In the Roman Catholic tradition, marriage and holy orders have been treated together as "sacraments vocation," while recent theological reflection and church teaching have emphasized how both flow from the call of baptism. This course introduces students to the history, liturgical celebration, and current issues surrounding the sacraments of marriage and holy orders. It presents marriage within the broader context of Christian commitment and holy orders within the context of Christian ministry and discipleship. Questions concerning church (What is the role of community in our relations to God?); sacrament (What are these realities imbued with the hidden presence of God?); and vocation (Who am I in God's plan for me?) are raised throughout the course.

### **THEO 20404. Sacrament and Sacramental Theology**

(3-0-3) Schneider

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The seven sacraments are central to the life of the Church. The purpose of this course is to introduce students to theological understandings of the sacraments in general. However, because the sacraments are given and received in specific contexts, we will explore the theology of each sacrament individually, in its liturgical practice, examining the ways in which the rites express the theology that the Church teaches. We will discuss the historical development of sacramental theology as well as contemporary perspectives, and students will also have the opportunity to address the sacraments from an ecumenical perspective in written assignments.

### **THEO 20405. Music, Worship, and Theology**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Music both expresses and shapes religious experience. This course will explore the practice and theory of music-making in Christian worship and devotion. Special emphasis will be given to the study of music in the Bible, Gregorian chant as foundational for Roman Rite worship music; the historical development of other forms of Christian church music; and contemporary issues of music, culture, and spirituality.

### **THEO 20406. Christian Liturgy and Music**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Music has long played an important role in Christian liturgy as an artistic expression of the Church's prayer and theology. Part I of this course will survey the historical development of Christian liturgy and its theological interpretation from the New Testament period forward, focusing in particular on the role of music and theology of music in liturgy. Part II will concentrate on the use of music in liturgy today, studying various official Church documents on music from

Vatican II forward (including *Sacrosanctum concilium*, *Musicae Sacram*, “Music in Catholic Worship,” and “Liturgical Music Today,” and drawing forth principles for determining theologically and pastorally what are the functions and appropriate uses of music in liturgy today. Assessment: there will be a midterm exam and a final exam, and students will engage in an exercise in practical theology utilizing participant-observation methods to analyze the use of music in several liturgical events. Students will develop a final report/analysis of their observations, which they will both present in class and submit in written form.

### THEO 20407. Liturgy and Architecture

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Churches are not museums, but places where the people of God come together to worship. As the forms and theologies of worship change so must the buildings where worship takes place. In this course, we will trace the past 500 years of liturgical and architectural changes in the Roman Catholic and Protestant churches.

### THEO 20408. The Sacraments of the Church

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will study all seven of the Church's sacraments. Special emphasis will be given to the notion of sacrament, the restored rite of Christian initiation of adults, and the centrality of the Eucharist in the life of the Church.

### THEO 20410. Introduction to Liturgy

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 20002 OR THEO 13183

The course will introduce students to liturgy as a sacred science. The course begins with a brief analysis of the present context of liturgical studies in the Church, then proceeds to an examination of the relationship between liturgy and ecclesiology. Attention will be paid to the historical development of Catholic liturgy, culminating in the liturgical movement of the 20th century and the first papal encyclical on the liturgy, *Mediator Dei* by Pius XII (1947). The course then examines the Constitution on the Sacred Liturgy *Sacrosanctum concilium* (1963) and the post-Vatican II liturgical rites and texts for the celebration of the Eucharist. The course concludes with a consideration of the spiritual, cosmic, and eschatological dimensions of the liturgy. Students are given the opportunity to study primary documents, both liturgical and magisterial, in good English translations, as well as helpful secondary literature. By the conclusion of the course, students will have demonstrated familiarity with the official rites and texts of the current Roman liturgy, the historical development of the Church's central act of worship, as well as its theological and spiritual foundation.

### THEO 20411. The Mass of the Roman Rite

(3-0-3) Roy

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

An examination of the Catholic Eucharist as celebrated according to the Roman rite. Students explore the earliest witnesses of the Eucharist in Scripture and tradition, then trace the emergence and development of the Eucharistic rite in Rome itself and in areas influenced by Rome. Attention is paid to the origins and formation of liturgical texts, and their compilation into various books; vestments and vessels; and the arrangement of church architecture over the centuries. The course follows the Roman liturgy from the Eternal City (ca. 700) over the Alps into the Frankish realms and even into southern England in the early Middle Ages; then traces its reintroduction to the City in the 11th and 12th centuries, through the pontificate of Innocent III (1198–1216), and its reform after the Council of Trent. The course finally examines the liturgical movement of the 20th century and developments after Vatican II. Due consideration is given to the role of Joseph Ratzinger-Pope Benedict XVI in the new liturgical movement with particular focus

on his liturgical legislation (*Summorum pontificum*, 7-7-2007), the *ars celebrandi*, and “the hermeneutic of continuity.”

### THEO 20412. Christian Initiation and Eucharist

(3-0-3)

*Prerequisite:* (THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002)

The Rites of Christian Initiation (Baptism, Confirmation, and First Eucharist) and the Eucharistic Liturgy as the primary sacramental celebrations of and in the Church: their biblical and anthropological foundations, historical evolution, contemporary forms, and pastoral effectiveness. Requirements will include three or four short papers and three unit exams.

### THEO 20414. Saints in Art and Icons

(3-0-3) Roy

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

A diachronic exploration of the lives and legends of the saints as depicted in art and iconography. Students will explore lives of the saints in select vitae as well as the most influential hagiographical collection of the Middle Ages, the golden legend of Dominican bishop James of Voragine. Due attention is paid to the arrangement of the sanctoral cycle, the compilation of calendars and martyrologies, and the theological underpinnings of classic iconography. Primary focus on identifying saints by iconographical attributes and conventions in both Western and Eastern iconography.

### THEO 20415. Why Worship Together

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 20002 OR THEO 13183

This course will study the principles of the nature of Christian liturgy using the documents of Vatican II, supplemented with sources from anthropology and sociology.

### THEO 20416. Sacraments of Initiation

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Throughout the Judeo-Christian tradition, human beings have found various ways to understand and express their relationships with the divine. These expressions have taken the form of covenants, purity rituals, ritual meals, and other ceremonies that make use of language and physical elements. Such ceremonies appeal to all five senses and are understood to ground the individual, both physically and spiritually, in community and in relationship to the divine. Language and the physical elements combine to signify a spiritual change in relationship. Within the Christian tradition, these changes are marked by the sacraments of initiation (baptism, confirmation, Eucharist). This course will examine the sacraments of initiation from their origins in ancient Jewish and Christian practice through their present day manifestations. Readings will be drawn from the Scriptures, contemporary and ancient ritual texts, the writings of figures such as Augustine, Thomas Aquinas, and Martin Luther, and the work of 20th-century theologians. Assignments and class discussions will engage themes of sin and grace, the significance of embodiment, and Christian identity.

### THEO 20417. Church and Worship

(3-0-3) Driscoll

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

An analysis of the church as a community of believers and a social institution, and a study of church liturgy and sacraments. This course will center around three key areas, namely (1) Anthropology: As humans, why do we feel the need to express ourselves and our relationship to God through ritual activity? (2) Theology: What are the Christological and ecclesiological underpinnings for the sacraments? (3) History: What is the historical development of each of the seven sacraments? What has remained constant in spite of the historical mutations?

**THEO 20601. Political Theology in the Bible and Christian Tradition**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

In this course, we will examine the major themes of the relationship between Christianity and politics by way of the careful examination of major works of political philosophy and political theology, from the Bible and Plato to early American political thought and beyond (including: Aristophanes, Augustine, Aquinas, Dante, Marsilius of Padua, Luther, Calvin, Machiavelli, Spinoza, Locke, Madison, Jefferson, Tocqueville, Hegel, and Nietzsche). Major themes include reason and revelation, the idea of a Christian polity and Christian citizenship (i.e., City of God vs. City of Man), rights, duties, original sin, limitations of government, rebellion, revolution, virtues, humility, magnanimity, friendship, family, prudence, power, justice, war, religion, toleration, truth, theocracy, democracy, liberalism, civil religion, and liberty, among others.

**THEO 20602. Catholic Morality and the Good Life**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

What is the good life? The answer to this question, subject of reflection for millennia, depends on how one understands the world, and the human person's place in the world. Catholic beliefs about God, creation, the human person, and Jesus Christ are the source of the Catholic vision of the good life. The purpose of this course is to explore different answers to the question of the good life, from both outside and within the Catholic tradition. Students will critically engage Biblical, theological, and philosophical texts, from before time of Christ to the present, which address the question of the good life. Students will be expected describe and charitably evaluate these various responses, with an eye toward enhancing their own response to the question of the good life. After this historical survey, the final third of the course will examine a few contested ethical issues in order to understand how competing visions of the good life play out in varying positions on difficult moral issues.

**THEO 20603. Ecology and the Christian Tradition**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

In this course, we will explore different Christian understandings of the relationship between human beings and nonhuman members of creation. We will begin by considering several representations of this relationship in the biblical text—especially those that can supplement our usual dependence on the Genesis creation accounts. Next we will study a selection of historical texts that exemplify some of the major conceptions of humanity's role on earth and consider how they have influenced how we understand and treat the rest of creation. Finally we will investigate how theologians have addressed challenges to our tradition that have developed with the dawning of contemporary ecological consciousness. For example, is it accurate to claim that we have used tenets of our religious tradition to justify the pillaging of the earth? Have we characterized the world around us as something from which we must escape? Are there elements of the Christian tradition that we can draw upon to counteract these kinds of assumptions and use to construct a vision of sustainable life on earth? One of the main objectives of this class is to both critique and retrieve our biblical and historical traditions in ways that respond to contemporary concerns while avoiding uncritical anachronisms. Requirements include significant participation in class and in group work, two 6- to 8-page papers, a creative group service project with and individual reflection paper, and a final exam.

**THEO 20605. Introduction to Catholic Moral Theology**

(3-0-3) Clairmont

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will be structured into three sections, addressing respectively, biblical foundations, fundamental topics, and selected contemporary ethical questions. The biblical section of the course will study some of the key ethical perspectives and teachings of the Scriptures, primarily the Gospels and the Pauline letters. This section will be followed by an introduction to several fundamental topics in moral theology including (1) the theology of grace; (2) the orientation of ethics toward the achievement of happiness; (3) the development of the moral and theological virtues as capacities that enable us to act well; (4) the relation between moral truth and authentic human freedom; (5) the natural law, and (6) the stages and analysis of moral action. The third section of the course will consider some contemporary ethical questions in the context of this biblical and systematic framework. The course will draw primarily upon the classical Catholic tradition, as represented especially by St. Thomas Aquinas. We will also read selected sections of recent encyclical letters by Pope John Paul II including his *Veritatis Splendor* (On the Splendor of the Truth), *Evangelium Vitae* (The Gospel of Life) and *Fides et Ratio* (On Faith and Reason). Students will be expected to write a summary of a short reading for each class, write one 5-page paper for each of the first two sections of the course, write a final 10-page paper applying what has been studied to a particular ethical question, and present a summary of this paper to the class.

**THEO 20606. Theology of Marriage**

(3-0-3) Odozor

*Prerequisite:* (THEO 10001 OR THEO 100) OR (THEO 13183 OR THEO 180G) OR (THEO 20001 OR THEO 200) OR (THEO 20002 OR THEO 201)

This course seeks to introduce participants to the principal elements in the Catholic Tradition on marriage by examining the sources of this tradition in sacred Scripture, the work of ancient Christian writers, the official teachings of the Church and recent theological reflection. The method employed in the course is thus historical, scriptural, and thematic. The readings selected for this course are intended to expose students to contemporary discussion in moral theology apropos of these issues, and provide them with the necessary theological tools to critically evaluate a wide variety of ethical positions dealing with marriage in the Catholic tradition.

**THEO 20609. God, Creation, and the Environment**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course examines the Christian understanding of God, especially as that understanding is related to our valuation of the nonhuman world. Our semester's discussions will be divided into five subtopics. First, we will survey major portrayals of God and the importance of the nonhuman world in the Bible. Second, we will study the doctrine of the Trinity and its implications for the environment as developed in the work of select patristic, medieval, and modern theologians. Third, we will explore the religious significance of the nonhuman world in some important Catholic prayers, rituals, and forms of spirituality. Fourth, we will investigate some contemporary theological reflections on God (and especially on the doctrine of the Trinity) that strive to counteract what is taken to be a theological devaluation of the nonhuman world. Finally, insofar as time permits, we will compare the Christian doctrine of God with the basic views of other world religions and their implications for stewardship of the environment.

**THEO 20611. Relationships, Sexuality, and Christian Tradition**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course is an introduction to the traditions and methods of Christian ethics and Roman Catholic moral theology, especially as they are applied to human sexuality and sexual ethics. Following a brief introduction to current cultural contexts for considering human sexuality, we will compare several theoretical bases for sexual morality. We will also consider methods and theories of Christian sexual ethics. Finally, we will turn our attention to a number of contemporary issues, including marriage, extramarital sexuality, contraception, assisted reproduction, and homosexuality. The format of the course will be lecture and discussion.

We will employ a number of cases and scenarios to prompt discussion and to exemplify methods and theories. Requirements include attendance at all class sessions, careful reading of the assigned texts, significant contributions in discussions, a 5-page reflection paper, midterm and final exams, and a 10-page researched essay on an issue related to Christian sexual ethics. There may also be several 1-page, ungraded essays assigned to promote thought and discussion on specific topics or questions.

### **THEO 20612. Catholic Faith and Practice**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will explore the fundamental beliefs and characteristic practices of Catholicism. Special attention will be given to the inherent unity of this faith as a sacramental approach to reality, rooted in the central Christian belief in the triune God who is the source and goal of our lives. The distinctively Catholic beliefs and practices will thus be examined in light of the Catholic interpretation of basic Christian beliefs about God, humanity, sin, and redemption. Our emphasis on the unity of Catholic faith and its implications for our lives will provide a basis for further critical and careful thought about the meaning and truth of Catholicism, especially in comparison with alternative approaches to the value and purpose of human life. Students will be encouraged to develop a project in experiential learning as one of their major requirements for this course. Those who have recently completed the Urban Plunge or a similar program will have the opportunity to explore the Catholic tradition in light of and dialogue with the insights and questions their experience may have raised. This course may be of most interest to Roman Catholics, but is open to anyone willing to engage the Christian understanding of reality as developed in the Catholic tradition. Where practicable, major points of commonality with and difference from non-Catholic Christians will be examined.

### **THEO 20614. Nature and Demands of Christian Love**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will examine the place of love in the Christian life, using the love commandments as the cornerstone of a theology of love. Various aspects of love will be explored so that love for God, love for others, and love for self can be more fully understood and brought into harmony. The material will thus include a broad survey of theological and philosophical writings on love as well as an analysis of relevant biblical texts. Four unit tests will be administered, and students will compose a final paper that will help them to integrate the theoretical facets of love and apply this theory to concrete situations.

### **THEO 20615. From Rome to Wall Street: The Church and Economic Life**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The primary purpose of this course is to develop a critical understanding, through engagement with key texts and writings in the Christian tradition, of theological interpretations of the relationship between the church and the economic order. Texts from the Roman Catholic social tradition to be studied include *Rerum Novarum* and "Economic Justice For All" (the U.S. Bishops' Letter on the U.S. Economy). Broad theological and ethical questions to be considered include: How have fundamental Christian understandings of creation—including teachings regarding human dignity and stewardship—shaped theological interpretations of the relationship between Church and economy? What is the appropriate role of the church and individual Christians in the economic order? Is economic justice a proper concern for the church? If so, how ought the church and individual Christians work to achieve economic justice? Particular questions include attention to the tension between the ideal of poverty and the acquisition of property by the church and its members and the role of women in economic life. Course requirements include significant participation in class discussion and group work,

a community-based learning project, a mid-semester paper, and a final exam. The instructor will work with gender studies and Catholic social tradition students to enhance the gender and CST content of the course through discussion and written assignments.

### **THEO 20616. Theology, Ethics, and the Environment**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Does our ecological awareness require radically new theologies and moralities? What moral claims, if any, do nonhuman entities make on us? Can current Christian and philosophical moral theories address these claims? This course raises these questions on both theoretical and practical levels. Theoretically, we will examine various theological and philosophical views of the moral status of nonhuman nature. Practically, we will explore the implications of these views for issues such as wilderness conservation/preservation, treatment of animals, agricultural biotechnology, and others. The diversity of positions we will consider will range from those who embrace standard, modern human-centered theologies and moral theories to critics (such as deep ecologists, ecofeminists, and others) who hold that the very theoretical stance of our dominant theologies and moral theories is incompatible with a genuinely ethical orientation to the environment.

### **THEO 20617. Contemporary Issues in Christian Ethics**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The purpose of this course is to introduce the student to the tradition and methods of Christian ethics, especially as they are applied to selected contemporary issues and several recurring moral questions in professional life. The course is divided into three sections; first, we will examine the moral life as it has been articulated in some classical and modern theories of ethics, and we will review particular methods and themes of Christian ethics. Second, we will study contemporary issues and Christian responses in the areas of bioethics, human sexuality, and social justice. In the third section of the course, we will discuss three issues in professional ethics—deception, informed consent, and social responsibility—and evaluate the contribution of the Christian ethical tradition in addressing these issues. Format: lecture and discussion. Requirements include a 5-page reflection paper, a midterm examination, a 10-page reflection paper, and a final examination.

### **THEO 20618. Christian Understanding of Human Nature**

(3-0-3)

*Prerequisite:* (THEO 10001 OR THEO 100) OR (THEO 13183 OR THEO 180G) OR (THEO 20001 OR THEO 200) OR (THEO 20002 OR THEO 201)

What does it mean to be human? Christians believe that this question can be adequately answered only in the light of divine revelation. This course will begin with an exploration of the central beliefs that shape the Christian understanding of human nature: creation in the image of God; the fall and original sin; salvation in Christ. From there we will go on to compare and contrast the Christian understanding with those of several non-Christian scientists and philosophers. Finally we will consider the Christian understanding in relation to various contemporary issues, including feminism, the environment, addiction, and the transformation of culture inaugurated by television and the computer. Course content will consist mainly but not exclusively of lectures and readings from the course packet. Requirements: midterm and final examinations; quizzes; either one 6-page paper or two shorter papers.

### **THEO 20619. Rich, Poor, and War**

(3-0-3)

*Prerequisite:* (THEO 10001) OR (THEO 13183) OR (THEO 20001) OR (THEO 20002)

This course examines the interrelationships between economic injustice and violence. It begins by investigating the gap between rich and poor both in the United States and worldwide. We also look at the history of Christian thought on wealth and poverty. We then address the ways in which economic disparity intersects with

the problem of violence in both domestic (violence against women) and political realms (war and revolution). Next, we canvass Christian thought on the use of violence. This raises the question of whether Christianity itself contributes more to violence or to peace. Finally, we pose the question of whether forgiveness for violence is advisable or feasible.

### **THEO 20620. Corporate Conscience**

(3-0-3) Clairmont

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The development of a corporate conscience involves discernment and judgment by individuals and by the various small and large groups of which individuals are a part. This course will examine how Christian moral thought, especially as it is expressed in Catholic moral theology, impacts the business decisions of individuals and the possibility of applying Christian moral principles in a business environment. The course will alternate between the study of basic values, norms and principles in Catholic theology and the values, norms and principles internal to the business practices of accountancy, finance, marketing, corporate management and governance, and the accumulation and deployment of business information. The goal of the course will be to learn strategies for dealing with situations that ask us to reconcile apparently conflicting goods, potentially diverging professional, social and religious commitments, and to envision how business practices might contribute to advancing the common good. Requirements include a midterm and a final exam and the preparation and presentation of a case.

### **THEO 20621. Medical Ethics**

(3-0-3) Mertensotto

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

### **THEO 20622. A Faith to Die For**

(3-0-3) Baxter

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

An introduction to Catholic moral theology, with an accent on how Catholic belief and practice shape the Church's understanding of the moral life. Aspects of Catholic belief and practice to be covered include baptism, penance, reading scripture, preaching, prayer, the Eucharist, martyrdom, religious life, marriage, and mission. In the context of these beliefs and practices, several leading themes in Catholic moral theology will be explored (e.g., sanctification, the eternal and natural law, and virtues and vices), and several moral issues will be examined (e.g., abortion, suicide, capital punishment, economic justice, and war and peace). This course explores an understanding of the moral life in terms of participation in the life, death, and resurrection of Christ, but at the same time it avoids construals of the moral life that rest merely on pious exhortations ("Jesus says"), assertions of ecclesial authority ("the Church says"), or invocations of negative moral prohibitions ("thou shalt not"). Thus, the "faith" will be presented as a set of beliefs and practices that are disturbingly radical, demanding that Christians die to themselves, yet also deeply attractive, in that dying serves as a passageway to true life. As suggested by the title, a leading emphasis in the course is that only a faith worth dying for can forge a moral life that is truly worth living. Readings include selections from scripture, liturgical texts, theological and moral treatises, encyclicals, and the documents of Vatican II, plus Augustine's *Confessions*, Cantalamessa's *The Eucharist; Our Sanctification*, Graham Greene's *The Power and the Glory*, short stories of Flannery O'Connor, Dorothy Day's *The Long Loneliness*, and Helen Prejean's *Dead Man Walking*. Evaluation is based on a midterm, a final, several short papers, and interactive class participation.

### **THEO 20623. Vocation and Leadership**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will invite students to consider the meaning of vocation in relation to the social mission of the church. Beginning with a theological understanding of the significance of vocation and charisms, this course will provide a narrative-based exploration of the vocational journey of prominent figures in the Catholic social tradition such as Francis of Assisi, Dorothy Day, Cesar Chavez, and Oscar Romero. The emergent understanding of vocation will be held in conversation with the witness given by leaders from other religious traditions, e.g., Badshah Khan, Gandhi, and Thich Nhat Hanh. Using the method of service-learning, this course will invite students to develop an awareness of their social justice commitments in light of their own sense of vocation. More information about the course format is explained in the Learning Agreement and Application Form, available at the Center for Social Concerns.

### **THEO 20625. Discipleship: Loving Action for Justice**

(3-0-3) Pfeil

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course is designed for students who have completed a Summer Service Project Internship (SSLP or ISSLP) through the Center for Social Concerns. The main objective is to afford students the opportunity to combine social analysis with theological reflection. The course material will span a variety of ethical issues, including education, globalization, restorative justice, racial justice, power relations, environmental justice, and structural violence. These topics will be held in conversation with the Catholic social tradition. A major component of the course will entail the presentation and analysis of student-generated research emerging from the SSLP/ISSLP.

### **THEO 20626. Science and Theology**

(3-0-3) Ashley

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Modern science has developed in intimate relationship to Christian faith and theology. Sometimes the interactions have been positive and other times negative, but many contemporary portrayals of this relationship deal in oversimplifications and caricatures. This course has the goal of introducing students to the rich complexity of the relationship between science and religion in general, and Christianity and modern science in particular. It examines this relationship first by considering two particularly intense moments: the controversies surrounding the heliocentric model of the solar system, which came to a head in the Galileo affair, and the still on-going debates over the compatibility of the science of evolution with Christian faith. In the third section of the course we consider the ethical implications of modern science and technology by considering debates over how to respond to one of several contemporary environmental crises (the particular one we discuss will be decided by the class at the beginning of the course).

### **THEO 20630. Health Care Ethics for the Twenty-First Century**

(3-0-3) Ryan

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course explores the importance of religious and moral values for the life and death choices we make, individually and as a society. Basic principles and methods of contemporary bioethics will be introduced, and a range of issues considered, e.g., medical research, physician assisted suicide, health care reform, new genetic technologies, and responding to AIDS. Especially recommended for students planning on a career in medicine or science. Lecture/ discussion format. Requirements: short papers, midterm, final.

### **THEO 20633. Introduction to Christian Ethics**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

What are the moral implications of being a Christian? What responsibilities do Christians have in their personal conduct, family life, and in their relations to the larger world? What should a Christian community look like? This course will

examine these questions through a survey of the sources, scope, and decision-making process involved in different approaches to Christian ethics. Equal stress will be placed on ethical theory and practical issues, from sexual ethics to social justice and war, from individual to global ethics. Students will have the opportunity to replace many traditional course requirements with a service-learning placement in one of several local service organizations. All students will engage in a semester-long writing project in which they research and reflect on one ethical issue in depth.

### **THEO 20634. Love and the Christian Tradition**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This intermediate theology course explores the rich and diverse history of love in the Christian tradition. It begins with an examination of the biblical terms for love and traces their theological development through the varied writings of Augustine, Julian of Norwich, Abelard and Heloise, Aquinas, Luther, Edwards, Kierkegaard, Reinhold Niebuhr, Martin Luther King Jr., and others up to the present. Through the lens of love, we will carefully attend to specific, pivotal moments that mark Christianity's historical and contemporary engagements with its own resources, external intellectual currents, and an array of moral, social and cultural demands. The course generally follows the outline sketched by Bernard Brady's *Christian Love*, and further primary readings will augment Brady's text.

### **THEO 20635. The Ethics of Energy Conservation**

(3-0-3) Pfeil; Vicht-Vadakan

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This is a joint theology and engineering course exploring the ethics of energy conservation by using the method of community-based learning. Students will begin by using the university campus as a "trial laboratory" for measuring energy efficiency and thinking creatively about possible energy conservation measures. We will then ask them to conduct a limited energy efficiency and conservation study for selected nonprofit organizations in the South Bend community. This course will fulfill a number of civic learning goals, including: the cultivation of theological and scientific competence in environmental ethics; the identification of leadership skills necessary to address the concrete concerns facing nonprofit organizations as they strive to meet pressing human needs in an environmentally sound manner; and, formation of consciences sensitive to the social responsibility of caring for the environment. Maximum enrollment: 20 students. By permission only.

### **THEO 20636. Catholic Social Thought: Globalization and Human Rights**

(3-0-3) Ryan

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The Roman Catholic Church has long been a champion of universal human rights. Today, the church and all who promote and defend the causes of justice within and between nations, must ask what it means to promote the dignity of all peoples in a global age. Is it possible to work for a global common good in a world of such pronounced religious, cultural, economic, and political differences? This course will test the hope and the challenge of the Catholic social tradition's confidence in human rights by engaging current international debates over access to health care, the use of military force, international economics, and ecological responsibility. Students will be introduced to the core documents and principles of Catholic social thought, will learn the basic theological and philosophical concepts that underlie the defense of human rights, and will acquire the background to critically participate in current debates over the viability of human rights language. Lecture/Discussion format; three shorter papers; final exam.

### **THEO 20637. Biomedical Ethics**

(3-0-3) McKenny

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

*Corequisite:* THEO 22637

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

### **THEO 20639. Conscience, Calling, and Character**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course is intended to be an introduction to Catholic moral theology customized for those discerning a career as a business professional. In the wake of ethics failures at a number of prominent corporations, business leaders have renewed their call for ethical behavior and have begun to establish criteria for hiring morally thoughtful employees and to institute ethics education in the workplace. In the first part of the course, we will examine Catholic theological ideas about conscience and how it functions in the process of making a moral decision. In the second part of the course, we will examine a selection of Catholic writings on the idea of vocation and calling, as well as the nature of human work, the relationship between workers and management, and the norms of justice that ought to govern these relations. Finally we will examine ideas about character and virtue to assess the challenges and opportunities for moral formation in a business context. Class format will combine analysis of theological texts and discussion of business cases. Course requirements include a midterm and final examination and a group project.

### **THEO 20640. Christian Ethics and Modern Society**

(3-0-3)

*Prerequisite:* (THEO 10001 OR THEO 20001 OR THEO 20002 OR THEO 13183)

This course examines the various ways Christians respond to certain contemporary moral problems. Do Christians think about ethics differently than other well-meaning citizens? Are Christian virtues and principles fundamentally at odds with the ethos of liberal democracy oriented toward rights, equality, and freedom? What do Christian beliefs and moral concepts imply about issues related to feminism, racism, and pluralism? What is the relationship between religious convictions, morality, and law? Special emphasis on selected political and economic problems, homosexuality and marriage, capital punishment, the environment, war, and the role of religion in public life. The course is reading-intensive and requires active participation in discussions.

### **THEO 20641. Christian Anarchy**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will explore ethical and theological issues around the relationship of Christian ecclesial communities to the state, personalist approaches to issues of social justice, and theological and philosophical understandings of a needs-based political economy. Methodologically, it will proceed through an historical consideration of the development of thought on these issues in the Christian tradition, beginning with views of community and political authority in Scripture and the early Church and including the thought of Peter Kropotkin, Leo Tolstoy, Peter Maurin, Dorothy Day, Karl Barth, Jacques Ellul, and Vernard Eller, among others. Community-based learning, in the form of 20 hours of site work in the South Bend community over 10 weeks, is a requirement for this course.

### **THEO 20642. War, Peace, and Conscience**

(3-0-3)

*Prerequisite:* (THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002)

This course examines ancient, medieval, and modern understandings of the ethics of war primarily, but not exclusively, within Christian tradition. It comes in three parts. First, it surveys the emergence and development of the morality of war from ancient times (Jewish, Christian, and classical), through the medieval period (church canonists, Aquinas, the scholastics), and into the modern period (Grotius and later sources of international law). Second, it examines the nature of modern

warfare by means of historical illustrations, including the Civil War, the so-called Indian wars, World War I, World War II, the Vietnam War, and the Gulf War. Third, it takes up several cases with the aim of exploring the tension between traditional conceptions of just war theory and the practice of modern warfare, focusing on issues involved in the use of weapons of mass destruction, the “fog of war,” wars of revolution, ethnic and religious conflict, and the continuing “war on terrorism.” Texts include: Roland Bainton, *Christian Attitudes Toward War and Peace*, Erich Maria Remarque, *All Quiet on the Western Front*, John Hersey, *Hiroshima*, Olson and Roberts, *My Lai: A Brief History with Documents*, plus writings on the attacks of September 11. Requirements include a take-home test, several short papers, and a final exam.

**THEO 20643. The Askesis of Nonviolence: Theology and Practice**  
(3-0-3) Pfeil

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 13183 OR THEO 20002

This course will explore the theology and practice of nonviolence as a form of askesis, or spiritual discipline. The material will include readings from Scripture, the early Christian tradition, and Catholic social teaching. Religious sources outside the Christian tradition will include Gandhi, Thich Nhat Hanh, and Badshah Khan. This course will use the method of community-based learning and will require 20 hours of service at particular sites in the South Bend area.

**THEO 20644. Justice, Human Rights, and the Catholic Social Tradition**  
(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The modern encyclical tradition of Catholic social teaching contains a wealth of reflection on the idea and practice of economic and social justice. This second course in theology will explore this tradition and will pay particular attention to the numerous and complex ways in which the ideas of justice and human rights have been construed in various official magisterial and theological documents. Through the lenses of justice and human rights, we will engage in close, careful readings of the official documents that constitute the Catholic social tradition. To gain a broader understanding of the tradition, we will explore themes such as natural law, the common good, and the dignity of the human person. A central focus of our inquiry will concern the ways in which the Catholic tradition attempts to reconcile individual rights with the promotion of the common good, and of political community. We will also explore the relationship of natural law to human rights. In the second half of the course, we will examine several practical questions that arise in conjunction with a consideration of the meanings of justice and of human rights.

**THEO 20645. Justice, Human Rights, and Catholic Social Thought: Contemporary Issues**  
(3-0-3) Helmer

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The modern encyclical tradition of Catholic social thought contains a wealth of reflection on the theory and practice of economic and social justice. This second course in theology will explore this tradition and will pay particular attention to the numerous and complex ways in which the ideas of justice and human rights have been construed in various official magisterial and theological documents. Through the lenses of justice and human rights, we will engage in close, careful readings of the official documents that constitute the Catholic social tradition. To gain a broader understanding of the tradition, we will explore themes such as natural law, the common good, and the dignity of the human person. A central focus of our inquiry will concern the ways in which the Catholic tradition attempts to reconcile individual rights with the promotion of the common good, and of political community. We will also explore the relationship of natural law to human rights. Throughout the course, we will examine several practical questions that arise in conjunction with a consideration of the meanings of justice and of human rights.

**THEO 20648. Fundamentals of Christian Ethics**

(3-0-3) Clark

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 20002 OR THEO 13183

The general aim of this course is to introduce undergraduates to the primary sources and fundamental concepts of Christian ethics. Our study will be structured around the 10 Commandments (Exodus 20:1–17) and the Beatitudes (Matthew 5:3–12). We will examine these teachings in light of the broader question of what it means to act well and flourish as a human creature and a child of God. We will study each of the commandments and beatitudes in turn, drawing upon a broad range of readings and commentaries from key thinkers throughout the Christian tradition. In both lecture and seminar format, we will attempt as a class to unpack and compare the different ways the commandments and beatitudes have been interpreted and lived out in daily life. The ultimate goal of the class is to facilitate a greater understanding of what it means to think about human action from a Christian theological perspective.

**THEO 20803. God’s Grace and Human Action**

(3-0-3) Wawrykow

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

What are the respective roles of God and the human person in salvation? Are ideas of human freedom and of the value of human acts compatible with a belief in God as the source of grace and redemption? These and other questions about salvation have been hotly debated by Christian theologians throughout the centuries. This course analyses the positions articulated by such figures as Augustine, Aquinas, Luther, and Calvin, and examines how they shaped the Catholic-Protestant debate about the role of good works, and of God, in salvation.

**THEO 20805. Vatican II History and Consequences**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The *Aggiornamento* or “bringing up to date” that occurred at the Second Vatican Council involved a quest for a deeper understanding of how the Gospel of Jesus Christ might speak more effectively to the modern world through the Catholic Church and sought to identify practical and pastoral ways of applying the Gospel not only to society-at-large but to the Church itself as well. This course provides a review of the theological history of the council, an exploration of the work of the theologians and bishops at the council itself and in its documents, and the consequences of the Council in the life of the Church since 1965. There will be an optional service component for this class that attempts to apply some of the principles of the council by working in various forms of ministry in the local church.

**THEO 20807. Catholicism**

(3-0-3) McBrien

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

A comprehensive exposition of Catholic theology from a historical, doctrinal, and ecumenical perspective. The course addresses the following questions: the inter-relationships among faith, theology, and belief; the meaning of human existence (a multidisciplinary exploration); the problem of God (revelation, religious pluralism, providence, the Trinity, etc.); Jesus Christ (New Testament data, doctrinal development, contemporary views, including a discussion of Jesus’ self-consciousness, sexuality, and sinlessness); the Church (New Testament data, history, Vatican II, mission, sacraments, authority, ministry, Mariology, etc.); and Christian existence (ethics, spirituality, eschatology). The course includes six discussion sessions that meet every other week on Thursday afternoon or Friday, with attendance required.

**THEO 20808. Fundamental Theology**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Contemporary theologians hotly debate the nature, purpose, and possibility of fundamental theology. However individual theologians understand it, fundamental theology includes the method(s) of theology, conceptions of faith, relation, and religious experience, and the critique and defense of the rationality of normative Christian faith. This course will probe these central themes of fundamental theology.

### **THEO 20809. Interpreting Suffering**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Suffering, as it has been interpreted or experienced by theologians, mystics, martyrs, victims, and survivors, has profoundly shaped Christian theology. Focusing particularly on Christology and Christian discipleship, this course will consist of three parts. Part I will look at how some of the earliest teachings of the church developed out of a need to interpret authoritatively the suffering Christ and the suffering of the early Christian martyrs. Part II will consider the suffering of Christ as it was understood systematically and/or lived spiritually by key medieval and reformation thinkers. In light of these traditional theological responses to suffering, Part III will consider a variety of modern theological attempts to confront the radical human suffering of the 20th century. This course will have two goals: (1) to reflect on how theology talks about Christ and Christian discipleship in the face of human suffering; (2) to reflect on how experiences of suffering have shaped (and continue to shape) theological discourse. Requirements: three short papers (with opportunities for experiential learning), class participation, midterm, and final.

### **THEO 20811. Jesus and Salvation**

(3-0-3) Hilbert

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

An exploration of the mystery of Jesus the Christ and the experience of salvation through examination of the life, ministry, death, and resurrection of Jesus (Part I); the development of classic Christian doctrine (Part II); and selected contemporary perspectives and questions (Part III).

### **THEO 20812. Concept of Resurrection in the Bible**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The first half of this course focuses on the interpretation of the New Testament accounts of the empty tomb, the resurrection appearances, and the ascension of Jesus. Selected Old Testament readings throw light on the Jewish and biblical background to these resurrection traditions in the New Testament. The purpose of this study is (1) to provide a historical verdict on the reported Easter events and (2) to assess the theological significance of the New Testament accounts of these events. The second half of this course focuses on ecclesiastical practices and doctrines that are related to belief in the resurrection of Jesus. Attention is given to the rites of baptism, Eucharist, laying on of hands, etc. A brief survey is made of heretical beliefs related to the nature of Jesus' resurrection. The overall purpose of this course is to stimulate theological reflection on the subject of resurrection.

### **THEO 20813. The Problem of Human Suffering**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

If religion has often been a source of strength and consolation in the face of human suffering, it is also true that the presence of meaningless suffering in human experience has posed one of the greatest challenges to religious practice and thought. We will examine this issue by studying classics in the Christian tradition, including the scriptural locus of later theological reflection, the Book of Job. After considering answers to the problem of suffering as it has traditionally been posed, we will look on the new shape it has assumed in the modern age, due to historical catastrophes like the Holocaust. Authors considered include Augustine of Hippo,

C.S. Lewis, Fyodor Dostoyevsky, Gustavo Gutierrez, Johann Baptist Metz, and Elie Wiesel.

### **THEO 20815. The Catholic Experience**

(3-0-3) Cunningham

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course has three quite specific aims: (1) to describe that form of the Christian tradition both in doctrine and practice which is called Catholic; (2) to argue that within the Catholic tradition there are different "ways" of being a Catholic; (3) to outline a general way of being a Christian within the Catholic tradition; we will call that "way" a "spirituality." THEO 20815 will meet weekly for a lecture followed by discussion groups. Attendance will be required. Each week a short reflection paper (two pages) will be readied for the discussion section. In addition, there will be an essay-style midterm and final.

### **THEO 20818. Religious Autobiography**

(3-0-3) Dunne

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

A course on the spiritual journey of the individual person, drawing on diaries and autobiographies. The first half is on the story of the life in terms of feeling and imagination and insight and choice, and the second half is on the story of the person in terms of the life project, the boundary situations of life, and conversion of mind, of heart, and of soul. Readings: Saint Augustine, *Confessions*; Martin Buber, *The Way of Man*; Carolina Maria de Jesus, *Child of the Dark*; John Dunne, *Reasons of the Heart and Search for God in Time and Memory*; Etty Hillesum, *An Interrupted Life*; C.G. Jung, *Memories, Dreams, Reflections*; Rainer Maria Rilke, *Letters to a Young Poet*. Writings: a spiritual diary (not handed in), a personal essay, and a midterm take-home and a final take-home exam.

### **THEO 20819. Religion and Psychology**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

To show how the quest for psychological explanation can raise issues classically identified as religious, we shall explore how the psychological articulation of these issues addresses the "task" of becoming a Christian. Beginning with Aristotle's *Ethics* to explore the most common idiom for human action, we jump to Kierkegaard's *Sickness Unto Death* and then enter the "psychological revolution" with Sigmund Freud's *Civilization and Its Discontents*, followed by Carl Jung's *Psychology of the Transference*. By that time, we will be ready to appreciate Sebastian Moore's *The Crucified Jesus is No Stranger*, testing his work against two diaries: Ruzbihan Baqli's *Unveiling of Secrets: Diary of a Sufi Master*, and Etty Hillesum's *An Interrupted Life*. A series of exercises (1-page papers) are designed to help us learn the language of these authors. A final paper offers a way to link that language with more explicitly theological inquiry. A midterm (in two parts) and a final exam give opportunities for synoptic grasp.

### **THEO 20821. The Mystery of Being Human**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course will explore some key questions of human existence in relation to basic Christian beliefs about human life and destiny. What is the meaning of human dignity, personhood, and community in light of the Christian claims that we are created in the image of God and baptized into the image of Christ? How are we to understand the reality of evil in the world and the fundamental ambiguity of human experience in relation to the symbol of "original sin"? What do "graced human existence" and "relationship with God" mean? Do they affect the way we experience and live everyday life? How can Christians live in hope in the face of suffering and death?

**THEO 20822. What Catholics Believe**

(3-0-3) Gorski

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

A theological exploration of the basic content and practice of the Catholic faith. The focus is on the fundamentals that form the foundation of Catholicism and against which everything else is explained or judged. The aim of this course is not simply to educate students about Catholicism. Rather, it intends to facilitate their personal appropriation of the Catholic tradition: that is, to challenge and help them reason critically for themselves about the meaning and practical implications of their faith. Some of the questions students will ponder concern God, Jesus Christ, the Church, Christian spirituality, and moral behavior. But since we raise these questions in an attempt to come to terms with the meaning of our own lives, we begin with the question of our own human existence: Who am I or who are we? The course is based on the conviction that all theological questions start with us as the ones who pose the questions in the first place. While the approach taken will be one that appeals immediately to critical reason rather than to conversion of the mind and heart, the aim ultimately is to help students discern, respond to, and be transformed by the presence of God in their lives, and to work for the continuing renewal of the world in light of this discernment of God.

**THEO 20823. Catholic/Orthodox/Protestant: A Theological Comparison**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course is an introduction to the fundamentals of Catholic doctrine, but it will accomplish this end by examining Catholicism in contrast to Eastern Orthodoxy and Protestantism. The purpose of making such a comparison is twofold: first, to discern what is distinctive to the Roman Catholic tradition through critical comparison and contrast; second, to advance ecumenical understanding by making students aware of the issues that originally separated these Christian bodies, and what progress toward unity has been made. The course will begin with teachings held in common by the three traditions (nature of God, creation, Christology, atonement) and then move on to issues over which divisions have occurred (sin and the nature of human beings, the Trinity, Scripture and tradition, sacraments and worship practices, and the papacy). Since a religious tradition is more than its confessions alone, we will also pay some attention to different cultural manifestations, such as art, music, architecture, and ritual.

**THEO 20825. World Religions and Catholicism in Dialogue**

(3-0-3) Gorski

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

A theological exploration of Hinduism, Buddhism, Taoism, Judaism, Islam, and the relationship of Christianity to those religions. The goal of this exploration is specifically (1) to set forth the essential characteristics of the world's great religions, (2) to disengage the essential differences between Christianity and the other world religions, (3) to identify the distinctiveness of Catholicism within the family of Christian traditions, and (4) to examine historically and systematically the Christian theological appraisal of other world religions. Thus, the course will enable the students to gain a deeper understanding of Christianity by "passing over" into and experiencing as well as appraising the different major religious traditions of the world. To enhance the learning experience, the course will use the BBC film series titled *The Long Search*. Each of these hour-long films focuses on perspectives of the world's major religions.

**THEO 20826. Eschatology**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The Heaven's Gate cult and David Koresh's Branch Davidians. The enormous popularity of the "left behind" novels. What people believe about the end time really matters. Eschatology is the study of the "last things." Traditionally for

an individual these "last things" are death, judgment, heaven, and hell. But eschatology also encompasses speculation about the fate of the larger cosmos, both earthly (animal, vegetable, and mineral) and heavenly (the physical universe as well as heavenly creatures, angelic and demonic). This course addresses eschatology chronologically. It begins in the Hebrew and Christian Scriptures, moves to the millenarian controversies of the early church, and explores the eschatological hopes of the Middle Ages. It looks at Luther's opinions of the last things, American apocalyptic movements, and 20th-century systematic theologies of eschatology. It will also examine Islamic eschatology and the contribution of women such as Hildegard of Bingen to the topic. In Judeo-Christian scriptures and thought, eschatological themes are often articulated in a narrative form with plot and characters. At this point in time the evangelical/fundamentalist "left behind" novels, based on the Book of Revelation, are extremely popular. This class will not read those books, but it will read two Catholic eschatological novels, *A Canticle for Leibowitz* and *Pierced by a Sword*. *A Canticle for Leibowitz* narrates cold-war fears of nuclear destruction. *Pierced by a Sword* places Armageddon, the ultimate showdown between good and evil, on the "God Quad" of the University of Notre Dame! Reading these novels gives the students the opportunity to apply what they have learned about the historical sweep of eschatology to a 20th-century context in an enjoyable way.

**THEO 20828. Christianity and World Religions**

(3-0-3) Malkovsky

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The purpose of this course is to introduce the student to the basic teachings and spiritualities of Hinduism, Buddhism, and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate mystery, the overcoming of suffering, etc. We will also examine some traditional and contemporary Catholic and Protestant approaches to religious pluralism. Our own search to know how the truth and experience of other faiths is related to Christian faith will be guided by the insights of important Catholic contemplatives who have entered deeply in the spirituality of other traditions. By course's end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. Requirements: Short papers, midterm exam, and final exam.

**THEO 20829. Jesus: Christianity and Islam**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

We will examine four bodies of writings: the Qur'anic material on Jesus, corresponding biblical material, Islamic polemics against Christian doctrine. Through these writings we will seek both to better understand the Islamic and the Christian Jesus, by examining questions of scripture, prophecy and salvation. Students are expected both to become conversant in these questions and to reflect theologically on their own response to the Islamic challenge of Christian teachings.

**THEO 20830. Regarding the Islamic Challenge to Christianity**

(3-0-3) Reynolds

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

While many Christians have described Islam as a Christian heresy, many Muslims consider Christianity to be an Islamic heresy. Jesus, they maintain, was a Muslim prophet. Like Adam and Abraham before him, like Muhammad after him, he was sent to preach Islam. In this view Islam is the natural religion—eternal, universal, and unchanging. Other religions, including Christianity, arose only when people went astray. Therefore Muslims have long challenged the legitimacy of Christian doctrines that differ from Islam, including the Trinity, the incarnation, the cross, the new covenant and the church. In this course, we will examine Islamic writings, from the Qur'an to contemporary texts, in which these doctrines are challenged. We will then examine the history of Christian responses to these challenges and consider, as theologians, how Christians might approach them today.

**THEO 20831. Divine Providence and Human Suffering**

(3-0-3) Ernst

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

Christians profess belief in a God who, being both all-powerful and all-good, generously provides for human persons and lovingly wills their happiness and fulfillment. But how is this belief compatible with the human suffering observable, in innumerable forms, throughout the world? If such suffering is part of the divine plan, does that mean that it is in fact willed by God (which would seem to jeopardize divine benevolence)? Or if it is not included in God's plan for humanity, does that mean that the suffering that nevertheless occurs is somehow beyond the reach of divine power or concern (thus seeming to jeopardize either omnipotence or benevolence)? This course offers a systematic and historical understanding of the doctrine of divine providence, a doctrine that is essential to the Christian perception of the divine/human relationship. The course is systematic in that it will attend to the interconnections between this doctrine and various other aspects of the Christian belief system (e.g., creation, free will, sin, grace, redemption, prayer). It is historical in that it will include consideration of sources from across the full sweep of Christian history. Finally, the exploration of the variety and richness of the theological tradition on this topic will allow for reflection on the experiential and pastoral implications of Christian belief today.

**THEO 20833. Jesus Christ and Hope**

(3-0-3) Krieg

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course critically elucidates the primary Christian truths concerning Jesus Christ. In particular, it inquires into the meaning of Jesus' proclamation of "God's kingdom" as well as into the significance of Jesus' suffering and death, resurrection, and "second coming." The course draws on pertinent texts from the Bible, Christian tradition, Church teachings, and contemporary writings. It requires two in-class tests, quizzes, class participation, and the final examination.

**THEO 20835. The Church in the World**

(3-0-3) Colberg

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

This course explores the nature and mission of the church with particular attention to how these are shaped by its engagement with the world. It looks at the Church's ongoing efforts to proclaim and preserve the good news of Jesus Christ while communicating it effectively in an ever-changing and increasingly diverse world. To this end, the class is divided into three units: Unit One surveys significant historical events which have helped form the Christian community's identity and the way it conveys its message; Unit Two studies the documents of Vatican II as a recent and essential expression of the church's mission and self-understanding; and Unit Three examines the church's position on several contemporary issues such as interreligious dialogue, economic justice, birth control and scientific/technological developments as a way of considering current efforts to proclaim the Gospel and speak meaningfully to a contemporary audience. This class includes weekly response papers, two tests, a final exam, and a class presentation or paper.

**THEO 20836. God, Human Beings, and Salvation**

(3-0-3) Colberg

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

At the heart of the Christian faith lies the conviction that sinful human beings are redeemed and saved through Jesus Christ who introduces them into a new and grace-filled relationship with God. While such a belief is universal to all Christians, the specific way in which redemption and salvation are understood has assumed varied expressions throughout the history of Christian thought. This course will explore Christian attempts to understand human salvation with particular focus on the notion of "justification"—the movement of a human person from a state of sin into a state of grace. Central to this exploration will be the study of how God and human beings both occupy meaningful roles in the process of justification

and the attainment of eternal life. As they relate to this theme, the course will also engage topics including Christ's role as savior, faith, grace, merit, sin, free will, and predestination. Surveying justification from a historical perspective, the course will offer students the opportunity to compare and evaluate diverse viewpoints using skills and vocabulary acquired during the semester.

**THEO 20837. Art/Theological Imagination**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

What role does art and creative expression play in the task of theology, the disciplined reflection on the content of faith? As Fr. Aidan Nichols points out, the Church's tradition is never accessible in itself, in its pure form, but only via some concrete mediation, such as the liturgy, sacraments, and art and iconography. Art maintains our memory of divine revelation and energizes the human imagination for the divine. In this class, we will first consider the meaning and function of theological aesthetics, then take a historical tour of some of Christendom's most beautiful religious art to examine its relationship to doctrine. Along the way, we'll consider intersections between beauty and justice, between art and devotion, and between classical and modern religious art.

**THEO 20838. Revelation and Inspiration**

(3-0-3)

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 20002 OR THEO 13183

This course will pursue the topics of revelation and inspiration from both historical and theological perspectives, beginning with discussions in Scripture and moving forward.

**THEO 20839. The Mystery of Being Human**

(3-0-3) Hilkert

*Prerequisite:* THEO 10001 OR THEO 13183 OR THEO 20001 OR THEO 20002

The joys and hopes, the grief and the anguish of the people of our time, especially of those who are poor or afflicted, are the joys and hopes, the grief and anguish of the followers of Christ. Nothing genuinely human fails to raise an echo in their hearts" (*Gaudium et Spes* #1). An introductory exploration of Christian anthropology, this course will focus on the mystery of being human within the wider context of creation from the perspective of the classic Christian doctrines of creation in the image of God, original sin, grace, and resurrection of the body.

**THEO 20840. Essentials in Systematic Theology**

(3-0-3) Colberg

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 20002 OR THEO 13183

"In His goodness and wisdom God chose to reveal Himself and to make known to us the hidden purpose of His will by which through Christ, the Word made flesh, we might in the Holy Spirit have access to the Father and come to share in the divine. Through this revelation, therefore, the invisible God out of the abundance of His love speaks to us as friends and lives among us, so that He may invite and take us into fellowship with Himself. This plan of revelation is realized by deeds and words having an inner unity: the deeds wrought by God in the history of salvation manifest and confirm the teaching and realities signified by the words, while the words proclaim the deeds and clarify the mystery contained in them. By this revelation then, the deepest truth about God and the salvation of humankind shines out for our sake in Christ, who is both the mediator and the fullness of all revelation."—Vatican Council II, *Dei verbum*, 1. As Vatican Council II's decree on divine revelation suggests, God reveals God's self so that believers can access and share God's divine life. The fundamental task of Christian theology, therefore, is to articulate God's revelation in a clear and cogent fashion that promotes the salvation of all who believe and engage it. This course introduces students to vital topics in Christian thought while exploring the need for their systematic agreement as an essential aspect of coherent Christian discourse. To that end, it will (1) examine the topics of God, Jesus, salvation, and the church from varying theological

viewpoints; (2) require students to analyze the content of theological arguments for their meaning and wider impact on Christian belief; and (3) train students with methodological and interpretive tools to construct theological arguments in oral and written forms.

### **THEO 20841. The Redemptive Work of Christ**

(3-0-3) Rosato

*Prerequisite:* THEO 10001 OR THEO 20001 OR THEO 13183 OR THEO 20002

The history of theology includes a large number of ways of explaining how Christ's death on the Cross brings about human redemption. We will learn about the most important theories of redemption through reading texts from the patristic era, the Middle Ages, the Reformation, and the 20th century. Class requirements: informed class participation, frequent short writing assignments, two long papers, a midterm exam, and a cumulative final exam.

### **THEO 22637. Biomedical Ethics Discussion**

(0-1-0)

*Corequisite:* THEO 20637

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

### **THEO 30001. Intensive Elementary Hebrew**

(3-0-3)

This six-week intensive language course will be devoted to learning the grammar of biblical Hebrew. Throughout the course we will focus on developing reading and comprehension skills in biblical Hebrew through the study of biblical texts. In addition, students will learn how to use reference grammars, concordances, and apparatus to the *Biblia Hebraica*. The course encourages students to think about the grammatical forms and their implications for biblical interpretation.

### **THEO 30002. Know Your Catholic Faith: Prayer**

(1-0-1) Cunningham

This course examines the theological underpinnings of the Catholic doctrine of prayer drawing on the fourth section of the Catechism of the Catholic Church. In the light of those theological principles, various kinds of prayer (liturgical, devotional, contemplative, etc.) are discussed. Short written exercises done for each class and clear evidence of participation in discussion based on those exercises are the basis for grading. Each class ends with participation in Sunday Vespers at the Basilica.

### **THEO 30003. Elementary Hebrew II**

(3-0-3)

This is a two-semester introductory course in biblical Hebrew; under normal circumstances, the student must complete the first to enroll in the second. The fall semester will be devoted to learning the grammar of biblical Hebrew. The spring semester will be divided into two parts. For the first six weeks we will finish and review the grammar. In the remaining part of the course we will read and translate texts from the Hebrew Bible, Qumran, and Rabbinic literature. The course will focus on developing reading and comprehension skills in biblical Hebrew through the study of biblical texts. In addition, students will learn how to use reference grammars, concordances, and apparatus to the *Biblia Hebraica*. The course encourages students to think about the grammatical forms and their implications for biblical interpretation.

### **THEO 30004. Introduction to Christian Latin**

(3-0-3) Bloomer

This class has two goals: to improve the student's all-around facility in dealing with Latin texts and to introduce the student to the varieties of Christian Latin texts. Medieval Latin II, a survey of medieval Latin texts, follows this course in the spring term.

### **THEO 30005. Catechist Formation**

(1-0-1)

The one-credit course is offered for students who are enrolled in the catechist program through campus ministry. Students sign up to serve as catechists in local parishes and take this course to prepare them for their ministry. The goals of the class are: (1) to offer a overview of catechetical documents and directives in the Church; (2) to explore lesson planning and curriculum for religious education; and (3) to share practical applications for creative teaching and classroom management.

### **THEO 30006. Faith and Revelation**

(1-0-1)

Preliminary notes: Christianity is basically about the communication of God's message (offer) of salvation to humanity (revelation) and our acceptance (faith) or rejection of this offer. From the time of the Council of Trent (1500s) until the time of the Second Vatican Council (1960s), the emphasis was on the content of this message usually presented as "propositions of faith" to be believed. Revelation was identified as "verbal truths." Vatican II, after much heated debate, shifted the emphasis from the content of revelation to the dynamics of revelation—to revelation as a living act. The understanding of faith also shifted from an emphasis on an acceptance of certain truths and disciplines to a personal encounter and relationship with the living God through Jesus Christ.

### **THEO 30007. Know Your Catholic Faith: Christianity: Life: Morality**

(1-0-1)

The course will introduce Catholic moral theology with a focus on appropriate scriptural passages, on the historical evaluation of the Catholic moral tradition and on the resources available for contemporary moral reflection.

### **THEO 30008. Know Your Catholic Faith: Jesus**

(1-0-1)

This course will look at the Christian hope for the resurrection of the body, as that hope is grounded in our confession that Jesus, who was crucified for us, has been raised by the Father. Beginning with a consideration of key passages on death and resurrection in the Old and New Testaments, it will focus then on classic passages in the Christian theological tradition and in contemporary theology, which articulate just what that hope for the full redemption and transformation of our human existence implies, and how it is rooted in our understanding of what has already happened in the paschal mystery.

### **THEO 30009. Knowing Your Catholic Faith: Original Sin**

(1-0-1)

This course begins with the definition and explanation of the doctrine of original sin as it is contained in "The Catechism of the Catholic Church" and selected other Church documents. Then we will examine how the doctrine arose, beginning with scriptural texts, moving through elected patristic documents, and then moving to modern attempts to make sense of the doctrine in the light of developments in our knowledge of human origins and history.

### **THEO 30011. Know Your Catholic Faith: Mary**

(1-0-1)

This course, which will be given in the form of an intensive on-campus retreat on a single weekend, will combine readings, lectures, discussions, common prayer, and quiet reflection on the subject of the mystery of God. After considering how God is presented in some major passages of the Old and New Testaments, we will discuss the presentation of God as mystery, and of the ways we come to know and speak of God, in the catechism of the Catholic Church. We will then discuss selected passages from St. Augustine's *Confessions* and from the works of Karl Rahner and C.S. Lewis, to get some sense of how the Christian theological tradition has dealt with God's being, God's knowability, and God's nearness.

### **THEO 30012. Know Your Catholic Faith: Eucharist**

(1-0-1)

The Eucharist is, as the catechism of the Catholic Church stresses, the "source and summit of the Christian life." This course examines Catholic teaching about this

central sacrament through the Catholic Catechism; papal and other ecclesiastical documents; and, the writings of St. Thomas Aquinas. Particular attention will be given to real presence, and, to the ways in which the Eucharistic Christ promotes spiritual growth.

### **THEO 30013. Know Your Catholic Faith: Matrimony**

(1-0-1)

This course is an introduction to the core teachings of the Roman Catholic Church on the sacrament of matrimony. The course is based on the “Catechism of the Catholic Church” (1994) and exposes students to both historical and contemporary writings on the theology of marriage.

### **THEO 30014. Know Your Catholic Faith: The Mass**

(1-0-1)

Each one-credit course in the Know Your Catholic Faith Series will reflect on a central feature of the Catholic faith, so that students come away with a clear idea of what the Church holds on these topics as well as a basic theological and personal understanding of them. This course focuses on the Catholic Mass, and will begin with a theology derived from the structure of the ritual, then choose additional areas of discussion: e.g., historical origins, ecumenical questions, liturgical symbolism in the Mass, roles of priest and laity, sacrificial and sacramental dimensions, etc.

### **THEO 30015. Know Your Catholic Faith: Ignation Spirit**

(1-0-1)

This course, which will be conducted in the intensive “retreat” style on a single weekend, invites students to learn first-hand about the distinctive approach to contemplative prayer aimed at conversion of life and practical decisions for discipleship that is classically embodied in St. Ignatius Loyola’s *Spiritual Exercises*. After an introductory lecture on the theology of Christian prayer and the distinctive role of Ignatius in Christian spirituality, students will participate in lectures and presentations on the text and structure of the exercises, and will then be asked to pray through the various meditations and considerations Ignatius offers, in a brief but concentrated way. As background to the course, students will be expected to have read the section on prayer in the catechism of the Catholic Church and Ignatius of Loyola’s autobiography.

### **THEO 30016. Know Your Catholic Faith: Identity of Jesus**

(1-0-1)

This course will attempt to answer the question: Just who was Jesus of Nazareth and what are the implications of this person for me? We will try to answer these questions through a careful reading of selected biblical texts and an examination of how the distinctive identity of Jesus has been imitated in the life of the church through the lives of various saints. Throughout the course, we will combine historical questions concerning who was Jesus with the pressing issues of our own day: Who is Jesus for me.

### **THEO 30017. Catechist Formation**

(1-0-1)

The one-credit course is offered for students who are enrolled in the catechist program through campus ministry. Students sign up to serve as catechists in local parishes and take this course to prepare them for their ministry. The goals of the class are: (1) to offer a overview of catechetical documents and directives in the Church; (2) to explore lesson planning and curriculum for religious education; and (3) to share practical applications for creative teaching and classroom management.

### **THEO 30018. ND: Vocation Initiative**

(3-0-3) Poorman

This course is meant to prepare the undergraduate resident counselors—known as “mentors-in-faith”—of the ND Vision high school summer retreat program. This preparation includes developing small group facilitation skills, acquiring the necessary theological understandings upon which the program is built, and building community. The culminating project of the course is a short Christian witness on one of approximately six themes that incorporates one’s own life experience as well as one’s faith-based reflections.

### **THEO 30019. ND: Vocation Initiative Music**

(2-0-2)

The NDVI: music class is for the student music leaders for the Notre Dame Vocation Initiative. Training in this choir begins at the start of the spring semester (each January); the choir meets once every week throughout the spring semester. The initial responsibilities lie with learning all the choral music, mass settings, responsorial psalms, canticles, and service music that accompanies the weeklong NDVI gatherings in the summer. Most of this repertoire is written for four-part harmony; each student must be thoroughly competent in his or her respective voice part. Additionally, the choir is the core group for the various (three) scriptural skit presentations that take place weekly. This work is further complemented by the choir members taking part in small group discussions with the high school campers, as time allows.

### **THEO 30020. A Theological Exploration of Vocation**

(1-0-1)

The purpose of this course is to foster a sense of vocation among our students, inviting them to become more aware of how they can live their whole lives as a response to a call from God. We hope to help young men and women realize, through their own faith experience, that the reality of Christian “vocation” invites each of them in some particular way to live as committed disciples of Christ in a challenging world. Through the decisions that they make every day as young adults they explore their own vocation. In order to achieve these stated goals, we will study the lives of 50 saints, holy men and women who responded to the call to follow Christ in their lives. Encyclical letters, Church doctrine, and other resources on vocation will be used to demonstrate what vocation means in the Catholic tradition.

### **THEO 30021. Liturgical Choir**

(1-0-1) Walton

Study, rehearsal, and performance of sacred choral music of high quality from plainchant through music composed in the 21st century. Membership in the 65-voice SATB ensemble is by audition and limited to undergraduate and graduate students. The choir sings each Sunday at the 10:00 a.m. Solemn Mass at the Basilica of the Sacred Heart, for Sunday evening vespers, and at special University liturgies and concerts throughout the year.

### **THEO 30022. Women’s Liturgical Choir**

(1-0-1) Bayless

The University of Notre Dame Women’s Liturgical Choir, under the direction of Andrew McShane, is a group of approximately 60 women who lead the liturgical music for the Saturday 5:00 p.m. Vigil Mass in the Basilica of the Sacred Heart. The Women’s Liturgical Choir is also heard at Sunday Vespers, weddings, Junior Parent’s Weekend, Advent lessons, and carols and other special University liturgies. Each spring semester, the choir tours within the United States, and at the end of the academic year presents a concert of sacred music at the Basilica of the Sacred Heart. The repertoire of the Women’s Liturgical Choir includes chant, renaissance polyphony, and music from the 18th through 20th centuries. Rehearsals are held on Monday and Wednesday evenings from 5:00 to 6:30 p.m. and on Saturday’s from 4:00 to 5:00 p.m. in Room 329 of the Coleman-Morse Center. If you are a female student, staff, or faculty member from the Notre Dame, St. Mary’s, or Holy Cross family and are interested in joining the choir, please contact Andrew McShane at 1-7800 or by email at mcshane.1@nd.edu.

### **THEO 30023. Folk Choir**

(1-0-1) Warner

Work with the folk choir, which continues to build the repertoire for Catholic school use. Class meets for seven weeks. (Second summer elective)

### **THEO 30024. Know Your Catholic Faith: Sin and Forgiveness**

(1-0-1) Anderson

This course will examine what the Bible has to teach us about the nature of human sin (original and otherwise) and how God’s merciful nature time and again overwhelms it. It should provide a good window in the penitential disciplines of

Lent and the joy of Easter. Class sessions will be devoted to a discussion of classic Biblical texts that have dealt with this theme (such as the book of Jonah and the story of the Prodigal Son) and how the Christian tradition has understood them.

### **THEO 30025. Facilitating Growth in Faith**

(0-0-0.5) Poorman

Facilitating Growth in Faith serves as a practicum allowing the mentors in faith from the NDVision Summer Program to reflect theologically on their catechetical ministry with high school students during each of four, one-week sessions. As such, this course will complete the educational objectives begun in THEO 30018. As a field education integrative seminar, this course will include interactive lectures, small group discussion sessions, and case study work on topics having to do with mentoring others in their personal and communal growth in faith and in their awareness of how to live their Christian vocations. Related theological topics include Christological and pneumatological perspectives on discipleship, grace, conversion, evil and human suffering, prayer, living the sacramental/liturgical life of the Church, becoming the Body of Christ, discerning the presence and action of God in our lives, and giving witness to faith in service and justice.

### **THEO 30026. Know Your Catholic Faith: Resurrection**

(1-0-1)

This course offers a brief theological introduction to the doctrine of the resurrection, based on the Catechism of the Catholic Church and expanded theologically by readings from traditional and contemporary writers.

### **THEO 30027. Know Your Catholic Faith: God**

(1-0-1)

Faith is the sense of God as real—as the most real reality there is, a reality more immediate to us than anything else that confronts us in everyday experience. Yet God is also veiled to faith: not a problem, but a mystery—a reality that is intrinsically beyond our ability to fit into the limited forms of words and ideas. To believe in God is a kind of knowing: a personal knowledge which gradually grows in us, and which involves, at the same time, trust, gratitude, and love. In this brief course, we will reflect together on some texts that have shaped the Church's sense of God: passages from the Old and New Testament; an oration of St. Gregory of Nazianus; St. Anselm's *Proslogion*; two questions from St. Thomas Aquinas's *Summa Theologiae*; a section from C.S. Lewis's *Mere Christianity*; and some writings on God by Pope Benedict XVI. Our purpose will be to develop a deeper sense of the God "in whom we live and move and have our being" (Acts 17:28), to whom we pray, in whose life and blessing we share.

### **THEO 30028. Know Your Catholic Faith: God is Love**

(1-0-1)

For five Sundays during Lent we will consider closely the first encyclical *Deus Caritas Es* ("God is Love") by Pope Benedict XVI. The class will meet on the Sunday evenings of Lent from 6:00 to 7:00 followed by participation at Sunday Vespers in the basilica. Attendance at all sessions and a weekly short reflection paper will be required in order to gain the one credit. Copies of the encyclical are available in the theology office (131 Malloy Hall). The course will be taught by Prof. Lawrence S. Cunningham and Rev. John Jenkins, C.S.C.

### **THEO 30029. Know Your Catholic Faith: Saints**

(1-0-1)

Those taking the one credit course on the saints have three requirements to earn the credit; they are (1) to read Lawrence Cunningham's *A Brief History of Saints* (Blackwell); (2) write a three to five page reflection paper on it; and (3) attend all the lectures of the Conference on the Saints beginning with the special lecture on Friday afternoon given by Prof. Cunningham. That lecture will treat both the history and theology of saints in the Catholic tradition.

### **THEO 30030. Know Your Catholic Faith: Creation**

(1-0-1)

The doctrine of creation is one of the most central doctrines of the Christian tradition: "it concerns the very foundations of human and Christian life, for it makes

explicit the response of the Christian faith to the basic question that people of all times have asked themselves, 'Where do we come from?' 'Where are we going?'" ("CCC" #282). This course offers a brief theological introduction to the doctrine of creation, based on the Catechism of the Catholic Church and expanded theologically by readings from traditional and contemporary writers. This course is part of the Know Your Catholic Faith series of one-credit courses.

### **THEO 30101. Augustine and Bonaventure**

(3-0-3)

A course devoted to what used to be called philosophical psychology. The goal will be to understand some of the ways the Augustinian tradition in philosophy attempts to make sense of the soul, in terms of mind, spirit, and will, but especially in terms of the heart. To be read are Augustine's *Confessions* and *De Trinitate*, and Bonaventure's *The Mind's Road to God*.

### **THEO 30201. Migration and Catholicism**

(1-0-1)

This course examines the international phenomenon of migration, the factors that give rise to it, and its effects on people. We will examine the Catholic documents that address the issue of migration

### **THEO 30202. Building Civilization of Love**

(1-0-1)

This course is an experience of service, based on faith, fostering theological reflection on inter-faith dialogue. Students will travel to Camp Brotherhood in Skagit County, Wash., during fall break, and meet and work with Jewish, Muslim, and Protestant and Catholic Christians on Together We Build, a Habitat For Humanity "build," constructing migrant worker housing. While in the Seattle area, students will also meet with leaders of faith communities and visit places of worship. This weeklong experience will provide a perspective from which to think theologically on interfaith dialogue. This course aims to foster interfaith life by providing a basic understanding of Judaism and Islam, (with a particular focus on the Catholic understanding of these religions); a side-by-side experience of service with members of other faiths; and an education in learning to think theologically about inter-faith experience and about dialogue. Readings will include "Nostra Aetate" and other church documents pertaining to interfaith dialogue, as well as contemporary theological treatments. Participation and one reflection paper.

### **THEO 30203. Christianity in the Middle East**

(3-0-3)

This course will examine the origins and development of Christianity in the Middle East where Semitic language and culture molded the indigenous "Oriental" churches of the region. Topics include Semitic-Christian spirituality, Christianity in India and China, the impact of Islam on the Middle East Christianity, and the modern diaspora: Europe and the Americas. Drawing on native accounts, and the latest archaeological evidence, we will piece together the largely untold story of Christianity in the Middle East.

### **THEO 30204. Augustine and William James**

(3-0-3)

A course devoted, for the most part, to a careful reading of significant parts of Augustine's *Confessions* and James's *The Variety of Religious Experience*. The goal is to come to an understanding of what these two great philosophers and psychologists can teach us about the spiritual quest.

### **THEO 30205. Kierkegaard**

(3-0-3)

This course will be devoted to a central theme in Kierkegaard's ethics, i.e., his discussion of the religious commandment to love God and thy neighbor as thyself. We will proceed by way of a slow and careful reading of his *Works of Love*.

### **THEO 30206. The Catholic Reformation**

(3-0-3)

*Corequisite:* HIST 32353

This course will examine some of the main historical realities, theological developments, and traditions of spirituality within Roman Catholicism c. 1450–c. 1700, the period of Catholic reform both before and after the emergence of the Protestant Reformation. The class format will be two lectures plus one discussion-based tutorial section per week, the latter based on the reading of primary sources in translation. Major topics to be discussed include the character of the late medieval Church and reforming efforts within it (e.g., the Observantine movement, Christian humanism); Roman Catholic response to the Protestant Reformation, including the Roman Inquisition; the revival of existing and emergence of new religious orders (especially the Society of Jesus); the Council of Trent and its implementation among the clergy and laity; Catholic missionary activity in Asia and the Americas; post-Tridentine Catholic art and scholarship; the relationship between the Church and European states in the 16th and 17th centuries; Jansenism; and the flowering of Catholic spirituality in the 17th century.

### **THEO 30207. The Romans and Their Gods**

(3-0-3)

An introduction to the way in which the Roman conceived of, worshipped, and communicated with the myriad gods of their pantheon. The course will focus first on conventional religious rituals and their cultural value, and secondly on the success of Roman polytheism in adapting to changing historical and social conditions. Particular attention will be paid to the so-called “mystery religions,” including Christianity, and their relationship to conventional forms of religious behavior.

### **THEO 30208. The Paschal Mystery in the Latino Community**

(1-0-1)

This is an intensive immersion experience in the Latino ritual celebrations of Holy Week combined with a theological reflection based on the experience and appropriate scripture. The students are required to write a final reflection paper.

### **THEO 30209. Canon and Literature of Islam**

(3-0-3)

This course is an introduction to the religious literature of the Arab-Islamic world. Emphasis is on works from the classical and medieval periods of Islam, roughly from the 7th to the 14th century of the Common Era. We will read selections from the Qur’an (the sacred scripture of Islam), the Hadith literature (sayings attributed to the prophet Muhammed), the biography of the Prophet, commentaries on the Qur’an, historical and philosophical texts, and mystical poetry. All texts will be read in English translation. No prior knowledge of Islam and its civilization is assumed, although helpful.

### **THEO 30210. Religion and Politics**

(3-0-3)

An examination of the linkage among religious beliefs, worldviews, group identifications, political attitudes and behavior, based on literature in political science, sociology, psychology, and theology. Topics include the meaning and measurement of religiosity; religious and anti-religious values embedded in American political institutions; religious worldviews and political philosophy; cue giving and political mobilization by religious groups, denominational traditions, partisanship, and issue positions; and religious movements, social conflict, and political coalitions.

### **THEO 30211. Philosophy of Judaism**

(3-0-3) Neiman

The most obvious goal of this course is to examine the philosophy of Judaism professed by the great American Rabbi, teacher and activist Abraham Joshua Heschel (1909–72). In order to facilitate comprehension of Heschel’s philosophical rendering of Judaism we will also study Rabbi Leo Trepp’s *The History of the Jewish Experience* (history, customs, beliefs) on alternative class days.

### **THEO 30212. Women and American Catholicism**

(3-0-3)

This course is a survey of the history of American Catholic women from the colonial period to the present. Through a combination of lectures, reading and discussion, we will explore the following themes and topics: the role of religious belief and practice in shaping Catholics’ understanding of gender differences;

the experience of women in religious communities and in family life; women’s involvement in education and social reform; ethnic and racial diversity among Catholic women; devotional life; the development of feminist theology; and the emergence of the “new feminism” as articulated by Pope John Paul II. We will seek to understand how Catholic women, both lay and religious, contributed to the development of Church and nation, and examine how encounters with the broader American society have shaped Catholic women’s relationship to the institutional Church over the last three centuries.

### **THEO 30213. Women and Religion in U.S. History**

(3-0-3)

The course is a survey of women and religion in America during the 19th and 20th centuries. Among others, we will consider the following themes: how religion shaped women’s participation in reform movements such as abolition, temperance, and civil rights; how religious ideology affected women’s work, both paid and unpaid; the relationship between religion, race, and ethnicity in women’s lives; female religious leaders; and feminist critiques of religion. We will examine women’s role within institutional churches in the Protestant, Catholic, and Jewish traditions, as well as raise broader questions about gender and religious belief. How did religious belief affect women both as individuals and in community? How could religion be used to both reinforce and subvert prevailing gender ideology?

### **THEO 30214. Chinese Ways of Thought**

(3-0-3) Jensen

This is a special topics class on religion, philosophy, and the intellectual history of China that introduces the student to the worldview and life experience of Chinese as they have been drawn from local traditions, as well as worship and sacrifice to heroes, and the cult of the dead. Through a close reading of primary texts in translation, it also surveys China’s grand philosophical legacy of Daoism, Buddhism, “Confucianism,” and “Neo-Confucianism” and the later religious accommodation of Christianity and Islam.

### **THEO 30216. Chinese Mosaic: Philosophy, Politics, and Religion**

(3-0-3)

This is a special topics class that introduces the diverse lifeways constituting the puzzle of the Chinese people. The course will chart this terrain of current Chinese imagination as it has been shaped from the contending, and often contentious, influences of religion, philosophy, and politics, introducing students to the heralded works of the Chinese intellectual tradition while requiring critical engagement with the philosophic and religious traditions animating this culture. Thus, as they learn about China, students also will reflect on how Chinese and Westerners have interpreted it.

### **THEO 30217. Reading the Qur’an**

(3-0-3) Reynolds

To Muslims, the Qur’an is the uncreated, eternal Word of God. As Jesus Christ is to Christians, the Qur’an to Muslims is the fullest expression of God’s mercy and concern for humanity. It is both the source of complete spiritual wisdom and the constitution for a more perfect society. In the present course we will encounter this revered text with the following goals: to examine the history of the Qur’an’s composition and reception; to explore the major themes of the Qur’an; to discuss new theories on and debates over the Qur’an; and, finally, to research the Qur’an’s statements on issues of contemporary interest, especially sex, politics and war. Students who are interested in this course, and are not majors, please contact the department for permission.

### **THEO 30218. The Vulgate and Related Texts**

(3-0-3)

Readings and critical discussion of the various layers of text, commentary, and glosses in the Vulgate Bible: (1) Jerome’s translation from the Hebrew (canonical books of the Hebrew Scriptures) including his introductions, including recent secondary scholarship on St. Jerome; (2) Jerome’s revised Gospels, with particular attention to St. Luke; (3) a glossed commentary on the gospel of St. Luke recently purchased by Notre Dame and Newberry Library (Notre Dame-Newberry ms. no. 9); and (4) a transcription and evaluation of the Notre Dame-Newberry

glosses. The class will have access to the manuscript itself, as well as photographic reproductions. An elementary knowledge of Latin is prerequisite; students will be expected to translate in class, and to read from reproductions of medieval manuscripts.

### **THEO 30220. The Reformation**

(3-0-3)

*Corequisite:* HIST 32352

A narrative history of Christianity in Western Europe from c. 1500 to c. 1650, which takes an international and comparative perspective, including Catholicism, Protestantism, and radical Protestantism. Topics covered include Christianity on the eve of the Reformation, Christian humanism, Luther and the German Reformation, the Peasants' War and Anabaptism, the English Reformation, Calvin and Calvinism, Catholic Reform and the Council of Trent, the French Wars of Religion, confessionalization, the Thirty Years War, and the English Revolution. Major themes include matters of religious content (doctrinal positions and devotional sensibilities), the relationship between different Christian groups and political regimes, the impact of religious changes across the population, and the definitive emergence of Christian pluralism. Lectures plus discussion.

### **THEO 30221. Islam and Muslim/Christian Dialogue**

(3-0-3)

The course is designed to introduce students to medieval Muslim perspectives of the Christian "other" and how these resonate in contemporary relations between Muslims and Christians. It will focus on Muslim-Christian relations in the modern/post-modern period, with particular attention to contexts of conflict and the potential for dialogue, solidarity and interreligious peacebuilding.

### **THEO 30222. The Worlds of Buddhism**

(3-0-3) Gimello

A thematic introduction to the pan-Asian (i.e., South, Southeast, and Central Asian as well as East Asian) Buddhist tradition exploring the fundamentals of Buddhist doctrine and practice while also sampling major themes in the religion's social, cultural, and material history. Among the particular topics to be covered are: the life of the Buddha (history and hagiography), the "Four Noble Truths" (the essentials of the Buddhist "creed"), the Buddhist canon (the nature and scope of Buddhist scripture), Buddhist cosmology (Buddhist conceptions of the formation and structure of the universe, i.e., of time and space), Buddhist monasticism, meditation and the Buddhist contemplative life, Buddhist ethics, the ritual lives of Buddhists, Buddhism and politics, Buddhist "family values," Buddhism and the arts, etc.

### **THEO 30223. Basil Moreau's Legacy**

(3-0-3)

This course will be taught at Holy Cross College by Robert Kloska. John Cavadini will be the instructor of record at Notre Dame. The purpose of this course is to understand the historical context, the life story, the work and thinking of Rev. Basil Moreau, C.S.C., the founder of the Congregation of Holy Cross, with a special eye toward how his life and spirit has influenced the Congregation of Holy Cross through the years, even up to the present day. The first part of the course will focus upon the historical context of his times, the unfolding drama of his life story, and the people and ideas that influenced him. Insights will be gleaned from biographical material, his own writings, books and ideas he references in his writings, and reflections from present day Holy Cross religious. The second part of the course will attempt to identify the strains of influence that Moreau had on other important figures in the history of the congregation (including Sorin, Bessette, Peyton), as well as the mission of the congregation and its worldwide works and institutions today. Students will write one 12-page paper exploring an aspect of his thought, spirituality, and continuing influence on the Congregation of Holy Cross and the life of the Church today. The paper will be presented orally.

### **THEO 30224. Buddhism in China: Middle Path in the Middle Kingdom**

(3-0-3)

Buddhism is the only one of the major religions traditionally regarded as Chinese that did not originate in China. China is arguably the Asian civilization in which Buddhism underwent its most extensive development and its most thoroughgoing transformations. This course is designed to be a thematic and historical overview of the development of Buddhist thought and practice in China with special emphasis on the process of mutual influence by which Buddhism, without ceasing to be Buddhist, became also a Chinese religion while China, without abandoning its indigenous religious heritage, became also a Buddhist culture. As such the course will serve a threefold purpose: it will introduce students to fundamental Buddhist beliefs and values as they took shape in China; it will acquaint them with essential elements of Chinese civilization attributable to Buddhism's presence; and it will provide an opportunity to study what may well be world history's most remarkable instance of successful cross-cultural religious communication. Students who are interested in this course and are not majors, please contact the department for permission.

### **THEO 30225. History of Catholicism and Catholics in the United States**

(3-0-3)

*Corequisite:* HIST 32615

This course is a survey of the history of Roman Catholicism in the United States from colonial times to the present. We will consider, among others, the following topics: immigrant and ethnic Catholicism, women in the Church, Catholic social reform, devotional and parish life, and the relationship between Catholicism and American democracy.

### **THEO 30401. Writing the Rites: Liturgical Books**

(3-0-3)

This is a theology course about liturgical books, their development through history, and their role in ritual practice. The course introduces and maintains a dynamic relationship between three main themes: interdisciplinary study, material culture of the book, and principles of pastoral liturgy. Participants will gain practical skills in manuscript studies and liturgy planning. Background in disciplines outside of theology is welcome. The course may be of special interest to those considering graduate work in the humanities, ministry, library science, and archival studies. Intense participation from students and interaction with the instructor and other experts is required. In the process, students will become familiar with several resources unique to our University: the Department of Special Collections, the Medieval Institute, the Center for Pastoral Liturgy, the Basilica of the Sacred Heart, the Church of the Loretto, and the Schola Musicorum.

### **THEO 30601. Christian Love**

(3-0-3)

This class explores the Christian understanding of love through close reading of a range of Christian classics on the topic from Tertullian to the early Reformation. The course's goal is to arrive at an understanding of the central themes and technical vocabulary of Christian thought on this question, and to encourage critical engagement with what the tradition claims.

### **THEO 30602. Christianity and Ecstatic Life**

(3-0-3)

A central aspect of the Christian vision is its articulation of the ecstatic movement of the self and communities away from immanent satisfactions and towards God. This movement itself is complex: It involves, on the one hand, intellectual and moral conversion and intellectual and moral journey, on the other. Importantly, however, both conversion and journey are always plotted against the background of the goal of conversion and journey, that is, real encounter with God. The course focuses on all three dimensions of the ecstatic movement, that is, conversion, journey, and encounter as they are envisaged and variously calibrated throughout the Christian tradition. Included among the leitmotifs of the course are Christian interpretation of the Song of Songs to extract a specific kind of Christian eroticism and the issues of whether a vision of God is possible in this life, and if so what are

its contours and limits. Authors include Origen, Athanasius, Augustine, Gregory the Great, Hildegard of Bingen, Bernard of Clairvaux, Bonaventure, Dante, Luther, the Anabaptists, and Pascal.

**THEO 30604. Dorothy Day and the Catholic Worker Movement**  
(1-0-1)

This course will examine the life and writings of Dorothy Day, the “mother” of the Catholic Worker Movement and its ongoing inspiration. We will read her autobiography, *The Long Loneliness*, and other of her writings.

**THEO 30605. Life, Death, and Morality**  
(1-0-1) Poorman

The purpose of this course is to introduce the student to three contemporary moral issues centered on the beginning and end of human life: assisted reproduction, end-of-life discernment, and abortion. We will study and discuss the contributions of Catholic Church teaching and moral theology to the consideration of these issues. The course will be a lecture-and-discussion format on two consecutive evenings.

**THEO 30801. Holy Fools in Christian Tradition**  
(3-0-3)

Through the analysis of a variety of texts ranging from the New Testament books to hagiographies and philosophical treatises we will examine different forms of holy foolishness in spiritual and cultural traditions of Eastern and Western Christianity and establish their cultural bearings. Concepts under discussion will include asceticism; sanctity; heresy; canonization; and hagiography. Among the course readings will be the First Epistle of the Apostle Paul to the Corinthians; Early Christian Paterika; individual Vitae of Byzantine holy fools (St. Simeon of Emessa, St. Andrew of Constantinople); controversial lives of Christian saints (Life of Alexis the Man of God); Lives of Eastern Orthodox Saints (Kieve Cave Monks; St. Basil the Fool of Moscow); Lives of Western Christian Saints (St. Francis of Assisi, Magery Kempe), and later elaborations on the subject of folly found in such works as *In Praise of Folly* by Erasmus of Rotterdam and *Madness and Civilization* by Michel Foucault.

**THEO 30802. God, Philosophy, and Universities: Aquinas, Arnould, and Newman**  
(3-0-3)

Enquiry and teaching in Catholic universities have aimed at understanding how the universe—physical, animal, and human—is ordered to God. One task of philosophy in the Catholic tradition has been to show how the various secular disciplines both contribute to such understanding and remain incomplete without theology. This course examines the question of how this task is to be carried out.

**THEO 30803. Modernism and Mysticism**  
(3-0-3)

This course examines the persistence of mystical and spiritual traditions in the literary texts of the early 20th century: Underhill, Hopkins, Yeats, Conrad, Joyce, Owen, Eliot, Crane, Hesse, Forster, Mansfield, Woolf, and Waugh.

**THEO 30804. Popular Religion and Philosophy in China**  
(3-0-3)

This lecture/discussion course will introduce the student to the plural religious traditions of the Chinese as manifested in ancestor worship, sacrifice, exorcism, and spirit possession. From an understanding of these practices, the course will offer insight into the mantic foundations of Chinese philosophy, especially metaphysics. Readings will consist of texts in translation of popular cults, as well as scholarly interpretations of these phenomena.

**THEO 30807. Chinese Ways of Thought**  
(3-0-3)

This is a special topics class on religion, philosophy, and the intellectual history of China that introduces the student to the worldview and life experience of Chinese as they have been drawn from local traditions, as well as worship and sacrifice to heroes, and the cult of the dead. Through a close reading of primary

texts in translation, it also surveys China’s grand philosophical legacy of Daoism, Buddhism, “Confucianism,” and “Neo-Confucianism” and the later religious accommodation of Christianity and Islam.

**THEO 30808. Islam: Religion and Culture**  
(3-0-3)

This course will discuss the rise of Islam in the Arabian Peninsula in the 7th century and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the core beliefs and institutions of Islam, with particular emphasis on religious and political thought from the Middle Ages through our own time. All readings are in English; no prerequisite.

**THEO 30809. God, Philosophy, and Universities**  
(3-0-3) MacIntyre

Enquiry and teaching in Catholic universities have aimed at understanding how the universe physical, animal, and human is ordered to God. One task of philosophy in the Catholic tradition has been to show how the various secular disciplines both contribute to such understanding and remain incomplete without theology. This course examines the question of how this task is to be carried out.

**THEO 30811. Learn Our Faith: Sharing Faiths**  
(1-0-1)

Sharing with persons of other faiths inevitably leads us to fresh understandings of our own faith. This course is designed to include Notre Dame students from diverse faith traditions and encourage mutual understanding.

**THEO 30812. Vatican II**  
(3-0-3)

The Second Vatican Council (aka Vatican II and VC II) initiated the reform and renewal of the Catholic Church. Because it determined the character and direction of contemporary Catholicism, it is the focus of this course. “Vatican II” consists of four units: Catholicism from 1846 to 1958, the unfolding of VC II from 1958 through 1965, the council’s teachings on the Church itself, and the council’s teachings on the Church in relation to the contemporary world.

**THEO 30813. Gender, Suffering, and Selfhood**  
(3-0-3)

Suffering is one of the most pervasive realities of human experience, and it can be argued that women often suffer in ways that are unique to and informed by their gender and sex. Designed for students of gender studies and theology, this course examines the intersection of gender, suffering, and selfhood with an emphasis on the ways in which suffering has played a role in religious traditions—and in the Christian tradition in particular—in problematizing or promoting the self-understanding and self-formation of women. We will engage authors both “inside” and “outside” the Christian tradition, and while the primary focus will be on contemporary debates and interpretations of the class themes, some attention will be given to earlier periods in history. The challenge of the course will be to learn to assess critically and understand constructively the various means by which the gender- and religion-inflected experiences of asceticism, ritual sacrifice, pain, self-denial, etc. have influenced the selfhood of women.

