility to continue the discussion during the second half of the semester and complete a full 3-credit hour course.

66301. Directed Readings (0-0-0)
Directed readings on an approved subject within the theme of Culture and Religion in Peacebuilding under the direction of a faculty member.

66401. Directed Readings (0-0-0)
Directed readings on an approved subject within the theme of Political Economy of War, Peace and Sustainable Development under the direction of a faculty member.

66501. Directed Readings (0-0-0)
Directed readings on an approved subject within the theme of Culture, War and Peace under the direction of a faculty member.

66601. Directed Readings (0-0-0)
Directed readings on an approved subject under the direction of a faculty member.

75102. Field Experience II (3-0-0)
Practicum and research at an approved field site, under the direction of a faculty member.

78101. Thesis Direction (0-0-0)
Research and writing on an approved subject under the direction of a faculty member.

78102. Nonresident Thesis Research (1-0-0)
Required of nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

The following directed reading topics are also available, under the direction of a faculty member.

76201. Global Politics and International Norms
76301. Religion, Conflict and Peace
76401. Political Economy of War, Peace and Sustainable Development
76501. Culture, War and Peace
76601. Conflict Analysis and Transformation

Faculty
Scott Appleby, John M. Regan, Jr, Director, Professor of History (Ph.D. Univ. of Chicago, 1985)
David Cottright, Research Fellow (Ph.D. Union Graduate School, 1975)
Hal Culbertson, Associate Director for Communications and Finance (J.D. University of Illinois, 1991)
John Darby, Professor of Comparative Ethnic Studies (Ph.D. University of Ulster, 1985)
Jaleh Dashti-Gibson, Director of Academic Programs (Ph.D. University of Notre Dame, 1998)
Larissa Fast, Visiting Assistant Professor of Sociology (Ph.D. George Mason University, 2002)
Robert C. Johansen, Senior Fellow, Professor of Political Science (Ph.D. Columbia University, 1968)
Asher Kaufman, Assistant Professor of History (Ph.D. Brandeis University, 2000)
John Paul Lederach, Director of International Peacebuilding (Ph.D. University of Colorado at Boulder, 1988)
George A. Lopez, Senior Fellow, Professor of Political Science (Ph.D. Syracuse University, 1975)
Martha Merritt, Associate Director for International Programs and Faculty Development (D.Phil. Oxford University, 1994)
Rashied Omar, PRCP Program Coordinator (Ph.D. in progress, University of Cape Town)
Daniel Philpott, Associate Professor of Political Science (Ph.D. Harvard University, 1996)
Gerard Powers, Director of Policy Studies (J.D., University of Notre Dame, 1986)
Jackie Smith, Associate Professor of Sociology (Ph.D., University of Notre Dame, 1995)

**Fellows**
Asma Asfaruddin, Associate Professor of Classics
Viva Barrus, Associate Professor of Management
Rev. Michael J. Baxter, C.S.C., Assistant Professor of Theology
Mary Beckman, Associate Director for Academic Affairs and Research, Center for Social Concerns
Doris L. Bergen, Associate Professor of History
Rev. David B. Burrell, C.S.C., Rev. Theodore M. Hesburgh, C.S.C., Professor of Philosophy and Theology
Paulo G. Carozza, Associate Professor of Law
Paul M. Cobb, Associate Professor of History
Kathleen Collins, Assistant Professor of Political Science
Barbara Connolly, Assistant Professor of Political Science
E. Mark Cummings, Notre Dame Chair in Psychology
Fred R. Dallmayr, Packey J. Dee Professor of Political Science, Professor of Philosophy
Alan K. Dowry, Professor Emeritus of Political Science
Amitava Dutt, Professor of Economics
Barbara J. Fick, Associate Professor of Law
Michael J. Francis, Professor Emeritus of Political Science
Agustín Fuentes, Associate Professor of Anthropology
Rev. Patrick D. Gaffney, C.S.C., Associate Professor of Anthropology
Teresa Ghilarducci, Director of the Higgins Labor Research Center, Associate Professor of Economics
Denis A. Goulet, William and Dorothy O'Neill Professor Emeritus in Education for Justice and Professor Emeritus of Economics
Frances Hagopian, Michael Grace III Associate Professor of Latin American Studies
Lionel M. Jensen, Department Chair and Associate Professor of East Asian Languages and Literatures and Concurrent Associate Professor of History
Ruthann K. Johansen, Concurrent Associate Professor of American Studies and Visiting Associate Professor of Liberal Studies
Rev. Paul V. Kollman, C.S.C., Assistant Professor of Theology
Keir A. Liebert, Assistant Professor of Political Science
Rev. William M. Lies, C.S.C., Executive Director of the Center for Social Concerns
Daniel A. Lindley III, Assistant Professor of Political Science
Cynthia Mahmood, Associate Professor of Anthropology
Scott P. Mainwaring, Eugene and Helen Conley Professor of Political Science, Director of the Kellogg Institute for International Studies
A. James McAdams, William M. Scholl Professor of International Affairs, Director of the Nanoik Institute for European Studies
Daniel J. Myers, Chair and Associate Professor of Sociology
Emily L. Osborn, Assistant Professor of History
Catherine Perry, Associate Professor of French and Francophone Studies
Teresa Phelp, Professor of Law
Richard B. Pierce, Carl E. Koch Associate Professor of History, Chair of Africana Studies
Donald B. Poppe-Davis, Associate Vice President and Associate Dean of Graduate Studies, Director of the McNair Scholars Program, and Professor of Psychology
Gabriel Said Reynolds, Assistant Professor of Theology
Maura Ryan, Associate Professor of Theology
Kristin Shrader-Frechette, O'Neill Professor of Philosophy and Concurrent Professor of Biological Sciences
Nainush Singh, Assistant Professor of Political Science
James P. Sterba, Professor of Philosophy
Lee A. Tavis, C. B. Smith Professor Emeritus of Business Administration (Finance)
A. Peter Waldbe, Professor of Political Science
Jennifer Warlick, Chair and Associate Professor of Economics and Policy Studies
Andrew J. Weigert, Professor of Sociology
Todd D. Whitmore, Associate Professor of Theology
Charles Wilber, Professor Emeritus of Economics
Rev. Oliver F. Williams, C.S.C., Academic Director of the Center for Ethics and Religious Values in Business and Associate Professor of Management
Martin Wolfson, Associate Professor of Economics

**The Program of Studies**

The primary aim of the graduate program in political science is to train qualified candidates for research and teaching. The department offers M.A. and Ph.D. degrees. It has four major subfields:

1. American politics;
2. comparative politics;
3. international relations;
4. political theory.

The department has faculty with a wide range of interests. Its particular strengths include political theory; democratic institutions; ethnicity, religion, and nationalism; political economy; international humanitarian issues and peace studies; Latin American politics; regime change; political participation; politics and literature; and constitutional studies. The highly selective student body is drawn from a large pool of applicants from many countries: in 2005 we had 200 applicants for 9 openings. The department’s community of graduate students is marked by a diversity of interests, backgrounds, and nationalities. The small size of the graduate program facilitates close interaction between faculty and students and allows us to offer financial assistance to virtually all students we admit.

In recent years, 80 percent of Notre Dame Ph.D. recipients in political science have been appointed to full-time teaching and research positions. Recent appointments of Notre Dame Ph.D.s in political science include tenure-track positions at leading universities (e.g., the University of Texas-Austin, the University of Pennsylvania, University of Pittsburgh, Florida State, Purdue, Florida International University, Oklahoma, Louisiana State University, Peppermill, SUNY-Stony Brook, University of Massachusetts-Boston, University of Wisconsin-Madison, Western Michigan University, California State University-Sacramento) and at renowned liberal arts colleges (e.g., Bowdoin, Connecticut College, Bates, Whitman). Students in the department have fared well in winning prestigious fellowships and prizes, including the Edwin Corwin Award of the American Political Science Association for the best dissertation in public law and the Leo Strauss Award for the best dissertation in political theory.

The faculty is strong, and it is growing and changing. The department currently has 42 faculty members, including scholars of national and international recognition.
M.A. students must complete a minimum of 30 hours in course credits and must pass a comprehensive written examination in their major field. A minimum of 12 hours of course work is required in the major field, and a minimum of nine in a second field. However, M.A.-only students are not eligible for funding, and we rarely offer admission to those seeking only the M.A.

**Doctoral Program**

Ph.D. students must complete the following requirements:

1. A total of 60 credit hours of courses, including at least 48 credit hours of substantive courses;
2. At least 12 hours of courses and comprehensive written exams in two of the department’s four subfields (American politics, comparative politics, international relations, and political theory);
3. At least nine hours of course credits in a student-defined area of specialization;
4. A proseminar on scope and methods and a quantitative methods course;
5. A reading exam in one foreign language or two additional courses in quantitative methods;
6. A master’s paper;
7. An oral examination, based on the student’s dissertation proposal;

Students in the department are advised to consult the listing of courses in other departments, particularly in sociology, economics, history, philosophy, and theology. Courses in other departments selected in consultation with the student’s advisor are counted toward a degree.

**Research Institutes**

Department faculty and graduate students also work in several major research institutions at Notre Dame. The Kellogg Institute for International Studies promotes advanced study, teaching, and research in comparative social science. Kellogg scholars focus on democratization and development in Latin America and on related research on all world regions. The Kroc Institute for International Peace Studies conducts research, teaching, and public education on war prevention and global security, the promotion of human rights and justice, and international dimensions of social, economic, and environmental justice. (Applicants interested in an M.A.-only program in peace studies should apply directly to the Kroc Institute.) The Nanovic Institute for European Studies facilitates lectures, conferences, and research opportunities on a variety of issues relating to contemporary European politics and society. Its programs are designed to appeal to graduate students working in any area of the social sciences or humanities, including comparative European politics, the relations among European states and developments in the EU, and European political theory and history. The Program in American Democracy supports and facilitates research, teaching, and other activities that explore and assess the quality of democracy in the United States. The program currently sponsors a working paper series, a speaker series, occasional conferences, and other activities.

These and other research initiatives of the department faculty aid graduate students through lively scholarly communities; the department offers numerous opportunities for research support, dissertation-year fellowships, and other resources.

**Course Descriptions**

The following list includes courses offered during the last three academic years by current faculty members. Some courses are offered on an annual basis, and many others are offered less frequently. Because this list is restricted to the past three academic years, it is not exhaustive. Students should also consult the list of courses in other departments.

Each course listing includes:
- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

60001. Field Seminar in American Politics (3-3-0)

This is the “core” seminar in American politics, designed to provide a survey of the most important literature in the field. The seminar is intended to present the student with a broad, eclectic view of the current state of the literature in American politics. The readings attempt to provide a sampling of classic and recent theory and substance in the hope of suggesting where scholars stand, and where they seem to be headed, with respect to some major topics in the American subfield.

60004. American Subnational Politics and Government (3-3-0)

This seminar provides a careful and extensive overview of the scholarly issues and literature concerning American “subnational,” especially State, politics. The assumption and approach taken is that state and local governments in the U.S. are important in and of themselves, but they are also critical in how they shape national politics and governance through their own political and policy patterns and in their implementation of “national” domestic policies. Three bodies of literature will be the focus of analysis: US federalism and intergovernmental relations, State Governance, Politics and Public policy, and Urban/Local Politics (with the most extensive attention given to the second of the three).

60009. Elections and Public Policy (3-3-0)

This course examines the relationship between the electoral choices of voters and the public policy regimes that the governments so chosen pursue. The central focus is thus on whether and how different types of electoral outcomes (which parties win elections and in what institutional contexts) actually determine the policies that governments pursue.

60010. Federalism and the Constitution (3-3-0)

Beginning in 1995, the Rehnquist Court has sought to restore some of the immunities from federal power that the states enjoyed prior to the late 1930s. Cases decided under the Commerce Clause and the 10th and 11th Amendments reflect the view that “federalism” is a fundamental feature of the American constitutional order, dear to the framers and integral to the values of “limited government” and “liberty.” Critics of this “states’ rights revolution” contend that the framers’ first priority was a strong national government and that advances in personal and civil liberties have historically come at the expense of states’ rights. This course asks what American “federalism,” as a normative concept, is, whether it is a genuine constitutional principle, and if so for what textual, historical, or moral reasons. The first part of the course will review Supreme Court cases. The second part will review what statesmen and political philosophers have said about the subject. In addition to around 30 cases, readings will include selections from The Federalist Papers and writings by Tocqueville, Calhoun, Lincoln, Martin Diamond, Herbert Storing, Charles Taylor, and others. Grades will be based on an objective exam covering the cases, oral reports in class, and a term paper. This is a graduate course, but senior undergraduates may register with the instructor’s consent.

60011. International Migration and Human Rights (3-3-0)

This course focuses on research reports on U.S. immigration from Mexico and critiques research methods and basic differences in the interpretation of data. A review of the literature is discussed with an emphasis on policymaking on immigration in the U.S. and Mexico. A comparison is made between the debate concerning migrants’ human rights in various parts of the world. A critique of scientific theories focusing on the relationship between international migrations and human rights is also included.

60012. Legislative Studies (3-3-0)

This course will examine both the organizational choices within legislatures and the outside influence on legislator behavior. Topics to be covered include problems of collective choice, the party versus preferences debate, legislative elections, roll call behavior, legislator home style, and the historical development of legislative institutions. Although particular attention will be paid to the U.S. Congress, comparative legislatures will also be considered.

60014. Political Participation (3-3-0)

Many observers wonder why more Americans don’t vote. Others wonder why anybody votes at all. This course cuts a swath through a large and methodologically diverse literature that examines these and other questions relating to political engagement. Readings include both some golden oldies and hits right off the political science charts. Some will be normative, others empirical. Students will grapple with questions like how a nation’s political institutions facilitate political participation (or not), and whether
it matters that some kinds of people are more likely to participate in politics than others. The focus will be on the United States, but perspectives from other nations will be offered as well. Given the topic of the course, it should come as no surprise that the instructor asks for full participation in class discussions as well as a paper. Like the assigned readings, this can be empirical or normative or even a little of both.

60016. The Presidency: Institution and Performance (3-3-0)
This course develops a two-part perspective on the U.S. presidency, examining its institutional development while assessing the leadership behavior of incumbents within it. Readings will survey conceptual strategies for understanding institutional development and leadership performance. Students will write brief, critical essays on readings that will focus class discussion. Additionally, students will prepare research papers using a case or database to assess the utility of one conceptual approach for understanding presidential leadership.

60017. Protests, Riots, and Movements (3-3-0)
This course is concerned with how people act together to pursue collective political aims via extra-institutional forms of behavior: When and why do people go outside the conventional political structure to address social issues important to them? During the course, we examine political behavior ranging from the relatively mild (like a letter writing campaign) to the severe (like rioting, looting, and killing). We also discuss aspects of collective behavior that are less political in nature (like panics and fads). Some of the social movements we discuss include the civil rights movement, the women’s movement, the anti-war movement, the gay and lesbian movement, pro-life and pro-choice movements, and the environmental movement (among many others). In the end, we try to explain how grievances, resources, the political environment, repression, individuals, decision making, and movement tactics all contribute to the success and failure of protest movements, their impact on social change, and the future of activism.

60018. Religion and the Constitution (3-3-0)
Does constitutionalism in America presuppose a supreme being? Does the maintenance of constitutional institutions depend on the prevalence of religious or specifically Christian faith and morals? To what extent can or should constitutional government accommodate religious beliefs, institutions and practices? Is constitutionalism in America on a collision course with the religious commitments of a substantial portion of the American people? This seminar will explore these and related issues. Readings include classical writers like Locke and Jefferson, contemporary scholars and social critics like Stanley Fish and Richard John Neuhaus, and leading decisions of the U.S. Supreme Court. Courses are open to graduate students and law students. Space may be available to a few seniors who have instructors’ permission. Course grade will be based on a term paper, class participation and assigned oral reports.

60019. Representation (3-3-0)
This course will investigate the translation of public preferences into public policies. Among the topics that will be discussed are public opinion and public policy, measuring public opinion, political participation and representation, political parties and representation, representation in legislatures, demographic disparities in representation, the courts as representative institutions, and the presidency and representation.

60022. Race/Ethnicity and American Politics (3-3-0)
This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What role do American political institutions—the Congress, presidency, judiciary, state and local governments, etc.—play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society?

60200. American Foreign Policy (3-3-0)
This course examines in detail theories about international relations and American foreign policy ranging from structural, state-level, policy process, to decision-making theories. We will also review the history of American foreign policy, and assess several prominent policy problems currently facing decision-makers. We will work extensively on formulating, critiquing, and testing theories, with a focus on case-study methodology. A major research paper is required. Students will also lead class and present their research papers. Qualified undergraduates may take the course with permission. Highly motivated juniors anticipating writing a senior honors thesis will likely find this course useful.

60203. Great Books in Foreign Policy and Security (3-3-0)
By reading ‘great books’ each week, this course examines in detail theories about international relations focusing on security studies and American foreign policy. The books cover a number of topics, and their theoretical focus ranges from structural, state-level, policy process, to decision-making. We may also review the history of American foreign policy, and assess prominent policy problems currently facing decision-makers. We will work extensively on formulating, critiquing, and testing theories, with a focus on case-study methodology. A major research paper is required. Students will also lead class and present their research papers. Qualified undergraduates may take the course with permission. Highly motivated juniors anticipating writing a senior honors thesis will likely find this course useful.

60204. International Organization (3-3-0)
International organizations (IOs) and institutions are pervasive in international relations. IOs can facilitate cooperation as well as institutionalize competition and conflict, including warfare. This course will examine the origins, roles, and prospects for IOs, with an emphasis on understanding change in intergovernmental organizations such as the UN system and regional organizations. Each student will present a briefing on a selected IO and write a research paper on some aspect of IO politics.

60205. International Political Economy (3-3-0)
This seminar explores the interaction between politics and economics in the international system, with an emphasis on the theoretical development of the subfield of international political economy. We will investigate the balance between cooperation and conflict, the effect of international institutions on economic relations, and the mutual impact of domestic and international politics. Substantive topics include the international trade system, the international monetary and financial systems, the role of the global economy in economic development, and the impact of economic globalization on domestic societies. Throughout the course, we will consider how well models developed in other fields of political science or economics can be applied to international political economy. We also will attempt to identify the “state of the art” in the study of international political economy. This course serves as a basis for future research in the fields of international political economy, international relations, and comparative political economy. It also prepares students for the international political economy component of the international relations comprehensive exam. Students are expected to participate in all class sessions, to write several short papers, and to write and present a research design at the end of the course.
POLITICAL SCIENCE

60206. International Conflict Resolution
(3-3-0)
This course focuses on the causes and resolution of violent conflict at the international level, surveying both the theoretical and applied literatures. There will be a heavy reading load for this course. Students will be required to write 2 papers and actively participate in class discussions.

60207. Issues in Arab-Israel Conflict
(3-3-0)
This course tracks the Arab-Israeli conflict from its origins in the late 19th century to the present, making special use of primary sources that express differing perspectives in their full intensity. Current issues of the conflict will be analyzed in depth with the help of current periodical and electronic sources. Classes will include a mixture of lectures, video, and role-playing. There will be a midterm exam and a short policy paper.

60208. International Cooperation
(3-3-0)
This course begins by considering factors that impede cooperation among self-interested states co-existing in the anarchic international system, even when they share common interests such as liberalizing trade or avoiding wars. We then survey a variety of strategies that states and other actors may employ to improve the likelihood of international cooperation, and investigate the ways in which international institutions may lead to greater international cooperation than in their absence. Students will be asked to connect theoretical arguments about cooperation dilemmas in international life to substantive issues of their own choosing in a major research project.

60211. Peace and World Order Studies II
(3-3-0)
This required course examines major global issues and multilateral responses to them in the areas of human rights and war prevention. The course, which emphasizes peace research methods and findings, includes study of the theory and practice of peacebuilding in its broadest sense of nurturing social integration and promoting justice as the work of peace. Discussion of human rights issues will include the Universal Declaration and Covenants; the rights of women and children; efforts to hold individuals accountable to prohibitions of war crimes and crimes against humanity; and questions of identity as they affect sovereignty and compliance with human rights norms. Discussion of war/peace issues will include debates among peace researchers, feminists, and political realists on causes of violence and conditions of peace; arms control and disarmament; intergroup tension reduction; and efforts by international commissions, the United Nations, and nongovernmental organizations to implement humanitarian norms of peace and human rights and gradually replace the rule of force with the rule of law in international relations.

60213. Global Politics and Peacebuilding
(3-3-0)
This required course examines major global issues and multilateral responses to them in the areas of human rights and war prevention. The course, which emphasizes peace research methods and findings, includes study of the theory and practice of peacebuilding in its broadest sense of nurturing social integration and promoting justice as the work of peace. Discussion of human rights issues will include the Universal Declaration and Covenants; the rights of women and children; efforts to hold individuals accountable to prohibitions of war crimes and crimes against humanity; and questions of identity as they affect sovereignty and compliance with human rights norms. Discussion of war/peace issues will include debates among peace researchers, feminists, and political realists on causes of violence and conditions of peace; arms control and disarmament; intergroup tension reduction; and efforts by international commissions, the United Nations, and nongovernmental organizations to implement humanitarian norms of peace and human rights and gradually replace the rule of force with the rule of law in international relations.

60214. Politics of Reconciliation
(3-3-0)
As countries all across the world have made transitions away from war and authoritarianism over the past couple of decades, reconciliation has emerged as a major approach towards dealing with past injustices. Philosophers, theologians, political scientists and other scholars have embraced the concept, too. But it also remains highly controversial, criticized for betraying victims, inappropriately imposing religion in political orders, imposing forgiveness on victims, and for creating divisions. What is reconciliation? What are the warrants for it? What is its relevance for politics? What criticisms of it are valid? This course will examine reconciliation through political philosophy, theology, and comparative case analysis.

60217. Theories of International Relations
(3-3-0)
This course provides a survey of major theoretical traditions and their applications in the study of international relations. The course explores recent changes in and debates on the key theoretical approaches; especially neorealism, liberal institutionalism, and structural theories. A main objective of the course is to clarify and assess various methodological commitments, ranging from empiricism to constructivism, that are built in these theoretical ideas and their consequences for the design and conduct of research. The course does not dwell upon the practice of international relations, but it makes an effort to link up theories and methods surveyed with the real world. This happens by tracing the long-term developments in security (war, peace, and deterrence) and economic (protectionism, free trade, and globalization) strategies by state and non-state actors. In this context, there will be a special focus on the international political and economic orders and their historical transitions. The students are expected to read carefully the assigned material, participate actively in the class discussions, write a publishable book review, develop a research design, and complete a final examination.

60220. U.N. and Counterterrorism
(3-3-0)
Our attention will be focused on the scope and meaning of the work of the UN Counter-Terrorism Committee (CTC) which was established by the Security Council Resolution 1373 on September 28, 2001. Working under the direction of the project research director, each participant will engage in an intense investigation of one of the numerous topics or queries relevant to the study.

60400. Army and Politics
(3-3-0)
This course examines the role of the armed forces in politics. The purpose of this course is not just to cover the material traditionally associated with civil-military relations, but also to consider new ways in which the military is important to the study of politics. We will cover a range of topics including coups d’etat, military rule, transitions to democracy, theories of civilian control, the role of the military in state formation, the effects of the cultural gap between civilians and the military, and the role of the military in state failure. Cases will be drawn from both the developed and developing worlds, with special attention paid to examples from the United States, Latin America and Africa. A variety of different approaches to the military will be employed, including sociological, institutional, and political economy perspectives.

60404. Comparative Constitutional Law
(3-3-0)
Studies the laws of the United States and Germany, the world’s paradigmatic examples of diffuse and concentrated judicial review. Germany’s federal Constitutional Court like the German Constitution (i.e., the Basic Law) has replaced the U.S. Supreme Court and the American constitution as the leading model constitutional governance around the globe. Contrasts Germany’s jurisprudence with the decisions and opinions of the U.S. Supreme Court. Examines the decisions in depth of the institutional features of the two tribunals, especially the controversial areas of modern governance, namely, abduction, the death penalty, freedom of speech (defamation, hate speech and pornography), church-state relations and free exercise of religion, party finance and political representation, race and sex discrimination, and selected socio-economic rights.
anyone wishing an individualized tutorial on the nants of democracy. I will offer in-class workshops research, generating theory, and testing hypotheses; 5 small exercises to give you practice in critiquing In addition to reading and discussing selected works democracy—which are the twin topics of this course. and timely theoretical question of what causes de- break down of democracy. [Note: This course does One of the central tasks in the study of politics has long been to explain the birth, survival, and breakdown of democracy. [Note: This course does not cover the consequences of democracy.] Over the years, scholars have offered dozens of hypotheses, focusing on culture, institutions, leadership, religion, ethnic cleavages, diffusion, dependency, social equality, economic development, or various combinations of several of the above. Clearly the problem has not been the difficulty of dreaming up explanations, but the difficulty of demonstrating which one or ones are correct. In their efforts to support some of the possible explanations, political scientists and sociologists have employed nearly every research method imaginable, and in recent years an escalation of methodological sophistication has taken some research on democratization to the cutting edge of comparative politics. A roughly chronological selection of this literature can therefore serve as a springboard for discussions about both practical questions of research design and methods, and the fascinating and timely theoretical question of what causes democracy—which are the twin topics of this course. In addition to reading and discussing selected works on democratization, you are required to (1) carry out 5 small exercises to give you practice in critiquing research, generating theory, and testing hypotheses; and (2) perform original research culminating in a 15-25-page paper on some question of the determinants of democracy. I will offer in-class workshops on the data analysis techniques that you will need to do each exercise, and will also meet privately with anyone wishing an individualized tutorial on the technique.
The seminar has the purpose of explaining labor conflict on the basis of the analysis of labor process and worker consciousness. On the basis of the analysis of work organization, working conditions, types of labor organization, ideologies of the labor movement, the seminar will discuss specific types of labor action by miners and industrial workers on the basis of cases from the Latin American region.

60600. Aristotle
(3-3-0)
An introduction to Aristotle's “human philosophy” (ta anthropina philosophia) by reading his Nicomen Ethics and Politics. Aim: to obtain a critical understanding of one of the founders and masters of political theory whose work is still relevant today. The seminar will study his theory of excellence in personal and political practice as well as of the method used in developing the theory. The course will be conducted in seminar style: participants will be expected to take turns presenting short, tightly argued introductions to key passages with a view to focusing discussion on the principle interpretive and theoretical questions posed by the particular text under discussion. Each seminar participant is also expected to write a critical research paper adjudicating a disagreement in the relevant scholarly literature (usually two articles) on some issue in Aristotle's ethical-political theory.

60601. Cicero and the Romans
(3-3-0)
This course offers the opportunity to study major issues in political theory, moral philosophy, and jurisprudence as they appear in the writings of Cicero and in the teachings of the philosophical schools of ancient Rome. Lucretius is also read. Topics considered include the relation of practice and theory, the virtues and expediency, the basis of right and law, and the natures of republican and mixed constitutions. Above all the course provides an opportunity for reading and discussing some of Cicero's most significant writings. Cicero's skepticism and his metaphysical and theological views come to attention in certain of his writings, Cicero, a leading statesman of the late Roman Republic, endeavored to mediate between the work of Greek theorists and Roman practice; in time, his writings became among the most important sources of ancient moral and political thought for the Christian tradition. His acknowledged influence on key American founders was much greater than that of Plato or Aristotle.

60603. Deliberative Democracy
(3-3-0)
Voting and discussion are two essential aspects of democracy. Voting is a mathematical operation and lends itself easily to formalization; thus, the economic theories of democracy prominent in the discipline of political studies during the later 20th Century concentrated exclusively on voting, the aggregation of individuals' preferences. The economic theories tend to find that democracy is a poor substitute for the market, and urge that democracy be minimized. Until the 1990s, political studies neglected the deliberative aspect of democracy, the transformation of individuals' preferences in discussion. Scholars seeking a richer descriptive and normative account of democracy were inspired initially by Habermas's theory of communicative action to offer new deliberative theories of democracy. The course will survey the field of deliberative democracy, from a friendly but skeptical perspective. Readings will include selections from Habermas, Rawls (and especially his students Joshua Cohen), Jon Elster, James Bohman, Bernard Manin, Carlos Nino, Henry Richardson, John Dryzek, Iris Marion Young, James Goodin, Nicholas Rescher, Paul Weithman, and others; and the few critical publications on the subject. We will systematically consider some of the major issues within the deliberative conception of democracy: the derivation of modern liberal rights; the clash between the fact of pluralism and the ideal of consensus agreement; whether the content of deliberation is rational argumentation or a wider range of communication; and the confused or sentimental character of some celebrations of the deliberative ideal. Finally, we will consider emerging work on institutional design intended to further deliberation (Fishkin's deliberative opinion polling, deliberation day, and more), and on empirical investigations of deliberative process.

60604. Democratic Theory and Multiculturalism
(3-3-0)
We live increasingly in a multicultural world. But is this trend compatible with democracy? In recent decades, democratic theory has been a battlefield between "liberals" and "communitarians." In both camps, multiculturalism is problematic. Liberals give primacy to autonomous individuals, outside cultural contexts. Communitarians stress community values, neglecting the multiplicity of cultural and religious values. The seminar explores the possibility of a multicultural democracy, beyond liberal detachment and communitarian parochialism. Starting from the liberal-communitarian debate, the seminar proceeds to a discussion of multicultural democracy both on the domestic level and on that of "cosmopolitan democracy." Some of the texts used are Charles Taylor's Multiculturalism, Bhikhu Parekh's Rethinking Multiculturalism, Iris M. Young's Inclusion and Democracy, Seyla Benhabib's Democracy and Difference, and David Held and Archibog's Cosmopolitan Democracy.

60606. Federalist/Anti-Federalist
(3-3-0)
This seminar will study the most important texts in the government debate over the Constitution in 1787-88. The focus will not be historical, however, but on the debate as a conflict of two political sciences, or of two versions of democratic theory. To that end, we will begin the course by looking at some current examples of democratic theory to set up some categories for discussing this earlier debate. We will also compare the institutional analysis of The Federalists and the Anti-Federalists some of the main conclusions of current political science.

60607. Gadamer and Charles Taylor
(3-3-0)
Given steadily closer contacts between societies and cultures today, the issues of understanding and interpretation acquire crucial importance. The seminar examines the work of two leading thinkers in the field of interpretive theory: Hans-Georg Gadamer and Charles Taylor. While Gadamer is recognized as the preeminent philosopher of “hermeneutics”, Taylor has underlined the role of understanding/interpretation both in the history of political thought and in the practice of the social and human sciences. The seminar will focus on selected writings of the two thinkers (including Gadamer's Truth and Method and Taylor's Philosophical Papers). Students are expected to write a research paper on a topic related to the seminar's theme.

60611. Heidegger and Praxis
(3-3-0)
In recent years there has been much debate concerning Heidegger's politics. Although important, the controversy has often had the effect of impeding access to Heidegger's philosophy and its implications. One of the larger issues often obscured is this: What is the relation between philosophy and politics, between theory and praxis? How can philosophy and praxis enter into a relationship which is mutually enriching while preserving their respective integrity? The seminar explores Heidegger's philosophy with an accent on his contributions to "practical philosophy" (including ethics and politics). Following a close reading of some of Heidegger's key texts - from (parts of) Being and Time to the Letter of Humanism and On the Way to Language - the seminar turns to some assessments of the "practical" implications of his thought in our time of globalization, technological dominance, and civilizational conflict.

60612. Hume's Practical Philosophy
(3-3-0)
Hume is not only one of the most revolutionary theoretical philosophers; in his essays he deals with many moral, economical and political questions and defends a peculiar form of liberalism. In the course, we will read the "Treatise of Human Nature" - the Inquiry concerning the Principles of Morals - and his various essays on political issues. A particular accent of the course is to probe into the connections between Hume's epistemology and anthropology and his concrete political views.

60613. Kant
(3-3-0)
The purpose of the seminar is to become familiar with Kant's practical philosophy and particularly with its implications for political philosophy and the philosophy of history. We will start with Kant's Grundwerk and the Critique of Practical Reason, which lay the foundation of his enterprise, continue with Kant's most materially important works Meta-physics of ethics and Anthropology and then deal with the smaller works on the philosophy of history and the relation between theory and practice.
60616. Nature and Modern Democracy
(3-3-0)
From 1951 to 1953, the University of Chicago Press published three sets of the Walgreen Lectures dealing with the intellectual basis of various 20th-century challenges to democracy. These three books—Yves Simon’s Philosophy of Democratic Government, Leo Strauss’s Natural Right and History, and Eric Voegelin’s The New Science of Politics—have functioned to outline three highly influential and overlapping approaches to defining the crises of modern democracy and to restoring viable democratic foundations. This seminar-style course focuses on the reading and discussion of these books. Special attention is given to the concepts of history, science, modernity, and democracy itself as they appear in the three works and in related writings.

60617. Nature, Grace, and History
(3-3-0)
This seminar will explore several interrelated themes concerning the relationship between religious belief and politics. It will critically compare several authors on a variety of questions including the status of politics, its natural versus conventional status, whether religion is understood as natural theology or divine particular providence, whether reason and revelation can conflict, toleration of other religions, and what claims are made about the role of revealed religion in establishing political obligation. Readings will include parts of Plato “Laws,” Augustine’s “City of God,” Aquinas’s “Summa Theologica,” Maistre’s “Guide of the Perplexed,” Alfarabi’s “Plato’s Laws,” John Calvin’s “Institutes of the Christian Religion,” and selections from Martin Luther. Requirements will include two five-page seminar papers, four one-page commentaries, and a 20-page term paper due at the end of the semester.

60618. Plato’s Laws
(3-3-0)
In this seminar we will explore the significance of the differences in the philosophical positions, political teachings, and pedagogical styles Plato presents in Plato’s writings (especially the Theaetetus) and the Eleatic Stranger (in the Sophist and Statesman). Students will be asked to write a major interpretive study as well as a critique of a recent critical work.

60621. Rousseau
(3-3-0)
In this graduate political theory seminar, we will read three of Jean-Jacques Rousseau’s works that he composed and published almost simultaneously—Julie (1761), Emile (1762), and On the Social Contract (1762)—and ask whether or not they can be understood as substantively interrelated works of political theory. Students will write a 25-page research paper on Rousseau, a five-page book review of a major work of Rousseau’s scholarship, and give an in-class presentation based on the book review.

(3-3-0)
The seminar reads one or more works by a major social contract theorist. In recent years the seminar has treated one of the following: Hobbes, Locke, Rousseau, and Rawls. The aim is to achieve a critical understanding of the theorist’s teaching on the relationships of individual, social, and political life. Participants are expected to take turns presenting short, tightly argued introductions to key passages with a view to focusing discussion on the principle interpretive and theoretical questions posed by the particular text under discussion. Each seminar participant is also expected to write a critical research paper adjudicating a disagreement in the relevant scholarly literature (usually two articles) on some issue.

60623. Socrates
(3-3-0)
Who was Socrates, and what effect did he have on later history and thought? According to Cicero, Socrates was the first political philosopher; according to Nietzsche, he was a logical monster, a pessimist disguised as an optimist; according to Kierkegaard, he was a moral teacher, second only to Jesus. We will examine several of the Platonic dialogues leading up to Socrates’ trial and death in an attempt to discover which of these or other later interpretations is correct.

60624. Theories of Law
(3-3-0)
What is law? What constitutes a just law? Is there any universally valid, moral foundation for law: human rights, natural law, a categorical imperative, etc.? Or is law purely ‘positive,’ a product of the will of those possessing political power, its justice merely a matter of following the established procedures? These questions constitute the core of this seminar. We will focus on the contemporary debates on these issues among legal theorists, in particular H.L.A. Hart (The Concept of Law) and John Finnis (Natural Law and Natural Rights), preparing to understand them better through careful study of Thomas Aquinas’s writings on law and justice. There will be additional short readings from early modern theorists and American jurists as well.

60625. Theories of Modernity
(3-3-0)
“Modernity” today is a contested concept, embroiled in multiple and often conflicting interpretations. For some, modernity is the highway to social progress, the advancement of knowledge, and human liberation. For others, modernity is an aberration, a deviation from the path charted in ancient and medieval times—an aberration manifest in the “crisis of modernity.” Still others view modernity as defunct, but salvageable, or else as exhausted and obsolete (to be replaced by postmodernity). In our age or globalization, modernity also plays a crucial role in debates about Western colonialism and hegemony. The seminar seeks to chart a course through these debates. Beginning with a survey of some social science literature on modernity and modernization, the seminar turns to Jurgen Habermas’s defense of modernity (as an “unfinished project”) and to Charles Taylor’s qualified defense. Discussion then shifts to critical accounts of modernity, from Strauss, Voegelin, and MacIntyre to Adorno and Derrida. Some attention will also be given to non-Western critiques of “Western” modernity. Some texts for the seminar are: Jurgen Habermas, The Philosophical Discourse of Modernity; M. Passerin d’Entrevoles and Seyla Benhabib, Habermas And The Unfinished Project Of Modernity; Charles Taylor, A Catholic Modernity?; Anthony Giddens, The Consequences Of Modernity; and Gary Gutting, Pragmatic Liberalism And The Critique Of Modernity. Selective reference will also be made to Agnes Heller, A Theory Of Modernity; Eric Voegelin, Modernity Without Restraint; Alasdair MacIntyre, After Virtue; Hans Blumenberg, The Legitimacy Of The Modern Age; and Scott Lasch, Another Modernity.