**THEO 30814. Ideas That Shape Catholic Education**  
(3-0-3)

Catholic elementary and secondary schools contribute to the common good of civic society while advancing the evangelical mission of the Catholic Church. This course focuses on the historical successes of Catholic schools in the United States of America, surveys current research, and analyzes trends in theology, history, and philosophy that have shaped the current structure of the Catholic school system. Requirements include a field-based experience in a local Catholic school.

**THEO 30815. Faces of the Saints**  
(1-0-1)

In this class, you will see a number of films made across the span of five decades by filmmakers from four different countries about individuals who live a profoundly spiritual life. Students in this class will be expected to see four of the six films

(tickets to be submitted with paper) and write an extended essay (8 to 10 pages) comparing at least two of them as visualizations of spirituality. Your paper should zero in on how these films try to express in visual terms what is normally thought of as invisible, namely the intensity of spiritual existence. As photographic art, films bring a high degree of realism, but how do they put into images that which transcends everyday reality?

### **THEO 30817. Buddhist Meditation Traditions**

(3-0-3)

Relying chiefly on English translations of primary, mostly east Asian canonical sources, this course will examine varieties of Buddhist meditation practice while posing theoretical questions about the nature of meditation as a form of religious life; its ethical implications; its relations with other elements of Buddhism like doctrine, ritual, art institutions; etc.—all considered against the background of theological and philosophical concern with the role of contemplative experience in the religious life.

### **THEO 30818. Catholic Church for Medellin to Aparecida: An Evangelizing Option for the Poor**

(3-0-3)

Medellin (1968) was the first General Conference of the Latin American Bishops after the Second Vatican Council. Medellin was a strong step forward in clarifying the role of the Latin Church. This course will explore the following question: Did Aparecida (the fifth General Conference) in Brazil 2007, rekindle the vision of Medellin?

### **THEO 30819. Introduction to Buddhism in East Asia**

(3-0-3) Gimello

An introduction to Buddhism in East Asia (principally China, but also Japan, Korea, and Vietnam) with emphasis less on what Buddhists think or believe and more on what they actually do in their public as well as their private lives—e.g., the rituals they perform; their disciplines of self-cultivation; the institutions they establish; the ethical, political, and economic decisions they make; etc.

### **THEO 30820. Theological Themes in Recent Mexican Film**

(1-0-1) Cavadini

This course explores the relationship between “films and faith” by looking at theological and religious themes in the work of four prominent, Catholic filmmakers from Mexico. Students will be expected to see all four films and the panel presentation, and to submit a journal taking up the issues that each movie presents. There will be a brief introductory meeting before the films, and the time and place of the introductory meeting is to be announced soon.

### **THEO 33601. Identity, Social Ethics, and Psychology**

(3-0-3)

This course represents a unique opportunity to explore how developmental psychology and Catholic social teaching might engage in a creative dialogue to better understand the potential impact of poverty, injustice, and oppression on human development. The first stages of the course will explore why identity and personhood are central concerns to both psychology and theology, as well as how each arrives at knowledge and understanding of these themes. From this base of understanding, we will explore contemporary social concerns in which identity and personhood are salient issues: migration, aging, and race relations. Course material will include empirical and theoretical documents from both disciplines, guest speakers, and structured “immersion” experiences in which students will be invited to meet and perhaps share meals and stories with individuals affected by these issues. Finally, students will be required to choose one of these topics for a community-based learning project in the South Bend area; for example, a student may elect to conduct a “life story interview” to understand how an individual’s identity is affected by the experience of migration, racism, or ageism. For more information, please contact mmontpet@nd.edu, vcarmona@nd.edu, or tbushlac@nd.edu.

### **THEO 33801. From Power to Communion: Toward a New Way of Being Church Based on the Latin American Experience**

(3-0-3) Pelton

This seminar explores the present and the future of the Catholic Church, placing emphasis on how its future is foreshadowed in the growing ecclesial interdependence that exists between the churches of North and Latin America. Emphasis is placed on the growing involvement of the laity in Latin America and where this may lead the North American church. In a particular way, attention is given to the role of small Christian communities.

### **THEO 33802. Faith and the African American Experience**

(1-0-1)

This course will introduce students to the African American faith experience, with particular attention being given to the historical development of spiritualities of liberation in the African Diaspora. Guest lecturers and seminar leaders will offer “perspectives” on this rich and heterogeneous tradition from several vantage points within the humanities, social sciences, and theological disciplines. In addition to a course pack of selected readings, the PBS series, *This Far by Faith: African American Spiritual Journey*, and its companion volume will constitute the required “texts” for the course.

### **THEO 33858. Social Concerns Seminar: International Issues**

(1-0-1) Tomas Morgan

This course revolves around international experiential learning opportunities, examining the culture, community, and life of the people encountered, including the poor. Students participate in preparation and follow-up sessions.

### **THEO 33931. Summer Service Learning: ACCION**

(1-0-1) Shappell

The ACCION internships run 10–12 weeks in micro-lending offices across the country.

### **THEO 33933. Summer Service Learning: Latino Leadership Intern Program**

(3-0-3) McDowell; Pfeil

This is a leadership internship for Hispanic studies working 10–12 weeks in a Hispanic/Latino area with organizations dedicated to empowering local communities. Students will complete the requirements of THEO 33931 and work with the Center for Social Concerns to build partnerships with the agencies and people involved.

### **THEO 33935. Seminar: Service Learning Internship: Contemporary Issues**

(3-0-3) Shappell; Pfeil

This internship is for students interested in learning more about how the Catholic social teachings are addressed in the work of a church organization, such as the Catholic Campaign for Human Development.

### **THEO 33936. Confronting Social Issues: SSPs**

(3-0-3) Shappell; Pfeil

This 3-credit service-learning course takes place before, during, and after student participation in eight-week “Summer Service Projects” sponsored by the Center for Social Concerns. The goals of the course are to reflect on the meaning and dynamics of Christian service, compassion and Catholic social teaching through readings and writing, along with discussion and reflection with site supervisors and alumni, and scheduled group discussions upon return to campus. Writing assignments include a journal, reflection paper of six to eight pages, and responses to study questions related to the course packet. This course is completed during the first five weeks of fall semester and is graded Satisfactory or Unsatisfactory. Acceptance is based on the student’s application and interview. Contact the Center for Social Concerns for more information.

**THEO 33937. Confronting Social Issues: THEO**

(3-0-3) Shapell; Pfeil

This 3-credit service-learning course takes place before, during, and after student participation in eight-week "Summer Service Projects" sponsored by the Center for Social Concerns. The goals of the course are to reflect on the meaning and dynamics of Christian service, compassion and Catholic social teaching through readings and writing, along with discussion and reflection with site supervisors and alumni, and scheduled group discussions upon return to campus. Writing assignments include a journal, reflection paper of six to eight pages, and responses to study questions related to the course packet. This course is completed during the first five weeks of fall semester. Acceptance is based on the student's application and interview. Contact the Center for Social Concerns for more information.

**THEO 33938. Summer Service Learning: International**

(3-0-3) Morgan; Kollman

This 3-credit course provides students the opportunity to encounter international realities through work with poor and marginalized people. Same academic requirements as THEO 33936 with the addition of area-/country-specific readings and meetings.

**THEO 33939. Summer Service Learning: NYSP**

(V-0-V) Pettit

The National Youth Sports Program runs for six weeks on the Notre Dame campus. Students work with low-income children from the South Bend area in educational enrichment and recreation. Same requirements as THEO 360.

**THEO 33950. Social Concerns Seminar: Appalachia**

(1-0-1) Mick

This seminar involves experiential learning during the semester break. The course is centered on a service-learning immersion in the region of Appalachia and provides preparation for and follow-up to that experience. Students may focus on particular themes (e.g., rural health care, environmental issues) at various sites while learning about the region and rural issues.

**THEO 33951. Social Concerns Seminar: Washington, D.C.**

(1-0-1) Toms Smedley

This course centers on a trip to Washington, D.C., over fall break, during which time students analyze a significant social issue through contact with various agencies, government offices, and church organizations. Students participate in preparation and follow-up sessions. Themes (e.g., educational reform, violence in America) vary each year.

**THEO 33952. Social Concerns Seminar: Advanced Studies**

(1-0-1) Toms Smedley

This seminar is designed to enhance the students' study and application of a particular social concern issue. The experiential component of the course will be tailored to the specific interest of the student and requires preparation and orientation, follow-up reflection, and associated readings.

**THEO 33953. Social Concerns Seminar: Contemporary Issues**

(1-0-1) Mick

This seminar allows students to participate in an experiential opportunity designed to examine contemporary social problems. Emphasis will be placed on understanding issues/conflicts from the perspective of the various participants. Preparation and follow-up sessions are tailored to the specific opportunity.

**THEO 33954. Social Concerns Seminar: Leadership Issues**

(1-0-1)

This course is open to student leaders of various campus organizations focused on community service and social action (e.g., student groups affiliated with the Center for Social Concerns, social concerns commissioners of dorms, etc.). This seminar will examine leadership and empowerment issues from a multidisciplinary perspective, focusing on the role of the leader within organizations promoting community service, social awareness, and action for justice and peace.

**THEO 33955. Social Concerns Seminar: Learning and Leadership**

(1-0-1)

*Prerequisite:* (THEO 10001 OR THEO 100) OR (THEO 13183 OR THEO 180G) OR (THEO 20001 OR THEO 200) OR (THEO 24805 OR THEO 201)

This seminar examines models of community-based learning and service-learning, building on and enhancing student leadership in such educational initiatives. Students will examine related texts, and learn means to facilitate faith-based reflection.

**THEO 33956. Social Concerns Seminar: Field Education**

(1-0-1)

A directed field education experience in theology, augmented by readings and dialogue with faculty and others. Area of focus and placement determined by student interest and initiative, in collaboration with the Center for Social Concerns. Site placements may involve service-learning or related work (at, for example, La Casa De Amistad, the Center for the Homeless, or other site where the center has placed a community-based learning coordinator). A learning agreement will outline specific learning tasks and requirements.

**THEO 33957. Conscience in the Crossfire: Ethics and the Environment**

(1-0-1)

Where do you stand on the issues and candidates during this election season? How do you make a judgment in regards to voting and participating in American society? This one-credit course will explore issues central to the 2008 elections, with a focus on how citizens, in particular those who bring a faith perspective, may address social concerns in their voting and political participation. The goals of the course are: (1) to address the process of the formation of conscience in political contexts; (2) to explore issues, in an interdisciplinary context, relevant to the current national elections; and (3) to explore creating the conditions for peace, justice, and the common good.

**THEO 33959. Social Concerns Seminar: Cultural Diversity**

(1-0-1) Toms Smedley

The purpose of this course is to begin to analyze the positive aspects of ethnic and cultural diversity as well as related tensions, including racism. Students will participate in a five-day program during break at selected sites providing an orientation to culturally diverse communities and allows students to engage in discussions on relevant issues with local residents and community leaders. Students participate in preparation and follow-up sessions.

**THEO 33960. Social Concerns Seminar: Mexico Service-Learning Project**

(1-0-1)

This seminar involves three weeks of service-learning in Oaxaca, Mexico. It is designed to expose students to the reality of Latin America through inter-cultural exchange, shared work experience, and faith reflection. Students examine the social, cultural, and international forces operative in the region through discussion, relevant readings, and written reflection.

**THEO 33961. Social Concerns Seminar: Discernment**

(1-0-1) Hebbeler

This seminar focuses on senior students discerning and envisioning the integration of faith/theology and social concerns into their lives beyond Notre Dame. The objective is to provide students the opportunity to integrate their experience with the insights of speakers and authors, emphasizing the Catholic social tradition, in written and oral expression. The seminar will meet for six Wednesdays from 5:00 to 7:00 p.m. at the Center for Social Concerns.

**THEO 33962. Social Concerns Seminar: Gospel of Life**

(1-0-1) Toms Smedley

The Gospel of Life Seminar provides opportunities to read, reflect, and be of service on a variety of life issues through service and experiential learning. Exploration begins in orientation classes where students will become familiar with the issues through reading Church documents such as *The Gospel of Life* and

through meeting people of the South Bend and Notre Dame communities that work on pro-life issues. During the week of service and experiential learning in Washington, D.C., over fall break, the seminar participants will learn from Church and government leaders, various agencies, and individuals. The follow-up classes facilitate analysis and synthesis of insights gained during the week in Washington, D.C.

### **THEO 33963. Church and Social Action: Urban Plunge**

(1-0-1) Purcell

This course centers on a 48-hour immersion (colloquially known as the Urban Plunge) in an urban setting during the winter break (prior to return to campus). The course includes a preparation workshop in the fall semester, readings, two reflection papers, and follow-up educational meetings.

### **THEO 33964. Social Concerns Seminar: Education**

(1-0-1) Toms Smedley

This seminar focuses on the educational and outreach endeavors of St. John Vianney Catholic Parish in Goodyear, Ariz., and builds upon Notre Dame's relationships with the Congregation of Holy Cross. Participants are hosted by parish families and spend several days in the classroom with a mentor teacher. Participants also visit organizations in Phoenix doing outreach to people who are homeless and to pregnant women.

### **THEO 33965. Social Concerns Seminar: Organizing Power and Hope**

(1-0-1) Mick

This seminar focuses on diverse church, school, leadership, and community-organizing initiatives to improve life in Chicago neighborhoods. Participants will be challenged to examine perceptions of power, service and social action.

### **THEO 33966. Social Concerns Seminar: Border Issues**

(1-0-1) Toms Smedley

The seminar examines immigration and related issues that exist between the United States and Mexico. Participants travel to El Paso, Texas and Ciudad Juarez, Mexico to meet with refugees, Border Patrol, parish organizations, and families who live in "squatter" villages. Participants also analyze and discuss policy issues. The immersion is in partnership with Annunciation House.

### **THEO 33967. Social Concerns Seminar: Migrant Experiences**

(1-0-1) Toms Smedley

This seminar offers a unique immersion into the lives of migrant farm workers in Florida during the spring harvest. Students pick tomatoes in the fields (donating their wages), live with migrant families, assist church and social agencies that serve migrants, and meet with community leaders, never again to take food for granted.

### **THEO 33968. Social Concerns Seminar: L'Arche Communities**

(1-0-1) Toms Smedley

This seminar centers on travel to a L'Arche community (e.g., Toronto, Canada) to share community life with developmentally challenged persons. Students draw from the philosophy of Jean Vanier, the works of theologian Henri Nouwen, and other spiritual writings to augment this participatory learning experience.

### **THEO 33969. Social Concerns Seminar: Hispanic Ministry**

(1-0-1) Toms Smedley

This seminar gives participants the opportunity to experience the Church's option for the poor through an immersion into the spirituality, culture, and economy of the rural, Southern California valley community of Coachella. Students work with the members of the Congregation of Holy Cross who are in ministry there.

### **THEO 33970. Social Concerns Seminar: International Issues**

(1-0-1) Tomas Morgan

This seminar serves as the required orientation course for all THEO 33938 International Service Learning Program participants. It will provide students with an introduction to international issues in developing countries through the lens of Catholic social tradition, guidance in independent country/area study, preparation

and tools for cross-cultural service, opportunities for theological reflection, logistical information necessary for international programs and travel, and general support within the context of a community of colleagues. Other students doing summer internships in developing countries may take the seminar with permission from the instructor.

### **THEO 33971. Social Concerns Seminar: Civil Rights and Social Change**

(1-0-1)

The purpose of this seminar is to study key events and leaders that sparked the broad-based movement to secure civil rights in the United States. Students will visit communities (Atlanta, Birmingham) and religious institutions that shaped the ideology and development of movement in the late 1950s and early 1960s. Participants will also be asked to explore the current state of leadership in the civil rights community, assessing its relevance and potential for continued influence on issues of race and discrimination into the new century.

### **THEO 33972. Social Concerns Seminar: Children and Poverty**

(3-0-3)

This seminar focuses on concerns that affect the youth of our nation, especially poverty and violence, and examines efforts to foster positive youth development. Immersion in New York City. Participants read Catholic social teaching focused on youth/family issues.

### **THEO 33975. Social Concerns Seminar: Poverty and Development in Chile**

(1-0-1) Cahill Kelly

This seminar serves as the required orientation course for all participants in the international study program in Chile. It will provide an introduction to international issues in developing countries through the lens of Catholic social tradition, preparation and tools for cross-cultural service, opportunities for theological reflection, logistical information necessary for international programs and travel, and general support within the context of a community of colleagues. Other students doing summer internships in developing countries may take the seminar with permission from the instructor.

### **THEO 40001. Seminar: Advanced Syriac**

(3-0-3)

Syriac is a form of Aramaic that was the literary language of Jews and pagans in Western Asia before becoming the common dialect of Aramaic-speaking Christians in the region. Christianity had its matrix in Judaism, and early literature in Syriac preserves the only surviving sustained evidence of the distinctive character of Aramaic-speaking Christianity that is largely un-Hellenized and that reflects the linguistic and cultural milieu of first-century Palestine. Because of the shared literary culture of Judaism and early Syriac Christianity, examination of the intertextuality of early Syriac literature reveals a deep acquaintance with the thought and culture of Late Second Temple Judaism and the intertestamental period. A full appreciation for the dependence of Syriac literature upon Jewish literary and intellectual models requires an interdisciplinary focus that takes into account a full range of issues; among the most important are hermeneutical questions related to Jewish and Christian interpretations of scripture. Participants in the seminar will investigate a range of questions based on the following: (1) In what sense may particular texts be called Christian (Jewish, Manichaean, Gnostic)? (2) What evidence is there for intertextuality, i.e. to what extent can texts be shown to occupy "the space between" Judaism and Christianity? (3) From what social and cultural milieu did the texts emerge? (4) What evidence do the texts retain of possible oral or non-literary origins? (5) In what sense are the texts literary? Do peculiarities of language, diction, or genre in any way distinguish the texts? Can the texts be shown to be typical of the time and circumstances from which they emerged? (6) How are the texts to be read? Is it enough to evaluate them as historical documents, relating them to the historical circumstances in which they were generated, and the literary culture to which they originally belonged?

**THEO 40014. Medieval Latin Survey**

(3-0-3)

This survey of medieval Latin texts emphasizes literary texts, but some attention will be given to more technical writing as well.

**THEO 40101. Introduction to Old Testament**

(3-0-3) Ulrich

This course will offer students an introductory-level survey of the books of the Hebrew Bible, with emphasis placed on the holistic (i.e., theological, literary, and social-scientific) study of the history, literature, and religion of ancient Israel. The implications of selected texts in Christian and Jewish theological discourse will also be explored. Required course components include the major divisions of the Hebrew Bible (Pentateuch, prophets, and writings), and writing spans the following research-related genres (case studies, article reviews, journal, and critical notes). Fall only.

**THEO 40102. Prophets**

(3-0-3)

This course will examine different concepts of prophecy in the Hebrew Bible and in later Second Temple traditions. How did prophets, priests, and scribes claim divine inspiration? How did they connect revelation and heavenly journey to textual authority and the production of Scripture? Throughout the course we will focus mainly upon biblical texts, but we will also look at claims to prophetic authority made in non-biblical wisdom, apocalyptic and liturgical texts. No prior knowledge of biblical prophecy, biblical studies, or ancient languages is required.

**THEO 40103. Redemptive Suffering In Ancient Judea**

(3-0-3)

What were the theologically significant effects of the destruction of the Temple in 586 BCE and in 70 C.E.? Traditionally scholarship has responded by claiming that the divine revelation eventually withdrew from the Jewish tradition and that prophecy ceased. More nuanced accounts speak of a transformation from prophecy into scribalism, in which divine revelation conveyed by the prophet is replaced by an inherited and inspired text, which is read by an authorized interpreter. While revelation and inspiration persisted, there was a gradual but significant transformation in the role of the divine and of the interpretation of destruction and exile. This course studies how suffering, destruction, and exile come to be recast as part of the salvation history of Judaism. We will study texts from ancient Judaism (Hebrew Bible, Dead Sea Scrolls, Pseudepigrapha, Apocrypha, Rabbinic Midrash).

**THEO 40104. Historical Jesus**

(3-0-3) Meier

The purpose of this course (a lecture course supplemented by readings and discussion) is to introduce the student to the major historical and exegetical problems involved in the quest for the historical Jesus, especially as pursued today in the so-called Third Quest. The course will move from initial definitions and concepts, through questions of sources and criteria, to consideration of major sayings and deeds of Jesus that may reasonably be considered historical. As time allows, major areas to be treated will include Jesus' relation to John the Baptist, Jesus' proclamation of the kingdom as future yet present, his realization of the kingdom through deeds of power (miracles) and table fellowship, the various levels or circles of followers (the crowds, the disciples, the Twelve), various competing groups (Pharisees, Sadducees), his teaching in relation to the Mosaic Law, the enigma (riddle-speech) of his parables, self-designation, final days, passion, and death. Obviously, it is more desirable that students be allowed time for discussion and questions than that all these topics be covered.

**THEO 40105. Women and Christian Origins**

(3-0-3) D'Angelo

The course is a survey of the New Testament and other literature from its context from a feminist perspective. It will delineate patterns of gender in the theology and structure of these works, attempt to retrieve the participation of women in the movements behind them, and consider the impact of the texts and their contexts

in gender relations, sexual politics and arrangements of race and class in the 21st century. Participation, three short or one short and one longer paper.

**THEO 40106. Memory and Prophecy**

(3-0-3) Gutierrez

In the last decades, significant theological trends have emerged both from poor countries and from marginalized groups within wealthy countries. Why have they emerged from different Christian churches of our time? This course will explore this question taking the case of Latin American theology. In particular, it will consider the implications of the "preferential option for the poor" for the areas of theological reflection, pastoral work, and spirituality. Special attention will be paid to the biblical foundations of that option as summed up in two crucial concepts: memory and prophecy. The 16th-century Dominican, Bartolome De Las Casas, said, "Of the least and most of forgotten people, God has a very fresh and vivid memory." The Bible invites us to make God's memory our own, and one component of that memory is the remembrance of the "least ones." The announcement of the Gospel is linked to the advice received by Paul to "remember the poor" (Gal. 2:10). Theologically, poverty is the negation of creation. Poverty means death. Thus, the option for the poor also manifests in the prophetic opposition to that which means death for the poor. The course will examine what memory and prophecy signify for living a Christian life and doing theology in light of some of the major challenges to Christian faith today.

**THEO 40107. Introduction to Rabbinic Literature**

(3-0-3)

The course will serve as an introduction to the critical study of Mishna, Tosefta, Midrash, and Talmud and will focus on the place of study within the various Rabbinic approaches. Some comparison will be made with Christian and Greco-Roman thinking on the subject.

**THEO 40108. New Testament Introduction**

(3-0-3) Aune

A presentation of all the major approaches important for the understanding and study of the literature of the canonical New Testament in its historical, social and literary context. Emphasis on the various methodologies which have been applied to the study of the New Testament, including historical criticism, form criticism, redaction criticism, source criticism, narrative criticism, rhetorical criticism, and social science criticism. Recent developments in the quest for the historical Jesus will be discussed, as will recent attempts to reconstruct the life and teachings of Paul. Important church documents on the Bible will be read, including, *De providentissimus Deus* (1893), *Divino Afflante Spiritu* (1943), *Instruction Concerning the Historical Truth of the Gospels* (1964), *Dei Verbum* (1965), and *The Interpretation of the Bible in the Church* (1995).

**THEO 40109. Prayer and Worship in the Early Church**

(3-0-3)

Yes, people actually do pray and worship. So all start with some experiential knowledge. But what do we do when we pray? How many types of prayer might we pray? Why pray? Hence we must necessarily turn to the experts to learn all of this, experts in this case being social scientists who have studied "communication" theory. In addition, student will be reading the great classical prayers in the New Testament and the early Church, both learning to read them critically and becoming acquainted with the remarkable body of prayers that are our heritage. Next, what is worship? Again, we turn to social sciences for suggestions. Christ worship, of course, was juxtaposed to temple worship in just about every area. Students will examine major New Testament documents where this is demonstrated, such as the Gospel of John and Hebrews. It is hoped that your worship on Sunday will be that much richer.

**THEO 40110. Book of Genesis: Literary Artistry and Theological Meaning**

(3-0-3) Anderson

The book of Genesis is arguably the most commented upon book in the Old Testament. Nearly all of the theological themes dearest to the Bible are the subject of considerable narrative elaboration: creation, fall, redemption, and election.

This course will consider how the various stories in Genesis raise the profoundest of questions and what sort of answers it has provided the theological reader. The focus of the course will be on a close reading of the entirety of the book with the goal of mastering the whole.

### **THEO 40111. Fourth Gospel**

(1-0-1)

The Gospel of John offers one of the most exciting and beautiful visions of Christian life in the New Testament, not only for its own time but also for disciples of all generations. However, because it is so different from the Synoptic Gospels it is often a mystery to readers who are intimidated by its highly developed theology and mystical spirituality. This one-week course is intended to introduce students to the Gospel's history, literary characteristics, theology, and spirituality so that they can handle it competently in ministry as well as use it fruitfully to nourish their own spiritual life. We will concentrate on the material in the Gospel on discipleship, community, mission/ministry using primarily the narratives of encounters between Jesus and disciples.

### **THEO 40112. Wisdom Literature and the Psalms**

(3-0-3)

The course offers a survey of the scriptural wisdom books (Proverbs, Job, Ecclesiastes, Sirach, Wisdom) and the Book of Psalms. The wisdom works will be studied in their historical contexts and their central themes will be explored; the major forms of the psalms and their settings will be studied. There will be a midterm and final exam and a paper.

### **THEO 40113. Introduction to Old Testament/Hebrew Bible**

(3-0-3)

Purpose of this course is to familiarize students with the basic contents of the Old Testament. Though often neglected by contemporary Christians it is worth noting that the Old Testament was the Bible for the first two centuries of the Church's existence. As such, the Old Testament has played a major role in all aspects of theological reflection. As would be expected, this course will address basic questions concerning historical and literary setting. But special emphasis will be placed on: (1) the reception of the text as sacred scripture within the Christian tradition; (2) how the Old Testament is to be understood in light of the New and vice versa; and (3) the relationship between Jewish and Christian readings of this book.

### **THEO 40114. Parables**

(3-0-3)

The parables in the gospels are among the most famous stories in the Bible. This course will explore the parables in three contexts. First, we will wrestle with the literary nature of a parable. What is a parable? Is a parable a metaphor? Are there parallels to the parables in the gospels? Second, we will work through the parables that are in the gospels of the New Testament. How did the evangelists understand parables? Why do they situate them in their gospels in the places that they do? Do parables help us understand the message of each gospel? Finally, we will attempt to uncover the parables of Jesus. Are there any distinguishing features of Jesus' parables? Why might Jesus have taught in parables? Course requirements include reading ancient texts and modern analyses, a major paper, and a final examination.

### **THEO 40115. Introduction to Rabbinic Literature**

(3-0-3)

The literature of Rabbinic Judaism, which emerged roughly at the same time as Christianity and developed in dialogue with it, is rich and various. We survey the major works in this corpus, with particular attention to the following issues: the role of the Hebrew Bible in rabbinic literature; theologies of rabbinic law; Temple and Torah as competing conceptual foci; border figures (gentiles, women, apostates, etc.); and study and worship in the synagogue. The course is open to undergraduates and M.A. students. Undergraduate course requirements include a midterm, a final, and a short paper. No Hebrew or Aramaic required, but students with facility in these languages will be provided with source material in the original.

### **THEO 40116. Hope in God: The Spiritual Horizon of the Hebrew Bible/Old Testament**

(3-0-3) Novick

One of the central foci of biblical piety is the worshiper's orientation toward the future. In distress, both the individual and the nation are to put their hope in God, and neither to lose their hope in God nor to put their hope in someone or something else. In this class, we examine the dynamics of hope and its alternatives in the Hebrew Bible/Old Testament, and the foundation that this discourse of hope provides for the notions of restoration and resurrection in the Second Temple period and in early Christianity and rabbinic Judaism. Readings include large parts of Job, Lamentations, and Psalms.

### **THEO 40117. Introduction to Judaism**

(3-0-3) Novick

This course surveys the major practices and beliefs of Judaism. Our focus is on Judaism as a religious tradition, one that links its adherents across time even as it changes in response to new circumstances. We begin by examining the foundational religious categories that crystallized in antiquity, such as the commandments and Torah study. We then turn to transformative developments in later periods, among them the flourishing of philosophy and mysticism in medieval Judaism, religious reform movements in the 19th and 20th centuries, the Holocaust, and Zionism.

### **THEO 40201. The Christian Theological Tradition I**

(3-0-3) Cunningham; Wawrykow

A survey of Christian theology from the end of the New Testament period to the eve of Reformation. Through the close reading of primary texts, the course focuses on Christology of such influential thinkers such as Origen, Athanasius, Augustine, Anselm, and Aquinas. How do these thinkers understand the person and work of Jesus Christ? What are the Christological problems that they tried to resolve? How do the different Christologies of these thinkers reflect their differing conceptions of the purpose and method of "theology?" Some attention will also be given to non-theological representations of Christ. How does the art of the early and medieval periods manifest changes in the understanding of the significance of Jesus. This course is obligatory for all first and supplementary majors but is open to others who have completed the University requirements of theology and who wish to gain a greater fluency in the history of Christian thought. Fall only.

### **THEO 40202. The Christian Theological Tradition II**

(3-0-3) Zachman

The course will examine the development of the Christian tradition from the time of the Reformation to the present, with special attention to the confessional division of the western Christian tradition during the Reformation, and the responses that post-Reformation Christian traditions make to the secularization of Western culture. The objective of this course is to develop an ecumenical understanding of contemporary Christian traditions. Class time each week will consist of two lectures and one student-led discussion. Evaluation will be based on discussion, four short papers, and a final exam. Spring only.

### **THEO 40205. Medieval Theology: Introduction**

(3-0-3)

The Middle Ages brought about a broad spectrum of theological thought and literature. Both traditional and innovative medieval theologians eventually made theology a "science." Though exposing the faith to rational inquiry, medieval theology remained a thoroughly biblical endeavor. The Middle Ages also produced a great number of classics of Christian spirituality. The course will focus on single theologians as well as on important controversies and theological ideas. Particular emphasis will be given to the leading figures of the 12th and the 13th century, such as Anselm of Canterbury, Peter Abelard, Bernhard of Clairvaux, Hugh of Saint Victor, Albert the Great, Bonaventure, Thomas Aquinas, and Duns Scotus.

### **THEO 40206. Reformation Theology: Topics**

(3-0-3) Zachman

An examination of the development of Christian thought from the Council of Constance in 1415 to the First Vatican Council in 1869–70, with special attention

given to the impact of the Reformation and the enlightenment on the formation of Christian theology.

### **THEO 40207. Christ, Spirit, and Transformation History**

(3-0-3)

This course will look at the relationships between embracing an authentic Christian spirituality and working to transform society and history. We start from the observation that while “spirituality” is currently very popular in the United States, it is often extremely individualistic and presented as a haven or oasis in which to escape a harsh world. The thesis of this course is that this is an impoverishment or distortion of authentic Christian spirituality. To investigate this, we will begin by looking at how spirituality is presented in the Bible, with particular attention to its relationship to conversion and evangelization, as expressed in and through people’s involvement in their particular cultures and histories. Then we look at certain important figures in the development of a spirituality that is transformative of history, including (among others) Bartolome de las Casas and Henri Nouwen. Finally, we look at recent texts from the magisterium, beginning with texts of Vatican II and proceeding through select papal writings (*Pacem in Terris*, *Evangelii Nuntiandi*), and concluding with an analysis of John Paul II’s insistence on the transformation of history as an integral part of a “new evangelization” of culture. Requirements: Two papers and a class presentation.

### **THEO 40208. Monastic Way in the History of Christianity**

(3-0-3)

Although often hidden from view, even hidden from view in the church, the monastic way is one of the oldest expressions of Christian devotion to God and neighbor, usually pursued alone communally. The purpose of this course is to explore how Christian men and women have lived this life, from earliest Christianity to the present. To that end, we will read the writings of monks of eastern and Western Christianity, paying close attention to monastic voices from antiquity (such as Anthony, Evagrius, Basil, and Benedict), medieval Christianity (e.g. Ailred of Rievaulx, Bernard of Clairvaux, Hildegard of Bingen, as well as Gregory Palamas and Theodore the Studite) up to the present day (Seraphim of Sarov, Thomas Merton, Mother Maria Skobtsova). The primary format of the class will be discussion, aided by the composition of short essays throughout the course.

### **THEO 40209. Topics in Medieval Theology: Sacraments**

(3-0-3) Prugl

An examination of the development of Christian thought from the Council of Constance in 1415 to the First Vatican Council in 1869–70, with special attention given to the impact of the Reformation and the enlightenment on the formation of Christian theology.

### **THEO 40210. Topics in Historical Theology: Medieval Spirituality**

(3-0-3)

This course considers selected texts from the history of Christian spirituality. The cluster of texts changes but some representative topics have included monastic texts, texts from the early Franciscan movement and texts in hagiography.

### **THEO 40211. St. Anselm’s Philosophy/Theology**

(3-0-3)

An examination of the major philosophical and theological writings of St. Anselm. His *Monologian*, *Proslogian*, and *Cur Deus Homo* will be of central concern, but several lesser-known texts will also be read. Topics discussed in these writings include arguments for the existence of God, the divine nature, the Trinity, the Incarnation, freedom (and its compatibility with divine foreknowledge), and truth.

### **THEO 40212. Theology and Popular Piety in U.S. Catholicism**

(3-0-3)

This course explores the theological insights inherent in the religious practices and spiritual traditions of African American, Latino/a, and European American Catholics. Particular emphasis is given to popular piety as a source for theology and the ways theologians and pastoral ministers can critically engage popular religious traditions.

### **THEO 40213. Culture, Religion, and Evangelization**

(3-0-3)

This course will examine the theological basis of enculturation, its historical development, ecclesial documentation, and the implications for ecclesiology, liturgy, catechesis, and the theological elaboration. The course will include lectures, videos, class discussion, and practical exercises.

### **THEO 40215. Miracles**

(3-0-3) Cavadini

What is a miracle? Can miracles happen? What is their significance? The course will approach these questions using a variety of paradigms, including philosophical, theological, and sociological. We will consider a variety of texts and issues, including the Bible, classical exegeses of biblical miracle stories (in Origen, Augustine, and Gregory the Great) as well their counterparts in modern scholarship, philosophical debates about the status of the miraculous, and recent studies of communities where miraculous events are alleged to have occurred. We will also consider the canonical process for the investigation of alleged miracles, as well as literary treatments of the theme. We will ask, finally, what is the religious significance of wonder.

### **THEO 40217. Jews and Christians Through History**

(3-0-3)

In the closing days of the II Vatican Council, *Nostra Aetate* (Declaration on Non-Christian Religions) reversed a negative attitude of the Catholic Church toward Judaism and the Jewish people. This remarkable change promoted “dialogue” with Jews, and positive changes in the ways in which Judaism was presented in Liturgy and Catechesis. Reactions from the Jewish communities were diverse: from rejection to welcoming. This course will explore a number of issues that emerge from the history of Christian thought and theology: How did a negative image of Judaism develop within Christianity? In what ways did these unfavorable teachings contribute toward violence against the Jews? What is the relationship between Christian anti-Jewish teachings and anti-Semitism? Is there any correspondence to Christian hostility within Judaism? In what ways have Jewish authors reacted to Christian tradition? We shall also want to construct a more positive theology for the future. How can Jews and Christians develop religious responses to modernity? In what senses can a study of Judaism by Christians, or Christianity by Jews, help either community to understand itself better? How can Christians and Jews develop a theology of “the other” that is not triumphalist, but empathic?

### **THEO 40218. Jewish Spirituality**

(3-0-3)

This course will explore several central themes that have informed the texture of Jewish spirituality through the ages. Topics will include: liturgy and iconic visualization of God; sacred space and time on ritual performance; letter meditation and the magical imagination; contemplation and mystic union; textual study and inspired exegesis; divine suffering and messianic redemption. Material will be selected from biblical, apocalyptic, rabbinic, and kabbalistic sources.

### **THEO 40219. Mary in the Christian Tradition**

(3-0-3) Daley

The good news of Christianity is first of all about Jesus, the risen Lord, and so about us, as his brothers and sisters—about our future, our world, the church we constitute. Still, Christian preaching and art have repeatedly singled out Mary, the mother of Jesus, as an object for contemplation and loving, personal attachment, and Christian theology has repeatedly focused on her as a symbol for speculation and a subject of debate. So Mariology, although in itself a secondary area in Christian thought, is central to any study Christian religion through the centuries, as well as a rich testing-ground for the implications of Christian belief concerning the person of Christ, the nature and future of the church, the reality of sin and redemption, and the importance of male and female images in our experience of and response to God’s love. This course will survey the most important moments in the development of the church’s understanding of and feeling for Mary’s role in the mystery of our salvation, beginning with the New Testament and ending with our own time.

**THEO 40220. Missionary Encounters**

(3-0-3) Kollman

This course will study the missionary activity of the Church. After a brief look at mission and evangelization in the New Testament and the early church, we will then explore several important moments of missionary contact in the Americas, Africa, and Asia in the modern (post-Columbian) period. The course will conclude with a look at contemporary missionary practice and theory.

**THEO 40221. Martyrs and Monastic Lives**

(3-0-3)

Early and medieval Christian communities were largely defined by their views not only of God or the personhood of Jesus, but also of the body; under fierce debate were questions of what, when, or even whether, to eat, drink, or engage in sexual activity. By reading intriguing texts stemming from the experience of martyrdom and monasticism, this course will illustrate how often explicitly theological concerns (for instance, an understanding of the incarnation) have their roots in just such pressing social concerns. Christians were further urged to ponder the relationship of the body to theology, by the experience of sporadic persecution launched against them initially by pagans, but after Constantine, increasingly by other groups of Christians. This course will examine a selection of intriguing texts stemming from the experience of martyrdom and monasticism. We will begin with the earliest portrait of Christians left to us, namely that found in the New Testament, and will end with the Reformation period, which not only saw a reassessment of the goals and goodness of the monastic life but also a resurgence of persecution. Two further and related concerns will also shape this course, namely, the uncovering of the contours of “ordinary” Christian life in these periods, and a growing appreciation of how Christian women, whose stories have often been eclipsed in surveys devoted to intellectual or doctrinal history, have shaped Christian tradition through their ascetic practices, and have been in turn shaped by them. Our perspective will be that of social historians.

**THEO 40222. St. Bonaventure: History, Theology, and Spirituality**

(3-0-3)

Along with Thomas Aquinas and Albertus Magnus, St. Bonaventure is considered one of the leading and most influential theologians of the high Scholastic period. Although he had to abandon his promising career as a university teacher in order to lead the fledgling Franciscan order as its minister general, Bonaventure continued his theological work until the end of his life. Critical of the growing influence of Aristotelian thought within theology, he deliberately chose the tradition of St. Augustine, Ps.-Denis and Hugh of St. Victor as the basis for his theology. The recent emphasis on his spiritual writings notwithstanding, Bonaventure developed a highly speculative and consistent theology, which spans the whole horizon of scholastic theology. Providing an introduction to Bonaventure’s life and writings, the course will focus on central aspects of his theology such as the Trinity, creation, Christology, anthropology, and theological epistemology.

**THEO 40223. Church and Society in El Salvador: Transforming Reality**

(3-0-3)

The premise of this course is that the Central American nation of El Salvador provides a unique opportunity for understanding how one local church tried to heed the call of the Second Vatican Council to read the signs of the times and interpret them in the light of the Gospel (*Gaudium et Spes* No. 4). Consequently, besides theological reflection, this seminar will make use of a number of disciplines in order to “read” the reality of the country. It will begin with a general introduction to social, economic, political, and ecclesial challenges within El Salvador. In consultation with the course instructors, students will pick a specific theme or issue around which to develop a research project. They will work on this project using resources at Notre Dame and then with resource persons in El Salvador itself during a trip to that country over spring break. In the final weeks of the course, we will further reflect on our experiences and complete the research projects. Students will present their final projects within the course and in other venues. This course is by instructor’s permission only. Interested students should pick up a learning

agreement either in the theology department offices or at the Center for Social Concerns.

**THEO 40224. Simone Weil: Justice, Grace, and Creativity**

(3-0-3)

Twentieth-century philosopher and educator, militant activist, and mystic, Simone Weil dedicated her life to analyzing and actively combating the malaise that she sensed in modern technological society. Her work in support of equal justice for all human beings and her compassion for the suffering of the poor and oppressed were a prelude to a series of mystical experiences that led her to a deeper appreciation of the role of grace in the transformation of the temporal order. This course will give equal attention to Weil’s distinctive contribution to theology, aesthetic theory, and social practice. Working within a study group and seminar format, student participants will be asked to examine texts from which Simone Weil drew inspiration, as well as authors who were influenced by her writing. Required research and reflection papers will be tailored to meet individual student needs according to one’s area of specialization, i.e., theology, French studies, or gender studies.

**THEO 40225. Post-Holocaust in Theology and Literature**

(3-0-3)

Between 1933 and 1945, the actions of the Nazi government transformed the map of the world politically, aesthetically, and theologically. The ability of the Nazis to gather the cooperation of German citizens and the citizens of other occupied countries to implement their policies against the Jews has raised questions about the claims that European civilization is based on Christianity. How could barbarism flourish in Germany, the land of poets and thinkers? Both Christians and Jews, for common and different reasons, look upon the Holocaust as an abyss, a dark night of the soul. During this semester we shall attempt to move from horrified silence to insight into the possible frameworks for constructing theology “after the abyss.” We shall also read literary works that attempt to describe the indescribable. Both literature and theology written after the Holocaust present the paradox of how to comprehend the incomprehensible. No single theologian or faith community has the answer to the problems raised by the Holocaust. No author writing in German, English, Yiddish, French, or Hebrew can describe the horrors and fully transmit the fullness of the atrocity. However, we shall attempt to read, evaluate, and-for some of us-appropriate what theologians, poets, and storytellers have written.

**THEO 40226. Christianity in Africa**

(3-0-3) Kollman

Few places on earth exhibit the dynamism of contemporary Christianity like Africa. Such dynamism creates new challenges and opportunities for the Catholic Church and other ecclesial bodies, and also shapes African life more generally. Through novels, historical studies, and present-day reflections from a variety of perspectives, this course will explore Christianity in Africa, beginning with the early Church but with heightened attention to the more recent growth of Christianity on the continent. It will also examine Christianity’s interaction with Islam and traditional forms of African Christianity. Ongoing attention will be paid to African Christian theology, carried out formally and informally, as well as the implications of the spread of African Christianity for global Christianity.

**THEO 40229. Theology of Edith Stein**

(3-0-3)

Canonized by John Paul II on October 11, 1998, Edith Stein (1891–1942) is one of the most controversial saints of the Roman Catholic tradition, living as she did at the center of one of the 20th-century’s most important philosophical movements—phenomenology—and dying in the midst of its most horrific tragedies—the Holocaust. Last born in a large Jewish family, Stein went on—despite adversity and intellectual restlessness—to study psychology at Breslau and then philosophy with Edmund Husserl at Göttingen and Freiburg, eventually writing a brilliant dissertation on the problem of empathy. Having read the autobiography of Teresa of Avila in one night in 1921, she converted to Catholicism and joined the Carmelite order. Until her martyrdom by the Nazis, Stein lived as a Carmelite

nun, writing on spiritual topics and trying to square Husserlian and Thomistic philosophies. It is the purpose of this course to put Edith Stein into dialogue with two other extraordinary Jewish intellectuals of the World War II period—Simone Weil (1901–43) and Hannah Arendt (1906–75)—in order to compare and study common points of biography as well as their literary and non-literary writings, their original theological/philosophical insights, their political entanglements, and struggles with their Jewish identities. Of special value to this dialogue will be Stein's conceptualization of empathy as a tool of interpretation. While the Purdue course is designed to encourage a broader comparison and contrast of Stein, Weil, and Arendt, the University of Notre Dame component has a slightly more narrow inflection. Students enrolled in the University of Notre Dame component of this seminar are expected to focus on the philosophy, theology, and spirituality of Edith Stein.

### **THEO 40230. American Religious Imagination**

(3-0-3)

How has Christianity been refigured in America? This course begins by looking at powerful interpretations of the faith by Ralph Waldo Emerson and William James. We then turn our attention to a range of narratives that deal with Christian themes, as treated by Catholics and Protestants, by men and women. Christian gothic writing and satire of preachers, as well as quest narratives and attempts to determine an authentic American sense of the sacred, will be considered. Authors to be studied include Charles Brockden Brown, Willa Cather, Sinclair Lewis, Cormac McCarthy, Flannery O'Connor, and Walker Percy. We will also consider Harold Bloom on "The American Religion."

### **THEO 40231. Christian Spirituality and Social Justice**

(3-0-3) Groody

This course will explore the challenge of Christian discipleship in the context of our globalized world. Rooting our reflection on the reality of poverty in our national and international context, we will do a faith reality of that reality through a thorough inquiry into pertinent biblical, patristic, liturgical, systematic, and spiritual tradition. We will also look at how this spirit has been embodied in recent decades, as well as how it has emerged both within Catholic social teaching and non-Christian religions.

### **THEO 40232. Latino Films: Culture, God, and Redemption**

(3-0-3) Elizondo; Matovina

The course will view great films from Latin America and Latino USA and discern what culture is portrayed, the presence or absence of God within the film and how is redemption expressed in the film. Since some of the films will not have subtitles, a working knowledge of spoken Spanish will be helpful but is not a requirement.

### **THEO 40234. Thomas Aquinas and the Pursuit of Wisdom**

(3-0-3)

This course offers an orientation to the theology of Thomas Aquinas through his account of "wisdom", which in Thomas refers to the contemplation of divine things and the ordering of all else in that light. The theme of "wisdom" threads its way through the entire range of Thomas's theology, and attention to "wisdom" will make clear many of Thomas's most important convictions-about the nature of the theological enterprise; the interrelated doctrines of God and of Christ; and, the specific character of Christian discipleship.

### **THEO 40235. Storming Heaven: Christianity in the Reformation Era**

(3-0-3)

A narrative history of Christianity in Western Europe from c. 1500-c. 1650, which takes an international and comparative perspective, including Catholicism, Protestantism, and radical Protestantism. Topics covered include Christianity on the eve of the Reformation, Christian humanism, Luther and the German Reformation, the Peasants' War and Anabaptism, the English Reformation, Calvin and Calvinism, Catholic Reform and the Council of Trent, the French Wars of Religion, confessionalization, the Thirty Years War, and the English Revolution. Major themes include matters of religious content (doctrinal positions and devotional sensibilities), the relationship between different Christian groups and

political regimes, the impact of religious changes across the population, and the definitive emergence of Christian pluralism. Lectures plus discussion.

### **THEO 40236. Virgin Victorius: Akathistos Hymn**

(3-0-3)

The Akathistos Hymn in honor of the Theotokos is the only kontakion still universally sung in its entirety in the Byzantine churches; it is chanted in sections on Wednesdays during Great Lent and then in toto on Akathistos Saturday. Legend attributes it variously to St. Romanos the Melode (fl c540), the Patriarch Sergios (d638), and the Patriarch St. Germanos (d733), but its author remains anonymous. It was composed in the early seventh century and came to be regarded as a victory-offering to the Mother of God for her deliverance of Constantinople from siege in 635. This long (245 lines) hymnodic sermon is the most famous poem in the vast corpus of Marian verse. This one-credit mini-seminar is offered as a separate course for those who can read the poem in Greek or in Latin (we have Latin translations from the ninth and the 15th centuries, and a corpus of Latin poems inspired by it; see G.G. Meersseman, *Der Hymnos Akathistos im Abendland*). It is offered as a separate course for those who will study the poem in modern-language translations and can contribute to discussion from an historical, musicological, or art historical perspective. Requirements: careful attention to reading assignments, participation in discussion; short research reports on details of the text; a short scholarly note on a feature of the text.

### **THEO 40237. Heaven, Hell, and Purgatory**

(3-0-3) Young

If there is a life after death for human beings, what is it like? How does a person get there? Reach one of the eternal destinations envisioned as punishment for sins or reward for good deeds? Are they states of being, or actual places? If the latter, what do they look like, and who are the inhabitants? Early Judaism and the two millennia of Christian tradition have developed a variety of sources to elaborate an answer to these questions. This course will consider how the tradition has proposed answers, and will look at various ways in which the answer has been elaborated. Materials for the course will draw from accounts of visionaries and mystics who ascended to heaven (or descended to hell) and reported what they saw, theologians who attempted to give comprehensive and consistent accounts of the paths to these places (or states), and Christian poets who metaphorically evoked heaven and hell to express the consequences of contemporary social or political conditions. The course will consider the development, primarily in Roman Catholicism, of the belief in and doctrine of purgatory and the debates about that belief. The contemporary reconsideration of heaven, hell, and purgatory (and the embarrassment about hell) will conclude the course.

### **THEO 40238. Transfiguration in the Fiction of C.S.Lewis**

(3-0-3) Fagerberg

This course will look at a theme that runs throughout the works of C.S. Lewis: theosis. Christianity's ultimate end is the deification of a person. In Lewis's fiction there is a strong theme of the transfiguration of matter and the human being, and the moral/ascetical prerequisite leading up to it. This course will first use some secondary theological sources to unpack theosis in light of the Christian doctrines of creation, sin, Trinity, and Christology, and then it will turn to Lewis himself—first to his non-fiction (*Mere Christianity*, *Abolition of Man*, *Weight of Glory* essays), but our main time will be spent in his fiction (*Narnia*, *Screwtape Letters*, *Great Divorce*, *The Pilgrim's Regress*, and *Til We Have Faces*).

### **THEO 40239. Globalization, Spirituality, and Justice**

(3-0-3)

This course will explore what it means to be Christian in the context of this new era of globalization. It is a time of new opportunities and unprecedented potential, but it brings with it new perils and greater social, political, and economic turmoil than ever before. In particular, we will explore the meaning of Christian discipleship in a time when half the world lives on less than two dollars a day and two thirds live in abject poverty. After grounding our discussion of socio-economic research, we will then do a theological reading of globalization, and then a global reading of theology. In particular, we will explore the meaning of Christian faith

today as we draw from the deep wells of scripture, early Christian sources, Catholic social teaching, major world religions, liturgy, and contemporary theological reflection, icons of justice, mysticism, and spirituality as we explore what it means to be Christian in a time of titanic change.

#### **THEO 40240. Moses Maimonides**

(3-0-3)

A careful reading of Maimonides's philosophical classic *A Guide for the Perplexed*. Close attention will be paid to its influence on Aquinas.

#### **THEO 40241. Christianity and Colonialism**

(3-0-3)

The coming of Christianity to most of the world has overlapped with the political, economic, and social processes associated with the term colonialism. This course will seek to understand the history of that overlap, as well as the many theological issues raised, especially for Christians in Latin America, Asia, and Africa. Questions to be considered include: How has political domination, typified (though certainly not exhausted) by European colonialism, shaped Christian mission? What kinds of theological innovations emerged in the relation to colonialism, both among the colonizers and the colonized? How did colonialism create a context in which Christianity encountered other religious traditions? How does contemporary theology reflect a colonial legacy in this current apparently "post-colonial" moment? How do contemporary global political dynamics, sometimes described with reference to the notion of globalization, compare and contrast with the overt colonialisms of the past? How do contemporary theologians respond to the colonial legacy? Is there such a thing as "post-colonial" theology? Should there be such a thing? Students will write three 5-page papers, and there will be a final exam.

#### **THEO 40242. The Long Quest II: The Religious Search for Truth from Lao Tzu and the Buddha to Mysteries of Mithra**

(3-0-3) Sullivan

The Long Quest II: The Religious Search for Truth from Lao Tzu and the Buddha to the Mysteries of Mithra is Part Two in a sequence but it is designed to stand alone: students are not required to take any other part of The Long Quest sequence. This course examines a series of significant religious movements and figures in historical sequence, moving approximately from the time of Confucius (fifth century BCE) and Lao Tzu (100 BCE) to the Mithraism of the fourth century. Cases in Part II of this sequence include the fundamentals of Buddhism and its principle developments up to Nagarjuna, major Indo-European myths and pantheons, Orphism, Hindu classical texts and related ideas and practices, developments in Judaic apocalypticism and eschatology, Hellenistic salvation mysteries, and Iranian Zurvanism, as well Mithraism before and during the early Christian period. Each case will involve primary texts in translation, art and archaeological evidence, historical commentaries, and contemporary interpretations. No one will be required to take Part One as a prerequisite.

#### **THEO 40243. The Long Quest: From the Buddha to the Prophet Muhammed**

(3-0-3) Sullivan

One of a sequence serving the history of religion, this course covers select cases from early Hinduism, Buddhism, the Greek mysteries, Judaism, Christianity, and Islam. Course requirements include quizzes on readings, class presentations, brief papers, and mid-term and final exam. Students who are interested in this course and are not majors, please contact the department for permission.

#### **THEO 40244. Jewish/Christian Dialogue: Germany/Holocaust**

(3-0-3)

From the second half of the 19th century to the rise of the Nazi state there was an intense exchange between Jews and Christians about their relationship. Tolerance and the promise of citizenship led to unprecedented formulations of Jewish identity. The question of "German-ness" and Judaism [*Deushtum und Judentum*] raised issues about the character of German society itself. In this course, we shall concentrate on Jewish and Christian authors who addressed these topics. During the final weeks of the course, we shall read from Christian authors who wrote after

the Holocaust and, in the wake of the II Vatican Council, brought the Catholic Church into conversation with the question of what elements of Christianity could address the horrors that the immediate past. Readings will be in English, but students who have the ability will be encouraged [and assisted] by the instructor to read select essays in German.

#### **THEO 40245. Augustine**

(3-0-3) Cavadini

Augustine is arguably the single most influential theologian in the West. There is in almost every Western theologian some strain that is Augustinian, and many of the disputes in Western Christendom can be regarded as arguments pitting one strain of Augustinian tradition against another. The study of Augustine, therefore, is essential for an understanding of most subsequent Christian theology. This course attempts to introduce students to the study of Augustine in an attempt to gauge the specific and distinctive character of his theology over a broad range of issues. Special attention will be given to the development of Augustine's thought. The class hopes to be useful to students who approach Augustine from a variety of perspectives and interests, and as such will have a strongly textual, rather than thematic, principle of organization, emphasizing the reading of whole works rather than excerpts topically arranged. Although this is an advanced introduction, the course is suitable for those with little exposure to Augustine.

#### **THEO 40246. Political Theology from Antiquity to Today**

(3-0-3)

This course studies the history of political theology. Starting with the "theology of the state" in the Greek and Roman empires, it examines the thought of Augustine, Dante, Machiavelli, DeMaistre, Rosmini, Maritain, Guardini, Metz, Habermas, and Pope Benedict XVI (Joseph Ratzinger). It gives particular attention to the relationship between church and state in Europe. For example, it considers religious issues related to the Constitution of the European Union (EU) and also to the possible inclusion of Turkey in the EU. The course grade is based on four short summary papers, class participation, a midterm examination, and a final examination. For further information, see Prof. Robert Krieg.

#### **THEO 40247. Medieval Jewish Bible Interpretation**

(3-0-3)

The course will deal with commentaries on the Hebrew Bible composed by five major medieval Jewish exegetes, from two main Jewish cultural entities, Ashkenaz (mostly Germany and France), and Sepharad (mostly Spain): Solomon ben Isaac (1040–1105), known as Rashi; one of Rashi's grandsons, Samuel ben Meir (c. 1080–c. 1170), a.k.a. Rashbam; Abraham Ibn Ezra (1089–1164); Moses ben Nahman (1194–1270), known as Nahmanides; and Isaac ben Judah Abrabanel (1437–1508). We will read and discuss commentaries of these authors (in English) on selected portions of the Hebrew Bible, chosen following the interests and wishes of the participants. We will delve also into a selection of modern scholarly works about these exegetes.

#### **THEO 40248. The Book of Job Through the Ages**

(3-0-3)

Job—sufferer, saint, rebel, prophet, and wise man—is one of the most impressive figures in the entire Bible. Regarding its literary form, its interpretation and theology, the book of Job is among the most difficult texts within the Hebrew Scriptures. Nevertheless, it inspired a wealth of Christian and Jewish interpretation from the earliest Church fathers to the present time. This course will study famous interpretations of the story and the book of Job from the patristic times to the 20th century. On the one hand it will look at exegetical commentaries such as Gregory the Great, Thomas Aquinas, Calvin, Maimonides. On the other hand, it will look at the figure of Job in modern theological writings and literature, from Kierkegaard, to Barth, to Gutierrez. Particular attention will be paid to such important theological topics as divine justice and innocent suffering, providence and revelation. The course will also look at the method of biblical exegesis in each of these authors.

**THEO 40250. Saints in Art and Icons**

(3-0-3)

A diachronic exploration of the lives and legends of the saints as depicted in art and iconography. Students will explore lives of the saints in select vitae as well as the most influential hagiographical collection of the Middle Ages, the golden legend of Dominican bishop James of Voragine. Due attention is paid to the arrangement of the sanctoral cycle, the compilation of calendars and martyrologies, and the theological underpinnings of classic iconography. Primary focus on identifying saints by iconographical attributes and conventions in both Western and Eastern iconography.

**THEO 40251. Prayer and Mysticism**

(3-0-3)

Prayer, for religious people, is the central activity in which faith becomes the personal focus of consciousness; mysticism usually means a type of prayer, or prayerful relationship to God, that leads the believer beyond the normal boundaries of consciousness and unites him or her to God in a way that transcends the limits of the self. In this course, we will reflect on representative works on prayer and mysticism from the whole history of Christian thought, from Origen, Gregory of Nyssa, and Dionysius the Areopagite in the early Church, through Gregory Palamas, Julian of Norwich and *The Cloud of Unknowing* in the Middle Ages, to Teresa of Avila and John of the Cross in the early modern period, and more recently to Therese of Lisieux, Pierre Teilhard de Chardin, and Hans Urs von Balthasar. We will be asking how the discipline and the grace of prayer transforms the human heart and mind, allowing it to experience personally the presence of God who is beyond understanding, but who has experienced our own limitations in Christ and through him has taught us how to pray.

**THEO 40252. Conversion and Mission in Early Christianity**

(3-0-3)

What did it mean to become Christian in the ancient world? This course considers the ways in which the narrative of conversion developed in early Christianity and its rivals, from the first through the sixth centuries. It examines various types of literary sources—e.g., sermons, martyrologies, visionary literature and biographies—in combination with remaining material evidence such as icons, church complexes and baptisteries. The course will also examine the expansion of Christianity through missions both to the “barbarian” residents of the West and the cities and cultures of the eastern Mediterranean.

**THEO 40253. Stein, Weil, Arendt**

(3-0-3) Astell

Like Sylvie Courtine-Denany’s *Three Women in Dark Times: Edith Stein, Simone Weil, and Hannah Arendt* (Cornell UP, 2000), this course groups together three extraordinary Jewish women philosophers of the World War II period. All three studied under noted male philosophers—Husserl, Alain, and Heidegger, respectively—and they developed their original insights on empathy (Stein), decreation and affliction (Weil), and “natality” (Arendt) partly as a response to their teachers. Their intellectual quests in the shadow of the Holocaust led them to take up theological questions, studying St. Thomas Aquinas and Dionysius the Areopagite (Stein), St. Augustine (Arendt), and Pascal (Weil). The answers they gave to God and others testify to the heroism and brilliance of their spiritual searches for truth.

**THEO 40254. Pagans and Christian: Interactions, Adaptation, and Coercion**

(3-0-3)

Early Christianity featured a strong opposition to the religious practices of the majority of the population of the Graeco-Roman Empire and its borderlands. As it expanded, it attempted to oppose and destroy “pagan” practices through conversion and through opposition ranging from philosophical treatments to state-sponsored repression. This course examines the history of Christian and pagan interaction through the period of the Protestant and Catholic reformations, when leaders of the now-divided churches again tried to extirpate paganism—not only in Europe, but in the New World as well.

**THEO 40255. Medieval Negative Theology**

(3-0-3) Gersh

The course will begin by examining the historical background in ancient and later ancient philosophy (Plato, the neo-Pythagoreans, the neo-Platonists) of the theological and philosophical method which later became known as “negative theology.” Having extracted a kind of definition from the historical survey, we will look at four major figures of the early Christian and medieval periods in greater detail, reading selected works or parts of works in English translation but also paying attention to the original Latin (or Greek). The authors and works will be (1) Pseudo-Dionysius the Areopagite (*On Divine Names*, *On Mystical Theology*, *On the Celestial Hierarchy*); (2) Iohannes Scottus Eriugena (*Periphyseon*, books I–III); (3) Meister Eckhart (*Parisian Questions*, selections from biblical commentaries, selected German and Latin sermons); and (4) Nicholas of Cusa (*On Learned Ignorance*, books I–II, *On the Vision of God*). The last part of the course will consist of a brief survey of the many other medieval writers who used the negative method, and also some notes on its influence in the Renaissance and later times. Knowledge of Latin will be useful but not necessary for the course. Written requirement: one final paper of ca. 20 pp.

**THEO 40256. Introduction to the Early Church**

(3-0-3) Cavadini

This course offers a basic introduction to the theology and life of the early Church from the second to the fifth centuries. Special emphasis is given to the development of doctrine, the development of a spiritual theology, and the shape of the lives of Christians both ordinary and extraordinary.

**THEO 40307. Sacraments**

(3-0-3)

This course introduces students to the concept and nature of “sacrament” and to the historical, liturgical, and theological development of the seven sacraments. The sacraments are studied “in general” as well as “in particular.” Primary emphasis is given to the sacraments of initiation (Baptism, Confirmation/Chrismation, and Eucharist), with due consideration of the sacraments of healing (Penance, Anointing of the Sick) and of Church service/governance (Matrimony, Holy Orders). Attention likewise is given to other rites with sacramental dimensions (religious profession, commendation of the dying, funeral and burial ceremonies, various blessings of persons, places, and things).

**THEO 40401. Christian Initiation and Eucharist**

(3-0-3) Bradshaw

The Rites of Christian Initiation (Baptism, Confirmation, and First Eucharist) and the Eucharistic liturgy as the primary sacramental celebrations of and in the Church: their biblical and anthropological foundations, historical and theological evolution, and contemporary forms and celebration in a variety of churches. Requirements will include short papers and exams.

**THEO 40402. Feasts and Seasons**

(3-0-3) Johnson

The Church measures time and lives not by the civic calendar but according to its own cycle of feasts and seasons. This course will explore the origins, evolution, and theological meaning of the central feasts and seasons of what is called the liturgical or Church year: the original Christian feast of Sunday; Advent, Christmas, and Epiphany; Lent, Easter, and Pentecost; and with some attention to the feasts of the saints. What do we celebrate on such occasions and how might we celebrate these feasts and seasons “fully,” “consciously,” and “actively”? Of special interest to those who work with the liturgical year in a variety of ways and for all who seek to understand the way in which the Church expresses itself theologically by means of a particular calendar, as well as for theology majors and interested graduate students in theology.

**THEO 40403. The Catholic Sacraments**

(3-0-3)

*Lumen Gentium* says that in the Church, “the life of Christ is poured into the believers who, through the sacraments, are united in a hidden and real way to

Christ who suffered and was glorified” (7). This course will look at the seven sacraments of the Catholic Church as the means whereby Christians are mystically united to the life of Christ. Although we will use a historical framework to organize our material, the main focus of attention will be on the theological dimensions of each sacrament. This will give us the opportunity both to examine particular questions that conditioned the development of current sacramental theology, and the content of each rite as it exists today. Some attention will be paid to the nature of sacramental symbol in general, but the course’s primary focus is on the sacraments as liturgical rites by which Christian life is celebrated.

#### **THEO 40404. Liturgical Theology in the Roman Mass**

(3-0-3) Fagerberg

The principle of *lex orandi lex credendi* means that the law of worship establishes the law of belief. This course will accordingly work from practice to doctrine: In order to do what we do at liturgy, what must we believe theologically? The Church’s liturgical reality is unpacked by its teachings, so the course will consider traditional Catholic doctrines (Trinity, Christology, ecclesiology, anthropology, eschatology, sin, salvation) as they break surface in the Mass.

#### **THEO 40405. Mary and the Saints in Liturgy, Doctrine, and Life**

(3-0-3)

This course explores the evolution and theology of Mary and the saints in their liturgical and doctrinal expressions in an attempt to discern, evaluate, and articulate their proper place within Christian liturgy, doctrine, and life today in relationship to the central mediatorial role of Christ. Issues of popular piety, “models of holiness,” and ecumenical division, dialogue, convergence, feminist critique, and liturgical renewal will also be examined. Requirements include several short papers/seminar-style presentations, and a research paper.

#### **THEO 40406. Catholic Liturgy in the Twentieth Century**

(3-0-3)

A study of the liturgical movement in the 20th century. Attention is paid to contributions of liturgical theologians (e.g. Guardini, Casel, Bouyer) and magisterial documents (papal, conciliar, curial) both before and after Vatican Council II (1962–65).

#### **THEO 40407. Catholic Devotions from the Middle Ages to Modernity**

(3-0-3) Roy

Catholic spirituality has been enriched by countless devotions and pious practices which can be traced as far back as the Middle Ages and indeed even much earlier. Many derive from the sacred liturgy and lead practitioners to a deeper understanding and appreciation of liturgical prayer. Various devotional objects and rites actually have been appropriated officially as sacramentals of the Church, enjoying their own liturgical blessings and rituals of enrollment or application. Others remain vital expressions of para-liturgical prayer and popular piety. This course examines particular forms of prayer and piety endorsed by the Church (Rosary, First Fridays, novenas, scapulars, medals, renowned statues, pilgrimage sites) from the Middle Ages until the present age. The course will also pay due attention to the religious orders, congregations, and movements that gave rise to or promoted specific devotions.

#### **THEO 40601. Mercy and Justice**

(3-0-3)

This course will explore the meaning of mercy, particularly in its relationship to justice. It will have four major topics: (1) Mercy in its Relation to Retributive Justice. Here we will look at the role of mercy (i.e., clemency) in the case of criminal sentencing, as well as broader questions of retribution and wrongdoing. Issues arising here include whether there can or should be criteria for the exercise of mercy, whether one can exercise mercy unjustly, and the relationship of forgiveness to mercy. (2) Mercy in its Relation to Distributive Justice. The focus here will be the corporal works of mercy; issues include the relationship between justice and “private charity” (i.e., whether in a truly just distributive scheme there would be no place for some or all of the works of mercy). (3) Mercy in its Relationship to Social Justice. The main focus here will be on the role of solidarity; is it an aspect of social

justice or is it the social face of mercy? (4) divine mercy. Here the focus will be the various ways theologians have attempted to reconcile divine mercy and divine justice. Readings for the class will be interdisciplinary; they will include materials from legal, philosophical, and theological sources. (A legal background is not a prerequisite). Course requirements will include class presentations and a paper.

#### **THEO 40602. Foundations of Moral Theology**

(3-0-3)

As John Mahoney noted in his *The Making of Moral Theology*, the term “moral theology” (*Theologia Moralis*) refers to a distinctive science thematically separate from all of the other branches of theology but of relatively recent vintage. It has only been in use since the Thomistic renaissance at the end of the 16th century, in the wake of the Council of Trent. Even so, the systematic consideration of Christian morality or ethics is both much older than this and has a wider scope than this recent Roman Catholic inflection. It is the purpose of this course to investigate the development of Roman Catholic moral theology against its wider historical horizon. This course is an introduction to the study of the basic elements of Roman Catholic moral experience and understanding as well as the criteria of Christian moral judgment and action, including the data of moral knowledge, theories of the ultimate end of human nature, ontic and epistemic aspects of sin, moral agency, the conscience, theories and methods for moral decision making, and the three dominant forms that moral theological thinking has taken in the history of the Roman Catholic Church (aretological, deontological, and consequentialist). This study will be accomplished, historically, through a series of readings from major Roman Catholic moral theologians/ethicists (and their influences) including pre-Christian philosophical sources, ancient medieval, modern, and contemporary approaches to Christian moral theology/ethics and their philosophical influences. The culmination of this study will be a close reading of John Paul II’s *Veritatis Splendor* with the previous readings as its backdrop.

#### **THEO 40603. Theology of Medicine**

(3-0-3) Ryan

An examination of moral problems in medicine in the context of key theological themes, e.g., creation, providence, the nature of Christian personhood, suffering and redemption, freedom and grace. Various normative problems will be explored, e.g., physician-assisted suicide, artificial reproduction, and access to health care.

#### **THEO 40604. Christian Ethics and Contemporary Culture: God and Morality**

(3-0-3)

This course examines major themes in recent Christian ethics in light of the broad moral context of modern Western societies. The course focuses on themes such as moral order, virtue, and the problem of Christian community in a post-Christian era. Authors include Oliver O’Donovan, Jean Porter, Lisa Cahill, John Howard Yoder, John Courtney Murray, John-Paul II, Richard Rorty, and Charles Taylor. No prior work in Christian ethics is assumed.

#### **THEO 40606. Social Ethics**

(3-0-3)

The aim of this course is to help the student develop the analytic tools to think through problems in contemporary social ethics. We will do this by focusing on three issue areas: war and peace in the post-cold war era, economic justice after the collapse of communism, and abortion in the Clinton era. In each case, we will look at both Roman Catholic documents and the wider debates.

#### **THEO 40607. Catholic Social Teaching**

(3-0-3)

This course will have three components: (1) The close reading of classic texts of the Catholic social tradition, particularly but not exclusively the papal and conciliar documents from Pope Leo XIII’s *Rerum Novarum* to John Paul II’s *Centesimus Annus*. Other texts will include source documents (e.g., writings by Thomas Aquinas and Augustine) and contemporary appropriations (e.g., writings by liberation theologians and neo-conservatives). Requirement: Short papers of critical analysis and responses, intensive class participation. (2) Immersion in professional context. Each student will find a placement in a location similar to that student’s

anticipated profession. The student is to observe, interview, and to the extent possible participate in the life of the setting. For instance, the students can observe a law or architectural firm or a medical practice. The director and the executive committee will develop a list of placements or the student can seek one out on her own, which must then be approved by the director. Requirement: keep an ongoing journal as a "pastoral ethnography" of the setting (an interpretation of the practice in the setting in light of the Catholic social tradition). (3) Final project: each student is to articulate or construct a setting in his or her anticipated profession in light of the Catholic social tradition (e.g., imagine and construct what a law firm/health clinic/ad agency would look like if it practiced in light of the Catholic social tradition). The pedagogical goals and means of this course require that it be a seminar (no more than 15 students).

### **THEO 40608. Introduction to Christian Ethics**

(3-0-3) Odozor

Faith in Jesus Christ as Lord and savior has practical implications for the way believers construe the world, organize their lives and engage with the world. In this course, students will be introduced to the basic elements in Christian moral thinking and decision making. We will look at nature of ethics in general and of Christian ethics in particular. We will cover questions related to the specificity of Christian ethics, Jesus and moral thinking, the human (Christian) person as moral agent, and the different methods employed in making ethical decisions. This course is therefore a foundational course which is meant to prepare students for further studies in moral theology and ethics or for life as responsible Christian men and women who are reasonably well equipped to face up to the implications of their faith for life in the world.

### **THEO 40609. Love and Sex in the Christian Tradition**

(3-0-3) Porter

Christian reflections on sexuality comprise one of the richest yet most controversial aspects of the Christian moral tradition. In this course, we will examine Christian sexual ethics from a variety of perspectives through a study of historical and contemporary writings. Topics to be considered include Christian perspectives on marriage and family, the ethics of sex within and outside of marriage, contraception, divorce and remarriage, and homosexuality. Course requirements will include four or five short papers and a final examination.

### **THEO 40611. Christian Attitudes Toward War, Peace, and Revolution**

(3-0-3)

This course is a survey of Christian understandings of war, peace, and revolution from the time of Christ and the early church to the present. Emphasis will be placed on the way in which theological convictions in the areas of Christology, pneumatology, eschatology, ecclesiology, and so on, have shaped Christian teaching on the nature of peace and the permissibility of using violence. Cases will be used to examine certain aspects of just-war theory, with the purpose of addressing the question: is just war theory applicable to warfare in the era of the modern nation state? Other issues will be taken up as well, including the military chaplaincy, ROTC in Catholic colleges and universities, the role of Christian churches in mobilizing for war, and the use of violence in revolution.

### **THEO 40612. Catholic Radicalism**

(3-0-3) Baxter

This course traces the emergence and development of Catholic radicalism in the United States from the early 20th century to the present. Special attention will be placed on the Catholic Worker Movement. Readings will include texts by and about Dorothy Day, Peter Maurin, Virgil Michel, Paul Hanly Furfey, Gordon Zahn, Thomas Merton, and Daniel Berrigan, as well as some recent theologians. Issues to be taken up in the course include the relation between theology and social theory, nature and the supernatural, the nature of the modern state, capitalism and socialism, and the challenges facing Catholic radicalism in the beginning of the 21st century.

### **THEO 40613. Catholic Social Teaching**

(3-0-3) Pfeil

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and appropriation of these documents. We will examine papal, conciliar, and Episcopal texts from *Rerum Novarum* (1891) up to the present time, identifying operative principles, tracing central theological, ethical, and ecclesial concerns, and locating each document in its proper historical context.

### **THEO 40614. Ethics, Law, and International Conflict**

(3-0-3) Powers

The terrorist attacks of 9/11 and the war in Iraq have contributed to a dramatic reexamination of moral and legal norms governing the role of military force in international affairs. This course provides an introduction to legal and moral perspectives on issues of war and peace, with special attention to Catholic social teaching. Topics include the UN framework for collective security, collective enforcement, and peacekeeping; terrorism, aggression and self-defense; intervention on behalf of self-determination and human rights; norms governing the conduct of war; accountability for war crimes; and approaches to arms control and disarmament. These topics are discussed with special attention to their application in combating global terrorism, the interventions in Iraq and Afghanistan, the wars in the Balkans, and other recent conflicts.

### **THEO 40615. Comparative Religious Ethics**

(3-0-3)

Is religion necessary to live a moral life? If so, are all religions basically the same when it comes to the moral norms contained in them? If not, how do we account for the differences among religious values, norms and principles? How do religions justify their distinctive moral claims in the face of alternative proposals? Can we study the ethical thought of a religious tradition that is different from our own in a responsible manner and, if so, how should we proceed? This course will take up these and other related questions through an examination of classic and contemporary Christian and Buddhist texts in dialogue with recent theoretical options for the comparative study of religious ethics. We will begin with an assessment of the importance and distinctive quality of religious voices in moral debate and then look at some of the ways that contemporary scholars have approached the investigation and assessment of similarities and differences in moral worldviews. The middle portion of the course will focus on a careful reading of selected Christian and Buddhist texts that offer visions of the moral life. The course will end with a comparative consideration of certain Buddhist and Christian positions in ecological ethics.

### **THEO 40616. U.S. Catholic Social Ethics**

(3-0-3) Baxter

This course will study the emergence and development of the Americanist tradition in Catholic social theory from the late-19th century to the present. The leading emphases will be on the theoretical paradigms that have shaped the discourse of what has since become the field of "Catholic social ethics," with a focus on Catholic political theory. Texts will be read genealogically in an effort to discover how the central terms and categories in Catholic social theory in the United States have shifted over time and how they have remained the same. Authors to be studied include John A. Ryan, Maritain, Yves Simon, John Courtney Murray, Bryan Hehir, George Weigel, Michael and Kenneth Himes, Robert George, and David Hollenbach, and others. By virtue of the topic, special attention will be paid to the writings of John Courtney Murray and the strengths and weaknesses of the so-called "Murray Project." Themes to be examined include nature and grace, faith and reason, church-state relations, the nature of law, the character of the modern state, and the problem of religious pluralism and freedom. Requirements include the weekly readings, preparing weekly seminar papers during the first half of the course, and presenting a well-researched paper(s) to the seminar during the second half of the course. In addition, students will be asked to produce a final essay that analyzes the strengths and weaknesses of the Americanist tradition in Catholic social ethics.

**THEO 40617. Mysticism and Morality**

(3-0-3)

Is mysticism (variously described as the presence of God, a direct experience of God, a consciousness of God, or pure love of God) the culmination of the moral life or its true beginning? To what extent should our moral decisions be guided by our personal experiences of the divine? Given the frequent appeals that thoughtful Christians make to the judgments of conscience, how if at all can we distinguish between the true voice of God in the human heart and self-consoling delusion? Are those who claim to have had, and write sweetly about, an “experience” of God real guides to be trusted by the Christian community or are they dangerous spiritual individualists who threaten the coherent moral witness of the Church? How, if at all, are we to reconcile the teachings of Christian mystical writers with the sacramental life of the Church and the cultivation of Christian virtue? Is a life of intense asceticism, or even an explicitly Christian faith, necessary for mystical knowledge? We will examine these and other questions in the four parts of the course: (1) maps of the soul (through a comparison of Augustine’s *Confessions* and Teresa of Avila’s *Interior Castle*); (2) reasons of the soul (through a comparison of Bonaventure’s *Journey of the Mind into God* and Marguerite Porete’s *Mirror of Simple Souls*); (3) loves of the soul (through a comparison of Catherine of Siena’s *Dialogue* and Ignatius of Loyola’s *Spiritual Exercises*; and (4) questions of the soul (through a comparison of Simone Weil’s *Waiting for God* and *The Dark Night of the Soul* by John of the Cross). Course requirements include two class presentations and a final paper comparing two of the authors examined during the semester.

**THEO 40618. Veritatis Splendor: Context, Content, and Conversation**

(3-0-3)

In 1993, Pope John Paul II issued the encyclical, *Veritatis Splendor*, which in his words was the first papal attempt “to set forth in detail the fundamental elements of Christian moral teaching.” This encyclical is thus much more than a magisterial effort to correct the work of some “dissenting” theologians. As the Pope himself puts it, his intention is to treat “more fully and more deeply the issues regarding the very foundations of moral theology” in the Catholic tradition. In this course, we will study the issues raised by this encyclical. And, with the encyclical as a guide, we will study some of the historical sources and origins of Catholic moral theology, the enduring insights of the Catholic moral tradition, the contested questions in this tradition, the internal (i.e., within the Church) and external dialogue partners and contributors to *Veritatis Splendor*. It is hoped that students should at the end be able to answer the question about the nature and aim of Catholic moral theology as theology and as ethics.

**THEO 40619. American Catholicism: History, Theology, and Social Thought**

(3-0-3)

This course traces the history of Catholicism in the United States from colonial times to the present. Particular attention is placed on the ways Catholics have conceived of the relation between the Church and nation, and how these conceptions shape the discourse of Catholic moral theology and social ethics. Historical figures to be examined include John England, Orestes Brownson, Isaac Hecker, John Ireland, James Gibbons, Edward McGlynn, John Ryan, and John Courtney Murray. We will also peruse the writings of recent figures such as Charles Curran, Rosemary Radford Ruether, Germaine Grisez, Mario Cuomo, Richard John Neuhaus, George Weigel, Robert George, and Margaret Farley. A central theme in this course is the role of Catholics in U.S. politics, and in this context several issues are explored, including contraception, abortion, nuclear weapons, economic justice, the death penalty, and gay marriage. Toward the end of the semester, the course focuses at the liberal/conservative divide that is sure to deepen as Catholics look toward the 2008 national elections. It concludes by exploring a way beyond this division by pursuing what some Catholic scholars have called “evangelical Catholicism.”

**THEO 40801. Archaeological Foundations of Christianity and Judaism in Antiquity**

(3-0-3)

This course surveys ancient Israel/Palestine (the Holy Land) during the biblical period. The class will challenge students to think critically and creatively about the makeup/construction of previous cultures, their life-ways, and how the components of the culture connect and relate to one another. In order to do this, the student will engage and incorporate theory and method from several fields (e.g., archaeology, theology, anthropology, philology, textual studies, history, art, and others). This course encourages the student to use as many available tools as possible to investigate and understand the past and its impact on the present. The class will expose students to the material remains through slides and some physical artifacts that will assist them in better comprehending the theological foundations of Judaism and Christianity.

**THEO 40803. Thomas Aquinas: Theologian**

(3-0-3)

The writings and thought of Thomas Aquinas influenced the subsequent course of Catholic theology perhaps more than any other single theologian in the church history. By exploring his career as a Dominican master through a variety of his writings, this course will provide students with a basic introduction to Aquinas theology. To that end, the course will pay particular attention to his masterpiece the *Summa Theologie* as well as other shorter works in order to highlight the major loci of his theology (e.g., God, Trinity, creation, sin, grace, virtues, Christ, and the sacraments). Students will be required to write four papers on assigned readings and prepare short class presentations.

**THEO 40804. Christian Autobiography**

(3-0-3)

This course examines three major yet very different attempts at Christian autobiography: St. Augustine’s *Confessions*, St. Teresa of Avila’s *Life*, and John Henry Newman’s *Apologia Pro Vita Sua*. Throughout, we will attend to three demands: a close reading of the texts themselves, including their narrative and rhetorical structures; a sense of how the self is imagined by the three writers; and an awareness of the authors’ religious contexts.

**THEO 40805. Christian Anthropology**

(3-0-3)

This course will explore theological perspectives on how Christians understand human life in light of the life, death, and resurrection of Jesus. Part One will focus on Karl Rahner’s theology of the incarnation as the key to understanding the mystery of being human in an evolutionary world. Questions to be considered include: How is human life related to the rest of creation? What does it mean to be a human person? In what sense can human life be called a sacrament? Do we have a vocation and destiny? What is the impact of the sin of the world on human freedom? What does it mean to be called to communion with God and with all of creation? Part Two will turn to the reality of suffering in its personal, interpersonal, social, and global dimensions. In a world of increasing violence, suffering, and ecological devastation, how are Christians called to re-imagine the symbols of creation in the image of God, original sin, grace, and hope for the future? Based on careful reading of required texts, students will develop a series of thesis statements that respond to the reading as well as articulate their own developing theological anthropology. The final paper, based on those thesis statements, will be a constructive paper in which the student articulates her or his theology of the human person or of some dimension of human life (e.g., theology of work, play, suffering, sexuality, and death). Midterm and final examinations will be based on the required readings.

**THEO 40807. Christian Spirituality**

(3-0-3) Cunningham

This course will first set out some general principles of Christian spirituality using materials from Cunningham and Egan’s *Christian Spirituality: Themes From the Tradition*. We will then consider some selected “classics” from the tradition including the writings of John Cassian, Gregory of Nyssa, Bernard of Clairvaux,

Julian of Norwich, Teresa of Avila, Thomas Merton, and Gustavo Gutierrez. Class participation, the timely submission of some short reflection papers, an occasional test, and a final research paper are required.

### **THEO 40808. Modern Catholic Theologians**

(3-0-3) O'Regan

The course focuses on three of the major contributions made by John Henry Newman to modern religious thought. (1) Newman's contribution to religious epistemology, especially the question whether it is rational or irrational to believe. *A Grammar of Assent* is our central text, although a number of Newman's much earlier Oxford sermons will also come in for discussion. (2) Newman's contribution to our understanding of the genesis, nature, and function of doctrine. Our main text here is the famous *Essay on Development* that, arguably, is the single-most important text on tradition written in the 19th century. (3) Newman's view of Christ. Unlike his treatment of religious epistemology and his view of the development of doctrine, Newman does not have a single authoritative treatment of Christ. His reflections are scattered throughout, especially in the voluminous sermons and in his historical works. We will read samples of both to discern the main drift of Newman's concerns and his conclusions. As an introduction to Newman, his intellectual development and his period, as well as a classic in its own right the course opens with Newman's celebrated Required Texts: *Apologia pro vita sua*, *A Grammar of Assent*, *An Essay on the Development of Doctrine*. Also course packet with sections from sermons on the theory of religious belief, the arians of the fourth century, and plain and parochial sermons.

### **THEO 40809. Theology after Darwin**

(3-0-3) Ashley

Daniel Dennett, a philosopher at Tufts University, has argued that the modern theory of evolution has not only made it intellectually possible and satisfying to be an atheist, but mandatory. What is the history of this anti-theistic use of Darwin, and how have Christian theologians responded? This course offers an advanced survey of attempts by Christian theologians (both Protestant and Catholic) to come to grips with the challenges raised by the Darwinian revolution. We will begin with an overview of the role of the so-called argument from design in 18th- and 19th-century Christian theology. Then we will consider two paradigmatic late 19th-century reactions to Darwin: that of Charles Hodge (*What Is Darwinism?*) and of John Zahm, C.S.C. (*Evolution and Dogma*). From there we will study the largely negative mood of the early 20th century, with particular attention to the rise of creationism. We will conclude by looking at three influential contemporary responses to Darwin: the modified creationist attack on Darwinism represented by the so-called "intelligent design" argument; the use of Darwin to attack the coherence of Christian faith by figures such as Daniel Dennett and Richard Dawkins; and the argument by John Haught and Denis Edwards (building on Teilhard de Chardin) that the Darwinian revolution can in fact support and enrich Christian faith and theology.

### **THEO 40810. Feminist and Multicultural Theologies**

(3-0-3) Hilkert

An exploration of how the voices of women have helped to reshape theological discourse and to bring to light new dimensions of the living Christian tradition. Using the writings of feminist, womanist, Latina, mujerista, Asian, and Third World theologians, this course will focus on the significance of gender and social location in understanding the nature and sources of theology, theological anthropology, Christology/soteriology, the mystery of God, and women's spirituality.

### **THEO 40811. Religion and Autobiography**

(3-0-3) Dunne

A course on the spiritual journey of the individual person, drawing on diaries and autobiographies. The first half is on the story of the life in terms of feeling and imagination and insight and choice, and the second half is on the story of the person in terms of the life project, the boundary situations of life, and conversion of the mind, of heart, and of soul. Readings: Saint Augustine, *Confessions*; Martin Buber, *The Way of Zen*; Carolina Maria de Jesus, *Child of the Dark*; John Dunne, *Reasons of the Heart* and *Search for God in Time and Memory*; Etty Hillesum, *An*

*Interrupted Life*; C.G. Jung, *Memories, Dreams, Reflections*; Rainer Maria Rilke, *Letters to a Young Poet* and *Reading the Gospel*. Writings: a spiritual diary (not handed in), a term paper, and a midterm take-home and a final take-home exam.

### **THEO 40812. Theology of Church and Ministry**

(3-0-3)

This course treats four basic areas of the ecclesiology of the Catholic church today: (1) the foundation of the church by Jesus and some of its basic and original characteristics; (2) the forms history has assumed from the time of the Twelve Apostles up to today; (3) lay ministry and the ministry of priesthood; (4) authority as a ministry in the church. The calling of disciples and the origins of the church bring charisms and ministries to the baptized. Lay ministry—in parish and diocese—has expanded considerably over the past 25 years and its variety, identity, and relationship to pastor and bishop are of import. Finally, a pervasive factor of Catholic life is church authority, and this is explored in terms of the bishop of Rome and bishops, of theologians and the faithful.

### **THEO 40813. Death and Rebirth**

(3-0-3) Dunne

A course on the spiritual journey through the ages: the figure Gilgamesh (the human quest of eternal life), the figure of Socrates (the sense of a deeper life that lives through death), the figure of Jesus (the I and thou with God in Christianity; how this leads to an understanding of death and resurrection, or Incarnation and Trinity), Dante and the spiritual journey (the Christian sense of a life that lives on both sides of death), Kierkegaard and the eternal self (the Christian encounter with the modern sense of selfhood), and a concluding vision (the experience of the presence of God). Requirements include a midterm and a final exam (take-home exams) and a personal essay.

### **THEO 40815. Psychology of Religion**

(3-0-3)

Introduction to the major issues, theories, and research in the psychology of religion through critical analysis of classical and modern literature from Western and Eastern cultures. Topics discussed will help illuminate the role of religion as a powerful meaning system that can affect the lives of individuals in terms of their beliefs, motivations, emotions, and behaviors. A major focus of this course will be in the area of religious identity development where various developmental theories of religion will be utilized to understand how religious identity unfolds across time.

### **THEO 40816. Philosophy and Theology of the Body**

(3-0-3) Reimers

Pope John Paul II's theology of the body constitutes a thoroughgoing effort to develop an account of human sexuality and love and of the "redemption of the body" in the context of an integral vision of the human person. This vision is based on his philosophical personalism together with a phenomenological analysis of the Genesis account of the human being as *imago Dei*. The first half of the course addresses first the original condition of human beings according to the Creator's intention and then concupiscence as the effect of original sin. The second half of the course addresses the sacramentality of marriage and the ethos of Christian marriage in the light of the redemption of the body. The principal text for the course will be John Paul II, *Man and Woman He Created Them: A Theology of the Body*, (Pauline Books and Media, 2006). Besides this we will read sections from Karol Wojtyła, *Love and Responsibility* (Ignatius Press, 1993), his encyclical *Veritatis Splendor*, and Apostolic Letter *Mulieris Dignitatem*, as well as Pope Paul VI's encyclical *Humanae Vitae*. Course requirements include two 7-page papers and a final exam. Students will be expected to participate actively in class discussions.

### **THEO 40817. Joint Seminar Philosophy/Theology: Creation and Freedom**

(3-0-3)

Modern Western notions of freedom equate freedom with choice and exalt "doing what I wanna do"—something already exposed by Socrates as effective bondage to our endless needs. When freedom turns out to be bondage, and demands exploitation of other humans and of the earth to satisfy its demands, something seems

wrong! We shall examine classical and modern sources to highlight the contrast, locating the signal difference in the presence (or absence) of a creator.

### **THEO 40818. Option for the Poor: Bible/Spirituality**

(3-0-3)

The sentence “preferential option for the poor” is well known, but it is not always well understood. It expresses the experience and the reflection of many Christian people from Latin America. It was present in the Latin American Bishops’ conferences of the last decades and today it belongs to the universal *Ecclesial Magisterium*. Pope John Paul II has several times mentioned this perspective in his addresses. This option has numerous consequences in the personal, social and political life of Christians and in the witness of the whole Church. We know how difficult, painful and rich this testimony has been. The purpose of the course is to provide some elements in order to underline the meaning and the scope of the option for the poor. We need to recall that it is, first of all, a way to be Christian, a disciple of Jesus. This is what we call spirituality. From this deep level we can understand that in a second moment it is an inspiration for doing theology. Talk about God comes after the silence of prayer and after the commitment to others. It is a discourse that is rooted into a faith lived in community and thus inserted into a history of the transmission and acceptance of the Christian message. In order to do that this class will explore the biblical foundations of the option for the poor, revisiting several scriptural texts. In addition, we are going to pay attention to the witness of some great Christians like Bartolome de Las Casas (Dominican missionary from the 16th century), Pope John XXIII, and others.

### **THEO 40819. Islam and Muslim-Christian Dialogue**

(3-0-3) Reynolds

This course has a twofold aim. It not only provides an introduction to the world of Islam but also attempts a comparison and evaluation of Islamic and Christian theological themes from both a systematic and historical perspective. Topics such as the nature of God and the process and content of divine revelation; the person and function of Muhammad and Jesus and exemplars of faith; the role and nature of sacred scripture and tradition; the place and nature of piety and practice in everyday life; the way that each religion sees itself in relation to other faiths; changes that each tradition has undergone in the modern period—these and other topics will be treated with the intention of deeper understanding and appreciation of the other.

### **THEO 40820. Christianity-Islam, Dialogue and Relations**

(3-0-3)

In this course, we will analyze the history of the Muslim-Christian conversation. We will begin with the Qur’an and the earliest Christian writings on Islam and continue with medieval polemical and apologetical works (in English) by Arab and European authors. Turning to the contemporary period we will look, on one hand, at missionary tracts aimed at converting (focusing on material on websites), and, on the other, at efforts to seek mutual understanding through dialogue (including the development of the Church’s teaching on Islam). Finally, we will consider the contribution to this conversation of more recent religious movements—including Baha’ism, Ahmadism, and the Nation of Islam—and the impact of September 11 on this conversation.

### **THEO 40822. Educating in Faith: Catechesis in Catholic Schools**

(3-0-3) Poorman

This course is designed to assist current or prospective teachers of religion/theology at the junior-high and high school levels in the catechesis of adolescents in Catholic schools. The course is also helpful for those anticipating a career in pastoral, and most especially catechetical, ministry with adolescents and young adults. The course is open to Theology students at the undergraduate and graduate levels and to Notre Dame undergraduates with ESS minors. Within class sessions designed to be highly dialogical, interactive, and prayerful, participants explore both theological and practical/pedagogical dimensions of the process of catechesis. Required readings are drawn from the “National Directory for Catechesis,” the “General Directory for Catechesis,” and “The Catechism of the Catholic Church,” as well as from the works of theologians and educational theorists who have

contributed significant responses to the two central questions addressed in this course: What is Catechesis? and How Do We Engage in Catechesis in the Context of Catholic Schools? During this course, participants explore all of the central tasks that constitute the holistic process of catechesis as delineated in the general and national Catholic catechetical directories and other catechetical documents and as adapted for use in Catholic schools: communicating knowledge of the mystery of God’s self-revelation; fostering maturity of faith and moral development; sharing and celebrating faith by forming Christian communities of prayerful people; promoting Christian service and social justice; and witnessing to faith through pedagogy and by the example of authentic spiritual lives. Participants are required to read all assigned selections from the course packet, as well as from the “National Directory for Catechesis.” Participants also actively contribute to class sessions. Presence in class is mandatory.

### **THEO 40823. Religion and Literature**

(3-0-3) O’Regan

This course has as its essential context the crisis of authority of discourse in the modern period subsequent to literature gaining independence from Christianity. It focuses specifically on the three main postures literature strikes vis-a-vis confessional forms of Christianity no longer thought to have cultural capital. (1) The antithetical posture. Here Christianity is viewed in exclusively negative terms as repressive, authoritarian, and obscurantist, the very opposite of a true humanism that is literature’s vocation. Readings include Voltaire and French existentialism. (2) The retrievalist posture. This posture is fundamentally nostalgic. The loss of Christianity’s cultural authority is mourned, and literature is seen as an illegitimate substitute. Readings will include Dostoyevsky, T.S. Eliot, and Flannery O’Connor. (3) The parasitic posture. Here Christianity is criticized but not totally dismissed. Portions of it are savable, especially select elements of the New Testament that emphasize human being’s creative capacities. Readings include Coleridge, Shelley, and Emerson.

### **THEO 40824. Hindu and Christian Interaction**

(3-0-3) Malkovsky

This course will provide a survey of the main events, human figures and theological models which have characterized Hindu-Christian interaction, especially since the beginning of the 19th century, a period that marks a turning-point in Hinduism’s understanding of itself. We shall attempt to determine how each of the two religions has undergone transformation in its theology and spirituality, either through the enrichment or through the challenge that the other tradition has presented. Theologically we shall examine such issues as revelation and history, divine grace and human freedom, personhood of the deity, Hindu and Christian views of Christ, and theistic and non-dualistic metaphysics.

### **THEO 40825. God, Philosophy, and Politics**

(3-0-3) MacIntyre

This is the capstone seminar for the interdisciplinary minor in philosophy in the Catholic tradition. It is normally open only to undergraduates registered for that minor. The central concern is to understand the various ways in which Catholic philosophers have brought theology to bear on the study of politics and vice versa. Authors studied include Augustine, Aquinas, Robert Dahl, and Maritain.

### **THEO 40826. Comparative Theology**

(3-0-3) Malkovsky

The purpose of this course is to introduce you to some important recent literature in comparative theology. We will attempt to evaluate the possible significance of theological ideas and religious experiences from Hinduism, Buddhism, and Islam for Christian thinking on God, Christology, grace, and eschatology. Requirements: Class presentations and two research papers.

### **THEO 40827. Comparative Spiritualities**

(3-0-3) Malkovsky

This course provides a first introduction to some of the more influential spiritualities practiced by Hindus, Buddhists, Muslims, and Eastern Orthodox Christians down through the ages and seeks to determine their significance for contemporary Roman Catholic spiritual praxis and theology. In order to properly understand the

practices of Hindu yoga and bhakti, of Buddhist vipassana and Zen, of Muslim salat/namaz and Sufism, of the Eastern Orthodox Jesus Prayer/Hesychasm and the accompanying place of human effort in asceticism and morality, it will be necessary to examine underlying convictions about the nature of the human person and the supreme reality, of divine presence and grace, as well as the declared ultimate goal of spiritual endeavor, whether it be expressed more in terms of a communion of love or of enlightened higher consciousness. During the semester, we will not only study important spiritual texts of other religions, but we will also practice meditation, visit a local mosque for Friday prayers and sermon, and be instructed by expert guest speakers who represent religious traditions other than our own.

### **THEO 40828. Comparative Religious Ethics: Buddhist and Christian**

(3-0-3) Clairmont

Is religion necessary to live a moral life? If so, are all religions basically the same when it comes to the moral norms contained in them? If not, how do we account for the differences among religious values, norms and principles? How do religions justify their distinctive moral claims in the face of alternative proposals? Can we study the ethical thought of a religious tradition that is different from our own in a responsible manner and, if so, how should we proceed? This course will take up these and other related questions through an examination of ancient and contemporary Christian and Buddhist texts in dialogue with recent theoretical options for the comparative study of ethics. We will begin with an assessment of the importance and distinctive quality of religious voices in moral debate and then look at some of the ways that contemporary scholars have approached the investigation and assessment of similarities and differences in moral worldviews. The course will end with a comparative consideration of certain Buddhist and Christian options in environmental ethics.

### **THEO 40829. Spirituality in the Ignatian Tradition**

(3-0-3)

The book of the *Spiritual Exercises* of St. Ignatius of Loyola will be the primary focus of the course. Particular concern will be given to their origin and composition, the division into weeks and dynamics of grace and choice that are at the core of this tradition. Attention will also be given to the rules for discernment and the way that this tradition is especially a path for Christian discipleship in the world.

### **THEO 40830. Documents Shaping Catechesis**

(3-0-3) Baumbach

This course will consider selected documents of the Catholic Church since the Second Vatican Council and their implications for catechesis. Documents that shape or inform catechesis are foundations for building a dynamic catechetical ministry, elevating our awareness of opportunities for promoting and handing on the Gospel. Our goal will be to explore these documents, noting their essential contribution to the catechetical enterprise along with their ongoing potential for implementation in parish life today. Students will be engaged in formulating and sharing insights within an interactive learning environment, informed by readings, group discussion, and assignments.

### **THEO 40831. Chesterton and Catholicism**

(3-0-3) Fagerberg

G.K. Chesterton was a man with many sides, but this course will confine itself to only one, and that is his theological front. About his conversion to Catholicism he wrote to a friend, "As you may possibly guess, I want to consider my position about the biggest thing of all, whether I am to be inside it or outside it." We will consider his position by reading primary works in theology that led up to and followed his decision, among them *Orthodoxy*, *The Everlasting Man*, biographies of St. Thomas and St. Francis, *The Thing*, and *What's Wrong with the World*. In these we will follow his own advice that "to become a Catholic is not to leave off thinking, but to learn how to think. It is so in exactly the same sense in which to recover from palsy is not to leave off moving but to learn how to move."

### **THEO 40832. Approaches to Black Theology**

(3-0-3)

This is an introductory course to theology from African American perspective. The course will not only open students to Roman Catholic (intellectual) theological traditions but also to the diversity of approaches in theology within which black theology is located. The dialectical engagement of black theology, the methodological and interpretative shifts that account for its emergence and ongoing development, are rooted in black history and tradition (African and African American). The course has an added pastoral dimension—the preparation for and enhancement of ministry in the Roman Catholic Church to peoples of African descent.

### **THEO 40833. Modern Spiritual Writers**

(3-0-3) Cunningham

This course will consider some early modern and modern Christian writers who were, in one way or another, prophetic figures who wrote "from the margins." We will begin with the American Quaker, John Woolman, and then read Soren Kierkegaard's *Fear and Trembling*; the anonymous Russian Orthodox author of *The Way of a Pilgrim*; Simone Weil's *Waiting for God*; and selected writings of both Dorothy Day and Thomas Merton. Students will write frequent short papers; offer in class presentations; and write one longer paper on a text not discussed in class. Because the course will be writing intensive no in class examinations will be given. Final grade will be computed based on class participation and the quality of writing.

### **THEO 40834. Holy Land**

(3-0-3) Reynolds

This course will investigate the manner in which Christians and Muslims through the centuries have understood the religious dimension of Palestine, and of Jerusalem in particular. In the first section of the course we will analyze classical religious texts, including: the New Testament prophecies of Jerusalem's destruction; the narratives surrounding Saint Helen's recovery of the true Cross and sacred relics; the traditions of Muhammad's night journey to Jerusalem, and Muslim narratives on the conquest of Palestine and the construction of the Dome of the Rock. In the second section of the course we will turn to the memories and visions of individual believers, such as the descriptions of medieval Muslim geographers, the travelogues of European Christian pilgrims, the writings of Eastern Orthodox monks of the Palestinian desert, and the popular religious pamphlets and websites of the Muslim and Christian faithful today.

### **THEO 40835. Darwin, Philosophy, and Religion**

(3-0-3) Ashley

*Corequisite:* PHIL 43712

The year 2009 marks both the 200th anniversary of Darwin's birth and the 150th anniversary of the publication of his *On the Origin of Species*. The *Origin* has had a profound effect, not just on biology, but also on how we think about ourselves, about human nature in relationship to the natural world, and both of the latter in relationship to God. This class will begin by setting the philosophical and theological scene in the 19th century and then, against that backdrop, reading Darwin's own work (the *Origin* and excerpts from *Descent of Man*) and biographical material about Darwin's life. We will then embark on an exploration of the impact of Darwin's ideas, focusing on their theological and philosophical implications. This class will thereby provide a deeper understanding of the birth and context of Darwin's ideas and their on-going significance in the 21st century. It will include invited speakers and at least one field trip (to the evolution exhibit at Chicago's Field Museum). Students will also be required to attend some of the sessions at the second of the two international conferences on evolution being presented by Notre Dame in cooperation with a consortium of Roman Pontifical Universities (Nov. 1–3). Beyond this, and faithful class participation, the course will entail several in-class presentations, a midterm, and a final paper. Note that students in this class must also register for PHIL 43712 (cross-listed as STV 43112). These two courses will meet together, all students for both classes will fulfill the same course requirements, and students will thus earn 3 credits of coursework in philosophy and 3 in theology (or in STV).

**THEO 40836. Hermeneutics, Deconstruction and Medieval Thought**

(3-0-3) Gersh

The aims of this course are both methodological and historical. The methodological part will consist of an introduction to hermeneutics (in a broad sense) as theorized and/or practiced in certain areas of modern continental philosophy. After a brief look at the crucial innovations of Husserl, we shall study carefully chosen extracts (in English translation) of Heidegger: *Being and Time* and *What is Called Thinking*, Gadamer: *Truth and Method*, and Derrida: *Of Grammatology*, *Writing and Difference*, *Dissemination* in order to illuminate the different (even opposing) ways in which the idea of "hermeneutics" can develop. This general discussion will be combined with specific consideration of the themes of allegory and negativity. The historical part of the course will concentrate on late ancient, patristic, and early medieval readings (Origen: *On First Principles*, Augustine: *On Christian Teaching*, *Literal Interpretation of Genesis*, Proclus: *Commentary on Plato's Timaeus*). Here, we shall attempt to advance our comprehension of ancient literature by (1) looking for parallels with modern hermeneutic techniques and (2) applying the modern techniques in test cases. The course is intended to be relatively open-ended; i.e., students will be expected to think about the way in which these discussions are internally coherent and also relate to their own areas of interest (which may be elsewhere in philosophy, theology, or literature (Latin or vernacular)). Requirement: one final essay of ca. 20 pp.

**THEO 40931. Youth Ministry Weekend Workshop**

(1-0-1)

The development and implementation of youth ministry programs. (Fall)

**THEO 41202. Christian Tradition II: German Discussion**

(1-0-1)

This is an optional discussion group conducted in German which is associated with THEO 40244 Jewish/Christian Dialogue: Germany/Holocaust.

**THEO 41244. Jewish/Christian Dialogue: Germany/Holocaust**

(0-1-0)

This is an optional discussion group conducted in German which is associated with THEO 40244 Jewish/Christian Dialogue: Germany/Holocaust.

**THEO 42202. Christian Tradition II Discussion**

(0-0-0)

Discussion group for Christian Traditions II.

**THEO 43001. Proseminar**

(1-0-1)

This 1-credit course will introduce the field of theology, emphasizing its nature and task, its relation to faith and experience, and its various methods of inquiry. Class sessions will have discussion format to promote close interaction among all the participants. The seminar will feature different members of the faculty who will discuss the goals and methods of their respective disciplinary areas. During the course students will gain the necessary background to begin planning their own programs in theology. Required for all majors and supplementary majors, and open to minor, pre-seminarians, and any other interested students. Spring only.

**THEO 43101. New Testament**

(3-0-3)

A critical introduction to the Christian Scriptures for Western readers. In addition to important historical and literary aspects of the New Testament, this course aims to interpret those scriptures in the light of the cultural world of Jesus. This means that readers will be learning the essential and relevant cultural models for reading Jesus, Paul, Timothy, etc., in their own culture: basic values (honor and shame), institutions (kinship), modal personality (group-oriented) and the like. Spring only.

**THEO 43202. Joint Seminar: Revelation**

(3-0-3)

This joint seminar is required for students in the Philosophy-Theology joint major. The topic changes each year, as do the faculty, though it is always team-taught by one philosophy and one theology faculty member. With department permission, it may be taken by someone who is not a joint major.

**THEO 46001. Directed Readings**

(V-0-V)

This course consists of research and writing on an approved subject under the direction of a faculty member.

**THEO 46002. Directed Readings**

(V-0-V)

This course consists of research and writing on an approved subject under the direction of a faculty member.

**THEO 48001. Undergraduate Research**

(V-0-V)

Varies with instructor. Variable credit.

**THEO 48002. Thesis Writing**

(V-0-V)

Under the direction of a faculty member, students define a topic, undertake independent research, and write a thesis. This course is largely for the joint THEO-PHIL major who chooses to write the senior thesis in theology. It may be used in other special circumstances.

**THEO 48005. Honors Research**

(1-0-1)

Students who are accepted to the theology honors program research their topics during fall semester under the direction of a faculty advisor.

**THEO 48006. Honors Colloquium**

(1-0-1)

Students who are accepted to the theology honors program meet as a group in colloquium during fall semester, led by a faculty member.

**THEO 48007. Honors Thesis Writing**

(3-0-3)

Students who are accepted to the theology honors program write their thesis during spring semester under the direction of a faculty advisor.

**THEO 50201. Jewish/Christian Debate in the Middle Ages**

(3-0-3)

The growth of urban centers in Europe and Iberia during the Middle Ages rekindled the literary debates between Jews and Christians that began in the early Church. Both Jews and Christians constructed images of the other that were grounded in earlier arguments from Scripture and augmented them with the new tools of reason and linguistic knowledge. Our seminar will read both Jewish and Christian documents analyzing them in light of the work of modern historians such as Gilbert Dahan, Jeremy Cohen, David Berger, and Gavin Langmuir. In addition to reading disputation literature we shall analyze papal policy, noble patronage, and canon law.

## Catholic Social Traditions

### CST 20102. Gendering Christianity

(3-0-3)

This course is an introduction to feminist approaches to spiritual and philosophical traditions in the Christian West. Beginning from the pastoral and practical issues raised by gender assignments in the context of religious experience, it addresses major topics of theological thinking (such as sin, salvation, images of God, and Christology) relating historical development and contemporary feminist re-readings. The approach is both critical (i.e., analytical) and constructive; the primary focus is on Christian and post-Christian theological and literary texts, but some attention is given to other religious perspectives.

### CST 20103. One Jesus and His Many Portraits

(3-1-3) Meier

This course explores the many different faith-portraits of Jesus painted by various books of the New Testament: e.g., from suffering servant abandoned by God through high priest interceding with God to Godself. In each case, the course will ask how this particular portrait did or did not have an impact on subsequent Christian faith and what it may say to faith in Christ today. The course will combine a lecture format with discussions, readings, and reflections on the readings.

### CST 20206. U.S. Latino Spirituality

(3-0-3) Elizondo

U.S. Latino spirituality is one of the youngest spiritualities among the great spiritual traditions of humanity. The course will explore the indigenous, African, and European origins of U.S. Latino spirituality through the devotions, practices, feasts, and rituals of the people.

### CST 20209. Political Theology

(3-0-3)

In this course, we will examine the major themes of the relationship between Christianity and politics by way of the careful examination of major works of political philosophy and political theology, from the Bible and Plato to early American political thought and beyond (including Aristophanes, Augustine, Aquinas, Dante, Marsilius of Padua, Luther, Calvin, Machiavelli, Spinoza, Locke, Madison, Jefferson, Tocqueville, Hegel, and Nietzsche). Major themes include reason and revelation, the idea of a Christian polity and Christian citizenship (i.e., City of God vs. City of Man), rights, duties, original sin, limitations of government, rebellion, revolution, virtues, humility, magnanimity, friendship, family, prudence, power, justice, war, religion, toleration, truth, theocracy, democracy, liberalism, civil religion, and liberty, among others.

### CST 20223. The Church We Believe In

(3-0-3)

From the New Testament on, the Christian community has turned repeatedly to the formulation and description of its identity, essence and constitutional elements. Specifying what is entailed in the claim of the creed—"I believe in the one, holy and catholic church"—has been especially necessary at certain crucial moments in the history of the Christian movement. Providing an introduction to the main themes and problems in ecclesiology (the doctrine about the Church), this course will examine the teachings of leading theologians in the patristic and medieval period (e.g., Augustine, Aquinas, and Luther) and the determinations of the last two Vatican Councils, largely concerned with such ecclesiological matters as the constitution of the Church, the role of the papacy, infallibility, and the universal versus local churches.

### CST 20259. From Rome to Wall Street: The Church and Economic Life

(3-0-3)

The primary purpose of this course is to develop a critical understanding, via engagement with key texts and writings in the Christian tradition, of theological interpretations of the relationship between the church and the economic order. Texts from the Roman Catholic social tradition to be studied include *Rerum*

*Novarum* and *Economic Justice For All* (the U.S. Bishops' Letter on the U.S. Economy). Broad theological and ethical questions to be considered include: How have fundamental Christian understandings of creation—including teachings regarding human dignity and stewardship—shaped theological interpretations of the relationship between Church and economy? What is the appropriate role of the Church and individual Christians in the economic order? Is economic justice a proper concern for the Church? If so, how ought the church and individual Christians work to achieve economic justice? Particular questions include attention to the tension between the ideal of poverty and the acquisition of property by the Church and its members and the role of women in economic life. Course requirements include significant participation in class discussion and group work, a community-based learning project, a mid-semester paper, and a final exam. The instructor will work with gender studies and Catholic social tradition students to enhance the gender and CST content of the course through discussion and written assignments.

### CST 20260. Religion and Schooling in American Society

(3-0-3)

Does religion help children do well in school? Focused on primary and secondary schooling in the United States, this course investigates several academic and policy questions on the relationship between religion and schooling: How does religion affect academic outcomes for children? How do contemporary religious Americans view public schools, and how does religion shape Americans' views on curricular and other school policy issues? What is the role of religion in the schooling choices of families in the United States? Do Catholic or other religious schools improve academic outcomes for children? Why or why not? Through lectures, discussion of key works, and a research paper, the course advances theory and evidence regarding the relationship of religion and academic achievement, the role of religion in politics of education, and the relationship of religion and democratic education.

### CST 20302. War, Law, and Ethics

(3-0-3)

This course is designed to explore the ethical and legal considerations related to war and the use of force. Beginning with a historical overview of Christian thinking on war and peace, we will develop an account of various ethical positions on the use of force, including views rooted in the just war tradition and in pacifism. We will also consider the ethical implications of contemporary issues related to the use of force, e.g., sanctions, war crimes, humanitarian intervention, and terrorism. In collaboration with the Center for Social Concerns and La Casa de Amistad, students will have the opportunity to engage in service learning by working with students from Washington High School to collect stories from local war veterans as part of the Library of Congress's "Veterans History Project."

### CST 20303. Catholic Radicalism

(3-0-3)

This course will examine the tradition of Catholic radicalism, including the thought of Paul Hanley Murphy, Dorothy Day, Peter Maurin, and others.

### CST 20304. Vocation and Leadership in Catholic School Tradition

(3-0-3)

This course will invite students to consider the meaning of vocation in relation to the social mission of the Church. Beginning with a theological understanding of the significance of vocation and charisms, this course will provide a narrative-based exploration of the vocational journey of prominent figures in the Catholic social tradition such as Francis of Assisi, Dorothy Day, Cesar Chavez, and Oscar Romero. The emergent understanding of vocation will be held in conversation with the witness given by leaders from other religious traditions, e.g., Badshah Khan, Gandhi, and Thich Nhat Hanh. Using the method of service learning, this course will invite students to develop an awareness of their social justice commitments in light of their own sense of vocation. More information about the course format is explained in the Learning Agreement and Application Form, available at the Center for Social Concerns.

**CST 20501. Globalization and Social Movements**

(3-0-3)

In what ways does an increasingly global political, economic and cultural system impact our lives? Has globalization led to increased peace and justice, or to new types of conflict and inequality? How has globalization affected national and transnational social movements? This course examines the ways in which changes in the global economic and political system affect politics within countries. First, we will briefly review the broader research literature on the sociology of social movements. Readings will cover a range of different movements, such as those working to protect the environment, advocating for economic justice, addressing social problems such as extreme poverty and public health, and fighting for the rights of women and working people. Then, we will look at how globalization has affected social movements. This course is particularly applicable to students majoring in business, political science, economics, peace studies, anthropology, sociology, and any foreign language. Students planning to study abroad may also be interested.

**CST 20502. Poverty and the Bishop's Pastoral Letter**

(1-0-1)

This class is designed to rewrite the poverty section of Chapter 3 in the Bishops' 1986 letter, "Economic Justice for All." There will be hearings with groups of economists, theologians, community activists, et al. The idea is to simulate the process the bishops went through in writing the original document and to update the material in light of changes in the economy over the past 19 years. Each student will prepare a paper (8–10 pp.) that rewrites the poverty section.

**CST 20503. Catholic Social Tradition, Notre Dame, and Poverty in South Bend**

(1-0-1) Whitmore

Catholic social teaching highlights the problems of poverty and the gap between rich and poor. This course will invite speakers from both the Notre Dame and South Bend communities to address the issue of the wealth of Notre Dame and the poverty present in South Bend. What is the relationship between the two communities and their relative wealth or poverty?

**CST 20505. Markets and Morals**

(1-0-1) Wilber

This class is designed to investigate questions such as: Do markets need ethical standards? Do markets make us moral? Should a market for transplant organs be allowed? What should we think about sweatshops?

**CST 20602. Medical Ethics**

(3-0-3) Solomon

An exploration from the point of view of ethical theory of a number of ethical problems in contemporary biomedicine. Topics discussed will include euthanasia, abortion, the allocation of scarce medical resources, truth-telling in the doctor-patient relationship, the right to medical care and informed consent, and human experimentation.

**CST 20605. Introduction to Catholic Moral Theology**

(3-0-3)

This course will be structured into three sections, addressing respectively, biblical foundations, fundamental topics, and selected contemporary ethical questions. The biblical section of the course will study some of the key ethical perspectives and teachings of the Scriptures, primarily the Gospels and the Pauline letters. This section will be followed by an introduction to several fundamental topics in moral theology including (1) the theology of grace; (2) the orientation of ethics toward the achievement of happiness; (3) the development of the moral and theological virtues as capacities that enable us to act well; (4) the relation between moral truth and authentic human freedom; (5) the natural law, and (6) the stages and analysis of moral action. The third section of the course will consider some contemporary ethical questions in the context of this biblical and systematic framework. The course will draw primarily upon the classical Catholic tradition, as represented especially by St. Thomas Aquinas. We will also read selected sections of recent encyclical letters by Pope John Paul II, including his *Veritatis Splendor* (On the Splendor of the Truth), *Evangelium Vitae* (The Gospel of Life) and *Fides et Ratio*

(On Faith and Reason). Students will be expected to write a summary of a short reading for each class, write one 5-page paper for each of the first two sections of the course, write a final 10-page paper applying what has been studied to a particular ethical question, and present a summary of this paper to the class.

**CST 20611. Relationship and Sexuality in Christ Tradition**

(3-0-3)

This course is an introduction to the traditions and methods of Christian ethics and Roman Catholic moral theology, especially as they are applied to human sexuality and sexual ethics. Following a brief introduction to current cultural contexts for considering human sexuality, we will compare several theoretical bases for sexual morality. We will also consider methods and theories of Christian sexual ethics. Finally, we will turn our attention to a number of contemporary issues, including marriage, extramarital sexuality, contraception, assisted reproduction, and homosexuality. The format of the course will be lecture and discussion. We will employ a number of cases and scenarios to prompt discussion and to exemplify methods and theories. Requirements include attendance at all class sessions, careful reading of the assigned texts, significant contributions in discussions, a 5-page reflection paper, midterm and final exams, and a 10-page researched essay on an issue related to Christian sexual ethics. There may also be several 1-page, ungraded essays assigned to promote thought and discussion on specific topics or questions.

**CST 20619. Rich, Poor, and War**

(3-0-3)

This course examines the interrelationships between economic injustice and violence. It begins by investigating the gap between rich and poor both in the United States and worldwide. We also look at the history of Christian thought on wealth and poverty. We then address the ways in which economic disparity intersects with the problem of violence in both domestic (violence against women) and political realms (war and revolution). Next, we canvass Christian thought on the use of violence. This raises the question of whether Christianity, itself, contributes more to violence or to peace. Finally, we pose the question of whether forgiveness for violence is advisable or feasible.

**CST 20625. Discipleship: Loving Action**

(3-0-3) Pfeil

This course is for students returning from summer service internships or other service experiences who desire an extended opportunity for reflection and analysis. Some of the major themes to be discussed are: Christian compassion, discipleship, and Catholic social teaching. The course culminates with a comprehensive research project on a theological question or issue that emerges from the summer and/or other service experiences and is explored with other academic disciplines. More information about the course format, the experiential learning method and the process of evaluation is explained in the Learning Agreement and Application, available at the Center for Social Concerns.

**CST 20629. War, Law, and Ethics**

(3-0-3)

This course is designed to explore the ethical and legal considerations related to war and the use of force. Beginning with a historical overview of Christian thinking on war and peace, we will develop an account of various ethical positions on the use of force, including views rooted in the just war tradition and in pacifism. We will also consider the ethical implications of contemporary issues related to the use of force, e.g., sanctions, war crimes, humanitarian intervention, and terrorism. In collaboration with the Center for Social Concerns and La Casa de Amistad, students will have the opportunity to engage in service learning by working with students from Washington High School to collect stories from local war veterans as part of the Library of Congress's "Veterans History Project."

**CST 20630. Health Care Ethics/Twenty-First Century**

(3-0-3)

This course explores the importance of religious and moral values for the life and death choices we make, individually and as a society. Basic principles and methods of contemporary bioethics will be introduced, and a range of issues considered,

e.g., medical research, physician-assisted suicide, health care reform, new genetic technologies, and responding to AIDS. Especially recommended for students planning on a career in medicine or science. Lecture/ discussion format. Requirements: short papers, midterm, and final.

### **CST 20639. Conscience, Calling, and Character**

(3-0-3)

This course is intended to be an introduction to Catholic moral theology customized for those discerning a career as a business professional. In the wake of ethics failures at a number of prominent corporations, business leaders have renewed their call for ethical behavior and have begun to establish criteria for hiring morally thoughtful employees and to institute ethics education in the workplace. In the first part of the course, we will examine Catholic theological ideas about conscience and how it functions in the process of making a moral decision. In the second part of the course, we will examine a selection of Catholic writings on the idea of vocation and calling, as well as the nature of human work, the relationship between workers and management, and the norms of justice that ought to govern these relations. Finally, we will examine ideas about character and virtue to assess the challenges and opportunities for moral formation in a business context. Class format will combine analysis of theological texts and discussion of business cases. Course requirements include a midterm and final examination and a group project.

### **CST 20642. War, Peace, and Conscience**

(3-0-3)

This course examines ancient, medieval, and modern understandings of the ethics of war primarily, but not exclusively, within Christian tradition. It comes in three parts. First, it surveys the emergence and development of the morality of war from ancient times (Jewish, Christian, and classical), through the medieval period (church canonists, Aquinas, the scholastics), and into the modern period (Grotius and later sources of international law). Second, it examines the nature of modern warfare by means of historical illustrations, including the Civil War, the so-called Indian wars, World War I, World War II, the Vietnam War, and the Gulf War. Third, it takes up several cases with the aim of exploring the tension between traditional conceptions of just war theory and the practice of modern warfare, focusing on issues involved in the use of weapons of mass destruction, the “fog of war,” wars of revolution, ethnic and religious conflict, and the continuing “war on terrorism.” Texts include: Roland Bainton, *Christian Attitudes Toward War and Peace*, Erich Maria Remarque, *All Quiet on the Western Front*, John Hersey, *Hiroshima*, Olson and Roberts, *My Lai: A Brief History with Documents*, plus writings on the attacks of September 11. Requirements include a take-home test, several short papers, and a final exam.

### **CST 20643. The Askesis of Nonviolence**

(3-0-3) Pfeil

This course will explore the theology and practice of nonviolence as a form of askesis, or spiritual discipline. The material will include readings from Scripture, the early Christian tradition, and Catholic social teaching. Religious sources outside the Christian tradition will include Gandhi, Thich Nhat Hanh, and Badshah Khan. This course will use the method of community-based learning and will require 20 hours of service at particular sites in the South Bend area.

### **CST 20807. Catholicism**

(3-0-3) McBrien

A comprehensive exposition of Catholic theology from a historical, doctrinal, and ecumenical perspective. The course addresses the following questions: the inter-relationships among faith, theology, and belief; the meaning of human existence (a multidisciplinary exploration); the problem of God (revelation, religious pluralism, providence, the Trinity, etc.); Jesus Christ (New Testament data, doctrinal development, contemporary views, including a discussion of Jesus’ self-consciousness, sexuality, and sinlessness); the Church (New Testament data, history, Vatican II, mission, sacraments, authority, ministry, Mariology, etc.); and Christian existence (ethics, spirituality, eschatology).

### **CST 20828. Christianity and World Religions**

(3-0-3) Malkovsky

The purpose of this course is to introduce the student to the basic teachings and spiritualities of Hinduism, Buddhism, and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate mystery, the overcoming of suffering, etc. We will also examine some traditional and contemporary Catholic and Protestant approaches to religious pluralism. Our own search to know how the truth and experience of other faiths is related to Christian faith will be guided by the insights of important Catholic contemplatives who have entered deeply in the spirituality of other traditions. By course’s end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. Requirements: short papers, midterm exam, and final exam.

### **CST 20830. Reg. Islamic Challenge to Christianity**

(3-0-3) Reynolds

While many Christians have described Islam as a Christian heresy, many Muslims consider Christianity to be an Islamic heresy. Jesus, they maintain, was a Muslim prophet. Like Adam and Abraham before him, like Muhammad after him, he was sent to preach Islam. In this view Islam is the natural religion—eternal, universal, and unchanging. Other religions, including Christianity, arose only when people went astray. Therefore Muslims have long challenged the legitimacy of Christian doctrines that differ from Islam, including the Trinity, the incarnation, the cross, the new covenant and the church. In this course, we will examine Islamic writings, from the Qur’an to contemporary texts, in which these doctrines are challenged. We will then examine the history of Christian responses to these challenges and consider, as theologians, how Christians might approach them today.

### **CST 20835. The Church in the World**

(3-1-3) Colberg

This course explores the nature and mission of the church with particular attention to how these are shaped by its engagement with the world. It looks at the church’s on-going efforts to proclaim and preserve the good news of Jesus Christ while communicating it effectively in an ever-changing and increasingly diverse world. To this end, the class is divided into three units: Unit One surveys significant historical events that have helped form the Christian community’s identity and the way it conveys its message; Unit Two studies the documents of Vatican II as a recent and essential expression of the Church’s mission and self-understanding; and Unit Three examines the Church’s position on several contemporary issues such as interreligious dialogue, economic justice, birth control, and scientific/ technological developments as a way of considering current efforts to proclaim the gospel and speak meaningfully to a contemporary audience. This class includes weekly response papers, two tests, a final exam, and a class presentation or paper.

### **CST 30150. Collegiate Sports and Catholic Identity**

(1-0-1)

This course assesses the relationship between collegiate sports and Catholic identity. Presenters will include former Notre Dame football players as well as other commentators.

### **CST 30164. Catholics in America**

(3-0-3) Cummings

Since 1850, Roman Catholics have constituted the single largest religious denomination in the United States. This course explores what the presence of Catholics has meant for the American experience, focusing on themes of church/state separation, religion and politics, education, and social reform. We will also examine how the American context has transformed the practice of Catholicism, with attention to ethnicity, gender, region, race, and class as variables that have shaped the American Catholic experience. Assigned readings range from excerpts of anti-Catholic publications to first-hand accounts written by American Catholics from the colonial period to the present. In addition we will study the representation of Catholics in American film, themes of Catholic fiction, material culture

relating to Catholic devotional life and the sacraments, and the shifting position of American Catholics in the universal Roman Catholic Church.

### **CST 30202. War and the Nation-State**

(3-0-3)

Examines the nature of modern warfare as it pertains to the role of the nation-state in international affairs

### **CST 30203. On War**

(3-0-3)

This course is about the causes and conduct of war. As regards causes, the focus is on evaluating the strengths and weaknesses of the most prominent explanations for the outbreak of major war, including balance of power, regime type (democracy/autocracy), civil/military relations, and the personality traits of individual leaders. As regards conduct, the emphasis is on considering the effect of broad political, social, and economic factors (nationalism, democratization, industrialization, and military professionalization) on how wars are and have been fought. Particular historical emphasis is placed on the causes and conduct of great power wars (especially the two World Wars), although other wars will be discussed.

### **CST 30204. History of Catholicism, 300 to 1500**

(3-0-3)

Course explores the evolution of Catholicism from 300 to 1500.

### **CST 30241. NGOs in International Relations**

(3-0-3)

Examines the role of nongovernmental organizations in world affairs.

### **CST 30266. Political Economy of Globalization**

(3-0-3)

Addresses the dynamics of the phenomenon of globalization.

### **CST 30305. Immigration Global Perspective**

(3-0-3)

Treats global immigration issues.

### **CST 30308. War, Peace, and Conscience**

(1-0-1)

The Catholic tradition affirms that there are two key traditions to responding to the question of peace and war: the just war tradition and pacifism. Engaging either of these traditions, however, requires the exercise of an informed conscience. This course examines the issue of the formation of conscience against the backdrop of the many questions that arise when a country goes to war.

### **CST 30309. Migration and Catholicism**

(1-0-1)

This course examines the international phenomenon of migration, the factors that give rise to it, and its effects on people. We will examine the Catholic documents that address the issue of migration.

### **CST 30353. The Catholic Reformation**

(3-0-3)

*Corequisite:* HIST 32353

This course will examine some of the main historical realities, theological developments, and traditions of spirituality within Roman Catholicism c. 1450–c. 1700, the period of Catholic reform both before and after the emergence of the Protestant Reformation. The class format will be two lectures plus one discussion-based tutorial section per week, the latter based on the reading of primary sources in translation. Major topics to be discussed include the character of the late medieval church and reforming efforts within it (e.g., the Observantine movement, Christian humanism); Roman Catholic response to the Protestant Reformation, including the Roman Inquisition; the revival of existing and emergence of new religious orders (especially the Society of Jesus); the Council of Trent and its implementation among the clergy and laity; Catholic missionary activity in Asia and the Americas; post-Tridentine Catholic art and scholarship; the relationship between

the Church and European states in the 16th and 17th centuries; Jansenism; and the flowering of Catholic spirituality in the 17th century.

### **CST 30601. Comparative Religious Social Ethics**

(1-0-1)

Course will examine the social ethics traditions of Judaism, Islam, Hinduism, Buddhism, and Confucianism through comparison with the basic tenets of Catholic social teaching. Focuses will include themes such as human dignity and equality, respect for human life, the common good, an option for the poor, solidarity, and environmental concerns. Guest lectures will be supplemented with classroom discussion. Requirements include an 8- to 10-page paper and supplementary readings.

### **CST 30602. Uganda, War, Religion**

(1-0-1)

Civil war has ravaged the land of northern Uganda for 20 years, pitting the rebel “Lord’s Resistance Army” against the Ugandan government. Caught in between are the people of northern Uganda. The LRA has abducted more than 20,000 children to serve in the rebel forces. The Ugandan army has committed its own abuses, including rape and forced labor. The aim of this class is to (1) examine the conflict and how different parties use theological language to rationalize their actions and (2) address the issue of the obligation of NGOs and the international community to help stop the war.

### **CST 30603. Ancient and Medieval Theory**

(3-0-3)

What is the meaning of justice, and why should we care about it? Can politics ever perfectly establish justice? Which forms of government are best for human beings to live under, and why? What is the political relevance of religion and philosophy, family and ethnicity, war and peace, nature and freedom, law and right? What are the qualities of a good citizen and political leader? How should relations among diverse political communities be conducted? This course introduces students to theoretical reflection on these and related questions through the study of some of the great works of ancient and medieval political thought. Readings will include writings of authors such as Thucydides, Plato, Aristotle, Cicero, Augustine, Farabi, Maimonides, and Aquinas.

### **CST 30615. American Catholic Experience**

(3-0-3)

*Corequisite:* HIST 32615

This course is a survey of the history of Roman Catholicism in the United States from colonial times to the present. We will consider, among others, the following topics: immigrant and ethnic Catholicism, women in the Church, Catholic social reform, devotional and parish life, and the relationship between Catholicism and American democracy.

### **CST 30618. United States Labor History**

(3-0-3)

*Corequisite:* HIST 32618

The labor questions: “Who does the work? Who reaps the rewards? And who makes the decisions?” are central to any society, and this course explores how those questions have been answered throughout the history of the United States of America. This course will introduce you to the major themes, events, organizations, individuals, and scholarly controversies in American labor history, from 1776 to the present. We will study the diversity of the working-class experience in the United States by exploring the past from multiple perspectives, and we will analyze competing interpretations put forth by labor historians over the past half-century. The workers, workplaces, communities, institutions, and issues will range widely over the semester, but we will investigate some core themes for the duration: issues of power, structure, and agency, from the workplace to Washington, D.C.; workers’ wide-ranging efforts to forge organizations, namely labor unions, to represent their collective interests; intersections between class, race, and gender at work, at home, at play, and in politics; and tensions between capitalism, industrialization, and democracy in U.S. history.

**CST 30637. Religious Factor in U.S. Culture**

(3-0-3)

This course is about understanding American culture and its history, taking religion into account as one important factor among many-but one often neglected. Subjects include how religion has interacted with just about everything else in the culture, from politics and warfare to intellectual life, ideals, morality, science, schooling, race, immigration, ethnicity, family, sexuality, and so forth.

**CST 30672. Religion and Social Life**

(3-0-3) Christiano

How society influences religion and how religion influences society.

**CST 30675. Religion, Modernity, Secularization and Religious Persistence**

(3-0-3)

What is the fate of religion in modern societies? Is there something about modernity that is particularly corrosive of religion? Does modernity secularize? What does secularization mean? Where, how, and why does religion survive or thrive in the modern world? What social forces and influences explain different religious outcomes in modernity? Are there “multiple modernities” that have different effects on religious traditions? This course examines the most important works on religion in modernity to explore these questions so as to better understand outcomes of religious belief and practice in the contemporary world. The full title of this course is “Religion, Modernity, Secularization, and Religious Persistence.” (This is a sophomore-to-senior level course primarily for Soc majors and others with specifically related interests.)

**CST 30809. God, Philosophy, and Universities**

(3-0-3) MacIntyre

Enquiry and teaching in Catholic universities have aimed at understanding how the universe physical, animal, and human is ordered to God. One task of philosophy in the Catholic tradition has been to show how the various secular disciplines both contribute to such understanding and remain incomplete without theology. This course examines the question of how this task is to be carried out.

**CST 30818. Catholic Church From Medellin to Aparecida**

(3-0-3)

Medellin (1968) was the first General Conference of the Latin American Bishops after the Second Vatican Council. Medellin was a strong step forward in clarifying the role of the Latin Church. This course will explore the following question: Did Aparecida (the fifth General Conference) in Brazil 2007, rekindle the vision of Medellin?

**CST 30901. Colonial Latin America**

(3-0-3)

This course provides an introduction to the major themes of Latin American colonial history, including the discovery, conquest, and settlement of the New World; the institutional framework established by the Iberian countries to advance their economic, political, and religious interests in the region; and various aspects of Latin American society and culture until independence in the early 19th century.

**CST 30985. World History of Christianity Since 1900**

(3-0-3)

*Corequisite:* HIST 32985

A survey of the dramatic changes that have recently altered the face of Christianity in the world. For Catholics, Protestants, Eastern Orthodox, and the rapidly growing number of “independent” churches, the last century witnessed changes on a scale not seen since the first centuries of Christian history. The long-time Christian heartlands of Europe and North America have undergone unprecedented secularization. The once-missionary regions of Africa, Asia, and Latin America have developed larger communities of active believers than now exist in “the Christian West.” All over the world, Christian interactions with war (and peace), poverty (and affluence), disease (and health) have multiplied with increasing complexity. The course concentrates on Asia, Africa, and Latin America, with developments in Europe and North America in the background. Throughout, a primary aim is to

link Christian events with major international developments like the world wars, the cold war, economic globalization, and colonization-decolonization.

**CST 33001. Catholic Social Teaching**

(3-0-3)

This seminar will introduce students to the key texts that make up Catholic social teaching. Students will read one document each week and ask how the document’s ideas relate to our own present lives and planned futures. The course concludes with asking what would our anticipated professional vocations look like if informed by Catholic social teaching. For instance, what would a law firm or health clinic look like if formed by ideas such as the common good and the option for the poor.

**CST 33100. Dorothy Day and the Catholic Worker Movement**

(1-0-1)

This course examines the life and writings of Dorothy Day, the cofounder and spiritual guide of the Catholic Worker movement. The course is seminar in style. Readings will include Day’s autobiography, *The Long Loneliness*, and selections from her other writings.

**CST 33101. Dorothy Day and the Catholic Worker Movement II**

(1-0-1)

Examines the life and writings of Dorothy day and the Catholic Worker Movement from sociological as well as theological perspectives.

**CST 33301. Sociology, Self, and Catholic Social Tradition**

(3-0-3) Weigert

What’s Catholic about sociology? What’s sociological about Catholic social tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

**CST 33800. Global Health**

(0-0-1) Ryan

This 1-credit course introduces topics and methods in the ethics of global health. We will examine questions such as the relationship between health and persistent poverty (especially in the developing world), the effect of international economic systems on access to care, the role of the environment in health promotion, the impact of political conflict on health and health care delivery, and the effectiveness of transnational partnerships for the promotion of health-related initiatives. Course requirements include conscientious participation and a short paper (7–10 pgs).

**CST 33933. Summer Service Learning: Hispanic**

(3-0-3) McDowell

This is a leadership internship for Hispanic studies working 10–12 weeks in a Hispanic/Latino area with organizations dedicated to empowering local communities. Students will complete the requirements of THEO 33931 and work with the Center for Social Concerns to build partnerships with the agencies and people involved.

**CST 33936. Summer Service Learning: Confronting Social Issues**

(3-0-3) Shappell

This 3-credit service-learning course takes place before, during, and after student participation in eight-week Summer Service Projects sponsored by the Center for Social Concerns. The goals of the course are to reflect on the meaning and dynamics of Christian service, compassion, and Catholic social teaching through readings and writing, along with discussion and reflection with site supervisors and alumni, and scheduled group discussions upon return to campus. Writing assignments include a journal, reflection paper of six to eight pages and responses to study questions related to the course packet. This course is completed during the first

five weeks of fall semester and is graded Satisfactory or Unsatisfactory. Acceptance is based on the student's application and interview. Contact the Center for Social Concerns for more information.

### **CST 33937. Confronting Social Issues**

(3-0-3) Shappell

This 3-credit service-learning course takes place before, during, and after student participation in eight-week Summer Service Projects sponsored by the Center for Social Concerns. The goals of the course are to reflect on the meaning and dynamics of Christian service, compassion, and Catholic social teaching through readings and writing, along with discussion and reflection with site supervisors and alumni, and scheduled group discussions upon return to campus. Writing assignments include a journal, reflection paper of six to eight pages and responses to study questions related to the course packet. This course is completed during the first five weeks of fall semester and is graded Satisfactory or Unsatisfactory. Acceptance is based on the student's application and interview. Contact the Center for Social Concerns for more information.

### **CST 33938. Summer Service Learning: International**

(3-0-3) Tomas Morgan

This 3-credit course provides students the opportunity to encounter international realities through work with poor and marginalized people. Same academic requirements as THEO 33936 with the addition of area-/country-specific readings and meetings.

### **CST 33950. Social Concerns Seminar: Appalachia**

(1-0-1) Mick

This seminar involves experiential learning during the semester break. The course is centered on a service-learning immersion in the region of Appalachia and provides preparation for and follow-up to that experience. Students may focus on particular themes (e.g., rural health care, environmental issues) at various sites while learning about the region and rural issues.

### **CST 33951. Social Concerns Seminar: Washington, D.C.**

(1-0-1) Toms Smedley

This course centers on a trip to Washington, D.C., over fall break, during which time students analyze a significant social issue through contact with various agencies, government offices, and church organizations. Students participate in preparation and follow-up sessions. Themes (e.g., educational reform, violence in America) vary each year.

### **CST 33953. Social Concerns Seminar: Contemporary Issues**

(1-0-1) Mick

This seminar allows students to participate in an experiential opportunity designed to examine contemporary social problems. Emphasis will be placed on understanding issues/conflicts from the perspective of the various participants. Preparation and follow-up sessions are tailored to the specific opportunity.

### **CST 33954. Social Concerns Seminar: Leadership Issues**

(1-0-1) Hebbeler

This course is open to student leaders of various campus organizations focused on community service and social action (e.g., student groups affiliated with the Center for Social Concerns, social concerns commissioners of dorms, etc.). This seminar will examine leadership and empowerment issues from a multidisciplinary perspective, focusing on the role of the leader within organizations promoting community service, social awareness, and action for justice and peace.

### **CST 33963. Social Concerns Seminar: The Church and Social Action**

(1-0-1) Purcell

This course centers on a 48-hour immersion (colloquially known as the Urban Plunge) in an urban setting during the winter break (prior to return to campus). The course includes a preparation workshop in the fall semester, readings, two reflection papers, and follow-up educational meetings.

### **CST 33964. Social Concerns Seminar: Education**

(1-0-1) Toms Smedley

This seminar focuses on the educational and outreach endeavors of St. John Vianney Catholic Parish in Goodyear, Ariz., and builds upon Notre Dame's relationships with the Congregation of Holy Cross. Participants are hosted by parish families and spend several days in the classroom with a mentor teacher. Participants also visit organizations in Phoenix doing outreach to people who are homeless and to pregnant women.

### **CST 33965. Social Concerns Seminar: Organizing Power and Hope**

(1-0-1) Mick

This seminar focuses on diverse church, school, leadership, and community-organizing initiatives to improve life in Chicago neighborhoods. Participants will be challenged to examine perceptions of power, service and social action.

### **CST 33966. Social Concerns Seminar: Border Issues**

(1-0-1) Toms Smedley

The seminar examines immigration and related issues that exist between the United States and Mexico. Participants travel to El Paso, Texas, and Ciudad Juarez, Mexico, to meet with refugees, Border Patrol, parish organizations, and families who live in "squatter" villages. Participants also analyze and discuss policy issues. The immersion is in partnership with Annunciation House.

### **CST 33967. Social Concerns Seminar: Migrant Experience**

(1-0-1) Toms Smedley

This seminar offers a unique immersion into the lives of migrant farm workers in Florida during the spring harvest. Students pick tomatoes in the fields (donating their wages), live with migrant families, assist church and social agencies that serve migrants, and meet with community leaders, never again to take food for granted.

### **CST 33968. Social Concerns Seminar: L'Arche Community**

(1-0-1) Toms Smedley

This seminar centers on travel to a L'Arche community (e.g., Toronto, Canada) to share community life with developmentally challenged persons. Students draw from the philosophy of Jean Vanier, the works of theologian Henri Nouwen, and other spiritual writings to augment this participatory learning experience.

### **CST 33969. Social Concerns Seminar: Hispanic Ministry**

(1-0-1) Toms Smedley

This seminar gives participants the opportunity to experience the Church's option for the poor through an immersion into the spirituality, culture, and economy of the rural, Southern California valley community of Coachella. Students work with the members of the Congregation of Holy Cross who are in ministry there.

### **CST 33970. Social Concerns Seminar: International Issues**

(1-0-1) Tomas Morgan

This seminar serves as the required orientation course for all THEO 33938 International Service Learning Program participants. It will provide students with an introduction to international issues in developing countries through the lens of Catholic social tradition, guidance in independent country/area study, preparation and tools for cross-cultural service, opportunities for theological reflection, logistical information necessary for international programs and travel, and general support within the context of a community of colleagues. Other students doing summer internships in developing countries may take the seminar with permission from the instructor.

### **CST 40000. Research Preparation for Capstone**

(1-0-1) Purcell

Preparation for capstone research in an approved topic regarding Catholic social tradition.

**CST 40106. Memory and Prophecy**

(3-0-3)

In the last decades, significant theological trends have emerged both from poor countries and from marginalized groups within wealthy countries. Why have they emerged from different Christian churches of our time? This course will explore this question taking the case of Latin American theology. In particular, it will consider the implications of the “preferential option for the poor” for the areas of theological reflection, pastoral work, and spirituality. Special attention will be paid to the biblical foundations of that option as summed up in two crucial concepts: memory and prophecy. The 16th-century Dominican, Bartolome De Las Casas, said, “Of the least and most of forgotten people, God has a very fresh and vivid memory.” The Bible invites us to make God’s memory our own, and one component of that memory is the remembrance of the “least ones.” The announcement of the Gospel is linked to the advice received by Paul to “remember the poor” (Gal. 2:10). Theologically, poverty is the negation of creation. Poverty means death. Thus, the option for the poor also manifests in the prophetic opposition to that which means death for the poor. The course will examine what memory and prophecy signify for living a Christian life and doing theology in light of some of the major challenges to Christian faith today.

**CST 40226. Christianity in Africa**

(3-0-3)

Few places on earth exhibit the dynamism of contemporary Christianity like Africa. Such dynamism creates new challenges and opportunities for the Catholic Church and other ecclesial bodies, and also shapes African life more generally. Through novels, historical studies, and present-day reflections from a variety of perspectives, this course will explore Christianity in Africa, beginning with the early Church but with heightened attention to the more recent growth of Christianity on the continent. It will also examine Christianity’s interaction with Islam and traditional forms of African Christianity. Ongoing attention will be paid to African Christian theology, carried out formally and informally, as well as the implications of the spread of African Christianity for global Christianity.

**CST 40602. Ethics, Law, and International Conflict**

(3-0-3) Powers

The terrorist attacks of 9/11 and the war in Iraq have contributed to a dramatic reexamination of moral and legal norms governing the role of military force in international affairs. This course provides an introduction to legal and moral perspectives on issues of war and peace, with special attention to Catholic social teaching. Topics include the UN framework for collective security, collective enforcement, and peacekeeping; terrorism, aggression and self-defense; intervention on behalf of self-determination and human rights; norms governing the conduct of war; accountability for war crimes; and approaches to arms control and disarmament. These topics are discussed with special attention to their application in combating global terrorism, the interventions in Iraq and Afghanistan, the wars in the Balkans, and other recent conflicts. Introductory course in ethics and/or international law helpful but not necessary to succeed in this course.

**CST 40612. Catholic Radicalism**

(3-0-3)

This course traces the emergence and development of Catholic radicalism in the United States from the early 20th century to the present. Special attention will be placed on the Catholic Worker Movement. Readings will include texts by and about Dorothy Day, Peter Maurin, Virgil Michel, Paul Hanly Furfey, Gordon Zahn, Thomas Merton, and Daniel Berrigan, as well as some recent theologians. Issues to be taken up in the course include the relation between theology and social theory, nature and the supernatural, the nature of the modern state, capitalism and socialism, and the challenges facing Catholic radicalism in the beginning of the 21st century.

**CST 40860. Genocide, Witness and Memory**

(3-0-3) Mahmood

How are episodes of mass killing experienced, survived, and remembered? In this course, we consider political, social, and cultural trauma as expressed in memoir,

documentary, fiction, and academic text. Witness as an ethical stance is examined; the role of memory in shaping morality is questioned. (Does “Never Again” actually work?) We also look at the perpetrators of genocidal killing: who are they? What prompts their actions? Moreover, are any of us incapable of this kind of violence?

**CST 43479. International Migration and Human Rights**

(3-0-3) Bustamante

This course is an extension from the “mini-course” to a full term offered by Prof. Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the “industrial revolution” to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United National Commission of Human Rights on the relationship between migration and human rights are also covered.

**CST 43719. Self, Society, and Environment**

(3-0-3) Weigert

This course focuses on social psychological aspects of relationships between humans and the natural environment. Issues include how humans interact with different environments, symbolic transformations of environments, and competing accounts or claims concerning human-environment relationships. The course is framed in a sociology-knowledge perspective and touches on alternative ways of envisioning and valuing individual and institutional perspectives on human-environment relationships with an eye toward implications for social change.

**CST 45100. CST Internship**

(0-V-V)

This course is set up on an individual basis to provide students the opportunity to reflect upon internship experiences in light of Catholic social teaching. Readings and requirements will be set up on an individual basis.

**CST 46100. Directed Readings**

(3-0-3)

This course will be set up on an individual basis and allows students to pursue individual interests in the Catholic social tradition. Topics might include, for instance, poverty and policy, medical ethics, and so forth.

**CST 47100. Special Studies**

(0-3-3)

Research and writing on an approved subject under the direction of a faculty member.

**CST 47200. Uganda, War and Religion II**

(1-0-1)

Civil war has ravaged the land of northern Uganda for 20 years, pitting the rebel “Lord’s Resistance Army” against the Ugandan government. Caught in between are the people of northern Uganda. The LRA has abducted more than 20,000 children to serve in the rebel forces. The Ugandan army has committed its own abuses, including rape and forced labor. The aim of this class is to (1) examine the conflict and how different parties use theological language to rationalize their actions and (2) address the issue of the obligation of NGOs and the international community to help stop the war.

**CST 48001. Catholic Social Tradition Senior Capstone**

(3-0-3)

This course fulfills the capstone requirement for CST minors. The requirement is a capstone paper relating CST to a topic worked out by the professor and the student.

## Religion and Literature

### RLT 20101. Introduction to Art and Catholicism

(3-0-3)

This undergraduate lecture/discussion course will give students the opportunity to analyze and discuss the history of Catholic doctrine as it pertains to the visual arts. From the Council of Elvira in A.D. 306 to John Paul II's Letter to Artists of 1999, Catholicism has engaged with and debated the role of the arts as a legitimate vehicle for spiritual experience and theological knowledge. In this course, we will examine the changing, complex, and various ideas that have been brought to the question of the function of art in the Church. It will become clear that Catholic attitudes toward the arts have been subject to a range of influences that have helped shape a still fluid and potential relationship between Catholicism and art. Among other topics we'll examine the accommodation of traditional pagan practices in late antiquity; the impact of Byzantine and Carolingian theological discourse on the arts; Mendicant thought and practice regarding the arts; lay piety in the later Middle Ages; issues raised by the Reformation, the Council of Trent and the Counter-Reformation; the implications of modernism; neo-Thomist aesthetics; and the aftermath of Vatican II. In all instances, the course will be shaped by the discussions of primary readings (in translation when necessary) that will set these texts in a context that is social, intellectual, theological, and cultural. Each reading will then lead to an examination of the artistic environment that preceded and succeeded the ideas shaped by these texts. It is expected that students will leave this course with a rich knowledge of the central ideas and works of art that have come to shape the continuing dialogue between Catholicism and art.

### RLT 20102. Introduction to Islamic Civilization

(3-0-3)

This course introduces Islamic civilization and Muslim culture and societies through scholarly works, literature, media clips, films, and audio-video material (some made by the instructor during recent trips to the Middle East). The background reading will provide a context for the audio-visual material, giving a general overview of the history of the Islamic world from the advent of Islam to the present day. The ultimate goal of this course is for students to gain a better understanding of the Muslim peoples and their culture and societies within the broader context of Islamic civilization. Focal point: brief overview of the canons and basic tenets of Islam as a world religion, recognition and transcendence of stereotypes, awareness of Western culture and political influence on today's Arab-Islamic world and vice versa, and exposure to Middle Eastern culture.

### RLT 20204. Political Theory

(3-0-3)

*Corequisite:* POLS 22600

This course serves as the department's required introductory course in political theory, and as a University elective. It introduces students to key questions in political theory, such as the nature of law, the question of conventional versus natural moral standards, the relationship between individual and community, and the relationship between individualistic- versus community-oriented political theories. Authors studied include Madison, Aristotle, Aquinas, Hobbes, Locke, Scott Momady, Sophocles, Plato, and Flannery O'Connor. Students will write three 1-page papers analyzing specific cases, and then two 4-page papers. There is a comprehensive final. In Friday discussion groups, students will critically apply the materials covered in class to specific cases.

### RLT 20205. Staging the Religious: Shakespeare and His Contemporaries

(3-0-3) Dodson

How do we imagine religious experience? What happens when religion becomes an image, either visually, dramatically, or on the page? In this course, we will approach this question through the plays of William Shakespeare and a handful of his contemporaries, focusing on English Renaissance playwrights whose works "stage" the cultural tensions and competing religious claims of Protestants, Catholics, Jews, Muslims, and atheists, not to mention the supernatural (ghosts, witches, devils, etc.). While we will explore a handful of themes in relation to

these works—faith and the will, religious outcasts, and violence and justice—we will spend most of our time asking how the presentation of these religious themes in dramatic form and on the stage affects their meaning. We will do so by way of comparison, both comparing Shakespeare's plays with the frequently under-read works of Christopher Marlowe and Ben Jonson, as well as setting their images of religious experience against the Bible, Renaissance painting (e.g., Bosch, Bruegel, Caravaggio, and Rembrandt), and contemporary film versions of the plays.

### RLT 20206. Religious Imagination in American Literature

(3-0-3)

A consideration of the ways in which selected American writers and works are informed and illuminated—formally and in their ideas and preoccupations—by religious traditions, ideas, and concerns. Readings will be selected from the following: Melville, *Billy Budd*, *Sailor* or *Moby-Dick*; Stowe, *Uncle Tom's Cabin*; DeVries, *The Blood of the Lamb*; Hemingway, *The Old Man and the Sea*; Dickinson, *Final Harvest*; Hurston, *Their Eyes Were Watching God*; Steinbeck, *The Grapes of Wrath*; Hawthorne, *Selected Tales and Sketches*; O'Connor, *Everything That Rises Must Converge*; Maclean, *A River Runs Through It*; Eliot, *Four Quartets*; Agee, *A Death in the Family*; Updike, *Pigeon Feathers*; and Salinger, *Franny and Zooey*.

### RLT 20207. God and Evil in Modern Literature

(3-0-3)

A study of selected modern writers whose concern with God and evil, faith and despair, and the reality and significance of suffering animates their writings.

### RLT 20208. Music of the Catholic Rite

(3-0-3)

A study of the music composed for the Mass, the Office hours (primarily Vespers), and the Requiem Mass from the Middle Ages to the present day. The musical repertoire of each era is examined both from a purely musical standpoint and in light of the reactions of various popes, from John XXIII through Pius X, to the sacred music of their day. Documents on sacred music issued after Vatican II also are examined in relation to postconciliar church music for both the choir and the congregation.

### RLT 20210. Philosophical Reflections on Christian Belief

(3-0-3)

In this course, we will take a careful look at some of the hard philosophical problems raised by several important Christian doctrines. For example, Christians believe that there is exactly one God but three divine Persons (Father, Son, and Holy Spirit). We believe that the second Person of the Trinity became a man, that this man—Jesus of Nazareth—suffered and died for our sins so that we might be restored to fellowship with God, that he was raised from the dead on the third day after his crucifixion, and that all Christians will one day undergo a similar bodily resurrection. Many of us also believe that God is sovereign and that in some sense nothing happens apart from his will, but also that we are free creatures who often do things that run directly contrary to the expressed will of God. Each of these doctrines, however, poses serious philosophical difficulties. The goal of this course is to try to get clear about what exactly these problems are and to explore some of the ways in which philosophers and theologians have attempted to solve them.

### RLT 20212. Reading the Qur'an

(3-0-3)

To Muslims, the Qur'an is the uncreated, eternal Word of God. As Jesus Christ is to Christians, the Qur'an to Muslims is the fullest expression of God's mercy and concern for humanity. It is both the source of complete spiritual wisdom and the constitution for a more perfect society. In the present course we will encounter this revered text with the following goals: to examine the history of the Qur'an's composition and reception; to explore the major themes of the Qur'an; to discuss new theories on and debates over the Qur'an; and, finally, to research the Qur'an's statements on issues of contemporary interest, especially sex, politics, and war.

**RLT 20214. Pilgrimage**

(3-0-3)

This course will examine the literary record and lived experience of pilgrimage throughout Christian history by focusing on particular texts, persons, and sites. To enrich our understanding of this phenomenon, we will deliberately adopt a variety of perspectives (archeological, sociological, anthropological, liturgical, and art historical). We will necessarily also consider relics and the cult of the saints.

**RLT 20216. One Jesus and His Many Portraits**

(3-0-3)

This course explores the many different faith-portraits of Jesus painted by various books of the New Testament: e.g., from suffering servant abandoned by God through high priest interceding with God to Godself. In each case, the course will ask how this particular portrait did or did not have an impact on subsequent Christian faith and what it may say to faith in Christ today. The course will combine a lecture format with discussions, readings, and reflections on the readings.

**RLT 26448. The Greeks and Their Gods**

(3-0-3)

An introduction to the varied and unique religious beliefs and practices of the ancient Greeks. With the aid of anthropological and comparative material on religion from other cultures and societies, the course stresses the intersection of religious conventions with politics, gender, and class in the Greek city-states, and gives special attention to the religious life of the best documented Greek community of all, ancient Athens.

**RLT 30210. Christianity and Modernism**

(3-0-3)

A study of Christian writers and how they struggle with the literary and cultural movement labeled “modernism.”

**RLT 30212. Faith and Fragmentation in Modernity**

(3-0-3)

This class examines how British and American modernist writers responded to an upheaval of traditional religious belief in the first half of the 20th century. In particular, we will explore how their choice of literary forms reflects the loss of stability traditional Christianity had earlier provided. As we will see, many writers produced works that are more fragmentary than coherent, which is symptomatic of their loss of a cohesive worldview. Formal fragmentation, however, rarely yields a simple, lamentable heap of chaos and meaninglessness. Rather it testifies to the troubles and consolations of living in the modern world. The class will focus on reading a variety of fiction and poetry, which will serve as an introduction to modernist literature. We will read Nietzsche, Faulkner, Woolf, Stein, Hopkins, and Eliot. Requirements: two papers (5 to 7 pages), short responses, presentations, and a midterm and final exam.

**RLT 30216. C.S. Lewis, Tolkien, and Inklings**

(3-0-3)

“Otherworldly” fiction as well as the theological, critical, and philosophical writings of C.S. Lewis, J.R.R. Tolkien, and the Inklings.

**RLT 30222. The Greeks and Their Gods**

(3-0-3)

An introduction to the varied and unique religious beliefs and practices of the ancient Greeks. With the aid of anthropological and comparative material on religion from other cultures and societies, the course stresses the intersection of religious conventions with politics, gender, and class in the Greek city-states, and gives special attention to the religious life of the best documented Greek community of all, ancient Athens.

**RLT 30223. Mysticism and Modern Literature**

(3-0-3)

This course examines the persistence of mystical and spiritual traditions in the literary texts of the early 20th century: Underhill, Hopkins, Yeats, Conrad, Joyce, Owen, Eliot, Crane, Hesse, Forster, Mansfield, Woolf, and Waugh.

**RLT 30224. Faith and the African American Experience**

(2-0-1)

This course will introduce students to the African American faith experience, with particular attention being given to the historical development of spiritualities of liberation in the American Diaspora. Guest lecturers and seminar leaders will offer “perspectives” on this rich and heterogeneous tradition from several vantage points within the humanities, social sciences, and theological disciplines. In addition to a course pack of selected readings, the PBS series, *This Far by Faith: African American Spiritual Journeys*, and its companion volume will constitute the required “texts” for the course. There will be seven class meetings of two hours each. The course will meet on Wednesday evenings from 6:00 p.m. to 8:00 p.m. The course will begin on 18 January 2006 and conclude on 1 March 2006. Attendance at all class sessions, active participation in seminar discussions, completion of six short (i.e., 2- to 3 pages in length) weekly reflection papers, and a final examination are required.

**RLT 30226. Islam and Modernity**

(3-0-3)

Islam and its compatibility with modernity is a much-debated issue in the contemporary period. The course will address this timely topic and discuss the most important “hot-button” issues involved: political Islam, democracy, pluralism, rights of women, and secularism. The historical contexts in which these issues have been debated will also receive attention. What internal resources exist within Islamic thought that are being drawn upon by modernists to make a strong case for an essential compatibility between Islam, modernity, and democracy, for example? Is democracy (or Islam, for that matter) a monolithic concept? Students will be expected to actively take part in discussions centered on such questions, the assigned readings, and class lectures. Prior exposure to at least one class on Islam or the Middle East is strongly recommended.

**RLT 30228. Russia Confronts the East**

(3-0-3)

This course will explore the prominent place the Caucasus and the Islamic East hold in the Russian literary imagination. We will take a broad view of the topic, ranging from medieval epic to modern film, from prose to poetry, and from literature’s “greatest hits” to the justly and unjustly forgotten. Throughout, we will seek to understand the uses of the East in Russian culture as a whole and in individual literary works in particular, the role it plays in the formation of a Russian national identity, and the literary resources the East provides to Russian authors. Readings will include works by Pushkin, Lermontov, and Tolstoy, among others, as well as contemporary journalism on the war in Chechnya. Class format will be lecture/discussion, and grades will be based on class participation and regular writing assignments.

**RLT 30232. Pagans/Preachers/Passions**

(3-0-3)

How did Christianity go from Mediterranean cult to world religion? How did the scattered tribes of ancient Europe become a world civilization? This course will examine the growth of Christianity in late antiquity and the Middle Ages, concentrating particularly on the men and women who actively pursued its expansion—the missionaries. A combination of lectures and discussions of primary sources will consider the conversion of the Roman Empire, the beginnings of missions on the fringes of the Roman world, the growth of an early medieval missionary movement, and the changes in approaches to non-Christians that came with contact with the Islamic and Mongol worlds and the rise of the papacy and new religious orders in the later Middle Ages.

**RLT 30234. Religious and Social Movements in Latin America**

(3-0-3)

The purpose of this course is to give students an understanding of the role religion has played in Latin American history from the colonial period to the present. We will focus specifically on how religion mediates relations between culturally-distinct peoples during points of encounter and the role it plays in social movements. Religion in Latin America served paradoxically as a means of

and justification for “conquest” but also at times as a foundation for “subordinate” peoples’ resistance to domination. We will examine this dynamic as it evolved in successive efforts by outsiders to impose control over people of indigenous and African descent. The course will focus on Spanish proselytization and its results during the colonial period, millenarian movements by people of indigenous and African descent during the 19th century, and American Catholic and Protestant mission endeavors and their outcomes in the 20th century.

### **RLT 30301. Ancient and Medieval Political Theory**

(3-0-3)

What is the meaning of justice, and why should we care about it? Can politics ever perfectly establish justice? Which forms of government are best for human beings to live under, and why? What is the political relevance of religion and philosophy, family and ethnicity, war and peace, nature and freedom, law and right? What are the qualities of a good citizen and political leader? How should relations among diverse political communities be conducted? This course introduces students to theoretical reflection on these and related questions through the study of some of the great works of ancient and medieval political thought. Readings will include writings of authors such as Thucydides, Plato, Aristotle, Cicero, Augustine, Farabi, Maimonides, and Aquinas.

### **RLT 40201. Survey: Greek Art/Architecture**

(3-0-3)

Open to all students. This course analyzes and traces the development of Greek architecture, painting, and sculpture in the historical period from the 8th through 2nd century B.C., with some consideration of prehistoric Greek forebears of the Mycenaean Age. Particular emphasis is placed upon monumental art, its historical and cultural contexts, and how it reflects changing attitudes toward the gods, human achievement, and the relationship between the divine and the human.

### **RLT 40203. Art into History: Byzantine**

(3-0-3)

This undergraduate lecture/discussion course will give students the opportunity to analyze and discuss the history of Catholic doctrine as it pertains to the visual arts. Byzantine art has often been opposed to the traditions of western naturalism, and as such has been an undervalued or little known adjunct to the story of medieval art. In order to develop a more sophisticated understanding of this material, we will examine the art produced in Byzantium in the period from the 9th to the 12th century, a period that marks the high point of Byzantine artistic production and influence. Stress will be placed upon the function of this art within the broader setting of this society. Art theory, the notions of empire and holiness, the burdens of the past, and the realities of contemporary praxis will be brought to bear upon our various analyses of material from all media. How we, as art historians can write the history of this rich culture will be a central issue in this course.

### **RLT 40205. Sociology of Vocation**

(3-0-3)

The unifying theme of this course is the crisis that is created when people’s lives and work are divorced from the religious foundation that constitutes them as a vocation in the world. Students will read and engage Karl Marx’s analysis of worker alienation in capitalism and Marx Weber’s diagnosis of the vocation crisis in the modern West, mid-20th century critiques by C. Wright Mills (*White Collar*) and William Whyte (*The Organization Man*), and more contemporary analyses of the moral dimension of work and economics (e.g., by Robert Bellah and Robert Wuthnow). Through reading, writing, and discussion, students will have the opportunity to develop and apply their sociological imaginations in interpreting their own life and goals through the sociological diagnoses. The class will conclude by considering the possibility of a contemporary re-appropriation of an explicitly Christian conception of vocation. NOTE: This course is reading-intensive and discussion-based, and students will be required to write a 20+ page paper.

### **RLT 40206. Dante**

(3-0-3) Werge

A study of *The Divine Comedy*, in translation with facing Italian text, with special attention to the history of ideas, the nature of mimesis and allegory, and Dante’s

sacramental vision of life. We will also consider the influence of Augustine’s *Confessions* on Dante’s imagination and experience and read selections from the *Fioretti*, or Little Flowers, of St. Francis and from such later figures as Teresa of Avila as well as modern writers—including T.S. Eliot—for whom Dante constitutes a powerful presence. Readings: *Inferno, Purgatorio, and Paradiso*, trans. John D. Sinclair (Oxford); St. Augustine, *Confessions*.

### **RLT 40209. Religion and Social Life**

(3-0-3)

How does social life influence religion? How does religion influence society? What is religion’s social significance in a complex society like ours? Is religion’s significance declining? This course will consider these and other questions by exploring the great variety in social expressions of religion. The course examines the social bases of churches, sects, and cults, and it focuses on contemporary religion in the United States.

### **RLT 40211. Islam: Religion and Culture**

(3-0-3) Afsaruddin

This course will discuss the rise of Islam in the Arabian Peninsula in the seventh century of the Common Era and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the life of the Prophet Muhammad, the Qur’an and its role in worship and society, early Islamic history, community formation, law and religious practices, theology, mysticism, and literature. Emphasis will be on the core beliefs and institutions of Islam and on its religious and political thought from its formative period until our own time. The latter part of the course will deal with resurgent trends within Islam, both in their reformist and extremist forms, and contemporary Muslim engagements with modernity. We will also discuss the spread of Islam to the West and increasing attention focused on “political Islam” or “Islamism” today. All readings are in English translation.

### **RLT 40213. Romans and Christians**

(3-0-3)

This course will examine the early development of the Christian religion in its historical Roman context. It will begin with a survey of the political, social, and administrative structures of the Roman Empire in the period from Augustus to Constantine, move to a study of the complexity and diversity of Roman religious life and culture (with special attention to mystery cults, e.g., that of Isis), and then examine the development of the Jesus movement and Rome’s reaction to it. Particular topics to be studied will include miracle-working and the practice of magic, the problem of the historical Jesus, the sectarian and subversive character of early Christianity, the issue of how persecution and martyrdom are to be historically understood, and the meaning of religious conversion in the polytheistic Roman world. Above all the course will concentrate on the questions of how and why in historical terms a new religious system came to have such appeal that Constantine chose to make himself the first Christian emperor of Rome.

### **RLT 40214. American Literature: Varieties of Religious Experience**

(3-0-3)

Many American authors are skeptical toward religion, yet they are, nonetheless, preoccupied with the religious experience. This course explores the relationship between these attitudes in American literature.

### **RLT 40215. Religion, Myth, and Magic**

(3-0-3)

The study of religious beliefs and practices in tribal and peasant societies emphasizing myths, ritual, symbolism, and magic as ways of explaining man’s place in the universe. Concepts of purity and pollution, the sacred and the profane, and types of ritual specialists and their relation to social structure will also be examined.

### **RLT 40217. Dante and Aquinas**

(3-0-3)

An introduction to the thought of two great medieval figures, Aquinas and Dante.

**RLT 40218. Chinese Ways of Thought**

(3-0-3) Jensen

This is a special topics class on religion, philosophy, and the intellectual history of China that introduces the student to the worldview and life experience of Chinese as they have been drawn from local traditions, as well as worship and sacrifice to heroes, and the cult of the dead. Through a close reading of primary texts in translation, it also surveys China's grand philosophical legacy of Daoism, Buddhism, "Confucianism," and "Neo-Confucianism" and the later religious accommodation of Christianity and Islam.

**RLT 40219. The Romans and Their Gods**

(3-0-3)

An introduction to the way in which the Romans conceived of, worshipped, and communicated with the myriad gods of their pantheon. The course focuses first on conventional religious rituals and their cultural meaning, and secondly on the success of Roman polytheism in adapting to changing historical and social conditions. Particular attention is paid to the so-called "mystery religions," including Christianity, and their relationship to conventional forms of Roman religious behavior.

**RLT 40220. Religion and Literature**

(3-0-3)

An analysis of the reciprocal relations between literature and religion.

**RLT 40221. Literature of Religion**

(3-0-3)

This course will explore the interface and conflict between fairy and Christian in the medieval and renaissance tradition by discussing the legend of the holy grail and by reading *Sir Gawain and the Green Knight*, Book 1 of Spenser's *Faerie Queene*, Shakespeare's *A Midsummer Night's Dream*, Milton's *Comus*, and parts of Tennyson's *Idylls of the King*. In the second half of the course, we will turn to a modern mythmaker by reading Tolkien's *Lord of the Rings*.

**RLT 40222. Christianity in the Middle East**

(3-0-3)

This course will examine the origins and development of Christianity in the Middle East where Semitic language and culture molded the indigenous "Oriental" churches of the region. Topics include Semitic-Christian spirituality, Christianity in India and China, the impact of Islam on the Middle East Christianity, and the modern diaspora: Europe and the Americas. Drawing on native accounts, and the latest archaeological evidence, we will piece together the largely untold story of Christianity in the Middle East.

**RLT 40224. Revelation and Revolution**

(3-0-3)

Between the years A.D. 100 and 1000, Christianity and Islam were born and struggled for supremacy as world empires. The rivalry that resulted was religious and theological, but it expressed itself in story, art, and imagination. This course follows the early progress of a rivalry that continues to our own day. Topics include history of religious interaction, politics of empire, Arabic literature, mytho-poetics, art, and architecture.

**RLT 40225. In Parables**

(3-0-3)

This seminar takes as its primary focus the parables of Jesus, and seeks to examine their literary structure. We will read a broad selection of Jesus' parables, both inside and outside the New Testament canon, and consider how later prose writers and poets have rewritten them.

**RLT 40226. Canon and Literature of Islam**

(3-0-3)

This course is an introduction to the religious literature of the Arab-Islamic world. Emphasis is on works from the classical and medieval periods of Islam, roughly from the 7th to the 14th century of the Common Era. We will read selections from the Qur'an (the sacred scripture of Islam), the Hadith literature (sayings

attributed to the prophet Muhammed), the biography of the Prophet, commentaries on the Qur'an, historical and philosophical texts, and mystical poetry. All texts will be read in English translation. No prior knowledge of Islam and its civilization is assumed, although helpful.

**RLT 40227. Literary Catholicism**

(3-0-3)

This course will explore the Catholic theological tradition primarily as it finds expression in six novels by authors whose writing is influenced by that tradition. The novels discussed will be *The End of the Affair* and *The Power and the Glory* by Graham Greene, *The Ball and the Cross* by G.K. Chesterton, *Silence* by Shusaku Endo, *Wise Blood* by Flannery O'Connor, and *Love In the Ruins* by Walker Percy. Among the topics to be treated are Jesus Christ, revelation, the fall of humanity and the problem of evil, the nature of sacraments, and faith as a relationship with a loving God.

**RLT 40228. Romanesque Art**

(3-0-3)

In this course, we will examine the place of art in an expanding culture. The 11th and 12th centuries witnessed the economic and military expansion of the societies of Western Europe. This growth produced a complex and rich art that can be broadly labeled as Romanesque. We will investigate this phenomenon (or rather these phenomena) through three actual and metaphorical journeys: the pilgrimage to Santiago de Compostela, a journey to the ruins of ancient Rome, and a visit to the Palestine of the Crusades. These journeys, in many ways typical of this period, will provide the means of examining how the art of this period responds to the various new demands of an increasing knowledge provoked by travel.

**RLT 40229. Chinese Mosaic Philosophy, Politics, and Religion**

(3-0-3)

This special topics class introduces the diverse lifeways constituting the puzzle of the Chinese people. The course will chart this terrain of current Chinese imagination as it has been shaped from the contending, and often contentious, influences of religion, philosophy, and politics, introducing students to the heralded works of the Chinese intellectual tradition while requiring critical engagement with the philosophic and religious traditions animating this culture. Thus, as they learn about China, students also will reflect on how Chinese and Westerners have interpreted it.

**RLT 40230. Survey of Baroque Art**

(3-0-3)

Open to all students. This course will examine the art of Europe during the 17th century. The first third of the semester will be devoted to the work of Counter-Reformation Italy and the work of individual artists such as Caravaggio and Gian Lorenzo Bernini. The second third of the term will focus on Spanish painting, particularly the work of Francisco Zurbaran and Diego Velazquez. The final section of the course will consider painting in the Low Countries looking at the art of Rubens, Rembrandt, Vermeer, and others. Among the issues that will be addressed are art and spirituality, shifting modes of patronage, art and politics, and definitions of gender.

**RLT 40231. Greek Literature and Culture**

(2.5-0-3) Bloomer

This course surveys the leading works of ancient Greek literature and examines the cultural contexts in which they were written, received, and transmitted. Students read poetry and prose from many genres, and sample works from a thousand years of extraordinary literary creativity. Among the authors introduced are Homer, Sappho, Aeschylus, Herodotus, Aristophanes, Plato, Theocritus, Plutarch, Lucian, and Longus. Special attention is paid to the formal structures of Greek literary works, the cultural issues they raise, and the lasting value of Greek literature to the modern age. The course prepares students for more advanced work in classical literature and culture. Offered biennially.

**RLT 40232. Religious Poetry: Herbert and Hopkins**

(3-0-3)

This course examines the work of the two strongest religious poets in the English language: George Herbert and Gerard Manley Hopkins. We will read, as closely as possible, the major poems of each writer. Also, we will attend to the religious contexts of each writer's poetry, and the influence of Herbert on Hopkins. Special attention will be given to the themes of "poetry and prayer" and "poetry and sacrament."

**RLT 40233. Seminar: Medieval Profane and Holy Quests**

(3-0-3)

The notion of quest has captivated the human imagination throughout the ages, and held a particularly prominent place in medieval culture. This course will explore the types, meaning, and purpose of "quest" in the Middle Ages, drawing on both sacred and profane experience, as found in literary, religious, and historical works.

**RLT 40234. Hopkins and the Jesuits**

(3-0-3)

This course has two foci: a close reading of Hopkins's major poems, and careful attention to their literary and religious contexts. Particular attention will be paid to Hopkins as a Jesuit, and to that end we will refer to the writings of St. Ignatius Loyola. The influence of Duns Scotus on Hopkins will also be considered. Hopkins's debts to his literary forebears, especially George Herbert, will be examined; and particular attention will be given to the themes of poetry as sacrament and poetry as a conductor of mystery.

**RLT 40235. En/Gendering Christianity**

(3-0-3)

This course is an introduction to feminist approaches to spiritual and philosophical traditions in the Christian West. Beginning from the pastoral and practical issues raised by gender assignments in the context of religious experience, it addresses major topics of theological thinking (such as sin, salvation, images of God, and Christology) relating historical development and contemporary feminist re-readings. The approach is both critical (i.e., analytical) and constructive; the primary focus is on Christian and post-Christian theological and literary texts, but some attention is given to other religious perspectives.

**RLT 40236. Poetry and Pragmatism**

(3-0-3)

An exploration of the complex relationships between poetry, philosophy, and science at the end of the 19th century and the beginning of the 20th century. Three American poets studied are Emily Dickinson, Robert Frost, and Wallace Stevens.

**RLT 40238. Religion and Autobiography**

(3-0-3)

A course on the spiritual journey of the individual person, drawing on diaries and autobiographies. The first half is on the story of the life in terms of feeling and imagination and insight and choice, and the second half is on the story of the person in terms of the life project; the boundary situations of life; and conversion of the mind, of heart, and of soul. Readings: Saint Augustine, *Confessions*; Martin Buber, *The Way of Men*; Carolina Maria de Jesus, *Child of the Dark* John Dunne, *Reasons of the Heart and Search for God in Time and Memory*; Etty Hillesum, *An Interrupted Life*; C.G. Jung, *Memories, Dreams, Reflections*; Rainer Maria Rilke, *Letters To A Young Poet* and *Reading the Gospel*. Writings: a spiritual diary (not handed in), a term paper, and a midterm take-home and a final take-home exam.

**RLT 40239. Late Antique and Early Christian Art**

(3-0-3)

Art in late antiquity has traditionally been characterized as an art in decline, but this judgment is relative, relying on standards formulated for art of other periods. Challenging this assumption, we will examine the distinct and powerful transformations within the visual culture of the period between the third and the eighth centuries AD. This period witnesses the mutation of the institutions of the Roman Empire into those of the Christian Byzantine Empire. The fundamental

change in religious identity that was the basis for this development had a direct impact upon the visual material that survives from this period, such that the eighth century witnesses extensive and elaborate debates about the status and value of religious art in Jewish, Moslem, Byzantine, and Carolingian society. This course will examine the underlying conditions that made images so central to cultural identity at this period.

**RLT 40240. Post-Holocaust Literature and Theology**

(3-0-3)

Between 1933 and 1945, the actions of the Nazi government transformed the map of the world politically, aesthetically, and theologically. The ability of the Nazis to gather the cooperation of German citizens and the citizens of other occupied countries to implement their policies against the Jews has raised questions about the claims that European civilization is based on Christianity. How could barbarism flourish in Germany, the land of poets and thinkers? Both Christians and Jews, for common and different reasons, look upon the Holocaust as an abyss, a dark night of the soul. During this semester we shall attempt to move from horrified silence to insight into the possible frameworks for constructing theology "after the abyss." We shall also read literary works that attempt to describe the indescribable. Both literature and theology written after the Holocaust present the paradox of how to comprehend the incomprehensible. No single theologian or faith community has the answer to the problems raised by the Holocaust. No author writing in German, English, Yiddish, French, or Hebrew can describe the horrors and fully transmit the fullness of the atrocity. However, we shall attempt to read, evaluate, and—for some of us—appropriate what theologians, poets, and storytellers have written.

**RLT 40241. Between Religion and Literature: Meaning, Vulnerability, and the Human Existence**

(3-0-3)

This course explores the contribution that the coming together of theological and literary reflection can make to our understanding of the nature of meaning. Focusing on the work of Augustine, Aquinas, Dante, Primo Levi, Dostoevsky and Shakespeare, students will address questions such as: What is it we are doing when speaking, reading, using language? How do the intellect and the imagination work in relation to literary texts? How might all this relate to our ways of thinking about God, human nature, and the relationship between them? Such questions will be addressed, in particular, through reflection on how the texts studied invite us to think about the nature of love, forgiveness, vulnerability, and creativity.