60810. Introduction to Quantitative Methods
(3-3-0)
This course is an introduction to the use of statistical methodology in the social sciences; it is not a course on statistics. The class emphasizes the role of statistics as a tool, rather than an end in itself. While we learn a variety of statistical techniques, the focus is upon the logic of these techniques rather than their mathematical intricacies. There will be a series of exercises and exams, coupled with a major project in which students will be required to gather and analyze data on an empirical problem of their choice.

60820. Advanced Quantitative Methods
(3-3-0)
Prerequisites: POLS 60810 Quantitative methods are often used to understand the behavior and interactions of individuals, governments, and nations. This course is designed to provide students with an understanding of the quantitative tools that are useful for doing quantitative political research. We will begin by reviewing the basics of statistical inference and the linear regression model, with a thorough discussion of the problems that arise in regression analysis and the solutions to those problems. The bulk of the course will be devoted to the following topics: Extensions to the basic regression model: simultaneous equations and time-series/cross-sectional models; maximum-likelihood techniques for modeling categorical dependent variables: logit/probit, ordered logit/probit, multinomial logit/probit, and count models; models for dealing with sample selection bias: tobit and Heckman models; techniques for modeling time-series data. Throughout, we will focus on understanding the theoretical underpinnings of the model and developing and evaluating applications of the models to substantive problems in political science. Students will be asked to do data-analysis exercises, to evaluate published research relying on quantitative techniques, and to do a research project on a topic of their own choosing.
60830. Qualitative Research Methods (3-3-0)
This course seeks to expose students to current trends related to the use of qualitative methods in political science. It explores both the similarities and differences between ethnographic research (or “Small-N” studies) and research based on statistical analyses. It also examines the myriad ways in which qualitative techniques like process-tracing, comparative case studies, content analysis, discourse analysis, and archival research can be successfully wedded to both statistical and formal approaches within one research design.

60860. Designing Research Projects: Practical Problems and Theoretical Issues (3-3-0)
The course is intended to familiarize students with practical problems and options as well as some underlying theoretical issues-encountered by social scientists in the course of qualitative or field research. Themes covered include consideration of the relationship between broad interpretive categories and specific empirical observations as well as the delineation of a research problem. Research strategies discussed include comparative historical work, historical case studies, observation, survey research, and qualitative interviewing. Students are asked to formulate a research proposal and to carry out practical exercises involving the use of several research strategies.

60870. Grant Writing for Social Sciences (3-3-0)
This course will provide an overview of the grant writing process in the social sciences focusing on the deadlines and regulations of the funding institutions.

60880. Game Theory, Politics and Institutional Analysis (3-3-0)
This course will focus on game theory as employed in empirical analyses of politics and institutions. It will cover some fundamental concepts of game theory: basic elements of games; several equilibrium concepts and different types of games. Selected applications include: explanations of political party competition, legislative decision making, the maintenance of democracy and constitutionalism, interethic cooperation and conflict, differences in social norms, transitions from socialist to market economies, the political economy of reforms and the economics of sovereign debt.

63800. Proseminar (3-3-0)
This is a required course for all first-year graduate students in the Department of Political Science. It is what is commonly called a “scope and methods” course; that is, a course designed to survey the great variety of themes and approaches in political science and to guide you through the fundamental debates about what political science is or should be. This course is also about democracy because the best way to teach about methods is to apply them to an interesting topic, and democracy is a topic of central interest to almost all of us these days. There is abundant literature that demonstrates the relevance of our course themes to democracy. Therefore, in the process of learning about the scope and methods of political science, this course will also familiarize you with some key ideas about what democracy is, what it could be, how it is changing, what causes it, and how we measure it.

66090. Directed Readings (3-3-0)
Reading and research on specialized topics that are immediately relevant to the student’s interests and not routinely covered in the regular curriculum. Letter grade given.

66093. Directed Readings (0-0-0)
Reading and research on specialized topics that are immediately relevant to the student’s interests and not routinely covered in the regular curriculum. Satisfactory/Unsatisfactory grade given.

67950. Examination Preparation (0-0-0)
Preparation for comprehensive examination.

78599. Thesis Direction (0-0-0)
Research and writing on an approved subject under the direction of a faculty member for resident graduate students.

78600. Nonresident Thesis Research (1-0-0)
Required of nonresident graduate students who are completing their theses in absentia and who wish to retain their degree status.

98699. Research and Dissertation (0-0-0)
Independent research and writing on an approved subject under the direction of the director of graduate studies for resident graduate students.

98700. Nonresident Dissertation Research (1-0-0)
Independent research and writing on an approved subject under the direction of the director of graduate studies for non-resident graduate students.

Faculty
Peri E. Arnold, Professor and Director of the Hesburgh Program in Public Service, B.A., Roosevelt Univ., 1964; M.A., Univ. of Chicago, 1967; Ph.D., ibid., 1972. (1971)

Sotirion A. Barber, Professor, B.A., Univ. of Illinois, 1964; M.A., Univ. of Chicago, 1966; Ph.D., ibid., 1973. (1986)

Michael J. Francis, Professor Emeritus, Director of the Latin America Area Studies Program, Professor, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies, B.A., Paris, 1990; Ph.D., Univ. of Virginia, 1963. (1966)

Walter J. Niegoski, Professor in the Program of Liberal Studies and Concurrent Professor of Political Science. A.B., Georgetown Univ., 1960; M.A., Univ. of Chicago, 1962; Ph.D., ibid., 1966. (1964)

David Nickerson, Assistant Professor. B.A., Williams College, 1997; Ph.D., Yale, 2005. (2005)

Catherine Zuckert, the Nancy Reeves Drexel Professor of Political Science. B.A., Cornell Univ., 1964; M.A., Univ. of Chicago, 1967; Ph.D., ibid., 1970. (1998)

The counseling program faculty represent a variety of research interests. Several faculty members are interested in social, social-cognitive, and cultural issues in mental and physical health. One area of research focuses on social-cognitive factors influencing perceptions of discrimination and stigmatized status, and the relationship of perceived social inequity to psychological health, social action engagement, and perceived social networks. Another area of research concerns the effects of concealment of stigma and the general processes and results of secret keeping. The effects of concealment are studied with regard to its effects on mental and physical health. Also, there is a program of research on multicultural psychology, counseling, and education. This research includes cultural and racial identity development, cultural competency training, multicultural supervision, acculturation, and issues of mental health for persons of color.

Program faculty also conduct research in the areas of marital discord, coping with chronic and terminal illness, and the adequacy of traditional research methods. In the marital area research activity focuses on marital discord and depression. Research on chronic illness has focused on coping with cancer from the perspective of self-regulation and self-efficacy theories and on the coping efficacy of caregivers. Finally, research is being conducted into the adequacy of traditional research practices in psychology, with a focus on the development and testing of alternative research procedures.

### III. Developmental

Doctoral candidates in the developmental program study development of individuals, families, and how the two interrelate. A life-span perspective is emphasized for both the individual (infancy to old age) and the family (formation to dissolution). Typical as well as atypical development, normative transitions, and the impact of nonnormative events are examined. The methodology of developmental research is stressed, and effort is made to generate knowledge and theory that have potential for application to social issues related to the development of individuals across the life span. Areas of specialization emphasize theoretical frameworks that view the individual from a systems perspective, methodology to assess family interaction and patterns of change, and intervention techniques to facilitate human development. The emphasis is on developing substantive knowledge bases necessary for careers in research and scholarship, in teaching, and in intervention. Concentrations in developmental psychology vary according to the specific interests of students and fit into three categories: cognitive development, socioemotional development, and developmental psychopathology.

**Cognitive Development**

This area stresses research in various specialty areas in cognition, including memory and cognitive changes during childhood, cognitive styles, and metacognition. Also included in this area is an opportunity to interface with our developing emphasis in educational psychology and our cognitive program. Developmental research emanating from the cognitive program focuses on the effects of age on the neural architecture supporting executive control and prospective memory.

**Socioemotional Development**

Research in this area of developmental psychology focuses on social and emotional development in infancy, early childhood, adolescence, and later life. Particular areas of emphasis are attachment, marital conflict and children, parenting behaviors, friendships, and social support. The interface between personal characteristics (such as personality, gender, depressive or other symptomatology, or temperament) and contextual factors (such as family environment, marital conflict, or parental adjustment to the teen's transition into adolescence) is highlighted. Faculty research, using behavioral genetic methodologies, also assesses genetic and environmental influences on individual differences in many of these attributes.

**Developmental Psychopathology**

Researchers in this area focus on dysfunctional development in families and individuals across the life span, including evaluating children for behavioral and emotional disorders, mental retardation, autism and learning disabilities. Research on topics such as the impact of marital conflict on children's emotions; depressive or other symptomatology in parents and/or children, child neglect; important transitions during the teen years; and the causes of developmental delays in the children of adolescent mothers is underway. Results are sometimes used to formulate and evaluate intervention programs for remediating dysfunctional behavior, including programs for presentation of marital discord. Of related interest is the identification of not only the risks and vulnerabilities associated with development, but the protective mechanisms that promote more optimal outcomes as well.

### IV. Quantitative

Doctoral candidates in the quantitative program receive advanced training in statistical methods and quantitative models applicable to psychology. The quantitative area emphasizes a wide range of topics, including traditional analysis of variance and regression, categorical data analysis, structural equation modeling, dynamical systems modeling, resampling methods, mixture modeling, and item response theory. Quantitative students will typically apply these methods to a topic in a substantive area of psychology, such as cognitive, counseling, or developmental. The extent of the substantive training above and beyond the quantitative training will depend on the interests of the individual student.

The quantitative program faculty train students to have expertise in a variety of analytical tools and to advance methodology through novel research on statistical applications and creative use of existing techniques.
60100. Quantitative Methods in Psychology I (3-3-0)
Prerequisite: Elementary Statistics or its equivalent.
All first-year psychology graduate students at Notre Dame are required to take a two-semester statistics sequence. The first semester begins with an introduction to descriptive statistics, probability theory, and statistical inference. Well-known one- and two-sample tests will be presented. In addition, the course introduces students to regression analysis for analyzing the dependence of a continuous variable onto one or more other variables. Emphasis is given to a sufficient specification of the regression model by including polynomial interaction terms in the regression functions and to the evaluation of the regression model by means of model comparison and residual analysis. Students enrolled in 60100 must also enroll in the lab section 61100. (Fall)

60101. Quantitative Methods in Psychology II (3-3-0)
The second semester of the required sequence focuses on experimental design and analysis of variance as a method for investigating mean differences among groups, whether or not the groups are formed experimentally. The course begins by developing principles for assessing the validity of various types of experimental and non-experimental approaches for investigating psychological phenomena. This semester continues the model comparison theme developed in the first semester by showing how questions of mean differences can be conceptualized in terms of various statistical models. Special emphasis is placed on repeated measures designs, including the multivariate approach to data analysis. Students enrolled in 60101 must also enroll in the lab section 61101. (Spring)

60105. Exploratory and Graphical Data Analysis (3-3-0)
The process by which psychological knowledge advances involves a cycle of theory development, experimental design and hypothesis testing. But after the hypothesis test either does or doesn’t reject a null hypothesis, where does the idea for the next experiment come from? Exploratory data analysis completes this research cycle by helping to form and change new theories. After the planned hypothesis testing for an experiment has finished, exploratory data analysis can look for patterns in these data that may have been missed by the original hypothesis tests. A second use of exploratory data analysis is in diagnostics for hypothesis tests. There are many reasons why a hypothesis test might fail. There are even times when a hypothesis test will reject the null for an unexpected reason. By becoming familiar with data through exploratory methods, the informed researcher can understand what went wrong (or what went right for the wrong reason). This class is recommended for advanced students who are interested in getting the most from their data.

63110. Quantitative Minor (3-3-0)
This course is focused on methods and techniques for research in quantitative psychology. It is expected that a student in this class is planning to become actively involved in quantitative research as a supplement to their main substantive research goals. The goal of the class is to prepare the student to successfully complete a Quantitative Minor by: Reviewing the categories of methodological articles; Reading a variety of classic quantitative articles to give a sense of the scope of the field; Dissecting how a project leading to a methodological article is conceived, planned and performed; Introducing tools of use to the performance of a quantitative project. Introducing tools of use in writing a methodological article; Helping the student to conceive a project and get partnered with a faculty sponsor; And providing editorial advice during the write-up of the project and preparation of the presentation for Quantitative Studies Group.

60121. Psychological Measurement (3-3-0)
Prerequisite: PSY 60100. This course introduces concepts from classical test theory, generalizability theory, and item response theory. Students review the foundations of test instruments construction from these three perspectives in creating self-report, standardized, and observation/interview measures. The course also highlights issues of equality across groups, assessing change versus measurement error, criterion-referenced tests, and clinical versus statistical prediction. (Every other spring)

60122. Measurement and Scaling (3-3-0)
This course studies methods for constructing scales for the measurement of psychological attributes. Subject-centered, stimulus-centered, and response approaches are considered.

60125. Multivariate Analysis (3-3-0)
This course is focused on methods and techniques for analyzing multivariate data. Emphasize includes both conceptual and computational aspects of the most commonly used analytic tools when one has multiple measures on the same experimental units. Derivations and advanced mathematical and statistical concepts will not be featured parts of the course but students will be expected to master the rationale behind the methods that will be covered to the extent that they can generalize the applications to novel problems and contexts. This course hopes to avoid the extremes of “cookbook analyses” on one hand and theorems and proofs on the other to provide generalizable working knowledge of multivariate statistics. The initial part of the course is committed to the essential operations of matrix algebra, a key language of multivariate analysis. Subsequently, a close look will be taken at the nature of linear combinations of variables. The remainder of the course will feature the application of techniques including Principal Components Analysis, Exploratory Factor Analysis, Canonical Correlation, Logistic Regression, Linear Discriminant Analysis, and Multivariate Regression.

60130. Structural Equation Models (3-3-0)
The course provides an introduction to structural equation modeling. Participants are assumed to be familiar with basic statistics, the linear regression model, and multivariate analysis. Some background in matrix algebra is helpful but not necessary. The course aims at showing the flexibility of the general structural equation model, and covers path analysis, exploratory and confirmatory factor models, multi-group analysis, and longitudinal models. The emphasis is on translating conceptual hypotheses into structural equation models. The course aims at showing how to specify models using matrix algebra in order to provide the link between model specification and model estimation.

60135. Introduction to Categorical Data Analysis (3-3-0)
Categorical response variables are frequently encountered in the social sciences. Categorical data analysis is discussed using generalized linear modeling as a theoretical framework. The course starts with a brief review of the linear regression model, and an introduction to the generalized linear model. The different models for categorical data covered in this course include logit and probit models for binary data, log-linear models for contingency tables, models for ordered and unordered categorical responses with more than 2 categories, and simple models used in event history analysis (i.e. survival analysis). Throughout the course, theoretical lectures are complemented with illustrations of data analyses using Splus.

60142. Computational Statistics (3-3-0)
The objective is to develop skills in using computational intensive methods for research. This includes: (1) the ability to recognize situations where traditional statistical procedures such as the F-test in ANOVA or regression may not provide accurate or correct conclusions; (2) understanding of the value of the computational intensive methods such as bootstrap and jackknife; (3) being aware of limitations of different methods; (4) being able to use a program language to make your own “software”. The topics covered are: Introduction (simulation and statistical inference); Bootstrap to standard errors and confidence interval (mean, regression, correlation); Estimating bias and bias-correction; Jackknife; Prediction error and cross-validation; Simulation-based testing; Newton-type algorithm; Iteratively reweighted least squares (IRLS); Missing data and EM-algorithm; Robust procedures.
60145. Dynamical Systems Data Analysis  
(3-3-0)  
This course intends to give the student a practical working understanding of techniques for analysis of dynamical systems. The course begins with an overview of the concepts and theory behind dynamical systems. A variety of examples of dynamical systems from Developmental, Cognitive, and Clinical Psychology are presented. The class covers techniques for time series analysis including recurrence analysis, phase space reconstruction, Fourier transforms, and methods for testing for stationarity and ergodicity. Practical methods for determining optimal sampling lag, embedding dimension, fractal dimension and nonlinear dependency from a sampled time series are presented. The remainder of the course is devoted to the linear analyses of behavioral data by estimating parameters of differential equations models. Software used includes R, Mathematics, TISEAN, and Mx, as well as software developed by Dr. Boker.

60147. Introduction to Artificial Neural Networks  
(3-3-0)  
This course is designed to provide an introduction to the broad field of Artificial Neural Networks (ANNs). This field involves models based on parallel networks of simple computing elements. There are three main branches to this field based on the specific goals for developing a computational model. (1) Cognitive Modeling. An ANN could be designed to illuminate properties of higher level cognitive processes such as memory, decision making, vision and language. In this case, an ANN is used to emulate a theory about a cognitive process in order that the behavior of the model can be compared with human behavior. This technique is best used in hopes of illuminating the consequences of competing theories about cognition. (2) Biologically Plausible Modeling. An ANN could be designed to model the actions of neurons as closely as possible in order to better understand neurophysiological functions. In this case, the actions of the model while it computes is of as much if not more interest than the outcome of the computation. These models are constructed so as to gain understanding of the consequences of changes to the parameters of models in larger aggregate of neurons than can be simultaneously recorded in vivo. There are some biologically plausible models that attempt to reproduce full, albeit simple behaviors of known neural circuits. (3) Nonlinear Statistical Modeling. An ANN could be designed to test statistical properties of a data set. One use for these ANNs is the analysis of statistical data from psychological experiments when distributional assumptions are not met.

60151. Factor Mixture Modeling  
(3-3-0)  
Factor mixture models are advanced latent variable models which receive increasing attention in the literature. Knowledge in structural equation modeling, categorical data analysis, and classic multivariate techniques is a prerequisite. This course is designed as a workshop. Participants summarize and discuss recent articles and book chapters, which provide introductions to different types of factor mixture models, and which cover the strength and potential weaknesses of mixture models as well as applications to empirical data.

60155. Longitudinal Data Analysis  
(3-3-0)  
The first reading in this course is a book chapter by John Nesselroade describing two fundamentally different ways of conceptualizing change: change in individual differences or individual differences in change. The former can be studied by such techniques as multiple regression and standard longitudinal applications of structural equation modeling, but the latter requires a different approach. In particular, this course focuses on multilevel models (i.e., hierarchical linear modeling, or HLM) as a methodology for studying individual growth and individual differences in change.

60156. Longitudinal Data Analysis II  
(3-3-0)  
This course is designed as an extension to Longitudinal Data Analysis I and it serves to cover a broad range of practical issues often encountered in fitting longitudinal models, including incomplete data, measurement invariance and how these issues are dealt with from a methodological standpoint. Beginning with models with a relatively long history in psychology (e.g., Markov models and cross-lag panel models), the class will then proceed to more recent modeling work pertinent to fitting (1) multivariate and nonlinear mixed effects models (2) equivalent growth curve models (3) differential and difference equations models and (4) time series models, including Kalman filter and related smoothing techniques.