**RLT 40242. Dante II**

(3-0-3)

*Corequisite:* ROIT 42116

Dante I and Dante II are an in-depth study, over two semesters, of the entire *Comedy*, in its historical, philosophical, and literary context, with selected readings from the minor works (e.g., *Vita Nuova*, *Convivio*, *De vulgari eloquentia*). Dante I focuses on the *Inferno* and the minor works; Dante II focuses on the *Purgatorio* and *Paradiso*. Lectures and discussion in English; the text will be read in the original with facing-page translation. Students may take one semester or both, in either order.

**RLT 40243. Dante's Commedia**

(3-0-3)

The course will offer a survey of major themes, scenes, and cantos in Dante's *Inferno*, *Purgatorio*, and *Paradiso*, trying to link their medieval context with our contemporary concerns and underlining the poetic value of the passages. We shall examine the overall structure of the poem and its central images of the voyage and sailing, the way in which Dante deals with shadows, and his concern with creation, prophecy, and the future. We shall also analyze contrasting pairs of dramatic scenes and discuss different kinds of sublimity.

**RLT 40244. Primo Levi**

(3-0-3)

This course explores the work of Primo Levi, focusing especially on his writings on the Shoah. It addresses, in particular, the questions that such writings raise

concerning the nature of meaning, suffering, creativity and freedom. As such, the course invites students to consider the nature of the relationship between literature and the study of literature, on the one hand, and reflection concerning the nature of human community and identity, on the other.

#### **RLT 40246. Age of Rembrandt: North Baroque**

(3-0-3)

Open to all students. This course investigates the century most fully identified with the early Renaissance in Italy. Individual works by artists such as Brunelleschi, Donatello, Ghiberti, Botticelli, and Alberti are set into their social, political, and religious context. Special attention is paid to topics such as the origins of art theory, art and audience, portraiture and the definition of self, Medicin patronage, and art for the Renaissance courts of northern Italy and Naples.

#### **RLT 40248. Religion and Politics in Comparative Perspective**

(3-0-3)

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America, and South America). The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others. Students will write two short reflection papers that demonstrate familiarity with the readings: one during the first half of the semester, and one during the second half of the semester. There will be a “short” mid-semester exam and, a final research paper due at the end of the semester.

#### **RLT 40250. Milton and Political Theology**

(3-0-3)

Using Milton as a guide, close readings of Hobbes and Spinoza.

#### **RLT 40251. Northern Renaissance Art**

(3-0-3)

Open to all students. This course traces the development of painting in Northern Europe (France, Germany, and Flanders) from approximately 1300 to 1500. Special attention is given to the art of Jan Van Eyck, Rogier van der Weyden, Heironymous Bosch, and Albrecht Durer. Through the consideration of the history of manuscript and oil painting and the graphic media, students will be introduced to the special wedding of nature, art, and spirituality that defines the achievement of the Northern Renaissance.

#### **RLT 40254. Theology and the Arts**

(3-0-3)

Christian faith is expressed and shaped by a variety of media: the narratives of sacred scripture, the propositions of ecumenical councils, the moral witness of saints, etc. This course will explore how musical, visual, and literary arts have mediated Christian faith in a variety of cultural contexts. From theological perspectives we will explore and analyze musical compositions such as the *Odes of Solomon*, Ambrosian hymns, and J.S. Bach's *Magnificat*; visual arts such as catacomb wall-paintings, icons, and the Sistine Chapel ceiling; and literary arts such as *The Dream of the Rood*, G.M. Hopkins's poetry, and the short stories of Andre Dubus.

#### **RLT 40258. Jesus in America**

(3-0-3)

While many modern Americans share a faith in Jesus as Messiah, Son of God, and Redeemer, they have also portrayed him as everything from a socialist to a Ku Klux Klansman, a polygamist to a black woman, an advertising executive to a Buddha-to-be. In the kaleidoscope of opinions about Jesus we can find the very essence, character, and vitality not only of American Christianity, but also of American values and beliefs more broadly speaking. In this course, we will study depictions and representations of Jesus in American culture, primarily in the 20th century, using a variety of texts, including canonical sources, films, novels, visual art, music, scholarly criticism, and popular culture. In addition to readings, film viewings, and

a group project, this senior seminar will culminate in a major research paper that will be developed throughout the semester, with extensive comments from other students and the professor.

#### **RLT 40260. Anthropology of Christianity**

(3-0-3)

This course considers Christianity as a topic of anthropological study. Our goal is to explore the vast diversity of ways Christianity has been articulated and experienced through time and within different cultures, even as we seek out some of the fundamental tenants, themes, and continuities that have characterized its emergence as a global religious system, faith, and practice. Among the variations of Christianity to be studied are first-century churches in the Mediterranean region; early churches in Africa and South America; contemporary Catholic and mainline Protestant churches; and the rapidly growing evangelical, charismatic, and Pentecostal movements. In addition to the historical and cross-cultural framework embedded within the course, topics to be considered include definitions and theories of religion; the question of conversion in Christianity; Christianity, colonialism, and capitalism; religious syncretism and enculturation; gender and women's experience within Christianity; and contemporary Christianity and the twin trends of fundamentalism and secularization. In addition to reading and participating in our in-class seminar, each student will conduct an ethnographic research project that explores some facet of Christian experience in the Notre Dame area and relates it to broader trends in America and beyond.

#### **RLT 40262. Rome, Christians, and Early Europe**

(3-0-3)

The course studies continuity and discontinuity in the Mediterranean world during a formative period, the transition from Roman Empire to early medieval European kingdoms. Christianity played a vital role during this transformation, but not the only one. Beginning with a review of Roman institutions, law, culture and religion, we will observe the changes they underwent between c. 150 C.E. and c. 750 C.E. At this latter point in time, some people were still thinking of themselves as living within the Roman Empire, even though the local potentate was a non-Roman king. Also, Roman law had become Christian law, and Latin was beginning to generate the languages now collectively described as “romance.” On the fringes of Europe, in England and Ireland, meanwhile, missionaries shared with their converts not just Christianity but also the Latin language and Latin literature along with certain Roman concepts of culture and political organization.

#### **RLT 40264. Historical Jesus**

(3-0-3)

The purpose of this course (a lecture course supplemented by readings and discussion) is to introduce the student to the major historical and exegetical problems involved in the quest for the historical Jesus, especially as pursued today in the so-called Third Quest. The course will move from initial definitions and concepts, through questions of sources and criteria, to consideration of major sayings and deeds of Jesus that may reasonably be considered historical. As time allows, major areas to be treated will include Jesus' relation to John the Baptist, Jesus' proclamation of the kingdom as future yet present, his realization of the kingdom through deeds of power (miracles) and table fellowship, the various levels or circles of followers (the crowds, the disciples, the Twelve), various competing groups (Pharisees, Sadducees), his teaching in relation to the Mosaic Law, the enigma (riddle-speech) of his parables, self-designation, final days, passion, and death. Obviously, it is more desirable that students be allowed time for discussion and questions than that all these topics be covered.

#### **RLT 40266. The Monastic Way in the History of Christianity**

(3-0-3)

Although often hidden from view, even hidden from view in the Church, the monastic way is one of the oldest expressions of Christian devotion to God and neighbor, usually pursued alone communally. The purpose of this course is to explore how Christian men and women have lived this life, from earliest Christianity to the present. To that end, we will read the writings of monks of eastern and western Christianity, paying close attention to monastic voices from

antiquity (such as Anthony, Evagrius, Basil, and Benedict), medieval Christianity (e.g. Ailred of Rievaulx, Bernard of Clairvaux, Hildegard of Bingen, as well as Gregory Palamas and Theodore the Studite) up to the present day (Seraphim of Sarov, Thomas Merton, Mother Maria Skobtsova). The primary format of the class will be discussion, aided by the composition of short essays throughout the course.

### **RLT 40268. Mary in the Christian Tradition**

(3-0-3)

The good news of Christianity is first of all about Jesus, the risen Lord, and so about us, as his brothers and sisters—about our future, our world, the church we constitute. Still, Christian preaching and art have repeatedly singled out Mary, the mother of Jesus, as an object for contemplation and loving, personal attachment, and Christian theology has repeatedly focused on her as a symbol for speculation and a subject of debate. So Mariology, although in itself a secondary area in Christian thought, is central to any study Christian religion through the centuries, as well as a rich testing-ground for the implications of Christian belief concerning the person of Christ, the nature and future of the church, the reality of sin and redemption, and the importance of male and female images in our experience of and response to God's love. This course will survey the most important moments in the development of the Church's understanding of and feeling for Mary's role in the mystery of our salvation, beginning with the New Testament and ending with our own time.

### **RLT 40270. The Book of Genesis**

(3-0-3)

The book of Genesis is arguably the most commented upon book in the Old Testament. Nearly all of the theological themes dearest to the Bible are the subject of considerable narrative elaboration: creation, fall, redemption, and election. This course will consider how the various stories in Genesis raise the profoundest of questions and what sort of answers it has provided the theological reader. The focus of the course will be on a close reading of the entirety of the book with the goal of mastering the whole.

### **RLT 40272. Transfiguration in the Fiction of C.S. Lewis**

(3-0-3)

This course will look at a theme that runs throughout the works of C.S. Lewis: theosis. Christianity's ultimate end is the deification of a person. In Lewis' fiction there is a strong theme of the transfiguration of matter and the human being, and the moral/ascetical prerequisite leading up to it. This course will first use some secondary theological sources to unpack theosis in light of the Christian doctrines of creation, sin, Trinity, and Christology, and then it will turn to Lewis himself—first to his nonfiction (*Mere Christianity*, *Abolition of Man*, *Weight of Glory* essays), but our main time will be spent in his fiction (*Narnia*, *Screwtape Letters*, *Great Divorce*, *The Pilgrim's Regress*, and *Til We Have Faces*).

### **RLT 40274. Religion and Autobiography**

(3-0-3)

A course on the spiritual journey of the individual person, drawing on diaries and autobiographies. The first half is on the story of the life in terms of feeling and imagination and insight and choice, and the second half is on the story of the person in terms of the life project, the boundary situations of life, and conversion of the mind, of heart, and of soul. Readings: Saint Augustine, *Confessions*; Martin Buber, *The Way of Zen*; Carolina Maria de Jesus, *Child of the Dark*; John Dunne, *Reasons of the Heart and Search for God in Time and Memory*; Etty Hillesum, *An Interrupted Life*; C.G. Jung, *Memories, Dreams, Reflections*; and Rainer Maria Rilke, *Letters To A Young Poet and Reading the Gospel*. Writings: a spiritual diary (not handed in), a term paper, and a midterm take-home and a final take-home exam.

### **RLT 40276. Theology of Revelation: Parable and Revelation**

(2.5-0-3)

What do the parables of Jesus reveal? How do they reveal it? This seminar seeks to answer these questions by way of a close reading of several parables of Jesus, aided by theological reflection on the category of revelation.

### **RLT 40278. Phenomenology and Theology**

(2.5-0-3)

In recent years French phenomenologists have sought to develop new phenomenologies of Christianity. This seminar examines the attempts of three such thinkers: Michel Henry, Jean-Luc Marion, and Jean-Louis Chretien. Can God properly be called "Life"? Of what use is the distinction between the icon and the idol? How far can the model of call and response go in either phenomenology or theology? These are the questions that will mainly interest us.

### **RLT 40280. Christian Autobiography**

(3-0-3)

This course examines three major yet very different attempts at Christian autobiography: St. Augustine's *Confessions*, St. Teresa of Avila's *Life*, and John Henry Newman's *Apologia pro vita sua*. Throughout, we will attend to three demands: a close reading of the texts themselves, including their narrative and rhetorical structures; a sense of how the self is imagined by the three writers; and an awareness of the authors' religious contexts.

### **RLT 40352. Plato Christianus**

(3-0-3)

This course is designed as an introduction to the philosophy of Plato, the "Platonism" (i.e., middle Platonism, neo-Platonism) of antiquity, the transformation of Platonism by the Greek and Latin Church fathers, and the medieval and Renaissance traditions derived from the above. In the first half of the semester, we shall survey the tradition as a whole and deal with a variety of general questions. However, particular attention will be given to two fundamental hermeneutic criteria employed by the followers of this tradition: namely, "radical selectivity" and "philosophical allegorization." In the second half of the semester, two specific texts which have arguably set the pattern for the Latin and Greek intellectual traditions respectively will be studied in more detail: Augustine's *On the City of God* and the works of pseudo-Dionysius the Areopagite. The course is intended to be accessible to students without knowledge of Latin or Greek. Requirement: one final paper of ca. 20 pp.

### **RLT 40354. Twelfth-Century Poetry and Philosophy**

(3-0-3)

This course will aim to provide a close reading of Bernard Silvestris's *Cosmographia* and Alan of Lille's *De Planctu Naturae* against the background of early 12th-century philosophical thought and grammatical-rhetorical theory. Although it will be initially necessary to cover the philological and historical ground with some care, the course will also attempt to explore in a more speculative and creative manner the question of the kind of relation between philosophy and literature in general that works like the *Cosmographia* and *De Planctu* suggest. As stimuli to such reflections, we shall pause to examine in some detail such textual phenomena as the philosophical allegory, the hermeneutical and metaphysical implications of number, the notion of self-reflexivity, and the negative symbol. The course is intended to be accessible to students without skill in Latin (although the latter would, obviously, be an advantage). Requirement: one final paper of ca. 20 pp.

### **RLT 40400. Religion and Literature**

(3-0-3)

*Prerequisite:* (THEO 10001 OR THEO 100) OR (THEO 20001 OR THEO 200) OR (THEO 24805 OR THEO 201) OR (THEO 13183 OR THEO 180G)

This course has as its essential context the crisis of authority of discourse in the modern period subsequent to literature gaining independence from Christianity. It focuses specifically on the three main postures literature strikes vis-a-vis confessional forms of Christianity no longer thought to have cultural capital. (1) The antithetical posture. Here Christianity is viewed in exclusively negative terms as repressive, authoritarian, and obscurantist, the very opposite of a true humanism that is literature's vocation. Readings include Voltaire and French existentialism. (2) The retrievalist posture. This posture is fundamentally nostalgic. The loss of Christianity's cultural authority is mourned, and literature is seen as an illegitimate substitute. Readings will include Dostoyevsky, T.S. Eliot, and Flannery O'Connor. (3) The parasitic posture. Here Christianity is criticized but not totally dismissed.

Portions of it are savable, especially select elements of the New Testament that emphasize human being's creative capacities. Readings include Coleridge, Shelley, and Emerson.

**RLT 40823. Death and Rebirth**

(3-0-3)

A course on the spiritual journey through the ages: the figure Gilgamesh (the human quest of eternal life), the figure of Socrates (the sense of a deeper life that lives through death), the figure of Jesus (the I and thou with God in Christianity; how this leads to an understanding of death and resurrection, or incarnation and Trinity), Dante and the spiritual journey (the Christian sense of a life that lives on both sides of death), Kierkegaard and the eternal self (the Christian encounter with the modern sense of selfhood), and a concluding vision (the experience of the presence of God). Requirements include a midterm and a final exam (take-home exams) and a personal essay.

**RLT 43301. Seminar: Topics in Medieval Art**

(3-0-3)

The topic and format of this course will vary from year to year.

**RLT 43345. Seminar: Out of the Purple Chamber**

(3-0-3)

Permission required. The subject of this seminar will vary from year to year.

**RLT 43347. Seminar: Greek Monumental Art**

(3-0-3)

Permission required. Seminar on specific subjects in Greek and/or Roman art.

**RLT 43348. Medieval Art Seminar**

(3-0-3)

Permission required. The subject of this seminar will vary from year to year.

**RLT 43349. Seminar: Courts of Renaissance Italy**

(3-0-3)

Permission required. Seminar on specific subjects in Renaissance art.

**RLT 43350. Seminar**

(1-0-1)

RLT concentrates only. The seminar allows for those students concentrating in religion and literature to attend designated lectures and conferences sponsored by religion and literature for one hour of credit.

**RLT 48500. Religion and Literature Thesis**

(3-0-3)

RLT concentrates only. The thesis is required for all students taking a minor in religion and literature. Students should approach Prof. Kevin Hart to determine a topic and to find an advisor.

# Mendoza College of Business

## Accountancy

### ACCT 20100. Accountancy I

(3-0-3)

An introduction to the techniques of accounting and the accounting profession, with an emphasis on the decision-usefulness of accounting information. The course stresses the relation of accounting to economic activity, organizing information for decision making, the resource acquisition decision, the uses of cash and noncash resources, the accounting for selling and manufacturing activities, and the information needs of multiple owners, lenders, and equity holders. A prerequisite of all accountancy and finance courses. Also offered to non-business students. Recommended University elective.

### ACCT 20200. Accountancy II

(3-0-3)

*Prerequisite:* ACCT 20100 OR BAUG 20001

A continuation of the introduction to accounting, with an emphasis on the decision-usefulness of accounting information. An analysis of the tools used for evaluation of financial and operating performance. The use of budgets and accounting systems for centralized decision making, decentralized decision making, participative budgeting, monitoring and control, and intrafirm contracts. Introduction to not-for-profit entities, attestation, and taxation. Also offered to non-business students who have taken the prerequisite.

### ACCT 30100. Corporate Financial Reporting

(3-0-3)

*Prerequisite:* ACCT 20200 AND FIN 20150

This one-semester course is designed for and required of finance majors and others who wish to develop an advanced knowledge of financial reporting in the corporate environment. The course covers financial statement preparation and analyses with a focus on understanding financial accounting information from a user perspective. NOTE: FINANCE MAJORS WISHING TO SIT FOR THE CPA EXAM, PURSUE A MASTERS DEGREE IN ACCOUNTANCY, OR TAKE ADDITIONAL UPPER-LEVEL ACCOUNTING COURSES MUST ENROLL IN ACCT 30110 AND ACCT 30120, INSTEAD.

### ACCT 30110. Accounting Measurement and Disclosure I

(3-0-3)

*Prerequisite:* (ACCT 20200 OR ACCT 232) AND (FIN 20150 OR FIN 251)

This course deals with the accounting process used to measure and report economic events. The primary goals are to understand the role financial reporting plays in providing decision useful information; to understand the economics underlying business transactions; to learn the Generally Accepted Accounting Principles (GAAP) that set the reporting and disclosure requirements for those transactions; to evaluate the efficacy of GAAP; and to understand the motivations that lead managers to select one accounting principle over another.

### ACCT 30120. Accounting Measurement and Disclosure II

(3-0-3)

*Prerequisite:* ACCT 30110 OR ACCT 371

Continues the study of financial accounting. Topics include accounting for income taxes, leases, stock-based compensation, pension plans, and equity investments including passive investments, equity method investments, and consolidated reporting for majority-owned operations. Contractual and economic issues, contemporary developments, and financial disclosures are integral parts of each topical discussion. The course is designed to strengthen the analytical, communication, and research skills required to succeed in accounting-related careers.

### ACCT 30210. Strategic Cost Management

(3-0-3)

*Prerequisite:* ACCT 20200 OR ACCT 232

ACCT 30210 is the second in a two-course, 6-credit-hour sequence that addresses cost and management accounting. The first course, ACCT 20200 Accounting and Accountancy II, introduces managerial concepts and how to use them for classifying and measuring costs, planning, and decision making. ACCT 30210 builds on and reinforces concepts from the introductory course with applications in accounting and strategic cost management settings. The course is designed to help students become discriminating producers and users of strategic cost accounting information for decision making. The course demonstrates how cost management analysts can add value to their organizations by providing recommendations to improve profitability of products, services, customers, and value streams. The course also focuses on measuring causes or drivers of costs, and making recommendations about capacity, quality, and time.

### ACCT 30280. Decision Processes in Accounting

(3-0-3)

*Prerequisite:* ACCT 20200 AND BAMG 20100 AND MGT 20600

This course builds on the statistical foundation established in prerequisite courses by examining applications in accounting decision-making settings. Because accountants increasingly use problem-solving skills, this course utilizes an important accounting tool, spreadsheets, to formulate and solve problems. It is intended to enhance students' abilities to identify relevant information and to think systematically about difficult managerial decisions involving issues of uncertainty, risk, and multiple objectives.

### ACCT 30750. Ethics in Accounting

(1-0-1)

*Prerequisite:* BAET 20300

This course examines a range of ethical issues associated with the major areas of accounting including auditing, tax, and managerial/financial accounting. Furthermore, the ethical theories that underpin decision making in accounting are applied as well as the dimensions of professionalism in the field. A combination of case analyses, issue paper, exam, and classroom discussion are used to evaluate students' learning.

### ACCT 40130. Accounting for Mergers and Acquisitions

(3-0-3)

*Prerequisites:* ACCT 30110 AND ACCT 30120

The course provides a study of accounting principles and problems related to financial reporting for mergers, acquisitions, consolidated enterprises, and foreign operations.

### ACCT 40510. Audit and Assurance Services

(3-0-3)

*Prerequisite:* ACCT 30110 OR ACCT 34110

The study of an independent accountant's assurance, attestation, and audit services. Topics include evidence, risk, standards, control, reports, liability, and ethics.

### ACCT 40610. Federal Taxation

(3-0-3)

*Prerequisite:* ACCT 20200 OR ACCT 232

The basic federal income tax provisions applicable to individuals, sole proprietorships, corporations, and small business firms are covered in this course, which emphasizes their rationale and significance in business and investment decision making.

**ACCT 40660. Tax Assistance Program**

(2-0-2)

*Prerequisite:* ACCT 40610

Preparation of federal and state income tax returns for low-income individuals.

**ACCT 40670. Tax Assistance Program**

(2-0-2)

*Prerequisite:* ACCT 40660

Preparation of federal and state income tax returns for low-income individuals.

**ACCT 40710. Business Law: Property and Negotiable Instruments**

(3-0-3)

*Prerequisite:* BALW 20150

This course involves the application of the following to business situations: organization structures, secured transactions, commercial paper, real and personal property, negotiable instruments, and the rights of the consumer. Recommended for students desiring to sit for the CPA exam.

**ACCT 40810. International Accounting**

(3-0-3)

*Prerequisite:* ACCT 20200

This course uses a decision-making approach to provide a background for business leadership in a global environment. It provides a fundamental understanding of accounting and reporting in international business and in the global capital markets. The student learns accounting for international business transactions, foreign exchange risk management and hedging mechanisms, comparative international accounting theory and practice, international financial statement translation, consolidation and analysis, social and political accounting concepts, and international taxation. The concepts and techniques are extensions of those learned in Accountancy I and II.

**Business (Nondepartmental)****BACM 30400. Business Speaking**

(1.5-0-1.5)

More information is being passed orally in business than ever before. This course can help students improve their speaking skills and overcome their fear of giving a speech. The eight-week course explores the communication process and shows how success in business is related to one's ability to integrate speaking skills with communication strategy and theory. Students will learn to research, write, organize, and present business briefings, informative speeches, and persuasive talks using PowerPoint technology. Students will learn to confront and overcome their fears about speaking in public.

**BACM 30420. Business Writing**

(1.5-0-1.5)

Only a fraction of a manager's communication time and effort is spent on writing, but without question, the most important issues in business end up on paper. This eight-week course will help you to improve your writing, as well as your critical thinking skills. We look at a range of expression issues related to language use, style, tone, grammar, punctuation, and organization. Students will learn to make decisions about document preparation, including format, layout, and design. Students also will develop an understanding of the ethical dimensions of business writing. One cannot become a better writer overnight, but this course can begin the process.

**BACM 30490. Persuasion**

(1.5-0-1.5)

Recognizing the power of persuasion, this course offers students insight into the factors that affect our ability to change the beliefs, attitudes, and behaviors of others. The course explores theories of social influence and guides students in the application of those theories to situations in the modern business environment. Given the power of persuasion, the course especially addresses the importance of ethical persuasion.

**BACM 30500. Conflict Management**

(1.5-0-1.5)

Conflict is a central feature of human behavior on interpersonal, organization, societal, and international levels. In this course, we explore the psychology of disputes, the nature and sources of conflict, and the ways in which conflict and human emotion can disrupt or make business organizations dysfunctional. As we examine the nature of conflict, we'll explore behavioral responses and theoretical approaches to it, and offer a wide range of alternatives to working through conflict. This course is highly practical and will offer students an opportunity to apply current research findings as they interactively participate in conflict resolutions.

**BAET 20300. Introduction to Business Ethics**

(1-0-1)

This course is designed to give the student an introduction to the central questions and fundamental character of ethics and morality. The course is focused on a discussion of ethical theories that can help to guide students' problem solving in ethical situations they will encounter in business. Ethical dilemmas faced by business people will be integrated into the class for purposes of discussion and analysis.

**BAET 30300. Giving Voice To Values**

(1-0-1)

*Prerequisite:* BAET 20300

The Giving Voice to Values (GVV) course allows students the opportunity to develop a "toolkit" of specific steps toward ethical decision making and personal response to ethical challenges. Building on the foundational concepts of the BAET 20300 course, the GVV elective explores the "post-decision making" stage. Thus, after one determines the right course of action, how, specifically, does he/she act on it within a given context? The course will explore case studies and "scripts"—through individual and role-playing exercises, students will practice ethical decision making and action. Students will design their own scenarios and plans

to teach ethical action. The course also includes the study of individuals who have contributed to society—what were their specific choices and actions? What were their paths to leadership? Includes a special focus on relevant applications—entry-level positions after graduation, job and other experiences students have already encountered or will soon encounter, and other practical contexts.

### **BAET 30301. Marketing Ethics**

(1-0-1)

BAET 20300

This course is built upon concepts learned in Introduction to Business Ethics. Students will use cases to analyze ethical problems in the area of marketing, applying and integrating the knowledge obtained from marketing courses and readings after cases. Issues that are covered in the course include ethics in product development, pricing, channels of distribution, advertising and selling. The class is conducted as a seminar with a major focus on class discussing of readings, cases and other assigned materials.

### **BAET 30500. Globalization and Corporate Responsibilities of Large and Small Companies**

(1-0-1)

*Prerequisite:* BAET 20300

This elective course builds on the course Introduction to Business Ethics and focuses on the ethical responsibilities of large and small companies in the global context. Because globalization is mainly driven by powerful multinational corporations, we conduct several case studies of MNCs and investigate their roles and responsibilities. We also pay attention to the challenges posed by globalization to small enterprises (for instance, Grameen Bank) that make up the vast majority of companies and ask about their responsibilities. For a deeper understanding of corporate responsibility, we develop a consistent framework that ranges from the high level of principles down to the operational level. Specifically, we discuss the United Nations Global Compact with its 10 principles and the Global Reporting Initiative with its metric of economic, social, and environmental performances. Finally, we explore ethical responsibility from an investor's perspective with the help of the UNEP Principles for Responsible Investment that consider environmental, social and corporate governance (ESG) issues. The course will use chapter 10 and 12 of the DesJardins's book *An Introduction to Business Ethics* (third edition) and a course packet posted on the I drive.

### **BAET 30510. United Nations Global Compact**

(1-0-1)

Take one look at the smog that hangs over the Olympic host city Beijing and it becomes abundantly clear—globalization and economic expansion come at a price. Resource depletion, worker exploitation, pollution and corruption—this is the dark underbelly of globalization that has raised alarm bells around the world. Thankfully, more and more individuals and organizations are waking up to the social, environmental, and ethical costs of a global marketplace and are making a sound business case for a new era of moral capitalism. Leading the way in this regard is the United Nations with its groundbreaking Global Compact initiative. Launched in 2000, the Global Compact now has more than 5,600 participants—including 4,300 businesses in 120 countries around the world—making it the world's largest voluntary corporate social responsibility project.

### **BAET 30511. The United Nations Global Compact and the Future of the Economy II**

(1-0-1)

This course will first review the material from BAET 30510/ UN Global Compact and then proceed to study the various criticisms of voluntary codes such as the Global Compact. The object of the study will be to gain some insight into which of the criticisms might be valid and then to propose some modifications of the compact. The course will include distinguished speakers in the field and will use the recently published book *Peace Through Commerce: Responsible Corporate Citizenship and the Ideals of the United Nations Global Compact*. BAET 30510 is not a prerequisite for this course.

### **BAET 30520. Topics in Sustainable Business**

(1-0-1)

The course will provide an introduction to relevant terms and concepts in the areas of social and environmental sustainability. The course will enhance awareness of corporate sustainability and ESG (environment, social, and governance) concepts, explore the role of stakeholders in business decisions and allow students to learn from “best practices” in these areas, featuring top companies including GE Corporation, PricewaterhouseCoopers, and others. Other relevant initiatives will be included, for example, interacting with the newly appointed University of Notre Dame sustainability director. Concepts to be examined include core sustainability terms such as dematerialization and relocalization, along with a close look at companies that have successfully incorporated such approaches. Frameworks and metrics of sustainability will be a focus of the course to allow an understanding of the importance of practical application of sustainability goals. The course runs concurrent with the MBA-level course in sustainability; shared speakers and opportunities for cross-cultivation may be possible.

### **BAET 30530. Managing Organizational Compliance and Ethics**

(1-0-1) Levey

*Prerequisite:* BAET 20300

Develop fundamental knowledge of compliance and ethics programs to facilitate future interaction with such programs, whether as an employee, manager, executive, director, partner (or other principal); auditor or consultant; member of a compliance and ethics function; or shareholder, regulator, or other external stakeholder. Complement and enhance ethical awareness developed during BAET20300 Introduction to Business Ethics course, e.g., by gaining exposure to additional “real-world” legal and ethical issues commonly encountered in the corporate setting. (Note that the goal of this course is to build upon, and not duplicate the introductory course.) Develop an understanding of how compliance and ethics programs contribute to the individual, organization and society. In addition to these subject-matter-specific goals, this course also seeks to develop students' skills in the following more-general areas: critical thinking and problem solving; oral and written communication; and research.

### **BAET 40300. Business Ethics Field Project**

(1-0-1)

*Prerequisite:* BAET 20300

The senior field project in ethics is designed to give the student practical evidence in a social service setting. The objectives of the course are to (1) introduce the student to service experiences outside the university setting, (2) provide a mechanism for enhancing the spiritual and intellectual awareness of students, (3) provide a mechanism for coordinating existing student social service projects with the student's academic work, and (4) interact with people whose values have led them into full-time work in the not-for-profit sector.

### **BALW 20150. Business Law: Contracts and Agency**

(3-0-3)

This course examines the background of the legal process and the judicial system, torts, contracts and the Uniform Commercial Code and agency law. Required for all BA students.

### **BAMG 20100. Statistics in Business**

(3-0-3)

*Prerequisite:* (MATH 10260 OR MATH 10360 OR MATH 10460 OR MATH 10560 OR MATH 10860)

Descriptive and inferential statistical techniques in analysis of data, statistical inference, and decision making. Study includes central tendency, probability, hypothesis testing, analysis of variance, regression, and correlation.

### **BAMG 30080. The History of Business**

(1.5-0-1.5)

This course traces the kaleidoscope evolution of business over the last 2,000 years. This 1½-credit hour course spans pertinent, wide-ranging institutions, individuals, and initiatives from Sun Tzu's 500 B.C. “The Art of War” through the Roman

Empire, renaissance, and into the 19th, 20th, and 21st centuries. This pioneering course is offered to a limited enrollment of sophomore, junior, and senior business majors who will share Prof. Keane's curiosity and knowledge of how what they are majoring in began and evolved.

### **BAMG 30310. Foresight**

(3-0-3)

The course will be run as a directed readings course for business students, who will be divided into teams of about four students each. Students who are accepted for the research course must also view previous "Ten Years Hence" lectures. Participants in the research course will be provided with a textbook/readings book related to future studies. As one part of the research course, students will meet with the instructor/assistant to develop the course, and discuss chapters from the readings book. Students will also be required to write short critiques of each chapter. However, the main course requirement will involve investigating a major trend and writing a group research report related to that trend.

### **BAMG 30460. International Management**

(3-0-3) Pannekoek

International business is conducted with and through people from various cultural backgrounds. Cultural differences, if not understood and bridged, can be significant barriers to the implementation and success of a business venture. We'll learn how to conduct business across borders and cultures by focusing on the cultural, political, economic, and legal environments in which multinational corporations (MNCs) operate.

### **BAMG 30505. Micro-Venturing I—Business**

(3-0-3)

The course will explore the innovative concepts, practices and strategies associated with microenterprise and micro-financing initiatives, engaging in the assessment and analysis of social models through the case study method.

### **BAMG 30506. Micro-Venturing II**

(3-0-3)

A comprehensive review of the fundamentals of finance, law, marketing, and management will be presented. In classroom and workshop formats, students will be teamed up to develop sound business plans with local entrepreneurs and compete for available seed capital to implement their business plans within the surrounding community. Students take their skills, work with business owners, and become mentors.

### **BAMG 30510. Entrepreneurship: Go to Market**

(2.5-0-1.5) Barry

*Prerequisite:* MGTE 30500 OR BAMG 30500

Alright, now you have an idea and have developed a business plan. What do you do next to start your business? We'll learn the first steps you take that will lead to a successful launch rather than frustration and failure. When you finish the course, you'll better understand how to start and grow your business and retain your competitive edge and advantage.

### **BAMG 30515. Topics in Entrepreneurship**

(2.5-0-1.5)

*Prerequisite:* MGTE 30500 OR BAMG 30500

This course considers special topics in entrepreneurship including growth management, cash management, sustaining the new venture, crisis management, and new venture human resources. This course will also consider using the tools of entrepreneurship within an existing organization (intrapreneurship).

### **BAMG 30520. Funding New Ventures**

(1.5-0-1.5) Frieling

*Prerequisite:* MGTE 30500 OR BAMG 30500

Every new venture needs money and other resources to begin operation. The best source of money depends upon the nature of your idea and its stage of development. We'll learn when it is best to go to your family and friends and when it is best to go to banks, angel investors, venture capitalists, or other funding groups.

Of course, you'll need to know how to position your proposal, how to perform venture valuation, and a bit about the theory of entrepreneurial finance. When you finish this course, you'll know who to approach to "show you the money" for your deal!

### **BAMG 30540. Entrepreneurship in Developing Countries**

(1.5-0-1.5) Paulsen

This course provides an international experiential learning opportunity for undergraduate students. The course examines how businesses are launched in different global contexts and includes discussion of global and national support agencies, market feasibility, and cultural issues. Students become involved in a practicum in which they provide consultative service to a startup or NGO in a less developed country setting.

### **BAMG 30590. New Venture Strategy**

(1.5-0-1.5)

This course will build a series of non-mathematical models of success and failure in the world of entrepreneurial business through intensive case analysis of both archival and current situations. We will not limit ourselves strictly to small business, but will approach business strategy issues that impact the practice of entrepreneurship. While all strategy courses are about the future, in corporate strategy, the future is charted based on the current operations of the firm. In New Venture Strategy, this task is much harder since students are thinking about a new firm with no existing data to guide strategy. By the end of the course, students will have developed a process for realistically assessing risk in various entrepreneurial schemes. In addition, they will have reviewed and understood both success and failure in a host of entrepreneurial businesses. From this, a greater ability to judge their own entrepreneurial ideas will emerge.

### **BAMG 30700. Introduction to Process Analytics**

(1.5-0-1.5)

*Prerequisite:* BAMG 20100 AND MGT 20600

Businesses compete based on the efficiency and effectiveness of delivering an experience, service, or good to their customers. This class provides a foundation for evaluating and analyzing business processes in order to make them more efficient and effective. Students will understand the problems and issues confronting operations managers. Furthermore, they will also learn language, concepts, insights, and tools to deal with these issues in order to gain competitive advantage through process analytics. The concepts and tools presented in this class can be applied to the service or manufacturing sector, to for-profit or not-for-profit organizations and all disciplines within a business.

### **BAMG 30900. Strategic Management**

(1.5-0-1.5)

*Prerequisites:* (MGT 20200 OR MGT 24200) AND (MARK 20100 OR MARK 24100) AND (FIN 20100 OR FIN 24100) OR (FIN 20150) ) AND BAMG 20100 AND MGT 20600

Strategic management deals with the organization, management, and strategic positioning of the firm so as to gain long-term competitive advantage. Up until this time, most of your business education has emphasized a specialized, functional perspective of business situations (e.g., marketing, human resources, accounting, finance, operations management). In this course, we integrate these acquired skills by taking the perspective of a general manager (or, equivalently, a management consultant). General managers are responsible for setting the goals, objectives, and strategies of the organizations they lead as well as the implementation and execution of such plans. To do this, managers must be capable of understanding and utilizing the knowledge from each of the organization's functional areas to develop a cohesive and effective competitive strategy. In addition, they must be able to analyze competitive situations within industries in order to understand the sources of the firm's competitive advantage. In today's business environment, whether you are a new hire, consultant, or the CEO, you must be capable of thinking strategically.

### **BAMG 40580. Family Business Strategy**

(1.5-0-1.5)

This course focuses on the unique challenges of family-owned, family-controlled businesses that graduates may very likely work in or consult to during their career. Learning how successful family businesses survive generation after generation can give a person an edge in consulting, governing, or managing in a family-owned business whether or not the business is owned by that person's family. Between 80 and 90 percent of businesses in the United States and Latin America are family-owned and family-controlled. Over 80 percent of businesses in Europe and Asia remain family-owned and family controlled. It is very likely that an individual may work with or consult to a family-owned, family-controlled business at some time in his or her career. Approximately 67 percent of family-owned businesses do not survive beyond the founding generation under the control of the founding family and about 12 percent make it to the third generation. Leadership succession, estate planning, governance, strategy—all are major concerns for family-owned businesses.

### **BAUG 10000. Introduction to Business**

(1.5-0-1.5)

An introduction to the study of business, including keys and strategies for success, personal development, the benefit of extracurricular activities, professional development, and orientation to the business education system. The course will emphasize personal responsibility for academic success.

### **BAUG 20001. Accountancy I**

(3-0-3)

An introduction to the techniques of accounting and the accounting profession, with an emphasis on the decision-usefulness of accounting information. The course stresses the relation of accounting to economic activity, organizing information for decision making, the resource acquisition decision, the uses of cash and noncash resources, the accounting for selling and manufacturing activities, and the information needs of multiple owners, lenders and equity holders. A prerequisite of all accountancy and finance courses. Recommended University elective.

### **BAUG 20002. Accountancy II**

(3-0-3)

*Prerequisite:* ACCT 20100 OR BAUG 20001

A continuation of the introduction to accounting, with an emphasis on the decision-usefulness of accounting information. An analysis of the tools used for evaluation of financial and operating performance. The use of budgets and accounting systems for centralized decision making, decentralized decision making, participative budgeting, monitoring and control, and intrafirm contracts. Introduction to not-for-profit entities, attestation, and taxation.

### **BAUG 20003. Business Law: Contracts and Agency**

(3-0-3)

This course examines the background of the legal process and the judicial system, torts, contracts and the Uniform Commercial Code and agency law. Required for all BA students.

### **BAUG 20004. Statistics in Business**

(3-0-3)

*Prerequisite:* MATH 10260 OR MATH 10360 OR MATH 10460 OR MATH 10560 OR MATH 10860

Descriptive and inferential statistical techniques in analysis of data, statistical inference, and decision making. Study includes central tendency, probability, hypothesis testing, analysis of variance, regression, and correlation.

### **BAUG 20005. Corporate Finance Essentials**

(3-0-3)

*Prerequisite:* (ACCT 20100 OR ACCT 231 OR BAUG 20001)

The course provides a general introduction to finance principles. Students learn financial goals, valuation theory, risk and return concepts, financial statement analysis, and techniques for managing current and fixed assets and capital structure. Personal investing and financial institutions also are discussed.

### **BAUG 20006. Principles of Management**

(3-0-3)

A study of the management process, including planning, organizing, staffing, directing, and controlling. Emphasis is placed on executive leadership, organizational behavior, and management theory.

### **BAUG 20007. IT Management Applications**

(3-0-3)

This is a "hands-on" course that develops the students' basic computer skills required for managerial problem solving and decision making. The students learn in this class how to use spreadsheets, database management, and web development software to solve business problems. An e-commerce website that integrates the use of all these computer tools is the expected deliverable at the end of this course.

### **BAUG 20008. Principles of Marketing**

(3-0-3)

*Prerequisite:* (ECON 10010 OR ECON 10011) OR ECON 10015 OR ECON 10020 OR ECON 13181 OR (ECON 20010 OR ECON 20011) OR ECON 20015 OR ECON 20020

A study of markets, institutions, and the environment in which business firms operate with attention to the effect these facets, forces, and issues have on the firm's overall marketing strategy.

### **BAUG 25000. Internship I**

(1-0-1)

Internship credit for undergraduate students in the Mendoza College of Business who have secured an internship that relates directly to their major area of study. Requirements to receive this credit include submitting an application for credit before the internship begins, then submitting appropriate evaluations immediately following the internship. Per evaluation from the employer, students must complete the internship successfully to receive credit. Credit is granted by permission only and may not be repeated. Note: Credit for BAUG 25000 does not apply toward graduation credits in the Mendoza College of Business.

### **BAUG 30000. Career Planning Strategies and Tactics**

(1-0-1)

Career Planning Strategies and Tactics is designed to provide students with the tools to manage their career throughout their working lifetime. It begins with self-assessment and clarifying career goals, continues with implementing job search strategies and tactics, and finally, outlines the transition from student to young professional. Our research at the Career Center has highlighted the need for Notre Dame students to improve in a number of areas critical to job search success. Career Planning Strategies and Tactics is designed not only to address the planning process necessary to start the job search, but also incorporates specific assistance in such areas as résumé writing, interview preparation, interview skills, and other tactics. The course will meet once per week for the entire semester. Students will be evaluated on a Satisfactory/Unsatisfactory basis.

### **BAUG 30080. The History of Business**

(1.5-0-1.5) Keane

This course traces the kaleidoscope evolution of business over the last 2,000 years. This 1½-credit hour course spans pertinent, wide-ranging institutions, individuals, and initiatives from Sun Tzu's 500 B.C. "The Art of War" through the Roman Empire, renaissance, and into the 19th, 20th, and 21st centuries. This pioneering course is offered to a limited enrollment of sophomore, junior, and senior business majors who will share Prof. Keane's curiosity and knowledge of how what they are majoring in began and evolved.

### **BAUG 30209. Boardroom Insights: A Senior Executive Speaker Series**

(1-0-1)

Corporate leaders and senior executives reflect on critical issues, concerns, and experiences, sharing their insights in a mix of lecture and discussion sessions designed to stimulate ideas and provide an opportunity for dialog. Topics will vary from speaker to speaker, ranging across the spectrum of business to expose

students to the opportunities and challenges inherent in today's global business environment. Speakers will select ideas they feel are relevant and valuable to students' development as they prepare for a professional career.

### **BAUG 30210. Ten Years Hence Lecture Series**

(1-0-1)

This course will explore issues, ideas, and trends likely to affect business and society over the next decade. A series of lectures on selected days throughout the semester will feature a wide range of experts on economic demography, biotechnology, religious fundamentalism, oil and peace, futurism and work, natural resources, and more. No examinations or graded assignments. Students must attend all lectures; no unexcused absences.

### **BAUG 30211. Fraud As Portrayed In Cinema**

(1-0-1)

The course will meet in nine Monday sessions during the spring term from 5:15 to 7:15 p.m. and will present several films including *The Crooked E*, *How to Steal \$500 Million*, *The Insider*, and *The Smartest Guys in the Room*. Along with background readings, class discussion, and written critiques, the course seeks to help students understand the many dimensions of fraud, including who commits fraud and why, the cost of fraud, and tools of fraud prevention and control.

### **BAUG 30219. Boardroom Insights II: A Senior Executive Speaker Series**

(0-0-0) Gaglio

*Prerequisite:* BAUG 30209

This course offers students the opportunity to take another "Boardroom Insights" course in addition to the prerequisite course of BAUG 30209. In this course, corporate leaders and senior executives reflect on critical issues, concerns and experiences, sharing their insights in a mix of lecture and discussion sessions designed to stimulate ideas and provide an opportunity for dialog. Topics will vary from speaker to speaker, ranging across the spectrum of business to expose students to the opportunities and challenges inherent in today's global business environment. Speakers will select ideas they feel are relevant and valuable to students' development as they prepare for a professional career.

### **BAUG 30229. Business Perspectives and Economic Development**

(2-0-2)

*Prerequisite:* THEO 33931

By permission only; contact the Center for Social Concerns to register. Junior or senior standing required. This course is built around a summer internship with an office of ACCI+N USA (an organization making loans to high-risk micro-entrepreneurs). Students will spend 10 weeks in the field. During the following fall semester each will participate in an academic analysis of their experience. The course is offered in partnership with the Center for Social Concerns, based on the model of experiential learning. The three hours of course credit are divided between business and theology.

### **BAUG 30500. Introduction to Entrepreneurship**

(3-0-3) Bernel

Have you ever dreamed of starting your own business rather than working in someone else's? Are you interested in being the "change agent" or "new idea person" in an existing organization? Do you have the drive and desire to start your own business, but lack a commercially viable idea? We'll learn the skills and concepts you will need to do so. If you come to this class with dreams, we can show you how to make them a reality.

### **BAUG 30505. Micro-Venturing I Non-Business**

(3-0-3) Paulsen

This course explores the complex issues associated with micro-venturing, particularly as a vehicle for economic development, including the fundamentals of finance, marketing, and management through the development of a business plan.

### **BAUG 30506. Micro-Venturing II**

(3-0-3) Belatti

*Prerequisite:* BAMG 30505 OR BAUG 30505

A comprehensive review of the fundamentals of finance, law, marketing, and management will be presented. In classroom and workshop formats, students will be teamed up to develop sound business plans with local entrepreneurs and compete for available seed capital to implement their business plans within the surrounding community. Students take their skills, work with business owners, and become mentors.

### **BAUG 30510. Applied Entrepreneurship: Concept To Launch**

(1.5-0-1.5)

This course, made possible by a grant from NASDAQ, and with further support from Palo Alto Software, provides an opportunity for Notre Dame students to gain training in the skills of conceptualizing, planning, and launching an entrepreneurial venture. Through an evening schedule that spans virtually the full academic year, students will gain training and insight into key areas of entrepreneurship, and will have the additional, optional but recommended opportunity to directly apply their training through the various stages of the Notre Dame Business Plan Competitions.

### **BAUG 30540. Entrepreneurship in Developing Countries**

(1.5-0-1.5) Paulsen

This course provides an international experiential learning opportunity for undergraduate students. The course examines how businesses are launched in different global contexts and includes discussion of global and national support agencies, market feasibility, and cultural issues. Students become involved in a practicum in which they provide consultative service to a startup or NGO in a less developed country setting.

### **BAUG 35000. Internship II**

(1-0-1)

Internship credit for undergraduate students in the Mendoza College of Business who have already received one academic credit for BAUG 25000. Requirements to receive this credit include submitting an application for credit before the internship begins, then submitting appropriate evaluations immediately following the internship. Per evaluation from the employer, students must complete the internship successfully to receive credit. Credit is granted by permission only and may not be repeated. Note: Credit for BAUG 35000 does not apply toward graduation credits in the Mendoza College of Business.

### **BAUG 40580. Family Business Strategy**

(3-0-3)

*Prerequisite:* BAMG 30500 OR BAUG 30500 OR MGT 20200

This course focuses on the unique challenges of family-owned, family-controlled businesses that graduates may very likely work in or consult to during their career. Learning how successful family businesses survive generation after generation can give a person an edge in consulting, governing, or managing in a family-owned business whether or not the business is owned by that person's family. Between 80 and 90 percent of businesses in the United States and Latin America are family-owned and family-controlled. Over 80 percent of businesses in Europe and Asia remain family-owned and family-controlled. It is very likely that an individual may work with or consult to a family-owned, family-controlled business at some time in his or her career. Approximately 67 percent of family-owned businesses do not survive beyond the founding generation under the control of the founding family and about 12 percent make it to the third generation. Leadership succession, estate planning, governance, strategy—all are major concerns for family-owned businesses.

## Finance

### FIN 20020. Personal Finance

(3-0-3)

This course discusses strategies in investing and helps students develop a lifelong financial plan. Topics include investing inside and outside retirement accounts, mutual funds, tax issues, insurance, and real estate. The course emphasizes securing your financial freedom. This course is suggested as a university elective for non-business majors.

### FIN 20100. Corporate Finance Essentials

(3-0-3)

*Prerequisite:* ACCT 20100 OR ACCT 231 OR BAUG 20001

This course is intended for business students who will not major in finance. The course provides a general introduction to finance principles. Students learn financial goals, valuation theory, risk and return concepts, financial statement analysis, and techniques for managing current and fixed assets and capital structure. Personal investing and financial institutions also are discussed.

### FIN 20110. Investment Concepts

(3-0-3)

This course provides an introduction to the fundamental economic principles underlying the investment decision and a descriptive overview of financial instruments and markets. The course is designed for non-business students.

### FIN 20150. Corporate Financial Management

(3-0-3)

*Prerequisite:* ACCT 20100 OR ACCT 231

This course is required for finance majors. A grade of "C" or higher is a prerequisite for continuing in the finance major. The course provides an in-depth and quantitative examination of the principles of financial decision-making. Students learn the concept of value maximization, mathematics of finance, valuation of financial securities, capital investment evaluation, the estimation of required rates of return, financial statement analysis, and the theory of capital structure.

### FIN 30210. Managerial Economics

(3-0-3)

*Prerequisites:* ( (ECON 10010 OR ECON 10011 OR ECON 101 OR ECON 101A OR ECON 101B OR ECON 101C) OR (ECON 124A OR ECON 124B) OR (ECON 20010 OR ECON 20011 OR ECON 201 OR ECON 201A OR ECON 201B OR ECON 224 OR ECON 224A OR ECON 224B) ) AND (BAMG 20100 OR BA 230 OR BAMG 230) OR (FIN 30011)

This course provides a coordination of economic theory and managerial practice. Topics covered include consumer demand, production functions, cost behavior, output determination, and pricing within various market structures.

### FIN 30220. Macroeconomic Analysis

(3-0-3)

*Prerequisites:* ( (ECON 10010 OR ECON 10011 OR ECON 101 OR ECON 101A OR ECON 101B OR ECON 101C) OR (ECON 124A OR ECON 124B) OR (ECON 20010 OR ECON 20011 OR ECON 201 OR ECON 201A OR ECON 201B OR ECON 224 OR ECON 224A OR ECON 224B) ) AND (BAMG 20100 OR BA 230 OR BAMG 230)

The course addresses topics including the goals of economic policy, national income accounting, theory of income determination, the determination and behavior of economic aggregates, such as total output and the price level.

### FIN 30400. Advanced Corporate Finance

(3-0-3)

*Prerequisites:* (FIN 20150 OR FIN 251) AND (BAMG 20100 OR BAMG 230 OR BA 230)

This course provides a sound conceptual framework within which a wide variety of corporate financial policy decisions can be evaluated. The course builds upon and extends the topics in FIN 20150. Topics covered include risk and return, capital

structure theory, dividend policy, corporate restructuring, leasing, and advanced capital budgeting. This course combines class lectures and case discussions in order to blend theory and practice.

### FIN 30600. Investment Theory

(3-0-3)

*Prerequisites:* (FIN 20150 OR FIN 251) AND (BAMG 20100 OR BA 230 OR BAMG 230)

This is an advanced course covering investment theory, financial markets, and financial instruments. The topics of security analysis, and options and futures are also introduced.

### FIN 30700. Real Estate Fundamentals

(3-0-3)

*Prerequisite:* FIN 20100 OR FIN 20150

(Note: This course does not count as a Finance major elective.) An introduction to the principles and practices of real estate. Topics to be covered shall include land use patterns and regulation, real estate finance, valuation, real estate law, brokerage and transfers, urban economics, and real estate development.

### FIN 40230. Business Forecasting and Data Mining

(3-0-3)

*Prerequisites:* (BA 230 OR BAMG 230 OR BAMG 20100) AND (FIN 20150)

This course develops the tools forecasters use to generate and evaluate forecasting models for both the economy and the firm. In addition to classical forecasting tools, the course also uses data mining and extremely large data sets for prediction. The student will make extensive use of commercial software in applying these tools to real-world situations.

### FIN 40320. Management of Financial Institutions

(3-0-3)

*Prerequisites:* (FIN 20150 OR FIN 251) AND (BAMG 20100 OR BAMG 230 OR BA 230)

This course examines the theory and practice of financial firms and the markets in which they operate. It analyzes the role of various financial intermediaries in the transfer of funds between economic units. Management issues and problem-solving techniques are emphasized through the use of case studies.

### FIN 40410. Mergers and Acquisitions

(3-0-3)

*Prerequisites:* FIN 30400 AND (FIN 30600 OR FIN 34600 OR FIN 370)

The objective of this course is to understand various aspects of the corporate acquisition market, including sources of acquisition synergies, valuation and pricing of acquisition targets, takeover defenses, the roles of management incentives and compensation, financing methods, the roles of insider and institutional shareholders, and regulations and taxes.

### FIN 40430. Investment Banking and Private Equity

(3-0-3)

*Prerequisites:* (FIN 30600 OR FIN 370) AND (FIN 30400 OR FIN 390)

This course will focus primarily on how corporations raise money in various ways to meet their funding needs, both short- and long-term. The first portion will look at domestic U.S. dollar funding mechanisms, and the second portion will cover funding in foreign currencies. The course will cover private and public debt markets, the Eurobond market, and how multinationals use derivatives to manage their required international financing.

### FIN 40480. Corporate Governance

(3-0-3)

*Prerequisite:* FIN 30400 OR FIN 390

This course studies the major issues and problems involved in corporate governance from the point of view of an investor. Emphasis is on evaluating proposed solutions to these problems. Topics such as external political and legal influences, and internal executive compensation and monitoring of executive behavior will be discussed.

**FIN 40490. Real Option Analysis**

(3-0-3)

*Prerequisites:* FIN 30400 AND (FIN 30600 OR FIN 34600)

As today's businesses increasingly shift their emphasis from tangible (bricks-and-mortar) assets to intangibles (patents, new product developments, joint ventures, etc.), financial decision makers will need the vision and capability to accurately assess the value of these investments. This course provides a framework for understanding and evaluating the inherent flexibility in investment opportunities. Students will gain sufficient mastery of the quantitative techniques to be able to apply the real options framework to real-world cases such as evaluating early-stage pharmaceutical R&D investments, multi-stage business roll-out strategies, optimal development of mining or drilling ventures, decisions about when to optimally abandon a failing business, and more. This elective should appeal to students in both the corporate and investments tracks of the finance major.

**FIN 40500. International Finance**

(3-0-3)

*Prerequisites:* (FIN 20150 OR FIN 251) AND (FIN 30220 OR FIN 361 OR FIN 3611 OR FIN 34220)

The increasing international exchange of goods, services, and financial capital demands increased understanding of international financial markets. The first part of the course addresses the international financial environment, examining institutional, theoretical, and empirical factors influencing exchange rates.

The second part of the course addresses derivative security markets for foreign exchange, notable currency forward, futures, and options markets. The third part of the course discusses international debt, equity, loan and money markets, and their interrelationship with foreign exchange markets.

**FIN 40510. Applied Global Money Management**

(3-0-3)

*Prerequisites:* (FIN 30220 OR FIN 361) AND (FIN 30600 OR FIN 370) AND (FIN 40500 OR FIN 475)

This course combines investment theory and practice from a global perspective. Students manage an actual portfolio composed of domestic and foreign equity, debt, foreign exchange, and derivatives. Guest speakers (e.g., portfolio managers and security analysts) frequently visit the class to share their insight and experience with respect to real-world portfolio management.

**FIN 40520. Global Portfolio Management**

(3-0-3)

*Prerequisite:* FIN 30600 OR FIN 34600

Global Portfolio Management is an advanced investments course that is available to a select group of undergraduate students at the University of Notre Dame chosen through an application process by the instructor. The course will elaborate on the basic principles discussed in introductory finance courses with a focus on multi-asset portfolio management in a global context. The major topics covered will include institutional investors and the "endowment model," global asset allocation, public equities, hedge funds, emerging markets, private equity, real estate, commodities, fixed income, risk management, and portfolio measurement and evaluation. An important feature of this course will be guest lecturers from a number of world renowned investors.

**FIN 40610. Security Analysis**

(3-0-3)

*Prerequisite:* (FIN 30600 OR FIN 34600 OR FIN 370)

This course covers the theory and practice of the valuation of securities—both stocks and bonds. The emphasis is on actual industries and companies. The equity analysis involves aggregate market analysis, industry analysis, and company analysis. The analysis of bonds involves credit analysis related to bond ratings and predicting insolvency and the analysis of interest rates.

**FIN 40620. Trading and Markets**

(3-0-3)

*Prerequisites:* (FIN 20150 OR FIN 251) AND (BAMG 20100 OR BAMG 230 OR BA 230) AND (FIN 370 OR FIN 34600 OR FIN 30600)

This course examines the general nature of organized trading by examining how bid and offer prices are determined, how market rules evolve, and what markets should be built. While markets for products and services are discussed, the focus is on the trading of financial securities. Existing centralized equity exchanges face competition from new alternative trading systems made possible by today's information technology. This course also examines the impact and implications of this dynamic.

**FIN 40630. Options and Futures**

(3-0-3)

*Prerequisite:* FIN 30600 OR FIN 34600 OR FIN 370

This course examines various topics involving options and futures, such as pricing fundamentals and models, risk management, trading strategies, and regulatory issues. Computer and mathematical skills are required and used regularly throughout the course.

**FIN 40640. Applied Investment Management**

(6-0-6)

*Prerequisite:* FIN 30600 OR FIN 34600 OR FIN 370

This course will provide an opportunity for students to blend the theory of investments with the practical demands of investment management. The course objectives include an understanding of the process of establishing a portfolio strategy with a real portfolio, gaining knowledge of the mechanics of trading, current theories of market micro structure, principles of equity, and bond valuation and technical analysis, and the role of derivatives. Student will actively manage this portfolio throughout the semester.

**FIN 40650. Advanced Derivatives**

(3-0-3)

*Prerequisites:* (FIN 30600 OR FIN 370) AND (FIN 40630 OR FIN 478) OR FIN 44630

This course examines several advanced topics involving derivatives, emphasizing the interplay between risk management and financial engineering. Major topics include swaps, interest rate forwards and options, advanced equity and interest rate derivatives, risk management techniques and applications (including Value at Risk), and managing risk in an organization. The required text is *An Introduction to Derivatives and Risk Management*, 6th ed., by Don Chance. This will be supplemented by four cases and various articles. Grades will be based on four case analyses (40 percent), two exams (30 percent), an independent project on a topic chosen by each student individually (20 percent), and class participation (10 percent).

**FIN 40660. Debt Instruments**

(3-0-3)

*Prerequisite:* FIN 30600 OR FIN 34600 OR FIN 370

This course studies the U.S. and global bond markets. The focus is on traditional and evolving bond instruments including those with embedded options. We will consider bond valuation techniques, the term structure of interest rates and the analysis of bonds with embedded options. Bond portfolio management strategies and performance benchmarks are also studied.

**FIN 40670. Advanced Investment Strategies**

(3-0-3)

*Prerequisite:* FIN 30600

This course introduces students to quantitative asset management. The building blocks of the course are asset allocation and factor models, active firm-level and portfolio-level quantitative investment strategies using a set of "investment signals," advanced trade execution and performance evaluation. Special topics change from one year to another to reflect recent trends and practices in the industry, and may include topics such as security litigation, fund activism, socially responsible

investment, PE funds, and LBO funds. In addition to regular lectures, this course uses case studies and guest lectures to enhance student understanding of the decision making process and the problem-solving skills of asset managers.

### **FIN 40690. Behavioral Finance**

(3-0-3)

*Prerequisite:* FIN 30600 OR FIN 34600

Behavioral Finance is considered by many to be one of the most important emerging topics in finance. The purpose of this course is to provide an understanding of the behavioral biases that individuals exhibit and the effects of these biases on financial markets. Standard finance theory assumes that individuals such as investors or financial managers are rational expected utility maximizers. Behavioral finance argues that some financial phenomena can be better understood admitting that some investors are not fully rational, and arbitrageurs have limits to how aggressively they could trade. A number of stock market anomalies will be presented and analyzed.

### **FIN 40710. Real Estate Valuation and Investment**

(3-0-3)

The course considers methods of real estate valuation with emphasis on income property valuation and single property investment analysis, including financial leverage, taxes, corporate real estate investment, performance measures, pro forma construction, and software (Argus); and techniques of market analysis.

### **FIN 40720. Real Estate Capital Markets**

(3-0-3)

This course focuses on its analysis of primary and secondary real estate capital markets; fundamental features, investment characteristics, and underwriting of commercial and residential mortgages; construction debt, sub-debt, alternative lending (land/bridge/hard asset loans), private and public equity markets, real estate securitization markets; and real estate as a component of portfolio investment.

### **FIN 40820. Mathematical Methods in Financial Economics**

(3-0-3)

*Prerequisite:* FIN 34600 OR FIN 30600 OR FIN 370

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time, will be discussed. The pricing of derivative securities in continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

## Management

### **MGT 20200. Principles of Management**

(3-0-3)

A study of the management process, including planning, organizing, staffing, directing, and controlling. Emphasis is placed on executive leadership, organizational behavior, and management theory.

### **MGT 20600. IT Management Applications**

(3-0-3)

This course will provide a hands-on introduction to the world of information technology management. Students will attain a general understanding of opportunities and challenges in IT Management through the use of common tools and business processes. They will use Microsoft Excel to structure and solve general business problems, analyze what-if scenarios and use optimization processes. They will also use Microsoft Access to create and manage databases.

### **MGT 30220. Management Communication**

(1.5-0-1.5)

A principal challenge for every manager is to determine what sorts of arguments others will find persuasive. Communication is at the heart of what business is about: writing, speaking, and listening are skills that will permit you to succeed. We'll use case studies to examine authentic business problems and we'll offer coaching, feedback, and peer review to develop the skills that executives, customers, employees, shareholders, the press, and the public find so valuable in a professional manager.

### **MGT 30660. Strategic IT Applications**

(1.5-0-1.5)

While Amazon and Dell used the Internet to create new retailing business models, that same technology was instrumental in destroying the business models of the telephone and music industries. What caused the difference? We'll examine how to use IT for competitive advantage in a digital economy. We'll explore how IT improves problem solving, productivity, quality, customer service, and process reengineering. We'll also examine how to apply current technologies in innovative ways to impact an organization's bottom line.

### **MGT 40420. Innovation and Design**

(3-0-3)

*Prerequisite:* MGT 20200

Innovation is about creating new ideas that have a positive impact. It requires thinking differently about the world around us. We'll discuss the key principles and the innovation processes that lead to breakthroughs and the practices that make them work. We'll learn about design and design thinking in ways that can be used to solve big problems in a human-centered way.

### **MGT 40490. Business Problem Solving**

(3-0-3)

*Prerequisites:* MGT 20200 AND MGT 20600

Just days before Christmas in 1999, Toysrus.com realized that it was not going to be able to fulfill tens of thousands of toy orders that it had promised would arrive before Christmas—even though the inventory was on the shelf! Two days before Christmas, top management decided to issue “We’re Sorry” emails to everyone whose package was not shipped. Is this the business decision you would have made? This class will help develop your “corporate street smarts” to leverage your creative and problem solving skills. Through hands-on techniques and exercises you'll learn how to ask the right questions, gather the right data, and use it to improve your judgment and make better decisions.

### **MGT 40580. Special Studies in Innovation**

(3-0-3)

Students in this course will gather and process data and considered needs in order to produce a detailed proposal for a cross-disciplinary research environment that will be established within the new Engineering Learning Center in the Stinson-

Remick Engineering Building. The resulting environment will be conceived through collaborative research conducted by marketing, engineering and design. Team-driven output during the course will result in a facility layout that considers technology requirements, furnishings, and an implementation plan capable of supporting and enhancing future university activities. The environment's purpose will foster meaningful innovation and problem solving through heightened academic unity between the colleges. The course undertaking will also serve as a preliminary test of Notre Dame's collaborative potentials, combining teaching resources from the College of Engineering, Mendoza College of Business, and the Industrial Design Program in the College of Arts and Letters. The vision of this course enterprise focuses on the belief that collaborative discourse between University colleges will lead to increased understanding, heightened achievement, and global recognition that exceeds the potential of a single unit within the University.

### **MGT 40700. Project Management**

(1.5-0-1.5)

*Prerequisite:* MGT 20200 AND MGT 20600

Whether you become a high-profile real estate developer, an investment banker, or an entrepreneur, in any career you'll need some project management skills to get your job done. Everyone tries to get projects finished on time and under budget, but many critical business projects fail anyway. We'll learn the steps associated with successful project management, examine some optimization techniques, learn how to use the software tools that enhance productivity, and discuss how to avoid the implementation pitfalls that cause good people doing good projects to fail.

### **MGT 40750. Spreadsheet Decision Modeling**

(1.5-0-1.5)

Whether it is picking an investment portfolio, moving goods through a supply chain, staffing a customer support center, or deciding how many reservations an airline or hotel should take, business decisions involve substantial quantitative analysis. We'll learn how spreadsheets (using with powerful add-ins) can help solve these sorts of problems. In particular, we'll learn how the techniques of simulation and optimization can help make a variety of businesses more competitive. Only a basic familiarity with spreadsheets is assumed.

### **MGTC 30300. Management Competencies**

(3-0-3)

*Prerequisite:* MGT 20200 AND BA 20100 OR BA 230 OR BAMG 230 OR BAMG 20100

Some people find joy and fulfillment in their work while others find it unpleasant and barely tolerable. While many people merely speculate on the factors that affect our work lives, we'll explore solid evidence concerning the key factors that have been found to influence employee attitudes, motivation, and performance. You'll build awareness of interpersonal dynamics, and gain insights into how to manage the behavior of others more effectively.

### **MGTC 30450. Human Resource Issues in High-Performance Organizations**

(3-0-3)

*Prerequisite:* (MGT 20200 OR MGT 231) AND (BA 20100 OR BA 230 OR BAMG 230 OR BAMG 20100)

Whether you are working for a Fortune 100 company, a dot-com startup, or something in between, it has become increasingly clear that "the people make the place." We'll learn how organizations acquire, develop, and maintain high-performing employees. We'll examine HR systems from a managerial point of view to help you become informed consumers of practices that affect the quality of life in an organization. This should help you manage your own career and provide useful skills as you progress beyond your initial job placement.

### **MGTC 30460. International Management**

(3-0-3)

*Prerequisite:* MGT 20200

International business is conducted with and through people from various cultural backgrounds. Cultural differences, if not understood and bridged, can be significant barriers to the implementation and success of a business venture. We'll learn

how to conduct business across borders and cultures by focusing on the cultural, political, economic and legal environments in which multinational corporations (MNCs) operate.

### **MGTC 40410. Leadership and Motivation**

(3-0-3)

*Prerequisite:* (MGT 20200 OR MGT 231)

The role of the leader influencing individual, group, and organizational performance is examined in this course. Characteristics of leaders, followers, situations, and group dynamics are considered as factors that affect the leadership process.

### **MGTE 30500. Introduction to Entrepreneurship**

(3-0-3)

*Prerequisite:* MGT 20200

Have you ever dreamed of starting your own business rather than working in someone else's? Are you interested in being the "change agent" or "new idea person" in an existing organization? Do you have the drive and desire to start your own business, but lack a commercially viable idea? We'll learn the skills and concepts you will need to do so. If you come to this class with dreams, we can show you how to make them a reality.

### **MGTE 30510. Entrepreneurship: Go to Market**

(1.5-0-1.5)

*Prerequisite:* MGTE 30500 OR MGTE 34500 OR MGTE 40508

Alright, now you have an idea and have developed a business plan. What do you do next to start your business? We'll learn the first steps you take that will lead to a successful launch rather than frustration and failure. When you finish the course you'll better understand how to start and grow your business and retain your competitive edge and advantage.

### **MGTE 30520. Funding New Ventures**

(1.5-0-1.5)

*Prerequisite:* MGTE 30500 OR MGTE 34500

Every new venture needs money and other resources to begin operation. The best source of money depends upon the nature of your idea and its stage of development. We'll learn when it is best to go to your family and friends and when it is best to go to banks, angel investors, venture capitalists or other funding groups. Of course, you'll need to know how to position your proposal, how to perform venture valuation and a bit about the theory of entrepreneurial finance. When you finish this course you'll know who to approach to "show you the money" for your deal!

### **MGTE 30590. New Venture Strategy**

(1.5-0-1.5)

This course will build a series of non-mathematical models of success and failure in the world of entrepreneurial business through intensive case analysis of both archival and current situations. We will not limit ourselves strictly to small business, but will approach business strategy issues that impact the practice of entrepreneurship. While all strategy courses are about the future, in corporate strategy, the future is charted based on the current operations of the firm. In New Venture Strategy, this task is much harder since students are thinking about a new firm with no existing data to guide strategy. By the end of the course, students will have developed a process for realistically assessing risk in various entrepreneurial schemes. In addition, they will have reviewed and understood both success and failure in a host of entrepreneurial businesses. From this, a greater ability to judge their own entrepreneurial ideas will emerge.

### **MGTE 40590. Entrepreneurship, the Business Plan**

(3-0-3)

*Prerequisite:* (MGTE 30500 OR MGTE 34500 OR MGTE 320) OR (MGTE 40508 OR MGTE 420N)

A good business plan will generate interest and excitement about your business from investors, partners and others. We'll learn how to write a business plan that will discipline your thinking and help refine and focus your idea into a viable business model. After writing your business plan, you'll have a much better idea

whether your idea is practical and worthy of implementation. Even if you choose not to launch your venture, your ability to write a strong business plan is a very desirable and marketable skill.

### **MGTI 30610. Application Development**

(3-0-3)

*Prerequisite:* MGT 20600 OR MGT 240

While most of us use computers as part of our daily lives, very few of us know how the computer programs we use actually work. Using object-oriented event-driven programming, we'll build and use programs that allow the computer to perform functions you design. Your VBA (Visual Basic for Applications) programming skills will help you develop expertise as the go-to person for programming solutions, especially within Excel and other MS Office applications, and will transfer easily to many other programming languages including programming for the Internet.

### **MGTI 30620. Business Intelligence Systems**

(3-0-3)

The unprecedented availability of data and information is allowing companies to rely on facts rather than intuition to drive their business decisions. Companies such as Netflix investigate the rental preferences of customers to recommend movie titles; eHarmony uses statistics to determine the factors that make people compatible; and UPS analyzes usage data to predict customer turnover. We'll study the tools and techniques these companies and others use to make better and faster decisions, and we'll learn about how methods such as data mining can be used to extract knowledge from data.

### **MGTI 30630. Systems Analysis and Design**

(3-0-3)

*Prerequisite:* MGT 20600

Each day, organizations such as Wal-Mart analyze hundreds of millions of transactions to increase efficiency and better serve their customers. We'll use market-leading Oracle Enterprise Database software to store and analyze large datasets just as Wal-Mart does. In addition, you'll serve as an IT consultant and build a real-world application for a client organization. In this role, you'll experience the entire system analysis process, including problem definition and analysis, design processes, testing, and implementation.

### **MGTI 30640. Networking and Security**

(3-0-3)

*Prerequisite:* MGT 20600

Is it possible to make information more accessible and more secure at the same time? Because this is a problem most organizations now face, the Bureau of Labor Statistics recently named Network Systems and Data Communication Analyst as the fastest-growing job for the period ending 2014. We'll learn about the technologies used in local and wide area networks, with a strong emphasis on network security. We'll make this come alive by building a small, fully-functional, routed network and complete exercises that will teach you techniques for securing data networks in a modern business environment.

### **MGTI 40612. Advanced Programming**

(3-0-3)

*Prerequisite:* (MGT 30610 OR MGT 350) OR (MGTI 30610 OR MGTI 350)

Whether writing a program to do market research on the Web or developing a graphical game like Warcraft or creating a virtual world like Second Life, the information age is built on programming. Using Java as a programming tool, we'll learn about Web-based programs, agent programs that can help monitor and process information from other websites, and multi-threaded game programming where several tasks need to be run all at once. We'll also develop graphical and database programs similar to those used in most corporations.

### **MGTI 40660. Web Development/Internet Technologies**

(3-0-3)

*Prerequisite:* MGT 20600

Successful companies such as Microsoft and Google use Web technologies to transfer data around the Web, going beyond simple HTML and delving into technologies that are really making a difference to their bottom lines. We'll learn about technologies like eXtensible Markup Language (XML), Active Server Pages (ASP), and JavaScript, and how these technologies are combined with VBScript and relational databases to generate interactive Web pages and dynamic data streams that are prevalent in today's environment.

### **MGTI 40670. Technology Risk Management**

(3-0-3)

*Prerequisite:* MGTI 30610 OR MGTI 350

According to a recent IDC research study, risk management is one of the hottest areas in the IT field and it is becoming more important every day. We'll examine the vulnerabilities and threats (such as malware, malicious insiders, and hackers) that create risk in an IT environment, as well as organizational strategies for dealing with them. Our topics will include technology risk identification and assessment; information security policy formulation and implementation; ethical, legal, and privacy issues; network security architecture and technologies, including firewalls, intrusion detection systems, and cryptographic tools; business continuity and disaster recovery; and information security staffing and personnel.

### **MGTI 40690. ITM Capstone Project**

(3-0-3)

*Prerequisite:* MGTI 30610

Would you like to use your technical skills to solve a real-life IT problem? In this course, we'll work in teams to design and implement an IT project. Each team will submit a business proposal for an IT project, research the problem and IT requirements, design possible IT solutions, and then develop and implement an IT application. We'll study the fundamentals of project management and the best practices in project development.

## Marketing Management

### MARK 20100. Principles of Marketing

(3-0-3)

*Prerequisite:* (ECON 10010 OR ECON 10011) OR ECON 10015 OR ECON 10020 OR ECON 13181 OR (ECON 20010 OR ECON 20011) OR ECON 20015 OR ECON 20020

A study of markets, institutions, and the environment in which business firms operate with attention to the effect these facets, forces, and issues have on the firm's overall marketing strategy.

### MARK 30100. Consumer Industrial Buying Behavior

(3-0-3)

*Prerequisite:* MARK 20100

An investigation of the decision-making process of consumer and organizational buyers. The course considers the social, cultural, psychological, and economic dimensions of behavior as they apply to the acquisition of goods and services.

### MARK 30110. Quantitative Analysis for Marketing Decision Making

(3-0-3)

*Prerequisites:* (MARK 20100 OR MARK 231) AND (BAMG 20100 OR BA 230 OR BAMG 230) AND (MGT 20600 OR MGT 240)

An introduction to data-based analysis areas such as market segmentation, new product development, positioning, promotion analysis, and database marketing. The course provides hands-on exposure to techniques that assist managers in structuring marketing problems and in applying data in marketing decisions.

### MARK 30120. Marketing Research

(3-0-3)

*Prerequisite:* MARK 30110 AND MARK 30100

Required for all marketing majors. A study of the application of scientific method to the definition and solution of marketing problems with attention to research design, sampling theory, methods of data collection and the use of statistical techniques in the data analysis.

### MARK 30350. Internet Marketing

(3-0-3)

*Prerequisite:* MARK 20100

A study of the ways marketing can be done more efficiently and effectively on the Internet. The role of the Internet relationship marketing, database marketing, and interactive marketing are explored. Special consideration is given to the impact of the Internet on pricing decisions, marketing research, new product development, electronic retailing, and integrated marketing communications.

### MARK 30400. Marketing and Technology

(3-0-3)

*Prerequisite:* MARK 20100

Technology can impact marketing strategy in significant ways. While the Internet has created new opportunities for marketers in the areas of content, commerce, collaboration and community, in this course, students will gain a broader perspective of marketing in a technology-enabled business environment. Students will learn to assess the potential impact of various technologies on highly valued marketing strategies (e.g., relationship marketing, customer relationship management), as well as how to use technology to enhance the effectiveness of traditional marketing tactics (e.g., advertising, distribution/channel management). Topics addressed in this course include issues relevant to consumer and business marketing, supply chain management, and consumer-to-consumer interactive marketplaces, including the legal, ethical, and public policy impacts of using technology to accomplish marketing objectives.

### MARK 30500. Integrated Marketing Communications

(3-0-3)

*Prerequisite:* MARK 20100 OR MARK 231

This course examines the strategic use of various marketing-communication elements, including advertising, sales promotion, public relations, event sponsorships, and direct marketing to build and maintain brand equity. Analysis focuses on topics such as selecting among alternative promotional tools, budgeting and allocation decisions, determining appropriate message strategy, and developing media schedules for a given product/market selection. Particular attention is paid to the effective integration of elements across the promotional mix.

### MARK 30600. Business-to-Business Marketing I

(3-0-3)

*Prerequisite:* MARK 20100 OR MARK 231

Learning to design value-based marketing plans and strategies for B2B markets. These strategies are based on carefully developed, value based, highly differentiated, flexible market solutions ("naked solutions" plus highly variable options). Learning to build value-based selling tools for creating the financial visions necessary to counter "more for less" demands from customers and provide convincing financial justification for solution purchase. Includes building sophisticated spreadsheet-based Value Models to help sort out, quantify, and communicate differential values available from value-focused B2B marketing strategies.

### MARK 30650. Professional Selling in Business to Business Markets

(3-0-3)

*Prerequisite:* MARK 20100 OR MARK 231

A study of the role of the salesperson and the function of sales management in creating close and productive buyer-seller relationships in the business-to-business domain. Emphases in the course are placed on trends affecting the sales person's role, the effects of the internal and external environment on the selling function, and the value of the salesperson to the firm and society.

### MARK 40100. Strategic Marketing

(3-0-3)

*Prerequisites:* (MARK 30100 OR MARK 350) AND (MARK 30110 OR MARK 370) AND (MARK 30120)

*Corequisite:* MARK 41100

The development and implementation of marketing programs, including determining the marketing mission within the context of environmental factors and organizational resources. Working in teams, students develop comprehensive business plans and compete in a computer-based market simulation.

### MARK 40300. International Marketing

(3-0-3)

*Prerequisite:* MARK 20100

This course helps students develop relevant managerial orientations and skills for planning and expanding activities in rapidly expanding global markets. It examines the specific issues involved in assessing global marketing environments and marketing opportunities and threats as firms enter into foreign markets and expand business/marketing operations on a global scale.

### MARK 40550. Public Relations

(3-0-3)

*Prerequisite:* MARK 20100 OR MARK 231

This course will provide students with a thorough understanding of the history, role, functions, techniques, and practices of the multi-dimensional field of public relations. Students will gain an understanding of public relations in corporate, trade, nonprofit, education, government, and other organizations; examine and analyze real-world public relations cases; learn the research, planning, communication, and evaluation process of public relations; and prepare news releases, advisories, speeches, and other relevant materials.

### MARK 40600. Business-to-Business Marketing II

(3-0-3)

*Prerequisite:* (MARK 20100 OR MARK 231)

Learning to systematically create operating, transition and financial visions and to convert those visions into more profitable sales in B-to-B markets. Learning the

“solution selling” process (and sales management) and related, highly operational, value-based professional selling and sales management systems.

**MARK 40750. Pricing Strategy**

(3-0-3)

*Prerequisites:* MARK 20100 AND (FIN 30210 OR FIN 34210)

The broad purpose of this course is to allow students to develop an understanding of the basic frameworks, analytical techniques, and strategic and tactical options for pricing goods and services. The course brings together concepts from managerial economics, marketing strategy, and consumer behavior to frame the interplay among costs, competition, and customers in the pricing decision-making process. By the end of the course, you should have a sound understanding of the assumptions and constraints of techniques for measuring costs and demand. You should also be familiar with the principles that underlie a variety of price-setting approaches.

**MARK 41100. Strategic Marketing Lab**

(0-0-0)

*Prerequisites:* (MARK 30100 OR MARK 350) AND (MARK 30110 OR MARK 370) AND (MARK 30120 OR MARK 374)*Corequisite:* MARK 40100

Lab for MARK 40100. The development and implementation of marketing programs, including determining the marketing mission within the context of environmental factors and organizational resources. Working in teams, students develop comprehensive business plans and compete in a computer-based market simulation.

**MARK 43500. Advertising Campaigns**

(3-0-3)

*Prerequisite:* (MARK 30100 OR MARK 350)

This course provides students an opportunity to create, produce, and present promotional solutions in support of new or existing products and services. The course focuses on the overall role of the campaign as well as its strategic development and tactical implementation. The reality of the learning opportunity is enhanced by interaction with real clients and interpretation to graphic designers.

**MARK 43700. Product Innovation**

(3-0-3)

*Prerequisite:* (MARK 30100 OR MARK 350)

Introduces students to some important activities and perspectives that can enhance innovativeness and improve the ability to influence and forecast the adoption and diffusion of innovations. These include the application of techniques for understanding user needs; the use of creative problem solving techniques in idea generation; the application of scenario analysis; and the selection of appropriate organizational and marketing strategies and tactics in overcoming resistance to innovation.

**MARK 43900. Exploring the Frontiers of Marketing Thought**

(3-0-3)

These seminars are devoted to selected areas of marketing and related disciplines. Each participant is expected to explore the chosen topic(s) determined by the participants and the teaching staff. Department approval required.

# College of Engineering

## Aerospace and Mechanical Engineering

### AME 20211. Introduction to Aeronautics

(3-0-3)

*Prerequisites:* ( (MATH 10560 OR MATH 126 OR MATH 126A OR MATH 126B OR MATH 126C OR MATH 126E OR MATH 126F) OR (MATH 10860 OR MATH 166) ) AND (PHYS 10310 OR PHYS 131)

*Corequisite:* AME 20214

An introduction to the fundamental concepts in fluid mechanics, the science of flight, the atmosphere, and airplane aerodynamics. Applications of the principles of mechanics to aircraft flight performance, stability, control, and design. Fall.

### AME 20212. Introduction to Mechanical Engineering

(3-0-3)

*Prerequisites:* (MATH 10560 OR MATH 126 OR MATH 126A OR MATH 126B OR MATH 126C OR MATH 126E OR MATH 126F) AND (PHYS 10310 OR PHYS 131)

*Corequisite:* AME 20214

An introduction to the discipline of mechanical engineering. Application and integration of the varied mechanical engineering subdisciplines to practical case studies. Fall.

### AME 20213. Measurements and Data Analysis

(3-0-3)

*Prerequisite:* (AME 20211 OR AME 240) OR (AME 20212 OR AME 230)

*Corequisite:* AME 21213

Introduction to experimental methods used in aerospace and mechanical engineering, including basic instrumentation, data acquisition, and data analysis techniques. Embedded microprocessors may be used for data acquisition and/or control. Fall and spring.

### AME 20214. Introduction to Engineering Computing

(1-0-1)

*Prerequisite:* EG 10112 OR EG 112

Introduction to the UNIX operating system and the Fortran programming language with applications to engineering computing. Fall.

### AME 20221. Mechanics I

(3-0-3)

*Prerequisites:* ( (EG 10111 OR EG 111) OR (EG 10112 OR EG 112) ) AND ( (MATH 10560 OR MATH 126 OR MATH 126A OR MATH 126B OR MATH 126C OR MATH 126E OR MATH 126F) OR (MATH 10860 OR MATH 166) ) AND (PHYS 10310 OR PHYS 131)

Introduction to systems of forces and couples, vector mechanics. Equilibrium of rigid bodies. Internal forces and moments, trusses and beams, distributed loads, and properties of areas. Friction and virtual work. Kinematics and kinetics of particle motion. Systems of particles. Fall.

### AME 20222. Mechanics II

(3-0-3)

*Prerequisites:* (MATH 20550 OR MATH 225A OR MATH 225B OR MATH 225C OR MATH 225E) AND (AME 20221 OR AME 225) OR AME 20214  
Introduction to Newtonian dynamics. Kinematics and kinetics (energy, linear, and angular momenta) of particles, systems of particles, and rigid bodies. Spring.

### AME 20231. Thermodynamics

(3-0-3)

*Prerequisite:* (MATH 20550 OR MATH 225 OR MATH 225A OR MATH 225B OR MATH 225C OR MATH 225E OR MATH 265)

Basic concepts of thermodynamics. The First Law of Thermodynamics.

Work, heat, properties of substances and state equations. The Second Law of Thermodynamics. Applications to engineering systems. Spring.

### AME 20241. Solid Mechanics

(4-0-4)

*Prerequisite:* (AME 20221 OR AME 225) OR (CE 20150 OR CE 225) OR (MATH 20550 OR MATH 225 OR MATH 225A OR MATH 225B OR MATH 225C OR MATH 225E OR MATH 265)

*Corequisite:* AME 21241; AME 22241

Introduction to the concepts of stress and strain, material properties, deflections of bars under axial, torsional, and bending loads, statically indeterminate problems, and stress transformations, including related experimental laboratory exercises. Spring.

### AME 22241. Solid Mechanics Recitation

(0-0-0)

*Corequisite:* AME 20241; AME 21241

This course is the study session associated with AME 20241 Solid Mechanics.

### AME 30314. Differential Equations, Vibrations, and Control I

(3-0-3)

*Prerequisite:* (MATH 20580 OR MATH 228 OR MATH 228A OR MATH 228B OR MATH 228C)

First of a two-course sequence that introduces methods of differential-equation solution together with common engineering applications in vibration analysis and controls. Includes second-order, linear differential equations, feedback control, single-degree of freedom vibrations, numerical solutions to systems of ordinary differential equations, and partial differential equations. Fall.

### AME 30315. Differential Equations, Vibrations, and Control II

(3-0-3)

*Prerequisite:* (AME 30314 OR AME 34314 OR AME 301)

Systems of  $n$ -th-order differential equations, multiple-degree of freedom vibrations, linear feedback,  $s$ -plane controls analysis, and frequency response analysis. Spring.

### AME 30331. Fluid Mechanics

(3-0-3)

*Prerequisites:* (AME 20222 OR AME 226) AND (AME 20231 OR AME 24231 OR AME 327) AND (MATH 20580 OR MATH 20610 OR MATH 221 OR MATH 226 OR MATH 228 OR MATH 228A OR MATH 228B OR MATH 228C)

A basic course in fluid mechanics. Topics include: mathematics of fluids, Euler N. S. Bernoulli's equation, control volumes, differential analysis, dimensional analysis and dynamic similarity, aerodynamics, boundary layers, and turbulence. Fall.

### AME 30332. Compressible Aerodynamics

(3-0-3)

*Prerequisite:* (AME 30031 OR AME 334) OR (AME 30331 OR AME 34331 OR CE 34330 OR AME 330) OR (AME 30033 OR AME 350)

An intermediate course of the study of the dynamics and thermodynamics of compressible flow for both internal and external geometries, including boundary layer effects. Applications of compressible flow principles to propulsive nozzles, flight simulation facilities, and supersonic airfoil problems. Spring.

### AME 30333. Aerodynamics Laboratory

(4-0-4)

*Prerequisites:* (AME 20213 OR AME 250) AND (AME 30331 OR AME 330)

Use and operation of a subsonic wind tunnel, flow velocity, pressure and strain gauge measurements, data acquisition and analysis, with emphasis on interpretation of aerodynamic flow phenomena. Spring.

### AME 30334. Heat Transfer

(3-0-3)

*Prerequisite:* ( ( AME 30031 OR AME 334 ) OR ( AME 30331 OR CE 34330 OR AME 34331 OR AME 330 ) OR ( AME 30033 OR AME 350 ) )

An introductory course covering three modes of heat transfer; steady and unsteady conduction, elementary boundary layer analysis for laminar and turbulent convection and the basic theory of radiation. Spring.

### AME 30341. Aerospace Structures

(3-0-3)

*Prerequisite:* ( AME 20241 OR AME 238 )

A study of basic principles and methods for structural analysis of lightweight structures with emphasis on aerospace applications. An introduction to load analysis of aircraft, materials, fatigue, stress/deformation analysis of thin-walled structures, and aeroelasticity. Fall.

### AME 30361. Computer-Aided Design and Manufacturing

(3-0-3)

Principles of engineering-graphic communications: visualization, sketching, orthographic projection, principal and auxiliary projections, 3-D surfaces, and feature-based design. Geometric dimensioning and tolerancing, computer-integrated manufacturing, and rapid prototyping. Fall and spring.

### AME 30362. Design Methodology

(3-0-3)

*Prerequisite:* ( AME 20212 OR AME 230 )

Modeling and analysis of mechanical systems. Automated design decision process, introduction to statistical methods, material engineering, requirements definition, and product specifications. Fall.