60159. Advanced Issues in Statistics and Research Design  
(3-3-0)  
This course focuses on special topics in statistics beyond the standard courses in the department's curriculum.

60160. Research Methods  
(3-3-0)  
This course covers issues central to the conduct of research by counseling and clinical psychologists. Topics include research ethics and professional issues, measurement, design, and data analysis. Readings, assignments, class discussion, and lectures focus on the mastery of research skills, the development of research ideas, critical thinking, and colleagueship. Evaluation includes exams, assignments, and the completion of a research proposal.

60161. Advanced Research Methods  
(3-3-0)  
This course offers students an overview of philosophy of science, study design, threats to internal and external validity, measurement, qualitative research methods, and research ethics. Techniques of scientific writing and journal editing are described and practiced.

60181. Advanced Qualitative Research  
(3-3-0)  
This course is about theory construction using ethnographic methods, especially to analyze instruction and student development.

60195. Grant Writing for Social Sciences  
(3-3-0)  
This course will provide an overview of the grant writing process in the social sciences focusing on the deadlines and regulations of the funding institutions.

60196. Scientific Writing for Social Sciences  
(3-3-0)  
Being able to compose a scholarly journal article, the most demanding of all professional writing tasks, is as important as research design and implementation. Mastering journal article composition translates to other types of professional writing (e.g., proposal, grants). Becoming a professional in a discipline requires scholarship in research (i.e., developing the insight into how a research project advances knowledge in a discipline) and rhetorical skill (i.e., conveying the nuances acceptable by established scientific standards). This course is designed toward the objectives of developing critical thinking and perfecting the writing skill prerequisite to successful journal article writing.

60200. Theories of Development Across the Life Span  
(3-3-0)  
A survey of the issues, theories, and research relevant to human psychological change across the life span.

60240. Theories of Moral Development and Identity  
(3-3-0)  
Readings will cover diverse perspectives on the nature of moral development and identity, with a special emphasis on Catholic moral identity. Theories include perspectives within psychology, major religious traditions, classic and modern theories. Students will compare and contrast theories, formulate a personal theory, design a research study, and implement a spiritual practice to their own identity development.

60241. Moral Development and Character Education  
(3-3-0)  
We review research and theory on moral identity development and its implications for character development and education. Students will select an aspect of moral character to study, reporting on their findings and designing a research study.

60243. Moral Psychology  
(3-3-0)  
Moral development and education as an introductory course to the field of moral psychology, we examine major research traditions. We study the theoretical underpinnings, goals, and practices of major approaches to moral education.

60250. Cognitive Development  
(3-3-0)  
Major theories in cognitive development and data relevant to those theories are reviewed. Mechanisms that might account for observed developmental changes across the life span (e.g., processing speed) are discussed.
60261. Socioemotional Development II
(3-3-0)
In this course we will examine selected aspects of socioemotional development during adolescence and adulthood. Within these broad age outlines, the course will also have a lifespan emphasis. Common foci from adolescence to late adulthood will include attachment, social support, autonomy and independence, family and friend relationships, romantic and marital relationships, affect regulation, and gender differences and similarities in socioemotional development. We will read and discuss theoretical, empirical, and methodological chapters and articles. The major goals of the course are to cover areas that are relevant to Developmental Psychology and to your own research areas.

60270. Research and Theory in Mental Retardation
(1-1-0)
Current research literature in mental retardation with emphasis devoted to the types of theories and methodologies being employed.

60280. Children and Families in Conflict
(3-3-0)
Current trends and findings pertaining to constructive and destructive conflict within families, and the effects of conflicts within families on children, will be considered. A focus will be on interrelations between family systems (marital, parent-child, and sibling), and methodologies for studying these questions. A particular concern will be how positive and negative conflict processes in the marital relationship affects families, marriages and children. The role of interparental conflict in various family contexts (divorce, parental depression, violence and abuse, custody, physical illness or disability), and relations between family and community conflict and violence, will be examined. The positive side of family conflict will be considered, including the elements of constructive marital and family conflict, and psychoeducational strategies for promoting for constructive conflict processes within families. Theories and models for conceptualizing the effects from a family-wide perspective will also be considered. Including consideration of a family-wide perspective on emotional security. Requirements: Class attendance, active participation in class discussions and activities, including leading discussions on articles in small groups, participation and report of the results of small-scale field studies in small groups, completion of a review paper on a topic in this area, and completion of midterm and final in-class exams.

60281. Developmental Psychopathology and Families
(3-3-0)
This course articulates principles for a life-span perspective on the origins and development of individual patterns of adaption and maladaptation. (Spring)

60290. Socio-Emotional Development I
(3-3-0)
Current research and theory in social and emotional development in infancy and early childhood are reviewed. Some of the topics covered include: attachment, temperament, emotion regulation, parenting and family issues, and peer relationships.

60299. Supervising Teaching
(1-1-0)
For the professional development of graduate students.

60310. Adult Psychopathology
(3-3-0)
This course covers classic and contemporary theories and research about DSM-IV forms of adult psychopathology. (Spring)

60311. Theories of Psychotherapy
(3-3-0)
Students will be introduced to the key research methods, empirical findings, and theories from the clinical/counseling psychology literature. Prospects for developing and testing new theories of psychotherapy will be discussed. Students will be encouraged to begin forming concepts for research projects and developing their own integrated theoretical approaches to treating clients. (Fall)

60320. Individual Personality Assessment
(3-3-0)
This course focuses on the science and practice of psychological assessment. Students become familiar with current theoretical and empirical issues in assessment, learn about assessment methods for intellectual and personality assessment, and practice the application of a variety of approaches to assessment.

60323. Adult Personality Assessment
(3-3-0)
This course is a continuation of PSY 60320 and focuses on more complex issues in psychological assessment of adults. Topics include projective testing, neuropsychological screening, learning disabilities, assessment responses to specific questions (i.e., potential for violence, dementia vs. depression), and an introduction to forensic assessment issues (i.e., parenting, competency). This course assumes prior understanding of basic assessment techniques such as intelligence and achievement testing, self-report personality inventories, and basic report writing skills.

60329. Neuropsychological Assessment
(3-3-0)
This course covers brain physiology and normal and abnormal neuropsychological functioning. In addition, procedures for assessing the integrity of neuropsychological functioning are described.

60331. Clinical Skills and Interventions
(1-3-0)
This course focuses on the empirical foundations of counseling, with emphasis on the skills important to the various phases of counseling – from rapport-building, through exploration, insight, and action, to termination. This course also informs the student of the roles and meaning of clinical dynamics and the therapeutic process. As such, there are three primary purposes of this course: 1) to facilitate understanding of the therapeutic premises and research bases of the fundamental skills used by professional psychologists, 2) to increase the student’s facility with each skill through structured practice and feedback, and 3) to enhance the student’s ability to assess, manage, and work effectively with clinical dynamics and the therapeutic process. Additionally, in preparation for the subsequent practicum experience, a number of professional training seminars presented by practicing psychologists are integrated into the course. (Spring)

60335. Group Dynamics
(3-3-0)
Group Dynamics will review interpersonal theories of personality, human interaction, and theories of group development and group dynamics. Research on group dynamics and approaches to the assessment of group development will also be covered. In addition, these theories and research data will be viewed in applied settings such as group therapy, family therapy, and consultation in organizations. Students will present research in a relevant area of interest, write a paper on that topic, participate in class exercises in which roles are played, and write short reaction papers based on those exercises.

60339. Marital Therapy Seminar
(3-3-0)
This didactic course covering the principles and practice of couples therapy prepares trainees for the companion practicum (61394), through which they will subsequently carry cases at the Marital Therapy and Research Clinic. Sample topics include communication, problem-solving, domestic violence, parenting, and sex/intimacy.

60340. Diversity Issues: Gender, Race, Sexuality
(3-3-0)
This course provides students with theory, knowledge, and skills in diversity issues pertaining to clinical and counseling psychology. (Spring)

60341. Multicultural Issues in Psy
(3-3-0)
This course provides students with theory, knowledge, and skills in diversity issues pertaining to clinical and counseling psychology.

60350. History and Systems of Ethics
(3-3-0)
This course has two sections. The first covers historical trends and influential theories in psychology. The second covers ethical and professional issues involved in psychological research and practice. In the latter section issues of ethics, ethnicity, and culture are reviewed. (even years, Fall)

60365. Sport and Exercise Psychology
(3-3-0)
This course will cover the foundations of sport and exercise psychology, which examines people and their behaviors within sport and physical activity contexts from a group and individual perspectives. This class will be taught using a variety of lecture methodologies (75%), group discussion & activities, as well as utilizing an occasional guest speaker. Students will be expected to attend and participate in class and complete writing, applied projects, and exams.
This course will cover the foundations of sport and exercise psychology, which examines people and their behaviors within sport and physical activity contexts from a group and individual perspectives. This class will be taught using a variety of lecture methodologies (75%), group discussion & activities, as well as utilizing an occasional guest speaker. Students will be expected to attend and participate in class and complete writing, applied projects, and exams.

60520. Cognitive and Affective Neuropsychology (3-3-0)
This course will survey the biological bases of cognition and emotion. The primary objective of this course will be to understand how human cognitive and affective behaviors are mediated in cortical and subcortical foci in the brain. Particular attention will be paid to cognitive and affective deficits that result from brain trauma and disease.

61385. Practicum I (3-0-0)
Supervised clinical practicum for second-year doctoral students in counseling psychology (Fall)

61386. Practicum II (0-0-3)
Supervised clinical practicum for second-year doctoral students in counseling psychology. (Spring)

61387. Practicum III (3-0-0)
Supervised clinical practicum for third-year doctoral students in counseling psychology. (Fall)

61388. Practicum IV (3-0-0)
Supervised clinical practicum for third-year doctoral students in counseling psychology. (Spring)

61389. Practicum V (3-0-0)
Supervised clinical practicum for fourth-year doctoral students in counseling psychology. (Fall)

61390. Practicum VI (3-0-0)
Supervised clinical practicum for fourth-year doctoral students in counseling psychology. (Spring)

61394. Marital Therapy Practicum (3-0-0)
Trainees who have successfully completed the Marital Therapy Seminar (61339) register for this supervised practicum every semester. They carry cases at the Marital Therapy and Research Clinic.

62199. Quantitative Studies Group (1-1-0)
Quantitative Studies Group is a weekly seminar in which original quantitative work of students and faculty are presented, at which quantitative articles are read and discussed, and to which guest speakers are invited.

63161. Personality (3-3-0)
This course considers the history and background of the study of personality as well as the influence that heredity, culture, learning, and motivation have on the development of personality throughout the life span. It also deals with personality abnormality, perceptual-cognitive influences on personality, creativity, and other topics. (Spring)

63292. Seminar in Positive Psychology (3-3-0)
This seminar examines current research and theory in the emerging field of Positive Psychology. Topics include eudaimonic and hedonic theories of well-being. These theories provide conceptual starting points for understanding the multidimensional nature of well-being, which include having positive self-regard, good-quality relationships with others, a sense that life is purposeful, the capacity to effectively manage one’s environment, the ability to follow inner convictions, a sense of continuing growth, the experience of frequent pleasant emotions and infrequent unpleasant emotions, and a general sense of life satisfaction. These topics are examined with respect to their underlying biological, cognitive, social, economic, existential, and cultural processes and their potential importance in understanding adaptation and health.

63311. Science and Practice Seminar (1-2-0)
Classic and contemporary topics in the science and practice of counseling psychology. Topics rating by semester. Typical topics include idiographic versus nomothetic research, clinical versus actuarial prediction, evidence based practice, and manualized treatment.

63410. Seminar in Spatial Cognition (3-3-0)
Have you ever gotten lost trying to navigate through a new environment or had difficulty in following directions? Can you easily give directions when someone asks you how to get somewhere? If you are following a map, do you turn it as you turn, or hold it in a fixed orientation? All of these processes involve relating your own spatial location to objects and landmarks in the external world. This seminar in spatial cognition will examine how we accomplish this, focusing on such issues as following directions, giving directions, using maps, mentally representing environments, and wayfinding.

63430. Graduate Seminar: Attention (1-1-0)
This course will examine the cognitive, neural, and computational basis of executive control processes. The course will cover readings from basic cognitive science and cognitive neuroscience as well as reports of the effect of neurological disorders on executive control. Class time will be split between discussion of readings and presentations of research ideas by students. The course will require weekly writing assignments and a longer term paper.

63440. Grad Seminar: Perception (1-1-0)
Advanced graduate seminar.

63450. Cognitive Core Seminar (3-3-0)
Advanced graduate seminar.

63455. Psycholinguistics (3-3-0)
This course will provide students with knowledge of current theories and research in psycholinguistics. Five core areas will be examined: the recognition of spoken and written words, language comprehension and production, and language acquisition. Each area will explore the use of both empirical techniques and computational (mathematical) models to test and inform theories.

63460. Concepts in Visual Neuroscience (3-3-0)
This seminar will provide an overview of contemporary theories, concepts and models in neuroscience, with an emphasis on vision. It will outline the different approaches that are used to understand neural information processing in the visual system. Some time will be spent discussing contemporary trends in neuroscience, along with the contributions from and influences of multiple relevant disciplines, including psychology, biology, and artificial intelligence. A central argument will be that there is still no coherent framework or single concept of neural processing, and the seminar will use this argument as a motivation to ask new questions, model an innovative network structure, or maybe just follow one of the existing approaches. We will occasionally examine studies that have successfully implemented some of the models into analog electronic circuits, allowing so for their real-time emulation.

63510. Behavioral Genetics (3-3-0)
An introduction to the principles necessary to understand genetic and environmental influences on development, with an overview of the methods and research.

63641. Motivation and Academic Learning (3-3-0)
Traditional studies of learning have focused almost exclusively on cognitive, or “cold,” processes. Recent research on learning illustrates how “hot” processes also influence thinking and academic learning. In this course, we focus on how social, motivational, and emotional influences interact with cognitive processes to affect academic learning. Social influences will include students’ social goals in school, friendships, and family dynamics. Motivational influences are explored through the study of major theories of achievement motivation, including attribution, self-efficacy, intrinsic motivation, “possible selves,” and goal theories. Emotional factors such as coping mechanisms, test anxiety, and well-being also are discussed. In addition, we explore how development affects students’ social, motivational, and emotional responses to learning. Child, adolescent, and adult models are discussed, and applications to educational child settings will be an integral part of the course.
PSYCHOLOGY

63650. Graduate Seminar: Introduction to Teaching (1-1-0)
Designed to be taken concurrently with the first two semesters of a student's teaching assistantship, ordi-
narily in years one, two, or three. It will meet five
times (approximately every third week) per semester
for 1-1/2 hours. The primary goals of the course are
to orient students to the profession of teaching, assist
them in their assigned tasks as TAs, and practice the
skills of observing and reflecting on their experiences
in the classroom setting. An additional five hours of
observing/interviewing in other departments of the
University and in local schools/collages/universities
will be required. The courses will be graded Satisfac-
tory or Unsatisfactory. N.B. Those who are assigned
teaching assistantships, but who do not plan to take
the above course for credit, would be welcome to
participate as fully as they wish in the meetings,
especially the processing of their experience as TAs,
but they would not be responsible for any materials
or activities outside these meetings.

63651. Graduate Practicum: Course Planning (3-3-0)
Students will meet on a regular basis as they pre-
are to be the instructor of record in an Intro or
Stats/Methods or 3000-level content course (e.g.,
abnormal, developmental, cognitive, etc.). Ordinar-
ily, students will have their teaching assignment for
the following year by this point and can focus on a
specific preparation. They will write objective, create
syllabi, critique planned assignments, design tests, 
discuss grading, etc. In conjunction with the current
instructor of record, they may be responsible for
giving a lecture/presenting a unit in the instructor’s
class. Grading is S/U. (Offered every spring for stu-
dents in their second year or beyond.)

65275. Sign Language (3-3-0)
The American Sign Language class is designed to
introduce basic vocabulary and simple sentence
structure for conversational use. A cultural view
is presented to examine traditions and values. A
linguistic view is presented to introduce structure,
syntax and manual alphabet. Experiential activities,
receptive and expressive exercises and fluency op-
portunities are incorporated into the format. This
is an introductory class for students with no prior
knowledge of American sign language.

65396. Resident Internship in Counseling Psychol-
yogy (0-0-1)
Full-time pre-doctoral internship in counseling psy-
chology for students interning on-campus. (Every
year)

78820. Thesis Direction (0-0-0)
For students doing work for a research master's de-
gree, maximum of six hours allowed.

78821. Nonresident Thesis Research (1-1-0)
For master's degree students.

78840. Seminar: Special Topics (0-0-0)
Topics and prerequisites to be specified by the in-
structor.

78841. Research/Special Topics (0-0-0)
Topics and prerequisites to be specified by instruc-
tor.

78842. Reading/Special Topics (0-0-0)
Topics and prerequisites to be specified by instruc-
tor.

98825. Research and Dissertation (0-0-0)
For resident graduate students who have completed
all course requirements for the Ph.D.; maximum of
12 hours allowed.

98826. Nonresident Dissertation Research (1-1-0)
For doctoral students.

**The Program of Studies**

The Department of Sociology offers training leading to the conferral of two graduate degrees: the master of arts (M.A.) and the doctor of philosophy (Ph.D.). Although the M.A. degree is available to graduate students, admission is given to applicants whose goal is the doctorate.

The principal aims of this graduate training are to educate students in the theory and methods of social science, and to develop in them a competence as professionals in specific fields of sociology. A mastery of sociology in general and a strong background in the techniques that are used in scholarship and teaching in the discipline will enhance the potential of graduates for employment as academic and applied researchers, as instructors in colleges and universities, and as practitioners in government and the private sector.

Preference for admission to the graduate program in sociology is given to students who have taken social science at the undergraduate level. A course in elementary statistics is also preferred. If a student does not have this course, it may be made up while in graduate school.

The M.A. degree requires 30 hours of credit, of which six credit hours may be earned for the master’s thesis. All students must complete and defend a research thesis for the master’s degree.

The doctoral program normally occupies four years of full-time work for students with the bachelor’s degree. Core requirements must be fulfilled in the first two years according to scheduled sequencing. Intensive independent study in the student’s field of specialization is generally initiated in the second year.

It is expected that the student will have completed all but the dissertation requirement by the conclusion of the third or fourth year of graduate study.

Several basic courses are required of all students who enter with only a bachelor’s degree; in addition, they are required of other students who cannot demonstrate previous equivalent work at the graduate level. These courses include: one semester of classical sociological theory, for three credit hours; a one-semester overview of sociological methods, for three credit hours; one semester of advanced social statistics (SOC 63993), for three credit hours (the student must have taken a more elementary statistics course as a prerequisite, or have received the permission of the instructor); a preseminar, extending across two semesters for a total of three credit hours (includes an introduction to faculty and facilities at the University and sessions on professional skills such as computing); and one semester of participation in a research practicum for a total of three credit hours.

Students are required to take at least four seminars, including at least one from each of the following two divisions: (1) advanced seminars in sociological theory and (2) advanced seminars in sociological methods or social statistics.

Beyond these, students may choose their areas of specialization in sociology, but the department is particularly strong in methodology and statistics, theory, organizations, social psychology, family, sociology of religion, comparative historical, political sociology, sociology of education, and sociology of culture.

If the emphasis and needs of the student’s interests require course work in other departments, the student may undertake such courses with the approval of his or her adviser and the director of graduate studies. It is also possible for the student to construct specialty areas provided faculty specialization is available.

To fulfill the training and research requirements, each candidate must select two specialty areas and pass a comprehensive examination in each. Dissertations must be undertaken in at least one of the specialty areas.

Faculty members in sociology are affiliated with various institutes and centers providing additional opportunities for graduate studies: the Center for Research on Educational Opportunity, the Helen Kellogg Institute for International Studies, the Erasmus Institute, the Institute for Latino Studies, and the Nanovic Institute for European Studies.

Teaching and research assistantships, fellowships for applicants from minority groups, dissertation-year fellowships, and tuition scholarships are available.

For a more detailed description of the graduate program requirements, the student is urged to send for a copy of the department’s special bulletin.
Course Descriptions
Each course listing includes:

- Course number
- Title
- (Credits per semester—lecture hours per week—laboratory or tutorial hours per week)
- Course description

63020. Organizations (3-3-0)
This seminar is an in-depth introduction to theories of and research on organization. Theoretical perspectives on social organization examined include functionalism, systems theory, contingency models, action frameworks, and both Marxian and Weberian approaches. The utility of theoretical perspectives is assessed by examining organizational dynamics. Among the topics investigated are goals and strategies, technologies, organizational behavior, power, legitimation processes, forms of control, and organization-environment relations.

63035. Armies and Politics (3-3-0)
This course provides students with theory, knowledge, and skills in diversity issues pertaining to clinical and counseling psychology. (Spring)

63037. Latin American Political Economy and Institutions (3-3-0)
This course examines the political and institutional framework underpinning the transition to an economic order in which market forces play a predominant role in the allocation of resources throughout Latin America. After reviewing the post-war economic model of protected, state-led industrialization and contending theoretical perspectives on economic liberalization, it analyzes the roles of various political and social actors and institutions in shaping first and second generation economic reforms. The focus is on the executive, party, legislative, and sub-national power structures, and the political and economic consequences of the military takeovers in Latin America.

63038. Armies and Politics (3-3-0)
This course examines the role of the armed forces in politics. The purpose of this course is not just to cover the material traditionally associated with civil-military relations, but also to consider new ways in which the military is important to the study of politics. We will cover a range of topics including coups d’etat, military rule, transitions to democracy, theories of civilian control, the role of the military in state formation, the effects of the cultural gap between civilians and the military, and the role of the military in state failure. Cases will be drawn from both the developed and developing worlds, with special attention paid to examples from the United States, Latin America and Africa. A variety of different approaches to the military will be employed, including sociological, institutional, and political economy perspectives.

63056. Democratic Theory & Comparative Politics (3-3-0)
This is a graduate seminar. We will read and discuss some of the most relevant and/or interesting contemporary theories about democracy, without fully neglecting some important predecessors. The purpose is to arrive at an enlightened - but not necessarily consensus - understanding of present-day democracy and its main issues and conceptions. For this purpose, several comparative incursions will be apposite.

63065. Comparative Research on Democratization (3-3-0)
One of the central tasks in the study of politics has long been to explain the birth, survival, and breakdown of democracy. [Note: This course does not cover the consequences of democracy.] Over the years, scholars have offered dozens of hypotheses, focusing on culture, institutions, leadership, religion, ethnic cleavages, diffusion, dependency, social equality, economic development, or various combinations of several of the above. Clearly the problem has not been the difficulty of dreaming up explanations, but the difficulty of demonstrating which one or ones are correct. In their efforts to support some of the possible explanations, political scientists and sociologists have employed nearly every research method imaginable, and in recent years an escalation of methodological sophistication has taken some research on democratization to the cutting edge of comparative politics. A roughly chronological selection of this literature can therefore serve as a springboard for discussions about both practical questions of research design and methods, and the fascinating and timely theoretical question of what causes democracy—which are the twin topics of this course. In addition to reading and discussing selected works on democratization, you are required to (1) carry out 5 small exercises to give you practice in critiquing research, generating theory, and testing hypotheses; and (2) perform original research culminating in a 25-page paper on some question of the determinants of democracy. I will offer in-class workshops on the data analysis techniques that you will need to do each exercise, and will also meet privately with anyone wishing an individualized tutorial on the technique.

63081. Politics and Economics in Postindustrial Societies (3-3-0)
This course investigates the nexus between politics and economics in the postindustrial societies. After a brief discussion of the theoretical principles of economic liberalism, the course focuses on the impact of economic actors and conditions on politics and the political and economic consequences of the organization of the world economy along free market principles. It concludes by scrutinizing the relationship between domestic politics and the project for deeper economic integration in the case of the European Union.

63091. Proseminar (2-2-0)
Designed to acquaint first-year graduate students with the resources available in the department and at the University to assist them with their research. The key component of the seminar is a series of presentations by faculty on their current research.

63125. Sociology of Culture (3-3-0)
Do cultures reflect societies? Do social institutions reflect culture? Or are social institutions themselves texts? What part does culture play in consensus formation, in domination, and in resistance? How has the relation between culture and social institutions changed?

We will survey some of the central issues in the sociology of culture, and their implications for sociological analysis and understanding more generally. We will review classic statements of the relation between culture and institutions, and exemplars in the renaissance of sociological work on culture. Case studies will illustrate different approaches. According to student interest, these may be selected from work on specialized cultural institution like art and the mass media, or from more broadly based studies of meaning and value.

63137. Materialism, Consumption, and Meaning in Modern Life (3-3-0)
In the twentieth-century the twin problems of meaning and materialism have come to the forefront of modern civilization, forming the basis of a variety of philosophies and social theories, animating revolutionary movements in art, looming as the silent specter behind mass society and its dramas of consumption. It is by no means clear that the mass-technological advances and materials gains in advanced industrial societies have contributed to a better way of life -- many would say increased meaningless is the actual result.

By exploring the rise of the modernist world view, key expressions of twentieth-century modern culture, recent criticism of modernity, “post” -- culture, and consumption culture, we will attempt to achieve a new understanding of the problem of meaning and the possibilities of a transformed civilization. Some topics to be taken up in the course include: the rise of modern materialism, the modern metropolis, consumption culture and its effects on domestic and civic life.

63234. The Schooled Society: How Schools Shape Who We Are and How Society Works (3-3-0)
This seminar focuses on the structure and organization of schooling in American society, and the societal forces that influence decisions about schools and student learning. These forces include legislation governing schooling, and cultural and religious norms that impact schools. The course will cover the role of schools in society, the political, economic and social dimensions of schooling, education reform and its underpinnings, and the transformation of higher education.
63239. Sociology of Education
(3-3-0)
Sociologists have identified the school as a fundamentally important social institution that both shapes, and is shaped by, the larger society. In this course, we will examine where schools "came from," how schools "work," and focus on how they "fit" with society's main social, economic, and political institutions. Topics covered in the course will include school expansion, the school as an agent of socialization, schools and social inequality, school organization, and school reform.

63250. Sociology of Development: Theories and Issues
(3-3-0)
As we now embark into a new millennium and compete on a global scale, it is important that we understand how our educational system works, the ways it combats and perpetuates the existing social hierarchy, and the ways that we can improve it. This course is designed to address these three important issues. The first half of the course is devoted to learning and critiquing existing theories of social stratification in general and educational stratification, more specifically. The second half of the course analyses actual educational practices and their relationship with stratification.

63268. Schools in Society
(3-3-0)
This seminar will examine and discuss major contemporary issues about schools and the schooling process. Topics will include the role of schools in society, the political, economic and social dimensions of schooling, educational reform and its underpinnings, the social and organizational structure of schools, and the transformation of higher education. Invited speakers from off campus or by a Notre Dame faculty member or graduate student. The content of the presentation is discussed and students write a brief reaction. Other sessions are devoted to a discussion of chapters in the Handbook on the Sociology of Education. The seminar runs for both semesters during the academic year and students receive three credits for the entire year.

63278. CREO Seminar
(1-1-0), (2-2-0)
Most sessions of the CREO Seminar feature a presentation of educational research by an invited speaker from off campus or by a Notre Dame faculty member or graduate student. The content of the presentation is discussed and students write a brief reaction. Other sessions are devoted to a discussion of chapters in the Handbook on the Sociology of Education. The seminar runs for both semesters during the academic year and students receive three credits for the entire year.

63279. CREO Seminar
(3-3-0)
Covers current theoretical and substantive developments in the area of family as well as applicable research methods. Family research findings relevant to family policy will also be discussed.

63402. Population Dynamics
(3-3-0)
Demography, the science of population, is concerned with virtually everything that influences, or can be influenced by, population size, distribution, processes, structure or characteristics. This course pays particular attention to the causes and consequences of population change. Changes in fertility, mortality, migration, technology, lifestyle and culture have dramatically affected the United States and the other nations of the world. These changes have implications for a number of areas: hunger, the spread of illness and disease, environmental degradation, health services, household formation, the labor force, marriage and divorce, care for the elderly, birth control, poverty, urbanization, business marketing strategies and political power. An understanding of these is important as business, government and individuals attempt to deal with the demands of the changing population.

63410. The Legacy of Exile: Cubans in the U.S.
(3-3-0)
This class deals with one of the most visible and political of all U.S. immigrant groups: Cubans. The theme of the class is that the Cuban presence has been shaped by the experience of exile. In understanding the case of the Cuban immigration to the United States, the students will gain insight into the dynamics of U.S. immigration policy, the differences between immigrants and exiles, inter-ethnic relations among newcomers and established residents, and the economic development of immigrant communities.

63441. Family Policy Seminar
(3-3-0)
The seminar covers family policy in the United States and in other countries with a concentration in the United States. There is comparison of the background, content and consequences of policies in the various countries. Such provocative topics as welfare policy, parental leave and child care are discussed. The relation between families and the work setting or families and government will also be addressed. A discussion format is used. Students write a term paper on some aspect of family policy. It is directed especially for juniors, seniors, and graduates.

63515. Political Sociology
(3-3-0)
A survey of the major theoretical traditions in the field, followed by a special focus on issues such as the process of state formation, sequences and forms of political development, the social bases of parties and their formation, the characteristics of party systems, the origins of democracies, the breakdown of democracies, the characteristics of authoritarian regimes, etc. Examples and case studies will be drawn from Europe and the Americas.

63532. Strategic Communications in Latin America
(3-3-0)
The course prepares students to conduct a strategic communication in a Latin American scenario. It reviews the culture, social, economic and political changes that explain the emergence of the discipline of strategic communications. Among these are transformations in the mass media industry as well as the rise of a public opinion that is oriented a never before by a consumer logic. The course reviews the main concepts and tools of strategic communications: identity, images, brands, communications crisis, and community, organizational, and political communications, among others. The course employs a case study approach, and will require an active participation by the students.

63553. Building Democratic Institutions in Latin America and European First Wave Democracies
(3-3-0)
Elements of democratic regimes emerged long before the regimes as such can be identified as being minimally in place. Beginning with a brief discussion of the essential features of democracies, the course examines how and why such institutions emerged, and the critical moments in which the actual transitions to the new democratic regimes occurred. The course focuses on democratizations that took place before the Second World War, and will examine key European and Latin American cases.

63558. Comparing European Societies
(3-3-0)
This course offers students a review of major patterns of difference, along with some similarities, among the 15 member states of the European Union. Despite the larger contrasts with the United States, and the pressures toward convergence generated by the process of European integration, European societies remain remarkably different from one another on a
number of dimensions including: the overall level and form taken by employment and unemployment, systems of social protection and welfare state organization, demographic trends ranging from extremely low birth rates in most of southern Europe to significantly higher birth rates further north, the connections between urban and rural life, and the impact of education on inequalities. The role of institutions, cultures, national histories and policies in accounting for this pattern of difference will be reviewed. The course will also examine the combinations of identities-national, regional, and European-found among citizens of Europe. Students will be encouraged to develop their expertise on at least one country while also doing comparative reading.

63571. Protests, Riots, and Movements (3-3-0)
This course is concerned with how people act together to pursue collective political aims via extratitutional forms of behavior: When and why do people go outside the conventional political structure to address social issues important to them? During the course, we examine political behavior ranging from the relatively mild (like a letter writing campaign) to the severe (like rioting, looting, and killing). We also discuss aspects of collective behavior that are less political in nature (like panics and fads). Some of the social movements we discuss include the civil rights movement, the women's movement, the anti-war movement, the gay and lesbian movement, pro-life and pro-choice movements, and the environmental movement (among many others). In the end, we try to explain how grievances, resources, the political environment, repression, individuals, decision making, and movement tactics all contribute to the success and failure of protest movements, their impact on social change, and the future of activism.

63576. Social Breakdown in American Society (3-3-0)
This course examines the apparent weakening of the fabric of social life in America that has occurred within the past half-century. It investigates the past influences of both the market economy and the political welfare state on several central societal problems, such as the deterioration of interpersonal trust, the erosion of social obligations and informal social control, and the lessening of altruistic concern for others. Students will discuss the significance of these problems, as well as potential solutions.

63589. Sociology of Economic Life (3-3-0)
Economic actions like working, buying, selling, saving, and giving are a fundamental part of everyday life, and all spheres of society, from family to religion to politics, are interrelated with economy. Sociologists examine how social relationships from small networks to transnational linkages affect economic actions and their outcomes, and the ways cultural meanings and political strategies shape those social relationships. The goal of this class is to provide students with new perspectives on economic actions by reading recent sociological studies of topics like money, markets, work, businesses, industries, and consumer society.

63651. Sociology of Religion I (3-3-0)
Classical and contemporary theories in the sociology of religion. Culture, stratification, ideology, and determinations of experience are some of the key issues related to societal and personal formulations of religion. Classical authors such as Durkheim, Marx, and Weber are considered.

63665. Religion in Postwar America (3-3-0)
This course surveys the major developments in religious life in the United States since the 1950s through an in-depth examination of several of the most important recent books on the subject, such as: Wade Clark Roof’s *Spiritual Marketplace*, Tom Beaudoin's *Virtual Faith*, Christian Smith’s *American Evangelicalism*, and Helen Berger’s *A Community of Witches*. With these works as the backdrop, each student will research and write her family’s religious history across three generations.

63730. Crime and Deviance in Ideological Perspective (3-3-0)
This seminar course will examine selected issues (e.g., white collar crime, gang violence, pornography, etc.) in the study of crime and deviance (issues will change each time the course is offered) and compare responses made by those representing the left and right in American society. We will critique the adequacy of these responses from a sociological viewpoint.

63731. Social Interaction (3-3-0)
This course develops a symbolic interactionist perspective within social psychology. Readings focus on theoretical and empirical aspects of the interactional dimensions of the way we live as selves in relationship to others and social organizations. Students are responsible for discussions and a term paper.

63774. Society and Identity (3-3-0)
This course looks at sources, dynamics, and consequences of identity in contemporary society. Identity is conceived as definitions of an individual that self and others use as a basis for interacting with one another. Significant outcomes of the way we are defined are the life chances, evaluations and emotional meanings we experience. The course format is a discussion. Seminar.

63803. The Information Society (3-3-0)
This seminar explores the social, political, economic, cultural, and organizational impacts of the information technology revolution. Among the topics examined are globalization, networked enterprises, transformation of work and employment, mass communication, conceptions of time and space, new social movements, the role of the nation state, and the crisis of democracy. Attention is also given to assessing the adequacy of existing sociological theories for understanding the changes that are occurring as the result of the information technology revolution.

63804. Exploring Identities (3-3-0)
How do we define ourselves? What are the various components of one's identity and how do we begin to understand these issues sociologically? These themes form the outlines of this course. We will explore identities, their formation, and their consequences, in post-colonial and Western societies, in peaceful, and in societies experiencing ethnic/racial conflict, among women and men, and in developed and in developing countries. Drawing on novels, films, autobiographies, and sociological arguments we will piece together a framework for understanding the identity landscapes of which we are a part.

63819. Social Stratification in American Society (3-3-0)
This course is designed to give students an overview of the major theories and empirical research that describe and explain social and economic inequality in American society. In the course, we will cover the following topics: social mobility across generations; gender and racial inequalities in status and income; the role of labor markets in creating inequality; studies of the “underclass” (or urban poor); and the role of social policy in ameliorating the social problem of poverty. Special attention will be given to the role of education as a mechanism of stratification in each of the topics covered.

63821. Labor Markets and Social Class (3-3-0)
In alternating years, focuses on social class and labor markets. The seminar on social class examines theories of and research on class structure, class formation, and social inequalities. Special attention is given to issues concerning the nature of the “middle class,” historical changes in class structures, the relation between class and income, intergenerational mobility, and debates about the emergence of new social classes. The seminar on labor markets focuses on economic and sociological approaches to understanding labor market processes and structures. After examining economic analyses of supply and demand in labor markets, various sociological perspectives are discussed, including segmentation theories, discussions of internal labor markets, research on job mobility, and models of employment relations. Historical, case study, quantitative, and comparative research is surveyed.

63826. Social Classes and Stratification (3-3-0)
This seminar is an in-depth introduction to theories of and research on social classes and inequalities. The focus of the seminar is on important socio-economic processes (mobility, income and status attainment, discrimination and segregation) and controversial issues (the existence of social classes, the character of the middle class, the relationships between class, race and gender, the emergence of new social classes). We will examine how various theoretical perspectives (Marxist, Weberian, functionalist, elite, gradational, and the “new structuralism”) are being used to understand these processes and issues.
63848. Labor Processes (3-3-0)
The seminar has the purpose of explaining labor conflict on the basis of the analysis of labor process and worker consciousness. On the basis of the analysis of work organization, working conditions, types of labor organization, ideologies of the labor movement, the seminar will discuss specific types of labor action by miners and industrial workers on the basis of cases from the Latin American region.

63911. Classical Social Theory (3-3-0)
This course is intended to thoroughly familiarize graduate students with the content and the method of great written works by sociology’s founding theorists. Theorists to be discussed include Durkheim, Weber, Marx, and Simmel. An examination of their writings serves as a basis to analyze the theoretical ambitions and controversies that provided the foundation for the development of sociology and which continue to influence contemporary social science. Through a focus on classic texts the course will address two main themes: the methodological arguments concerning the most appropriate strategies for fulfilling sociology’s scientific ambitions and substantive debates over the nature of a changing society. Attention will also be devoted to the enduring implications of classical theory for contemporary theory and research.

63913. Research Methods (3-3-0)
Sociology 513 is designed to provide an in-depth view of quantitative and qualitative research methods in the social sciences. Topics covered include (1) hypothesis formulation and theory construction (2) the measurement of sociological variables (3) data collection techniques - experimental, survey, and observational. At the end of the course, students should appreciate both the strengths and the limitations of sociological research techniques, and will hopefully have a solid foundation for beginning to conduct research on their own.