### AME 30363. Design of Machine Elements

(3-0-3)

*Prerequisite:* ( AME 20241 OR AME 238 )

*Corequisite:* AME 32363

Static and fatigue failure theories. Theory, design, and selection of gearing, power transmitting shafts, rolling element bearings, journal bearings, fasteners, springs, brakes, and clutches. Spring.

### AME 30381. Orbital and Space Dynamics

(3-0-3)

*Prerequisite:* ( AME 20222 OR AME 226 )

The one-and two-body problems; geometrical elements and time dependence. Orbital determination. Linear orbits and regularization. Orbital transfer. The n-body problem; various forms of the three-body problem, including the circular restricted case, its "equilibrium" solutions and their stability. Spring.

### AME 36099. Directed Readings

(V-0-V)

Individual or small group study under the director of a faculty member in an undergraduate subject not currently covered by any University course. As needed.

### AME 40423. Mechanisms and Machines

(3-0-3)

*Prerequisites:* ( AME 20222 OR AME 226 ) AND ( MATH 20580 OR MATH 20610 OR MATH 221 OR MATH 226 OR MATH 228 OR MATH 228A OR MATH 228B OR MATH 228C )

*Corequisite:* AME 42423

The analysis and synthesis of planar, spherical, and spatial mechanisms. Topics include vectors, complex numbers, and the analysis of planar mechanisms; design of cams, gear tooth geometry, and the analysis of transmissions; synthesis of planar

mechanisms, direction cosine matrices, and the analysis of spherical mechanisms; and homogeneous transformations, and the analysis of spatial mechanisms. Fall.

### AME 40431. Gas Turbines and Propulsion

(3-0-3)

*Prerequisite:* ( AME 30331 OR CE 34200 OR AME 34331 OR AME 330 )

The mechanics and thermodynamics of gas turbines and air-breathing propulsion devices. The mechanics of various space propulsion systems are also presented, including an introduction to rocket propulsion. Fall.

### AME 40451. Aerospace Dynamics

(3-0-3)

*Prerequisites:* ( AME 20222 OR AME 226 ) AND ( AME 30315 OR AME 302 )

Mechanics and equations of motion, aerodynamics forces, airplane motions, longitudinal and lateral. Introduction to autopilot design. Fall.

### AME 40461. Flight Mechanics and Introduction to Design

(3-0-3)

*Prerequisites:* ( AME 20211 OR AME 240 ) AND ( AME 30331 OR CE 34330 OR AME 34331 OR AME 330 )

The fundamentals of flight performance are developed. Primary emphasis will be on examining how configuration design parameters affect aircraft performance. Students are introduced to aircraft preliminary design methodology. Fall.

### AME 40462. Aerospace Design

(4-0-4)

*Prerequisite:* ( AME 40461 OR AME 440 )

*Corequisite:* AME 41462

Team-design project with application to an aerospace system development. Includes topics in all associated technologies, design methodology, standards, and engineering ethics. Spring.

### AME 40463. Senior Design Project

(3-0-4)

*Prerequisites:* ( AME 30362 OR AME 344 ) AND ( AME 40423 OR AME 430 )

*Corequisite:* AME 41463

A course that provides a comprehensive team-oriented, project-based design of a selected mechanical system or process. Projects involve design specification development, engineering design, documentation, and prototype fabrication. Projects are assessed by industrial reviewers. Fall.

### AME 47099. Special Studies

(V-0-V)

Individual or small group study under the direction of a faculty member in an undergraduate subject not currently covered by any University course. As needed.

### AME 47530. Special Studies in Energy Systems

(3-0-3)

*Prerequisite:* ( AME 30331 AND AME 30334 )

This is an independent, directed study course covering the mechanical engineering aspects of energy systems. Topics will include the fluid mechanics and heat transfer aspects of pumps, compressors, turbines, heat exchangers, boilers, and condensers, as well as alternative energy sources. Consent of instructor required.

### AME 48491. Undergraduate Research

(V-0-V)

A research project at the undergraduate level under the supervision of a faculty member. Fall and spring.

### AME 50521. Intermediate Dynamics

(3-0-3)

*Prerequisite:* ( AME 20222 OR AME 226 )

Review of linear algebra, 3-D rigid body dynamics: kinematics and kinetics; the gyroscope. analytical dynamics: constraints and Lagrangian dynamics; and Hamiltonian dynamics and canonical transformations.

**AME 50531. Intermediate Thermodynamics**

(3-0-3)

*Prerequisite:* AME 20231

A second course in engineering thermodynamics including cycle analyses, real gas behavior, psychometrics, gas mixtures, chemical equilibrium and finite-rate chemical reactions, and elements of compressible flow.

**AME 50532. Computational Fluid Dynamics**

(3-0-3)

*Prerequisite:* (AME 30331 OR AME 34331 OR AME 330) OR (AME 30332 OR AME 360)

An introduction to the fundamentals of computational aerodynamics/fluid mechanics. Numerical techniques are developed and applied to the solution of several practical fluid mechanics and aeronautics problems.

**AME 50535. Energy Systems**

(3-0-3)

*Prerequisites:* AME 30331 AND AME 30334

This course will cover the mechanical engineering aspects of energy systems. Topics will include the fluid mechanics and heat transfer aspects of pumps, compressors, turbines, heat exchangers, boilers, and condensers, as well as alternative energy sources.

**AME 50541. Finite Element Methods for Structural Analysis**

(3-0-3)

*Prerequisite:* (AME 20241 OR AME 238)

An introduction to the finite element method with applications to problems in structural analysis. Basics of linear and nonlinear finite element formulation and programming, applications to bars, beams and simple continuum problems, and use of commercially available codes with advanced input/output capabilities.

**AME 50542. Engineering Analysis of Manufacturing Processes**

(3-0-3)

*Prerequisites:* (AME 20241 OR AME 238) AND (CBE 34361 OR CBE 30361)

A senior elective course dealing with the application of engineering analysis to casting, forming, machining and joining processes as well as other advanced manufacturing processes.

**AME 50551. Introduction to Robotics**

(3-0-3)

*Prerequisite:* (AME 30314 OR AME 34314 OR AME 301)

Kinematics of 2-D and 3-D robots; statics and dynamics; design considerations; actuators; sensors; and control fundamentals. Project assignments are used to demonstrate the fundamentals of robotics.

**AME 50561. Reliability Engineering**

(3-0-3)

An introduction to fundamental concepts in reliability analysis that includes statistical concepts, data and data distributions, reliability analysis of data, quality concepts including Taguchi methods, analysis of maintained systems, human failure interaction, and fault tree analysis.

**AME 50571. Structural Aspects of Biomaterials**

(3-0-3)

*Prerequisites:* (AME 20241 OR AME 238) AND (CBE 30361 OR CBE 225 OR CBE 34361 OR CHEG 225)

Structure and mechanical functions of load bearing tissues and their replacements. Natural and synthetic load-bearing biomaterials for clinical applications are reviewed. Biocompatibility and host response to structural implants are examined. Quantitative treatment of biomechanical issues related to design of biomaterial replacements for structural function. Material selection for reconstructive surgery is addressed. Directions in tissue engineering are presented.

**AME 50581. Space Systems Analysis**

(3-0-3)

Missions, spacecraft dynamics, attitude determination and control, space environment, spacecraft power, telecommunications, avionics, data handling/processing, and other topics that may include configuration, load determination and structure, and thermal control.

**AME 50582. Chemical Rocket Propulsion**

(3-0-3)

A brief review of thermodynamics and an introduction to fluid mechanics with the specific goal of developing the theory of equilibrium combustion and the fluid mechanics of Nozzles. Other topics associated with chemical rocket systems. Final project that will include a complete analysis of a particular existing chemical rocket engine.

**AME 50650. Applied Nonlinear Analysis and Controls**

(3-0-3)

This is a one-semester course that surveys topics from nonlinear analysis with emphasis on applications to controls. Topics include nonlinear phenomena, describing functions, linearization, nonlinear stability, Lyapunov stability, Lyapunov control functions, adaptive control, stability of non-autonomous systems, boundedness, center manifold theory, bifurcations, feedback linearization, and hybrid systems.

**AME 56561. Directed Readings in HVAC**

(3-0-3)

This course will introduce the student into the design and implementation of building HVAC systems, define the concept of green building design, and sustainability in HVAC design.

**AME 56562. Directed Readings in Reliability Engineering**

(3-0-3)

This course will be focused on directed readings in the general area of reliability engineering, with applications to relevant engineering systems, mutually agreed upon by the student and instructor. The student and instructor desire that a final paper be drafted, suitable for publication, though non-publication will not impact the student's grade in the course. The course would fulfill 3 hours course credit as a technical elective.

**AME 57104. Engineering Analysis**

(3-0-3)

*Prerequisite:* (AME 302 OR AME 30315)

The course is designed for undergraduates interested in graduate school in engineering, either directly after graduation or later. Students should have taken the required courses in mathematics. This course will introduce them to modern mathematical techniques that are commonly used in the engineering sciences. Theory will be closely related to applications.

## Chemical and Biomolecular Engineering

### CBE 20255. Introduction to Chemical Engineering Analysis

(3-0-3) McCready

*Prerequisite:* ( MATH 10560 OR MATH 10460 OR MATH 10860 OR MATH 126 OR MATH 126A OR MATH 126B OR MATH 126C OR MATH 126E OR MATH 126F OR MATH 166 OR MATH 196) AND (CHEM 10122 OR CHEM 10172 OR CHEM 10182 OR CHEM 122) AND (PHYS 10310 OR PHYS 131)

*Corequisite:* CBE 22255

This is a foundation course in which the students learn to apply the concepts of material and energy balances to problems involving chemical processes, biological systems, and environmental phenomena. Within this context, they learn problem-solving techniques and acquire a working knowledge of phase equilibria, physical properties, and computer applications.

### CBE 20256. Chemical Engineering Thermodynamics

(4-0-4) Brennecke

*Prerequisite:* (CBE 20255 OR CBE 255 OR CHEG 255)

The course provides an introduction to modern applied thermodynamics, with a focus on aspects relevant to chemical engineers. It begins with a review of the first law energy balance, followed by the development of the second law entropy balance. Thermodynamic constitutive equations for gases and liquids are developed from a molecular-level perspective, followed by applications involving thermodynamic cycles and energy conversion. The second half of the course concerns stability, thermodynamics of mixtures, and phase and chemical equilibrium.

### CBE 20258. Computer Methods in Chemical Engineering

(3-0-3) Kuczynski

*Prerequisite:* (CBE 20255 OR CBE 255 OR CHEG 255)

Algorithms for solving algebraic (e.g., Gaussian Elimination, PLU decomposition, etc.) and differential equations (e.g., Runge-Kutta, Shooting methods) are derived and implemented using Matlab. Statistics and error analysis constitute a significant part of the course.

### CBE 20290. Career Choices for Engineers

(1-0-1) Flynn

A seminar series featuring selected speakers who are employed or consult with high-tech business enterprises of both national and global involvement. The presentations and open symposium format will emphasize business ethics, competitive pressures, people skills, and most importantly, career opportunities for engineering graduates.

### CBE 22255. Introduction to Chemical Engineering Tutorial

(1-0-0)

*Corequisite:* CBE 20255

Tutorial for Introduction to Chemical Engineering.

### CBE 30310. Global Sustainability

(3-0-3)

This course examines the growing need for addressing "sustainability" as a parameter in the practice of engineering as well as in related disciplines. The course begins with an introduction of the origin of resources on earth and their fragile connection with life on earth both on the ecology and ultimately on the human population. The basic laws regulating the flow of energy and materials through ecosystems and the regulation of the distribution and abundance of organisms is reviewed. A model of the interaction between population, resources, and pollution is analyzed based on the World3 model proposed by Meadows, Randers and Meadows (*Limits to Growth*, 1972). The model predictions made in 1972 are compared with results compiled in 2002. The model include analysis of the state of land, soils and food, water, forests, nonrenewable resources, energy, and capital. Emphasis is placed in analyzing energy sustainability and assessment of current and potential future energy systems. This includes availability, extraction, conversion, and end-use to meet regional and global energy needs in the 21st century in a

sustainable manner. Different renewable and conventional energy technologies will be discussed and their attributes described within a framework that aids the evaluation and analysis of energy technology systems in a global context. The effect of human activity on the environment with emphasis on climate change will be also analyzed. The World3 model will be used to discuss different scenarios of the state of the our planet based on population, industrial output, food, and population, as well materials standards of living and human welfare and human footprint. The course closes with a discussion of what we can do as engineers and professionals to insure that growth is consistent with a sustainable future.

### CBE 30338. Chemical Process Control

(3-0-3) Chang

While the idealization of chemical processes is that they are operated at steady-state, they are in fact usually dynamic (unsteady state). Process feed compositions may change slightly, ambient conditions may change, pipe leaks may develop, steam pressures may vary, etc. There are any number of such disturbances that may cause the process to deviate from its desired steady-state. In some cases, such deviations may be catastrophic, in other cases a severe loss of product quality may be caused. Thus process control devices are installed that detect deviations from the desired steady-state and attempt to correct them. In this course, students will be introduced to the analysis of chemical process dynamics, and to the design and analysis of process control systems.

### CBE 30343. Chemical Engineering Thermodynamics

(3-0-3)

The old second thermodynamics course. It contained phase equilibria and chemical equilibria.

### CBE 30355. Transport Phenomena I

(3-0-3) Leighton

Basic conservation principles of energy, mass, and momentum are used to derive the integral and differential forms of the transport equations. These equations are used to solve fluid flow problems of both fundamental and practical interest.

### CBE 30356. Transport Phenomena II

(3-0-3) Zhu

*Corequisite:* CBE 32356

Integral and differential transport equations are applied to the solution of heat and mass transfer problems of interest to chemical engineers.

### CBE 30361. Science of Engineering Materials

(3-0-3) Mukasyan

*Prerequisite:* (CHEM 10114 OR CHEM 114) OR (CHEM 10116 OR CHEM 116) OR (CHEM 10118 OR CHEM 118) OR (CHEM 10121 OR CHEM 121)

This is an introductory course that examines the relationship between the structure, processing, and properties of engineering materials. Common engineering materials, including steel, concrete, ceramics, and polymers are discussed. Mechanical, chemical, electrical, and magnetic properties of various materials are examined. The process dependence of microstructural development and defects levels are described.

### CBE 31358. Chemical Engineering Laboratory I

(1-4-3)

Chemical engineering laboratory courses are comprised of experiments that cover most of the major subject areas of chemical engineering. The rationale for combining all of the topics into two separate courses, as opposed to distributing them into the different lecture courses, is to provide a focused learning experience emphasizing experimental techniques to observe fundamental behavior, understanding of the phenomena in terms of the appropriate theory, and experience at technical report writing. Formal and informal oral presentation skills are also an important part of the courses.

### CBE 32327. Thermodynamics Tutorial

(1-0-0)

Tutorial for Thermodynamics.

**CBE 32338. Chemical Process Control Tutorial**

(1-0-0)

Tutorial for Chemical Process Control.

**CBE 32355. Transport Phenomena I Tutorial**

(1-0-0)

Tutorial for Transport Phenomena I

**CBE 32356. Transport Phenomena II Tutorial**

(0-1-0)

*Corequisite:* CBE 30356

Tutorial for Transport Phenomena II.

**CBE 40439. Simulation and Optimization**

(3-0-3) Stadtherr

This course will provide an overview of the computational methodologies used for chemical process simulation and optimization. Topics will include (1) how to formulate process models; (2) how to solve process models (linear and nonlinear equation solving, etc.); and (3) how to optimize using process models (linear and nonlinear programming, global optimization, etc.).

**CBE 40443. Separation Processes**

(3-0-3) Hill

This course demonstrates the application of the principles of phase equilibria, transport processes, and chemical kinetics to the design and characterization of stage-wise and continuous separation processes. Both graphical and rigorous numerical techniques are used, and the general procedures applicable to different specific processes are emphasized. Example problems are drawn from the petroleum, chemical, food, biochemical, and electronic materials processing industries.

**CBE 40445. Chemical Reaction Engineering**

(3-0-3) Wolf

The basic concepts of chemical rate processes are applied to the theory of the design and operation of the various types of commercial reactors for both noncatalytic and catalytic reactions. Topics covered include mole balances, rate laws and stoichiometry, collection and analysis of rate data, multiple reactions, isothermal and nonisothermal reactor design, catalysis, and catalytic reactors.

**CBE 40448. Chemical Process Design**

(3-0-3) Maginn

This course represents a capstone in the chemical engineering curriculum. In this course, students will have the opportunity to apply the basic concepts learned in previous courses to the design and analysis of a chemical processing system. This will be done primarily through the design project. Supporting material to be covered in lectures includes the following: computer-aided design (process simulation), economic analysis, process safety, flowsheet synthesis (conceptual design), and decision-making analysis (optimization).

**CBE 40456. Polymer Engineering**

(3-0-3) Hill

A course for seniors and graduate students in science and engineering who are interested in applications of engineering to polymer science and technology. Topics include polymerization reactions and the structure, properties, processing, and production of polymers. (Every year)

**CBE 40461. Structure of Solids**

(3-0-3) McGinn

This class seeks to provide students with an understanding of the structure of solids, primarily as found in metals, alloys, and ceramics applied in technological applications. The structure of crystalline solids on the atomic level as well as the microstructural level will be discussed. Imperfections in the arrangements of atoms will be described, especially as regards their impact on properties. The study of structure through X-ray diffraction will be a recurring theme. A sequence of powder diffraction laboratory experiments (four to five class periods) also will be included.

**CBE 40464. Principals of Materials Selection**

(3-0-3)

Case study-based course focuses on systematically selecting the appropriate material (metal, ceramic, polymer, or composite), its method of processing and fabrication, and all associated costs to achieve an optimized choice for a given shape. The student will learn to use a powerful computer search and database system (Cambridge Engineering Selector) to rapidly achieve an optimized materials selection for a wide variety of mechanical designs.

**CBE 40465. Colloid and Surface**

(3-0-3) Zhu

This course will discuss experimental and theoretical techniques for understanding intermolecular forces.

**CBE 40472. Modeling—Ecology and Environment**

(3-0-3) Stadtherr

This course covers various topics pertaining to the Earth's ecological and biogeochemical systems and the effects of disturbances or imbalances, particularly those caused by human/industrial activities. Based on fundamentals incorporated in such subject areas as chemical reaction engineering, process dynamics, and transport phenomena; the principal topics center on population and ecosystem dynamics, and on the Earth's natural and altered environments. Examples and applications are drawn from such subjects as the endangerment or extinction of species, biogeochemical cycles, greenhouse gases and global warming, ozone pollution in the troposphere and depletion in the stratosphere, pollutant dispersion, and acid rain. The course makes extensive use of methods of mathematical modeling, nonlinear dynamics, and computer simulations. In major course assignments, students work in small groups on modeling/simulation projects.

**CBE 40474. Environmental Design**

(3-0-3)

*Prerequisites:* (CBE 20256 OR CHEG 256) AND (CBE 30356 OR CHEG 356)

The goals of this course are to explore how to design and operate chemical processes so that we avoid or decrease the amount of pollutants that are released into the environment. Thus, this is essentially a course in pollution prevention. In the course, we identify and apply chemical engineering principles learned in previous classes (thermodynamics, phase equilibria, transport, reaction engineering) to environmental problems. In addition to normal lectures, discussions and homework, the course is comprised of a series of case studies that compare the design and operation of chemical processes using conventional technology versus new technology that incorporates various principles of pollution prevention.

**CBE 40477. Nanoscience and Technology**

(3-0-3)

This course focuses on the unique scientific phenomena that accrue to matter with characteristic nanometer-scale dimensions and on the technologies that can be constructed from them. Special optical, electronic, magnetic, fluidic, structural and dynamic properties characteristic of nanostructures will be addressed.

**CBE 40478. Advanced Process Dynamics and Control**

(3-0-3) Kantor

This course provides an introduction to advanced techniques for process modeling and control with application to chemical, biochemical, and biomedical systems. Topics include model development, identification, optimal and predictive control, passivity, and robustness to model errors. The course will make extensive use of modeling and simulation tools. Students will complete a semester project on a topic of their choosing. A prior course in control or dynamics is strongly encouraged.

**CBE 40481. Biomedical Engineering Transport Phenomena**

(3-0-3) Chang

This course brings together fundamental engineering and life science principles, and provides a focused coverage of key concepts in biomedical engineering transport phenomena. The emphasis is on chemical and physical transport processes

with applications toward the development of drug delivery systems, artificial organs, bioartificial organs, and tissue engineering.

### **CBE 40483. Topics in Biomolecular Engineering**

(3-0-3) Bilgicer

The objective of this class, intended for both upper level undergraduate and graduate students, is to illustrate the emerging field of bioengineering which fuses molecular life sciences with engineering. The students will gain a fundamental understanding in the principles of how biological systems function, and learn about the innovative approaches that engineers take for diagnosis, treatment, and prevention of diseases, design of novel materials, devices, and processes, and in enhancing environmental health. Topics will include biological systems, cell functions, molecular scale (what is nano?), molecular interactions and multivalency, Synthetic molecules, molecular biology, fermentation, cell culture, and combinatorial methods, protein purification, bioinformatics, biotechnology, biomedical engineering, drug delivery, and biosensors.

### **CBE 40485. Biological Thermodynamics**

(3-0-3)

This course expands traditional thermodynamics to include biological systems.

### **CBE 40498. Energy and Climate**

(3-0-3) Kuczenski

This course integrates the principles of physical sciences and engineering as they pertain to energy, its sources, and uses, and the impact of these on the environment. The great majority of energy used by society comes from fossil fuels. The consequences are that carbon dioxide levels in the atmosphere have been increasing and that readily available sources of oil have been depleted. Prospects for sustainable energy use will be discussed including an engineering cost/benefit analysis of different sources. A question that will be examined in particular detail, is the effect of energy use on climate change both now and in the future. To do this we will analyze the complex couplings and feedback mechanisms that operate between the geosphere, the biosphere, the atmosphere, and the hydrosphere as related to global climate change.

### **CBE 40576. Applied Optimization for Process Operations**

(3-0-3)

The purpose of this course is to introduce students to computational methods for the optimization of process operations. Applications include blending, scheduling, process synthesis, and planning problems. Students taking this course will learn the basic categories of optimization problems (unconstrained, linear programming, convex programming, integer and mixed integer programming, and elements of stochastic programming), how these problems typically arise in practice, and how to solve such problems with the computation tools currently used in industrial practice. A major focus of the course is on applications and problem solving. Students will learn how to recognize and formulate optimization problems in a wide range of contexts, including design, operations, and finance, and how to generate solutions to those problems.

### **CBE 41362. Laboratory Technology in Materials Science**

(0-3-2)

This course is intended for junior chemical engineering majors who are participating in the materials certificate program. The goal of the course is to introduce students to instrumentation they will likely use in the course of their senior thesis research. Laboratory sequences last from two to four weeks. A laboratory report is written for each lab as per instructions from each professor.

### **CBE 41459. Chemical Engineering Laboratory II**

(1-4-3)

Chemical engineering laboratory courses are composed of experiments that cover most of the major subject areas of chemical engineering. The rationale for combining all of the topics into two separate courses, as opposed to distributing them into the different lecture courses, is to provide a focused learning experience emphasizing experimental techniques to observe fundamental behavior, understanding of the phenomena in terms of the appropriate theory and experience at technical

report writing. Formal and informal oral presentation skills are also an important part of the courses.

### **CBE 41910. Biomolecular Engineering Lab**

(0-4-3)

In this course, students will be exposed to modern laboratory methods in bioengineering and experimental design. Students will be expected to develop and execute laboratory protocols, write laboratory reports, and orally present their findings.

### **CBE 45449. Internship Experience**

(0-0-V)

Intended to facilitate interactions between Notre Dame and industry by allowing students to get credit for internship experience.

### **CBE 45490. Internship Experience**

(0-0-V)

Intended to facilitate interactions between Notre Dame and industry by allowing students to get credit for internship experience.

### **CBE 46497. Directed Readings**

(V-0-V)

Course requires the student to explore various readings chosen by the professor.

### **CBE 48901. Undergraduate Research**

(V-0-V)

A graded research project at the undergraduate level under the supervision of a faculty member. A substantial written document describing the research project, results, and conclusions is required.

### **CBE 48902. Advanced UG Research**

(0-12-3)

*Prerequisite:* (CBE 48901 OR CBE 499)

This course is intended for students with previous research experience and requires at least one credit of 48901 as a prerequisite. It requires a written final report. This course will count as a technical or engineering elective.

### **CBE 48903. Undergraduate Thesis**

(0-12-2)

*Prerequisite:* CBE 48901

This course requires a written thesis document that is defended to a committee of faculty. At least one credit of 48901 research is a prerequisite, although several semesters are recommended. This course will count in place of a chemical engineering elective.

### **CBE 48904. Undergraduate Thesis**

(0-12-2)

*Prerequisite:* (CBE 48903 OR CBE 499B)

This course requires a written thesis document that is defended to a committee of faculty. At least one credit of 48901 research is a prerequisite, although several semesters are recommended. This course will count in place of a chemical engineering elective. This course is a continuation of undergraduate thesis.

## Civil Engineering and Geological Sciences

### CE 20130. Methods of Civil Engineering Analysis

(4-0-4)

*Corequisite:* CE 21130

A rigorous introduction to the tools used in civil engineering. This will include computer programming, exposure to circuits and sensors, surveying/GPS, and use of commercial software packages. These tools and their use will be introduced through a project-oriented pedagogy and strong hands-on experience. Fall.

### CE 20150. Mechanics I

(3-0-3) Kirkner

*Prerequisites:* ( (EG 10111 OR EG 111) OR (EG 10112 OR EG 112) ) AND ( (MATH 10560 OR MATH 126 OR MATH 126A OR MATH 126B OR MATH 126C OR MATH 126E OR MATH 126F) ) AND ( (PHYS 10310 OR PHYS 131) )

Introduction to systems of forces and couples; vector mechanics. Equilibrium of rigid bodies. Internal forces and moments, trusses and beams, distributed loads and properties of areas. Friction and virtual work. Kinematics and kinetics of particle motion. Systems of particles. Fall.

### CE 20230. Engineering Programming

(1-0-1) Dietrich

Introduction to programming for engineers. This course will cover the fundamentals of programming in C and Mathematica, including basic structures, algorithm development, and implementation and debugging of programs. Assignments will illustrate the advantages of each programming environment. An emphasis will be placed on team-based learning; some assignments will require students to work together to write community programs.

### CE 20500. Engineering Geology

(3-0-3) Simonetti

A study of physical geology and geologic processes relevant to engineering. Emphasis is on origin and distribution of natural hazards (earthquakes, volcanoes, floods, winds, and mass wasting) as they impact built infrastructure, and chemical and physical processes impacting contaminant transport in water. Distribution of natural hazards is considered in the context of plate tectonics theory. Spring.

### CE 21130. Methods/Civil Engineering Analysis Lab

(0-1-0)

*Corequisite:* CE 20130

**The concurrent laboratory portion of CE 20130. Fall.**

### CE 23600. Challenges and Innovations in Civil and Environmental Engineering

(1-0-0.5) Westerink

This course will focus on examining large-scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 12 lectures per semester presented by senior project engineers, University faculty, and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a one-hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered each spring and fall semester

### CE 25600. Civil Engineering Service Projects

(V-0-V)

Civil Engineering Service Projects (CESP) is a course that partners teams of students with local community service organizations. Projects involve strong technical content, significant design, and multidisciplinary effort and a strong

communication component. These projects have a civil engineering emphasis, but benefit from enrollment of most other undergraduate majors. Fall and spring.

### CE 30125. Computational Methods

(3-0-3) Westerink

Fundamentals of numerical methods and development of programming techniques to solve problems in civil and environmental engineering. This course requires significant computer use via a scientific program language such as Matlab and/or FORTRAN. Standard topics in numerical linear algebra, interpolation, discrete differentiation, discrete integration, and approximate solutions to ordinary differential equations are treated in a context-based approach. Applications are drawn from hydrology, environmental modeling, geotechnical engineering, modeling of material behavior, and structural analysis. Fall.

### CE 30160. Civil Engineering Materials

(3-0-4) Kerr

*Corequisite:* CE 31160

A study of mechanical properties of civil engineering materials and how they relate to the atomic, microscopic, and macroscopic structure. Weekly laboratories are used to study materials such as steel, concrete, wood, and bituminous materials. Spring

### CE 30200. Introduction to Structural Engineering

(3-0-3) Taflanidis

*Prerequisite:* (AME 20241 OR AME 238)

Introduction to structural engineering; analysis of statically determinate structures; deflection analysis; analysis of indeterminate structures using classical and matrix methods; introduction to analysis software, structural design concepts and codes and standards. Fall.

### CE 30210. Structural Analysis

(3-0-3) Khandelwal

*Prerequisite:* (CE 30200 OR CE 34200 OR CE 336)

The fundamentals of matrix methods of analysis. Application to trusses and rigid frames. Introduction to the use of commercial analysis software. Advanced topics of analysis: plastic analysis, introduction to structural dynamics. The first course in the structures track. Spring.

### CE 30230. Engineering Programming

(1-0-1) Dietrich

Introduction to programming for engineers. This course will cover the fundamentals of programming in C and Mathematica, including basic structures, algorithm development, and implementation and debugging of programs. Assignments will illustrate the advantages of each programming environment. An emphasis will be placed on team-based learning; some assignments will require students to work together to write community programs.

### CE 30300. Introduction to Environmental Engineering

(3-0-3)

An introduction to the fundamental concepts of material balances and reactions occurring in reactors. These concepts bind together topics in water supply, wastewater treatment, air pollution control, and management of solid and hazardous wastes. The course describes how a holistic approach, not a fragmented single-pollutant or single-medium, is required to solve environmental problems. Decisions made by environmental engineers require a consideration of environmental ethics, a unifying topic of this course. The first course in the environmental track. Fall.

### CE 30320. Water Chemistry and Treatment

(3-0-3)

*Prerequisite:* (CE 30300 OR CE 369)

An introduction to water treatment design, including discussion of basic aquatic chemistry, water quality, environmental policy, and current issues and problems in the industry. The first course in the environmental track. Spring.

**CE 30460. Fluid Mechanics**

(3-0-3) Kennedy

*Prerequisite:* (AME 20241 OR AME 238) AND (MATH 30650 OR MATH 325)  
A basic course in fluid mechanics.**CE 30510. Geotechnical Engineering**

(3-0-4) Woods

*Prerequisite:* (AME 20241 OR AME 238 OR CE 20150 OR CE 225)*Corequisite:* CE 31510

The objective of this course is to introduce and familiarize the student with the fundamentals of soil mechanics, including behavior of soils in compression and shear, and the principles of geotechnical engineering through lectures and laboratory experiments. Spring.

**CE 31160. Civil Engineering Materials Laboratory**

(0-1-0)

*Corequisite:* CE 30160**The concurrent laboratory portion of CE 30160. Fall.****CE 31510. Geotechnical Engineering Lab**

(0-1-0)

*Corequisite:* CE 30510**The concurrent laboratory portion of CE 30500. Spring.****CE 33600. Challenges and Innovations in Civil and Environmental Engineering**

(1-0-0.5) Westerink

This course will focus on examining large-scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 12 lectures per semester presented by senior project engineers, University faculty, and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a one-hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered each spring and fall semester.

**CE 35600. Civil Engineering Service Projects**

(V-0-V)

Civil Engineering Service Projects (CESP) is a course that partners teams of students with local community service organizations. Projects involve strong technical content, significant design, and multidisciplinary effort and a strong communication component. These projects have a civil engineering emphasis, but benefit from enrollment of most other undergraduate majors. Fall and spring.

**CE 40010. Scientific Manuscript Writing and Editing**

(1-0-1)

In this course, students will learn writing and editing skills needed for successful preparation of scientific manuscripts. Instruction will cover both editing and writing techniques for scientific papers, with particular focus on grammar, layout format options, presentation of logic, scientific content, and referencing approaches. Students will write a series of 3- to 4-page papers, and the first round of editing of each paper will be conducted by a fellow student, with the instructor offering assessment of both the writing and the editing that was done. Class discussions will center on common difficulties faced by students in their writing and editing approaches using examples from the written assignments in the course.

**CE 40120. Numerical Methods in Engineering**

(3-0-3)

*Prerequisite:* (MATH 30650 OR MATH 325)

Finite difference and finite element methods for the solution of ordinary and partial differential equations encountered in engineering. Spring.

**CE 40170. Advanced Mechanics of Solids**

(3-0-3)

*Prerequisite:* (AME 20043 OR AME 236) OR (CE 20170 OR CE 236)

The course covers fundamental principles and techniques in stress analysis of trusses, beams, rigid frames, and thin-walled structures. Emphasis is placed on energy methods associated with calculus of variations. Offered as needed.

**CE 40230. Engineering Programming**

(1-0-1) Dietrich

Introduction to programming for engineers. This course will cover the fundamentals of programming in C and Mathematica, including basic structures, algorithm development, and implementation and debugging of programs. Assignments will illustrate the advantages of each programming environment. An emphasis will be placed on team-based learning; some assignments will require students to work together to write community programs.

**CE 40240. Structural Systems**

(3-0-3)

*Prerequisite:* (CE 30210 OR CE 356)

Overview of common structural systems used in design, with specific focus on the hierarchy of lateral load resisting systems. Course will also highlight innovative structural systems for high rise buildings, collapse mechanisms, and concepts of serviceability and habitability. Codes and commercial software common to practice will be heavily utilized.

**CE 40250. Analysis of Wobbly Structures: An Introduction to Structural Dynamics**

(3-0-3) Kareem

Introduction to dynamics of civil infrastructure; dynamics of single- and multiple-degree-of-freedom systems and distributed/continuous systems; dynamic analysis of structural systems; introduction to wind, waves, and earthquake dynamic load effects; treatment of dynamic effects in building codes.

**CE 40270. Reinforced Concrete Design**

(3-1-4) Kurama

*Prerequisite:* (CE 30200 OR CE 34200 OR CE 336)

Mechanics and behavior of reinforced concrete members and structures. Design of reinforced concrete members and structures, including continuous beams, slabs, columns, and frames. Strength and serviceability considerations for design. Building codes and specifications for reinforced concrete design. Includes a semester-long project on the design of a five-story, five-bay reinforced concrete frame building. The second or third course in the structures track. Spring.

**CE 40275. Prestressed Concrete Design**

(3-0-3)

*Prerequisite:* (CE 40270 OR CE 486)

Mechanics of prestressed concrete structural members. Design of prestressed concrete structural members and simple systems. Strength and serviceability considerations.

**CE 40280. Structural Steel Design**

(3-1-4)

*Prerequisite:* (CE 30200 OR CE 34200 OR CE 336)

Design of structural steel members/systems using basic fundamentals of mechanics, principles of steel behavior at element and system level. Course integrates current codes/standards and commercial software into semester-long project, providing for direct application of concepts to the design of a mid-rise structural steel residential/commercial building. The second or third course in the structures track. Fall.

**CE 40290. Design of Structures to Resist Natural Hazards**

(3-0-3)

Natural hazards and associated load effects on structures. Analysis of damage caused by wind storms, earthquakes, and ocean waves. Design provisions to resist damage resulting from natural hazards.

**CE 40320. Environmental Chemistry**

(3-0-3)

This course begins with (1) an overview of the formation and general chemical characteristics of the Earth and (2) an introduction to the natural global physical and chemical cycles. There will be major sections on the Earth's atmosphere, hydrosphere, and lithosphere. The major chemical processes within each of these compartments and chemical aspects of associated modern-day environmental problems will be reviewed. Special sections on energy and the environment and the chemistry of global climate will be included.

**CE 40340. Waste Treatment**

(3-0-4) Nerenberg

A study of the theory, design, and operation of facilities both for industrial and municipal treatment and disposal. Design of municipal wastewater treatment systems is emphasized. A significant project design component is included with a tutorial section. The third course in the environmental track. Spring.

**CE 40350. Environmental Microbiology**

(3-0-3) Shrout

Fundamentals of microbiology applied to environmental systems and treatment processes. Emphasis will be placed on kinetics and energetics of microorganisms, fate of environmental pollutants, biotechnology applications, and laboratory techniques used to cultivate organisms and analyze biological systems. Spring.

**CE 40355. Water, Disease, and Global Health**

(3-0-3) Shrout

*Prerequisite:* (CHEM 10122 OR BIOS 10161)

The main emphasis of the course will be to study the diseases important to both civilized societies and the Third World. Basic principles of public health, epidemiology, infectious disease microbiology, and engineering application will be learned utilizing both local and global examples. Particular emphasis will be given to diseases transmitted by water. As a complement to environmental design classes, this class will focus on the disease agents removed in properly designed municipal water and waste systems.

**CE 40370. Air Pollution Control**

(3-0-3)

Course will draw upon previous coursework in chemistry, mathematics, fluids, thermodynamics, and environmental engineering. Types, sources, and effects of air pollutants will be covered, as well as design of existing technologies used to control emissions. Also, the effect of meteorology on air quality and pollution transport will be discussed.

**CE 40385. Hazardous Waste Management and Design**

(3-1-4)

The course addresses traditional and innovative technologies, concepts, and principles applied to hazardous waste management and design to protect human health and the environment. Topics include the regulatory process, fate and transport of contaminants, toxicology, environmental audits, waste minimization, physicochemical processes, bioremediation, stabilization, incineration, land disposal, risk assessment, remedial investigations, remedial technologies, and alternative analysis. Course will include a remediation design project, which may require laboratory analyses.

**CE 40450. Hydraulics**

(3-0-3)

*Prerequisite:* (AME 30031 OR AME 334) OR (AME 30331 OR AME 34331 OR CE 34330 OR AME 330) OR (CE 330 OR CE 30460 OR CE 34330)

Theory, analysis, and design of pipe flow, sewer flow, open channel flow, and reservoirs and pumping facilities for water distribution and wastewater collection. Student team design of water distribution and sewer collection systems is emphasized. Fall.

**CE 40460. Groundwater Hydrology**

(3-0-4) Silliman

Lectures and laboratory cover the fundamentals of flow and transport in porous media. Methods of analysis for development of groundwater resources. Fall.

**CE 40530. Foundation Analysis and Design**

(3-0-3) Woods

*Prerequisite:* (CE 30510 OR CE 445 OR CE 351)

Application of basic engineering principles of soil mechanics in the design of foundations and earth structures, including deep excavation supports, shallow foundations, deep foundations, and cofferdams.

**CE 40610. Construction Management**

(3-0-3) Schlagel

Engineering aspects of planning, economics, practices, and equipment usage in construction of civil engineering projects. Use of critical path construction schedules. Offered as needed.

**CE 40620. Transportation Engineering**

(3-0-3) Harrison

The planning, design, operation, safety, and economics of transportation systems. Spring.

**CE 40627. Global Climate Change**

(3-0-3)

A study of the global climate change mechanisms.

**CE 40650. Legal, Ethical, and Business Relations in Engineering**

(3-0-3) Devine

Civil engineering analysis and design in the land development process.

**CE 41460. Groundwater Hydrology Lab**

(0-1-0)

**The concurrent laboratory portion of CE 40460. Fall.****CE 42340. Waste Treatment Tutorial**

(0-1-0)

The concurrent tutorial portion of CE 40340.

**CE 43600. Challenges and Innovations in Civil and Environmental Engineering**

(1-0-0.5) Westerink

This course will focus on examining large-scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils, and environmental engineering. Course format: 12 lectures per semester presented by senior project engineers, University faculty, and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a one-hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered each spring and fall semester

**CE 45600. Civil Engineering Service Projects**

(V-0-V)

Civil Engineering Service Projects (CESP) is a course that partners teams of students with local community service organizations. Projects involve strong technical content, significant design, and multidisciplinary effort and a strong communication component. These projects have a civil engineering emphasis, but benefit from enrollment of most other undergraduate majors. Fall and spring.

**CE 45700. Entrepreneurship and Technology**

(1-0-V)

This community service project involves the development of a community-based computer repair/upgrade/sales operation at St. Casimir's parish on the west side of South Bend. The project will require the students to develop a business plan,

marketing plan, and training program for the new business that will collect used computers from area businesses and train local low-income residents to upgrade the computers for donation and/or resale.

**CE 46600. Air Pollution Engineering: An Independent Study**

(0-0-3)

This is an independent study of the types, sources, and effects of air pollutants, and design of existing technologies to control emissions.

**CE 46700. Big Beam Contest**

(1-0-V)

Students taking this course will compete in the national Big Beam Contest organized by the Precast/Prestressed Concrete Institute (PPCI). The students will work in teams and together with a local precast/prestressed concrete producer to design and construct a precast concrete test beam. The specimens will be tested in the Structural Systems Laboratory at Notre Dame. Each team will prepare a report to be submitted to the PPCI to enter the competition. The course will emphasize the practical engineering and fabrication aspects of precast concrete, as well as fundamental concepts in structural engineering.

**CE 47300. Tunnel Engineering and Underground Construction**

(3-0-3)

Ground conditions affecting tunnel design, fragmentation of hard rock for tunneling, excavation in soft ground, structural design of tunnel linings, construction operations for tunnel excavation.

**CE 47347. Physiochemical Treatment of Organics**

(3-0-3)

An investigation of the physiochemical treatment processes for treatment of organic contaminants

**CE 47600. Special Studies**

(V-V-V)

Individual or small group study under the direction of a faculty member in an undergraduate subject not concurrently covered by any University course.

**CE 47601. Special Studies: Big Beam Contest**

(1-0-V)

Students taking this course will compete in the national Big Beam Contest organized by the Precast/Prestressed Concrete Institute. The students will work in teams and together with a local precast/prestressed concrete producer to design and construct a precast concrete test beam. The specimens will be tested in the Structural Systems Laboratory at Notre Dame. Each team will prepare a report to be submitted to the Precast/Prestressed Concrete Institute to enter the competition. The course will emphasize the practical engineering and fabrication aspects of precast concrete, as well as fundamental concepts in structural engineering.

**CE 48600. Undergraduate Research**

(V-0-V)

A research project at the undergraduate level under the supervision of a faculty member.

**ENVG 10100. Environmental Geosciences**

(3-0-3) Burns

*Prerequisite:* (CHEM 10113 OR CHEM 113) OR (CHEM 10115 OR CHEM 115) OR (CHEM 10117 OR CHEM 117) OR (CHEM 10121 OR CHEM 121) OR (CHEM 10125 OR CHEM 125) OR (CHEM 10171 OR CHEM 10181)

This course introduces the student to Earth processes, and focuses on how these processes affect people, and how people affect these processes. The course explores the interactions between Earth's biosphere, geosphere, atmosphere, and hydrosphere, with the objective of demonstrating how our physical environment is controlled by geological, biological, and human forces.

**ENVG 10110. Physical Geology**

(3-2-4) Neal

*Corequisite:* ENVG 11110

An introduction to the Earth, its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, geophysics, environmental geology, and planetology. Lecture and laboratory meetings.

**ENVG 11110. Physical Geology Laboratory**

(0-1-0)

*Corequisite:* ENVG 10110

This is the laboratory portion of ENVG 10110.

**ENVG 20100. Environmental Geosciences**

(3-0-3)

*Prerequisite:* (CHEM 10113 OR CHEM 113) OR (CHEM 10115 OR CHEM 115) OR (CHEM 10117 OR CHEM 117) OR (CHEM 10121 OR CHEM 121) OR (CHEM 10125 OR CHEM 125) OR CHEM 10171

This course introduces the student to Earth processes, and focuses on how these processes affect people, and how people affect these processes. The course explores the interactions between Earth's biosphere, geosphere, atmosphere, and hydrosphere, with the objective of demonstrating how our physical environment is controlled by geological, biological, and human forces.

**ENVG 20110. Physical Geology**

(3-2-4) Neal

*Corequisite:* ENVG 21110

An introduction to the Earth, its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, geophysics, environmental geology, and planetology. Lecture and laboratory meetings.

**ENVG 20120. Historical Geology**

(3-2-4) Rigby

*Prerequisite:* ENVG 20110 OR SC 20110 OR SC 10110

*Corequisite:* ENVG 21120

This course introduces the student to the concept of geologic time, absolute and relative age-dating, Earth processes and features through time, and the major features of evolution and distribution of fossils. Lecture and laboratory meetings. One-day field trip is required.

**ENVG 20200. Mineralogy and Optical Mineralogy**

(3-2-4) Burns

*Prerequisites:* CHEM 10122 AND ENVG 20110

Crystallography and mineral optics: physical and chemical mineralogy—its application to mineral identification in hand-specimen and using the petrographic microscope.

**ENVG 20210. Igneous and Metamorphic Petrology**

(3-2-4)

*Prerequisite:* ENVG 20110

Origin and identification of igneous and metamorphic rocks within a plate tectonic framework. Geochemistry and petrography are used to investigate mineral equilibria, magma generation and crystallization, pressure and temperatures of deformation, and the interior of the Earth.

**ENVG 20240. Igneous and Metamorphic Petrology**

(3-0-4)

Origin and identification of igneous and metamorphic rocks within a plate tectonic framework. Geochemistry and petrography are used to investigate mineral equilibria, magma generation and crystallization, pressure and temperatures of deformation, and the interior of the Earth.

**ENVG 21110. Physical Geology Laboratory**

(0-1-0)

*Corequisite:* ENVG 20110

This is the laboratory portion of ENVG 20110.

**ENVG 21120. Historical Geology Laboratory**

(0-1-0)

*Corequisite:* ENVG 20120

This is the laboratory portion of ENVG 20120.

**ENVG 21210. Igneous and Metamorphic Petrology Laboratory**

(0-1-1)

Lab component for ENVG 20210.

**ENVG 21240. Igneous and Metamorphic Petrology Laboratory**

(0-1-1)

Lab component for ENVG 20240.

**ENVG 30230. Sedimentation and Stratigraphy**

(3-2-4) Rigby

*Prerequisite:* (ENVG 20200 OR ENVG 242)

Sedimentary environments from a physical, biological, and tectonic perspective are explored, along with processes such as lithification. Identification of sedimentary rocks and the interpretation of the succession of layered rocks in North America are emphasized.

**ENVG 30300. Surficial Processes and Surficial Hydrology**

(2-3-3) Rigby

*Prerequisite:* (ENVG 20200 OR ENVG 242) OR (GEOS 20201 OR GEOS 242)

A quantitative study of natural chemical and physical processes (e.g., weathering, flooding, wind) that produce both erosional and depositional landforms. Their effects on human structures and developments are explored. A one-day field trip is required.

**ENVG 30400. Structural Geology and Rock Mechanics**

(3-3-4) Kenney

*Prerequisite:* (ENVG 20200 OR ENVG 242)

Shapes and fabric of deformed rocks, physical properties of rocks, processes and mechanisms of deformation with associated stresses and strains, and regional and global structural events. A weekend field trip is required.

**ENVG 31400. Structural Geology and Rock Mechanics**

(0-1-1)

Lab component for ENVG 30400.

**ENVG 40300. Geochemistry**

(3-0-3) Fein

*Prerequisites:* CHEM 10121 AND CHEM 10122 AND MATH 10550 AND MATH 10560

An introduction to the use of chemical thermodynamics and chemical kinetics in modeling geochemical processes. Special emphasis is placed on water-rock interactions of environmental interest.

**ENVG 40310. Environmental Impact of Resource Utilization**

(3-0-3) Neal

*Prerequisites:* ENVG 20110 AND ENVG 40300

The environmental effects of utilizing natural resources are examined from their extraction, refining, to use. Pivotal in this course is environmental impact assessment and rehabilitation/remediation technologies. A number of case studies will be examined to highlight the environmental impact of using the Earth's natural resources and how such impacts can be mitigated.

**ENVG 40340. Water-Rock Interactions**

(3-0-3) Alessi

*Prerequisite:* CE 40320

Fundamental properties of mineral surfaces and of the mineral-water interface. Methods of surface and interface analysis. The electric double layer. Interface reactions including adsorption, mineral growth and dissolution, photoredox phenomena, and controls on bacterial adhesion.

**ENVG 40360. Geomicrobiology**

(3-0-3) Fein

*Prerequisite:* (ENVG 40300 OR ENVG 403)

This course explores current research involving the interaction between microbes and geologic systems, focusing on the ability of microbes to affect mass transport in fluid-rock systems. Readings concentrate on laboratory, field, and modeling studies of environmental and/or geologic interest.

**ENVG 40380. Paleontology**

(2-2-3)

*Prerequisite:* (ENVG 20120 OR ENVG 232)

The fossil record—morphology, taxonomy, evolution, statistical population systematics, and paleoecology. A one-day field trip is required.

**ENVG 40390. Physical Volcanology**

(2-0-2)

This course is an introduction to volcanoes and includes the links between volcanoes and their tectonic and geophysical setting, the types of volcanic edifices, classic eruption styles and deposits, volcanoes and their eruption products as landforms, and comparisons to planetary volcanism. Class will meet once a week for an hour in the Fall for reading and discussion (1 credit) then have a weeklong field trip to Hawaii just before the start of the Spring semester (1 credit), and would have a research paper due spring semester (1 credit). Tentative travel dates are January 6–13, 2008.

**ENVG 40410. Geophysics**

(2-2-3)

*Prerequisite:* (PHYS 10320 OR PHYS 132)

Physics of the solid Earth: seismic wave, gravity, resistivity, and electromagnetic methods of probing the structure of the Earth. Applications to environmental concerns as well as to groundwater, mineral, and petroleum exploration are discussed.

**ENVG 40480. Chemistry of Lanthanides and Actinides**

(3-0-3) Albrecht-Schmitt

This course will cover a wide variety of topics involving the chemistry of the f-block elements. Topics will include periodic trends, aqueous and environmental chemistry, solid-state chemistry, and physical properties. The course will begin with a brief history of the discovery of these elements. The fundamental knowledge gained early in the course will be applied to the critical problems of nuclear energy production and waste remediation. This will be a primary literature-based course.

**ENVG 40547. Geodynamics**

(3-0-3)

This course applies continuum physics to geological problems, beginning with plate tectonics, progressing into the study of stress and strain in geological strata from earth processes. Large scale problems (frictional heating on faults, flow through volcanic pipes, mantle convection) are examined by applying principles from heat transfer, faulting, and fluid mechanics.

**ENVG 40647. Research Methods: Geophysics and Geodynamics of Iceland**

(4-0-4)

This course covers an introduction to research methods and professional journal manuscript preparation. Course requires fieldwork in Iceland in August and submission of student research to a professional journal. Topics include geophysics and geodynamics problems such as mantle flow, volcanism, and tectonics as applied to Iceland.

**ENVG 40810. Geographic Information Systems (GIS)**

(2-2-4) Bensman

This course provides both the theory and practical tools to display, analyze, and manipulate geographic data through the concepts of thematic layers and spatial objects. Lectures provide the background theory and introduction to display and analysis tools. In the labs, students will develop their own projects using geographic data in both raster and vector form.

**ENVG 45200. Field Trip**

(0-2-1)

*Prerequisite:* (ENVG 10110 OR ENVG 20110 OR SC 20110 OR CE 20500 OR ENVG 10100)

Field trip during the fall/spring vacation; emphasis on regional field geology and field relationships. Classic localities are studied in order to demonstrate geological concepts.

**ENVG 46600. Directed Reading: Principles of Paleontology**

(3-0-V)

One credit will be awarded for a submitted journal summarizing summer activities in which records, practices and procedures of the summer excavation will be highlighted. An additional two credits 2 credits will be available for successful completion of a seminar course dealing with modern research issues in paleontology. The course will meet weekly for two hours: one hour of lecture and one hour of discussion where topics will be discussed that relate to an assigned topic of the week. Each student will be expected to read the weekly assignment and one student, on a rotating basis, will be expected to present lecture material on the assigned topic and will direct the discussion. It is anticipated that each student will be responsible for preparation of at least three topics. Class participation, a midterm and final exam, in addition to weekly quizzes, will form the basis for grading. Topics may include fossil preservation, paleoecology, biostratigraphy, the species concept, evolution, phylogeny, biogeography, and others.

**ENVG 47600. Special Studies**

(0-V-V)

This course requires permission of the chair of the Department of Civil Engineering and Geological Sciences and the individual instructor. Research of literature on a specific geoscience topic. Preparation of reports and presentations.

**ENVG 48600. Undergraduate Research**

(0-V-V)

This course requires the permission of the chair of the Department of Civil Engineering and Geological Sciences. Three to 15 hours each week, arranged individually for each student.

**ENVG 57498. Planetary Geology**

(3-0-3)

This course will examine the solar system bodies and solar system formation, and compare and contrasts geologic processes and resulting forms on the terrestrial (solid surface) planets. Typical processes discussed include volcanism, impact cratering, tectonics, hydrology, polar processes, and implications for life. There are no formal prerequisites, but a calculus and an earth sciences course are recommended.

**Computer Science and Engineering****CSE 20110. Discrete Mathematics**

(3-0-3) Chaudhary

Introduction to mathematical techniques fundamental to computer engineering and computer science. Topics: mathematical logic, induction, set theory, relations, functions, recursion, recurrence relations, introduction to asymptotic analysis, algebraic structures, graphs, and machine computation.

**CSE 20211. Fundamentals of Computing I**

(3-1-4) Chawla

*Corequisite:* CSE 21211

This is the first part of a two-course introduction-to-computing sequence, intended primarily for computer science and computer engineering majors. It introduces fundamental concepts and principles of computer science, from formulating a problem and analyzing it conceptually, to designing, implementing, and testing a program on a computer. Using data and procedural abstractions as basic design principles for programs, students learn to define basic data structures, such as lists and trees, and to apply various algorithms for operating on them. The course also introduces object-oriented and parallel programming methods.

**CSE 20212. Fundamentals of Computing II**

(3-1-4) Emrich

*Prerequisite:* CSE 20211*Corequisite:* CSE 21212

This is the second part of a two-course introduction-to-computing sequence, intended primarily for computer science and computer engineering majors. This course introduces concepts and techniques for developing large software systems. The object-oriented model of design and programming is presented using a modern programming language such as Java or C++. Topics covered include modularity, specification, data abstraction, classes and objects, genericness, inheritance, subtyping, design patterns, testing, concurrency, object persistency, and databases.

**CSE 20221. Logic Design and Sequential Circuits**

(3-3-4) Brockman

*Corequisite:* CSE 21221

Boolean algebra and switching circuits, Karnaugh maps, design of combinational and of sequential logic networks, and sequential machines.

**CSE 20232. C/C++ Programming**

(3-0-3) Stewman

*Prerequisites:* (EG 10111 OR EG 10112) AND (MATH 10550)

Top-down analysis and structured programming. Basic analysis of algorithms, algorithm development, implementation, and debugging and testing of programs will also be emphasized. Students will write several programs in the C++ language to learn the concepts taught and to acquire experience in solving problems using the UNIX operating system.

**CSE 20600. CSE Service Projects**

(V-0-V) Brenner; Freeland; Madey; Kennedy

Engineering projects in community service.

**CSE 21211. Fundamentals of Computing I Lab**

(0-0-0)

*Corequisite:* CSE 20211

Lab for Fundamentals of Computing I.

**CSE 21212. Fundamentals of Computing II Lab**

(0-2-0)

*Corequisite:* CSE 20212

Lab Fundamentals of Computing II.

**CSE 21221. Logic Design Laboratory**

(0-0-0)

*Corequisite:* CSE 20221  
Lab for Logic Design.**CSE 30151. Theory of Computing**

(3-0-3) Blanton

The theory of automata and formal languages is developed along with applications. Various classes of automata, formal languages, and the relations between these classes are studied. Restricted models of computation; finite automata and pushdown automata; grammars and their relations to automata; parsing; turing machines; limits of computation: undecidable problems, the classes of P and NP.

**CSE 30189. Basic Unix for Engineers**

(1-0-1) Bualuan

This course will cover basic Unix/Linux, as well as make files, shell scripting, etc.

**CSE 30246. Database Concepts**

(3-0-3) Bualuan

Effective techniques in managing, retrieving, and updating information from a database system. Focusing primarily on relational databases, the course presents the entity-relationship model, query processing, and normalization. Topics such as relational calculus and algebra, integrity constraints, distributed databases, and data security will also be discussed. A final project will consist of the design and the implementation of a database system with a Web interface.

**CSE 30264. Computer Networks**

(3-0-3) Poellabauer

This course introduces students to fundamental topics on the principles, design, implementation, and performance of computer networks. Topics include Internet protocols, congestion control, switching and routing, mobile IP and ad-hoc networks, network security, the end-to-end arguments, and peer-to-peer systems.

**CSE 30321. Computer Architecture I**

(3-3-4) Niemier

*Prerequisite:* CSE 20212 OR CSE 20232 OR CSE 20221*Corequisite:* CSE 31321

Introduction to basic architectural concepts that are present in current scalar machines, together with an introduction to assembly language programming, computer arithmetic, and performance evaluation. Commercial computer-aided-design software is used to deepen the student's understanding of the top-down processor design methodology. MIPS-based assembly language will be used.

**CSE 30322. Computer Architecture II**

(3-3-4) Kogge

*Prerequisites:* (CSE 20221 OR CSE 221) AND (CSE 30321 OR CSE 34321 OR CSE 321)*Corequisite:* CSE 31322

A continuation of the architectural concepts in CSE 30321. Detailed study of processor design, hardwired and microprogrammed control, pipelining, memory organization, I/O and bus protocols, and parallel processors. The course makes extensive use of commercial computer-aided-design tools and culminates with a major project of designing and simulating a complete microprocessor.

**CSE 30331. Data Structures**

(3-0-3) Izaguirre

*Prerequisite:* (CSE 20232 OR CSE 20212)

Fundamental techniques in the design and analysis of non-numerical algorithms and their data structures. Elementary data structures such as lists, stacks, queues; more advanced ones such as priority queues and search trees. Design techniques such as divide-and-conquer. Sorting and searching and graph algorithms.

**CSE 30332. Programming Paradigms**

(3-0-3) Flynn

Programming language overview: imperative and functional languages; logic programming. Scripting languages and tools. Development environments. Multilanguage interfacing. Case studies. Comprehensive programming practice using several languages.

**CSE 30341. Operating System Principles**

(3-0-3) Thain

*Prerequisite:* (CSE 30321 OR CSE 34321)

Introduction to all aspects of modern operating systems. Topics include process structure and synchronization, interprocess communication, memory management, file systems, security, I/O, and distributed files systems.

**CSE 30600. CSE Service Projects**

(V-0-V) Brenner; Freeland; Madey; Kennedy

Engineering projects in community service.

**CSE 31321. Computer Architecture I Lab.**

(0-0-0)

*Corequisite:* CSE 30321

Lab for Computer Architecture I.

**CSE 31322. Computer Architecture II Lab**

(0-0-0)

*Corequisite:* CSE 30322

Lab for Computer Architecture II.

**CSE 40113. Design/Analysis of Algorithms**

(3-0-3) Chen

*Prerequisite:* (CSE 30331 OR CSE 34331 OR CSE 331)

Techniques for designing efficient computer algorithms and for analyzing computational costs of algorithms. Common design strategies such as dynamic programming, divide-and-conquer, and Greedy methods. Problem-solving approaches such as sorting, searching, and selection; lower bounds; data structures; algorithms for graph problems; geometric problems; and other selected problems. Computationally intractable problems (NP-completeness).

**CSE 40166. Computer Graphics**

(3-0-3) Stewman

Graphics display devices. Two- and three-dimensional geometry: transformations and projections. Raster graphics algorithms; primitive rendering; 3-D modeling; scene description. Graphics software standards. Software projects.

**CSE 40171. Introduction to Artificial Intelligence**

(3-0-3)

Evaluation of the areas that make up artificial intelligence today. Development of various representations commonly used. Differences between knowledge bases and databases are explored. A study of several applications including expert systems.

**CSE 40175. Ethical and Professional Issues**

(3-0-3) Bowyer

This course seeks to develop a solid foundation for reasoning about the difficult ethical, professional, and social controversies that arise in the computing field. Emphasis is placed on identifying the appropriate legal and professional context and applying sound critical thinking skills to a problem. Topics covered include relevant professional codes of ethics, encryption/privacy/surveillance, freedom of speech, "cracking" of computer systems, development of safety-critical software, whistle blowing, and intellectual property. This course relies heavily on case study of real incidents, both historical and current.

**CSE 40232. Software Engineering**

(3-0-3) Izaguirre

*Prerequisite:* (CSE 30331 OR CSE 34331)

Software engineering is an engineering discipline that is concerned with all aspects of producing high-quality, cost-effective, and maintainable software systems. This course provides an introduction to the most important tasks of a software engineer: requirements engineering, software design, implementation and testing, documentation, and project management. A medium-scale design project combined with individual assignments complement the lectures.

### **CSE 40239. Simulation and Modeling**

(3-0-3) Madey

*Prerequisite:* MATH 30530

Computer techniques for simulating the behavior of physical, biological, engineering, and social systems, including both natural and artificial systems. Applications include scientific enquiry, engineering design, manufacturing planning, training, entertainment, and games. Topics include animation, visualization, and graphical analysis of results.

### **CSE 40243. Compilers**

(3-0-3) Thain

*Prerequisite:* (CSE 30331 OR CSE 34331)

An introduction to the fundamental techniques and tools used in compiler construction. Topics include high-level language specification via context-free grammars; lexical analysis; parsing techniques such as top-down, bottom-up, and LR parsing; run-time environments; and code generation.

### **CSE 40244. Introduction to Systems Administration**

(3-0-3) Freeland

*Prerequisite:* CSE 30341

An introduction to the concepts and practices of computer system administration, including software management, system device management, system security, management of system services, disaster planning, and disaster recovery.

### **CSE 40258. Network Management**

(3-0-3) Freeland

An introduction to the concepts and practices of computer network management, including network installation, monitoring, and troubleshooting.

### **CSE 40317. Online Algorithms for Computational Finance**

(3-0-3) Chaudary

In this course, we study online algorithms and a technique for evaluating them called competitive analysis. We apply these ideas to problems from the exciting world of computational finance, e.g., trading and portfolio selection. This approach to computational finance is very nontraditional; the old traditional approach is to try to model the unknown future inputs using probability distributions. Since financial markets are unpredictable, it is usually very hard to develop accurate probability models for it. Thus, online algorithms have been receiving increasing attention in the past few years.

### **CSE 40373. Multimedia Systems**

(3-0-3) Chandra

Advances in hardware technologies is finally allowing widespread multimedia availability. It is becoming increasingly easy to capture videos in high definition, distribute them to friends using broadband networks and carry them with you in portable iPod, PSP, and other devices. This course will introduce the students to many of the fundamental concepts involved with handling multimedia data and applications. Topics that will be covered in this course include multimedia data types, systems support for multimedia applications, and multimedia applications. We will discuss the value and limitations of current multimedia compression technologies including JPEG, and MPEG. In addition, we will examine how to support multimedia applications with appropriate operating system, file system, and architectural features. We will also briefly look into the security and digital rights management issues.

### **CSE 40391. Linear Programming and Algorithms**

(3-0-3) Chaudhary

*Prerequisites:* CSE 40113 AND MATH 20580

Linear programming (LP) is used to solve many important optimization problems in economics, finance, transportation, military operations, scheduling, etc. It is also the basis for several approximation algorithms. In this course, we'll study the foundations of the subject, including geometric properties of polyhedra, the classical simplex algorithm, and linear programming duality. We follow it by studying LP-based approximation algorithms for problems such as set cover, maximum satisfiability, multicut, and integer multicommodity flows. At the end of the course, a student will be able to solve modern linear optimization problems as well as design and analyze LP-based algorithms.

### **CSE 40416. System Interface Design**

(3-0-3) Striegel

This course will focus on the interface to computing systems, in particular with respect to multisensory input/output through direct experience in laboratory and project activities. Specific interfaces to be covered include traditional graphical user interface (GUI) design, visualization via specialized controls (network graphs, virtual worlds), multimedia (audio, video), and sensory input/output (motion capture, multi-touch, etc.). Further topics include exploration of the effects of scaling / networking on responsiveness, exposure to multiple design choices (Web, framework, native), and exposure to multiple contemporary programming languages.

### **CSE 40422. Computer System Design**

(3-0-3) Striegel

*Prerequisite:* CSE 30322

Integrated hardware and software development, construction, and testing of digital systems by design teams to meet specifications subject to technical, economic, and environmental constraints.

### **CSE 40431. Programming Languages**

(3-0-3) Kogge

An introduction to modern computing concepts and computational models as embodied in a number of different classes of languages. These include (1) functional-based languages such as Lisp, Scheme, SASL, and ML; (2) logic-based languages such as Prolog, Parlog, Strand, and OPS; and (3) object-oriented languages such as Smalltalk, C++, and Java.

### **CSE 40456. Data Networks**

(3-0-3)

Introduction of fundamental concepts of data networks in terms of the ISO-layered architecture. Functions that occur at the various levels are explored. Topics include local area networks such as Ethernet and Token Ring networks, proposals for wide and metropolitan-area networks such as FDDI and DQDB, and the eventual integration of data communications into a single network under ISDN (Integrated Digital Services Network) and Broadband ISDN.

### **CSE 40462. VLSI Circuit Design**

(3-0-3) Kogge

*Prerequisite:* CSE 20221

CMOS devices and circuits, scaling and design rules, floor planning, data and control flow, and synchronization and timing. Individual design projects.

### **CSE 40463. Real-Time Systems**

(3-0-3)

This course introduces students to fundamental topics in the theory and application of real-time systems. Topics covered include basic concepts such as predictability, worst-case execution time analysis, fault tolerance, real-time communication and synchronization, and advanced topics such as real-time operating systems, embedded computing, real-time CORBA and Java, and power management. The course will be project-oriented and the students have the opportunity to analyze the deficiencies of general-purpose operating systems for the use in real-time and embedded systems, and they will implement and experiment with real-time extensions to an operating system kernel.

**CSE 40532. Bioinformatics Computing**

(3-0-3) Emrich

Subject matter changes depending on students' needs. Prospective topics include specific diseases (e.g., Malaria, dengue), molecular genetics of vectors, bioinformatics, and others. (On demand).

**CSE 40535. Special Studies: Computer Vision**

(3-0-3) Flynn

An introduction to the major biometric techniques (fingerprint, face, iris, voice, hand shape), the underlying pattern recognition basis for these biometrics, and current concerns regarding privacy and social/ethical issues.

**CSE 40539. Simulations in Biocomplexity**

(3-0-3) Collins; Madey

This course is cross-listed in the College of Science Biology Department (BIOS TBD) and the College of Engineering Computer Science Department (CSE 40539/CSE 60539). The course will cover computer-modeling techniques for simulating the behavior of biological and public health systems. The primary approach will be the individual-based modeling method (sometimes called the agent-based approach). Special focus will be given to modeling various biological systems; for example, the epidemiology of malaria, population ecology, evolutionary dynamics, microbial ecology, genetic regulatory networks, animal behavior, developmental biology, etc. Topics include methods for modeling and simulation, statistical distributions, random variate generation, animation, visualization, design of simulation experiments, verification and validation of simulations, and analysis of results. CSE students will work on collaborative projects with biological sciences majors. Students will be expected (1) to learn about simulation and modeling (2) to help define biological problems for modeling and simulation, and (3) to help with verification, validation, and interpretation of results. (Computer programming on course projects will be done by the computer science students.) A major objective of the course will be to compare the performance of specific biological models when simulated through individual-based versus more traditional approaches.

**CSE 40547. Computing at the Nanoscale**

(3-0-3) Niemier

The purpose of this course will not just be to teach students how different emerging technologies compute and what applications they are best suited for. Rather, the course will be based in fundamental (yet understandable!) device physics and will work to show students interested in design what roles they can play in helping an emerging technology to evolve (i.e., studies similar to the work proposed here). However, work in design will only be meaningful if it is grounded in the experimental state of the art. Thus, a discussion of relevant device physics will always precede any work in design.

**CSE 40567. Computer Security**

(3-0-3) Blanton

*Prerequisite:* (CSE 30341 OR CSE 341)

This course is a survey of topics in the realm of computer security. This course will introduce the students to many contemporary topics in computer security ranging from PKIs (Public Key Infrastructures) to cyber-warfare to security ethics. Students will learn fundamental concepts of security that can be applied to many traditional aspects of computer programming and computer systems design. The course will culminate in a research project where the student will have an opportunity to more fully investigate a topic related to the course.

**CSE 40600. CSE Service Projects**

(V-0-V) Madey

Engineering Projects in Community Service.

**CSE 40611. Team Software Design and Implementation**

(3-0-3)

This course builds on the basic techniques introduced in Fundamentals of Computing I and II, but emphasizes a team approach to the design and implementation of software. A variety of team structures will be considered, including

two-person teams for extreme programming and three-person teams as used in the ACM programming contest. Student teams will develop software to solve problems ranging across the computer science curriculum and will present their solutions to the class for critique and analysis. Students will participate in the fall campus programming contest and selected students will represent the University in the ACM Regional Programming Contest.

**CSE 40613. Intro to e-Technology**

(3-0-3) Madey

Introduction to concepts, theories, and techniques of Internet and WWW programming. The goal of this course is to prepare the student to design and develop Web-based applications, e-Commerce applications, e-Science applications, and Internet-based services. Students will be expected to design a large system (course project) requiring integration with other student projects.

**CSE 40622. Cryptography**

(3-0-3) Blanton

Concepts and principles of cryptography and data security. Topics covered include principles of secrecy systems starting from classical ciphers such as Caesar and Vigenere; secret key encryption standards (DES, AES); public key encryption (RSA, ElGamal); information and number theory; hash functions; digital signatures; authentication; key exchange protocols and key certification; and network centric protocols.

**CSE 40625. Machine Learning**

(3-0-3) Chawla

*Prerequisite:* (CSE 40647 OR CSE 60647 OR CSE 40171 OR CSE 60171 OR CSE 471 OR CSE 671)

This course on machine learning will give an overview of many concepts, learning theory, techniques, and algorithms in machine learning, such as in reinforcement learning; supervised learning; unsupervised and semi-supervised learning; and genetic algorithms, including advanced methods such as sequential learning, active learning, support vector machines, and graphical and relational models. The course will give the student the basic ideas and intuition behind modern machine learning methods as well as a bit more formal understanding of how, why, and when they work. The course will also include discussions on some of the recent applications and the interface with computer vision, systems, bioinformatics, and architecture. The course will have a strong focus on project and assignments, with emphasis on writing implementations of learning algorithms.

**CSE 40647. Data Mining and Pattern Recognition**

(3-0-3) Chawla

Data mining uses methods from multiple fields including but not limited to machine learning, pattern recognition, databases, probability and statistics, information theory, and visualization. The focus of this course will primarily be the machine learning component, with relevant inclusions and references from probability, statistics, pattern recognition, and information theory. The course will give students an opportunity to implement and experiment with some of the concepts and also apply them to the real-world data sets. It will also touch upon some of the advances in related fields such as Web mining, intrusion detection, bioinformatics, etc. In addition, we will discuss the role of data mining in the society.

**CSE 40655. Technical Concepts of Visual Effects**

(3-0-3) Bualuan

This class seeks to introduce students to some basic concepts of computer-generated imagery as it is used in the field of visual effects, and to delve into some of the technical underpinnings of the field. While some focus will rely on artistic critique and evaluation, most of the emphasis of the class will be placed on understanding fundamental concepts of 3-D modeling, texturing, lighting, rendering, and compositing. Those who excel in the visual effects industry are those who have both a strong aesthetic sense coupled with a solid understanding of what the software being used is doing "under the hood." This class, therefore, will seek to stress both aspects of the industry. From a methodology standpoint, the class will consist of lectures, several projects that will be worked on both in class and out of class, an on-site photo shoot, and extensive open discussion. The nature

of the material, combined with the fact that this is the first execution of the class, will mean that a significant degree of flexibility will need to be incorporated into the class structure.

### **CSE 40721. Advanced Architecture**

(3-0-3) Niemier

*Prerequisite:* (CSE 30321 OR CSE 30322)

This course discusses the fundamentals of a modern processor architecture. It begins with an abbreviated discussion of pipelining before continuing with topics such as out-of-order execution and register renaming. Case studies of modern processors and the limits of superscalar architectures are considered. How the above fit in with a memory hierarchy (for single- and multi-node machines) is also discussed. The class concludes with a study of multi-core architectures, problems associated with interconnect, thread extraction, and other issues that are associated with and will affect state-of-the-art processing.

### **CSE 40746. Advanced Database Projects**

(3-0-3) Bualuan

*Prerequisite:* CSE 30246

Advanced topics in database concepts; the course's main goal is a major final project, where groups will compete for prizes and awards.

### **CSE 40764. Computer Networks**

(3-0-3) Poellabauer

This course introduces students to topics on the principles, design, implementation, and performance of computer networks. Topics include Internet protocols and routing, congestion control, switching and routing, mobile IP and ad-hoc networks, network security, the end-to-end arguments, peer-to-peer systems, and other current research topics.

### **CSE 40768. Networks Phenomena**

(3-0-3) Chawla

Networks are a pervasive and ubiquitous phenomenon—online social networks (facebook, myspace, etc.) or biological networks or economic networks or search and information networks on the Web. We will introduce basic concepts in network science, discuss metrics and models, use software analysis tools to experiment with a wide variety of real-world network data, and study applications to a number of areas. We will analyze several datasets and focus on a number of applications, including blogging, marketing, tagging, financial networks, wikipedia, facebook, citation networks, co-authorship, etc. We will also study how information, fads, and political movements (recent political climate will provide us with sufficient fodder) spread via the networks. The students will develop a comprehensive understanding of networks, including their sensitivities and vulnerabilities, and be able to design practical, and sound solutions for real-world problems.

### **CSE 40771. Distributed Systems**

(3-0-3) Thain

A distributed system is a collection of independent machines that work together on a common problem. Distributed systems have been both interesting and difficult to build because their components may be autonomous and highly failure-prone. The primary material for this course will be a series of papers describing both working distributed systems and theoretical results. Topics may include distributed file and storage systems, batch computing, peer-to-peer computing, grid computing, process migration, fault tolerance, security, time and ordering, and distributed agreement. Students will undertake a course project that involves building and evaluating a distributed system. Grading will be based on discussion, exams, and the course project.

### **CSE 40774. Graduate Networks**

(3-0-3) Striegel

This course will survey advanced networking topics, specifically the mechanics regarding scaling, connectivity, and performance in the core of the Internet. Topics to be covered include inter/intra-domain routing, TCP fundamentals, quality-of-service (QoS), content distribution, and network calculus. Students will be expected to create protocol parsers using the language of their choice, use/modify

an appropriate network simulator and/or emulator, and complete a research project over the course of the semester.

### **CSE 40787. Perspectives on Artificial Intelligence, Robotics, and Humanity**

(3-0-3) Bowyer

This course will consider perspectives on artificial intelligence, humanoid robotics, and humanity, both as presented in popular media (primarily movies) and in academic writing.

### **CSE 40814. Mobile Computing and Wireless Networking**

(3-0-3) Poellabauer

This course looks at the intersection between mobile computing, mobile telephony, and wireless networking, addressing the unique network protocol challenges, and opportunities presented in these fields. While some of the more important physical layer properties of radio communications will be touched, the focus will be on network protocols above the physical layer, particularly media access control, transport protocols, and routing. The course will be project-oriented, giving students an opportunity to work with state-of-the-art mobile computing technology, including cell phone programming, location-aware systems using GPS, and emerging network protocols and applications.

### **CSE 40827. Ubiquitous Computing**

(3-0-3) Poellabauer

The primary objective of this course is to provide an introduction to the concept of ubiquitous (or pervasive) computing, with an emphasis on the systems challenges in building environments that provide “ambient intelligence.” Topics covered will include design issues for ubiquitous computing, wireless communication infrastructures, mobile and urban sensing scenarios, security and privacy issues, user interfaces, resource management, and application areas. Students are expected to read a number of papers in these areas, prepare a presentation on a topic of their choice, and execute a term project that will allow them to apply the learned concepts in real-world applications.

### **CSE 40833. Introduction to Parallel Algorithms and Programming**

(3-0-3) Emrich

This course will provide a comprehensive introduction to parallel algorithms and parallel programming. Emphasis will be on both algorithmic techniques and parallel programming using MPI. Topics covered will be models of parallel computation, performance measures, basic parallel constructs and communication primitives, and parallel algorithms for selected problems including sorting, matrix, tree and graph problems. Programming assignments will be done on a 22-node partition of a campus computing cluster.

### **CSE 40881. Extreme Computing: Parallel GPU Programming**

(1-0-1) Flynn

Graphics Processing Units (GPUs) have their origins in fast video accelerators for advanced game consoles, but have begun to be commonplace in computers across the spectrum. As their use has spread, their massively parallel architectures have become more general, and the range of applications ported to them has expanded rapidly. In one case, a relatively simple variant of C, called CUDA, has emerged that has gathered a lot of attention. This 1-credit course will focus on introducing the student to GPUs in general—both architecture and programming, and NVIDIA GPUs and CUDA in particular. The key goal will be for each student to develop, debug, and analyze a single application kernel of their own choice and present it to the rest of the class at the end of the semester. Access to both a complete CUDA tool set and to some real GPU-equipped processors will be provided. Grading will be based on both the final application presentation and on several quizzes throughout the semester.

### **CSE 40951. Design for Manufacture**

(3-0-3)

Design for Manufacture looks at the process of designing a product for high-volume manufacture. Topics covered include manufacturing variation and design

robustness in the face of variation, design validation (assuring the design does what it is intended to do) and verification (assuring the design implementation matches the design and meets manufacturing constraints), testability, and reliability.

### **CSE 45605. Internship**

(V-0-V)

Industry-based internship.

### **CSE 46101. Directed Readings**

(3-0-3)

This course consists of directed readings in computer science engineering.

### **CSE 47900. Special Studies**

(V-0-V)

*Prerequisite:* (CSE 2012 OR CSE 212)

Individual or small group study under the direction of a CSE faculty member in an undergraduate subject not currently covered by any University course.

### **CSE 47903. Special Studies-Ethics**

(3-0-3)

Ethical and professional issues related to the computer science field.

### **CSE 48100. Capstone Research**

(3-0-3)

A senior design experience incorporating scholarly research and development of systems, tools, and techniques to address a research question. Students will be presented with a problem domain and a research problem description, and will be required to perform problem analysis, identify a potential solution, place the solution in the context of existing work, implement a prototype of the solution, test and assess the prototype, document all steps, and present their work.

### **CSE 48901. Undergraduate Research**

(V-0-V)

A research project at the undergraduate level under the supervision of a CSE faculty member.

## Electrical Engineering

### **EE 20222. Introduction to Electrical Engineering and Embedded Systems**

(4-0-4) Schafer

*Prerequisites:* (PHYS 10320 OR PHYS 20290) AND MATH 20580

*Corequisite:* EE 21222

An introduction to electrical Engineering featuring microcontroller-based C programming of embedded systems. The course includes basic concepts of electrical circuits and electronic devices including operational amplifiers and transistors. Labs feature microcontroller C programming for an embedded control environment, with emphasis on interfacing microcontrollers to a variety of sensor and actuators.

### **EE 20224. Introduction to Electrical Engineering**

(3-3-4) Huang

*Prerequisite:* MATH 10560

*Corequisite:* EE 21224

A project-oriented introduction to electrical engineering principles in which long-term projects are used to introduce such topics as node and loop circuit analysis, network theorems, first-order circuits, operational amplifiers, communications, systems theory, microprocessor interfacing techniques, and computer programming. Fall.

### **EE 20234. Electric Circuits**

(3-0-3) Huang

*Prerequisites:* (EE 20224 OR EE 24224 OR EE 20222) AND PHYS 10320

Analysis of first, second, and higher order circuits, including natural response, forced response, phasor concepts, AC methods, frequency response, and Laplace transform techniques.

### **EE 20242. Electronics I**

(3-3-4) Fay

*Prerequisite:* (EE 20224 OR EE 24224 OR EE 20222)

*Corequisite:* EE 21242

Introduction to electronic circuits and systems. Basic diode and transistor circuits and the associated DC bias analysis and low-frequency AC small signal analysis. Voltage and feedback amplifiers. Logic and analog circuits utilizing discrete solid-state devices. Spring.

### **EE 21222. Introduction to Electrical Engineering and Embedded Systems Lab**

(0-2-0)

*Corequisite:* EE 20222

An introduction to electrical engineering featuring microcontroller-based C programming of embedded systems. The course includes basic concepts of electrical circuits and electronic devices including operational amplifiers and transistors. Labs feature microcontroller C programming for an embedded control environment, with emphasis on interfacing microcontrollers to a variety of sensor and actuators.

### **EE 21224. Introduction to Electrical Engineering Lab**

(0-0-0)

*Corequisite:* EE 20224

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

### **EE 21242. Electronics I Lab**

(0-0-0)

*Corequisite:* EE 20242

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

**EE 30333. Theology and Engineering**

(3-0-3) Sain

A one-semester introduction to the feedback principles involved in making good choices and avoiding bad choices. Topics from feedback system theory are introduced as needed, and used to characterize such decision-making processes, to determine the challenges inherent in them, and to offer engineering experience toward robustly and optimally tracking good goals, while resisting disturbances and negative influences, all in the presence of sensitive or unknown parameters. Application of the ideas to systematic theology provides an interface with the University's theology/philosophy core requirements.

**EE 30342. Electronics II**

(3-3-4) Seabaugh

*Prerequisite:* EE 20242*Corequisite:* EE 31342

Fundamentals of transistor integrated circuit design, including frequency response, feedback, stability, and frequency compensation with application to operational amplifiers, phase-locked loops, and AM/FM transmission and reception. Includes laboratory. Spring.

**EE 30344. Signals and Systems I**

(3-0-3) Bauer

*Prerequisites:* (EE 20234 AND MATH 20580)*Corequisite:* EE 32344

Behavior of linear systems in both time- and transform-domain representations; convolution integrals and summations, Fourier series signal expansions, Fourier and Laplace transform analysis of linear systems; discrete time Fourier transforms. Fall.

**EE 30347. Semiconductors I: Fundamentals**

(3-0-3) Hall

*Corequisite:* EE 32347

An introduction to solid-state electronic devices, presenting the basis of semiconductor materials, conduction processes in solids, and other physical phenomena fundamental to the understanding of transistors, optoelectronic devices, and silicon integrated circuit technology. Fall.

**EE 30348. Electromagnetic Fields and Waves I: Fundamentals**

(3-0-3) Seabaugh

*Prerequisites:* (MATH 20550 AND PHYS 10320)*Corequisite:* EE 32348

A basic course in electromagnetic field theory, using Maxwell's equations as the central theme. Vector analysis is employed extensively. Fall.

**EE 30354. Signals and Systems II**

(3-0-3) Gupta

*Prerequisite:* EE 30344 OR EE 34344*Corequisite:* EE 32354

Linear systems analysis with emphasis on discrete time case; sampling theory, discrete Fourier transform, Z-transform, applications in signal processing, communications, and control. Spring.

**EE 30357. Semiconductors II (Devices)**

(3-0-3) Xing

*Prerequisite:* EE 30347*Corequisite:* EE 32357

Applications of transport phenomena in semiconductors to explain the terminal behavior of a variety of modern electronic devices such as bipolar junction transistors, MOS structures, and field effect transistors. Spring.

**EE 30358. Electromagnetic Fields and Waves II: Applications**

(3-0-3) Lent

*Prerequisite:* (EE 30348 OR EE 34348)

Propagation of traveling waves along transmission lines: transient waves, steady-state sinusoidal time and space variations. Wave equations for unbounded media and in wave guides. Spring.

**EE 30363. Random Phenomena in Electrical Engineering**

(3-0-3) Fuja

*Prerequisite:* EE 30344 OR EE 34344

An introduction to probability, random variables and random processes as encountered in information processing systems. Analysis and estimation of stochastic signals and noise in linear systems.

**EE 30372. Electric Machinery and Power Systems**

(3-0-3) Collins

*Prerequisites:* (EE 20234 AND PHYS 10320)

Introduction to electric power systems and electro-mechanical energy conversion, including generators, transformers, three-phase circuits, AC and DC motors, transmission lines, power flow, and fault analysis. Spring.

**EE 31342. Electronics II Lab**

(0-0-0)

*Corequisite:* EE 30342

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

**EE 32344. Signals and Systems I Recitation**

(0-0-0)

*Corequisite:* EE 30344

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

**EE 32347. Semiconductors I: Recitation**

(0-0-0)

*Corequisite:* EE 30347

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

**EE 32348. Electromagnetic Fields and Waves I Recitation**

(0-0-0)

*Corequisite:* EE 30348

Recitation designed to help engineering students with their problem solving skills in a smaller group setting.

**EE 32354. Signals and Systems II Recitation**

(0-0-0)

*Corequisite:* EE 30354

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

**EE 32357. Semiconductors II Recitation**

(0-0-0)

*Corequisite:* EE 30357

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

**EE 40434. Circuits and Systems**

(3-0-3) Sain

Study of electrical circuits from the systems point of view. The intrinsic feedback features of electrical circuits. Extensions of the ideas of Thevenin and Norton. Principles of automatically generating circuit models and solutions. Essential electric and magnetic features of circuits. Qualitative features of electrical circuits.

**EE 40446. IC Fabrication**

(2-6-4) Snider

*Corequisite:* EE 41446

This course introduces the student to the principles of integrated circuit fabrication. Photolithography, impurity deposition and redistribution, metal deposition and definition, and other topics. Students will fabricate a 5000 transistor CMOS LSI circuit. Fall.

### EE 40453. Communication Systems

(3-0-3) Fuja

*Prerequisite:* EE 30354

An introduction to the generation, transmission, and detection of information-bearing signals. Analog and digital modulation techniques including AM, FM, PSK, QAM, and PCM. Time and frequency division multiplexing. Fall.

### EE 40455. Control Systems

(3-3-4) Antsaklis

*Prerequisites:* (EE 30354 OR EE 30444) AND (MATH 30650 OR AME 34314)

*Corequisite:* EE 41455

Design of linear feedback control systems by state-variable methods and by classical root locus, Nyquist, Bode and Routh-Hurwitz methods. Fall.

### EE 40458. Microwave Circuit Design and Measurements Laboratory

(2-3-3) Fay

*Prerequisite:* (EE 30348 OR EE 34348)

*Corequisite:* EE 41458

This course is an introduction to microwave circuit design and analysis techniques, with particular emphasis on applications for modern microwave communication and sensing systems. An integrated laboratory experience provides exposure to fundamental measurement techniques for device and circuit characterization at microwave frequencies. Students will develop an enhanced understanding of circuit design and analysis principles as applied to modern microwave circuits, as well as become familiar with design techniques for both hand analysis and computer-aided design. An appreciation for basic measurement techniques for characterization of microwave devices, circuits, and systems through laboratory experiments will also be developed. Fall.

### EE 40462. VLSI Circuit Design

(3-0-3) Kogge

*Prerequisite:* CSE 20221

CMOS devices and circuits, scaling and design rules, floor planning, data and control flow, synchronization, and timing. Individual design projects.

### EE 40465. Space Systems Analysis

(3-0-3)

Missions, spacecraft dynamics, attitude determination and control, space environment, spacecraft power, telecommunications, avionics, data handling/processing, and other topics that may include configuration, load determination and structure, and thermal control. Spring.

### EE 40468. Photonics

(2-3-3) Hall

*Corequisite:* EE 41468

A hands-on overview of the important role of photons alongside electrons in modern electrical engineering. Photonics technologies studied include lasers, optical fibers, integrated optics, optical signal processing, holography, optoelectronic devices, and optical modulators. A survey of the properties of light, its interactions with matter, and techniques for generating, guiding, modulating, and detecting coherent laser light. Spring.

### EE 40471. Digital Signal Processing

(3-0-3) Haengi

*Prerequisites:* (EE 30354) AND (EE 30363 OR MATH 30440 OR MATH 30530)

An introduction to the theory and application of digital information processing: analog/digital and digital/analog conversion, transform domain representation of discrete-time signals and systems, Z-transform, signal flow graphs, discrete

Fourier transform, fast Fourier transforms, frequency analysis, filter design, filter structures, Wiener filter, finite-precision effects, applications in communications, and the analysis and synthesis of audio and image data. Spring.

### EE 40486. Digital and Analog Integrated Circuits

(3-0-3)

*Prerequisite:* EE 30342

Device-level operation of digital and analog integrated circuits. Covers the elements of silicon bipolar and MOS logic, GaAs logic, and volatile and nonvolatile memory. Topics in analog ICs include the design of transistors optimized for particular applications such as high bandwidth, AC and DC analysis of analog circuits, and subcircuits used in analog ICs. Design issues.