63947. Designing Research Projects: Practical Problems and Theoretical Issues (3-3-0)
The course is intended to familiarize students with practical problems and options as well as some underlying theoretical issues encountered by social scientists in the course of qualitative or field research. Themes covered include consideration of the relationship between broad interpretive categories and specific empirical observations as well as the delineation of a research problem. Research strategies discussed include comparative historical work, historical case studies, observation, survey research, and qualitative interviewing. Students are asked to formulate a research proposal and to carry out practical exercises involving the use of several research strategies.

63957. Historical and Comparative Sociology (3-3-0)
Reviews some of the basic techniques in historical research, discusses comparative research designs in the social sciences, and examines critically major works using comparative analysis. Students are encouraged to write proposals using comparative analysis.

63959. Sociology of the Life Course (3-3-0)
This course seeks to understand how and why people change or remain the same throughout their lives. Through seminar-style discussion of major works in life course studies, it will explore how lives are shaped by specific historical contexts, how individuals actually construct their life course within historical and social constraints, how life domains are intertwined (and how this shapes human actions), and how the impact of life transitions on life trajectories is contingent on the timing of a particular change in a person’s life. Substantively, the course will focus on change within and the relationship over the life course between the domains of religion, education, and politics. The course will have a strong methodological orientation, focusing on data collection issues and measurement strategies for capturing religious formation and change over the life of the course, and for understanding the perhaps reciprocal relationship between religious development and educational and political attitudes and behavior.

63975. Research Practicum (M.A.) (2-2-0)
The aim of this research practicum is to assist second-year graduate students in writing their master’s theses. When the practicum is taught in two semesters, this course is taught Fall semester.

63976. Research Practicum (M.A.) (1-1-0)
The aim of this research practicum is to assist second-year graduate students in writing their master’s theses. When taught as a two-semester course, this is always taught in spring semester.

63980. Qualitative Methodology (3-3-0)
How does one conceive and execute a qualitative research project? In this seminar we will learn this process through developing and carrying out independent research projects. We will cover: using the literature to identify interesting and important qualitative questions, grounded theory and theory reconstruction approaches to building research projects, interview and ethnographic methods, and preliminary aspects of qualitative data management and analysis.

63983. Archival Research Techniques (3-3-0)
This course will introduce students to a variety of archival research techniques such as archive access, research responsibilities, interviews with archivists, managing reading rooms, organizing archival data, and documenting sources. The course will also explore some of the organizing archival data, and documenting sources. The course will also explore some of the organizing archival data, and documenting sources. The course will also explore some of the organizing archival data, and documenting sources.

63986. Primary Data Collection and Survey Methodology (3-3-0)
This course is offered to graduate students in sociology and other social sciences who have an interest in the design, implementation, and use of social surveys and databases in social science research. The course examines all practical aspects of survey design including sample design and selection, questionnaire design, measurement, mode of administration, field methods, data editing, and database development. We also cover theoretical development in survey methodology, including research on cognitive process and questionnaire response, the role of social theory in questionnaire design, and other specialized topics. This course will prove useful for both conducting primary data collection and interpreting data from secondary sources.

63990. Computing for Social Science Research (1-1-0)
This is a laboratory course designed to introduce first-year graduate students to the basic computational and statistical techniques used in social science quantitative research. The main goal of the course is to show students how to build and access a data set for analysis. As such, it is complementary to the core statistical and econometrics course offered in the social sciences. Students will be exposed to the different operating systems available at Notre Dame, and to a variety of statistical software applications. Topics treated include reading data in different formats and checking it for errors, carrying out exploratory analyses, recoding and creation of new variables, merging data sets, performing extracts, and moving a data set between different operating environments.

63992. Statistics I (3-3-1)
Prerequisite: Prior course in statistics. This course reviews basic descriptive statistics and probability, then concentrates on inferential hypothesis testing (analysis of variance, linear regression, dummy variables, standardized coefficients, chi-square tests and basic contingency table analysis).

63993. Statistics II (3-3-1)
The second course in the graduate sequence focuses on the general linear model in all its forms: special topics in multiple regression (multicollinearity, autocorrelation, heteroscedasticity), nonlinear models, causal modeling (recursive and nonrecursive systems), structural equations, logit equations, and probit models.

73080. Writing for Academic Journals (3-3-0)
This seminar is intended for advanced (post-M.A.) graduate students in sociology. It requires students to develop and submit a paper to an appropriate academic journal. The course takes students through the following steps: (1) final preparation of a manuscript, (2) pre-submission review, (3) selecting an appropriate journal, (4) submitting the paper, (5) reviewing process, (6) interpreting reviewers’ and editors’ comments, (7) revising the paper, and (8) re-submission.
73081. Graduate Teaching Seminar (3-3-0) The purpose of this course is to prepare graduate students in sociology for a career in teaching at colleges and universities. Course content includes treatment of practical concerns of teachers such as construction of a syllabus, selection of readings, composition of lectures, and grading of student performance. In addition, seminar time is devoted to discussion of larger issues, including the role of sociology in the liberal arts curriculum, the mission of teachers in the American professoriate, and the state of the academic labor market. A term project is required of all participants.

73082. Graduate Teaching Practicum (3-3-0) Supervised experience for graduate students in the teaching of undergraduate sociology. Enrollment normally is limited to those students who have taught one course on their own or who will be teaching such a course. The purpose is to contribute to the professional development of students.

76097. Directed Readings in Sociology (0-0-0) Reading and research on highly specialized topics that are immediately relevant to the student’s interests and that are not routinely covered in the regular curriculum.

76098. Directed Readings (0-0-0) Prerequisite: Departmental permission. Reading and research on highly specialized topics that are immediately relevant to the student’s interests and that are not routinely covered in the regular curriculum.

78599. Thesis Direction (0-0-0) Reserved for the six-credit-hour thesis requirement of the master’s degree.

78600. Nonresident Thesis Research (1-1-0) For master’s degree students.

73652. Sociology of Religion II (3-3-0) Contemporary empirical studies in the sociology of religion are examined. Current developments and movements of religious behavior are related to such issues as political action, family structure, economic actions, and leisure.

73905. Grant Writing for Social Sciences (3-3-0) This is an introductory graduate course in grant writing. The course will focus on fundamental aspects of grant writing: searching for funding, writing a proposal narrative, generating an effective budget, reviewing proposals, and managing your awarded grant. The course will examine the criteria for fundable projects in the social sciences and provide students with knowledge and tools for producing a successful grant application. Students will learn how to develop and market fundable project ideas, think about what funding agencies and reviewers are looking for, and write a fundable proposal. The ultimate course objective is to have students identify, write, and review (among their peers) grant proposals appropriate for the social sciences.

73910. Seminar in Theory and Social Psychology (3-3-0) A discussion of current theoretical approaches in sociological social psychology. Attention is paid to the interrelationship between macro sociological processes and the formation of self-identity. Application is made to contemporary interpretations of American culture.

73915. Advanced Theory Construction (3-3-0) Techniques of formalized theory building are covered, including axiomatic systems, causal models, and cybernetic systems. The course is based on principles in the philosophy of science and gives students experience in shaping the structural and linguistic features of the theories to be used in their dissertation research.

73917. Advanced Theory Seminar: Interpretation (3-3-0) Social theory, formerly more the province of sociologists, has come to the forefront of contemporary intellectual life for philosophers, literary critics, and others in the humanities. This seminar will be geared toward coming to terms with some of the principal issues and controversies animating contemporary theory, particularly the nature of signification and interpretation, and will reveal how much in the sociological tradition figures into these contemporary debates. We will explore the traditions of interpretation that form the basis for much contemporary social theory, including semiotics and semiosis, phenomenology, pragmatism, and interpretive sociology. Topics will include: What is the place of the act and of action/practice as a basis for interpretation? Are there natural bases for signification and social construction? What are the varieties of ways in which the self can be seen as a complex of signs, relativism, and objective interpretation?

73922. Event History Analysis (3-3-0) This course provides an in-depth introduction to event history analysis methods for analyzing change in discrete dependent variables. The course draws on methodological and empirical research from the social sciences. Special attention is given to the relationship between theories of social change, life-cycle processes, and dynamic models. The course begins by examining nonparametric discrete-time life table models and then turns to continuous-time discrete-state models for the analysis of hazard rates. Parametric and partially parametric models that allow for dependency of rates both on explanatory factors and time are introduced. Problems concerning censored data and competing risks are also addressed.

73975. Research Practicum (Ph.D.) (2-2-0) The aim of this research practicum is to assist second-year graduate students in writing their master’s theses. When practicum is taught as a two-semester course, this number is for Fall semester.

73976. Research Practicum (Ph.D.) (1-1-0) The aim of the research practicum is to assist graduate students in writing their dissertation proposals. When taught as a two-semester course, this course is taught in the spring semester.

98699. Research and Dissertation (1-0-0) For resident graduate students who have completed all course requirements for the Ph.D.

98700. Nonresident Dissertation Research (1-1-0) For non-resident graduate students who have completed all course requirements for the Ph.D.

Faculty
Joan Aldous, the William R. Kenan Jr. Professor of Sociology. B.S., Kansas State Univ., 1948; M.A., Univ. of Texas, 1949; Ph.D., Univ. of Minnesota, 1963. (1976)
Jorge A. Bustamante, the Eugene and Helen Conley Professor of Arts and Letters and Fellow in the Helen Kellogg Institute for International Studies. L.L.B., Centro Univ. Mexico, 1954; M.A., Univ. of Notre Dame, 1970; Ph.D., ibid., 1975. (1986)
Teaching and Research Faculty

The following list does not include regular faculty, only Teaching and Research Faculty for the academic year 2004–2005.

John H. Adams, Associate Professor of Biological Sciences
Asma AlFaruquddin, Associate Professor of Classics and Fellow in the Joan B. Kroc Institute for International Peace Studies
Sadhir Alki, Assistant Research Professor of Chemical and Biomolecular Engineering
Mark S. Alber, Professor of Mathematics
Joan Aldous, the William R. Kenan Jr. Professor of Sociology
Samuel Amago, Associate Professor of Spanish
Joseph P. Amar, Associate Professor of Classics and Concurrent Associate Professor of Theology
Karl Ameriks, the McMahon-Hank Professor of Philosophy and Fellow in the Nanovic Institute for European Studies
Robert L. Amico, Professor of Architecture
José Anadón, Professor of Spanish Language and Literature
D. Chris Anderson, Professor Emeritus of Psychology
Gary Anderson, Professor of Theology
Thomas Anderson, Assistant Professor of Spanish Language and Literature and Fellow in the Helen Kellogg Institute for International Studies
Panos J. Antsaklis, Director of the Center for Applied Mathematics, the H. C. and E. A. Brown Professor of Electrical Engineering, and Concurrent Professor of Computer Science and Engineering
R. Scott Appleby, John M. Regan, Jr. Director of the Joan B. Kroc Institute for International Peace Studies and Professor of History
Ani Aprahamian, Chair and Professor of Physics
Gerald B. Arnold, Professor of Physics
Peri E. Arnold, Professor of Political Science and Director of the Hesburgh Program in Public Service
J. Matthew Ashley, Director of Graduate Studies for Theology PhD Program, Associate Professor of Theology, and Fellow in the Center for Social Concerns
Hafiz Atassi, the Viola D. Hank Professor of Mechanical Engineering
David Aune, Professor of Theology
Louis J. Ayala, Assistant Professor of Political Science
Nicholas Ayo, C.S.C., Professor Emeritus in the Program of Liberal Studies
Brian Baker, Assistant Professor of Chemistry and Biochemistry
Kate Baldwin, Assistant Professor of English
Dinshaw Balsara, Assistant Professor of Physics
Albert-László Barabási, the Emil T. Hofman Professor of Physics
Charles E. Barber, the Michael P. Grace Professor of Arts and Letters and Associate Professor of Art, Art History, and Design
Sotirios A. Barber, Professor of Political Science
J. Eli Barkai, Assistant Professor of Chemistry and Biochemistry
Katrina D. Barron, Assistant Professor of Mathematics
Rev. Ernest J. Bartell, C.S.C., Professor Emeritus of Economics
Willis E. Bartlett, Associate Professor Emeritus of Psychology
Subhash Chandra Basu, Professor of Chemistry and Biochemistry
Stephen M. Batill, Chair and Professor of Aerospace and Mechanical Engineering
Peter H. Bauer, Professor of Electrical Engineering
Rev. Michael J. Baxter, C.S.C., Assistant Professor of Theology and Fellow in the Joan B. Kroc Institute for International Peace Studies
Timothy Bays, Assistant Professor of Philosophy
Edward N. Beatty, Associate Professor of History
Frederick S. Beckman, Professor Emeritus of Art, Art History, and Design
Gail Bederman, Associate Professor of History
Gary E. Belovsky, the Marion J. Gillen Director of UNDERS and Professor of Biological Sciences
Harvey A. Bender, Professor of Biological Sciences
David P. Bennett, Research Associate Professor of Physics
Cindy S. Bergeman, Chair and Associate Professor of Psychology
Doris L. Bergen, Associate Professor of History, Fellow in the Nanovic Institute for European Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Jeffrey H. Bergstrand, Professor of Finance and Business Economics, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Gary H. Bernstein, Associate Chair and Professor of Electrical Engineering
H. Gordon Berry, Professor of Physics
William B. Berry, Professor Emeritus of Electrical Engineering
Nora J. Besansky, Professor of Biological Sciences
Philip Bess, Director of Graduate Studies and Professor of Architecture
David M. Betson, Associate Professor of Economics
Kathleen A. Biddick, Professor of History and Fellow in the Nanovic Institute for European Studies
Deborah C. Biedel, Professor of Psychology
Ikaros I. Bigi, Professor of Physics
Alexander Blachly, Professor of Music
John Blacklow, Assistant Professor of Music
TEACHING AND RESEARCH FACULTY

Howard A. Blackstead, Professor of Physics
Patricia A. Blanchette, Director of Graduate Studies and Associate Professor of Philosophy
Rev. Thomas E. Blantz, C.S.C., Director of Undergraduate Studies and Professor of History
Joseph Blinkensop, the John A. O’Brien Professor Emeritus of Old Testament Studies
W. Martin Bloomer, Associate Professor of Classics
Joseph Bobik, Professor of Philosophy
Steve M. Boder, Assistant Professor of Psychology
Frank J. Bonello, Associate Professor of Economics
Mario Borelli, Associate Professor Emeritus of Mathematics
John G. Borkowski, Professor Emeritus of Old Testament Studies
Paul F. Bosco, Associate Professor Emeritus of Italian Language and Literature
Eileen Botting, Assistant Professor of Political Science
Rev. William A. Botzum, C.S.C., Professor Emeritus of Psychology
Maureen B. M.

Sheilah Brennan, Associate Professor Emerita of Philosophy
Joan F. Brennecke, the Koating-Crawford Professor of Chemical Engineering
Jay B. Brockman, Associate Professor of Computer Science and Engineering and Concurrent Associate Professor of Electrical Engineering
Jacqueline V. Brogan, Professor of English
Nyame Brown, Assistant Professor of Art, Art History, and Design
Seth N. Brown, Associate Professor of Chemistry and Biochemistry
Michael C. Brownstein, Associate Professor of East Asian Languages and Literatures
Gerald L. Bruns, the William P. and Hazel R. White Professor of English
Steven A. Buechler, Professor of Mathematics
Bruce A. Bunker, Professor of Physics
Karen L. Burzynska, Associate Professor of Music
Thomas G. Burish, Provost of the University
Peter C. Burns, Chair and the Henry J. Maxson Jr. Professor of Civil Engineering and Geological Sciences
Robert E. Burns, Professor Emeritus of History
Rev. David B. Burrell, C.S.C., the Theodore M. Hesburgh, C.S.C., Professor of Arts and Letters, Professor of Theology and Philosophy, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Joe B. Bustamante, the Eugene P. and Helen Conley Winifred Clark Professor of Biological Sciences
Surendar Chandra, Assistant Professor of Computer Science and Engineering
Hsueh-Chia Chang, the Bayer Corporation Professor of Chemical Engineering
Danny Z. Chen, Professor of Computer Science and Engineering
Peter Cholak, Professor of Mathematics
Daryl D. Christ, Adjunct Associate Professor of Biological Sciences and Associate Professor of Pharmacology (SBCME)
Kirsten M. Christensen, Assistant Professor of German and Russian Languages and Literatures
Kevin J. Christmann, Associate Professor of Sociology
Patricia Clark, the Clare Boothe Luce Assistant Professor of Biochemistry
Paul Cobb, Assistant Professor of History and Fellow in the Joan B. Kroc Institute for International Peace Studies
Robert R. Coleman, Associate Professor of Art, Art History, and Design and Research Specialist in the Medieval Institute
Rev. Austin I. Collins, C.S.C., Associate Professor of Art, Art History, and Design
Frank H. Collins, Director of the Center for Tropical Disease Research and Training and the George and Winifred Clark Professor of Biological Sciences
James M. Collins, Associate Professor of Film, Television, and Theatre and Concurrent Associate Professor of English
Kathleen A. Collins, Assistant Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Laura A. Carlson, Associate Professor of Psychology
Paolo G. Carozza, Associate Professor of Law, Fellow in the Nanovic Institute for European Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies
John Caruso, Assistant Professor of Art, Art History, and Design
Neal M. Cason, Professor of Physics
Francis J. Castellino, Dean Emeritus of Science, Director of the Keck Center for Translational Research, and the Kluever-Pesudov Professor of Biochemistry
John C. Cavadini, Chair and Associate Professor of Theology and Executive Director of the Institute for Church Life
William Gern, Professor Emeritus of Music
Susan D. Clarke, Assistant Professor of Social Work
Surendar Chandra, Assistant Professor of Computer Science and Engineering
Hsueh-Chia Chang, the Bayer Corporation Professor of Chemical Engineering
Danny Z. Chen, Professor of Computer Science and Engineering
Peter Cholak, Professor of Mathematics
Daryl D. Christ, Adjunct Associate Professor of Biological Sciences and Associate Professor of Pharmacology (SBCME)
Kirsten M. Christensen, Assistant Professor of German and Russian Languages and Literatures
Kevin J. Christmann, Associate Professor of Sociology
Patricia Clark, the Clare Boothe Luce Assistant Professor of Biochemistry
Paul Cobb, Assistant Professor of History and Fellow in the Joan B. Kroc Institute for International Peace Studies
Robert R. Coleman, Associate Professor of Art, Art History, and Design and Research Specialist in the Medieval Institute
Rev. Austin I. Collins, C.S.C., Associate Professor of Art, Art History, and Design
Frank H. Collins, Director of the Center for Tropical Disease Research and Training and the George and Winifred Clark Professor of Biological Sciences
James M. Collins, Associate Professor of Film, Television, and Theatre and Concurrent Associate Professor of English
Kathleen A. Collins, Assistant Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies

TEACHING AND RESEARCH FACULTY

Oliver M. Collins, Professor of Electrical Engineering
Philippe A. Collon, Assistant Professor of Physics
Ayo Abiétou Coly, Assistant Professor of French Language and Literature and Fellow in the Nanovic Institute for European Studies
Barbara Connolly, Assistant Professor of Political Science, Fellow in the Joan B. Kroc Institute for International Peace Studies, and Fellow in the Nanovic Institute for European Studies
Francis X. Connolly, Professor of Mathematics
Rev. Michael E. Connors, C.S.C., Director of M.Div. Program and Assistant Professor of Theology
Olivia R. Constable, Director of Graduate Studies and Professor of History
Michael Coppedge, Associate Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Nanovic Institute for European Studies
Thomas C. Corke, Director of Herrett Laboratory for Aerospace Research and the Clark Equipment Professor of Aerospace and Mechanical Engineering
Alexandra Corning, Assistant Professor of Psychology
Edmundo Corona, Associate Professor of Aerospace and Mechanical Engineering
Daniel J. Costello, the Leonard Bettes Professor of Electrical Engineering
Donald P. Costello, Professor Emeritus of English
Laura A. Crago, Assistant Professor of History and Fellow in the Nanovic Institute for European Studies
Craig J. Cramer, Professor of Music
Charles Craypo, Professor Emeritus of Economics
Xavier Creary, the Charles L. Huisking Sr. Professor of Chemistry and Biochemistry
John T. Croteau, Professor Emeritus of Economics
Michael J. Crowe, the Rev. John J. Cavanaugh, C.S.C., Professor Emeritus of the Humanities, Professor of Liberal Studies and Concurrent Professor Emeritus of History
Norman A. Crowe, Professor of Architecture
Charles R. Crowell, Director of the Computer Applications Program and Associate Professor of Psychology
E. Mark Cummings, Professor and the Notre Dame Endowed Chair in Psychology, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Lawrence S. Cunningham, the John A. O'Brien Professor of Theology
Mary Rose D'Angelo, Associate Professor of Theology
Crisilyn D'Souza-Schroyer, the Walther Cancer Institute Assistant Professor of Biological Sciences
Rev. Brian Daley, S.J., the Catherine F. Huisking Professor of Theology
Fred R. Dallmayr, the Packey J. Dee Professor of Political Science, Professor of Philosophy, Fellow in the Helen Kellogg Institute for International Studies, Fellow in the Nanovic Institute for European Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies
John Darby, Professor of Comparative Ethnic Studies
Fabio B. DaSilva, Professor Emeritus of Sociology
Marian A. David, Professor of Philosophy
William E. Dawson, Associate Professor of Psychology
Jeanne D. Day, Professor of Psychology
Seamus Deane, the Donald and Marilyn Keough Professor of Irish Studies and Professor of English
Cornelius F. Delaney, Professor of Philosophy
Joann Delanceva, Associate Professor of French and Comparative Literature
Michael R. De Paul, Professor of Philosophy
John E. Derwent, Associate Professor Emeritus of Mathematics
Vincent P. DeSantis, Professor Emeritus of History
Michael Detlefsen, Professor of Philosophy
Victor Deupi, Assistant Professor of Architecture
Jean A. Dibble, Director of Graduate Studies and Associate Professor of Art, Art History, and Design
Jeffrey Diller, Associate Professor of Mathematics
Mary Doak, Assistant Professor of Theology
Malgorzata Dobrowolska-Furdyna, Director of Undergraduate Studies and Professor of Physics
Bernard E. Doering, Professor Emeritus of French Language and Literature
Jay P. Dolan, Professor Emeritus of History
Margaret Doody, Director of the Ph.D. Program in Literature and the John and Barbara Glynn Family Professor of Literature
Dennis P. Doordan, Professor of Architecture and Chair and Concurrent Professor of Art, Art History, and Design
James P. Dougherty, Professor Emeritus of English
Julia V. Douthwaite, Assistant Provost for International Studies, Professor of French Language and Literature, and Fellow in the Nanovic Institute for European Studies
Paul A. Down, Associate Professor of Art, Art History, and Design
Alan K. Dowry, Professor Emeritus of Political Science and Fellow in the Joan B. Kroc Institute for International Peace Studies
Thomas L. Doyle, Academic Director of ACE and Director of the Master of Education Program
Rev. Michael S. Driscoll, Associate Professor of Theology
John Duffy, Assistant Professor of English and Director, University Writing Center
John G. Duman, the Martin J. Gillen Professor of Biological Sciences
Stephen D. Dumont, Associate Professor of Philosophy
Patrick F. Dunn, Professor of Aerospace and Mechanical Engineering
Rev. John S. Dunne, C.S.C., the John A. O’Brien Professor of Catholic Theology
Amitava K. Dutt, Professor of Economics
Lawrence Dwyer, Associate Professional Specialist in Music
William G. Dwyer, Chair and the William J. Hank Family Professor of Mathematics
Ken Dye, Director of Bands and Professor of Music
Matthew J. Dyer, Associate Professor of Mathematics
Kathleen M. Eberhard, Assistant Professor of Psychology
Richard Economakis, Associate Professor of Architecture
Rev. Virgilio Elizondo, Visiting Professor of Latino Studies, Associate Director of Latino Theology and Pastoral Concerns, and Fellow in the Helen Kellogg Institute for International Studies
Kent Emery Jr., Professor in the Program of Liberal Studies and Fellow in the Medieval Institute
Morten R. Eskildsen, Assistant Professor of Physics
Samuel Evens, Associate Professor of Mathematics
Stephen M. Fallon, Associate Professor of Liberal Studies and Concurrent Associate Professor of English
TEACHING AND RESEARCH FACULTY

Andrew Farley, Director of the Spanish Language Program and Assistant Professor of Spanish Language and Literature

Patrick J. Fay, Assistant Professor of Electrical Engineering

Leonid Faybusovich, Professor of Mathematics

Jeffrey Feder, Associate Professor of Biological Sciences

Thomas P. Fehlner, Associate Chair of Chemistry and Biochemistry and the Grace-Rupley Professor of Chemistry

Jeremy B. Fein, Director of the Environmental Molecular Science Institute and Professor of Civil Engineering and Geological Sciences

Michael T. Ferdig, Assistant Professor of Biological Sciences

Barbara J. Fick, Associate Professor of Law and Fellow in the Joan B. Kroc Institute for International Peace Studies

Robert M. Fishman, Associate Professor of Sociology, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Nanovic Institute for European Studies

Rev. James F. Flanigan, C.S.C., Associate Professor of Art, Art History, and Design

Thomas P. Flint, Director of the Center for Philosophy of Religion and Professor of Philosophy

Patrick J. Flynn, Professor of Computer Science and Engineering

Christopher Fox, Director of the Keough Institute for Irish Studies, Professor of English and Chair of Irish Language and Literature

Michael J. Francis, Director of the Latin America Area Studies Program, Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies

Mary E. Fransen, Associate Professor of Music

Paul Franks, Assistant Professor of Philosophy

Malcolm J. Fraser Jr., Professor of Biological Sciences

Stefan G. Frandsen, Professor of Physics

Alfred J. Freedman, Professor of Philosophy

Stephen A. Freedman, Chair and Professor of English

Dolores Warwick Frese, Professor of English

Thomas E. Fuja, Director of Graduate Studies and Professor of Electrical Engineering

Jacek K. Furdyna, the Aurora and Tom Marquez Professor of Physics and Fellow in the Nanovic Institute for European Studies

Abbott Astrid L. Gabriel, Director of the Frank M. Fidano Ambrosiana Microfilm and Photograph Collection and Professor Emeritus of Medieval Studies

Rev. Patrick D. Gaffney, C.S.C., Associate Professor of Anthropology, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies

Umesh Garg, Professor of Physics

Peter M. Garmavich, Associate Professor of Physics

Liangyan Ge, Associate Professor of East Asian Languages and Literatures

Michael Gekhtman, Associate Professor of Mathematics

Sonia G. Gernes, Professor Emerita of English

Stephen Ellis Gersh, Professor of Medieval Studies

J. Daniel Gezelter, Assistant Professor of Chemistry and Biochemistry

Teresa Ghilarducci, Director of the Higgins Labor Research Center, Associate Professor of Economics, Fellow in the Nanovic Institute for European Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies

Luke Gibbons, the Grace Director of Irish Studies, the Keough Family Professor of Irish Studies, Professor of English, and Concurrent Professor of Film, Television, and Theatre

Bradley S. Gibson, Associate Professor of Psychology

Meredith Gill, Assistant Professor of Art, Art History, and Design

Philip Gleason, Professor Emeritus of History

Edward A. Goerner, Professor Emeritus of Political Science

Abraham Goetz, Associate Professor Emeritus of Mathematics

Dawn M. Gondoli, Director of Graduate Studies and Associate Professor of Psychology

Holly V. Goodson, Assistant Professor of Chemistry and Biochemistry

J. William Goodwine, Associate Professor of Aerospace and Mechanical Engineering

Rev. Charles Gordon, C.S.C., Assistant Professor of Theology

Andrew C. Gould, Associate Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Nanovic Institute for European Studies

Robert D. Goulding, Assistant Professor in the Program of Liberal Studies

Denis A. Goulet, the William and Dorothy O'Neill Professor in Education for Justice, Professor Emeritus of Economics, and Fellow in the Joan B. Kroc Institute for International Peace Studies

Anna Gousiou, Assistant Professor of Physics

Richard Gray, Associate Professor of Art, Art History, and Design

Barbara J. Green, Associate Professor of English

Stuart Greene, the O'Malley Director of the First-year Composition Program and Associate Professor of English

John Griffin, Assistant Professor in Political Science

Paul R. Grimstad, Assistant Chair and Associate Professor of Biological Sciences

Alexandra Guisinger, Assistant Professor of Political Science

Li Guo, Assistant Professor of Classics

Matthew Gursky, Director of Undergraduate Studies and Professor of Mathematics

Sandor Gustafson, Director of Graduate Studies and Associate Professor of English

Gary M. Gutting, the Notre Dame Professor of Philosophy and Fellow in the Nanovic Institute for European Studies

David S. Hachen Jr., Associate Professor of Sociology

Martin Haenggi, Assistant Professor of Electrical Engineering

Jan-Lüder Hagen, Assistant Professor of German and Russian Languages and Literatures and Fellow in the Nanovic Institute for European Studies

Kristin M. Hager, Assistant Professor of Biological Sciences

Frances Hagopian, the Michael Grace III Associate Professor of Latin American Studies and Fellow in the Joan B. Kroc Institute for International Peace Studies

Alexander J. Hahn, Director of the Kaneb Center for Teaching and Learning, Professor of Mathematics, and Fellow in the Nanovic Institute for European Studies

Ethan T. Haimo, Director of Graduate Studies and Professor of Music

Brian Hall, Associate Professor of Mathematics

TEACHING AND RESEARCH FACULTY

Encarnación Juárez, Assistant Professor of Spanish Language and Literature
Eric J. Jumper, Professor of Aerospace and Mechanical Engineering
S. Alex Kandel, Assistant Professor of Chemistry and Biochemistry
Jeffrey C. Kantor, Vice President for Graduate Studies and Research, Dean of the Graduate School, and Professor of Chemical and Biomolecular Engineering
Ahsan Kareem, the Robert M. Mann Professor of Civil Engineering and Geological Sciences
M. Cathleen Kaveny, the John P. Murphy Foundation Professor of Law and Professor of Theology
Anita E. Kelly, Professor of Psychology
Thomas P. Kelly, Assistant Professor of Philosophy
Barbara Kenda, Assistant Professor of Architecture
Rev. Robert Lee Kerby, Associate Professor Emeritus of History
Lloyd H. Ketchum Jr., Associate Professor of Civil Engineering and Geological Sciences
Mary M. Keys, Assistant Professor of Political Science
Tracy Kijewski-Correa, the Rooney Family Assistant Professor of Civil Engineering and Geological Sciences
Irene J. Kim, Assistant Professor of Psychology
Kwan Suk Kim, Professor of Economics
Douglas Kinsey, Professor Emeritus of Art
David J. Kirkner, Associate Professor of Civil Engineering and Geological Sciences
David M. Klein, Director of Graduate Studies and Associate Professor of Sociology
Edward A. Kline, Professor Emeritus of English
Julia F. Knight, Director of Graduate Studies and the Charles L. Huisking Professor of Mathematics
Francis M. Kobayashi, Assistant Vice President Emeritus for Research and Professor Emeritus of Aerospace and Mechanical Engineering
Peter M. Kogge, the Ted H. McCourtney Professor of Computer Science and Engineering
James J. Kolata, Professor of Physics
Christopher F. Kolda, Associate Professor of Physics
Paul V. Kollman, Assistant Professor of Theology and Fellow in the Joan B. Kroc Institute for International Peace Studies
Donald P. Kommers, the Joseph and Elizabeth Robbie Professor of Political Science, Concurrent Professor of Law, and Fellow in the Nanovic Institute for European Studies
Thomas H. Kolos, Associate Professor of Electrical Engineering
Janet Kourany, Associate Professor of Philosophy
Robert A. Kriebel, Professor of Theology and Fellow in the Nanovic Institute for European Studies
Theresa M. Krier, Associate Professor of English
William J. Krier, Associate Professor of English
Brian Kromenhoek, Associate Professor of Classics
Thomas A. Kuo, Professor of History and Fellow in the Nanovic Institute for European Studies
Greg P. Kuczich, Professor of English
Charles F. Kulpa Jr., Chair and Professor of Biological Sciences
M. Kenneth Kuno, Assistant Professor of Chemistry and Biochemistry
Yahya C. Kurama, Director of Graduate Studies and Associate Professor of Civil Engineering and Geological Sciences
David J. Ladouceur, Associate Professor of Classics
Rev. John Lahey, C.S.C., Associate Professional Specialist in Theology
Richard A. Lamanna, Associate Professor Emeritus of Sociology
Gary A. Lamberti, Director of Graduate Studies, Assistant Chair, and Professor of Biological Sciences
Larry O. Lamm, Research Associate Professor of Physics
Jesse M. Landet, Assistant Professor of English
J. Nicholas Laneman, Assistant Professor of Electrical Engineering
Michael Lapidge, Professor Emeritus of English
A. Graham Lappin, Professor of Chemistry and Biochemistry
Kenneth R. Laufer, Professor Emeritus of Civil Engineering and Geological Sciences
Eugene J. Leahy, Professor Emeritus of Music
William H. Leahy, Professor of Economics
Felicia B. LeClerc, Director of the Laboratory for Social Research, Associate Professor of Sociology, and Fellow in the Center for Social Concerns
John Paul Lederach, Professor of International Peacebuilding
François Ledrappier, the John and Margaret McAndrew Professor of Mathematics
Byung-Joo Lee, Associate Professor of Economics
Lawrence H. N. Lee, Professor Emeritus of Aerospace and Mechanical Engineering
David C. Leese, Professor Emeritus of Political Science
David T. Leighton Jr., Professor of Chemical and Biomolecular Engineering
Michael D. Lemmon, Professor of Electrical Engineering
Craig S. Lent, the Frank M. Freimann Professor of Electrical Engineering
Blake Leyerle, Associate Professor of Theology and Concurrent Associate Professor of Classics
Lei Li, Associate Professor of Biological Sciences
Keir Lieber, Assistant Professor of Political Science and Fellow in the Joan B. Kroc Institute for International Peace Studies
Marya Lieberman, Associate Professor of Chemistry and Biochemistry
Sylvia Li-Chun Lin, Assistant Professor of East Asian Languages and Literatures
Daniel A. Lindley III, Assistant Professor of Political Science and Fellow in the Joan B. Kroc Institute for International Peace Studies
XiaoBo Liu, Associate Professor of Mathematics
A. Eugene Livingston, Professor of Physics
David M. Lodge, Professor of Biological Sciences and Fellow in the Joan B. Kroc Institute for International Peace Studies
George A. Lopez, Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Director of Policy Studies and Fellow in the Joan B. Kroc Institute for International Peace Studies
Martina Lopez, Associate Professor of Art, Arts History, and Design
Robert J. Lordi, Professor Emeritus of English
John M. Losecco, Professor of Physics
Michael J. Loux, the George N. Shuster Professor of Philosophy
Gitta H. Lubke, Assistant Professor of Psychology
John W. Lucey, Associate Professor Emeritus of Aerospace and Mechanical Engineering
TEACHING AND RESEARCH FACULTY

Semion Lyandres, Assistant Professor of History and Fellow in the Nanovic Institute for European Studies

Michael N. Lykoudis, Professor and Dean of the School of Architecture

Sabine G. MacCormack, the Rev. Theodore M. Hesburgh, C.S.C., Professor of Arts and Letters

Alasdair MacIntyre, Senior Research Professor of Philosophy

Louis A. MacKenzie Jr., Associate Professor of French Language and Literature

Gregory R. Maday, Director of Graduate Studies, Professional Specialist, and Concurrent Associate Professor of Computer Science and Engineering

Edward J. Maginn, Associate Professor of Chemical and Biomolecular Engineering

Cynthia Mahood, Director of Graduate Studies in Peace Studies and Associate Professor of Anthropology

Scott P. Mainwaring, Director of the Helen Kellogg Institute for International Studies, the Eugene and Helen Conley Professor of Political Science, and Fellow in the Joan B. Kroc Institute for International Peace Studies

Bradley J. Malkovsky, Associate Professor of Theology

Rev. Edward A. Malloy, C.S.C., Professor of Theology

Rev. Patrick H. Maloney, C.S.C., Associate Professor Emeritus of Music

A. Edward Manier, Professor of Philosophy

Jill Mann, Professor Emerita of English

Dino Marcantonio, Assistant Professor of Architecture

Joseph P. Marino, the William K. Warren Dean of the College of Science and Professor of Chemistry

Nelson C. Mark, the Alfred C. DeGrane Professor of International Studies and Fellow in the Helen Kellogg Institute for International Studies

Jerry J. Marley, Associate Professor Emeritus of Civil Engineering and Geological Sciences

George M. Marsden, the Francis A. McAnaney Professor of History

Lawrence C. Marsh, Associate Professor of Economics

Julia Marvin, Assistant Professor in the Program of Liberal Studies

James J. Mason, Associate Professor of Aerospace and Mechanical Engineering

Cecil B. Mast, Associate Professor Emeritus of Mathematics

Grant J. Mathews, Director of the Center for Astrophysics and Professor of Physics

Timothy Matovina, Director of the Charles and Margarett Hall Cashin Center for the Study of American Catholicism and Associate Professor of Theology

John E. Matthias, Professor Emeritus of English

Sarah Maurer, Assistant Professor of English

Patricia A. Maurice, Director of the Center for Environmental Science and Technology and Professor of Civil Engineering and Geological Sciences