### EE 41430. Senior Design I

(1-6-3)

The first part of a year-long senior design project. In this part, students will choose a project, develop the paper design, plan the implementation, and purchase necessary materials. Fall.

### EE 41440. Senior Design II

(0-9-3)

*Prerequisite:* EE 41430

The second part of a year-long senior design project. In this part, students implement, test and document their senior project. Spring.

### EE 41446. IC Fabrication Laboratory

(0-0-0)

*Corequisite:* EE 40446

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

### EE 41455. Control Systems Laboratory

(0-0-0)

*Corequisite:* EE 40455

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

### EE 41458. Microwave Circuit Design and Measurement Lab

(0-0-0)

*Corequisite:* EE 40458

This course supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

### EE 41468. Photonics Lab

(0-0-0)

*Corequisite:* EE 40468

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

### EE 47007. Electric and Hybrid Vehicles

(3-0-3)

*Prerequisites:* EE 20234 AND PHYS 10320

The course is an introduction to modern electric and hybrid-electric vehicles. It covers basic aspects of batteries, electric motors, power train systems, and the vehicle-road system. Emphasis will be placed on energy and power flows in electric and hybrid-electric vehicle systems. Optimization of energy usage for given driving cycles will also be addressed in some detail. Some of the commercially available power management schemes will be introduced and potential alternatives will be explored.

**EE 47498. Special Studies**

(V-V-V)

Individual or small group study under the direction of a faculty member in an undergraduate subject not concurrently covered by any University course.

**EE 48499. Undergraduate Research**

(V-V-V)

A research project at the undergraduate level under the supervision of a faculty member.

**Engineering (Nondepartmental)****EG 00100. Introduction to Engineering**

(3-3-0) Bualuan

This course is designed for rising high schools seniors who are interested in exploring engineering as a career. Included are lectures, field trips, and design projects reflecting what engineers do and how they do it. It is offered twice during the summer period. This is period I. Summer.

**EG 00200. Introduction to Engineering**

(3-3-0) Bualuan

This course is designed for rising high schools seniors who are interested in exploring engineering as a career. Included are lectures, field trips, and design projects reflecting what engineers do and how they do it. It is offered twice during the summer period. This is period II. Summer.

**EG 00300. Introduction to Engineering**

(5-0-0)

Special lab for select EG00100/00200 students.

**EG 10111. Introduction to Engineering Systems I**

(3-0-3)

*Corequisite:* EG 11111

The first of a two-part sequence intended to introduce engineering to first-year intents and to establish a foundation for their studies in any of the engineering disciplines. Team-oriented design projects are used to provide a multidisciplinary view of engineering systems and to present the engineering method. Structured programming is introduced, and computing skills are developed for engineering analysis, synthesis, and technical communication. Fall.

**EG 10112. Introduction to Engineering Systems II**

(3-0-3)

*Prerequisites:* EG 10111 AND MATH 10550

*Corequisite:* EG 11112

The second of a two-course sequence intended to continue the introduction of first-year intents to the engineering disciplines. Multidisciplinary projects are used to illustrate the application of engineering modeling, analysis, and design principles to solve a variety of practical problems. The projects are intended to span areas of interest in all departments of the College of Engineering. Structured programming and software skills are further developed. Spring.

**EG 11111. Introduction to Engineering Systems I—Learning Center**

(0-0-0)

*Corequisite:* EG 10111

Learning center section for Introduction to Engineering Systems I Course.

**EG 11112. Introduction to Engineering Systems II—Learning Center**

(0-0-0)

*Corequisite:* EG 10112

Learning center section associated with Introduction to Engineering Systems II course.

**EG 40421. Integrated Engineering and Business Fundamentals**

(3-0-3) Alworth

The course is designed to improve the effectiveness of engineers working in corporations by teaching how and why businesses operate. Subjects covered include business financial reporting, business plans, the development processes, project management, the supply chain, and a history of quality topics. Numerous guest speakers are utilized to give the students exposure to successful business executives and reinforce the business processes covered in class. Fall.

**EG 40422. Advanced Integrated Engineering and Business Topics**

(3-0-3) Brauer

*Prerequisite:* EG 40421 OR EG 44421

The second course in the sequence integrates the elements taught in the fundamentals course. Subjects covered include a team-oriented Web-based business simulation exercise, management, effective communications, and a review of leading-edge trends in modern corporations. Spring.

**EG 48999. Research Experience for Undergraduates**

(0-0-0)

This is a zero-credit course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. Registration requires a brief description of the research or project to be pursued and the permission of the director of the Summer Session. This course is taken as an indication of the student's status on campus and is meant to allow the registered student to use the University facilities as the summer session permits. No coursework is required.

# College of Science

## Department of Biological Sciences

### **BIOS 10098. Introductory Biology**

(3-3-4)

Students receiving a 5 on the Biology AP I examination or an IB grade of 7, receive credit fully equivalent to BIOS 10161 + 11161 and BIOS 10162 + 11162; i.e., the first year sequence of Biological Sciences I and II with laboratories designed for science majors. For those students who choose not to waive AP or IB credit, BIOS 10098 and 10099 combined will be accepted as a prerequisite for all upper-level biology courses where BIOS 10161 and/or BIOS 10162 are the prerequisites. Students intending to apply to medical or other professional schools where AP science credit is not accepted, or where two semesters of general biology with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, BIOS 10098/10099 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of either BIOS 10161/11161 + 10162/11162 or BIOS 20201/21201 + 20202/21202 as determined by the requirements of their respective majors.

### **BIOS 10099. Introductory Biology II**

(3-3-4)

Students receiving a 5 on the Biology AP examination or an IB grade of 7, receive credit fully equivalent to BIOS 10161 + 11161 and BIOS 10162 + 11162, i.e., the first year sequence of Biological Sciences I and II with laboratories designed for science majors. For those students who choose not to waive AP or IB credit, BIOS 10098 and 10099 combined will be accepted as a prerequisite for all upper-level biology courses where BIOS 10161 and/or BIOS 10162 are the prerequisites. Students intending to apply to medical or other professional schools where AP science credit is not accepted, or where two semesters of general biology with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, BIOS 10098/10099 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of either BIOS 10161/11161 + 10162/11162 or BIOS 20201/21201 + 20202/21202 as determined by the requirements of their respective majors. Please see printed section of this bulletin for a general statement pertaining to Biology Survey Courses.

### **BIOS 10106. Common Human Diseases**

(3-0-3) Streit

The goal of this course is to introduce students to diseases that may afflict them, their parents, and/or their children, as well as other health problems common to the Tropics. It will provide the student with the information necessary to understand the biology of the disease process. Fall. This course counts as general elective credit only for students in the College of Science.

### **BIOS 10107. Ecology and Environmental Issues**

(3-0-3) Olsen

Emphasis will be placed on today's ecological and environmental problems and the possible effect they may have on the future evolution of life on Earth. Topics will generally include an overview of the theory of evolution and a discussion of ecological principles as observed at the population, community, and ecosystem levels. The influence of cultural and political factors will also be discussed. Each academic year, one or more sections will be offered; some may be individually subtitled, allowing for one-time presentation of specific topics within the context of "environment and evolution" in addition to multiple-semester presentations of a specific topic (e.g., Evolutionary Ecology, Freshwater and Society, Environmental Issues and Solutions). Summer. This course counts as general elective credit only for students in the College of Science.

### **BIOS 10119. Evolution and Society**

(3-0-3) Filchak

Evolution is the cornerstone of modern biological sciences. This course will highlight evolutions as well as ecology and environmental biology. Emphasis will be placed on the evolution of animal behavior including human behavior. Sexual selection and its role in shaping many forms of life on Earth will be extensively covered. Formerly taught as BIOS10107 during fall and spring semesters.

### **BIOS 10161. Biological Sciences I**

(3-0-3) O'Tousa

*Corequisite:* BIOS 11161

This is a two-semester course with three lectures and one 3-hour laboratory a week for first-year students contemplating a career in biology, medicine, or related areas of life science. The first semester presents a description of biologically important molecules and then proceeds to cell structure, energy metabolism, and classical and modern genetics. The topics presented in the second semester in the context of modern evolutionary theory include biological diversity, ecology, and organismal physiology. BIOS 10161 and 10162 are not typical survey courses; they go into greater depth, especially in modern molecular biology. When followed by BIOS 20241 and BIOS 20250, they will provide biology and biochemistry majors, including premedical intents, with a thorough in-depth overview of basic concepts of modern biology.

### **BIOS 10162. Biological Sciences II**

(3-0-3) Boyd; Tank

*Prerequisite:* BIOS 10161

*Corequisite:* BIOS 11162

This is the second semester of a two-semester course for first-year students contemplating a career in biology, medicine, or related areas of life science. The topics presented in the second semester in the context of modern evolutionary theory include biological diversity, ecology, and organismal physiology.

### **BIOS 10191. Molecular Genetic Technology**

(3-0-3) Filchak

Open to non-science honors students only. Not available to students who have previously taken BIOS 10101 or BIOS 11110. The objectives of the course are to have students learn the basics of cell division and Mendelian genetics and then explore the relatively new field of DNA technologies such as gene cloning, genetic testing, biotechnology, and cancer genetic analysis. This course also has a service-learning component in which students will work at the Logan Center in South Bend. Fall. This course counts as general elective credit only for students in the College of Science.

### **BIOS 11161. Biological Sciences I—Lab**

(0-1-1) Olsen

*Corequisite:* BIOS 10161

The laboratory sessions are an integral part of the lecture courses, which will complement the lectures. The lab sessions will also offer the student direct experience in using the scientific method and simultaneously introduce numerous biological and analytical techniques. In addition, students learn to present their findings during the course of the two semesters of laboratory as they would for a journal article or a scientific meeting (seminar and poster presentations).

### **BIOS 11162. Biological Sciences II—Lab**

(1-0-1) Olsen

*Corequisite:* BIOS 10162

The laboratory sessions are an integral part of the lecture courses, which will complement the lectures. The lab sessions will also offer the student direct

experience in using the scientific method and simultaneously introduce numerous biological and analytical techniques. In addition, students learn to present their findings during the course of the two semesters of laboratory as they would for a journal article or a scientific meeting (seminar and poster presentations).

### **BIOS 20201. General Biology A**

(3-0-3) Fraser

*Prerequisite:* CHEM 10122 OR CHEM 10172 OR CHEM 10182

Introduction to living organisms with emphasis on biological processes and principles. BIOS 20201 introduces biology to the student at the cellular level, covering such topics as important biological molecules, energy metabolism, and classical and modern genetics. BIOS 20201 and 20202, along with their concomitant laboratories (BIOS 21201 and 20202) constitute a traditional two-semester introduction to biology. This sequence covers more topics, but in less depth, than the former BIOS 155–156 or BIOS 10161–10162 and is designed to provide students with the necessary background for subsequent advanced biology courses and to help them prepare for MCATS. A prerequisite is a full year of college chemistry. In addition, organic chemistry is to be taken concurrently.

### **BIOS 20202. General Biology B**

(3-0-3) Duman; Hellenthal

*Prerequisites:* BIOS 20201 AND (CHEM 10122 OR CHEM 10171 OR CHEM 10181)

Introduction to living organisms with emphasis on biological processes and principles, and goes beyond the cellular level, with an emphasis on organismic physiology, evolution, diversity, and ecology. BIOS 20201 and 20202, along with their concomitant laboratories (BIOS 21201 and 21202) constitute a traditional two-semester introduction to biology. This sequence covers more topics, but in less depth, than BIOS 10161 and 10162 and is designed to provide students with the necessary background for subsequent advanced biology courses and to help them prepare for MCATS. A prerequisite is a full year of college chemistry. In addition, organic chemistry is to be taken concurrently.

### **BIOS 20241. Molecular Cellular Biology**

(3-0-3) Vaughan

*Prerequisite:* (CHEM 10172 OR CHEM 10182)

This course is restricted to biological science and majors only. This course explores the fundamental structural and functional basis of cell biology, with specific emphasis on molecular mechanisms that regulate cellular activities involved in ion and solute transport, organelle biogenesis, protein trafficking and vesicular transport, intracellular communication and signaling, cell cycle growth control regulation, and cytomechanics. The lecture portion of the course is dedicated to exposing students to the protein machinery driving cell functions, while the laboratory complements lecture by providing a combination of experiments and opportunities for independent project-based investigation focused on elucidating basic cell function. Spring.

### **BIOS 20250. Classical and Molecular Genetics**

(4-0-4) Hyde

*Prerequisite:* BIOS 10161 OR BIOS 20201

This course is restricted to biological science majors only. The course exposes students to classical and molecular genetics and demonstrates how these two approaches can combine to examine complex problems. The lecture is strongly weighted toward teaching students to solve genetic and molecular biological problems. Classical genetic principles are introduced first. Students are then presented with the techniques to examine underlying genetic principles through problem solving. Basic principles and techniques of molecular biology are next presented, and students learn how to apply these techniques to explore genetic problems. The laboratory gives the students hands-on experience in a number of genetic and molecular techniques and demonstrates how these procedures are combined to produce a cohesive genetic picture. Experiments begin with classical genetic analysis of a mutation, progress to isolating the mutant gene by PCR and standard cloning techniques, followed by DNA sequencing the genomic fragments to determine the nature of the genetic defect. Immunolocalization of the protein

in mutant and wild-type flies brings the molecular work back to the organism, providing a full-circle study of the genetic mutation under study. At the end of the lab, students are ready for the independent study projects conducted in the laboratory for BIOS 20241, Molecular Cell Biology. Fall.

### **BIOS 20303. Fundamentals of Genetics**

(3-0-3) Besansky; Severson

*Prerequisite:* BIOS 10161 OR BIOS 20201

An elementary course dealing with the principles of variation and inheritance in plants and animals, with special reference to humans. Designed primarily for junior preprofessional students. Spring.

### **BIOS 21201. General Biology A Laboratory**

(0-3-1) Lewis

*Prerequisite:* BIOS 20201 (MAY BE TAKEN CONCURRENTLY)

Materials covered in laboratory parallel the lecture material for the most part.

### **BIOS 21202. General Biology B Laboratory**

(1-0-1) Lewis

*Prerequisite:* BIOS 20202 (MAY BE TAKEN CONCURRENTLY)

Materials covered in laboratory parallel the lecture material for the most part.

### **BIOS 21241. Molecular Cellular Biology Laboratory**

(0-3-1) Whaley

*Prerequisite:* BIOS 20241 (MAY BE TAKEN CONCURRENTLY)

This cell biology laboratory is a special section only for biology and environmental science majors. It focuses on techniques rather than the investigational experimental approach of BIOS 27241. Note: Prior to Spring 2003, there was a single BIOS 20241 laboratory. See the current description of BIOS 27241 for details of that experimental laboratory.

### **BIOS 21250. Classical and Molecular Genetics Laboratory**

(0-3-1)

*Prerequisite:* BIOS 20250 (MAY BE TAKEN CONCURRENTLY)

*Corequisite:* BIOS 20250

In this laboratory course, students will characterize mutations that cause retinal degeneration in the fruit fly, *Drosophila Melanogaster*, in a series of related experiments comprising a semester-long study. The labs will be broken into two major sections, starting with the genetic characterization of a mutation, followed by the molecular characterization of the altered gene causing that mutation. This directed research project will be presented in two drafts of a complex research paper. Some work outside the 4-hour lab period will be required. Fall.

### **BIOS 21303. Fundamental Genetics Laboratory**

(0-3-1) Besansky; Severson

*Prerequisite:* BIOS 20303 (MAY BE TAKEN CONCURRENTLY)

Laboratory provides experience in genetic experimentation and analysis. Either BIOS 21250 or 31303 is required for biology majors, optional for others. Spring.

### **BIOS 27241. Molecular Cell Biology Laboratory**

(0-V-2) Whaley

*Prerequisite:* BIOS 20241 (MAY BE TAKEN CONCURRENTLY)

This cell biology laboratory, reserved exclusively for BIOS majors, is an investigative, project-based laboratory designed to expose students to a bona fide research experience involving the development and application of critical thinking skills to solve complex research problems. Working in groups of four to six, students will devote themselves to tackling self-chosen research projects reviewed and approved by course instructors. The culmination of the laboratory experience ends when students formally prepare and present their findings in a poster-style scientific meeting. Spring.

### **BIOS 28498. Introduction to Undergraduate Research**

(1-0-1) Whaley

Introduction to research procedures, including basic laboratory methods, design of effective experiments, use of controls and statistics to generate valid data, ethical

concerns relevant to reporting research data, literature searches, and delivery of effective research presentations.

### **BIOS 30301. Embryology**

(3-0-3) Kolberg

*Prerequisite:* (BIOS 10155 AND BIOS 10156) OR (BIOS 10161 AND BIOS 10162) OR (BIOS 20201 AND BIOS 20202)

Overview of the embryology and histology of the developing organism with an emphasis on the clinical aspects. Content similar to BIOS 30342.

### **BIOS 30305. Evolution**

(3-0-3) Hollocher

*Prerequisite:* (BIOS 10162 OR BIOS 20202)

The mechanisms and processes involved in the production of life as we know it today, as well as a discussion on the impact current events may have upon life in the future. Spring.

### **BIOS 30310. The History of Life**

(3-0-3) Feder

*Prerequisite:* (BIOS 10155 AND BIOS 10156) OR (BIOS 10161 AND BIOS 10162) OR (BIOS 20201 AND BIOS 20202)

This course explores the origin, history, and systematics of life on Earth, starting from hypotheses examining life's origin(s) and including current thinking concerning the systematic relationships of organisms and the evolution of humans. The class will be taught primarily from a macroevolutionary perspective. BIOS 30310, therefore, represents the complement to BIOS 30305 (Evolution), which concentrates on processes generating gene frequency changes within populations (i.e., microevolution). Fall.

### **BIOS 30312. General Ecology**

(3-0-3) Hellman; McLachlan; Tank

*Prerequisite:* (BIOS 10162 OR BIOS 20202)

The study of populations and communities of organisms and their interrelations with the environment. Fall and spring.

### **BIOS 30325. Plant Science**

(3-0-3) Romero-Severson

*Prerequisites:* ( (BIOS 20241 OR BIOS 30341 (MAY BE TAKEN CONCURRENTLY) ) AND (BIOS 20250 (MAY BE TAKEN CONCURRENTLY) OR BIOS 20303) ) AND (BIOS 10156 OR BIOS 20201 OR BIOS 20202)

This course for biology majors provides a more detailed examination of plant development, biochemistry, genetics, and ecology than presented in the general and cell biology courses. Specific topics include energy capture and biosynthesis strategies, plant biochemistry, nitrogen fixation, defense mechanisms, plant diversity, plant reproductive strategies, plant genetics, grassland and forest ecology, plant domestication, the ecological impact of plant domestication, and forest management policy. Fall.

### **BIOS 30326. Human Genetics**

(3-0-3) Bender

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 20250 OR BIOS 20303)

Evaluation of human genetics in the light of modern genetic research.

### **BIOS 30338. Neurobiology**

(3-0-3) Li

*Prerequisites:* (BIOS 10161 AND BIOS 10162) OR (BIOS 20201 AND BIOS 20202) AND (BIOS 20241 OR BIOS 30341) AND (BIOS 30344 OR BIOS 30421 OR BIOS 34344)

Neuroscience is a relatively new field. It consists of several quite separate disciplines, for example, neuroanatomy, which studies the structure of neural tissue; neurophysiology, which investigates individual nerve cell properties; neurochemistry, which is concerned with the substances found in brain tissue; and cognitive neuroscience, which deals with higher brain function. This course

will discuss all of these issues. Topics will include nerve cell function (i.e., electric and chemical synapses, neurotransmitters, and neural control of locomotion) and cognition (i.e., perception, learning, and memory). By the end of the course, students will be expected to understand our current knowledge of how the brain controls our actions and behaviors.

### **BIOS 30341. Cellular Biology**

(3-0-3) Hager, D'Souza-Schorey

*Prerequisites:* ( (BIOS 10161 OR BIOS 20201) ) AND ( (CHEM 20223 OR CHEM 20235) OR CHEM 10172 OR CHEM 10182 )

Designed primarily for junior preprofessional students. Structural and functional aspects of the biology of cells are addressed. Fall and spring.

### **BIOS 30342. Developmental Biology**

(3-0-3) Hinchcliffe

*Prerequisites:* (BIOS 10161 AND BIOS 10162) OR (BIOS 20201 AND BIOS 20202) AND (BIOS 20241 OR BIOS 30341) AND (BIOS 30344 OR BIOS 30421 OR BIOS 34344)

Development of plants, animals, and microorganisms studied at the molecular, cellular, and organismic levels.

### **BIOS 30344. Vertebrate (Human) Physiology**

(3-0-3) Boyd; Duffield

*Prerequisites:* ( (BIOS 10161 OR BIOS 20201) ) AND ( (BIOS 10162 OR BIOS 20202) ) AND ( (CHEM 20223 OR CHEM 20235 OR CHEM 10172) OR CHEM 10182 )

Physiological functions and processes at the level of organs and organ systems, oriented primarily toward humans. Designed primarily for junior preprofessional students. Fall and spring.

### **BIOS 30401. Principles of Microbiology**

(3-0-3) Kulpa

*Prerequisites:* (CHEM 10122 OR CHEM 10172 OR CHEM 10182) AND (BIOS 10155 OR BIOS 10156 OR BIOS 20201 OR BIOS 20202)

An introduction to microbial life, including structure and function of bacteria. Characterization and classification of microorganisms are considered and include their ecology, growth and death, metabolism, physiology, genetics and antigenic analysis. The impact of microorganisms on human health is discussed through representative pathogenic bacteria. Fall.

### **BIOS 30404. Vertebrate Biology**

(3-0-3) Filchak

*Prerequisite:* (BIOS 10156 OR BIOS 10162 OR BIOS 20202 OR BIOS 20201)

A study of systematic relationships, evolution, and life histories of living and extinct vertebrates, and the physiology and behavior of living vertebrates. Fall.

### **BIOS 30406. General Entomology**

(3-0-3) Collins

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 10162 OR BIOS 20202)

A study of the morphology, life histories, and systematic relationships of insects, with emphasis on medical and agricultural aspects. Alternating fall semesters.

### **BIOS 30407. Animal Behavior**

(3-0-3) Esch

*Prerequisite:* (BIOS 10162 OR BIOS 20202)

A consideration of individual and social behavior patterns, with emphasis on organization and adaptive significance. Neural, endocrine, genetic, and environmental factors modifying behavior will be examined. Spring.

### **BIOS 30408. Arthropods and Human Disease**

(3-0-3) Collins

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 10162 OR BIOS 20202)

Emphasis on physiology, genetics, and relationships of arthropods as agents and vectors of disease. Alternating spring semesters.

### **BIOS 30418. Molecular Genetics**

(3-0-3)

*Prerequisites:* (BIOS 20250 OR BIOS 20303) AND (CHEM 20273 OR CHEM 20283 OR CHEM 40420) AND (BIOS 10155 OR BIOS 10156 OR BIOS 20201 OR BIOS 10161 OR BIOS 10162)

The course will introduce the tools of modern molecular biology and explore their applications at the frontiers of biological research. Advanced topics may include molecular medicine, biotechnology, development, evolution, and neurobiology. Fall.

### **BIOS 30420. Aquatic Ecology**

(3-0-4) Hellenthal

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 10162 OR BIOS 20202)

*Corequisite:* BIOS 31420

A study of the structure and function of aquatic systems with emphasis on the behavioral, physiological and morphological adaptations generated by the physical and chemical characteristics of various aquatic habitats. Fall.

### **BIOS 30421. Integrative Comparative Physiology**

(4-0-4) Duman; Johnson

*Prerequisites:* BIOS 20241 AND BIOS 20250

Designed primarily for students in the biology or biochemistry major sequences. This course is designed to be taken either as an introductory animal physiology course for students without formal training in physiology beyond general biology or as a second physiology course for students who have already taken BIOS 30344. General physiological principles are introduced, and the course is designed around the classical organ/system approach to physiology but with stress on comparative and evolutionary relationships. Emphasis is placed on the integrated nature of the various physiological systems and on the relationships of the physiology of the organism to its environment (physiological ecology) as well as to the lower levels of biological hierarchy (biochemistry, cell, and molecular biology). Special emphasis is placed on adaptations to environmental extremes. This course has four lectures per week. Spring.

### **BIOS 30422. Marine Biology**

(3-0-3) Gerrish

*Prerequisite:* (BIOS 10162 OR BIOS 20202)

Examination of the organisms of the ocean and the interrelationships with the physical, geological, and chemical factors of their environment.

### **BIOS 30423. Genomics: Sequence to Organism**

(3-0-3) Ferdig

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 10162 OR BIOS 20202) AND (BIOS 20250 OR BIOS 20303)

This course will introduce the methods of genome science and explore their applications in biological research and their impact on biological thinking. Topics will include how genomes are studied, how they function, and how they evolve. The importance of comparative and functional genomics in identifying mechanisms of human diseases will be highlighted. Spring.

### **BIOS 30475. Laboratory Animal Science**

(2-0-2) Stewart

*Prerequisite:* (BIOS 10155 OR BIOS 10156 OR BIOS 20201 OR BIOS 10161 OR BIOS 10162)

An introduction to laboratory animal science, focusing on federally mandated regulations, animal rights/animal welfare controversies, general care and use of animals in a full-compliance program, and common methodologies used in animal-based research. Enrollment is by consent of instructor only and limited to junior or senior undergraduate pre-veterinary students, or biology majors whose graduate career program will require animal use, or graduate students whose research requires animal use at Notre Dame. Spring.

### **BIOS 30568. Introduction to UNDERC**

(1-0-1) Belovsky

Open only to students previously accepted into the UNDERC program. Spring.

### **BIOS 31312. General Ecology Laboratory**

(0-1-1) Chaloner

*Prerequisite:* BIOS 30312 (MAY BE TAKEN CONCURRENTLY)

General ecology laboratory is to be taken concurrently with the general ecology lecture. Students may not take lecture alone or laboratory alone.

### **BIOS 31341. Cell Biology Laboratory**

(0-3-1) Veselik

*Prerequisite:* (BIOS 20241 OR BIOS 30341 (MAY BE TAKEN CONCURRENTLY) )

This laboratory course exposes students to a variety of techniques in modern cell biology. Students will get hands-on experience in working with cultured cell lines, including sterile technique, media preparation, and passaging of cells. Individual experiments will include assessment of cell growth and apoptosis, examination of subcellular structure using fluorescent microscopy, separation and analysis of nucleic acids and proteins, enzyme assays, and measurement of cell cycle by flow cytometry. It provides an excellent introduction to the approaches routinely used in analysis of cells and their functions. Fall.

### **BIOS 31401. Principles of Microbiology Lab**

(0-3-1) Kulpa

*Prerequisites:* (BIOS 30401 (MAY BE TAKEN CONCURRENTLY) ) AND (BIOS 10162 OR BIOS 20202 OR BIOS 30401)

Laboratory exercises consider basic techniques in microbiology such as sterile procedures and microbial metabolism. Fall.

### **BIOS 31406. General Entomology Laboratory**

(0-3-1) Collins

*Prerequisites:* (BIOS 30406 (MAY BE TAKEN CONCURRENTLY) ) AND (BIOS 10161 OR BIOS 10162 OR BIOS 20201)

The laboratory introduces students to insect morphology, systematics, and techniques used in the study of insects. Offered concurrently with lecture.

### **BIOS 31408. Medical and Veterinary Entomology Laboratory**

(0-3-1) Collins

*Prerequisite:* BIOS 30408 (MAY BE TAKEN CONCURRENTLY)

The laboratory introduces students to the variety of arthropods that vector disease agents or otherwise affect the lives of humans and other vertebrate animals. Offered concurrently with lecture.

### **BIOS 31420. Aquatic Ecology Laboratory**

(0-3-0) Hellenthal

*Prerequisite:* (BIOS 10162 OR BIOS 20202)

*Corequisite:* BIOS 30420

Aquatic ecology laboratory is to be taken concurrently with the aquatic ecology lecture. Students may not take lecture alone or laboratory alone.

### **BIOS 31421. Integrative Comparative Physiology Laboratory**

(0-3-1)

*Prerequisite:* BIOS 30421 (MAY BE TAKEN CONCURRENTLY)

Laboratory provides experience with experimentation and analysis of physiological concepts at the organismal, cellular, and molecular levels. Spring.

### **BIOS 35501. Introduction to UNDERC**

(1-0-1) Belovsky

Open only to students previously accepted into the UNDERC program.

### **BIOS 35502. Practicum in Environmental Field Biology East**

(3-3-6) Belovsky

Practical training in aquatic and environmental biology through lecture and field experience at the University's environmental research facility located in northern

Wisconsin and the upper peninsula of Michigan. Course includes an independent research project. Each student is provided with a \$2,500 stipend, tuition, and expenses. For further information, write Gary Belovsky, Department of Biological Sciences, Notre Dame, IN 46556. Summer.

**BIOS 35503. Practicum in Environmental Biology West**

(V-V-6) Belovsky

*Prerequisite:* BIOS 35502

This course is designed to give the student advanced practical laboratory experience in ecological studies in the grasslands and mountains of western Montana on the Flathead Indian Reservation. The nine-week learning experience consists of one-week modules on grassland ecology, montane ecology, wildlife ecology, and human ecology focusing on ancestral Native American lifeways, and each student conducts an independent research project over the remaining five weeks. Each student is provided with a \$2,500 stipend, tuition, and expenses. For further information, write Gary Belovsky, Department of Biological Sciences, Notre Dame, IN 46556. Summer.

**BIOS 35504. Practicum in Environmental Field Biology III**

(3-0-6) Belovsky

Opportunity to take field classes and conduct an independent research project in University of Puerto Rico programs at the El Verde (rain forest) or Mayaguez (marine) field stations. Participation in this program required students to have first taken the Practicum in Environmental Field Biology "UNDERC East" (BIOS 35502).

**BIOS 35505. Practicum in Field Environmental Biology IV: Coral Reef Ecology**

(0-2-2) Gerrish

*Prerequisite:* (BIOS 30422 OR BIOS 35502)

This course will consist of a 15-day trip (from late December to mid-January) to Belize to study the Pan-American coral reef habitat and, upon returning, weekly seminar meetings for the first four weeks of spring semester to discuss primary literature and compose a final paper relating to field projects from the off-campus trip. Students must have a valid passport; other requirements for international travel as set by the University must be followed.

**BIOS 35568. UNDERC Field Studies—Academic Year**

(V-V-V) Belovsky

BIOS 35568 and the companion summer course, BIOS 35569, provide students with the opportunity for extended field studies in the UNDERC environment.

**BIOS 37491. Teaching Practicum in the Life Sciences**

(0-0-0) Grimstad

Same as BIOS 37495 except that students who are registered for this section are paid as undergraduate teaching assistants; this section is not graded and no academic credit is given.

**BIOS 37492. Teaching Practicum in the Life Sciences**

(0-0-0) Grimstad

Same as BIOS 37495 except that this is an S/U-graded zero-credit section.

**BIOS 37493. Teaching Practicum in the Life Sciences**

(V-0-V) Grimstad

Same as BIOS 37495 except that this is an S/U variable credit section; 2.0 maximum credits allowed.

**BIOS 37494. Teach Practicum/Life Sciences**

(V-0-V) Grimstad

Same as BIOS 37495 except that this is a letter-graded variable credit section; 2.0 maximum credits allowed.

**BIOS 37495. Teaching Practicum in Life Sciences**

(2-0-2) Grimstad

This course gives the advanced student an opportunity to gain direct experience in teaching. Students are assigned regular teaching duties in certain laboratory courses and must be prepared to accept responsibility. Note: Most states will not accept this in lieu of practice teaching in an education department. Students must clear lab assignments with each section's practicum coordinator. Fall and spring.

**BIOS 37671. Special Studies**

(V-V-V) Grimstad

Special topics in the field of interest for individual or small groups of undergraduate students or for one-time introduction of new course materials will be covered. Spring. Repeatable course.

**BIOS 37672. Special Studies**

(V-V-V) Grimstad

Special topics in the field of interest for individual or small groups of undergraduate students or for the one-time introduction of new course materials will be covered. Spring. Repeatable course.

**BIOS 38499. Molecular and Cellular Biology Research and Design Laboratory**

(0-2-2) Veselik

*Prerequisites:* (BIOS 10161 or BIOS 20201) and (CHEM 10172 or CHEM 10182 or CHEM 20223) or two semesters of general biology with labs and two semesters of general chemistry with labs or one semester of general chemistry with lab and one semester of organic chemistry with lab for non-Notre Dame science students.

This course is for science majors only and counts a science credit. It satisfies one of the six required laboratory courses for BIOS majors at Notre Dame. This special laboratory course exposes students to a variety of techniques in modern cell biology while participating in an undergraduate research project. Students will get hands-on experience in working with cultured cell lines, including sterile technique, media preparation, and passaging of cells. Individual experiments will include assessment of cell growth and apoptosis, examination of subcellular structure using fluorescent microscopy, separation and analysis of nucleic acids and proteins, enzyme assays, and measurement of cell cycle by flow cytometry. Students will gain experience with reviewing scientific literature, data presentation, statistical analysis, data interpretation, and ethical concerns relevant to reporting research data. Additional outside work in terms of literature review, writing of reports, papers and preparing oral presentations will be necessary.

**BIOS 40320. Aquatic Conservation: Global Freshwaters, Science and Policy**

(3-0-3) Lodge

*Prerequisites:* (BIOS 20201 AND BIOS 20202) OR (BIOS 10161 AND BIOS 10162) AND (BIOS 30312 OR BIOS 30420)

This course is designed for advanced undergraduates with a background in ecology and/or environmental science. The first primary goal will be to read, discuss, and write about the main ongoing global environmental changes that affect the global water cycle, including regional water quality and water availability. The second primary goal will be to have students examine how the current scientific understanding of these issues has or has not been incorporated into regional, national, and international policy, including policies on water rights. Guest lecturers will be broadly drawn from the research, legal, and NGO fields. There will be a textbook, supplemented by readings from the primary literature and other sources. Fall or spring.

**BIOS 40339. Human Gross Anatomy**

(3-0-3) O'Malley

See BIOS 40340; BIOS 40399 shares the identical lecture section with BIOS 40340, however, this is a non-lab, lecture-only section of human gross anatomy. Students may not take both BIOS 40399 and BIOS 40340.

**BIOS 40340. Human Anatomy**

(3-0-4) O'Malley

*Corequisite:* BIOS 41340

The course will consist of a description of human gross anatomy. The content will be organized as a regional approach to gross human anatomy with descriptions of the back, thorax, abdomen, pelvis and perineum, lower limb, upper limb, and head and neck. Within each region, subtopics will include bones, ligaments, muscles, vasculature, lymphatics, peripheral nervous system, and regional viscera. The content emphasis will be basic human anatomy, although there will be a moderate amount of clinical anatomy. The required laboratory portion of the course will consist of regional dissection of partially dissected human cadavers, as well as identification of structures of previously dissected human cadavers. The course should serve as a foundation for students planning future human anatomy studies and/or an independent elective. Spring.

**BIOS 40342. Advanced Developmental Biology**

(3-0-3) Schulz

*Prerequisites:* (BIOS 10162 OR BIOS 20202) AND (BIOS 20250 OR BIOS 20303) AND (BIOS 20241 OR BIOS 30341) AND (BIOS 30344 OR BIOS 34344) AND BIOS 30342

Development of plants, animals, and microorganisms studied at the molecular, cellular, and organismic levels. BIOS 40342 is taught at a higher level in contrast to BIOS 30342. Spring.

**BIOS 40411. Biostatistics**

(V-0-V) Chaloner; Lamberti

*Prerequisites:* (BIOS 10162 OR BIOS 20202) AND (MATH 10360 OR MATH 10560 OR MATH 10860 OR MATH 10460)*Corequisite:* BIOS 42411

Basic principles of statistical analysis and their application to biological problems, including statistical inference, analysis of variance, regression, non-parametric approaches, and introduction to statistical computing. This course's "lab" is a tutorial; it does not fulfill the laboratory elective requirement (after 1993). Students may not take both BIOS 40411 and MATH 20340. Spring.

**BIOS 40415. Medical and Veterinary Parasitology**

(3-0-3) Robichaud

*Prerequisite:* (BIOS 10161 AND BIOS 10162) OR (BIOS 20201 AND BIOS 20202)

The animal parasites of humans and related hosts are reviewed. The pathology caused by these parasites, epidemiology, life cycles, prophylactic and therapeutic control are considered. Spring.

**BIOS 40416. Virology**

(3-0-3) Fraser

*Prerequisites:* (BIOS 20250 OR BIOS 20303) AND (BIOS 20241 OR BIOS 30341) AND (BIOS 21250 OR BIOS 21303) AND (BIOS 31341 OR BIOS 27241)

A study of viruses as primitive biological entities and as disease-inducing agents in humans and other animals: characteristics of viruses and virus infections; molecular aspects of virus replication; methods for diagnosis and prevention of infections; artificial use of viruses. Spring.

**BIOS 40417. Human Musculoskeletal Anatomy**

(3-0-3) O'Malley

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 10162 OR BIOS 20202)

An introduction to basic anatomical principles relating to bones and muscles and to the normal anatomical and biochemical aspects of the human musculoskeletal system. Fall.

**BIOS 40419. Immunology**

(3-0-3) McDowell

*Prerequisites:* (BIOS 10161 OR BIOS 20201) AND (BIOS 10162 OR BIOS 20202) AND (BIOS 20250 OR BIOS 20303) AND (BIOS 20241 OR BIOS 30341)

An introductory course emphasizing the cells and tissues of the immune system and the nature and function of antigens and antibodies. A survey is presented of immune capabilities of humans and animals, immune diseases, immunodeficiency states, transplantation of organs, and the influence of nutrition on the immune system. Fall.

**BIOS 40421. Integrative Comparative Physiology Lab**

(4-0-4) Duman

*Prerequisites:* (BIOS 20250 AND BIOS 20241)

Designed primarily for students in the biology or biochemistry major sequences.

This course is designed to be taken either as an introductory animal physiology course for students without formal training in physiology beyond general biology or as a second physiology course for students who have already taken BIOS 30344. General physiological principles are introduced, and the course is designed around the classical organ/system approach to physiology but with stress on comparative and evolutionary relationships. Emphasis is placed on the integrated nature of the various physiological systems and on the relationships of the physiology of the organism to its environment (physiological ecology) as well as to the lower levels of biological hierarchy (biochemistry, cell, and molecular biology). Special emphasis is placed on adaptations to environmental extremes. This course has four lectures per week. Spring.

**BIOS 40424. Tumor Cell Biology**

(3-0-3)

*Prerequisites:* ( (BIOS 10155 OR BIOS 10156) OR BIOS 20201 OR BIOS 10161 OR BIOS 10162 ) AND ( (BIOS 20250 OR BIOS 20303 ) AND ( (BIOS 20241 OR BIOS 30341 )

Overview of the cancer development process at the cellular and molecular level, including regulatory networks involved in growth control and tissue organization and an introduction to animal, cell, and molecular techniques for studying progression, treatment, and prevention of cancer. Spring.

**BIOS 40425. Mammalogy**

(3-0-4) Cramer

*Prerequisite:* (BIOS 10162 OR BIOS 20202)*Corequisite:* BIOS 41425

This course will explore the rich taxonomic diversity of mammals, and investigate mammalian physiology, ecology, and behavior. Students will use a general text for foundation and implement their learning experience with primary literature.

**BIOS 40428. Practical Public Health Microbiology**

(1.5-4.5-3)

This course provides an exposure to a number of microbiological principles and techniques in public health using case studies to illustrate their application. The course is composed of lecture and laboratory and will provide fundamentals for public health aspects of microbiology and epidemiology, water quality food microbiology and standard techniques in handling and identifying microorganisms.

**BIOS 40435. Cellular and Molecular Basis of Human Disease**

(3-0-3) Schorey

*Prerequisites:* (BIOS 20241 OR BIOS 30341) AND (BIOS 30344 OR BIOS 30421 OR BIOS 34344)

This course will explore the cellular and molecular mechanisms underlying various human diseases. Following an introduction to principles of disease, lectures will focus on recent advances in cellular and molecular aspects of immune responses and inflammation, pathogenic mechanisms, and tumor cell biology (including abnormal growth regulation, invasion and metastasis). Specific examples of human diseases will be utilized to illustrate the concepts of disease-related gene products,

the use of experimental animal models, and the development of novel therapeutic strategies.

### **BIOS 40440. AIDS**

(3-0-3) Fraser

*Prerequisites:* ( (BIOS 10155 AND (BIOS 10156) OR ( (BIOS 10161 AND (BIOS 10162) ) OR ( (BIOS 20201 AND (BIOS 20202) ) AND ( (BIOS 20241 AND (BIOS 27241 OR BIOS 31341) OR ( (BIOS 30341 AND (BIOS 31341) ) AND ( (BIOS 20250 AND (BIOS 21250) ) OR ( (BIOS 20303 AND (BIOS 21303) )

This course will explore the phenomenon of AIDS, including characteristics of the worldwide AIDS pandemic, the virus (HIV) itself, the immune system and HIV, methods of diagnosis, prevention, treatment, and basic epidemiology as it relates to AIDS. This is an advanced course in infectious diseases designed for preprofessional and other interested students. Fall.

### **BIOS 40460. Plant Ecology**

(3-0-3)

*Prerequisite:* BIOS 30312

An overview of ecological principles as they relate to botanical ecosystems.

### **BIOS 40522. GLOBES**

(3-0-3) Hellmann

The GLOBES series of courses offered each semester reflect various areas of life science relevant to multiple disciplines. Students should expect to have a different topic offered every semester under the GLOBES heading. The course is repeatable since potentially every semester the biology topics vary. Cross-listed with BIOS 60522.

### **BIOS 40562. Aquatic Insects**

(3-3-4) Hellenthal

*Prerequisites:* (BIOS 30312 OR BIOS 30240) AND (BIOS 41562 (MAY BE TAKEN CONCURRENTLY) )

The taxonomy and ecology of insects having aquatic stages in their life cycles.

### **BIOS 40573. Topics in Ecology**

(3-0-3)

*Prerequisite:* BIOS 30312 OR BIOS 30420

Subject matter changes depending on students' needs. Prospective subjects include systems analysis in ecology or biogeography. (On demand)

### **BIOS 41340. Human Anatomy Laboratory**

(0-2-0) O'Malley

*Corequisite:* BIOS 40340

See BIOS 40340 for lab description. Lab is required of all students.

### **BIOS 41344. Vertebrate (Human) Physiology Laboratory**

(0-3-1)

*Prerequisite:* (BIOS 30344 OR BIOS 34344)

Laboratory experience in physiology. Ideally, this laboratory is taken *after* students have completed the BIOS 30344 lecture. Fall.

### **BIOS 41415. Medical and Veterinary Parasitology Laboratory**

(0-3-1) Robichaud

*Prerequisite:* BIOS 40415 (MAY BE TAKEN CONCURRENTLY)

The laboratory introduces students to the microscopic world of parasites. Extensive microscope work is needed. Spring, on demand.

### **BIOS 41417. Anatomy Laboratory**

(0-3-1) O'Malley

*Prerequisite:* BIOS 20201 OR (BIOS 10156 OR BIOS 20202)

*Corequisite:* BIOS 40417

This lab is available by special arrangement with the instructor and is designed primarily for physical therapy intents. The focus is on musculoskeletal anatomy and should NOT be considered a substitute for a general anatomy laboratory.

### **BIOS 41421. Integrative Comparative Physiology Lab**

(0-1-1) Duman; Johnson

Laboratory provides experience with experimentation and analysis of physiological concepts at the organismal, cellular, and molecular levels. Spring.

### **BIOS 41425. Mammalogy Laboratory**

(0-3-0) Cramer

*Corequisite:* BIOS 40425

In conjunction with mammalogy lecture, this course will provide a hands-on experience in the study of mammals, including how to capture and identify mammals, some unique aspects of mammalian physiology, and use of the scientific method to understand mammalian ecology and behavior.

### **BIOS 41475. Laboratory Animal Science Laboratory**

(2-0-2) Stewart

*Prerequisite:* BIOS 30475

This course focuses on experimental techniques and methodologies in both laboratory and clinical settings. Students will divide their laboratory time between hands-on work in the animal facility and clinical experience in area veterinary clinics when possible. Enrollment is by consent of instructor only and limited to senior undergraduate pre-veterinary students, or senior biology majors whose graduate research program will require animal use at Notre Dame. Every student will be required to keep a complete notebook and develop a semester journal project or case study. Fall.

### **BIOS 41562. Aquatic Insects Laboratory**

(0-3-0) Hellenthal

*Corequisite:* BIOS 40562

The taxonomy and ecology of insects having aquatic stages in their life cycles. (Spring, on demand)

### **BIOS 42411. Biostatistics Tutorial**

(0-1-0) Chaloner; Lamberti

*Corequisite:* BIOS 40411

The biostatistics tutorial is to be taken concurrently with the lecture. Students may not take lecture alone or the tutorial alone.

### **BIOS 46497. Directed Readings**

(0-0-V) Grimstad

This course provides the opportunity for independent study through readings on specific topics in biological science. Readings are chosen with the advice of the supervising instructor. Students may not register for more than three credits per semester; only two credits per semester may be counted as BIOS elective credits by majors. Offered all semesters.

### **BIOS 48498. Undergraduate Research**

(0-0-V)

Research in collaboration with members of the faculty. Evaluation of performance will be accomplished through regular discussions with the faculty member in charge of the course. Enrollment must be completed before the end of the first week each semester. Students may not register for more than three credits per semester; only two credits per semester may be counted as BIOS elective credits by majors. Offered all semesters.

### **BIOS 50543. Ethics and Science**

(3-0-3) Shrader-Frechette

Use of four ethical theories and five classical logical/analytical criteria to ethically evaluate case studies in contemporary science. Problems analyzed via contemporary science include practical issues of plagiarism, attribution, peer reviewing, data sharing, data ownership, collaborative science, scientific misconduct, paternalism, whistle blowing, conflicts of interest, secrecy in science, and advocacy in science. Methodological issues to be dealt with include scientists misrepresenting their opinions with confirmed science, cooking and trimming their data, failure to attend to the purposes for which their research may be used or misused, and scientists' use of evaluative presuppositions, questionable inferences and default

rules, question-begging validation and benchmarking, and misleading statistics. On demand.

#### **BIOS 50544. Environmental Justice**

(3-0-3) Shrader-Frechette

This course will survey environmental impact assessment (EIA), ecological risk assessment (ERA), and human-health risk assessment (HHRA); and ethical and methodological issues related to these techniques; then apply these techniques to contemporary assessments for which state and federal governments are seeking comments by scientists and citizens. Cross-listed with PHIL 43308. This course counts as a general elective credit only for students in the College of Science.

#### **BIOS 50545. Bio-Medical Ethics, Scientific Evidence and Public Health Risk**

(3-0-3) Shrader-Frechette

The course will survey ethical and scientific issues associated with current public health problems such as pollution-induced cancers, occupational injury and death, and inadequate emphasis on disease prevention, nutrition, and environmental health. This course does not count as science credit for College of Science undergraduate majors. Cross-listed with PHIL 43708. This course counts as a general elective credit only for students in the College of Science.

## Department of Chemistry and Biochemistry

### **CHEM 10101. Foundations of Chemistry**

(3-0-3)

This course covers forms, properties, and separation of matter; atomic structure and periodicity; nuclear chemistry; chemical bonding and structure; reactivity with applications to acid-base and oxidation-reduction reactions; and chemistry of carbon and living systems. This course is not open to students who have taken the equivalent of CHEM 10171 or 10181.

### **CHEM 10102. Chemistry, Environment, and Energy**

(3-0-3)

Chemistry of the atmosphere, hydrosphere, and lithosphere; agricultural chemistry and pesticides; food and drugs; hazardous and solid wastes; and recycling. Fossil fuels; nuclear, solar, geothermal, and other types of energy. This course is not open to students who have taken the equivalent of CHEM 10171 or 10181.

### **CHEM 10104. Forensic Chemistry**

(2-3-3)

This 3-credit course introduces non-science majors to aspects of chemistry and biochemistry as applied to law enforcement. Topics include legal and scientific standards of proof, biometrics, drug detection, crime scene investigation, case studies, and guest speakers. Students do several lab experiments using modern analytical instrumentation.

### **CHEM 10122. General Chemistry: Fundamental Principles and Biological Processes**

(3-0-3)

*Prerequisite:* (CHEM 10171 OR CHEM 10181 OR CHEM 10121)

This one-semester course (taught in spring semester) completes the two-semester chemistry sequence for most engineering students. Fundamental principles of chemistry are woven into key themes of modern biology, including protein structure and function, gene structure and manipulation, and the basics of biotechnology. Emphasis is placed on common themes rather than biological details, and examples are drawn from biological systems of interest to engineers.

### **CHEM 10171. Introduction to Chemical Principles**

(4-0-4)

*Corequisite:* CHEM 11171; CHEM 12171

This one-semester course, offered in the fall, provides a thorough grounding in the fundamental principles governing chemical structure and reactivity. It is accompanied by laboratory work and by a tutorial section. Topics to be discussed include the quantum mechanical structure of atoms, models of chemical bonding, chemical equilibrium, acidity and basicity, and thermochemistry and thermodynamics. Recommended for students in the College of Engineering, College of Science, and for all preprofessional students.

### **CHEM 10172. Organic Structure and Reactivity**

(4-0-4)

*Prerequisite:* CHEM 10171 OR CHEM 10181

*Corequisite:* CHEM 11172; CHEM 12172

This class, generally taught in the spring, is the first semester of a two-semester organic chemistry sequence intended for students in biological sciences and preprofessional studies. It is accompanied by laboratory work and by a tutorial section. The course provides a solid foundation in organic structure and bonding, spectroscopy, and Lewis acid/base reactions. These concepts are then applied to understand substitution and elimination reactions with a focus on mechanism and factors governing selectivity. A section of this course, taught in the fall semester, is intended for chemical engineering students and does not include a tutorial.

### **CHEM 10181. Introduction to Chemical Principles**

(4-0-4)

*Corequisites:* CHEM 11181; CHEM 12181; MATH 10550

This course provides a thorough grounding in the fundamental principles governing chemical structure and reactivity. Topics to be discussed include the quantum mechanical structure of atoms, models of chemical bonding, chemical equilibrium, acidity and basicity, and thermochemistry and thermodynamics. Recommended for students with a special interest in the subject, especially those intending to major in chemistry or biochemistry. Lectures will be supplemented with a weekly tutorial session.

**CHEM 10182. Organic Structure and Mechanism**

(4-0-4)

*Prerequisite:* CHEM 10171 OR CHEM 10181

*Corequisite:* CHEM 11182; CHEM 12182

Basic principles of organic chemistry, including fundamental aspects of organic and biological structures and bonding, stereochemistry, the effect of structure on physical and chemical properties, and applications of spectroscopic methods to assign structures. A detailed analysis of organic chemical reactivity, including reactive intermediates and mechanistic principles. Introductory applications of reactions in synthesis. Intended primarily for chemistry and biochemistry majors. Lectures will be supplemented with a weekly tutorial session.

**CHEM 11171. Introduction to Chemical Principles Laboratory**

(0-3-0)

*Corequisite:* CHEM 10171; CHEM 12171

This lab involves experimental work to accompany CHEM 10171 lecture.

**CHEM 11172. Organic Structure and Reactivity Laboratory**

(0-3-0)

*Corequisite:* CHEM 10172

Experimental work to accompany CHEM 10172.

**CHEM 11181. Introduction to Chemical Principles Laboratory**

(0-3-0)

*Corequisite:* CHEM 10181; CHEM 12181

A laboratory to accompany CHEM 10181 that will stress quantitative measurements.

**CHEM 11182. Organic Structure and Mechanism Laboratory**

(0-3-0)

*Corequisite:* CHEM 10182

A laboratory to accompany CHEM 10182 that will emphasize fundamental organic techniques.

**CHEM 12171. Introduction to Chemical Principles Tutorial**

(1-0-0)

*Corequisite:* CHEM 10171; CHEM 11171

Tutorial section to accompany CHEM 10171.

**CHEM 12172. Structure and Reactivity tutorial**

(1-0-0)

*Corequisite:* CHEM 10172; CHEM 11172

Tutorial section to accompany CHEM 10172.

**CHEM 12181. Introduction to Chemical Principles Tutorial**

(1-0-0)

*Corequisite:* CHEM 10181

Tutorial that accompanies CHEM 10181.

**CHEM 12182. Organic Structure and Mechanism - Tutorial**

(1-0-0)

*Corequisite:* CHEM 10182

Tutorial that accompanies CHEM 10182.

**CHEM 20204. Environmental Chemistry**

(3-0-3)

Discussion of basic chemical processes occurring in the environment, particularly those relating to the impact of humanity's technological enterprise.

**CHEM 20262. Mathematical Methods for the Chemical Sciences**

(3-0-3)

*Prerequisite:* MATH 10560

This course provides chemistry and biochemistry majors with mathematical background, chemical context, and problem-solving methods for problems that involve differential equations, linear algebra, and probability and statistics.

**CHEM 20273. Organic Reactions and Applications**

(3-0-3)

*Prerequisite:* (CHEM 10172 OR CHEM 10182 OR CHEM 20223)

A second semester covering the basic principles of organic chemistry, including structure, bonding, physical and chemical properties, reactive intermediates, and reaction mechanisms. Additional emphasis on applications of reactions in synthesis and relationships to biochemical systems and other associated areas of current interest. Intended primarily for preprofessional and biological science majors. This course is generally taken in the Fall semester with the laboratory CHEM 21273. A section is offered in the spring semester for chemical engineering students.

**CHEM 20274. Chemistry Across the Periodic Table**

(3-0-3)

*Prerequisite:* CHEM 20273 OR CHEM 20283

Chemistry course that completes the two-year chemistry sequence for students in the College of Science, Chemical Engineering, and preprofessional students. Extends principles of chemistry with an in-depth look at the periodic table and an emphasis on bioinorganic chemistry. Topics include bonding across the periodic table, chemistry of the s and p block elements, d-block elements and coordination chemistry, and kinetics, catalysis, and redox/electrochemistry with applications to biological systems. This course is generally taken in the spring semester with the laboratory CHEM 21274.

**CHEM 20283. Organic Reactions and Applications**

(3-0-3)

*Prerequisite:* (CHEM 10172 OR CHEM 10182)

*Corequisite:* CHEM 21283

A second semester covering the basic principles of organic chemistry, including structures, bonding, physical and chemical properties, reactive intermediates, and reaction mechanisms. Additional emphasis on applications of reactions in synthesis and relationships to biochemical systems and other associated areas of current interest. Intended primarily for chemistry and biochemistry majors.

**CHEM 20284. Chemistry Across the Periodic Table**

(3-0-3)

*Prerequisite:* CHEM 20273 OR CHEM 20283

*Corequisite:* CHEM 21284

This course will extend general principles with an in-depth view of the rest of the periodic table. Topics covered include bonding across the periodic table, chemistry of the s- and p-blocks, d-block and coordination chemistry, as well as chemical reactivity, kinetics, catalysis, and redox/electrochemistry.

**CHEM 21273. Organic Reactions and Applications Laboratory**

(0-3-1)

*Prerequisite:* (CHEM 11172 OR CHEM 11182 OR CHEM 21223)

Experiments to accompany CHEM 20273.

**CHEM 21274. Chemistry Across the Periodic Table Laboratory**

(0-3-1)

*Prerequisite:* (CHEM 10172 OR CHEM 10182)

*Corequisite:* CHEM 20274

Experiments to accompany CHEM 20274.

**CHEM 21283. Organic Reactions and Applications Laboratory**

(0-3-1)

*Corequisite:* CHEM 20283

A laboratory to accompany CHEM 20283 that will emphasize organic techniques and synthesis.

**CHEM 21284. Chemistry Across the Periodic Table Laboratory**

(0-3-1)

*Corequisite:* CHEM 20284

A laboratory to accompany CHEM 20284 emphasizing inorganic synthesis and studies of chemical reactivity.

**CHEM 23201. Chemistry Seminar**

(1-0-1)

To be taken either semester of the sophomore through senior years. Introduction to the communication of scientific knowledge.

**CHEM 23202. Chemistry Seminar**

(1-0-1)

To be taken either semester of the sophomore through senior years. Introduction to the communication of scientific knowledge.

**CHEM 23212. Biochemistry Seminar**

(1-0-0)

A zero-credit seminar course offered in the fall term for sophomore biochemistry majors only. The seminar seeks to acquaint the biochemistry majors with (1) the biochemistry faculty members; (2) the types of research programs in biochemistry that are being carried out in the department; and (3) some general biochemistry concepts. Each meeting will be conducted by a different member of the biochemistry faculty.

**CHEM 30321. Physical Chemistry I**

(3-0-3)

*Prerequisite:* (CHEM 20262 AND PHYS 10320)

A rigorous course in the fundamentals of physical chemistry, including chemical thermodynamics, kinetics, quantum mechanics, and the elements of atomic and molecular structure.

**CHEM 30322. Physical Chemistry II**

(3-0-3)

*Prerequisite:* CHEM 30321

For science majors only. Second semester of Physical Chemistry. A rigorous course in the fundamentals of physical chemistry, including chemical thermodynamics, kinetics, quantum mechanics, and the elements of atomic and molecular structure.

**CHEM 30324. Physical Chemistry for Engineers**

(3-0-3)

*Prerequisites:* (CHEM 10121 OR CHEM 10171 OR CHEM 10181 OR CHEM 10118) AND (PHYS 10320)

A course in the fundamentals of physical chemistry, emphasizing theoretical and experimental aspects of reaction kinetics, an introduction to quantum theory, and a critical appreciation of the nature of the chemical bond. The course also explores how spectroscopic techniques allow us to gain insight into the structure and properties of molecules.

**CHEM 30331. Chemistry in Service of the Community**

(1-0-1)

*Prerequisite:* (CHEM 30333 (MAY BE TAKEN CONCURRENTLY) )

Addressing the problem of lead contamination in the community, students will visit area homes and collect paint, dust, and soil samples. After analyzing these samples in CHEM 31333, students will help homeowners reduce the health risks associated with exposing young children to lead.

**CHEM 30333. Analytical Chemistry I**

(3-0-3)

*Prerequisite:* (CHEM 10182 OR CHEM 10172)*Corequisite:* CHEM 31333

Introduction to the principles, theory, and applications of analytical chemistry. Course covers modern methods for separation of mixtures, quantitative and qualitative analysis, and trace analysis.

**CHEM 30337. Physical Chemistry for the Life Sciences**

(3-0-3)

*Prerequisite:* (CHEM 20274 OR CHEM 20284)

Introduction to the fundamental principles of physical chemistry with application to modern biological problems. Emphases will include classical and statistical thermodynamics and a survey of biological spectroscopy.

**CHEM 30341. Fundamentals of Biochemistry**

(3-0-3)

*Prerequisite:* (CHEM 20273 OR CHEM 20283)*Corequisite:* CHEM 31341

This course is offered for undergraduate biochemistry majors and is generally taken in the junior year. The course covers the basic chemical and physical principles of the primary biomolecules: protein, carbohydrates, lipids, and nucleic acids. The structures and properties of these molecules and their relevance to biological processes will be integrated.

**CHEM 30342. Intermediary Metabolism**

(3-0-3)

*Prerequisite:* CHEM 30341

This course is offered for undergraduate biochemistry majors. The course is a study of the major metabolic processes involving energy storage and utilization, emphasizing the relationships between biomolecular structure and metabolic function. Throughput, regulation, and integration of pathways are presented.

**CHEM 31322. Physical Chemistry Laboratory**

(0-6-2)

*Prerequisite:* CHEM 30321*Corequisite:* CHEM 30322

A course in the experimental aspects of physical chemistry using modern techniques of measurement. The laboratory includes thermodynamic, kinetic measurements, spectroscopic measurements, and measurements in reaction dynamics.

**CHEM 31333. Analytical Chemistry Laboratory**

(0-3-1)

*Corequisite:* CHEM 30333

A laboratory course in the techniques of analytical chemistry.

**CHEM 31341. Fundamentals of Biochemistry Laboratory**

(0-6-2)

*Corequisite:* CHEM 30341

This course is designed to let students explore some of the techniques that are utilized in characterizing proteins, lipids, carbohydrates and nucleic acids. It exposes students to modern biochemical and instrumental methods for elucidating the structural and functional properties of these important types of molecules. Biochemistry majors only.

**CHEM 40420. Principles of Biochemistry**

(3-0-3)

*Prerequisite:* (CHEM 20273 OR CHEM 20283) OR CHEM 20248

A general treatment of the various areas of modern biochemistry including protein structure and function, bioenergetics, molecular basis of genetic and developmental processes, cellular mechanisms, and intermediary metabolism.

**CHEM 40434. Physical Methods of Chemistry**

(3-0-3)

*Prerequisite:* (CHEM 20248 OR CHEM 20284 OR CHEM 20274)

A course in molecular structure examined through the theory and interpretation of spectra. The focus is on infrared spectroscopy, mass spectrometry, nuclear magnetic resonance spectroscopy, and X-ray crystallography, with exposure to other techniques such as two-dimensional NMR, Raman spectroscopy, optical spectroscopy, and electron spin resonance. Spring.

**CHEM 40477. Nanoscience and Technology**

(3-0-3)

This course focuses on the unique scientific phenomena that accrue to matter with characteristic nanometer-scale dimensions and on the technologies that can be constructed from them. Special nanostructures will be addressed.

**CHEM 40480. Chemistry of the Lanthanides and Actinides**

(3-0-3)

*Prerequisites:* CHEM 20274 OR CHEM 20284

This course covers the chemistry of the f-block elements. Topics will include periodic trends, aqueous and environmental chemistry, solid-state chemistry, and physical properties. The course will begin with a brief history of the discovery of these elements. The fundamental knowledge gained early in the course will be applied to the critical problems of nuclear energy production and waste remediation. This will be based mainly on the primary literature.

**CHEM 41443. Advanced Inorganic Chemistry Laboratory**

(0-6-2)

*Prerequisite:* CHEM 40443 (MAY BE TAKEN CONCURRENTLY)

The preparation of main group inorganic, coordination and organometallic compounds, including air-sensitive manipulations and the use of vacuum-line techniques. Characterization of inorganic compounds by spectroscopic and electrochemical methods.

**CHEM 46497. Directed Readings**

(V-0-V)

In-depth study of topics not covered or only briefly covered in other courses. Readings, problems, and reports.

**CHEM 48498. Undergraduate Research**

(0-V-V)

Research in collaboration with members of the faculty. A written progress report must be submitted each semester, and all participating students must make an oral presentation of their work in the spring semester of senior year.

**CHEM 50520. Principles of Biochemistry**

(3-0-3)

This is a new graduate offering, which is essentially the same course as CHEM 40420 but for graduate credit. Description follows: An introduction to the field of biochemistry, including the structure and function of biomolecules, bioenergetics, and the molecular basis of cellular mechanisms including genetics, signalling, and metabolism. Intended for graduate students with no prior biochemistry course experience.

**CHEM 50531. Molecular Biology I**

(3-0-3)

The first of a two-semester sequence that provides an introduction to molecular biology, molecular genetics, and nucleic acid biochemistry. Topics include physical chemistry of nucleic acids, bacterial genetics, principles of cloning, DNA replication and recombination, prokaryotic and eukaryotic transcription, and RNA processing and translation. Listed also as BIOS 60531. (Fall)

**CHEM 50532. Molecular Biology II**

(3-0-3)

*Prerequisite:* (BIOS 60531 OR CHEM 50531)

The second semester of the sequence. Lecture topics include yeast genetics and molecular biology; retroviruses and transposable elements; transgenic mice; and special topics covering cell cycle regulation, oncogenes, development in *Drosophila*,

signal transduction, and cloning of human disease genes. Listed also as BIOS 60532. (Spring)

## Department of Preprofessional Studies

### SCPP 30300. Introduction to Clinical Ethics

(3-0-3) Foster

The focus of the course will be an examination of the advances in medicine over the last 30 years that have challenged traditional values and ethical norms, and the institutional processes and procedures in place that facilitate decision making in the health care setting. It will include a sketch of the most recent advances in the various fields of medicine, followed by an examination of the clinical and ethical questions they raise and how they have affected the physician-patient relationship. Note: This course counts as a general elective. Fall and spring.

### SCPP 30311. Introduction to the American Health Care System

(3-0-3) Navari

The course will begin with a short history of the American health care system and will be followed by a discussion of the major components of the system (patients, providers, payers), health insurance coverage, managed care programs, the movement for quality health care, physicians in the changing medical marketplace, health care expenditures, and academic medical centers. This course counts as a general elective. Fall.

### SCPP 46397. Directed Readings

(V-0-V)

Permission required. Readings focus on learning how patients, families, and health care professionals experience illness and healing; how the stories that patients tell become the basis for diagnosis and therapeutic response; what it's like to go through medical training and grow in identity as a physician; and the nature of the doctor-patient relationship and how it is changing. Fall and spring. Note: This course counts as a general elective.

## Science (Nondepartmental)

### SC 10100. Environmental Geosciences

(3-0-3) Burns

*Prerequisite:* (CHEM 10113 OR CHEM 113) OR (CHEM 10115 OR CHEM 115) OR (CHEM 10117 OR CHEM 117) OR (CHEM 10121 OR CHEM 121) OR (CHEM 10125 OR CHEM 125) OR (CHEM 10126 OR CHEM 126) OR CHEM 10171 OR CHEM 10171

This course introduces the student to Earth processes and focuses on how these processes affect people, and how people affect these processes. The course explores the interactions between Earth's biosphere, geosphere, atmosphere, and hydrosphere, with the objective of demonstrating how our physical environment is controlled by geological, biological, and human forces. SC 10100 and SC 20100 are the same course.

### SC 10101. The Cosmos, the Earth, and the Genome

(3-0-3)

An introduction to the evolution of our universe, from the Big Bang to the human genome. The course will cover major concepts of cosmology, earth science, and evolutionary biology. Emphasis will be placed on not only our current understanding of those fields, but also on how our understanding itself has evolved over time. If taken by science or engineering students, this course counts as general elective credit.

### SC 10190. Seminar on Interdisciplinary Biological Research: Mathematical and Computational Modeling in Biology

(3-0-3)

The goal of this course is to introduce students to the mathematical and computational methods in the field of qualitative and system biology and demonstrate to them the breadths of interdisciplinary activities in this field on the Notre Dame campus. The course will be taught by Mark Alber with the assistance of the members of the Center for the Study of Biocomplexity. Students will be divided into small groups. Each group will be given a project and will be working with senior undergraduates already participating in one of the REU projects and graduate students (mentors). Each group will present its results at the end of the semester. This approach has been already tested in the courses taught by the members of the center. Lectures and visits to biological and computational labs will be complemented by meetings with undergraduate students participating in a variety of research projects on the Notre Dame campus. Students will also participate in an Indiana Biocomplexity Symposium held each April and attend seminars and public lectures organized by the center. Meetings will be also arranged with distinguished speakers visiting Notre Dame.

### SC 13190. Seminar on Interdisciplinary Biological Research: Mathematical and Computational Modeling in Biology

(3-0-3)

The goal of this course is to introduce students to the mathematical and computational methods in the field of qualitative and system biology and demonstrate to them the breadths of interdisciplinary activities in this field on the Notre Dame campus. The course will be taught by Mark Alber with the assistance of the members of the Center for the Study of Biocomplexity. Students will be divided into small groups. Each group will be given a project and will be working with senior undergraduates already participating in one of the REU projects and graduate students (mentors). Each group will present its results at the end of the semester. This approach has been already tested in the courses taught by the members of the center. Lectures and visits to biological and computational labs will be complemented by meetings with undergraduate students participating in a variety of research projects on Notre Dame Campus. Students will also participate in an Indiana Biocomplexity Symposium held each April and attend seminars and public lectures organized by the center. Meetings will be also arranged with distinguished speakers visiting Notre Dame.

**SC 20100. Environmental Geosciences**

(3-0-3) Burns

*Prerequisite:* (CHEM 10113 OR CHEM 113) OR (CHEM 10115 OR CHEM 115) OR (CHEM 10117 OR CHEM 117) OR (CHEM 10125 OR CHEM 125) OR (CHEM 10126 OR CHEM 126) OR CHEM 10171

This course introduces the student to Earth processes and focuses on how these processes affect people, and how people affect these processes. The course explores the interactions between Earth's biosphere, geosphere, atmosphere, and hydrosphere, with the objective of demonstrating how our physical environment is controlled by geological, biological, and human forces.

**SC 20110. Physical Geology (Lecture and Laboratory)**

(3-0-4) Neal

*Corequisite:* SC 21110

An introduction to the Earth and its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, and environmental geology. Lecture and laboratory meetings.

**SC 20120. Historical Geology (Lecture and Laboratory)**

(3-0-4) Rigby

*Prerequisite:* (GEOS 20110 OR GEOS 231) OR (SC 20110 OR SC 231)

*Corequisite:* SC 21120

This course introduces the student to the concept of geologic time, absolute and relative age dating, Earth processes and features through time, and the major features of evolution and distribution of fossils. Lecture and laboratory meetings. A one-day field trip is required.

**SC 20200. Mineralogy and Optical Mineralogy**

(4-0-4) Burns

*Prerequisite:* (CHEM 10118 OR CHEM 118) OR (SC 20110 OR SC 231) OR (ENVG 10110 OR ENVG 131) OR (CHEM 10171)

Crystallography and mineral optics: physical and chemical mineralogy—its application to mineral identification in hand-specimen and using the petrographic microscope.

**SC 21110. Physical Geology Laboratory**

(0-2-0)

*Corequisite:* SC 20110

The laboratory portion of ENVG/SC 20110.

**SC 21120. Historical Geology Laboratory**

(0-2-0)

*Corequisite:* SC 20120

This is the laboratory portion of ENVG/SC 20120.

**SC 21200. Mineralogy and Optical Mineralogy Lab**

(0-2.5-0)

This is the laboratory portion of ENVG 20201.

**SC 30001. Introduction to the Fundamentals of Bioinformatics**

(V-0-V) Sepeta

Bioinformatics is the study of the biological and health sciences with the aid of computers. In particular bioinformatics refers to the analysis of genomes—animal, plant, bacterial, and viral—using software and the Internet. A main impetus for bioinformatics is the recently completed Human Genome Project. Additionally the sequencing of the genome of the mosquito *Anopheles gambiae* by Notre Dame researchers is also a significant event for bioinformatics. Bioinformatics is quickly becoming fundamentally important for understanding diseases and drug development. In this 1-credit-hour basic introduction to bioinformatics, students will search biological databases, compare nucleotide and amino acid sequences, look at protein structure, and more generally ask biological questions with computers.

**SC 30230. Sedimentation and Stratigraphy**

(4-0-4) Rigby

*Prerequisite:* (ENVG 20200 OR ENVG 242) OR (SC 20200 OR SC 242)

Sedimentary environments from a physical, biological, and tectonic perspective are explored, along with processes such as lithification. Identification of sedimentary rocks and interpretation of the succession of layered rocks in North America are emphasized.

**SC 40300. Geochemistry**

(3-0-3) Fein

An introduction to the use of chemical thermodynamics and chemical kinetics in modeling geochemical processes. Special emphasis is placed on water-rock interactions of environmental interest.

**SC 40350. Paleontology**

(3-0-3)

*Prerequisite:* (GEOS 20120 OR GEOS 232) OR (SC 20120 OR SC 232)

The fossil record—morphology, taxonomy, evolution, statistical population systematics, and paleoecology. A one-day field trip is required.

**SC 40491. Current Topics in Environmental Science**

(3-0-3) Grimstad

Taught by the director of the ES major. Environmental sciences first and second majors only. The course will be divided into various modules taught by experts on campus. The modules will include environmental law, risk assessment, environmental ethics, advancements in environmental and ecological science, current topics of national interest in environmental science, and others. This course is required of all first majors and recommended of all second majors. Fall.

**SC 43100. Senior Honors Colloquium**

(1-0-1)

This is a 1-credit seminar consisting of presentations of ongoing thesis research as a spur to the successful completion of the senior thesis or research project.

**SC 48100. Research Experience for Undergraduates**

(V-V-V)

Times and inclusive dates variable depending on specific program elected by the student. Permission required.

**SC 48101. Undergraduate Research**

(V-0-V)

Times and inclusive dates variable depending on specific program elected by the student. Permission required.

**SC 48999. Research Experience for Undergraduates**

(0-0-0)

This is a zero-credit course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. Registration requires a brief description of the research or project to be pursued and the permission of the director of the Summer Session. This course is taken as an indication of the student's status on campus and is meant to allow the registered student to use the University facilities as the Summer Session permits. No coursework is required.

## Department of Mathematics

### **MATH 10005. Processes of Mathematical Thought**

(3-0-3)

For students in arts and letters or business administration. A study of mathematical thought as an analytical tool to solve real-life problems. The class is divided into teams, each analyzing a topic from such areas as commercial games, consensus within diversity, governmental economic planning, and chaos theory. Teams will present their findings in a seminar format.

### **MATH 10110. Principles of Finite Mathematics**

(3-0-3) Gejji

For students in arts and letters. For first-year students who lack the necessary background for MATH 10120. (Students who take this course cannot take MATH 10120.) Topics include the fundamental principles of counting systematically, probability, statistics, linear programming, optimization problems, game theory and mathematical finance, population problems, and coding information. There is a wealth of applications of these topics to contemporary social, economic, and political issues appealing to liberal arts students. Also, these topics broaden a student's mathematical horizon in an interesting direction not covered by calculus, which deals mostly with continuous models.

### **MATH 10110. Principles of Finite Mathematics**

(3-0-3) Gejji

For students in arts and letters. For first year students who lack the necessary background for MATH 10120. (Students who take this course cannot take MATH 10120.) Topics include the fundamental principles of counting systematically, probability, statistics, linear programming, optimization problems, game theory and mathematical finance, population problems, and coding information. There is a wealth of applications of these topics to contemporary social, economic, and political issues appealing to liberal arts students. Also, these topics broaden a student's mathematical horizon in an interesting direction not covered by calculus, which deals mostly with continuous models.

### **MATH 10120. Finite Mathematics**

(3-0-3) Pilkington

For students in arts and letters or as an elective for students in business administration. Topics include the fundamental principles of counting systematically, probability, statistics, linear programming, optimization problems, game theory, and mathematical finance. Other topics that may be covered include population problems, difference equations and modeling, and coding information. There is a wealth of applications of these topics to contemporary social, economic, and political issues appealing to liberal arts students. Also, these topics broaden a student's mathematical horizon in an interesting direction not covered by calculus, which deals mostly with continuous models.

### **MATH 10130. Beginning Logic**

(3-0-3) Flood; Knight

For students in arts and letters. Provides the students with some formal tools for analyzing arguments. By writing proofs in a formal system, students see the importance of stating the basic premises in an argument and giving intermediate steps that lead to the conclusion. They learn strategies for thinking up proofs. They see that proof checking is, in principle, something that a machine could do. Students learn truth tables and see an effective procedure that they could apply to any argument stated in propositional logic, to determine whether the conclusion follows logically from the premises. There is nothing like truth tables for predicate logic. Students get to experience doing what mathematicians do, trying to determine whether a particular conclusion follows from some premises by searching simultaneously for a proof or a counterexample. Writing papers gives students an opportunity to explore other topics in logic of their interest.

### **MATH 10140. Elements of Statistics**

(3-0-3) Pilkington

This course is intended for those students who may or may not plan to use statistics in their chosen careers, but wish nevertheless to become informed and astute consumers. Topics include statistical decision making, sampling, data representation, random variables, elementary probability, conditional probabilities, independence, and Bayes' rule. The methodology will focus on a hands-on approach. Concepts and terminology will be introduced only after thorough exposure to situations that necessitate the concepts and terms. Care will be exercised to select a variety of situations from the many fields where statistics are used in modern society. Examples will be taken from biology and medicine (e.g. drug testing, wild animal counts), the social sciences, psychology, and economics. This course counts only as general elective credit for students in the College of Science.

### **MATH 10150. Elements of Statistics II**

(3-0-3) Stanton

*Prerequisite:* MATH 10140

The goal of this course is to give students an introduction to a variety of the most commonly used statistical tools. A hands-on approach with real data gathered from many disciplines will be followed. Topics include inferences based on two samples, analysis of variance, simple linear regression, categorical data analysis, and non-parametric statistics. This course counts only as general elective credit for students in the College of Science.

### **MATH 10240. Principles of Calculus**

(3-0-3)

For students in arts and letters. Note: Credit is not given for both this course and any other calculus course. A terminal course introducing the principles of calculus. Topics include basic properties of functions, derivatives and integrals, with interesting real-life applications throughout. This course is not intended to prepare students for more advanced work in calculus.

### **MATH 10250. Elements of Calculus I**

(3-0-3)

For students in arts and letters, architecture, or business. A study of basic calculus as part of a liberal education. It emphasizes conceptual learning and stresses the connections between mathematics and modern society. Topics include functions, limits, derivatives, and an introduction to integral, with interesting real-life applications throughout. Students are familiarized with the many different interpretations of the derivative as a rate of change, and the integral as a total rate of change. This enables them to learn and practice modeling in a variety of situations from economics the social and the life sciences.

### **MATH 10260. Elements of Calculus II for Business**

(3-0-3) Budur; Williams

*Prerequisite:* MATH 10250 OR MATH 10350 OR MATH 10550 OR MATH 10850

Credit is not given for both MATH 10280 and either of the following courses: MATH 10260 and MATH 10360. For students in business. An introduction to mathematical concepts, techniques, and ideas that are useful in understanding and solving problems that arise in economics and business. Most mathematical concepts are introduced through interesting business problems. Furthermore, by using available computer technology, real-life problems that may lead to non-trivial computations and graphics are considered. Topics include integration, differential equations, Taylor polynomial approximations, unconstrained and constrained optimization for functions of several variables, probability, and statistics, with interesting real-life applications throughout.

### **MATH 10270. Mathematics in Architecture: Mathematical Excursions to the World's Great Buildings**

(3-0-3) Hahn

*Prerequisite:* MATH 10250 OR MATH 10550 OR MATH 10850

This is a second mathematics course for arts and letters and architecture students. As the Roman architect Vitruvius pointed out 2,000 years ago, architecture is a broad enterprise bringing together virtually all the elements of the human

experience: spirituality, intelligence and creativity, economics, politics, and sociology, as well as aesthetics, structural engineering, and mathematics. The agenda of this course has a focus on the last three: aesthetics, structural aspects, and related mathematics. The architecture of the world's great historic buildings will be the environment in which the narrative of this course is developed. The aesthetic and structural properties of these structures will be described following a chronological line. Whenever the opportunity presents itself, this discussion will be informed by basic modern mathematics (such as geometry, trigonometry, and calculus). While the mathematical comments about the buildings considered are standard by today's criteria, they would (for the most part) have been beyond the reach of the architects who built them.

### **MATH 10350. Calculus A**

(3-1-4) Cholak; Lim; Wong

*Corequisite:* MATH 12350

Primarily for students in science whose programs require a one-year terminal course in calculus of one variable, but also open to students in arts and letters. Topics include sets, functions, limits, continuity, derivatives, integrals, and applications.

### **MATH 10360. Calculus B**

(3-1-4) Lim; Smyth

*Prerequisite:* MATH 10350 OR MATH 10550 OR MATH 10850

*Corequisite:* MATH 12360

Primarily for students in science whose programs require a one-year terminal course in calculus of one variable, but also open to students in arts and letters. Topics include sets, functions, limits, continuity, derivatives, integrals, and applications.

### **MATH 10450. Honors Mathematics I**

(4-0-4) Dyer

*Corequisite:* MATH 12450

A survey of several mathematical topics, emphasizing the relevance of mathematics to many diverse areas of study. Calculus is also studied at the level of MATH 10350–10360.

### **MATH 10460. Honors Mathematics II**

(4-0-4) Hahn

*Prerequisite:* (MATH 10450 OR MATH 195)

*Corequisite:* MATH 12460

A survey of several mathematical topics, emphasizing the relevance of mathematics to many diverse areas of study. Calculus is also studied at the level of MATH 10350–10360.

### **MATH 10550. Calculus I**

(3-1-4) Barron; Han; Lange

*Corequisite:* MATH 12550

For students in science and engineering. Topics include sets, functions, limits, continuity, derivatives, integrals, and applications. Also covered are transcendental functions and their inverses, infinite sequences and series, parameterized curves in the plane, and polar coordinates.

### **MATH 10560. Calculus II**

(3-1-4) Hind; Nicolaescu; Snow

*Prerequisite:* MATH 10550 OR MATH 10850

*Corequisite:* MATH 12560

For students in science and engineering. Topics include sets, functions, limits, continuity, derivatives, integrals, and applications. Also covered are transcendental functions and their inverses, infinite sequences and series, parameterized curves in the plane, and polar coordinates.

### **MATH 10850. Honors Calculus I**

(4-0-4) Caine; Wong

*Corequisite:* MATH 12850

Required of honors mathematics majors. A rigorous course in differential and integral calculus of one variable. Topics include an axiomatic formulation of the real numbers, mathematical induction, infima and suprema, functions, continuity, derivatives, integrals, infinite sequences and series, transcendental functions and their inverses, and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

### **MATH 10860. Honors Calculus II**

(4-0-4) Colarusso

*Prerequisite:* (MATH 10850 OR MATH 165)

*Corequisite:* MATH 12860

Required of honors mathematics majors. A rigorous course in differential and integral calculus of one variable. Topics include an axiomatic formulation of the real numbers, mathematical induction, infima and suprema, functions, continuity, derivatives, integrals, infinite sequences and series, transcendental functions and their inverses, and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

### **MATH 12350. Calculus A Tutorial**

(0-1-0)

*Corequisite:* MATH 10350

Perfecting problem-solving skills in smaller group settings.

### **MATH 12360. Calculus B Tutorial**

(0-1-0)

*Corequisite:* MATH 10360

Perfecting problem-solving skills in smaller group settings.

### **MATH 12450. Honors Mathematics Tutorial**

(0-1-0)

*Corequisite:* MATH 10450

Perfecting problem-solving skills in smaller group settings.

### **MATH 12460. Honors Mathematics II Tutorial**

(0-1-0)

*Corequisite:* MATH 10460

Perfecting problem-solving skills in smaller group settings.

### **MATH 12550. Calculus I Tutorial**

(0-1-0)

*Corequisite:* MATH 10550

Perfecting problem-solving skills in smaller group settings.

### **MATH 12560. Calculus II Tutorial**

(0-1-0)

*Corequisite:* MATH 10560

Perfecting problem-solving skills in smaller group settings.

### **MATH 12850. Honors Calculus I Tutorial**

(0-1-0)

*Corequisite:* MATH 10850

Perfecting problem-solving skills in smaller group settings.

### **MATH 12860. Honors Calculus II Tutorial**

(0-1-0)

*Corequisite:* MATH 10860

Perfecting problem-solving skills in smaller group settings.

### **MATH 13150. First Year Math Seminar**

(3-0-3) Evens

The goal of this new course is to give students a panoramic view of mathematics by considering a variety of topics displaying its enormous power and beauty. It aspires to present the first year students with an opportunity to participate in the excitement of discovering ideas of their own by practicing the mathematical way of thinking. This topical course will be rich, in content and context. It will stress

the connections between mathematics and modern society by considering a wide variety of problems ranging from environmental and economic issues to social and political situations that can be modeled and solved by mathematical means. Also by giving appropriate assignments and projects, it will allow students to make contributions in areas of their interest and expertise. “The Magic of Numbers” is the first theme of this seminar course.

### **MATH 20210. Computer Programming and Problem Solving**

(3-0-3) Snow

*Prerequisite:* MATH 20610 (MAY BE TAKEN CONCURRENTLY) OR MATH 20580 (MAY BE TAKEN CONCURRENTLY)

An introduction to solving mathematical problems using computer programming in high-level languages such as C.

### **MATH 20340. Statistics for the Life Sciences**

(3-0-3) Galvin

*Prerequisite:* MATH 10360 OR MATH 10560

An introduction to the principles of statistical inference following a brief introduction to probability theory. This course does not count as a science or mathematics elective for mathematics majors. NOTE: Students may not take both BIOS 40411 (411) and MATH 20340 (214). Not open to students who have taken MATH 30540 (324).

### **MATH 20550. Calculus III**

(3-1-3.5)

*Prerequisite:* MATH 10560 OR MATH 10860

*Corequisite:* MATH 22550

A comprehensive treatment of differential and integral calculus of several variables. Topics include space curves, surfaces, functions of several variables, partial derivatives, multiple integrals, line integrals, surface integrals, Stokes theorem, and applications.

### **MATH 20570. Mathematical Methods in Physics I**

(3-0-3.5) Frauendorf

*Prerequisite:* MATH 10560 OR MATH 10860

*Corequisite:* PHYS 22451

A study of methods of mathematical physics. Topics include matrices, linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. Weekly tutorial sessions. Cross-listed with PHYS 20451 (271).

### **MATH 20580. Introduction to Linear Algebra and Differential Equations**

(3-1-3.5) Chakrabarti; Nicolaescu

*Prerequisite:* MATH 20550

*Corequisite:* MATH 22580

An introduction to linear algebra and to first- and second-order differential equations. Topics include elementary matrices, LU factorization, QR factorization, the matrix of a linear transformation, change of basis, eigenvalues and eigenvectors, solving first-order differential equations and second-order linear differential equations, and initial value problems. This course is part of a two-course sequence that continues with MATH 30650 (325). Credit is not given for both MATH 20580 (228) and MATH 20610 (221).

### **MATH 20610. Linear Algebra**

(3-0-3) Polini

Open to all students. An introduction to vector spaces, matrices, linear transformations, inner products, determinants and eigenvalues. Emphasis is given to careful mathematical definitions and understanding the basic theorems of the subject. Credit is not given for both MATH 20610 (221) and MATH 20580 (228).

### **MATH 20630. Introduction to Mathematical Reasoning**

(3-0-3) Diller

This course serves as a transition to upper-level math courses. The general subject is numbers of all sorts—integers, rationals, reals, etc. The main point will be to treat everything the way a mathematician would. That is, we will give precise definitions of the objects we consider and careful statements of the assertions we make about them. And, most importantly, we will justify our assertions by giving mathematical proofs. Topics covered include basic language of sets, common methods of proof, integers, factorization, modular arithmetic, rational numbers, completeness, real numbers, cardinality, limits, and continuity.

### **MATH 20670. Mathematical Methods in Physics II**

(3-0-3.5) Frauendorf

*Corequisite:* MATH 22670

A study of methods of mathematical physics. Topics include linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. Weekly tutorial sessions.

### **MATH 20750. Ordinary Differential Equations**

(3-1-3.5) Zhu

*Corequisite:* MATH 22750

An introduction to differential equations. Topics include first-order equations,  $n$ -th order linear equations, power series methods, systems of first order linear equations, nonlinear systems, and stability. Credit is not given for both MATH 20750 (230) and MATH 30650 (325).

### **MATH 20810. Honors Algebra I**

(3-0-3) Colarusso

A comprehensive treatment of vector spaces, linear transformations, inner products, determinants, eigenvalues, tensor and exterior algebras, spectral decompositions of finite-dimensional symmetric operators, and canonical forms of matrices. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

### **MATH 20820. Honors Algebra II**

(3-0-3) Diller

*Prerequisite:* MATH 20810

A comprehensive treatment of vector spaces, linear transformations, inner products, determinants, eigenvalues, tensor and exterior algebras, spectral decompositions of finite-dimensional symmetric operators, and canonical forms of matrices. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

### **MATH 20850. Honors Calculus III**

(4-0-4) Connolly

*Prerequisite:* MATH 10860

*Corequisite:* MATH 22850

Required of honors mathematics majors. A rigorous course in differential and integral calculus of several variables. Topics include functions of several variables, the inverse function theorem, partial derivatives, multiple integrals, line integrals, surface integrals, Stokes' theorem, and an introduction to ordinary differential equations and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

### **MATH 20860. Honors Calculus IV**

(4-0-4) Connolly

*Prerequisite:* MATH 20850

*Corequisite:* MATH 22860

Required of honors mathematics majors. A rigorous course in differential and integral calculus of several variables. Topics include functions of several variables, the inverse function theorem, partial derivatives, multiple integrals, line integrals, surface integrals, Stokes' theorem, an introduction to ordinary differential

equations and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

**MATH 22550. Calculus III Tutorial**

(0-3-0)

*Corequisite:* MATH 20550

Perfecting problem-solving skills in smaller group settings.

**MATH 22570. Mathematical Methods in Physics I Tutorial**

(0-1-0)

*Corequisite:* MATH 20570

Perfecting problem-solving skills in smaller group settings.

**MATH 22580. Linear Algebra and Differential Equations Tutorial**

(0-1-0)

*Corequisite:* MATH 20580

Perfecting problem-solving skills in smaller group settings.

**MATH 22670. Mathematical Methods in Physics II Tutorial**

(0-0-0)

*Corequisite:* MATH 20670

Required tutorial for MATH 20670.

**MATH 22750. Ordinary Differential Equations Tutorial**

(0-1-0)

*Corequisite:* MATH 20750

Perfecting problem-solving skills in smaller group settings.

**MATH 22850. Honor Calculus III Tutorial**

(0-1-0)

*Corequisite:* MATH 20850

Perfecting problem-solving skills in smaller group settings.

**MATH 22860. Honors Calculus IV Tutorial**

(0-1-0)

*Corequisite:* MATH 20860

Perfecting problem-solving skills in smaller group settings.

**MATH 30210. Introduction to Operations Research**

(3-0-3) Faybusovich

*Prerequisite:* MATH 20580 OR MATH 20610 OR MATH 20750 OR MATH 20810

An introduction to linear programming, duality theory, simplex algorithm, the transportation problem, network analysis, dynamic programming, and game theory.

**MATH 30440. Probability and Statistics**

(3-0-3) Galvin

An introduction to the theory of probability and statistics, with applications to the computer sciences and engineering. Topics include discrete and continuous random variables, joint probability distributions, the central limit theorem, point and interval estimation and hypothesis testing.

**MATH 30530. Introduction to Probability**

(3-0-3) Galvin

*Prerequisite:* MATH 20850 OR MATH 20550

An introduction to the theory of probability, with applications to the physical sciences and engineering. Topics include discrete and continuous random variables, conditional probability and independent events, generating functions, special discrete and continuous random variables, laws of large numbers, and the central limit theorem. The course emphasizes computations with the standard distributions of probability theory and classical applications of them.

**MATH 30540. Mathematical Statistics**

(3-0-3) Williams

*Prerequisite:* MATH 30530

An introduction to mathematical statistics. Topics include distributions involved in random sampling, estimators and their properties, confidence intervals, hypothesis testing including the goodness-of-fit test and contingency tables, the general linear model, and analysis of variance.

**MATH 30650. Differential Equations**

(3-0-3) Hall; Shaw

*Prerequisite:* MATH 20580

A second course in differential equations. Topics include higher order linear equations, numerical methods, Laplace transforms, linear systems, nonlinear systems and stability, and an introduction to partial differential equations and Fourier series. Credit is not given for both MATH 20750 (230) and MATH 30650 (325).

**MATH 30710. Algebra**

(3-0-3) Migliore

*Prerequisite:* MATH 20630 OR MATH 20610

An introduction to groups, rings, and fields. Topics include permutations, divisibility, modular arithmetic, cryptography, cyclic and dihedral groups, Lagrange's theorem, homomorphisms, ideals, integral and Euclidean domains, and extension fields.

**MATH 30750. Real Analysis**

(3-0-3) Xavier

*Prerequisite:* MATH 20630

A rigorous treatment of differential and integral calculus. Topics include a review of sequences and continuity, differentiability, Taylor's theorem, integration, the fundamental theorem of Calculus, pointwise and uniform convergence, and power series. Additional topics are likely and will depend on the instructor. Emphasis throughout will be on careful mathematical definitions and thorough understanding of basic results.

**MATH 30810. Honors Algebra III**

(3-0-3) Dyer

*Prerequisite:* MATH 20820

A comprehensive treatment of groups, polynomials, rings, homomorphisms, isomorphism theorems, field theory, and Galois theory. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

**MATH 30820. Honors Algebra IV**

(3-0-3) Polini

*Prerequisite:* MATH 30810

Required of honors mathematics majors. A comprehensive treatment of groups, polynomials, rings, homomorphisms, isomorphism theorems, field theory, and Galois theory. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

**MATH 30850. Honors Analysis I**

(3-0-3) Gekhtman

*Prerequisite:* MATH 20860

Required of honors mathematics majors. An advanced course in mathematical analysis in one and several variables. Topics include an axiomatic formulation of the real and complex number systems, compactness, connectedness, metric spaces, limits, continuity, infinite sequences and series, differentiation, the Riemann-Stieltjes integral, the Stone-Weierstrass theorem, the implicit function theorem, differential forms, partitions of unity, simplexes and chains, and Stokes' theorem.

**MATH 30860. Honors Analysis II**

(3-0-3) Ledrappier

*Prerequisite:* MATH 30850

Required of honors mathematics majors. An advanced course in mathematical analysis in one and several variables. Topics include an axiomatic formulation of the real and complex number systems, compactness, connectedness, metric spaces, limits, continuity, infinite sequences and series, differentiation, the Riemann-

Stieltjes integral, the Stone-Weierstrass theorem, the implicit function theorem, differential forms, partitions of unity, simplexes and chains, and Stokes' theorem.

### **MATH 40210. Basic Combinatorics**

(3-0-3)

An introduction to the theory of combinatorics. Topics include permutations, multinomial coefficients, the theory of enumerative combinatorics, pairing problems, recurrence relations, the inclusion-exclusion principle, graph theory, algebraic coding theory, and symbolic dynamics.

### **MATH 40390. Numerical Analysis**

(3-0-3) Sweet

*Prerequisite:* MATH 20750 OR MATH 20860 OR MATH 30650

An introduction to the numerical solution of ordinary and partial differential equations. Topics include the finite difference method, projection methods, cubic splines, interpolation, numerical integration methods, analysis of numerical errors, numerical linear algebra and eigenvalue problems, and continuation methods.

### **MATH 40480. Complex Variables**

(3-0-3) Snow

*Prerequisite:* MATH 20550 OR MATH 20850

An introduction to the theory of functions of one complex variable. Topics include analytic functions, Cauchy integral theorems, power series, Laurent series, poles and residues, applications of conformal mapping, and Schwarz-Christoffel transformations.

### **MATH 40510. Introduction to Algebraic Geometry**

(3-0-3)

*Prerequisite:* MATH 30710 OR MATH 30810

Algebraic geometry is the study of systems of polynomial equations and their vanishing loci. It has important components that lie in the realm of geometry, of algebra, and of computation (among others) and countless applications. This course tries to give a flavor of these different aspects of the field and how they fit together. Indeed, much of the fascination of this subject comes from the myriad ways in which arguments squarely in one realm give surprising consequences that fall squarely in a different realm.

### **MATH 40520. Number Theory**

(3-0-3)

*Prerequisite:* MATH 30705 OR MATH 20820 OR MATH 30710

An introduction to elementary number theory. Topics include the Euclidean algorithm, congruencies, primitive roots and indices, quadratic residues, quadratic reciprocity, distribution of primes, and Waring's problem.

### **MATH 40570. Mathematical Methods in Financial Economics**

(3-0-3) Cosimano

*Prerequisites:* (MATH 30530) AND (MATH 20750 OR MATH 30650) AND (MATH 30750 OR MATH 30850) OR (FIN 30600) OR (FIN 70670)

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time, will be discussed. The pricing of derivative securities in continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

### **MATH 40710. Computability and Logic**

(3-0-3)

*Prerequisite:* MATH 10560 OR MATH 10860

An introduction to formal notions of computability. Topics include finite automata, regular languages and expressions, pushdown automata, context-free grammars and languages, Turing machines, primitive recursive and  $\lambda$ -recursive functions, Church's Thesis, and absolutely unsolvable problems.

### **MATH 40720. Topics in Algebra**

(3-0-3)

*Prerequisite:* MATH 30710 OR MATH 30820

Topics in algebra, number theory and algebraic geometry.

### **MATH 40730. Mathematical Modeling**

(3-0-3) Alber

*Prerequisites:* (MATH 20210 OR CSE 20232) AND (MATH 30650 OR MATH 20750)

Introductory course on applied mathematics methods with emphasis on modeling of physical, mechanical and biological problems in terms of differential equations, and stochastic dynamical systems. Students will be working in groups on several projects and will present them in class at the end of the course.

### **MATH 40740. Topology**

(3-0-3) Williams

*Prerequisite:* MATH 20630 OR MATH 223

An introduction to topology. Topics include the theory of surfaces, knot theory, and the theory of metric spaces.

### **MATH 40750. Partial Differential Equations**

(3-0-3) Zhu

*Prerequisite:* (MATH 20750 OR MATH 30650 OR MATH 30850)

An introduction to partial differential equations. Topics include Fourier series, solutions of boundary value problems for the heat equation, wave equation and Laplace's equation, Fourier transforms, and applications to solving heat, wave, and Laplace's equations in unbounded domains.

### **MATH 40760. Differential Geometry**

(3-0-3) Stanton

*Prerequisite:* MATH 20750 OR MATH 20860 OR MATH 30650

An introduction to differential geometry. Topics include analysis of curves and surfaces in space, the first and second fundamental forms of surfaces, torsion, curvature, and the Gauss-Bonnet theorem.

### **MATH 40910. Topics in Mathematical Logic**

(3-0-3)

*Prerequisite:* MATH 30710 OR MATH 30810

An introduction to mathematical logic and Gödel's Incompleteness Theorem. The course will include topics from model theory, computability, and set theory, as time permits.

### **MATH 40960. Topics in Geometry or Topology**

(3-0-3)

*Prerequisite:* MATH 20630 OR MATH 10860

This course covers topics in geometry and topology.

### **MATH 43900. Problem Solving in Mathematics**

(0-0-1) Gekhtman

The main goal of this course is to develop problem-solving strategies in mathematics.

### **MATH 46800. Directed Readings**

(V-0-V)

*Prerequisite:* Consent of director of undergraduate studies in mathematics.

### **MATH 48800. Undergraduate Research**

(V-0-V)

This course offers students the opportunity to study and do research on a topic of their interest with faculty members of Mathematics department. It is a variable credit hour course, with a maximum of 4 credits per semester, arranged individually for each student. This is a repeatable for credit course.

**MATH 48844. Special Topics**

(V-0-V)

This topical course is intended for students attending international study programs. It is a variable credit hour course, with a maximum of 4 credits per semester, arranged individually for each student. It is a repeatable for credit course.

**MATH 48900. Thesis**

(V-0-V)

Seniors in the mathematics program have the option of writing a senior thesis on a more advanced subject than is provided in the normal undergraduate courses. A program of readings on the topic must be begun with a faculty advisor by the spring semester of the junior year.

**MATH 50510. Computer Programming/ Problem Solving**

(3-0-3) Snow

An introduction to solving mathematical problems using computer programming in high-level languages such as C.

**MATH 50570. Mathematical Methods in Financial Economics**

(3-0-3) Cosimano

*Prerequisites:* (MATH 30530 AND (MATH 20750 OR MATH 30650) AND (MATH 30750 OR MATH 30850) ) OR (FIN 30600) OR (FIN 70670)

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time, will be discussed. The pricing of derivative securities in continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

**MATH 50590. Foundations of Computational Mathematics**

(3-0-3)

The course is a solid theoretical introduction to numerical analysis. Topics covered include polynomial interpolation, least squares, numerical integration, numerical linear algebra, and an introduction to numerical solutions of ordinary and partial differential equations.

**MATH 50730. Mathematical Modeling**

(3-0-3) Alber

Introductory course on applied mathematics methods with emphasis on modeling of physical, mechanical, and biological problems in terms of differential equations and stochastic dynamical systems. Students will be working in groups on several projects and will present them in class at the end of the course.

**MATH 50760. Special topics in Differentiable Manifolds and Lie Groups**

(3-0-3)

This course introduces students to Differentiable Manifolds and Lie Groups. Topics include smooth manifolds and smooth maps, submanifolds, Lie groups, the tangent space of a manifold at a point, the inverse function theorem, Sard's Theorem and the Whitney Embedding Theorem, the Tangent bundle, the Lie algebra of a Lie group, vector bundles, the orthogonal and unitary groups. Grassmannians as manifolds, and Cobordism and the theorem of R. Thom.

**MATH 50780. Special Topics—Seminar for Undergraduate Mathematical Research**

(3-0-3) Connolly

This course permits students to pursue a special topic in advanced mathematics. It is offered as a part of SUMR (the Seminar for Undergraduate Mathematical Research). The consent of the director of undergraduate studies in mathematics is required.

**MATH 56800. Directed Readings**

(V-0-V)

Readings not covered in the curriculum that relate to the student's area of interest.

**MATH 58900. Thesis Direction**

(V-0-V)

Students in the Applied Mathematics Masters Program have the option of writing a thesis on an advanced subject under the direction of a faculty advisor.

## Department of Physics

### PHYS 08699. Directed Research: Particle Physics

(V-0-V)

Directed research course for high school students combining coverage of topics in particle physics with participation in experimental research in ongoing experiments conducted by particle physics faculty. Students maintain a research logbook and submit a written research summary at the conclusion of the research period.

### PHYS 08798. Directed Research in Nuclear Astrophysics

(V-0-V)

Directed research course for high school students combining coverage of topics in nuclear astrophysics with participation in experimental research in ongoing experiments conducted by nuclear astrophysics faculty. Students maintain a research logbook and submit a written research summary at the conclusion of the research period.

### PHYS 10052. Concepts of Energy and the Environment

(3-0-3) Arahamian

A course developing the basic ideas of energy and power and their applications. The fossil fuels are considered together with their limitations, particularly as related to global warming, pollution, and their nonrenewable character. The advantages and disadvantages of nuclear power are studied and compared with alternative energy sources such as solar energy, wind, and geothermal and hydroelectric power. Various aspects of energy storage and energy conservation are also considered. This course is designed for the nonspecialist. It is open to first-year students only.

### PHYS 10062. Science Literacy

(3-0-3) Berry; Rettig

A course that provides the tools for a basic understanding of scientific developments and their potential consequences. Developments in many areas of science will be discussed, including biology, chemistry, physics, astronomy, engineering, and computer science, with the view that basic physical laws serving as a common thread among them. Topics covered include the mechanisms of scientific discovery, the impact of scientific discoveries on society, science, and ethics, and the tools of contemporary science. The course focuses on concepts rather than formulas and concentrates primarily on examples taken from current scientific developments. If taken by science or engineering students, this course counts as a general elective.

### PHYS 10111. Principles of Physics I

(3-0-3) Livingston

PHYS 10111 is a prerequisite to PHYS 10122. A course intended for students who desire a grounding in all the major principles of physics, but who plan to major in some area other than science or engineering. The ability to apply these principles to the solution of problems is a major goal of the course. The following topics are normally included: kinematics and dynamics of a particle, work, energy, momentum, harmonic motion, gravitation, and circular orbits; wave motion, interference, standing waves, the Doppler effect; and temperature, heat, first law of thermodynamics, and kinetic theory of gases. Additional material will be at the discretion of the instructor. The division between PHYS 10111 and 10122 will depend on the order of presentation.

### PHYS 10122. Principles of Physics II

(3-0-3) Livingston

*Prerequisite:* PHYS 10111

PHYS 10111 is a prerequisite to PHYS 10122. A course intended for students who desire a grounding in all the major principles of physics, but who plan to major in some area other than science or engineering. The ability to apply these principles to the solution of problems is a major goal of the course. The following topics are normally included: electric charge, Coulomb's law, electric field and potential, current, resistance, and DC circuits; magnetic force, and electromagnetic induction; the nature of light, the spectrum; photons, photoelectric effect, Compton scattering, deBroglie waves, energy levels, X-rays; nuclei and radioactivity; and special relativity. Additional material will be at the discretion of

the instructor. The division between PHYS 10111 and 10122 will depend on the order of presentation.

### PHYS 10140. Descriptive Astronomy

(3-0-3) Rettig; Mathews

A description of the motions and structure of the earth, moon, and planets; an exposition of the modern theories of solar and stellar structure, nebulae, and galaxies; basics of stellar evolution, black holes, quasars, and other recent developments; an introduction to cosmology. This course includes elementary observational projects.

### PHYS 10240. Elementary Cosmology

(3-0-3)

An elective course for students planning to major in the arts and letters or business. It is designed to acquaint the non-mathematically inclined student with the most important discoveries in physics of the last few decades and how they have altered our perceptions of the origin and structure of the universe. This course examines such questions as: "Where did the universe come from?" "Why do scientists feel sure that it was born in a cosmic fireball called the Big Bang?" and "Where did the Big Bang itself come from?" This is a reading-intensive course based on popularizations of science written for the curious and intelligent layperson. The emphasis will be on class discussion of the readings. One book report and a term paper are required in addition to examinations. If taken by College of Science students, this course counts as general elective credit.

### PHYS 10262. Physical Methods in Art and Archaeology

(3-0-3) Collon

A course that gives an overview of the various physics-based analysis and dating techniques used in art and archaeology. The course will cover topics such as X-ray fluorescence and X-ray absorption, proton-induced X-ray emission, neutron-induced activation analysis, radiocarbon dating, accelerator mass spectroscopy, luminescence dating, and methods of archeometry. Multiple examples of the use of the techniques in art and archaeology will be given, e.g., under X-ray techniques and accelerator mass spectrometry, the analysis of ancient coins and violin varnish and the Iceman and the Turin Shroud are used respectively as examples. Physics principles of the methods and techniques will be taught in a descriptive manner.

### PHYS 10310. General Physics I

(4-0-4) Hyder; Lannon; Losecco

*Prerequisite:* (MATH 10550 (MAY BE TAKEN CONCURRENTLY) OR MATH 10850 (MAY BE TAKEN CONCURRENTLY) )

*Corequisites:* PHYS 11310; PHYS 12310

The first course in a two-semester sequence in general physics. Topics include the kinematics and mechanics of a particle; work, energy and momentum, and associated conservation laws; rotation, torque and angular momentum; oscillations and wave motions. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only. Weekly tutorial sessions.

### PHYS 10320. General Physics II

(4-0-4) Balsara; Hyder; Lannon

*Prerequisites:* (PHYS 10310 OR PHYS 10411) AND (MATH 10550 OR MATH 10850) AND (MATH 10560 (MAY BE TAKEN CONCURRENTLY) OR MATH 10860 (MAY BE TAKEN CONCURRENTLY) )

*Corequisites:* PHYS 11320; PHYS 12320

The second course in a two-semester sequence in general physics. Topics include electrostatics, electric current, and circuits; magnetism, electromagnetic induction, and waves; and geometrical optics. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only. Weekly tutorial sessions.

### PHYS 10342. Modern Physics from Quarks to Quasars

(3-0-3) Garg

*Prerequisite:* ALHN 13950

Restricted to first-year arts and letters intents in the honors program. This course emphasizes themes of modern physics and will be organized around the concepts

of symmetry and physical laws. For example, how do symmetries observed in nature lead to fundamental laws of conservation of energy and momentum? Examples from areas of modern physics such as cosmology and astrophysics are used to bring these topics to life. We consider questions such as: "What happens if one travels alongside a beam of light?" (which leads us into special relativity); "Why is the night sky so dark?" (the Big Bang); "What is matter?"; "What is mass"; "What are forces?" The course is a mix of lecture, discussions, and lab/demonstrations.

### **PHYS 10411. General Physics A-M/Mechanics**

(4-0-4) Hildreth

*Prerequisite:* (MATH 10550 (MAY BE TAKEN CONCURRENTLY) OR MATH 10850 (MAY BE TAKEN CONCURRENTLY) )

*Corequisite:* PHYS 11411

The first semester of a three-semester sequence in general physics. Topics include the kinematics and mechanics of a particle; work, energy, and momentum, and associated conservation laws; rotation, torque, and angular momentum; oscillations and wave motions. A course designed for students intending to enter the Department of Physics. Laboratory meetings each week.

### **PHYS 10424. General Physics B-M/Waves,Thermo,SpRel**

(4-0-4) Hildreth

*Prerequisites:* (PHYS 10310 OR PHYS 10411) AND (MATH 10550 OR MATH 10850) AND (MATH 10560 (MAY BE TAKEN CONCURRENTLY) OR MATH 10860 (MAY BE TAKEN CONCURRENTLY) )

*Corequisite:* PHYS 11424

The second semester of a three -semester course in general physics. Topics include classical thermodynamics, fluids and acoustics; wave motions, geometric and physical optics; special relativity. The course is intended primarily for physics majors but is open to other qualified students.

### **PHYS 11310. General Physics I Laboratory**

(0-1-0)

*Corequisite:* PHYS 10310; PHYS 12310

The laboratory is a corequisite for PHYS 10310

### **PHYS 11411. General Physics A-M/Mech Lab**

(0-2-0)

*Corequisite:* PHYS 10411

The laboratory is a corequisite for PHYS 10411

### **PHYS 11424. General Physics B-M Laboratory**

(0-2-0)

*Corequisite:* PHYS 10424

The laboratory is a corequisite for PHYS 10424.

### **PHYS 12310. General Physics I Tutorial**

(0-1-0)

*Corequisite:* PHYS 10310; PHYS 11310

The tutorial is a corequisite for PHYS 10310

### **PHYS 12320. General Physics II Tutorial**

(0-1-0)

*Corequisite:* PHYS 10320; PHYS 11320

The tutorial is a corequisite for PHYS 10320

### **PHYS 20051. Energy and Society**

(3-0-3)

A course developing the basic ideas of energy and power and their applications from a quantitative and qualitative viewpoint. The fossil fuels (coal, oil, natural gas) are studied together with their societal limitations (pollution, global warming, diminishing supply). Nuclear power is similarly studied in the context of the societal concerns that arise (radiation, reactor accidents, nuclear weapons proliferation, high-level waste disposal). The opportunities as well as the risks presented by alternative energy resources, in particular solar energy, wind, geothermal, and

hydropower, together with various aspects of energy conservation, are developed and discussed. This course is designed for the nonspecialist.

### **PHYS 20061. Nuclear Warfare**

(3-0-3) Wiescher

Nuclear phenomena, nuclear fission, and fusion. Nuclear weapons. Effects of blast, shock, thermal radiation, prompt, and delayed nuclear radiation. Fire, fallout, ozone-layer depletion, electromagnetic pulse, "nuclear winter." Medical consequences, physical damage, effects on the individual and on society. Defensive measures and their feasibility. Scenarios for war and peace, proliferation of nuclear weapons material, recent diplomatic history. U.S. Bishops' Pastoral Letter. The course counts for science majors as a general elective credit.

### **PHYS 20071. Physics of Sound and Music**

(3-0-3) Bunker

This course includes a non-technical introduction to the physics of sound, including musical acoustics and the science of sound reproduction. The course will include basic Newtonian mechanics, oscillating systems, wave motion, sound, Fourier synthesis, psychoacoustics and hearing, and the acoustics of various musical instruments. It will also include a short introduction to electricity and magnetism, and the physics of microphones, loudspeakers, phonographs, digital recording, and electronic synthesizers. Although there are no formal prerequisites, the course will make use of some algebra and trigonometry. There will not be laboratory, but many demonstrations will be offered, including students playing their own instruments.

### **PHYS 20140. Descriptive Astronomy**

(3-0-3) Rettig, Mathews

A description of the motions and structure of the Earth, moon, and planets. An exposition of the modern theories of solar and stellar structure, nebulae, and galaxies. Basics of stellar evolution, black holes, quasars, and other recent developments. An introduction to cosmology. This course includes elementary observational projects.

### **PHYS 20330. General Physics III**

(3.5-0-3.5) Bigi

*Prerequisites:* (PHYS 10320) AND (MATH 10560 OR MATH 10860) AND (MATH 20850 (MAY BE TAKEN CONCURRENTLY) OR MATH 20550 (MAY BE TAKEN CONCURRENTLY) )

*Corequisite:* PHYS 21330

A third semester in general physics. Topics include (1) interference and diffraction; (2) quanta and the wave-particle duality; (3) introduction to quantum mechanics; (4) atomic, nuclear, and particle physics; (5) physics of the solid state; and (6) astrophysics and cosmology. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only.

### **PHYS 20421. Scientific Programming**

(3-0-3) Garnavich

*Prerequisites:* (PHYS 10411 OR PHYS 10310 OR PHYS 30210) AND (PHYS 20451 OR MATH 20580)

The principal goal of this course is to develop competence and experience in the use of computers as tools for scientific studies. The course is intended primarily for physics majors with little or no programming experience. Topics covered will include (1) FORTRAN, C, or other modern computer languages; (2) graphical presentation of results including user-written programs and graphics packages; (3) applying computer techniques to scientific data analysis, model calculations, and simulations; (4) the use of scientific libraries of sub-routines; and (5) the use of other scientific programs such as algebraic manipulators (Mathematica, etc). Course work will include the use of high-end UNIX workstations.

### **PHYS 20435. General Physics C-M/Electricity and Magnetism**

(3-0-4) Tang

*Prerequisites:* (PHYS 10310 OR PHYS 10411) AND (MATH 20550 (MAY BE TAKEN CONCURRENTLY) OR MATH 20850 (MAY BE TAKEN CONCURRENTLY) )

*Corequisite:* PHYS 21435

The third semester of a three-semester sequence in general physics. Topics include electrostatics, electric current and circuits, magnetism, electromagnetic induction and waves. A course designed for students majoring in the Department of Physics. Laboratory meetings each week.

### **PHYS 20451. Mathematical Methods in Physics I**

(3-0-3.5) Frauendorf

*Prerequisite:* (MATH 20550 (MAY BE TAKEN CONCURRENTLY) OR MATH 20850 (MAY BE TAKEN CONCURRENTLY) )

*Corequisite:* PHYS 22451

A two-semester course in the study of methods of mathematical physics. Topics include linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. The division between PHYS 20451 and 20452 will depend on the order of presentation. Weekly tutorial sessions.

### **PHYS 20452. Mathematical Methods in Physics II**

(3-0-3.5) Frauendorf

*Prerequisite:* PHYS 20451 OR MATH 20570

*Corequisite:* PHYS 22452

A two-semester course in the study of methods of mathematical physics. Topics include linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. The division between PHYS 20451 and 20452 will depend on the order of presentation. Weekly tutorial sessions.

### **PHYS 20454. Intermediate Classical Mechanics**

(3-0-3) Ruggiero

*Prerequisite:* (PHYS 20451 OR MATH 20570) AND (PHYS 20452 (MAY BE TAKEN CONCURRENTLY) OR MATH 20670 (MAY BE TAKEN CONCURRENTLY) )

Newtonian mechanics of particles in one, two, and three dimensions; oscillations; non inertial reference frames; gravitation, central forces; systems of particles; kinetics and dynamics of rigid body motion; Lagrangians; Hamilton's equations.

### **PHYS 20464. Modern Physics I**

(4-0-4) Furdyna

*Prerequisite:* PHYS 10424 OR PHYS 20435 OR PHYS 10320

Special relativity, foundations of quantum concepts. Properties of atoms. Interactions of electromagnetic fields with atoms. Wave mechanics and the Schrodinger equation. Atomic structure and atomic spectra. Atomic wave functions. Fine structure and Zeeman effect. Multiplet analysis. Exclusion principle, periodic table, and spectra of multielectron atoms. Introduction to the statistical physics of quantum mechanical systems.

### **PHYS 20481. Introduction to Astronomy and Astrophysics for Majors**

(3-0-3)

*Prerequisite:* PHYS 10310 OR PHYS 10411 OR PHYS 30210

This one-semester course uses basic physical principals of mechanics, optics, and radiation to provide an introduction to modern astronomy and astrophysics. Topics include the solar system, stars, interstellar matter, galaxies, and cosmology. The underlying observations (from radio to gamma rays) are used to provide a fundamental understanding of topics and their historical background. Several observing projects will be completed at the observatory in the Jordan Hall of Science. (This course is offer in the fall of even years.)

### **PHYS 21330. General Physics III Laboratory**

(0-1-0)

*Corequisite:* PHYS 20330

The laboratory is a corequisite for PHYS 20330

### **PHYS 21435. General Physics C-M/EandM Laboratory**

(0-2-0)

*Corequisite:* PHYS 20435

The laboratory is a corequisite for PHYS 20435.

### **PHYS 22451. Mathematical Methods in Physics I**

(0-1-0)

*Corequisite:* PHYS 20451

The tutorial is a corequisite for PHYS 20451

### **PHYS 22452. Mathematical Methods in Physics II**

(0-1-0)

*Corequisite:* PHYS 20452

The tutorial is a corequisite for PHYS 20452.

### **PHYS 23411. Sophomore Seminar**

(1-0-1)

An introduction to the physics major, career and post-graduate options, and current topics in physics research. Classes are conducted by staff members.

### **PHYS 30210. Physics I**

(3-0-4) Dobrowolska; Ruggiero

*Prerequisite:* (MATH 10360 OR MATH 10460 OR MATH 10560 OR MATH 10860)

*Corequisite:* PHYS 31210

The basic principles of mechanics, fluid mechanics, thermal physics, wave motion, and sound. Primarily for students in the life sciences. Laboratory meetings each week.

### **PHYS 30220. Physics II**

(3-0-4) Dobrowolska; Wayne

*Prerequisites:* (PHYS 10310 OR PHYS 10411 OR PHYS 30210 OR PHYS 34210) AND (MATH 10360 OR MATH 10460 OR MATH 10560 OR MATH 10860)

*Corequisite:* PHYS 31220

The basic principles of electricity, magnetism, optics, and modern physics. Primarily for students in the life sciences. Laboratory meetings each week.

### **PHYS 30389. Philosophical Issues in Physics**

(3-0-3) Bland

*Prerequisite:* PHYS 10122 OR PHYS 10320 OR PHYS 30220 OR PHYS 20435

This course is intended for non-science students who desire to begin an examination of the origins of the modern laws of physics and for science students who wish to know the actual route to the discovery and the broader implications of the formal theories with which they are already familiar. The historical background to and philosophical questions associated with major laws of physics will be discussed, in large measure by examining directly relevant excerpts from the writings of some of the creators of seminal concepts and theories in physics. The latter part of the course will concentrate on historical and philosophical issues related to relativity and especially to quantum theory and its interpretation. This course is accepted as a science elective in the College of Science.

### **PHYS 30432. Lasers and Modern Optics**

(3-0-3) Tanner

*Prerequisite:* PHYS 20330 OR PHYS 20464

*Corequisite:* PHYS 31432

Principles and practical aspects of laser operation and applications in modern optics. Propagation of plane electromagnetic waves. Diffraction and interference of light. Gaussian beam propagation and optical resonators. Theory of laser oscillation. Gas, solid, semiconductor, and dye lasers. Detectors of optical radiation. Nonlinear optics. Applications in research and industry. Laboratory exercises include polarization, interference, Fourier optics, holography, gas, diode and

turnable lasers, and harmonic generation. A course primarily intended for physics majors.

### PHYS 30461. Thermal Physics

(3-0-3) Delgado

*Prerequisite:* PHYS 20454

The first half of this course covers classical thermodynamics, from ideal gases to thermodynamic potentials, finishing with phase transitions. The second half is devoted to statistical mechanics as the basis of thermodynamics. Classical and quantum distributions will be introduced to explain the collective behavior of particles, ending with Bose-Einstein condensation.

### PHYS 30465. Topics in Modern Physics II

(3-0-3) Garg

*Prerequisite:* PHYS 20464

A continuation of Modern Physics I. Topics in quantum physics. Molecular bonding and spin valence. Molecular spectra. Bonding, energy levels and band structure in solids. Ionic crystals, metals and semiconductors. Thermal, electric, magnetic, and optical properties of solids. Quantum numbers of particles, basic forces, the particle zoo. Stable nuclei, nuclear structure and models, nuclear decay and reactions, energy levels, fission, fusion. Particle scattering. Production, detection and properties of elementary particles.

### PHYS 30471. Electricity and Magnetism

(3-0-3) Caprio

*Prerequisites:* (PHYS 20435 OR PHYS 10320) AND (PHYS 20452 OR MATH 20670)

Electro- and magnetostatics. Laplace's and Poisson's equations. Boundary value problems. Multipole fields. Dielectric and magnetic phenomena. Maxwell's equations.

### PHYS 30472. Electromagnetic Waves

(3-0-3) Caprio

*Prerequisite:* PHYS 30471

Study of electromagnetic waves, physical optics, radiation from accelerating charges, and some topics from the special theory of relativity.

### PHYS 30481. Modern Observational Techniques

(3-2-3) Howk

*Prerequisite:* (PHYS 20435 OR PHYS 10320)

This one-semester modern-astronomy laboratory course emphasizes new advances in telescopes, astronomical imaging, and spectroscopies, as well as photoelectric observations. Data processing and analysis techniques are taught. Extensive use will be made of the new observatory in the Jordan Hall of Science. There is a possibility of field trips to the VATT, LBT, or other major research telescopes. (This course is offered in the fall of odd years.)

### PHYS 31210. Physics I Laboratory

(0-2-0)

*Prerequisite:* PHYS 30210 (MAY BE TAKEN CONCURRENTLY) OR PHYS 34210

The laboratory is a corequisite for PHYS 30210

### PHYS 31220. Physics II Laboratory

(0-2-0)

*Corequisite:* PHYS 30220

The laboratory is a corequisite for PHYS 30220

### PHYS 31432. Lasers and Modern Optics Lab

(0-2-0)

*Corequisite:* PHYS 30432

Accompanying lab for PHYS 30432.

### PHYS 33411. Junior Seminar

(1-0-1)

A discussion of current topics in physics by staff members.

### PHYS 40371. Medical Physics

(3-0-3) Blackstead

*Prerequisite:* (PHYS 10320 OR PHYS 20435 OR PHYS 30220)

Topics involving the applications of physics in medicine and biology are selected from the following: external and internal forces on the body; heat and temperature equilibrium; physics of hearing; physics of vision; nerve conduction; muscle contraction; electric potentials of the brain; physics of cardiovascular and pulmonary systems; ionizing radiations and their effects; nuclear medicine; radiotherapy; physics of some biological instruments. A science elective course for preprofessional students, but open to other students.

### PHYS 40432. Biological Physics

(3-0-3) Bunker

*Prerequisite:* PHYS 10320 OR PHYS 20435 OR PHYS 30220

The functioning of cells at the molecular level will be discussed on the basis of basic physics principles including Newtonian mechanics, thermodynamics, statistical mechanics, and electrical transport. The course covers diverse topics including cell energy balance, molecular machines, nerve impulse propagation, self-assembly; electrical properties of molecules. This is an approved science elective.

### PHYS 40441. Modern Physics Laboratory I

(0-2-3) Tanner

*Prerequisites:* (PHYS 20464 AND PHYS 30471)

*Corequisite:* PHYS 41441

A two-semester laboratory course stressing experiments in atomic, nuclear, and solid-state physics. The course is designed to introduce the student to experiments and methods closely related to modern-day research. Students will be introduced to the fundamentals of semiconductor devices and the construction and use of such devices.

### PHYS 40442. Modern Physics Laboratory II

(0-3-3) Collon

*Prerequisite:* PHYS 40441

*Corequisite:* PHYS 41442

A two-semester laboratory course stressing experiments in atomic, nuclear, and solid-state physics. The course is designed to introduce the student to experiments and methods closely related to modern-day research. Students will be introduced to the fundamentals of semiconductor devices and the construction and use of such devices.

### PHYS 40453. Introduction to Quantum Mechanics I

(3-0-3) Eskildsen

*Prerequisites:* PHYS 20464 AND (PHYS 20452 OR MATH 20670)

A two-semester course on the experimental basis for the wave picture of matter and the fundamental ideas of quantum mechanics. The first semester covers scattering and bound state solutions to the Schrodinger equation in one and three dimensions; Hilbert spaces and the mathematical formalism underlying quantum mechanics; angular momentum and spin; the hydrogen atom; and multi-particle wave functions and identical particles.

### PHYS 40454. Introduction to Quantum Mechanics II

(3-0-3) Eskildsen

*Prerequisite:* PHYS 40453

A two-semester course on the experimental basis for the wave picture of matter and the fundamental ideas of quantum mechanics. The second semester covers corrections to the hydrogen atom, including fine structure, hyperfine splitting and Zeeman effect; approximation techniques, including WKB, perturbation theory, and variational principle; adiabatic theorem; geometrical phases; and scattering theory.

**PHYS 41441. Modern Physics I Laboratory**

(0-4-0) Garnavich

*Corequisite:* PHYS 40441

The laboratory is a corequisite for PHYS 40441

**PHYS 41442. Modern Physics II Laboratory**

(0-4-0)

*Corequisite:* PHYS 40442

The laboratory is a corequisite for PHYS 40442

**PHYS 43411. Senior Seminar**

(1-0-1) Wayne

A discussion of current topics in physics by students and staff members.

**PHYS 46490. Directed Readings**

(V-0-V)

Study of topics not covered or only briefly covered in other courses. Readings, problems, and reports.

**PHYS 48480. Undergraduate Research**

(V-0-V)

Research in collaboration with members of the faculty. Three to nine hours each week, arranged individually for each student. One to three credits.

**PHYS 50303. Quantum Optics**

(3-0-3) Tanner

*Prerequisite:* PHYS 40453

This course will cover properties of the quantized electromagnetic field as it interacts with atoms and other forms of matter. The interaction of light with matter is the basis for the phenomena of photoelectric detection, measurement, and nonlinear optics which will be used to investigate the quantum mechanical nature of photon correlations, coherent states of light, squeezed states, and the basics of quantum computing.

**PHYS 50445. Astrophysics**

(3-0-3) Garnavich

*Prerequisites:* (PHYS 30471 AND PHYS 40453)

A study of the physical problems associated with stellar motions; energy generation and radiation; astronomical distances; celestial mechanics; galactic dynamics; cosmic rays; interstellar matter; thermodynamics; and equations of state of various stellar models. Observational techniques and methods of computation will be discussed. An elective course for senior physics majors and other qualified students.

**PHYS 50472. Relativity: Special and General**

(3-0-3) Arnold

*Prerequisite:* PHYS 30471

An introduction to relativity, both special and general. Special relativity: Lorentz transformations of events, geometry of space-time, relativistic kinetics (energy-momentum), Lorentz transformations of electromagnetic fields. General relativity: gravity and light, principle of general covariance, Einstein's field equations, Schwarzschild solution, precession of perihelions of planets, deflection of light, black holes. An elective course for senior physics majors.

# The University

## Department of Aerospace Studies (ROTC—Air Force)

### AS 10101. The Foundations of the United States Air Force

(1-0-1) Harding

AS 10101 is the first course in the two-semester sequence for AS 10000. AS 10000 is a survey course designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps. Featured topics include overview of ROTC, special programs offered through ROTC, mission and organization of the Air Force, brief history of the Air Force, introduction to leadership and leadership-related issues, Air Force core values, Air Force officer opportunities, and an introduction to communication studies. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

### AS 10102. The Foundations of the United States Air Force

(1-0-1) Harding

*Corequisite:* AS 11102

AS 10102 is the second course in the two-semester sequence for AS 10000. AS 10000 is a survey course designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps. Featured topics include overview of ROTC, special programs offered through ROTC, mission and organization of the Air Force, brief history of the Air Force, introduction to leadership and leadership-related issues, Air Force core values, Air Force officer opportunities, and an introduction to communication studies. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

### AS 11101. Leadership Laboratory

(0-2-0) Harding

Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student-planned, organized, and executed practicum conducted under the supervision of the detachment commander and commandant of cadets. LLAB cadets are classified into one of four groups with respect to field training attendance and/or commissioning: (1) Initial Military Training (IMT) cadets, (2) Field Training Prep (FTP) cadets, (3) Intermediate Cadet Leaders (ICL), and (4) Senior Cadet Leaders (SCL). IMT cadets are part of the General Military Course (GMC) but are not scheduled to attend field training (normally AS 10000 cadets). The focus of IMT objectives/activities is to promote the Air Force way of life and help effectively recruit and retain qualified cadets. This time is spent acquainting the cadets with basic Air Force knowledge and skills to help them determine whether they wish to continue with the AFROTC program.

### AS 11102. Leadership Laboratory

(0-2-0) Harding

*Corequisite:* AS 10102

Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student-planned, organized, and executed practicum conducted under the supervision of the detachment commander and commandant of cadets. LLAB cadets are classified into one of four groups with respect to field training attendance and/or commissioning: (1) Initial Military Training (IMT) cadets, (2) Field Training Prep (FTP) cadets, (3) Intermediate Cadet Leaders (ICL), and (4) Senior Cadet Leaders (SCL). IMT cadets are part of the General Military Course

(GMC) but are not scheduled to attend field training (normally AS 10000 cadets). The focus of IMT objectives/activities is to promote the Air Force way of life and help effectively recruit and retain qualified cadets. This time is spent acquainting the cadets with basic Air Force knowledge and skills to help them determine whether they wish to continue with the AFROTC program.

### AS 20101. The Evolution of USAF Air and Space Power

(1-0-1) Harding

AS 20101 is the first course in the two-semester sequence for AS 20000. AS 20000 is a course designed to examine general aspects of air and space power through a historical perspective. Utilizing this perspective, the course covers a time period from the first balloons and dirigibles to the space-age systems of the global war on terror. Historical examples are provided to extrapolate the development of Air Force distinctive capabilities (previously referred to as core competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension: e.g., principles of war and tenets of air and space power. As a whole, this course provides the students with a knowledge-level understanding for the general employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, the students will be inculcated into the Air Force core values, with the use of operational examples, and will conduct several writing and briefing assignments to meet Air Force communication skills requirements.

### AS 20102. The Evolution of USAF Air and Space Power

(1-0-1) Harding

AS 20102 is the second course in the two-semester sequence for AS 20000. AS 20000 is a course designed to examine general aspects of air and space power through a historical perspective. Utilizing this perspective, the course covers a time period from the first balloons and dirigibles to the space-age systems of the global war on terror. Historical examples are provided to extrapolate the development of Air Force distinctive capabilities (previously referred to as core competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension: e.g., principles of war and tenets of air and space power. As a whole, this course provides the students with a knowledge-level understanding for the general employment of air and space power, from an institutional, doctrinal, and historical perspective. In addition, the students will be inculcated into the Air Force core values, with the use of operational examples, and will conduct several writing and briefing assignments to meet Air Force communication skills requirements.

### AS 21101. Leadership Laboratory

(0-2-0) Harding

As a complement to AS 20000, Field Training Prep (FTP) cadets are scheduled to attend field training in the upcoming year (normally AS 20000 cadets). The FTP objectives provide training to ensure every cadet is mentally and physically prepared for the rigorous field-training environment.

### AS 21102. Leadership Laboratory

(0-2-0) Harding

As a complement to AS 20000, Field Training Prep (FTP) cadets are scheduled to attend field training in the upcoming year (normally AS 20000 cadets). The FTP objectives provide training to ensure every cadet is mentally and physically prepared for the rigorous field-training environment.

**AS 30101. Air Force Leadership Studies**

(3-0-3) Braue

AS 30101 is the first course in the two-semester sequence for AS 30000. AS 30000 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course.

**AS 30102. Air Force Leadership Studies**

(3-0-3) Braue

AS 30102 is the second course in the two-semester sequence for AS 30000. AS 30000 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course.

**AS 31101. Leadership Laboratory**

(0-2-0) Harding

Complementing AS 30000 courses are the Intermediate Cadet Leaders (ICL) who are cadets returning from field training. ICL objectives/activities give cadets the opportunity to further develop the leadership and followership skills learned at field training. Every cadet position should provide the ICLs the opportunity to sharpen their planning, organizational, and communication skills, as well as their ability to effectively use resources to accomplish a mission in a constructive learning environment.

**AS 31102. Leadership Laboratory**

(0-0-0) Harding

Complementing AS 30000 courses are the Intermediate Cadet Leaders (ICL) who are cadets returning from field training. ICL objectives/activities give cadets the opportunity to further develop the leadership and followership skills learned at field training. Every cadet position should provide the ICLs the opportunity to sharpen their planning, organizational, and communication skills, as well as their ability to effectively use resources to accomplish a mission in a constructive learning environment.

**AS 40098. Directed Readings**

(3-0-3)

Directed readings of selected classic and current military/leadership literature.

**AS 40101. National Security Affairs/Preparation for Active Duty**

(3-0-3) Mitchell

AS 40101 is the first course in the two-semester sequence for AS 40000. AS 40000 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills.

**AS 40102. National Security Affairs/Preparation for Active Duty**

(3-0-3) Mitchell

AS 40102 is the second course in the two-semester sequence for AS 40000. AS 40000 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills.

**AS 41101. Leadership Laboratory**

(0-2-0) Harding

Senior Cadet Leaders (SCL) are cadets scheduled to be commissioned in the upcoming year (normally AS 40000 cadets complementing AS 40000 courses). This time is spent on additional opportunities to develop leadership and supervisory capabilities, and prepares cadets for their first active duty assignment. Extended Cadet Leaders (ECL) are cadets whose ROTC academic requirements are complete, but who still have one or more terms of college left to complete. These cadets may hold special duty or regular positions within the cadet corps upon discretion of the Detachment Commander (Det CC) or Commandant of Cadets (COC).

**AS 41102. Leadership Laboratory**

(0-2-0) Harding

Senior Cadet Leaders (SCL) are cadets scheduled to be commissioned in the upcoming year (normally AS 40000 cadets complementing AS 40000 courses). This time is spent on additional opportunities to develop leadership and supervisory capabilities, and prepares cadets for their first active duty assignment. Extended Cadet Leaders (ECL) are cadets whose ROTC academic requirements are complete, but who still have one or more terms of college left to complete. These cadets may hold special duty or regular positions within the cadet corps upon discretion of the Detachment Commander (Det CC) or Commandant of Cadets (COC).

## Institute for Educational Initiatives

### ESS 20200. Sociology of Race and Ethnicity

(3-0-3)

*Corequisite:* ESS 27999

This course has three objectives. First, the course will help you to think critically about issues related to race and ethnicity in American society. These issues include the meaning of race and ethnicity; the extent of racial and ethnic inequality in the United States; the nature of racism, discrimination, and racial stereotyping; the pros and cons of affirmative action; the development of racial identity; differences between assimilation, amalgamation, and multiculturalism; and social and individual change with respect to race relations. The second objective is to foster a dialogue between you and other students about racist and ethnocentric attitudes and actions. The third objective is to encourage you to explore your own racial and ethnic identity and to understand how this identity reflects and shapes your life experiences.

### ESS 20201. Social Psychology

(3-0-3)

*Corequisite:* ESS 27999

An analysis of important human processes, including perceiving and knowing other people, attitudes and attitude change, conformity and nonconformity, cooperation and competition with others, leadership in groups, attraction and love, aggression and violence, and prejudice. Specifically designed for sociology and other liberal arts majors and will emphasize theory and research. As a result, it is not recommended for students having had SOC 10722, as the content may overlap. This is an education-general course.

### ESS 20202. Social Inequality and American Education

(3-0-3) Carbonaro

*Corequisite:* ESS 27999

Many have claimed that the American educational system is the “great equalizer among men.” In other words, the educational system gives everyone a chance to prosper in American society regardless of each person’s social origins. In this course, we explore the validity of this claim. Do schools help make American society more equal by reducing the importance of class, race, and gender as sources of inequality, or do schools simply reinforce existing inequalities and reproduce pre-existing social relations? Topics covered include unequal resources among schools, sorting practices of students within schools, parents’ roles in determining student outcomes, the role of schooling in determining labor market outcomes for individuals, and the use of educational programs as a remedy for poverty. This is an education-focused course.

### ESS 20203. Introduction to Social Problems

(3-0-3)

*Corequisite:* ESS 27999

Analysis of selected problems in American society such as crime, narcotic addiction, alcoholism, delinquency, racial and ethnic conflict, prostitution, and others. Discussions, debates, films, tapes, and readings. This is an education-general course.

### ESS 20205. Social Inequality: The Social Construction of Difference and Inequality

(3-0-3)

*Corequisite:* ESS 27999

Many of us are aware of our own experiences of disadvantage (or perhaps privilege), but people are generally not aware of how structural arrangements in society result in systems of difference and inequality. Only occasionally do we question whether or not things are really black and white, right and wrong, true or false, and even less often do we contemplate the repercussions of such binary assumptions. This class will challenge taken-for-granted beliefs about race and ethnicity, social class, sex and gender, and sexuality. We will discuss how these socially constructed categories of difference are given significant meaning and how

this process subsequently results in “real” differences in experiences, expectations, and achievements between groups of individuals.

### ESS 20206. Religion and Schools in American Society

(3-0-3)

*Corequisite:* ESS 27999

Does religion help children do well in school? Focused on primary and secondary schooling in the United States, this course investigates several academic and policy questions on the relationship between religion and schooling: How does religion affect academic outcomes for children? How do contemporary religious Americans view public schools, and how does religion shape Americans’ views on curricular and other school policy issues? What is the role of religion in the schooling choices of families in the United States? Do Catholic or other religious schools improve academic outcomes for children? Why or why not? Through lectures, discussion of key works, and a research paper, the course advances theory and evidence regarding the relationship of religion and academic achievement, the role of religion in politics of education, and the relationship of religion and democratic education.

### ESS 20300. Latinos in the United States

(3-0-3)

*Corequisite:* ESS 27999

This course will examine the history of Latinos/as in the United States. Readings and discussions will trace the founding and development of early Mexican American communities in the present-day Southwest. We will then topically and chronologically cover the post-1900 urban and regional experiences of Latin American-origin immigrants, migrants, and exiles throughout the United States. The focus will be on those people coming from Mexico and the Hispanic Caribbean, but immigrants from Central and South America are also included. Some of the areas of emphasis are the Chicano movement and civil rights; Latino music and culture; race, ethnicity, and the family; education; and contemporary trends in transnational migration. The instructor will necessarily adopt a comparative approach, and students will study and critique a variety of interpretations and ideologies. Lectures and discussions will be supplemented with visual material. Grading will be based primarily on two midterm essay exams and a final research paper (10 pp.). This is an education-general course.

### ESS 20301. American Catholic Experience

(3-0-3)

*Corequisites:* ESS 27999; HIST 32615

A survey of the history of Roman Catholicism in the United States from colonial times to the present, with emphasis on the 20th-century experience. The first half of the course covers the Catholic missions and settlements in the New World, Republican-era Catholicism’s experiment with democracy, and the immigrant church from 1820 to 1950. The second half of the course focuses on the preparations for, and impact of, the Second Vatican Council (1962–65). Assigned reading includes a packet of articles and primary sources about the liturgical renewal, Catholic action, social justice movements, and other preconciliar developments. This is an education-general course.

### ESS 30205. Race and Ethnicity

(3-0-3)

*Corequisite:* ESS 27999

This course focuses on race and ethnic relations in the United States. Current cases involving racial and ethnic issues will be presented and discussed in class. Readings and materials will present three approaches to the study of majority-minority group relations, the emergence and maintenance of group dominance and minority-group adaptations to modes of dominance, including separation, accommodation, acculturation, and assimilation. Class participation and students’ experiences will be emphasized. This is an education-general course.

### ESS 30207. Sociology of Education

(3-0-3)

*Corequisite:* ESS 27999

This course focuses on the relationship between education and society. In the course, a variety of theoretical approaches and contemporary issues in the field of

education will be discussed. Topics to be addressed include, but are not limited to, gender and race inequalities in education, the role of schools as agents of selection and socialization, and the nature of educational reform movements. Class participation and the experiences of students will be emphasized. This is an education-focused course.

### **ESS 30208. Poverty, Inequality, and Social Stratification**

(3-0-3)

*Corequisite:* ESS 27999

Social inequality is a prominent and persistent feature of modern society. Social stratification theory attempts to explain the causes of inequality and the reasons for its persistence. This course will address such questions as: Why are some people rich and some people poor? Why does inequality persist? Who gets ahead? Can men and women get the same jobs? Do different races have the same opportunities? Is inequality necessary? Potential topics include inner city and rural poverty, welfare dependency, homelessness, status attainment and occupational mobility, racial and ethnic stratification, gender stratification and class theory. This is an education-general course.

### **ESS 30210. Today's Gender Roles**

(3-0-3) Aldous

*Corequisite:* ESS 27999

Current changes in male and female roles and the reasons for these changes are examined. Existing gender differences, various explanations for them, and proposals for change are discussed and evaluated. This is an education-general course.

### **ESS 30211. Sociology of Teaching**

(3-0-3)

*Corequisite:* ESS 27999

This course surveys the sociological foundations of teaching and learning in America's elementary and secondary school classrooms. The class begins with an examination of teaching as a profession. What attracts individuals to the teaching profession, and why do they leave? What constitutes professional success for teachers? Next, we'll examine how local context shapes the work that teachers do, looking at some elements of schools and communities that impact the nature of teachers' work. The course concludes by looking at the teacher's role in producing educational success by considering two enduring educational problems: how to foster student engagement, and how to teach students of differing abilities within the same classroom. In addition to research in the sociology of teaching, students will be exposed to teacher narratives of success and struggle. This is an education-focused course.

### **ESS 30212. Sociology of Culture: Culture and Society, Sociological Approaches**

(3-0-3)

*Corequisite:* ESS 27999

In this class we will examine cultural dimensions of important social processes, and we will survey contemporary sociological approaches to analyzing culture. Examples will include readings on home and work, social hierarchies, political culture, media and the arts, and social change.

### **ESS 30213. Gender Roles and Violence in Society**

(3-0-3)

*Corequisite:* ESS 27999

Much of the violence in contemporary society—whether it is domestic abuse, school shootings, gang warfare, video games, or inter-ethnic conflict—has something to do with gender. This course explores the connection between gender role socialization and the expression of conflict or aggression. Through readings, discussions, films and projects, students will be encouraged to examine sex differences in violent behavior as the outcome of complex processes. We will try to understand those processes better and develop the ability to describe the causes and their effects.

### **ESS 30214. Sociology, Self, and Catholic Social Tradition**

(3-0-3) Weigert

*Corequisite:* ESS 27999

What's Catholic about sociology? What's sociological about Catholic social tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

### **ESS 30215. Introduction to Cultural Sociology**

(3-0-3)

*Corequisite:* ESS 27999

This class is an introduction to the way that sociologists study the cultural dimensions of the social world. Culture is here defined as all objects, ideas, and practices that people attach some meaning to. We will survey contemporary sociological approaches to analyzing culture, along the way tracing and discussing the way that culture and meanings are produced, disseminated, interpreted, and used by social actors. We will investigate how cultural objects are produced in mass media industries, how social boundaries and social hierarchies (such as those based on gender, race, and class) are created through the consolidation of cultural categories, and how social practices related to the consumption of cultural objects have become a central facet of life modern societies.

### **ESS 30216. Gender and Society**

(3-0-3) Gregg

*Corequisite:* ESS 27999

This course is an introduction to the study of gender and society. We will study how gender is constructed through social interaction and how it is patterned in a wide gamut of structural locations, such as the following: education, media, family, the field of medicine, and business and the economy. Major themes in this course include the social construction of gender, how people "do" gender, and patriarchy and the perpetuation of gender inequality in our society. After exploring the core characteristics of patriarchy and its power as a social system, the final project in this course will work toward solutions to gender inequality.

### **ESS 30217. Statistics for Sociological Research**

(3-0-3) Peaslee

*Corequisite:* ESS 27999

This course is designed to show students how to interpret and critically evaluate statistics commonly used to describe, predict, and evaluate in the social sciences, as well as many areas of the business and/or medical world. The focus is on a conceptual understanding of what the statistic does, means, and what assumptions are made from it. Hands-on experience in using data analysis is part of the course.

### **ESS 30302. Latino/a History**

(3-0-3)

*Corequisite:* ESS 27999

This is an interdisciplinary history course examining the Latino experience in the United States after 1848. We will examine the major demographic, social, economic, and political trends of the past 150 years with an eye to understanding Latino/a America. Necessarily a large portion of the subject matter will focus on the history of Mexican Americans, and Mexican immigrants in the Southwest, and Midwestern United States, but we will also explore the histories of Puerto Ricans, Cubans, and Latin Americans within the larger Latino/a community. Latinos are U.S. citizens and as such, the course will spend significant time on the status of these groups before the law, and their relations with the state at the federal, local, and community level. To explore these issues within the various Latino communities of the United States we will explore the following key topics: historical roots of Latinos/as in the United States; the evolution of a Latino/a ethnicity and identity within the United States; immigration, transmigration, and the shaping of Latino/a communities; Latino/a labor history; segregation; civil rights; nationalism

and transnationalism; the Chicano civil rights movement; Latinos in film; and post-1965 changes in Latino/a life. This is an education-general course.

### **ESS 30304. Women and Religion in U.S. History**

(3-0-3)

*Corequisite:* ESS 27999

The course is a survey of women and religion in America during the 19th and 20th centuries. Among others, we will consider the following themes: how religion shaped women's participation in reform movements such as abolition, temperance, and civil rights; how religious ideology affected women's work, both paid and unpaid; the relationship between religion, race, and ethnicity in women's lives; female religious leaders; and feminist critiques of religion. We will examine women's role within institutional churches in the Protestant, Catholic, and Jewish traditions, as well as raise broader questions about gender and religious belief. How did religious belief affect women both as individuals and in community? How could religion be used to both reinforce and subvert prevailing gender ideology? This is an education-general course.

### **ESS 30305. Women and American Catholicism**

(3-0-3)

*Corequisite:* ESS 27999

This course is a survey of the history of American Catholic women from the colonial period to the present. Through a combination of lectures, reading and discussion, we will explore the following themes and topics: the role of religious belief and practice in shaping Catholics' understanding of gender differences; the experience of women in religious communities and in family life; women's involvement in education and social reform; ethnic and racial diversity among Catholic women; devotional life; the development of feminist theology, and the emergence of the "new feminism" as articulated by Pope John Paul II. We will seek to understand how Catholic women, both lay and religious, contributed to the development of Church and nation, and examine how encounters with the broader American society have shaped Catholic women's relationship to the institutional church over the last three centuries.

### **ESS 30306. African American History to 1877**

(3-0-3)

*Corequisites:* ESS 27999; HIST 32800

This African American history survey begins with an examination of West African origins and ends with the Civil War era. We will discuss the Atlantic slave trade, slavery in colonial America, the beginnings of African American cultures in the North and South during and after the revolutionary era, slave resistance and rebellions, the political economy of slavery and resulting sectional disputes. Particular attention will be paid to northern free blacks.

### **ESS 30308. Mexican American History**

(3-0-3) Rodríguez

*Corequisites:* ESS 27999; HIST 32621

This course is an introductory survey of Mexican American history in the United States. Primarily focused on events after the Texas revolution and annexation of the American Southwest we will consider the problems the Spanish and Mexican settlers faced in their new homeland, as well as the mass migration of Anglo-Americans into the region following the annexation. Throughout the course, we will explore the changing nature of Mexican American U.S. citizenship. Other themes and topics examined will include immigration; the growth of agriculture in Texas and California; internal migration, urbanization, discrimination, segregation, language and cultural maintenance; and the development of a U.S.-based Mexican American politics and culture. Although primarily focused on the American Southwest and California, this course also highlights the long history of Mexican American life and work in the Great Lakes and Midwestern United States. We will conclude with the recent history of Mexican and Latin American migration to the United States after 1965, and the changing nature of Mexican American identity and citizenship within this context.

### **ESS 30310. Reforming America in the Long Nineteenth Century (1776–1919)**

(3-0-3) Turpin

With the recent 2008 presidential election, there is a lot of excitement about the possibility of "change" and "reform" in our country. This class will provide perspective on our present historical moment by examining American reform movements of the past. It will focus on "the long 19th century" from the American Revolution to World War I. During this time, optimistic Americans of various stripes set out to reform all sorts of things: religion, sex, eating and drinking, race and gender relations, education, and working and living conditions, to name just a few. As we look at these reform movements, we will ask the questions: What drove certain people to buck convention and seek reform? Why did they choose to focus on these particular reforms at these times? What did they believe would be the ultimate significance of the changes they were seeking? Why were some movements more successful than others?

### **ESS 30371. The Anthropology of Gender**

(3-0-3) *Corequisite:* ESS 27999

This course introduces students to the main issues and debates characterizing the anthropology of gender and explores how anthropologists have attempted to understand changing roles, sexual asymmetry, and stratification. This is an education-general course.

### **ESS 30400. Introduction to African American Literature**

(3-0-3)

*Corequisite:* ESS 27999

A survey of 300 years of African American literature. This is an education-general course.

### **ESS 30470. Race, Ethnicity, and American Democracy**

(3-0-3)

*Corequisite:* ESS 27999

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What roles do American political institutions—the Congress, presidency, judiciary, state and local governments, etc.—play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society? This is an education-general course.

### **ESS 30471. Schools and Democracy**

(3-0-3)

*Corequisite:* ESS 27999

Education sits high on the public policy agenda. We are living in an era of innovations in education policy, with heated discussion surrounding issues such as vouchers, charter schools, and the No Child Left Behind Act. This course introduces students to the arguments for and against these and other educational innovations, and does so through the lens of how schools affect the civic health of the nation. Often forgotten amidst debates over school choice and standardized testing is the fact that America's schools have a civic mandate to teach young people how to be engaged citizens. Students in this course will grapple with the civic implications of America's educational landscape, and have an opportunity to propose ways to improve the civic education provided to young people.

### **ESS 30472. The Politics of Poverty and Social Welfare**

(3-0-3) Flavin

*Corequisite:* ESS 27999

The United States is the wealthiest nation in the world, yet poverty remains a persistent concern. In this course, we will study the sources of poverty and economic inequality and what has and can be done to address the problem. We begin by discussing different theories on to what extent citizens' income and wealth should be equal in a society and the government's prescribed role, if any, in the process.

We then trace the history of poverty in the United States and various government efforts to address the problem through social welfare programs. Finally, we will closely study the different forms poverty takes on today and enter the ongoing debate over what public policies should be implemented in response. Throughout the course, we will pay particular attention to the decidedly political dimension of poverty in America.

### **ESS 30500. Economics of Poverty**

(3-0-3)

*Corequisite:* ESS 27999

An examination of the extent and causes of poverty in the United States. The current system of government programs to combat poverty is analyzed. Reforms of this system are also considered. This is an education-general course.

### **ESS 30501. Addressing U.S. Poverty at the Local Level**

(3-0-3)

This course focuses on four arenas where poverty manifests itself: homelessness, education, healthcare, and jobs. This is an education-general course.

### **ESS 30502. Economics and Education**

(3-0-3)

*Corequisite:* ESS 27999

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What roles do American political institutions—the Congress, presidency, judiciary, state and local governments, etc.—play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society? This is an education-focused course.

### **ESS 30590. Catholics in America**

(3-0-3) Cummings

*Corequisite:* ESS 27999

Since 1850, Roman Catholics have constituted the single largest religious denomination in the United States. This course explores what the presence of Catholics has meant for the American experience, focusing on themes of church/state separation, religion and politics, education, and social reform. We will also examine how the American context has transformed the practice of Catholicism, with attention to ethnicity, gender, region, race, and class as variables that have shaped the American Catholic experience. Assigned readings range from excerpts of anti-Catholic publications to first-hand accounts written by American Catholics from the colonial period to the present. In addition, we will study the representation of Catholics in American film, themes of Catholic fiction, material culture relating to Catholic devotional life and the sacraments, and the shifting position of American Catholics in the universal Roman Catholic Church.

### **ESS 30609. The Impact of Language, Culture, and Identity on Educational Practices**

(3-0-3) Askildson

*Corequisite:* ESS 27999

This course seeks to critically examine the interaction and integration of language, culture and identity as they impact educational practices. The course will provide a broad introduction and overview of linguistic and cultural theory as they relate specifically to routines of socialization and interaction in the construction and maintenance of identity. Although much of the course will be devoted to American cultural contexts—particularly in the area of educational practices—our focus will be decidedly multicultural/lingual in scope. Topics will include language politics and policy, models of sociolinguistic interaction and variation, linguistic and cultural variables of developmental socialization, linguistic standardization, approaches to bilingual instruction, and a broad array of sociocultural influences on educational practice—in addition to many others. While some course content will require careful analysis of various theoretical considerations, the thrust of our

curriculum will move beyond the conceptual in order to address discrete issues of application and evaluation. As such, we will draw on contemporary illustrations of course material whenever possible and incorporate both outside fieldwork and guest speakers to elucidate the real-world impact of language, culture, and identity on education.

### **ESS 30611. Tutoring in the Community**

(1-0-1) Masters

ESS 30611 is a 1-credit seminar for students who are tutoring in the South Bend community. This seminar will provide tutors with an opportunity to explore the social, economic, and cultural forces that influence the lives of their students. Tutoring in the Community will give tutors the tools they need to analyze beliefs and pedagogy, improve instruction, and foster development in South Bend school children in need. Departmental approval required.

### **ESS 30612. History of American Education**

(3-0-3)

*Corequisite:* ESS 27999

The purpose of this course is to examine the history of education in America from around 1800 to the present in order to better understand the varied meanings Americans have attached to education during that period. Consequently, the course seeks to treat American educational history within the context of American intellectual, political, religious, and ethnic history. The course will be conducted as a seminar, which means that the course will be heavily geared toward reading and discussion of both primary and secondary source materials.

### **ESS 30614. Educational Psychology**

(3-0-3) Turner

*Corequisite:* ESS 27999

Educational Psychology examines questions about development, learning, and achievement in schools. In this course, we will explore fundamental questions such as (1) What is intelligence? Is it fixed or changeable? What are the implications of conceptions of intelligence for achievement? (2) How does learning occur? What are the implications of different theories of learning? Is there a “correct” theory of learning? Does learning differ in different subject areas? (3) What motivates student learning? Can instruction be “motivational”? (4) What is “good” instruction? How do theories of learning relate to instructional practices? (5) How do aspects of school context, such as interaction with peers and teachers and school culture influence learning, motivation, and achievement?

### **ESS 30615. Ideas That Shape Catholic Education**

(3-0-3)

*Corequisite:* ESS 27999

Catholic elementary and secondary schools contribute to the common good of civic society while advancing the evangelical mission of the Catholic Church. This course focuses on the historical successes of Catholic schools in the United States, surveys current research, and analyzes trends in theology, history, and philosophy that have shaped the current structure of the K–12 Catholic school system. Requirements include a field-based experience in a local Catholic school.

### **ESS 30616. The Politics of Educational Policy**

(3-0-3)

*Corequisite:* ESS 27999

This course will provide an overview of the major political processes, structures, and issues in education. We will analyze the nature of policymaking in education and discuss the roles of the various participants in the decision-making process. In addition, we will critically analyze the language of educational policies and the impact that these policies have on various stakeholders. Finally, we will examine the roles that legislation and courts have in shaping education policy.

### **ESS 30617. Education and Social Change**

(3-0-3)

*Corequisite:* ESS 27999

We live in an age when there is great optimism about the power of education to influence the wellbeing of individuals, communities, and nations. Parents

see education as a way for their children to improve their lives by building an understanding of their own place in the world. It is also the principal means by which young people can establish a competitive advantage in the labor market. While it might appear that little has changed in education—students still walk through school gates and university lecturers still speak to rooms of undergraduates—economic, political, and social shifts over the past 30 years have fundamentally altered the nature and prospects for education. This course seeks to assess critically these fundamental shifts in our society. Students will develop a broad understanding of the global context of both the causes and effects of these changes. Also, students will develop the capacity to assess the extent to which, as Basil Bernstein famously asked, education can compensate for society.

### ESS 30619. Cognitive Development

(3-0-3)

*Corequisite:* ESS 27999

This course provides an introduction to the central issues in the field of cognitive development. It will cover (1) general frameworks for studying cognitive development; (2) key questions in the field; and (3) specific topics such as conceptual development, memory development, language development, and the development of mathematical understanding. The primary focus will be on cognitive development from infancy to adolescence. Students will be expected to synthesize and evaluate material presented in lectures, readings, and class discussions.

### ESS 30621. Education Innovations in Diverse Contexts of Poverty

(3-0-3) Chattopadhyay

*Corequisite:* ESS 27999

This course will look at innovative educational interventions for socio-economically disadvantaged children in diverse contexts—both here in the United States, and internationally. Whether it is the Comer model in New Haven Conn.; or the Diversity Project in Berkeley, Calif; or EDUCO schools in Nicaragua; or Pratham's community-based supplementary education programs for slum children in India, the course will explore in-depth promising education interventions for children and adolescents growing up in poverty in a globalized world. The course will aim to make students aware of the ways in which educators in diverse contexts of poverty and inequality have conceptualized and implemented empowering alternatives. In doing so, the course will help students better understand what is possible in contexts of poverty and, indeed, what are the limits of the possible without any structural change in society.

### ESS 30622. Disability

(3-0-3) Joshua

*Corequisite:* ESS 27999

This course investigates the cultural meanings attached to extraordinary bodies and minds. Cultural and literary scholarship has extensively explored issues connected with identities derived from race, gender, and sexuality. Only recently have concepts of bodily identity, impairment, stigma, monstrosity, marginalization, beauty, deviance, and difference begun to cohere around disability as a concept and have emerged into a discipline called “disability studies.” This course covers topics such as human rights; feminism; medical attitudes; social stigma; normalcy; life narratives; pedagogy; Gothic horror; bodily representation; mental impairment; the politics of charity, community, and collective culture; Bible narrative; the built environment; and empowerment in a range of disciplines including literary studies, film, theology, government policy, art, and drama. Key texts and films will include *The Elephant Man*, *The Hunchback of Notre Dame*, Victor Hugo's *Notre-Dame de Paris*, Jean-Dominique Bauby's *The Diving Bell and the Butterfly: A Memoir*, Milton's *Samson Agonistes*, Charlotte Perkins Gilman's “The Yellow Wallpaper,” Ben Jonson's *Volpone* and Mary Shelley's *Frankenstein*. As part of the assessment, students who take this class will take part in a local placement with people with disabilities in order to gain experience of community-based learning.

### ESS 30623. Community-Based Research in Education

(3-0-3) Long

*Corequisite:* ESS 27999

Community-based research (CBR) is a form of applied scholarship that collaboratively engages campus and community organizations in the research process. By definition, a CBR problem originates in the community, and campus/community partners actively work together during the design and analysis phases. As a result, the research outcome is more likely to be useful for the community partner. In this course, students will have a wonderful opportunity to influence educational policy by helping the South Bend Community School Corporation: (1) review existing research on specific contemporary educational issues; and (2) do evaluative research of existing programs. Previous research experience is helpful, but not necessary; interest in educational issues is required.

### ESS 33218. Education and Social Stratification

(3-0-3)

*Corequisite:* ESS 27999

Education is one of the best predictors of occupational success and it is often viewed as one of the best ways to achieve social mobility. Given the emphasis placed on educational attainment in contemporary society, it is important that we consider the following questions: To what extent does the current educational system succeed in improving the opportunities of all members of society? To what extent does the educational system reinforce existing social inequality? In this course, we explore these questions in detail by examining the relationships between education, social class, race and ethnicity, and gender.

### ESS 33360. Social Concerns Seminar: Education

(0-0-1)

*Corequisite:* ESS 27999

This seminar focuses on the educational and outreach endeavors of St. John Vianney Catholic Parish in Goodyear, Ariz., and builds upon Notre Dame's relationships with the Congregation of Holy Cross. Students also collaborate with those in ministry with Holy Cross in Phoenix. The immersion takes place over winter break. Apply at the Center for Social Concerns in the fall.

### ESS 33600. Education, Schooling, and Society

(3-0-3) Chattopadhyay

*Corequisite:* ESS 27999

The aim of the introductory course is to introduce some basic questions about the nature and goals of education, its history, and theoretical explanations of influences on learning, teaching, and schooling. We will incorporate both classic and current texts. The core course will incorporate several disciplinary perspectives.

### ESS 33601. Exploring Authentic Ways of Learning Amidst a Myriad of Educational Challenges

(2-0-2)

*Corequisite:* ESS 27999

This course will focus on various aspects that affect a school setting that is undergoing reflections of its teaching and learning practices. After a discussion of current trends and practices in education, students will explore the reality gap between current curriculum and its preparation of future students to thrive in a global economy. Throughout the course, students will be challenged to think about new ways to enhance student learning in the following areas: literacy, creativity, critical thinking, and problem solving. Students will be presented issues through research and guest speakers that impact educational settings, e.g., cultural diversity, gender equity, special student populations such as children with autism, health-related concerns such as childhood obesity, and poverty. After understanding the culture of a local school and weaving together the educational challenges and innovations presented at seminar, students will create, implement, and evaluate an authentic learning experience that could be used by other mentors or volunteers in K–8 schools. Requirements include approximately two hours per week of community service at St. Adalbert's School. Department approval required.

### ESS 33602. Multicultural Education in the New Millennium: The Sociopolitical Context

(3-0-3)

*Corequisite:* ESS 27999

The success or failure of students in school has been the subject of much research and debate, particularly for students whose racial, ethnic, linguistic, or social class backgrounds differ from that of the dominant group. This course will focus on both the individual experiences (psychological responses), and how societal and educational structures, policies, and practices affect student learning. Students will explore ways that teachers, individually and collectively, can provide high-quality education in spite of obstacles that may get in the way. Multicultural education will be placed within a broad sociopolitical context considering education, politics, society, and economics.

### **ESS 33603. Think GREEN—Environmental Education in K–12 Schools**

(1-0-1)

Think GREEN—Generating and Guiding Reflective Environmental Education Networks in K–12 Classrooms will focus on environmental issues in which K–12 students can take an active role to help make a difference and/or change attitudes or behaviors. After discussions of environmental issues through film, presentations, readings, and blog interactions, students will explore the ND Green Initiatives; ND Forum on the Environment; Indiana Department of Education's Learn Green, and Live Green 2008 initiative, as well as other environmental educational programs for K–12 students. Students will use critical thinking strategies, curriculum ideas, and environmental education resources to create a service project or plan an action research project. Requirements include work with a K–12 school, science club, or afterschool program for a minimum of 10 hours during the semester. Course will include a maximum of five seminars on environmental education topics; attending the ND Forum and follow-up discussions; participating in a blog; and several small group projects. Department approval required.

### **ESS 33605. Education and Development in a Global Era**

(3-0-3)

*Corequisite:* ESS 27999

Forces of globalization are profoundly changing the experiences and opportunity structures of young people in an increasingly interconnected world. While there is a growing recognition that the knowledge-based global economy requires a new paradigm for education in the 21st century, a significant segment of the world's largest generation of adolescents remain vulnerable, disengaged, and disenfranchised from education. Against this backdrop, the proposed course will explore the policy responses towards social disadvantage and educational inequities at home and abroad through a framework that is informed by the dynamic interdependencies of the global and the local. Students taking this course will: (1) gain a critical understanding of the broader global context in which national educational policy takes shape, (2) develop operational fluency in key contemporary policy initiatives in international educational development, and (3) enhance analytical skills for comparative analysis of educational policy and practice toward underprivileged children and adolescents at home and abroad.

### **ESS 33606. Social Foundations of Coaching**

(1-0-1) Power

This course examines coaching children and adolescents as an educational ministry. We will explore the ways sports participation contributes to athletes' development as integrated human beings and the role that coaches can play in fostering that development. We will reflect on the nature of sports as play and on the motivational and moral aspects of sports participation. Finally, we will consider Bart Giamatti's reflection on the spiritual nature of sports: "I believe we have played games and watched games to imitate the gods, to become more godlike in our worship of each other, and through those moments of transmutation, to know for an instant what the gods know." Course participants can be certified as official "Play Like A Champion Today" trainers at the completion of the course.

### **ESS 33607. Principles of Coaching**

(1-0-1) Kelly

This course is designed to provide principles and methods necessary to become an effective coach at the youth and interscholastic levels. The focus will include coaching philosophy, qualities for successful leadership, strategies for effective and

cohesive programs, developing a sound understanding coaching philosophy at various levels, and gaining an understanding of the art and science of coaching. This course and ESS 33606 Social Foundations of Coaching are prerequisites for ESS 33608, a practicum in coaching, which will be offered in spring 2010.

### **ESS 33616. Leadership in Catholic Education**

(3-0-3)

*Corequisite:* ESS 27999

Changes in the Church, society, public policy and family life are impacting Catholic schools. This seminar explores the main challenges and opportunities facing K–12 Catholic schools in the United States and offers a theological view of leadership, informed by scripture, Church documents and recent history. Fieldwork with Catholic educational leaders is required.

### **ESS 33619. Race and Ethnicity in Public Education**

(3-0-3)

*Corequisite:* ESS 27999

This course explores the multiplicity and complexity of race, ethnicity, and culture in U.S. public education. Through its focus on the histories and contemporary realities of racial and ethnic groups in the United States, we will develop critical knowledge about the contingent, layered, and contested development of educational policies, institutions, and curricula. We will achieve this, in part, by examining the interplay of various racial and ethnic groups, numerous and sometimes competing interests, and the impact of power, history, and place upon public education. Through an exploration of these complex relationships, students will not only develop a stronger foundation in the politics and history of race and ethnicity in public education, but will also engage in more nuanced and critical analyses of contemporary issues. The goal of this course is to provide students with the tools necessary to critically and thoughtfully engage in and contribute to discussions and behavior that will support successful, affirming and healthy public education for all children.

### **ESS 35372. Anthropology of Childhood and Education**

(3-1-3)

*Corequisite:* ESS 27999

Concepts of human growth vary extraordinarily across time and space. When children become full-fledged persons, when they can reason, when or whether they should be independent from their parents, and how all this happens are variable and illuminating. Education—either formal or informal—reflects and also constitutes a society's view of childhood. This course provides a (selective) cross-cultural survey of childhood and education, looking at stages from pregnancy and infancy to late adolescence. Students will devise and conduct projects of their own.

### **ESS 36615. Directed Readings**

(V-0-V)

*Corequisite:* ESS 27999

Student and Instructor will design readings relevant to a special interest in education.

### **ESS 36616. Directed Readings: Motivation to Learn in Theory and Practice**

(3-0-3)

*Corequisite:* ESS 27999

This is a directed-readings course focusing on the theme of motivation.

### **ESS 36617. Directed Readings in Education**

(V-0-V)

Directed readings on various topics in education.

### **ESS 40209. Ethnicity in America**

(3-0-3)

*Corequisite:* ESS 27999

A study of the dynamic process of formation and development of the society of the United States and its cultural, religious, and racial pluralism; and a review of

the history and theory of interethnic relations and their manifestation in the basic institutions of family, education, religion, economics, and government.

### **ESS 40210. Unequal America**

(3-0-3)

*Corequisite:* ESS 27999

Although America is world's richest nation, it has the most unequal distribution of wealth and income in the industrialized world. In this course, we will examine why this is so. In particular, we will examine the following questions: What social forces create inequality in society? Is inequality inevitable? Is there such a thing as "social class"? Who gets ahead and why? Why is race/ethnicity and gender still related to social status, wealth, and income? Does America have a "ruling elite?" Who are "the poor," and what explains their poverty? Are there social policies that can create more equality in American society—and is that what Americans really want?

### **ESS 40212. Latinos in Education**

(3-0-3)

*Corequisite:* ESS 27999

This course examines the educational experiences and struggles of Latinos in U.S. public schools. Students will study these experiences through legal, political, historical, social, and economic perspectives, regarding educational policies and practices. Additionally, this course focuses on the potential of education as an agent for social justice and change for linguistically and culturally diverse groups, and thus its important role in the Latino experience. The goal of this course is to develop a reflective individual who is able to understand the educational context of Latinos in the United States. This is an education-focused course.

### **ESS 40213. The Schooled Society**

(3-0-3)

*Corequisite:* ESS 27999

This seminar focuses on the structure and organization of schooling in American society, and the societal forces that influence decisions about schools and student learning. These forces include legislation governing schooling, and cultural and religious norms that impact schools. The course will cover the role of schools in society; the political, economic, and social dimensions of schooling; education reform and its underpinnings; and the transformation of higher education. This is an education-focused course.

### **ESS 40214. Society and Identity**

(3-0-3)

*Corequisite:* ESS 27999

This course looks at sources, dynamics, and consequences of identity in contemporary society. Identity is conceived as definitions of an individual that self and others use as a basis for interacting with one another. Significant outcomes of the way we are defined are the life chances, evaluations, and emotional meanings we experience. The course format is a discussion. Seminar. This is an education-general course.

### **ESS 40215. Great Books in Sociology of Education**

(3-0-3)

*Corequisite:* ESS 27999

This course focuses on classic works in the sociology of education that not only shaped the direction of the education subfield, but also were landmarks in the field of sociology as a whole and often greatly influenced public policy. Discussion of the works will focus not only on an evaluation of the contribution of each work to sociology of education, but also on the question of how these works contributed to sociological theory. One important goal of the course is to use careful evaluation of classic works to develop good research questions and/or to use concepts and arguments from the works to inform current research projects. This is an education-focused course.

### **ESS 40250. Children and Poverty: Developmental Implications**

(3-0-3)

*Corequisite:* ESS 27999

Every fifth child in America faces hunger or poverty. This course examines the impacts of youth poverty and related risks from the perspectives of developmental and social psychology. Key topics include changing family patterns, violence and conflict resolution, moral development, resiliency, and educational inequalities/potentials. Central to the course will be an emphasis on children's developing cognitive perceptions of self in relation to society, and an examination of potential solutions, model programs, and relevant social policy. Readings will be drawn from a variety of sources and discussed in seminar format. Active student participation and service-learning engagement or community-based research are fundamental to the course. Students currently working with youth via student organizations or local entities are especially encouraged to apply.

### **ESS 40251. Multicultural Psychology**

(3-0-3)

*Corequisite:* ESS 27999

The general purpose of this course is to examine and learn to talk about issues of culture and race in the United States from a psycho-social perspective. Culture and race are not synonyms. So, we will be examining some of the ways that each affects the quality of our psychological functioning. The goals of this course are to learn to recognize and appreciate culture in ourselves and others; to examine the different ways that cultural and racial socialization influence behavior, to consider how culture and race relate to various psychological constructs, and to understand the ways in which racism and ethnocentrism operates in everyday life. To accomplish these goals, we will use readings, group discussions, lectures, films, and each other to expanding our awareness of how culture and race operates in our everyday life. As a student in this class, you will be encouraged to share your ideas and life experiences. This is an education-general course.

### **ESS 40253. Latino Psychology**

(3-0-3)

*Corequisite:* ESS 27999

The purpose of this course is to examine the psychosocial research and literature about Latino/a individuals and communities within the United States. Students will be actively involved in discussing issues relevant to Latino/a well-being, including immigration and acculturation, ethnic identity, religiosity, family life, prejudice and discrimination, and multiracial identity. Economic, educational, and social opportunities for Latinos also will be studied, and efforts toward social advocacy and the delivery of psychological interventions for Latino communities will be critically examined. This is an education-general course.

### **ESS 40255. Coaching Youth Sports**

(3-0-3) Howard

*Corequisite:* ESS 27999

This course is ideal for anyone who might serve as a coach at any time in the future. Topics include coaching strategies, substitution strategies, designing practices, dealing with parents, and the like. Conducting actual practice sessions and discussing relevant movies are scheduled throughout the course. There are no tests as a final portfolio is the sole grading method. Books include Phil Jackson's *Sacred Hoops* and Andy Hill and John Wooden's *Be Quick But Don't Hurry*.

### **ESS 40256. Moral Development**

(3-0-3) Narvaez

*Corequisite:* ESS 27999

Students are challenged to think about the nature of moral development, learn how to examine and compare theories in moral development, develop critical thinking, and have the opportunity to create a study of moral development. The course reflects on Catholic social teaching and its relation to moral identity and social action generally and in our own lives.

### **ESS 40257. Character Formation: Theory, Research, and Pedagogy**

(3-0-3)

*Corequisite:* ESS 27999

Students read research, study theory, and learn pedagogical approaches in the area of character education and moral development. They apply course material in a

real-world setting of their choice. Students develop creative, analytical, and practical intelligences as well as leadership skills. This is an education-focused course.

### ESS 40259. Psychology of Personality

(3-0-3) Kelly

*Corequisite:* ESS 27999

Major theories and research findings on social, emotional, and cognitive development are covered. Although emphasis is on the time from birth to early adulthood, some research on adulthood and the elderly is included. Attention is given to how different environments enhance or hinder healthy development.

### ESS 40260. Abnormal Psychology

(3-0-3) Monroe

*Corequisite:* ESS 27999

Defines the concept of abnormal or maladaptive behavior; reviews the principles involved in human development and adjustment and describes the common clinical syndromes, their causes, and treatments.

### ESS 40261. Developmental Psychology

(3-0-3) Lickenbrock

*Corequisite:* ESS 27999

Major theories and research findings on social, emotional, and cognitive development are covered. Although emphasis is on the time from birth to early adulthood, some research on adulthood and the elderly is included. Attention is given to how different environments enhance or hinder healthy development.

### ESS 40262. Cognitive Psychology

(3-0-3)

*Corequisite:* ESS 27999

A lecture course presenting a cognitive approach to higher processes such as memory, problem solving, learning, concept formation, and language.

### ESS 40263. Autism

(3-0-3) Whitman

*Corequisite:* ESS 27999

This seminar discusses topics related to developmental disabilities, with a special emphasis on pervasive developmental disorders and autism. Issues regarding their definition, etiology, and treatment are also discussed.

### ESS 40264. Sign Language

(3-0-3) Stillson

*Corequisite:* ESS 27999

The American Sign Language class is designed to introduce basic vocabulary and simple sentence structure for conversational use. A cultural view is presented to examine traditions and values. A linguistic view is presented to introduce structure, syntax, and manual alphabet. Experiential activities, receptive and expressive exercises, and fluency opportunities are incorporated into the format. This is an introductory class for students with no prior knowledge of American Sign Language.

### ESS 40402. The Teaching of Writing

(3-0-3)

*Corequisite:* ESS 27999

This course is designed to acquaint students seeking professional training in English with the methods, theories, and pedagogies appropriate for teaching English language arts and composition based on National Council of Teachers of English (NCTE) and International Reading Association (IRA) standards. Throughout the semester students will engage in an array of writing tasks, including lesson planning, research writing, and other formal and informal writing activities. Most of the writing projects serve as models for the kinds of assignments you might develop and implement in future classrooms.

### ESS 40403. The Literature of Disability

(3-0-3)

*Corequisite:* ESS 27999

A review of literature about “disability,” how the “disabled” experience literature, and how to teach literature to the “disabled.”

### ESS 40404. “Our America”: Exploring the Hyphen in African American Literature

(3-0-3)

*Corequisite:* ESS 27999

Close readings of various 20th-century African American literatures, with foci on how “black subjectivity” is created; the relationship between literature, history, and cultural mythology; the dialectic of freedom and slavery in American rhetoric; the American obsession with race; and the sexual ideology and competing representations of domesticity.

### ESS 40530. Educating in Faith: Catechesis in Catholic Schools

(3-0-3) Poorman

*Corequisite:* ESS 27999

This course is designed to assist current or prospective teachers of religion/theology at the junior high- and high school-levels in the catechesis of adolescents in Catholic schools. The course is also helpful for those anticipating a career in pastoral, and most especially catechetical, ministry with adolescents and young adults. The course is open to theology students at the undergraduate and graduate levels and to Notre Dame undergraduates with minors in education, schooling, and society. Within class sessions designed to be highly dialogical, interactive, and prayerful, participants explore both theological and practical/pedagogical dimensions of the process of catechesis. Required readings are drawn from the *National Directory for Catechesis*, the *General Directory for Catechesis*, and *The Catechism of the Catholic Church*, as well as from the works of theologians and educational theorists who have contributed significant responses to the two central questions addressed in this course: What is catechesis? and How do we engage in catechesis in the context of Catholic schools? During this course, participants explore all of the central tasks that constitute the holistic process of catechesis as delineated in the general and national Catholic catechetical directories and other catechetical documents and as adapted for use in Catholic schools: communicating knowledge of the mystery of God’s self-revelation; fostering maturity of faith and moral development; sharing and celebrating faith by forming Christian communities of prayerful people; promoting Christian service and social justice; and witnessing to faith through pedagogy and by the example of authentic spiritual lives. Course Requirement: Participants are required to read all assigned selections from the course packet, as well as from the *National Directory for Catechesis*. Participants also actively contribute to class sessions.