Scott E. Maxwell, the Matthew A. Fitzsimons Professor of Psychology

Elizabeth Forbes Mazurek, Associate Professor of Classics

A. James McAdams, Director of the Nanovic Institute for European Studies, the William M. Scholl Professor of International Affairs, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies

Rev. Richard P. McBrein, the Crowley-O’Brien Professor of Theology

Sheridan P. McCabe, Associate Professor Emeritus of Psychology

Stuart T. McComas, Professor Emeritus of Aerospace and Mechanical Engineering

Mark J. McCready, Chair and Professor of Chemical and Biomolecular Engineering

Mary Ann McDowell, Assistant Professor of Biological Sciences

Paul J. McGinn, Director of the Center for Molecularly Engineered Materials and Professor of Chemical and Biomolecular Engineering

Rev. James J. McGrath, C.S.C., Assistant Chair and Associate Professor of Biological Sciences

John McGreevy, Chair and the Rev. John A. O’Brien Professor of History

Ralph M. McInerny, the Michael P. Grace Professor of Medieval Studies

Gerald McKenny, Director of the Reilly Center for Science, Technology, and Values and Associate Professor of Philosophy

Sarah McEldowney, Assistant Professor of Classics

Vaughn R. McKim, Associate Professor of Philosophy

Christopher A. McLaren, Assistant Professor of Classics

Rev. Ernan McMullin, the John Cardinal O’Hara Professor Emeritus of Philosophy

George McNinch, Assistant Professor of Mathematics

Peter T. G. McQuillan, Associate Professor of Classics and Concurrent Associate Professor in the Keough Institute for Irish Studies

Rory M. McVeigh, Assistant Professor of Sociology

Naomi M. Meara, the Nancy Reeves Drexel Professor Emerita of Psychology

John Meier, the William K. Warren Professor of Catholic Theology

Dan Meisel, Professor of Chemistry and Biochemistry

Juan Mendez, Professor of Law, Director of the Center for Civil and Human Rights, and Fellow in the Helen Kellogg Institute for International Studies

Orlando Menes, Assistant Professor of English

Thomas V. Merluzzi, Professor of Psychology

Rev. Leon Mertenssoto, C.S.C., Associate Professor of Theology

James L. Mertz, the Frank M. Freimann Professor of Electrical Engineering

Anthony M. Messina, Associate Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Nanovic Institute for European Studies

Anthony N. Michel, the Frank M. Freimann Professor Emeritus of Engineering

Juan C. Migliore, Professor of Mathematics

Albert E. Miller, Professor of Chemical and Biomolecular Engineering

Marvin J. Miller, Chair of Chemistry and Biochemistry and the George and Winifred Clark Professor of Chemistry

Philip E. Mirowski, the Carl E. Koch Professor of Economics

Rev. Wilson D. Miscamble, C.S.C., Associate Professor of History

Gerard K. Misiolek, Associate Professor of Mathematics

Shahriar Mobashery, the Navari Professor of Chemistry and Biochemistry

Christian R. Moews, Associate Professor of Italian Language and Literature

Peter R. Moody Jr., Professor of Political Science

Patrick J. Mooney, Visiting Research Assistant Professor of Physics

Scott C. Morris, Assistant Professor of Aerospace and Mechanical Engineering

Lenny Moss, Assistant Professor of Philosophy

Thomas J. Mueller, the Roth-Gibson Professor of Aerospace Engineering
TEACHING AND RESEARCH FACULTY

Dian Hechtner Murray, Professor of History
Daniel J. Myers, Chair and Professor of Sociology and Fellow in the Joan B. Kroc Institute for International Peace Studies
Darcia Narvaez, Associate Professor of Psychology
Clive R. Neal, Associate Professor of Civil Engineering and Geological Sciences
Victor W. Nee, Professor Emeritus of Aerospace and Mechanical Engineering
Robert C. Nelson, Professor of Aerospace and Mechanical Engineering
Robert Nerenberg, Assistant Professor of Civil Engineering and Geological Sciences
Kathie E. Newman, Director of Graduate Studies and Professor of Physics
Rev. Jerome Neyrey, S.J., Professor of Theology
Martin L. Nguyen C.S.C., Associate Professor of Art, Art History, and Design
Walter J. Nieminski, Professor in the Program of Liberal Studies and Concurrent Professor of Political Science
David P. Nicholls, Assistant Professor of Mathematics
Lewis E. Nicholson, Associate Professor Emeritus of English
Liviu Nicolaescu, Associate Professor of Mathematics
Glen Niebur, Assistant Professor of Aerospace and Mechanical Engineering
Thomas F. X. Noble, the Robert M. Conway Director of the Medieval Institute and Professor of History
Maura Bridget Nolan, Assistant Professor of English
Carolyn R. Nordstrom, Associate Professor of Anthropology, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Robert E. Norton, Chair of German and Russian Languages and Literatures, Professor of German, and Fellow in the Nanovic Institute for European Studies
Thomas L. Nowak, Professor of Chemistry and Biochemistry
Walter Nugent, the Andrew V. Tackes Professor Emeritus of History
Katherine O’Brien-O’Keefe, the Notre Dame Professor of English
Breandán Ó Buachalla, the Thomas and Kathleen O’Donnell Professor of Irish Language and Literature
Rev. Marvin R. O’Connell, Professor Emeritus of History
David K. O’Connor, Associate Professor of Philosophy and Concurrent Associate Professor of Classics
Guillermo O’Donnell, the Helen Kellogg Professor of Political Science and Fellow in the Helen Kellogg Institute for International Studies,
Aiden O’Leary, Assistant Professor of History
John F. O’Malley, Acting Director of the South Bend Center for Medical Education and Adjunct Associate Professor of Biological Sciences
Rev. Thomas F. O’Meara, O.P., the William K. Warren Professor Emeritus of Theology
Timothy O’Meara, Provost Emeritus of the University and the Rev. Howard J. Kenna, C.S.C., Professor Emeritus of Mathematics
Cyril O’Regan, the Charles L. Huisking Professor of Theology
William A. O’Rourke, Director of Graduate Studies in Creative Writing and Professor of English
Joseph E. O’Toole, Professor of Biological Sciences
Maria Rosa Olivera-Williams, Associate Professor of Spanish Language and Literature
Emily L. Osborn, Assistant Professor of History, Fellow in the Joan B. Kroc Institute for International Peace Studies, and Fellow in the Helen Kellogg Institute for International Studies
Agnes E. Ostafin, Assistant Professor of Chemical and Biomolecular Engineering
Richard Otter, Professor Emeritus of Mathematics
Timothy C. Ovaert, Professor of Aerospace and Mechanical Engineering
Rev. Hugh Rowland Page Jr., Director of the Program in African and African American Studies and Associate Professor of Theology
Paloma Pajares, Associate Professor of Architecture
Andre F. Palmer, Assistant Professor of Chemical and Biomolecular Engineering
Samuel Paolucci, Professor of Aerospace and Mechanical Engineering
Catherine Perry, Associate Professor of French Language and Literature and Fellow in the Nanovic Institute for European Studies
James S. Phillips, Assistant Professor Emeritus of Music
J. Daniel Philpott, Associate Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Director of Undergraduate Studies in Peace Studies
Richard B. Pierce, the Carl E. Koch Assistant Professor of History, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Mark C. Pilkinson, Professor of Film, Television, and Theatre
Vibha Pinglé, Assistant Professor of Sociology and Fellow in the Helen Kellogg Institute for International Studies
Alvin Plantinga, the John A. O’Brien Professor of Philosophy
Carolyn R. Plummer, Associate Professor of Music
Claudia Polini, Associate Professor of Mathematics
Barth Pollak, Professor Emeritus of Mathematics
Rev. Mark Poorman, C.S.C., Vice President for Student Affairs and Associate Professor of Philosophy
Donald Pope-Davis, Associate Vice President for Graduate Studies, Associate Dean of the Graduate School, Professor of Psychology, Director of McNair Program, Fellow in the Center for Social Concerns, Fellow in the Joan B. Kroc Institute for International Peace Studies, and Fellow in the Institute for Educational Initiatives
Wolfgang Porod, Director of the Center for Nano Science and Technology and the Frank M. Freimann Professor of Electrical Engineering
Dean A. Porter, Director Emeritus of the Notre Dame Museum of Art and Professor of Art, Art History, and Design
Jean Porter, the John A. O’Brien Professor of Moral Theology
Joseph M. Powers, Associate Professor of Aerospace and Mechanical Engineering
Vera B. Proft, Professor of German and Russian Languages and Literatures
Thomas Prügl, Associate Professor of Theology
Lisa A. Pruitt, the Voila D. Hank Professor of Aerospace and Mechanical Engineering
Kathleen A. Pyne, Director of the Gender Studies Program and Professor of Art, Art History, and Design
Philip L. Quinn, the John A. O’Brien Professor of Philosophy
Benjamin F. Raddil, Director of Graduate Studies and Professor of Political Science
Gabriel A. Radavansky, Associate Professor of Psychology
James J. Rakowski, Associate Professor of Economics
Tariq Ramadan, Luce Professor of Religion, Conflict, and Peacebuilding in Peace Studies
William M. Ramsey, Associate Professor of Philosophy
TEACHING AND RESEARCH FACULTY

Kali P Rath, Director of Graduate Studies and Associate Professor of Economics
Paul A. Rathburn, Associate Professor Emeritus of English
Francis H. Raven, Professor Emeritus of Aerospace and Mechanical Engineering
Michael C. Rea, Associate Professor of Philosophy
Rev. Herman Reith, C.S.C., Associate Professor Emeritus of Philosophy
John E. Renaud, Director of Graduate Studies and Professor of Aerospace and Mechanical Engineering
Georgine Restick, Associate Professor of Music
Terrence W. Rettig, Professor of Physics
Gretchen J. Reydams-Schils, Associate Professor in the Program of Liberal Studies and Fellow in the Nanovic Institute for European Studies
Robin F. Rhodes, Associate Professor of Art, Art History, and Design and Concurrent Associate Professor of Classics
J. Keith Rigby Jr., Associate Professor of Civil Engineering and Geological Sciences
Rev. James A. Rigert, C.S.C., Associate Professor Emeritus of Civil Engineering and Geological Sciences
John H. Robinson, Director of the Thomas J. White Center for Law and Government, Associate Fellow in the Law School, and Concurrent Assistant Professor of Law and Philosophy
Mark W. Rocha, the J. A. O'Shaughnessy Dean of Arts and Letters, the Rev. Edmund P. Joyce, C.S.C., Professor of German Language and Literature, and Concurrent Professor of Philosophy
Robert E. Rodes, the Paul J. Schiefler/Howard Corporation Professor of Legal Ethics and Professor of Law
Jamie Javier Rodriguez, Assistant Professor of English
Ryan K. Roeder, Assistant Professor of Aerospace and Mechanical Engineering
Jeanne Romero-Severson, Associate Professor of Biological Sciences
L. John Roos, Professor of Political Science
Jaime Rox, Professor of Economics
Charles M. Rosenberg, Professor of Art, Art History, and Design
Joachim J. Rosenthal, Professor of Mathematics and Concurrent Professor of Electrical Engineering
David F. Ruccio, Associate Professor of Economics
Randal C. Ruchti, Professor of Physics
Steven T. Ruggiero, Professor of Physics
Fred Rush, Assistant Professor of Philosophy
Maura A. Ryan, Associate Provost of the University and Associate Professor of Theology
Colleen Ryan-Scheutz, Assistant Professor of Italian
Michael K. Sain, the Frank M. Freimann Professor of Electrical Engineering
Susan E. H. Sakimoto, Assistant Professor of Civil Engineering and Geological Sciences
Lynne Ann Salvati, the Clare Booth Luce Assistant Professor of Civil Engineering and Geological Sciences
Victoria D. L. Sanford, Assistant Professor of Anthropology and Fellow in the Helen Kellogg Institute for International Studies
John Francisco Dos Santos, Professor Emeritus of Psychology
Jonathan R. Sapirstein, Professor of Physics
Ken D. Sauer, Associate Professor of Electrical Engineering
Valerie Sayers, Professor of English
Kenneth M. Sayre, Professor of Philosophy
Lambert Schaelicke, Assistant Professor of Computer Science and Engineering
W. Robert Schecht, the William K. Warren Professor of Chemistry and Biochemistry
Matthias Scheutz, Assistant Professor of Computer Science and Engineering
Catherine M. Schlegel, Associate Professor of Classics
Thomas J. Schlereth, Professor of American Studies and Concurrent Professor of History
Steven R. Schmidt, Associate Professor of Aerospace and Mechanical Engineering
Roger A. Schmitz, the Keating-Crawford Professor of Chemical Engineering
Jeffrey S. Schoenly, Assistant Professor of Biological Sciences
Rev. Timothy R. Scully, C.S.C., Professor of Political Science, Fellow in the Helen Kellogg Institute for International Studies, and Fellow in the Nanovic Institute for European Studies
Alan C. Seabourgh, Professor of Electrical Engineering
Dubreil Sébastien, Assistant Professor of French Language and Literature
Robert Sedlack, Assistant Professor of Art, Art History, and Design
Dayle Seidenspinner-Núñez, Professor of Spanish Language and Literature
Lili I. Selden, Assistant Professor of East Asian Languages and Literatures
Mihir Sen, Professor of Aerospace and Mechanical Engineering
Esther-Mirjam Sent, Associate Professor of Economics
Anthony S. Serianni, Professor of Chemistry and Biochemistry
David W. Severson, Professor of Biological Sciences
Slavi C. Sevov, Professor of Chemistry and Biochemistry
Paul E. Shanley, Associate Professor of Physics
Mei-Chi Shaw, Professor of Mathematics
Neil F. Shay, Associate Professor of Biological Sciences
Daniel J. Sheerin, Director of Graduate Studies in Early Christian Studies, Professor of Classics and Concurrent Professor of Theology
Dinah L. Shelton, Professor of Law and Fellow in the Helen Kellogg Institute for International Studies
William D. Shephard, Professor of Physics
Susan Guise Sheridan, the F. J. and H. M. O'Neill II Associate Professor of Anthropology
Kristin Shrader-Freechette, the F. J. and H. M. O'Neill Professor of Philosophy, Concurrent Professor of Biological Sciences, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Michael Sigal, the Rev. Howard J. Kenna, C.S.C., Memorial Professor of Mathematics
Rabbi Michael A. Signer, the Abrams Professor of Jewish Thought and Culture and Fellow in the Nanovic Institute for European Studies
David Sikkink, Assistant Professor of Sociology and Fellow in the Institute for Educational Initiatives
Stephen E. Silliman, Professor of Civil Engineering and Geological Sciences and Fellow in the Center for Social Concerns
David Singer, Assistant Professor of Political Science
Naunihal Singh, Assistant Professor of Political Science
Steven B. Skara, Professor of Aerospace and Mechanical Engineering
Roger B. Skurski, Professor Emeritus of Economics
Thomas P. Slaughter, the Andrew V. Tackes Professor of History

Jennifer L. Warlick, Chair and Associate Professor of Economics and Policy Studies
Stephen H. Watson, Professor of Philosophy
Joseph P. Wawrykow, Associate Professor of Theology
Mitchell R. Wayne, Associate Dean of the College of Science and Professor of Physics
J. Robert Wegs, Professor of History and Fellow in the Helen Kellogg Institute for International Studies
Andrew J. Weigert, Professor of Sociology and Fellow in the Joan B. Kroc Institute for International Peace Studies
Rev. Charles Weiher, C.S.C., Assistant Professor Emeritus of Philosophy
Paul J. Weithman, Chair and Professor of Philosophy
Michael R. Welch, Associate Professor of Sociology
John P. Welle, Professor of Italian Language and Literature, Concurrent Professor of Film, Television, and Theatre, and Fellow in the Nanovic Institute for European Studies
Christopher J. Welna, Executive Director of the Kellogg Institute for International Studies, Director of Latin American Studies, and Concurrent Assistant Professor of Political Science
Joellen J. Welsh, Professor of Biological Sciences
Thomas A. Werge, Professor of English and Concurrent Professor in the Master of Education Program
Robert L. West, Assistant Professor of Psychology
Joannes J. Westerink, Associate Professor of Civil Engineering and Geological Sciences
Carroll William Westfall, the Frank Montana Professor of Architecture
Thomas L. Whitman, Professor of Psychology
Todd D. Whitmore, Associate Professor of Theology and Fellow in the Joan B. Kroc Institute for International Peace Studies
Michael C. F. Wiescher, the Frank M. Freimann Professor of Physics
Olaf Guenter Wiest, Associate Professor of Chemistry and Biochemistry
Charles K. Wilber, Professor Emeritus of Economics
E. Bruce Williams, Professor of Mathematics
Richard A. Williams, Associate Professor of Sociology
Rev. Oliver F. Williams, C.S.C., Academic Director of the Center for Ethics and Religious Values in Business, Associate Professor of Management, and Fellow in the Joan B. Kroc Institute for International Peace Studies
Albert K. Wimmers, Director of Graduate Studies and Associate Professor of German Language and Literature, Fellow in the Medieval Institute, and Fellow in the Nanovic Institute for European Studies
Jennifer R. Woertz, Assistant Professor of Civil Engineering and Geological Sciences
Christina Wölbrecht, the Packey J. Dee Associate Professor of Political Science
Eduardo E. Wolf, Professor of Chemical and Biomolecular Engineering
Martin H. Wolkson, Associate Professor of Economics
Pit-Mann Wong, Professor of Mathematics
Warren J. Wong, Professor Emeritus of Mathematics
Heather A. Wood, Assistant Professor of Classics
Frederico J. Xavier, Professor of Mathematics
Huili (Grace) Xing, Assistant Professor of Electrical Engineering
David Yamane, Assistant Professor of Sociology
Kwang-Tzu Yang, the Viola D. Hank Professor Emeritus of Aerospace and Mechanical Engineering
Xiaoshan Yang, Assistant Professor of East Asian Languages and Literatures
Susan L. Youens, Professor of Music
Samir Younès, Director of the Rome Studies Center and Associate Professor of Architecture
Robin Darling Young, Associate Professor of Theology
Ke-Hai Yuan, Associate Professor of Psychology
Randall C. Zachman, Director of Graduate Studies (M.T.S.) and Associate Professor of Theology
Catherine Zuckert, the Nancy Reeves Dreux Professor of Political Science
Michael Zuckert, the Nancy Reeves Dreux Professor of Political Science
Directions to the campus

The University is located just south of the Indiana Toll Road (Interstate 80/90) and just east of Indiana 933. From the Toll Road, use exit 77 (South Bend/Notre Dame) and turn right (south) onto Indiana 933 (Michigan Street). Turn left (east) onto Angela Boulevard (the fourth light), drive about one mile and turn left (north) onto Notre Dame Avenue (the first light).
The following is a list of the graduate programs at the University and the graduate degrees conferred. Please note that the University requires all applicants to take the GRE General Test. Many programs also require an additional examination, the GRE Subject Test.