### ESS 43200. Research on School Effects

(3-0-3)

*Corequisite:* ESS 27999

It might seem a truism that schools have powerful effects on student achievement. Yet beginning with the landmark Equality of Educational Opportunity study in 1966, social scientists have debated the role that schools play in the production of student achievement. Does it matter much, which school a student attends? Why are some schools chronically low performing, and what are the characteristic of more effective schools? Students should have completed coursework in methods and statistics for social research or equivalent coursework before enrolling in this course.

### ESS 43201. Population Dynamics

(3-0-3)

*Corequisite:* ESS 27999

Demography, the science of population, is concerned with virtually everything that influences, or can be influenced by, population size, distribution, processes, structure, or characteristics. This course pays particular attention to the causes and consequences of population change. Changes in fertility, mortality, migration, technology, lifestyle, and culture have dramatically affected the United States and the other nations of the world. These changes have implications for a number of areas: hunger, the spread of illness and disease, environmental degradation, health services, household formation, the labor force, marriage and divorce, care for the

elderly, birth control, poverty, urbanization, business marketing strategies, and political power. An understanding of these is important as business, government, and individuals attempt to deal with the demands of the changing population.

### **ESS 43202. Inequality, Schooling, and Higher Education**

(3-0-3)

*Corequisite:* ESS 27999

This course is concerned with the association of social inequality with higher education. More specifically, it will examine the gap in enrollment, retention, and completion of college across gender, race, and social classes. Main topics include the study of educational stratification, educational transition to higher education, high school effects on college attendance, college retention, and the effects of going to college on earnings. Most parts of the course are devoted to review and discussion of a variety of theoretical perspectives and empirical studies related to the topics. Also, knowledge and skills in the area of quantitative methodology for research on higher education will be addressed.

### **ESS 43255. Adolescent Development**

(3-0-3) Gondoli

*Corequisite:* ESS 27999

Focuses on adolescent development within various social contexts, including family, peer groups, and the workplace. Special emphasis on normative development at the transition from childhood to adolescence.

### **ESS 43256. Developing Minds**

(3-0-3) Day

*Corequisite:* ESS 27999

In this course, students will learn some of the ways cognition changes with age, experience, and education. Cognition in this course is defined broadly and includes, but is not limited to, basic processes such as memory, knowledge of subjects taught in school (e.g., reading and arithmetic), and thoughts about one's self as a learner (e.g., perceived self-competence). The age range covered is from birth to old age. Two fundamental questions addressed throughout the course are: What cognitive abilities do individuals of different ages bring to learning environments? and How do learning environments affect individuals' thinking?

### **ESS 43257. Attention Deficit Disorder**

(3-0-3)

*Corequisite:* ESS 27999

Attention deficit disorder (also known as attention deficit hyperactivity disorder) is a diagnosis applied to children and adults who have experienced a handicap in their school, home, work, and/or social settings due to abnormal levels of distractibility, impulsivity, and/or hyperactivity. According to epidemiological data, approximately 4 percent to 6 percent of the U.S. population has ADD, which makes it one of the most prevalent psychological disorders in contemporary society. Furthermore, it is currently believed that 66 percent of those diagnosed with ADD as children will continue to exhibit symptoms as adults. Over the past decade, there has been heated debate over both the cause and treatment of ADD. For instance, ADD has been attributed to a variety of causes including minor brain damage, poor diet, and poor parenting. Likewise, a variety of different treatment options have been recommended including medication, behavior therapy, and cognitive therapy; and recently, there has been concern expressed by the FDA that several medications used to treat ADD might be harmful to children. This seminar will provide a comprehensive survey of current research into the cause and treatment of ADD. In addition, the seminar will focus on the effects of this disorder from the perspective of both afflicted individuals and their families as well.

### **ESS 43258. Motivation and Academic Learning**

(3-0-3)

*Corequisite:* ESS 27999

Traditional studies of learning have focused almost exclusively on cognitive or "cold" processes. Recent research on learning illustrates how "hot" processes also influence thinking and academic learning. In this course, we focus on how social, motivational, and emotional influences interact with cognitive processes to affect academic learning. Social influences will include students' social goals in school,

friendships, and family dynamics. Motivational influences are explored through the study of major theories of achievement motivation, including attribution, self-efficacy, intrinsic motivation, "possible selves," and goal theories. Emotional factors such as coping mechanisms, test anxiety, and well-being also are discussed. In addition, we explore how development affects students' social, motivational, and emotional responses to learning. Child, adolescent, and adult models are discussed, and applications to educational settings will be an integral part of the course. This is an education-focused course.

### **ESS 43640. Seminar: Educational Research**

(3-0-3)

*Corequisite:* ESS 27999

Students will learn about both methods and topics in educational research. Students will design and execute an original research study.

### **ESS 43642. Seminar: New Directions in Educational Research**

(3-0-V) Greene

Seminar for seniors in the ESS minor. Students will study new approaches to educational research.

### **ESS 45200. Sociology Internship**

(V-V-V)

*Corequisite:* ESS 27999

This is an experiential course designed to give students some practical experience in the area of urban affairs, social welfare, education, health care, or business, in order to test their interest, complement their academic work, or acquire work experience preparatory to future careers. Students are placed in a community agency in the South Bend area and normally work eight hours per week as interns under the supervision of an experienced practitioner. Hours are flexible, usually set to accommodate the intern's availability and the needs of the host agency. While there are no prerequisites, preference is given to sociology majors, ESS minors, PSIM minors, and students who have had coursework in an area related to social concerns. This is a graded course. In addition to fieldwork, academic work includes reading scholarly works related to the field placement, periodic group meetings with the instructor and others in the course, periodic short reports, and a final paper. For more information and/or an application, contact Ann Power at AnnMarie.R.Power.4@nd.edu. The following is a list of agencies that have accepted interns. Students may also request placement in an agency they find on their own (subject to approval by the instructor): La Casa de Amistad; Near Northwest Neighborhood Inc.; Neighborhood Development Association; Safe Station (Youth Runaway Shelter); Salvation Army of St. Joseph County (Social Services); Sex Offense Services, Madison Center; Early Childhood Development Center; Good Shepherd Montessori School; Robinson Community Learning Center; Upward Bound; Washington High School, South Bend; Center for Hospice and Palliative Care, St. Joseph County; Sr. Maura Brannick Health Center at Chapin Street; The CASIE Center (Child Abuse Services, Investigation and Education); Family Justice Center; and Indiana Legal Services.

### **ESS 45652. Mexican Immigration: South Bend Case Study**

(3-1-4)

*Corequisite:* ESS 27999

This course uses experiential learning in the Mexican community of South Bend in order to understand how Mexican migrants conduct their lives across the vast distances separating South Bend and their homeland. The course begins with readings in social science and fiction about transnationalism, Mexican-U.S. migration and the history and sociology of the local community. Next, we learn ethical fieldwork methods in preparation for community research. Students working in two-person teams will gather data on local and transnational households and kin networks, political involvement, employment, consumption practices, cultural activities, and religious life, working through contacts with social service agencies, the Mexican consulate, and Mexican- or Latino-run media, businesses, food stores, and sports leagues. We will document the innovative adaptations of this migrant community, especially the growth of an ethnic enclave of small businesses that both unite Mexicans as an ethnic group and sustain their ties to their homeland. We intend to

compile the research in a volume published by Latino studies to be given to those who shared their lives with us and to entities that are committed to helping them.

**ESS 47600. Special Studies: Focus on Leadership in Catholic Schools**

(2-0-V)

Research-based course focused on leadership issues in Catholic schools.

**ESS 47601. Special Studies: Research in Catholic Education**

(3-0-V)

*Corequisite:* ESS 27999

Special Studies: Research in Catholic Education is designed to provide undergraduate students an opportunity to engage in systematic research of issues and trends in Catholic education. Faculty members in the ACE leadership program will supervise individual research projects, facilitate presentations at conferences when possible and appropriate, and ensure that individual student research efforts are informed by and contribute to the growing field of Catholic education.

## Institute for International Peace Studies

**IIPS 20501. International Relations**

(3-0-3)

*Corequisite:* IIPS 27999

This course provides an introduction to the study of international relations and will cover several theoretical approaches to and empirical issues in the field of IR. Readings have been selected to highlight both traditional approaches to and more recent developments in world politics. The first half of the course focuses on contending theories of IR, while the second half of the course deals with more substantive issues. Empirical topics and subjects covered include international security (nuclear weapons, ethnic conflict, and terrorism); international political economy (trade, international finance, and globalization); and 20th-century history (WWI, WWII, and the Cold War). In addition, we will examine several contemporary topics in international organization and law, including the environment, nongovernmental organizations, and human rights. We conclude by discussing the future of international relations in the 21st century.

**IIPS 20502. Responding to World Crisis**

(5-0-3)

This course focuses on current issues in international affairs and what the U.S. policy response to them should be. The participants will be divided into groups specializing in events and issues on each continent, with an additional group focusing on the international economy. Each session of the seminar will hear the reports prepared by students in two of such (i.e., the Africa and the Asia groups, or the Europe and World Issues groups). The reports must be individually written, with the crisp style of policy briefs, on different countries or issues, and must include an assessment of the origins and nature of the problem or problems at hand, a well as recommendations regarding what the U.S. should do. The required reading for the seminar will be the *New York Times* (the printed version) on a daily basis. Students may go to Internet news services of the *New York Times* or of other sources such as the *Economist* for additional background information on the situation they wish to write about.

**IIPS 20701. Rich, Poor, and War**

(3-0-3)

*Corequisite:* IIPS 27999

This course examines the interrelationships between economic injustice and violence. It begins by investigating the gap between rich and poor both in the United States and worldwide. We also look at the history of Christian thought on wealth and poverty. We then address the ways in which economic disparity intersects with the problem of violence in both domestic (violence against women) and political realms (war and revolution). Next, we canvass Christian thought on the use of violence. This raises the question of whether Christianity itself contributes more to violence or to peace. Finally, we pose the question of whether forgiveness for violence is advisable or feasible.

**IIPS 20703. War, Law, and Ethics**

(3-0-3)

*Corequisite:* IIPS 27999

This course is designed to explore the ethical and legal considerations related to war and the use of force. Beginning with a historical overview of Christian thinking on war and peace, we will develop an account of various ethical positions on the use of force, including views rooted in the just war tradition and in pacifism. We will also consider the ethical implications of contemporary issues related to the use of force, e.g., sanctions, war crimes, humanitarian intervention, and terrorism. In collaboration with the Center for Social Concerns and La Casa de Amistad, students will have the opportunity to engage in service-learning by working with students from Washington High School to collect stories from local war veterans as part of the Library of Congress' "Veterans History Project."

**IIPS 20704. Christianity and World Religions**

(3-0-3) Malkovsky

*Corequisite:* IIPS 27999

The purpose of this course is to introduce the student to the basic teachings and spiritualities of Hinduism, Buddhism, and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate mystery, the overcoming of suffering, etc. We will also examine some traditional and contemporary Catholic and Protestant approaches to religious pluralism. Our own search to know how the truth and experience of other faiths is related to Christian faith will be guided by the insights of important Catholic contemplatives who have entered deeply in the spirituality of other traditions. By course's end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. Requirements: Short papers, midterm exam, and final exam.

### **IIPS 20705. Ways/Peacemaking: Gandhi/King**

(3-0-3) Neiman

An intensive study of the philosophy and spirituality of two of the greatest activists and peace educators of our century, M. Gandhi and M. Luther King. We will be especially concerned with the way each of these human beings came to construct new, yet quite ancient, images or controlling myths that they hoped would lead us to think and act in revolutionary ways.

### **IIPS 20707. A Faith to Die For**

(3-0-3)

*Corequisite:* IIPS 27999

An introduction to Catholic moral theology, with an accent on how Catholic belief and practice shape the Church's understanding of the moral life. Aspects of Catholic belief and practice to be covered include baptism, penance, reading scripture, preaching, prayer, the Eucharist, martyrdom, religious life, marriage, and mission. In the context of these beliefs and practices, several leading themes in Catholic moral theology will be explored (e.g., sanctification, the eternal and natural law, and virtues and vices), and several moral issues will be examined (e.g., abortion, suicide, capital punishment, economic justice, and war and peace).

This course explores an understanding of the moral life in terms of participation in the life, death, and resurrection of Christ, but at the same time it avoids construals of the moral life that rest merely on pious exhortations ("Jesus says"), assertions of ecclesial authority ("the Church says"), or invocations of negative moral prohibitions ("thou shalt not"). Thus, the "faith" will be presented as a set of beliefs and practices that are disturbingly radical, demanding that Christians die to themselves, yet also deeply attractive, in that dying serves as a passageway to true life. As suggested by the title, a leading emphasis in the course is that only a faith worth dying for can forge a moral life that is truly worth living. Readings include selections from scripture, liturgical texts, theological and moral treatises, encyclicals, and the documents of Vatican II, plus Augustine's *Confessions*, Cantalamessa's *The Eucharist: Our Sanctification*, Graham Greene's *The Power and the Glory*, short stories of Flannery O'Connor, Dorothy Day's *The Long Loneliness*, and Helen Prejean's *Dead Man Walking*. Evaluation is based on a midterm, a final, several short papers, and interactive class participation.

### **IIPS 20710. Women in Islamic Societies**

(3-0-3) Afsaruddin

*Corequisite:* IIPS 27999

This course is a broad survey of women's and gender issues in various Islamic societies, with a focus on the Arab Middle East. The first half of the semester will concentrate on the historical position of women in Islamic societies, defined by the normative values of Islam and by cultural traditions and norms. We will discuss how the interpretations of these values in diverse circumstances and who gets to do the interpreting have had an important impact on women's societal roles. The second half of the course will privilege women's voices and agency in articulating their gendered identities and roles in a number of pre-modern and modern Islamic societies. Our sources for discovering these voices are women's memoirs, fiction, magazine articles, and public speeches. We will also focus on how historical phenomena such as Western colonialism, nationalist liberation movements, and civil and other forms of war have given rise to women's organized movements and a feminist socio-political consciousness in many cases.

### **IIPS 20713. Culture and Politics in Northern Ireland**

(3-0-3)

Using a broad range of texts—drama, fiction, poetry, film, painting, and documentary material—an examination of the politics of culture, and the cultures of politics, in the North of Ireland during the 20th century.

### **IIPS 20714. Islamic Societies of the Middle East and North Africa: Religion, History, and Culture**

(3-0-3)

This course is an introductory survey of the Islamic societies of the Middle East and North Africa from their origins to the present day. It will deal with the history and expansion of Islam, both as a world religion and civilization, from its birth in the Arabian Peninsula in the seventh century to its subsequent spread to other parts of western Asia and North Africa. Issues of religious and social ethics, political governance, gender, social relations and cultural practices will be explored in relation to a number of Muslim societies in the region, such as in Egypt, Morocco, and Iran. The course foregrounds the diversity and complexities present in a critical area of what we call the Islamic world today.

### **IIPS 20715. World Religions and Catholicism in Dialogue**

(3-0-3) Gorski

*Corequisite:* IIPS 27999

A theological exploration of Hinduism, Buddhism, Taoism, Judaism, and Islam, and the relationship of Christianity to those religions. The goal of this exploration is specifically: (1) to set forth the essential characteristics of the world's great religions; (2) to disengage the essential differences between Christianity and the other world religions; (3) to identify the distinctiveness of Catholicism within the family of Christian traditions; and (4) to examine historically and systematically the Christian theological appraisal of other world religions. The ultimate goal of this course is to enable the students to gain a deeper understanding of Christianity by "passing over" into and experiencing as well as appraising the different major religious traditions of the world. To enhance the learning experience, the course will make abundant use of films. The students are required to attend class regularly and punctually. Indeed, strong emphasis is placed on the requirement to attend class faithfully. Students are allowed but one single absence during the semester.

### **IIPS 20716. Introduction to Islamic Civilization**

(3-0-3) Guo

*Corequisite:* IIPS 27999

This course is designed to introduce students to Islamic civilization and Muslim culture and societies. The course will cover the foundations of Islamic belief, worship, and institutions, along with the evolution of sacred law (*al-shari'a*) and theology, as well as various aspects of intellectual activities. The Koran and the life of the Prophet Muhammad will be examined in detail. Both Sunni and Shi'i perspectives will be considered. Major Sufi personalities will be discussed to illuminate the mystical and popular tradition in Islam. Topics on arts, architecture, literary culture, and sciences will be covered. Although the course is concerned more with the history of ideas than with modern Islam as such, it has great relevance for understanding contemporary Muslim attitudes and political, social, and cultural trends in the Muslim world today.

### **IIPS 20719. War, Peace, and Conscience**

(3-0-3)

*Corequisite:* IIPS 27999

This course examines ancient, medieval, and modern understandings of the ethics of war primarily, but not exclusively, within Christian tradition. It comes in three parts. First, it surveys the emergence and development of the morality of war from ancient times (Jewish, Christian, and classical), through the medieval period (church canonists, Aquinas, the scholastics), and into the modern period (Grotius and later sources of international law). Second, it examines the nature of modern warfare by means of historical illustrations, including the Civil War, the so-called Indian Wars, World War I, World War II, the Vietnam War, and the Gulf War. Third, it takes up several cases with the aim of exploring the tension between traditional conceptions of just war theory and the practice of modern warfare, focusing

on issues involved in the use of weapons of mass destruction, the “fog of war,” wars of revolution, ethnic and religious conflict, and the continuing “war on terrorism.” Texts include: Roland Bainton, *Christian Attitudes Toward War and Peace*, Erich Maria Remarque, *All Quiet on the Western Front*, John Hersey, *Hiroshima*, Olson and Roberts, *My Lai: A Brief History with Documents*, plus writings on the attacks of September 11. Requirements include a take-home test, several short papers, and a final exam.

### **IIPS 20720. Islam: Religion and Culture**

(3-0-3) Afsaruddin

This course will discuss the rise of Islam in the Arabian Peninsula in the seventh century of the Common Era and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the life of the Prophet Muhammad, the Qur'an and its role in worship and society, early Islamic history, community formation, law and religious practices, theology, mysticism, and literature. Emphasis will be on the core beliefs and institutions of Islam and on its religious and political thought from its formative period until our own time. The latter part of the course will deal with resurgent trends within Islam, both in their reformist and extremist forms, and contemporary Muslim engagements with modernity. We will also discuss the spread of Islam to the West and increasing attention focused on “political Islam” or “Islamism” today. All readings are in English translation.

### **IIPS 20727. Moral Problems**

(3-0-3) Sterba

*Corequisite:* IIPS 27999

In this course, we will critically evaluate alternative solutions to a number of contemporary moral problems. We will begin with the problems of the distribution of income and wealth and our obligations to distant peoples and future generations. We will then turn to the problem of sexual equality and to a particular challenge to feminism that maintains that men themselves suffer from a “second sexism” that benefits women. Finally, we will take up the problem of affirmative action and examine the legal and moral issues raised by affirmative action as it again makes its way to a decision before the U.S. Supreme Court.

### **IIPS 20728. Women and War**

(3-0-3) Cameron

*Corequisite:* IIPS 27999

This course looks at the wide range of women's literary responses to World Wars I and II. Our readings and class conversations will be structured around central themes such as women's military service, women's pacifism, women and national boundaries, women and empire, shellshock, and nursing national wounds. Students will look at an international range of authors, including the French author Marguerite Duras; British authors Virginia Woolf, Radclyffe Hall, and Rebecca West; British Jamaican author Andrea Levy; New Zealand writer Katherine Mansfield; American authors H.D. and Edith Wharton; and Canadian author J.G. Sime and Japanese Canadian author Joy Kogawa. We will cover a range of genres, including prose, the novel, autobiography, and the short story.

### **IIPS 20729. The Askesis of Nonviolence**

(3-0-3) Pfeil

*Corequisite:* IIPS 27999

This course will explore the theology and practice of nonviolence as a form of *askesis*, or spiritual discipline. The material will include readings from Scripture, the early Christian tradition, and Catholic social teaching. Religious sources outside the Christian tradition will include Gandhi, Thich Nhat Hanh, and Badshah Khan. This course will use the method of community-based learning and will require 20 hours of service at particular sites in the South Bend area.

### **IIPS 20901. Gender Roles and Violence in Society**

(6-0-3)

*Corequisite:* IIPS 27999

Much of the violence in contemporary society—whether it is domestic abuse, school shootings, gang warfare, video games, or inter-ethnic conflict—has something to do with gender. This course explores the connection between gender

role socialization and the expression of conflict or aggression. Through readings, discussions, films, and projects, students will be encouraged to examine sex differences in violent behavior as the outcome of complex processes. We will try to understand those processes better and develop the ability to describe the causes and their effects.

### **IIPS 20902. Environmental Ethics**

(3-0-3)

*Corequisite:* IIPS 27999

The course will be an attempt to come to grips critically with the moral significance of contemporary concern for ecology and the environment.

### **IIPS 20903. Environment and Development in Global Perspective**

(3-0-3)

In this course, we will examine contemporary struggles over natural resources in the context of globalization. We will begin by analyzing the model of development that is dominant in the United States and seek to understand how it has emerged as a “favored” model in different parts of the world. Who benefits from this model of development? Who suffers? What forms of power are deployed to maintain this model? To challenge it? Next we will turn our attention to the global consequences of particular patterns of production and consumption. We will take a close look at two natural resources—petroleum and water—and examine the political and social contexts that have given rise to collective struggles over their control and distribution. Finally, we will step into the realm of futurist sociology and ask what the future might look like if current development patterns continue. Classes include lectures, discussions, and films. There are no exams in this course, but students should be prepared to participate in class discussions, to write several short papers, to submit bi-monthly evaluations of current news reports, and to lead one class discussion on the readings.

### **IIPS 20904. The Ethics of Energy Conservation**

(3-0-3)

This is a joint theology and engineering course exploring the ethics of energy conservation by using the method of community-based learning. Students will begin by using the university campus as a “trial laboratory” for measuring energy efficiency and thinking creatively about possible energy conservation measures. We will then ask them to conduct a limited energy efficiency and conservation study for selected nonprofit organizations in the South Bend community. This course will fulfill a number of civic learning goals, including the cultivation of theological and scientific competence in environmental ethics; the identification of leadership skills necessary to address the concrete concerns facing nonprofit organizations as they strive to meet pressing human needs in an environmentally sound manner; and formation of consciences sensitive to the social responsibility of caring for the environment.

### **IIPS 20905. Sociology of Terrorism**

(3-0-3)

*Corequisite:* IIPS 27999

The purpose of this course is to provide a broad review of terrorism with a focus on sociological approaches such as social movements theory, network analysis, and ideology. The course will examine profiles of terrorists within a historical and social psychological perspective. Specifically, we will focus on the purpose and difference of terrorists and terrorist groups and frame our discussion around historical factors that continue to influence modern terrorism. Finally, we will discuss the consequences of terrorism in terms of social responses to terrorism, the economic and political costs of these responses, and the possibility of preventing terrorism in the future.

### **IIPS 20906. Energy and Society**

(3-0-3)

*Corequisite:* IIPS 27999

A course developing the basic ideas of energy and power and their applications from a quantitative and qualitative viewpoint. The fossil fuels (coal, oil, natural gas) are studied together with their societal limitations (pollution, global warming, diminishing supply). Nuclear power is similarly studied in the context of the

societal concerns that arise (radiation, reactor accidents, nuclear weapons proliferation, high-level waste disposal). The opportunities as well as the risks presented by alternative energy resources, in particular solar energy, wind, geothermal, and hydropower, together with various aspects of energy conservation, are developed and discussed. This course is designed for the non-specialist.

### **IIPS 20907. Environmental Philosophy**

(3-0-3)

*Corequisite:* IIPS 27999

A philosophically integrated examination of current environmental issues, drawing on familiar literature from ecology (Leopold), economics (Boulding), and ethics (Singer), as well as recent fiction (Tolkien, Herbert).

### **IIPS 20908. Globalization and Social Movements**

(3-0-3)

*Corequisite:* IIPS 27999

In what ways does an increasingly global political, economic, and cultural system impact our lives? Has globalization led to increased peace and justice, or to new types of conflict and inequality? How has globalization affected national and transnational social movements? This course examines the ways in which changes in the global economic and political system affect politics within countries. First, we will briefly review the broader research literature on the sociology of social movements. Readings will cover a range of different movements, such as those working to protect the environment, advocating for economic justice, addressing social problems such as extreme poverty and public health, and fighting for the rights of women and working people. Then we will look at how globalization has affected social movements. This course is particularly applicable to students majoring in business, political science, economics, peace studies, anthropology, sociology, and any foreign language. Students planning to study abroad may also be interested.

### **IIPS 20909. Ecology, Ethics, and Economics**

(3-0-3) Sayre

*Corequisite:* IIPS 27999

An examination, through literature and reasoned argument, of (a) social values behind the economic excesses that have led to our ecological crisis and (b) alternative values by which the crisis might be alleviated.

### **IIPS 23901. Power and Identities**

(3-0-3)

*Corequisite:* IIPS 27999

This seminar explores various ways of thinking about the distribution and exercise of power in modern societies, and how power is related to identities and the self. We read and discuss contemporary theoretical works and case studies that examine authority relations and their construction, and the interplay of power with economics, politics, religion, and culture. Readings include, among others, works by Michel Foucault, Richard Sennett, Saba Mahmood, and Leora Auslander. Because of its themes and interdisciplinary approach, this course may be of interest not only to sociology majors, but also to majors in political science, gender studies, anthropology, and history.

### **IIPS 23902. Globalization, Coffee, and the Fair Trade Movement**

(5-0-3) Brenneman

This special spring '09 course will examine globalization and its effects on people at the global "margins," especially in economically depressed Central America. The drop in world coffee prices, the rise of the maquila industry, and the increase of emigration from Central America are just a few of the topics that will be considered during this course. The course will also examine how lifestyle choices and consumption habits in the United States affect farmers and artisans in the "third world." A key focus of the course will be the examination of the international fair trade movement, both a result of and a response to globalization. A required one-week cross-cultural experience in Guatemala during spring break will bring students face-to-face with some of the people who are most deeply impacted by economic globalization. During the trip, students will meet and hear from Guatemalan coffee farmers, large and small, as well as from economists and sociologists with differing views on the subjects of "fair trade" and "free trade."

You must be willing and able to travel to Guatemala from March 7 to 15 in order to pass this class. Students will use conceptual tools from global sociology, economic sociology, and social movement theory. Students in other majors such as finance, marketing, or economics will learn how economic sociology sheds light on economic behavior and international economic forces. The course is a natural fit for sophomore or junior sociology majors and Latin American studies minors, but seniors are also welcome. The course content and the cross-cultural component would also make it an ideal elective for majors in marketing; Spanish; and film, television, and theatre. This course is capped at 19 students, and all registering students must receive approval for enrollment by Dec. 10, 2008.

### **IIPS 27999. IIPS Gateway Course**

(0-0-0)

This course is used as a co-requisite for administrative purposes so that students in the Peace Studies program will be able to web register for other IIPS courses.

### **IIPS 30101. Introduction to Peace Studies**

(3-0-3) Cortright; Lopez; Omer; Philpott; Verdeja

This course surveys: (1) the major causes of deadly conflict around the world; (2) various definitions of "peace" and the conditions under which it occurs and is sustained; and (3) the style and comparative success of various strategies such as building peace movements and nonviolent social change as ways to achieve peace. (Open to all undergraduates—required for peace studies minors and majors)

### **IIPS 30301. How To Do Political Research**

(3-0-3)

*Corequisite:* IIPS 27999

This is a course primarily intended for juniors or seniors who are writing, or are planning to write, a senior essay, although it is open to all majors. It helps students acquire the practical skills that are essential for completing a substantial empirical research project: posing a research question, finding out what is already known, staking out an original argument, identifying counterarguments, deciding what kind of evidence is required to figure out who is right, clarifying concepts and boundary conditions, gathering the evidence, analyzing the evidence, and interpreting the analysis. The course encourages students to consider a variety of approaches and helps them decide whether to use quantitative methods, qualitative methods, or both. Students will do independent research to compile a bibliography, gather and analyze evidence, and write an outline, but will not write a paper. Instead, they will present and defend their findings orally and visually. All students are expected to participate vigorously in evaluations of their peers' research.

### **IIPS 30302. Micro-Venturing II**

(3-0-3) Belatti

*Prerequisite:* IIPS 30924 OR BAMG 30505 OR BAUG 30505

A comprehensive review of the fundamentals of finance, law, marketing, and management will be presented. In classroom and workshop formats, students will be teamed up to develop sound business plans with local entrepreneurs and compete for available seed capital to implement their business plans within the surrounding community. Students take their skills, work with business owners, and become mentors.

### **IIPS 30401. Terrorism, Peace, and Other Inconsistencies**

(3-0-3) Lopez

*Corequisite:* IIPS 27999

This course examines the roots and sustaining conditions of contemporary terrorism, as well as diverse counter-terrorism measures and policy prescriptions for the US and for the international community. We then address what challenges both the causes and the cures for terror pose to those who take seriously the creation of a world with less war and violence and greater cooperation among rivals. The course will require a heavy dose of reading each week, from 200-250 pages, and participants will be required to write four persuasive and/or policy papers, based on course readings, of about seven pages each in length.

**IIPS 30402. Global Issues and the United Nations**

(3-0-3) Smith

*Corequisite:* IIPS 27999

This course introduces students to the operations of the United Nations and its potential for contributing to a more peaceful, equitable, and sustainable world. We take up the world's most pressing issues such as peace and security, nuclear disarmament, poverty, economic and gender inequalities, and environmental degradation — to explore how the world's governments have attempted to address global problems. Has the UN been an effective place for managing these issues? How might it be improved? What unique roles do civil society groups, or non-governmental organizations (NGOs), play in the pursuit of the United Nations' mission and goals? To help us consider these questions, we will meet via video conference with United Nations ambassadors, UN officials, and representatives from civil society groups. Students will have opportunities to ask questions of distinguished guest speakers, who will be joining us from the United Nations headquarters in New York. In addition to gaining an understanding of contemporary global issues, students will learn about the practical, day-to-day operations of this important world body. They will also have a chance to offer their own proposals for improving the ability of the world community to address major problems.

**IIPS 30403. Borders, Boundaries and Frontiers**

(3-0-3) Kaufman

*Corequisite:* IIPS 27999

This course explores political borders, boundaries and frontiers and their changing meaning and dynamics from the beginning of the colonial era (circa 1500) until the present. We will explore the formation of political borders, life along borders and border conflicts and their resolutions (or lack thereof). Themes, including colonialism and globalization, will also be discussed through the prism of political boundaries. Geographically we will look at areas including the Middle East, Africa, Europe, South Asia and the US-Mexican border in order to analyze boundaries through both global and regional perspectives.

**IIPS 30404. The United Nations and Global Security: Where Politics, Law and Ethics Contend**

(3-0-3) Johansen

In this course students explore how to increase peace and security for all people on earth. The course emphasizes human security as much as national security in addressing questions such as: What are the reasons for the United Nations' successes and failures in maintaining international peace and security? What are the impacts of United States security policies toward the United Nations? What is the international legal basis for humanitarian intervention and for preventing crimes against the peace, war crimes, genocide, crimes against humanity, and acts of terrorism? How can those who want to be good citizens both of their nation and of the world meet the ethical challenges posed by security problems in an age of globalization and weapons of mass destruction? Students evaluate ways to strengthen the role of international law and organization in preventing armed conflict while addressing major issues of international peacebuilding.

**IIPS 30405. Politics of Humanitarianism**

(3-0-3) Fast

*Corequisite:* IIPS 27999

The principles of impartiality, neutrality, and independence have traditionally guided humanitarian actors working to provide life-saving assistance to those affected by violent conflict and war. However, in the wake of the end of the Cold War and the more recent wars in Iraq and Afghanistan, the politicization of humanitarian aid and the changing nature of violence have forced humanitarians to reevaluate some of the central assumptions of humanitarian action. Using a series of case studies, this course will examine the central debates and dilemmas of humanitarian action, especially in relation to the "relief-to-development" continuum, military-civilian interactions, safety and security issues, and the protection of war-affected populations. The course requires a substantial amount of reading and will be conducted in a seminar format. Students will be required to write a series of papers as well as an exam.

**IIPS 30503. Politics of Southern Africa**

(3-0-3) Walsh

*Prerequisite:* POLS 20400*Corequisite:* IIPS 27999

This course focuses on the key state of the region—the Republic of South Africa. After outlining the political history of apartheid, the phenomenon of Afrikaner nationalism, and the rise of African nationalism and the liberation movements, attention turns to the country's escalating turmoil of the 1980s and resulting political transition in the 1990s. South Africa's political and economic prospects are also examined. The semester concludes with a survey of the transitions that brought South Africa's neighboring territories to independence, the destabilization strategies of the apartheid regime, and United States policy in that region.

**IIPS 30504. International Law**

(3-0-3) Reydam

*Corequisite:* IIPS 27999

International law and institutions are increasingly important for understanding the nature of world politics. This course investigates the interaction between international law and international politics. We examine how international institutions operate, the significance of international law to state behavior, and the connections between international norms and domestic law. The substantive issues addressed in this course include trade, human rights, and environmental protection.

**IIPS 30505. International Organizations**

(3-0-3) Reydam

Examination of governance in international relations, including both formal and informal institutions. The functioning of organizations such as the United Nations, International Monetary Fund, World Trade Organization, European Union, and multilateral development banks. Research papers on topics including peacekeeping and humanitarian intervention, political conflicts surrounding trade liberalization, and assessment of economic development programs.

**IIPS 30509. Latin American International Relations**

(3-0-3) Hagopian

*Corequisite:* IIPS 27999

The primary goal of the course is to understand the bases for the political, economic, and security relations of Latin American states with the United States. The course begins with a theoretical and historical examination of the competing perspectives on what determines United States policy toward Latin America: its normative ideals, its security interests, or its economic interests. It then takes up several enduring themes in U.S.-Latin American relations, including the response of the United States to dictatorships, expropriations of United States-owned property, and revolution, and efforts to promote development, democracy, and human rights. Next, it considers the relations of several Latin American states with each other and the United States, from the Latin American point of view, with special attention paid to the foreign policies of Cuba and Mexico. Finally, it examines several new issues in U.S.-Latin American relations, including regional free trade agreements and trade policy, the environment, migration, and drugs, in a post-Cold War environment.

**IIPS 30510. War and the Nation-State**

(3-0-3)

*Prerequisite:* POLS 10200 OR POLS 20200*Corequisite:* IIPS 27999

This course will examine the phenomenon of war in its broader political, social, and economic context since the emergence of the modern nation-state. The general themes of the course include the impact of nationalism, democratization, industrialization, military professionalization, the nuclear revolution, and the information and communication revolution on the development of warfare and the state. Particular historical emphasis will be placed on exploring the causes and conduct of World War I and World War II.

**IIPS 30511. Politics of Tropical Africa**

(3-0-3) Walshe

Following an introduction to traditional political institutions, the colonial inheritance, and the rise of African nationalism, the course concentrates on the current economic and political problems of tropical Africa. This includes case studies of political organizations, ideologies, and government institutions in Ghana, Nigeria, and Tanzania.

**IIPS 30512. International Political Economy**

(3-0-3)

*Prerequisite:* POLS 10200 OR POLS 20200*Corequisite:* IIPS 27999

This course examines the interactions between international politics and international economics. We begin with a brief exploration of the economic rationale for trade and financial relations and then examine the recent political history of global trade and finance. Topics include global and regional trade liberalization, coordination and cooperation in monetary policy (including the advent of the single currency in Europe), causes and implications of financial crises, and the linkages among economic globalization, environmental regulation, and human rights.

**IIPS 30514. US Foreign Policy**

(3-0-3) Lindley

*Corequisite:* IIPS 27999

The United States is the most powerful state in the world today. US foreign policy is important not just for US citizens, but it also affects whether others go to war and whether they will win, whether states receive economic aid, what kind of aid starving people will receive, and the extent of global efforts to cope with environmental problems. With these issues at stake, this course addresses the following questions: What determines US foreign policy? What is the national interest? When do we go to war? Would you send US soldiers into war? If so, into which wars and for what reasons? How do our economic policies affect others? Does trade help or hurt the US economy and its citizens? To answer these questions, we first study several theories about foreign policy. We then examine the US foreign policy process, including the President, Congress, the bureaucracy, the media, and public opinion. To see how this all works in practice, we turn to the history of US foreign policy, from Washington's farewell address through the World Wars and the Cold War to the Gulf War. We then study several major current issue areas, including weapons of mass destruction, terrorism, trade and economics, and the environment. Finally, we develop and debate forecasts and strategies for the future.

**IIPS 30517. International Relations in East Asia**

(3-0-3) Moody

*Corequisite:* IIPS 27999

This course explores the interactions of the states and societies in the east Asian region, focusing mainly on the relationships of China and Japan, their interactions with each other and with the outside "Asian" powers, the United States and Russia (Soviet Union). Topics include: the China-centered system in east Asia prior to the intrusion of the new world system carried by western imperialism; the western impact, including colonialism, the Chinese revolution, and Japan's "defensive modernization"; the clash between Japanese and Chinese nationalism; the diplomacy of the Second World War and postwar developments; the cold war; decolonization and the emergence of new states and nationalism; the Sino-Soviet rift; the failure of the American policy of deterrence in Vietnam; the diplomatic reconciliation of the United States and China; the liberal reforms in China and their partial disappointment; the end of the cold war; China's growth as a potential world power; Japan's perhaps increasing restiveness in serving as an American surrogate; Asian assertiveness against perceived American hegemonic aspirations; potential tensions and rivalries within the region itself; the collapse of the Asian economic boom and the onset of a period of chronic economic troubles. Course requirements include assigned readings and class participation; a midterm and final examination; completion of two brief research papers dealing with the foreign policy of one of the "smaller" Asian countries (that is, one of the countries other than China and Japan).

**IIPS 30523. Indigenous and Colonial Mexico**

(3-0-3)

This course investigates the history of Mesoamerica from the Olmec, Mayan, and Aztec societies to Mexico's independence from Spain after 1800. We will examine the nature of several indigenous societies, their conquest and domination by Europeans, post-conquest debates concerning Indians' nature and colonial Indian policy, the structure of colonial society, including relations between Indians, Africans, and Europeans, Catholic conversions and the role of the Church, and finally the causes of independence. We will use readings, lectures, discussions, archeological evidence, film, and literature throughout the course. Students need not have any background in Latin American history.

**IIPS 30525. Latin American Development and Politics**

(3-0-3)

Latin American countries face many challenges, some inherited from Spanish and Portuguese colonial rule, some created by today's globalization, and some common to all developing countries. This course examines how several Latin American countries have responded to the most important of these challenges: How to build a state that can maintain order at home and stay at peace with its neighbors, how to form legitimate governments that can pass needed laws, how to ensure that citizens have political rights and a say in the political process, how to promote industrialization and economic growth, and how to achieve a more equal distribution of wealth and ensure that basic human needs are met.

**IIPS 30526. Political Movements in Asia**

(3-0-3) Hui

*Corequisite:* IIPS 27999

This course analyzes a wide range of political movements including nationalist and revolutionary movements, guerrilla insurgencies, terrorist organizations, democracy movements, and peace movements. The Asian region encompasses China (including Taiwan, Tibet, Xinjiang, Hong Kong), Mongolia, North and South Korea, Japan, the Philippines, Vietnam, Thailand, Cambodia, Burma, Malaysia, Indonesia, India, Pakistan, Nepal, Afghanistan, and so on. To understand various movements, we will study global trends, human rights values, cultural differences, religious doctrines, historical legacies, state-society relations, leadership skills, mobilization strategies, and violent vs. nonviolent trajectories. In addition to analytical readings, we will also watch a series of documentaries and read a number of prominent autobiographies.

**IIPS 30527. Chile in Comparative Perspective**

(3-0-3)

*Corequisite:* IIPS 27999

Students will learn about the Chilean political process since the 1930s, with a special emphasis on the period from 1964 to 2002. Students will analyze and discuss institutional, economic, social, and cultural changes that occurred during that period. Chilean politics, economics, and sociology will be addressed from a historical perspective.

**IIPS 30528. U.S. Foreign Policy Since 1945**

(3-0-3) Brady

*Corequisite:* IIPS 27999

This course covers the main developments in American foreign relations from the Spanish-American War in 1898 through World War II. It traces the emergence of the United States as a major world power and examines in some detail how the United States became involved in the two world wars. A recurring theme will be the major traditions in American foreign policy and the ways in which these traditions influenced policy makers in the early years of the "American Century."

**IIPS 30529. Global Politics in the Post-Cold War Era**

(3-0-3) Hui

*Corequisite:* IIPS 27999

This course analyzes U.S. foreign policy in the post-Cold War and post-September 11 world. We first examine a number of underlying causes for global problems in the post-Cold War world, including civilizational differences, state failure, poverty,

and political domination. We then discuss the vexing problems of religious violence, ethnic cleansing, and genocide. Humanitarian crises present the challenges of humanitarian intervention, peace making, post-conflict reconstruction, democracy building, and bringing justice for crimes against humanity. We will also explore a wide range of foreign policy issues in the post-Sept. 11 world, including international terrorism, rogue states, weapons of mass destruction, American primacy, anti-Americanism, unilateralism and multilateralism, and the war in Iraq.

### **IIPS 30530. Israeli-Palestinian Conflict**

(3-0-3)

*Corequisite:* IIPS 27999

This class discusses the roots, evolution, current situation and prospects of resolution of the Israeli-Palestinian conflict. In order to better understand this theme the class will also locate this conflict in larger regional and global perspectives. Thus, issues such as nationalism in the Middle East, colonial impact in the region, the Arab states and their involvement in the conflict, cold war and post-cold war dynamics, will all be an integral part of the class discussions. We will also juxtapose the competing narratives of Israelis and Palestinians towards this conflict. Finally, we will engage in an un-historical practice by looking at the future and thinking about possible avenues for concluding this protracted conflict

### **IIPS 30532. Modern Middle East**

(3-0-3)

This course surveys Middle Eastern history from 1500 to the present. The primary themes to be covered include: the emergence and demise of the last Muslim unitary states; European colonial and imperial penetration of the Middle East in the 19th century; the social and cultural impact of imperialism; state-building in the 20th century; new ideologies/nationalisms; and contemporary problems of political and economic development. We will also consider the most important movements of Islamic reform and revival over the past two centuries.

### **IIPS 30533. The Transatlantic Relationship**

(3-0-3)

*Corequisite:* IIPS 27999

Since the end of the Cold War, there have been two notable ideas developed by scholars of International Relations. The first idea—first developed by Francis Fukuyama—is that western civilization has triumphed globally over other civilizations, while the second idea—developed by Samuel Huntington—is that Western civilization is about to enter a period of greater weakness, vis-à-vis other civilizations. In order to understand which argument is correct, we must first understand the current strength of western civilization, and in particular, the relationship between its two halves—Western Europe and North America. In this course, therefore, we will undertake a study of the history and current state of that relationship, focusing primarily on the post-WWII period, and particularly on the security arrangements that have developed between the two regions. In this light, special attention will be applied to the NATO alliance and to the developing security capabilities of the European Union. Having considered the objective facts of the transatlantic security situation, we will then be able to return to the Fukuyama-Huntington debate in order to determine what the future of intercivilizational relations does indeed portend.

### **IIPS 30534. Human Rights in an “Age of Terrorism”: View from South Asia**

(3-0-3)

This course will look at human rights and its continued relevance in the “age of terrorism.” Recent developments have shown the need for states to protect themselves and their populations from acts of terror while at the same time maintaining respect for human rights and the rule of law. This course examines how to uphold that balance and draws from the experience of Pakistan’s involvement in the global fight against terror. It examines both the misuse of prevention of terrorism laws as well as the minimum safeguards and remedies that must be guaranteed and provided if human rights are not to become the first casualty in the war on terror. There is no exam. Grades based 75 percent on research paper; 25 percent on class participation. Students are expected to have done readings before the class.

### **IIPS 30535. Politics and Development in Central America**

(3-0-3) Cosenza

*Corequisite:* IIPS 27999

This course will explore the impact that politics and politicians have had on development in Central America. It will begin with a discussion of the concept of development and how we attempt to measure it. It will then proceed to review the different approaches used to spur development and what conventional wisdom holds today to be the determinants of growth. After this, it will review the socio-economic indicators of Central America and how they have evolved with time. It will subsequently study how politics and politicians, through current Constitutions, laws, institutions, political culture, and practice have affected the determinants of growth. It will close with a discussion of the changes needed to foster high, sustainable and equitable growth in the region.

### **IIPS 30536. Middle East and the West**

(3-0-3) Kaufman

*Corequisite:* IIPS 27999

This course examines the relationship between what could roughly be defined as “the West” (Europe and the United States) and Middle Eastern societies from the Napoleonic invasion of Egypt in 1798 until the American invasion of Iraq in 2003. We shall start by trying to make sense of the terms the “West” and the “Middle East.” We shall then explore different and eclectic themes such as European colonial penetration into the Middle East, reciprocal stereotypes of the Middle East and the West, cultural exchanges between these regions, and the relationship between contemporary Europe and its growing Muslim population. We shall also examine American involvement in the region by focusing on themes such as oil interests, the Arab-Israeli conflict, and the Iraqi imbroglio. Finally, we shall discuss contemporary Middle Eastern perceptions of the West in light of American hegemonic power around the globe in general and in the Middle East, in particular.

### **IIPS 30537. Modern South Asia**

(3-0-3) Sengupta

*Corequisite:* IIPS 27999

Home to over a billion people, just over 23 percent of humanity, the South Asian subcontinent is a fascinating laboratory in which to analyze the unfolding of such themes in modern history as colonialism, nationalism, partition, decolonization, post-colonial democracies, the modern state, economic development, center-region problems and relations between Asia and the West. The course will consider critical themes in social, political, economic, and cultural history, which will include imperialism, capitalism, nationalism, religious politics, regionalism, ethnicity, globalization, diaspora, ecology, social inequality, and gender, development, and democracy. It will not only provide a lively historical narrative told through lectures based on scholarly research and primary texts, but will also seek to embellish this narrative with the perception and articulation of vision and sound, as well as with readings from representative genres of South Asian literature.

### **IIPS 30539. The Logics and Politics of International Migration**

(3-0-3)

*Corequisite:* IIPS 27999

This course investigates the primary economic, humanitarian, and political forces that are driving and sustaining the complex phenomenon of contemporary transnational migration. Within this context, three core questions are addressed. First, have the forces of globalization and the entanglements of international commitments and treaty obligations significantly diminished the policy making autonomy of the traditional nation state? Second, what are the significant benefits and costs of transnational migration for the immigration receiving countries? Finally, is a liberal immigration regime desirable and, if so, can it be politically sustained? This is a course with a methodological component.

### **IIPS 30540. War, Violence and Politics in Europe Since World War I**

(3-0-3)

*Corequisite:* IIPS 27999

This class examines the management and effects of domestic, colonial, and interstate armed conflicts on European societies and democracy since the First World War, in order to probe the relationship between violence and politics. The overriding question of the course is, "How has politically motivated violence affected European democracy?" Course themes include the effects of war on regimes, the effect of domestic violence on democratic institutions, and the attempts to come to terms with terror as a political weapon. The course studies the World Wars, the role of violence in effecting political and social change, including changing gender norms, and terrorist violence in both Western Europe and in the colonial context.

### **IIPS 30541. NGOs in International Relations**

(3-0-3)

*Corequisite:* IIPS 27999

This course examines the role that non-governmental organizations (NGOs) play in international relations. Since the end of World War II, international relations scholarship has been dominated by theories that assume privacy of the state. However, in the last 20 years, non-state actors have grown in number, size, and influence. We will analyze the impact that this development has had on both traditional approaches to international relations as well as empirical problems associated with the prominence of NGOs in IR. The first half of the course will analyze several competing theoretical approaches to NGOs, while the second half of the course will focus on empirical topics and contemporary case studies that highlight the efforts of NGOs to influence state behavior. Topics covered include: the origins of NGOs, NGOs as interest groups, transitional advocacy networks, epistemic communities, globalization, human rights, the environment, the United Nations, access to international negotiations, and the effectiveness of NGOs in altering state behavior. This course examines governance in international relations, including both formal and informal institutions, and the functioning of organizations such as the United Nations, International Monetary Fund, World Trade Organization, European Union, and multilateral development banks. Students will conduct research on topics including peacekeeping and humanitarian intervention, political conflicts surrounding trade liberalization, and assessment of economic development programs.

### **IIPS 30542. Political Economy of Globalization**

(3-0-3)

*Corequisite:* IIPS 27999

This course examines the intersection of politics and economics in an increasingly global world. Economic interdependence has increased dramatically over the past 50 years. While this has raised living standards in many countries, it has also given rise to new social, economic, and political tensions. This course offers an analytical framework for evaluating the consequences of globalization and provides an overview of several theoretical approaches to the empirical issues in today's global economy. The first half of the course focuses on contending theories of globalization, while the second half of the course deals with more substantive issues. Empirical topics discussed include labor inequality, capital mobility, democratization, international institutions, regional trading blocs, the environment, human rights, and state sovereignty

### **IIPS 30543. Contentious Politics and Resistance Movements**

(3-0-3)

*Corequisite:* IIPS 27999

This course analyzes prominent resistance movements in the 20th and 21st centuries. We first examine the conceptual tools of contentious politics, domination and resistance, state-society relations, and violent vs. nonviolent strategies of resistance. We then examine various nationalist independence movements, revolutionary movements, communist insurgencies, civil wars, and peaceful democracy movements. To better understand resistance movements from the perspectives of leaders and participants, we will watch a series of documentaries and read the (auto-)biographies of Mahatma Gandhi, Nelson Mandela, Aung San Suu Kyi, the Dalai Lama, Wei Jingshen, and others. In analyzing democracy movements, we will further examine what the third wave of democracy entails, why some movements succeed while others fail, how new democracies should reconcile with past

dictators, to what extent constitutional engineering can solve past problems and facilitate successful transitions, and why some new democracies remain fragile.

### **IIPS 30544. Politics of Poverty and Social Welfare**

(3-0-3) Flavin

*Corequisite:* IIPS 27999

The United States is the wealthiest nation in the world, yet poverty remains a persistent concern. In this course, we will study the sources of poverty and economic inequality and what has and can be done to address the problem. We begin by discussing different theories on to what extent citizens' income and wealth should be equal in a society and the government's prescribed role, if any, in the process. We then trace the history of poverty in the United States and various government efforts to address the problem through social welfare programs. Finally, we will closely study the different forms poverty takes on today and enter the ongoing debate over what public policies should be implemented in response. Throughout the course, we will pay particular attention to the decidedly political dimension of poverty in America.

### **IIPS 30545. Arab-Israeli Relations: From Confrontation to Coexistence**

(3-0-3) Bligh

*Corequisite:* IIPS 27999

This course is following and analyzing the complexity of relations between the Arab countries and the state of Israel (and the State in the making) since the early 20th century to this day. This conflict has been one the major elements shaping the political, diplomatic and military history of the region drawing into the conflict a variety of actors among them the super powers, nation-states from within and outside the region, sub-states, and supra states. The effects of the conflict on these respective regimes are analyzed as well. Three major processes became the main source of interest for all actors: the Arab effort to prevent the creation of the Jewish state; the armed conflicts; and finally, the diplomatic processes that continue today. Most of them will be studied in the context of the diplomatic and political history of the Middle East.

### **IIPS 30546. Radical Islam in Comparative Perspective**

(3-0-3) Bligh

*Corequisite:* IIPS 27999

Muslim radical movements are not new to the Middle East. They made their debut in the 18th century Arabian Peninsula paving the way for the first Saudi Kingdom. However, the use Islam by individuals, movements and nation states for political purposes has become common since the mid-1970s. Many of the contemporary Muslim actors use religious terminology in their ideology and activities but are active as political actors per se. This course is studying the roots of the political Islam, its current political activities and their implications, the distinction between mainstream Islam and radical Islam, and finally the phenomena of religious terror used by several of these movements.

### **IIPS 30547. Building a European Union**

(3-0-3) Messina

*Corequisite:* IIPS 27999

This undergraduate lecture course introduces the contemporary project for greater economic, political, and security integration among the current 27 members of the European Union within its appropriate historical context, its current economic and political setting, and its projected future ambitions. The course is thus very much concerned with recent events and important European events-in-the-making, including the implementation of the Amsterdam Treaty, the expansion of the membership of the European Union, and EU-sponsored strategies to facilitate democratic transitions in Eastern Europe.

### **IIPS 30548. Genocide in the Modern World**

(3-0-3) Verdeja

*Corequisite:* IIPS 27999

This course investigates modern genocide. We will consider several cases: Armenia, the Jewish Holocaust, Cambodia, Rwanda, and possibly Darfur, and examine the conditions that lead to genocidal violence. We will also examine the uses of

humanitarian interventions, trials, and strategies of societal reconciliation, and relevant conceptions of justice, guilt, forgiveness, and moral responsibility.

### **IIPS 30549. U.S. Operations in Central America**

(3-0-3) Pensado

*Corequisite:* IIPS 27999

As European countries furthered their economic penetration of Africa and Asia during the 19th century, the United States continued its westward expansion by extending its borders to the Pacific and securing its economic and political dominance throughout the Latin American Hemisphere. This course examines the social, cultural, and political repercussions a broad range of U.S. operations had in Central America since the writing of the Monroe Doctrine in 1823 until the “fall of communism” in the late 1980s, including “Dollar Diplomacy,” CIA-sponsored coups, paramilitary training of “death squads,” and overt military occupations.

### **IIPS 30550. Diplomacy and Conflict in the Middle East**

(3-0-3) Bligh

*Corequisite:* IIPS 27999

This course examines the role of diplomacy in shaping the Middle East and in managing conflict in the region today.

### **IIPS 30551. State Terror and Violence**

(3-0-3) Davenport

*Corequisite:* IIPS 27999

This course on state-sponsored terror, repression, and violence examines its causes and implications, and the role of the international community in responding to it.

### **IIPS 30552. Democracy and Its Critics**

(3-0-3)

*Corequisite:* IIPS 27999

While there is widespread agreement that democracy is desirable, there is relatively little consensus on its meaning. This course explores several theoretical interpretations of democracy. We will focus on democratic theory, that is, philosophical theories of democracy and democratic practice, and we will consider numerous challenges to democracy from some of its most important critics. The class will focus on close readings of key texts in democratic thought. We will investigate issues of representation, equality, identity, institutional requirements, and the relationship between democracy and culture. We will also examine the role of deliberation, the problems and benefits associated with pluralism, indigenous claims to self-determination, citizenship, and gender, and the place of revolution and dissent.

### **IIPS 30553. Modern Genocide in Historical Context**

(3-0-3)

*Corequisite:* IIPS 27999

This course explores genocide as both a concept and a phenomenon in the 20th-century world, beginning with Germany and the Holocaust and then moving forward in time and across the globe.

### **IIPS 30554. Human Rights and Human Wrongs**

(3-0-3) Verdeja

*Corequisite:* IIPS 27999

This course will examine theories of human rights and their applications and implications for international politics.

### **IIPS 30601. Islamic Ethics of War and Peace**

(3-0-3) Omar

*Corequisite:* IIPS 27999

Since September 11, 2001, topics related to Islam have inundated the airwaves, aroused the curiosity of many and troubled the minds of some. In order to better understand current events, it is important to have a greater understanding of the world view of Islam. This course on “Islamic Ethics of War and Peace” will provide students with such an opportunity. It examines the major principles of Islamic ethics and the key theories of classical and contemporary Muslim ethicists. These principles and theories will be applied to analyze contemporary Muslim perspectives on war and peace. Cognizant of the various contexts within which

ethical questions are debated, students will be encouraged to explore the impact of modernity, post-modernity, globalization, and liberalism on Muslim ethical discourses. Students will also be encouraged to compare the ethical principles and theories of Islam on war and peace with that of other philosophical and religious theories to discover points of difference as well as convergence.

### **IIPS 30703. Islam: Religion and Culture**

(3-0-3)

*Corequisite:* IIPS 27999

This course will discuss the rise of Islam in the Arabian Peninsula in the seventh century and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the core beliefs and institutions of Islam, with particular emphasis on religious and political thought from the Middle Ages through our own time. All readings are in English; no prerequisite.

### **IIPS 30708. Canon and Literature of Islam**

(3-0-3) Afsaruddin

This course is an introduction to the religious literature of the Arab-Islamic world. Emphasis is on works from the classical and medieval periods of Islam, roughly from the seventh to the 14th century of the Common Era. We will read selections from the Qur’an (the sacred scripture of Islam), the Hadith literature (sayings attributed to the prophet Muhammed), the biography of the Prophet, commentaries on the Qur’an, historical and philosophical texts, and mystical poetry. All texts will be read in English translation. No prior knowledge of Islam and its civilization is assumed, although helpful.

### **IIPS 30710. Religion, Myth, and Magic**

(3-0-3) Gaffney

*Corequisite:* IIPS 27999

The study of religious beliefs and practices in tribal and peasant societies emphasizing myths, ritual, symbolism, and magic as ways of explaining man’s place in the universe. Concepts of purity and pollution, the sacred and the profane, and types of ritual specialists and their relation to social structure will also be examined.

### **IIPS 30719. Islam and Modernity**

(3-0-3) Afsaruddin

Islam and its compatibility with modernity is a much-debated issue in the contemporary period. The course will engage this timely topic and discuss the most important “hot-button” issues involved in these debates: political Islam, democracy, pluralism, rights of women, and secularism. The historical contexts that provide the backdrop for the range of responses to the phenomenon of modernity and its attendant issues will also receive attention. What internal resources exist within Islamic thought that are being drawn upon by modernists to make a strong case for an essential compatibility between Islam and democracy, for example? Is democracy (or Islam, for that matter) a monolithic concept? Students will be expected to actively take part in discussions centered around such questions, the assigned readings, and class lectures. Prior exposure to at least one class on Islam or the Middle East is strongly recommended.

### **IIPS 30721. Russian Realms: Societies/Cultures of Eastern Europe and Beyond**

(3-0-3)

*Corequisite:* IIPS 27999

This course explores the social structures, the historical contexts, and the symbolic universes of the peoples who either identify themselves as Russian or whose way of life has come to be deeply affected by the Russian tradition. It concentrates on those territories that were formerly incorporated into the Tsarist empire and subsequently formed parts the Soviet Union. It will include an examination of the extensive efforts by Russian thinkers to characterize their own national spirit, reflecting, for example, on classic and contemporary attempts to define *dusha* or a distinctively Russian “soul,” as well as some of the consequences of these formulations, looking at this famous “civilization” question through art, literature, and film, as well as social science works. However, the chief approach of the course will be through reading of anthropological studies that have addressed the larger questions from numerous specific local venues. A strong emphasis will also be placed

on the so-called current “transition period,” as a new Russia in the neighborhood of the “Commonwealth of Independent States” seeks to reshape its heritage amid complex problems arising from social, economic, political, and cultural, not to mention old ghosts of global rivalry, terrorism, and disputed legitimacy.

### **IIPS 30723. Religion and Social Movements In Latin American History**

(3-0-3)

The purpose of this course is to give students an understanding of the role religion has played in Latin American history from the colonial period to the present. We will focus specifically on how religion mediates relations between culturally distinct peoples during points of encounter and the role it plays in social movements. Religion in Latin America served paradoxically as a means of and justification for “conquest,” but also at times as a foundation for “subordinate” people’s resistance to domination. We will examine this dynamic as it evolved in successive efforts by outsiders to impose control over people of indigenous and African descent. The course will focus on Spanish proselytization and its results during the colonial period, millenarian movements by people of indigenous and African descent during the 19th century, and American Catholic and Protestant mission endeavors and their outcomes in the 20th century.

### **IIPS 30726. The Worlds of Buddhism**

(3-0-3) Gimello

*Corequisite:* IIPS 27999

A thematic introduction to the pan-Asian (i.e., South, Southeast, and Central Asian as well as East Asian) Buddhist tradition exploring the fundamentals of Buddhist doctrine and practice while also sampling major themes in the religion’s social, cultural, and material history. Among the particular topics to be covered are the life of the Buddha (history and hagiography), the “Four Noble Truths” (the essentials of the Buddhist “creed”), the Buddhist canon (the nature and scope of Buddhist scripture), Buddhist cosmology (Buddhist conceptions of the formation and structure of the universe, i.e., of time and space), Buddhist monasticism, meditation and the Buddhist contemplative life, Buddhist ethics, the ritual lives of Buddhists, Buddhism and politics, Buddhist “family values,” Buddhism and the arts, etc.

### **IIPS 30727. Religion and Politics in Comparative Perspective**

(3-0-3)

*Corequisite:* IIPS 27999

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America and South America) discuss the robustness of such hypotheses. The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on the effects of modernization and globalization on the political salience of religion and whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others.

### **IIPS 30728. Genocide, Witness, and Memory**

(3-0-3) Mahmood

*Corequisite:* IIPS 27999

How are episodes of mass killing experienced, survived, and remembered? In this course, we consider political, social, and cultural trauma as expressed in memoir, documentary, fiction, and academic text. Witness as an ethical stance is examined; the role of memory in shaping morality is questioned. (Does “Never Again” actually work?) We also look at the perpetrators of genocidal killing: Who are they? What prompts their actions? Moreover, are any of us incapable of this kind of violence?

### **IIPS 30729. Contemporary Political Islam**

(3-0-3) Shahin

*Corequisite:* IIPS 27999

This course is designed to provide students with an understanding of the phenomenon of political Islam in the Arab and Muslim worlds. It examines the reasons,

implications, and consequences of the reassertion of Islam in today’s politics. The first part of the course provides a thorough analysis of the Islamic order and the model(s) that inspires modern Islamist activists. The second part critically examines the ideas of the main ideologues of contemporary Islamic movements. The third part discusses the approaches to the understanding of contemporary political Islam and the Islamic movements and presents cases studies of mainstream and radical Islamic movements in a number of Arab and Muslim countries. Finally, the course concludes with a critical analysis of the future of political Islam and its relations with the West.

### **IIPS 30802. Peacemaking in Divided Societies**

(3-0-3) Darby

*Corequisite:* IIPS 27999

This course examines the transition from civil war to peace in divided societies. The process of moving from violence to settlement is complex and presents a new set of problems for the communities involved: the management of negotiations; the continuing threat of violence; acknowledging human rights and other abuses from the war years; the post-war construction of a just and stable society. This course will analyze how these and other problems have been approached, with varying degrees of success, in different peace processes including those in Northern Ireland, Israel-Palestine, and Sri Lanka.

### **IIPS 30901. Home Fronts During War**

(3-0-3)

*Corequisite:* IIPS 27999

How have Americans responded at home to war and threats of war throughout the 20th century and into the 21st? What internal divisions and shared identities has war inspired or revealed? We will examine not the battles and factors that determined the military outcomes, but also the domestic struggles that have defined our national experience and informed many of our responses to current events. Topics will include critiques of democracy and civil rights inclusion during WWI; treatment of Japanese Americans during WWII; development of peace movements, anti-nuclear movements; Cold War politics and fears of American communism; debates over the draft, just-war, racism at home, and U.S. policies abroad in the wake of Vietnam. The final unit will focus on the Gulf War, terrorism, and developments since September 11.

### **IIPS 30902. Social Movements**

(3-0-3) Summers-Effler

*Corequisite:* IIPS 27999

How is social change possible? This is one of the central questions for the study of social movements, as well as the organizing theme of this course. In this course, we will consider the ways in which different sociological theories of social movements have asked and answered this question, playing particular attention to theories of identity, emotion, and networks.

### **IIPS 30903. Peace and Development in Africa**

(3-0-3) Singh

This course addresses two questions: “Why is there so much conflict in Africa?” and “Why is Africa still so poor?” A variety of different explanations are considered, including pre-colonial and colonial legacies, ethnic heterogeneity, poor leadership, the character of African institutions, and international factors. Students will consider the nature of Africa’s challenges, what conditions distinguish Africa’s successes from its failures, and what can be realistically accomplished in the future.

### **IIPS 30906. Development Economics**

(3-0-3)

The current problems of Third World countries are analyzed in a historical context, with attention given to competing theoretical explanations and policy prescriptions. The course will combine the study of the experiences of Latin American, African, and Asian countries with the use of the analytical tools of economics.

**IIPS 30907. Restoring Economic Vitality to the Inner City: What Works, What Doesn't, and Why**

(3-0-3)

This community-based learning and research course examines the political economy of U.S. inner-city revitalization, with South Bend as a case study. Community-Based Learning (CBL) requires that students both learn and apply what they are learning within a setting outside the classroom. In addition to in-class seminar sessions, CBL activities will include meetings with local organizations that link public agencies and private enterprise, visits to varied businesses in urban South Bend, and meetings with area government representatives and relevant church and neighborhood organizations. During the first third of the semester, students will learn about the central problems of the U.S. city and their roots, viewing the issues firsthand locally. In the second third, they will study how inner-city problems are being addressed in selected areas of the country as well as in South Bend. The South Bend Heritage Foundation (SBHF) will act as a client organization for this course by posing research questions for students to investigate during the last third of the semester. The SBHF is a private, not-for-profit service and community development corporation dedicated to the stabilization, enhancement, and empowerment of South Bend's inner-city neighborhoods.

**IIPS 30914. International Environmental Politics**

(3-0-3) Connolly

*Corequisite:* IIPS 27999

This course surveys the major actors (states, NGOs, scientists, IOs, consumers, corporations) and issues relating to global and regional environmental problems. We consider issues such as ozone depletion, deforestation, climate change, biodiversity, acid rain, water supply, nuclear power safety, and more. We study the range of political mechanisms that have been used to foster international environmental cooperation and ask how existing political solutions have fared in response to some of the major international environmental problems. We will develop a sense of what works for international environmental protection and what does not, in order to assess how policymakers might devise effective responses to current and future environmental problems.

**IIPS 30915. Democracy, Development, and Conflict in Africa**

(3-0-3) Singh

*Corequisite:* IIPS 27999

This course surveys African politics through the lens of the “big themes” in comparative politics—democratization, economic development, and internal conflict. Each theme is approached through both broad theories and specific case studies, so that students will learn about Africa in general and concrete ways. Students will consider the nature of Africa's challenges, what conditions distinguish Africa's successes from its failures, and what can be realistically accomplished in the future.

**IIPS 30916. U.S. Labor History**

(3-0-3)

*Corequisite:* HIST 32618, IIPS 27999

This course will examine the history of paid and unpaid labor in the United States from the American Revolution to the near present. We will seek to understand how working people both shaped—and were shaped by—the American Revolution; early industrialization; the debates over slavery and free labor culminating in the Civil War and Reconstruction; the rise of big business; the creation of a national welfare state; the Cold War-era repression of the left; and continuing debates over the meanings of work, citizenship, and democracy. Throughout the course, we will devote considerable time to the organizations workers created to advance their own interests, namely the unions and affiliated institutions that have made up the labor movement. We will also pay special attention to the crucial connections between work and identities of class, race, and gender as they evolved over the past two centuries.

**IIPS 30918. U.S. Environmental History**

(3-0-3)

This course is an introduction to the new field of environmental history. While many people think “the environment” suddenly became important with the first

“Earth Day” in 1970 (or a few years earlier), environmental issues have, in fact, long been of central importance. In recent decades, historians have begun actively to explore the past sensibilities of various groups toward the quality of their air, water, and land; the passionate discussions of philosophers, theologians, and social and natural scientists about resource use, the safety of the environment, and long-term prospects for humanity; and the customs, laws, and managerial systems that guided use of the environment. Historians have also increasingly paid attention to the ways environmental factors have affected the course history: the effects of the distribution of water, foodstuffs, wood, minerals, and of changes in climate or endemic disease. This course will range widely—in methodology, from the history of ideas to paleoclimatology; geographically, from the ancient Near East to modern America; and topically, from wood-cutting rights in medieval France to the rise of the organic farming movement and water-allocation laws in the 20th-century American West. Lecture discussion format.

**IIPS 30919. Economics of Poverty**

(3-0-3) Warlick

An examination of the extent and causes of poverty in the United States. The current system of government programs to combat poverty is analyzed. Reforms of this system are also considered.

**IIPS 30920. Global Economic History**

(3-0-3)

The course presents a comparative economic history emphasizing the sources of long-term economic growth. The comparative analysis is used to explore different development strategies around the world over the past two centuries, from the British Industrial Revolution to the contemporary developing countries, focusing on examples from Europe, Latin America, and North America. Subjects include population change, migration, technological change, industrialization, market integration, education, inequality, and government expenditure. Each topic is discussed through a current economic policy concern. Special attention will be placed upon the role played by the natural resources endowments and institutional change. The last section of the course centers around the debates on globalization and inclusive development. Does going global foster growth? Who gains, and who loses?

**IIPS 30922. Labor and America Since 1945**

(3-0-3)

*Corequisite:* IIPS 27999

This course explores the relationship between workers and the labor movement to American politics and culture since 1945. The United States emerged from World War II as the strongest global power, and its citizens subsequently enjoyed a long postwar economic boom that created what we might call the first truly middle-class society in world history. At the heart of that new society was the American labor movement, those unions such as the United Auto Workers and the United Steel Workers who ensured that at least some of the postwar profits made it into the wallets of workers and their families. Today, however, unions represent only 8 percent of workers in the private sector. What accounts for the decline of organized labor since the 1950s? What has the decline of the labor movement meant for workers specifically, and the American economy and politics more broadly? How and why have popular perceptions of unions changed over time? What has been the relationship of organized labor to the civil rights movement, feminism, and modern conservatism? What is “globalization,” and what has been its impact on American workers and their unions? Through an exploration of historical scholarship, memoirs, polemical writings, and Hollywood films, this course will try to answer these questions. Students interested in politics, economic development, international relations, social justice, human rights, peace studies, or mass culture are particularly welcome.

**IIPS 30924. Micro-Venturing**

(3-0-3) Paulsen

*Corequisite:* IIPS 27999

A practical guide for both business and non-business majors, undergraduate and graduate students, to learn the essential elements of micro-venturing. The course

will concentrate on defining the role of social entrepreneurship in solving the larger problems of domestic and global poverty. The fundamentals of finance, law, marketing, and management will be introduced and applied to practical projects with the intent of creating viable business solutions in the marketplace.

### **IIPS 30925. Race and Ethnicity**

(3-0-3)

*Corequisite:* IIPS 27999

This course has three objectives. First, the course will help you to think critically about issues related to race and ethnicity in American society. These issues include the meaning of race and ethnicity; the extent of racial and ethnic inequality in the United States; the nature of racism, discrimination, and racial stereotyping; the pros and cons of affirmative action; the development of racial identity; differences between assimilation, amalgamation, and multiculturalism; and social and individual change with respect to race relations. The second objective is to foster a dialogue between you and other students about racist and ethnocentric attitudes and actions. The third objective is to encourage you to explore your own racial and ethnic identity and to understand how this identity reflects and shapes your life experiences.

### **IIPS 30926. Environmental Philosophy**

(3-0-3)

*Corequisite:* IIPS 27999

A philosophically integrated examination of current environmental issues drawing on familiar literature from ecology, economics and ethics, as well as recent fiction. This course is equivalent to IIPS 20907.

### **IIPS 30927. Immigration in Global Perspective**

(3-0-3)

*Corequisite:* IIPS 27999

How do people in immigrant-receiving countries shape their attitudes toward immigrants? What are the differences between refugees and other migrants? How is immigration related to urban “immigrant riots”? And what can anthropological studies of borders and national policies tell us about the transnational world in which we live? We will examine these and related questions, and more generally the causes, lived experiences, and consequences of migration. We will acquire a sound understanding of migration in its social, political, legal, and cultural facets. Fieldwork accounts from countries of origin and from the United States, Europe, Australia, and Japan will enable us to appreciate both global and U.S.-distinctive trends. Rather than merely learning a collection of facts about immigrants, we will address how migration intersects with gender and class, the mass media, border enforcement, racism, the economy, territory and identity formation, and religion.

### **IIPS 30929. Global Sociology**

(3-0-3)

Global level changes have profound impacts on societies and on people’s everyday practices. This course explores the major economic and institutional changes that have helped shape the world in which we live. Students will become familiar with the workings of global institutions such as the United Nations, the World Bank, the International Monetary Fund, and the World Trade Organization. We explore important topics such as immigration, inequality, gender, human rights, environmental degradation, and development as we consider how the global system affects other levels of social organization and practice. How, for instance, does the World Trade Organization affect democracy within countries? Do U.S. policies within the World Bank contribute to environmental protection? What happens when international trade agreements come into conflict with international human rights norms? How has globalization affected the ways people engage in political action?

### **IIPS 30931. The Holocaust**

(3-0-3) Spicer

In this lecture/discussion class, we will study the Nazi German program of mass killings that has come to be known as the Holocaust. We will explore the ideas, decisions, and actions that culminated in the murder of an estimated hundred thousand people deemed handicapped, half a million Roma (Gypsies), and six million European Jews. The role of historical prejudices, the impact of National

Socialist ideology and leadership, and the crucial factor of the war itself will all be considered. We will address the experiences of those targeted for annihilation as well as the actions of perpetrators and the role of others: bystanders, witnesses, and rescuers. At the same time, we will examine how attacks on other groups—for example, homosexuals, Polish intellectuals, Soviet prisoners of war, Jehovah’s Witnesses, and Afro-Germans—fit into the overall Nazi scheme for a “new world order.” The legacy of the Holocaust after 1945 will be discussed as well. Course requirements include short papers in response to weekly readings, a comparative book review, and a cumulative final exam.

### **IIPS 30932. Environmental Sociology**

(3-0-3)

*Corequisite:* IIPS 27999

This course will explore the relationship between human societies and the larger natural environment of which they are a part. The main focus of the course will be modern society, but we will also review the history of resource use, pollution, wilderness preservation, environmental movements, and other environmental developments. This course is mainly oriented toward a theoretical perspective and will cover different schools of thought to help students understand the ecological world that surrounds them. The course will be divided into four parts (the moral, the material, the ideal, and the practical).

### **IIPS 33201. Dorothy Day and the Catholic Worker**

(1-0-1)

This course examines the life and writings of Dorothy Day, the cofounder and spiritual guide of the Catholic Worker Movement. The course is seminar in style. Readings will include Day’s autobiography, *The Long Loneliness*, and selections from her other writings.

### **IIPS 33702. Sociology, Self, and Catholic Social Tradition**

(3-0-3) Weigert

*Corequisite:* IIPS 27999

What’s Catholic about sociology? What’s sociological about Catholic social tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

### **IIPS 35901. Anthropology of Globalization**

(3-0-3)

*Corequisite:* IIPS 27999

This course analyzes contemporary patterns of globalization drawing on recent ethnographies. We will briefly overview the historical antecedents of globalization and then proceed to analyze globalization’s cultural, socio-political, and economic complexity, often resulting in urbanization. In particular, we will tackle the global circulation of food, entertainment, fashion, capital, ideologies, violence, religious practice, migrant/trafficked labor, and even of so-called “anti-globalization” movements. Examples of specific topics include youth and free trade in Latin America; cyber-politics among transnational Chinese, Eritreans, and others; McDonald’s and consumerism in Moscow; and Indian cinema and global media. By locating global processes in everyday practice, we will come to understand the interconnectivity sustaining globalization and the resulting practices of resistance. More broadly, we will appreciate, on the one hand, how various cultures and societies become increasingly interconnected and, on the other, how people around the world appropriate large-scale processes in culturally specific ways. The course emphasizes anthropology’s role as a discipline that is globally relevant and publicly “engaged.” Accordingly, we will focus on the discipline’s methodological and theoretical contributions in the study of globalization and its inequalities, and toward a more socially just world. The course will also equip you to design and implement an original research project and to write an ethnographic account based on that project.

**IIPS 40201. The Vocation of Peacebuilding: The Art and Soul of Peace Practice**

(3-0-3) Lederach

This course proposes an inquiry into the life vocation of peacebuilding. The challenge of exploring life vocation requires of students something that the academic setting, with its primary focus on intellectual and professional development, has not always found easy to provide: the nurturing of voice, sense of place, creativity, and calling. We will engage this vocational challenge through two broad themes, referred to here as the “art” and the “soul” of peacebuilding. Art will provide a lens to explore peacebuilding as an artistic process and an avenue to encourage creativity. Soul will provide inquiries into voice and the sense of place, and disciplines to sustain the peacebuilder. Students should be prepared for more informal, experimental, inductive hands-on, and dialogical approaches to learning. The course is restricted to junior/senior peace studies majors.

**IIPS 40402. Iraq War**

(3-0-3) Lopez

*Corequisite:* IIPS 27999

This course explores the scope and meaning of the Iraq War for U.S. society and for the dynamics of peace and security in the wider globe. The course brings a variety of disciplinary, conceptual and policy frameworks to bear on the Iraqi experience of internal and external war. The course includes substantial reading and the opportunity for students to do policy relevant research.

**IIPS 40505. UN and Counterterrorism**

(3-0-3)

Our attention will be focused on the scope and meaning of the work of the UN Counter-Terrorism Committee (CTC), which was established by the Security Council Resolution 1373 on September 28, 2001. Working under the direction of the project research director, each participant will engage in an intense investigation of one of the numerous topics or queries relevant to the study.

**IIPS 40506. Latin American Politics**

(3-0-3) Lies

This course is an introduction to Latin American politics. Thematically, we will focus on two of the great issues facing this region of the world at the end of the 20th century: democratization and strategies for promoting economic development. After spending the first part of the course examining these two issues in a broad way, we will then analyze these same issues, but focus on Brazil, Chile, and Mexico.

**IIPS 40513. The United States and the Vietnam War**

(3-0-3) Brady

*Corequisite:* IIPS 27999

This course examines the participation of the United States in its “longest war”—the conflict in Vietnam. The course is taught primarily from an “American” as opposed to a “Vietnamese” perspective. Broad topics to be covered include: Vietnamese background (land, people, history, culture); American political and diplomatic decision making; 1950–75: how the war was fought; debating the war; the war at home; the aftermath of war; and lessons of the war. This is a lecture AND a discussion course. Attendance at BOTH is required. Approximately six books will be assigned.

**IIPS 40514. Politics of Globalization**

(3-0-3)

This course analyzes the emerging world order and U.S. foreign policy at the end of the Cold War. We first examine a number of underlying causes for global problems in the post-Cold War world, including civilizational differences, state failure, poverty, and political domination. We then discuss the vexing problems of religious violence, ethnic cleansing, and genocide. Humanitarian crises present the challenges of humanitarian intervention, peace making, post-conflict reconstruction, democracy building, and bringing justice for crimes against humanity. In the last few weeks, we address some difficult foreign policy questions that have become amplified in the war on Iraq, including international terrorism, rogue states,

weapons of mass destruction, American primacy, anti-Americanism, unilateralism and multilateralism, and state building and democracy building.

**IIPS 40515. Diplomacy of U.S. Foreign Policy**

(3-0-3)

The United States emerged from World War II in a new peacetime role as a superpower. We had to discover for ourselves how to combine diplomacy and military power in a manner consistent with our democratic principles. While the policy choices were stark in the days of the Cold War, they have become more complex in recent years. Presented by a career diplomat who headed U.S. overseas missions in four countries, the course emphasizes case studies and the practical problems that have confronted U.S. leaders from the end of World War II to the present. The issues treated will illustrate the height of tensions in the Cold War, the emergence of detente and deterrence, and the challenges of the global agenda after the end of the Cold War. The course aims to help the student understand current foreign policy issues, which will be discussed briefly in class. A research paper (10 pages), a midterm exam, and a final exam are required.

**IIPS 40516. The Politics of International Trade**

(3-0-3)

If global free trade is theoretically optimal for the economy, why does free trade foster so much concern politically? Spanning events from the 1700s to the present day, this lecture course will discuss the politics of free trade in four different issue areas: (1) global trade and national security; (2) winners, losers, and the domestic politics of trade policy; (3) global trade and the development of democracy; and (4) the rise of international institutions and the decline of sovereignty. The syllabus will draw on classic readings in international relations and comparative politics, and students will be exposed to the variety of methods used by political scientists to analyze these questions: qualitative descriptions, quantitative analysis, formal models, etc. While the course does not require any background in economics, basic economic models of trade will be covered in the introductory sections. Students will be evaluated by both examinations and short papers.

**IIPS 40602. Ethics, Law, and International Conflict**

(3-0-3) Powers

*Corequisite:* IIPS 27999

The terrorist attacks of 9/11 and the war in Iraq have contributed to a dramatic reexamination of moral and legal norms governing the role of military force in international affairs. This course provides an introduction to legal and moral perspectives on issues of war and peace, with special attention to Catholic social teaching. Topics include the UN framework for collective security, collective enforcement, and peacekeeping; terrorism, aggression, and self-defense; intervention on behalf of self-determination and human rights; norms governing the conduct of war; accountability for war crimes; and approaches to arms control and disarmament. These topics are discussed with special attention to their application in combating global terrorism, the interventions in Iraq and Afghanistan, the wars in the Balkans, and other recent conflicts.

**IIPS 40603. Islam and Muslim/Christian Dialogue**

(3-0-3) Omar

The course is designed to introduce students to medieval Muslim perspectives of the Christian “other” and how these resonate in contemporary relations between Muslims and Christians. It will focus on Muslim-Christian relations in the modern/post-modern period, with particular attention to contexts of conflict and the potential for dialogue, solidarity, and interreligious peacebuilding.

**IIPS 40604. Tolerating Intolerance: Religion, Secularization, and Peace**

(3-0-3) Springs

*Corequisite:* IIPS 27999

Tolerance of religious differences is heralded today as a primary accomplishment of the modern liberal-democratic societies, and perhaps the best hope for transforming conflict and building peace in conflict zones across the globe. Where did this value come from, and how did it evolve? How has it come to orient modern, liberal society, and mark the difference between liberal and illiberal

societies? Is religious toleration an absolute good? What are its limits? In what ways might it assist or impede the pursuit of transitional and restorative justice and peacebuilding? Is the basis of religious toleration the secularization of public life and politics? This class examines the concept of toleration, attending specifically to its application to current debates about the relation of religious belief and practice to politics and social movements in contemporary European contexts. We will examine the difference between free speech and hate speech; the controversies pertaining to religious freedom in contemporary France, Holland, and Britain; and the apparent stand-off between multiculturalism, secularization, human rights, and group rights.

### **IIPS 40605. Religion, Violence, and Peace**

(3-0-3) Omer

*Corequisite:* IIPS 27999

In this course, we will first explore theoretical frameworks for thinking about the connection between religion and violence. Second, we will examine the role of religion in conflict through an exploration of theoretical material as well as specific case studies. Finally, we will ask how and why various analyses of the role of religion in conflict enable us to think about the potential role of religion in peacebuilding and conflict transformation. The course will explore the cases of Sri-Lanka, Sudan, Israel-Palestine, and Northern Ireland.

### **IIPS 40701. Advanced Moral Problems**

(3-0-3) Sterba

An in-depth discussion of three very important moral problems of our time: affirmative action, animal rights, and sexual harassment.

### **IIPS 40703. Culture and Politics in Northern Ireland**

(3-0-3)

What the literature of Northern Ireland reveals about the culture and politics of Northern Ireland.

### **IIPS 40706. Multiculturalism**

(3-0-3)

The course explores the economic, state, and national conditions of multiculturalism as a social relation and semiotic form. Seminal questions include the issues of difference deployed in debates over multiculturalism and anthropology's location in them as a study of human diversity.

### **IIPS 40707. Topics in Social/Cultural Anthropology**

(3-0-3)

This course explores the latest developments in social-cultural anthropology, including but not limited to nationalism and transnationalism; colonialism and post-colonialism; political-economy; gender; religion; ethnicity; language; and medicine and the body. Emphasis will be on social and cultural transformations in specific historical contexts.

### **IIPS 40708. Anthropology of War and Peace**

(3-0-3) Nordstrom

This class will explore the human capacity for war and peace, from tribal conflicts through guerilla warfare to conventional and nuclear war. It will also study societies without war and populations with innovative ideas about peace.

### **IIPS 40714. Religion and Power in Latin America**

(3-0-3)

The cultural dimension of religion and the institutional building abilities present in religious communities are building new power sources for religions in the present Latin American context. Taking the experience of Peru, we will look at Latin American recent processes in the religious domain. The course will describe the changing conditions of the Catholic Church in Latin America and the new situation of religious pluralism produced by the growing presence of evangelical groups and Pentecostalism. We will look at the impact of religion in the empowerment of people from below and its relation to new social movements, as well as to the institutionalization of power at the state level in the new context of globalization.

### **IIPS 40719. Catholic Social Teaching**

(3-0-3) Whitmore

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and appropriation of these documents. We will examine papal, conciliar, and episcopal texts from *Rerum Novarum* (1891) up to the present time, identifying operative principles; tracing central theological, ethical, and ecclesial concerns; and locating each document in its proper historical context.

### **IIPS 40720. Christianity in Africa**

(3-0-3) Kollman

*Corequisite:* IIPS 27999

This course will explore the history of Christianity in Africa, beginning with the early church, but with heightened attention to the more recent growth of Christianity on the continent. Particular topics to be addressed include the dynamics of missionary activity before, during, and after the colonial period; the rise of African Independent Churches; the interaction between Christianity and Islam in the past and present; and contemporary issues surrounding Christianity and the African nation-state. We will also investigate theological questions surrounding the relationship between Christianity and culture. In addition to a final exam, students will have the option of one longer research paper or several shorter papers.

### **IIPS 40722. Religion and Politics in Comparative Perspective**

(3-0-3)

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America, and South America). The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others. Students will write two short reflection papers that demonstrate familiarity with the readings: one during the first half of the semester and one during the second half of the semester. There will be a "short" mid-semester exam and a final research paper due at the end of the semester.

### **IIPS 40724. Globalization, Spirituality, and Justice**

(3-0-3) Groody

This course will explore what it means to be Christian in the context of this new era of globalization. It is a time of new opportunities and unprecedented potential, but it brings with it new perils and greater social, political, and economic turmoil than ever before. In particular, we will explore the meaning of Christian discipleship in a time when half the world lives on less than two dollars a day and two-thirds live in abject poverty. After grounding our discussion of socio-economic research, we will then do a theological reading of globalization, and then a global reading of theology. In particular, we will explore the meaning of Christian faith today as we draw from the deep wells of scripture, early Christian sources, Catholic social teaching, major world religions, liturgy and contemporary theological reflection, icons of justice, mysticism, and spirituality as we explore what it means to be Christian in a time of titanic change.

### **IIPS 40726. Comparative Spiritualities**

(3-0-3) Malkovsky

*Corequisite:* IIPS 27999

This course provides a first introduction to some of the more influential spiritualities practiced by Hindus, Buddhists, Muslims, and Eastern Orthodox Christians down through the ages and seeks to determine their significance for contemporary Roman Catholic spiritual praxis and theology. In order to properly understand the practices of Hindu yoga and bhakti, of Buddhist *vipassana* and Zen, of Muslim *salat/namaz* and Sufism, of the Eastern Orthodox Jesus Prayer/*Hesychasm* and the accompanying place of human effort in asceticism and morality, it will be necessary to examine underlying convictions about the nature of the human person and the supreme reality, of divine presence and grace, as well as the declared ultimate goal of spiritual endeavor, whether it be expressed more in terms of a communion

of love or of enlightened higher consciousness. During the semester, we will not only study important spiritual texts of other religions, but we will also practice meditation, visit a local mosque for Friday prayers and sermon, and be instructed by expert guest speakers who represent religious traditions other than our own.

### **IIPS 40728. Transnational Immigration/European Cinema**

(3-0-3)

*Corequisites:* IIPS 27999, IIPS 41246

The globalization of capital and labor over the course of the 20th century has created a paradox where the transnationalization of capital and advances in communication and technology promote a porosity of borders that increases and even advocates the mobility of people, while at the same time individual nation-states consciously control their borders in an attempt to contain the presumed homogeneity of their cultures. This is particularly evident in Europe, where European national borders have become unstable due to geopolitical changes such as the fall of the Berlin Wall and the Balkan wars, and the constant growth of the European Union. This seminar will examine fundamental aspects of immigration in the European Union and the way they are represented in contemporary European film. With this in mind, we will examine the paradox where, on the one hand, the European Union in its constant growth promotes a cosmopolitan, borderless society, while, on the other hand, it attempts to curb what it considers an invasion by the immigrant other. We will juxtapose the legacies of the French, English, and German post-colonial and immigrant cultures to the immigration wave of the early 1990s, which has affected the southern European countries of Spain, Italy, and Greece. The massive influx of immigrants to these countries is challenging their preconceived notions of homogeneously imagined communities. We will spend the last part of the semester concentrating on subtler issues of nation, gender, politics, and religion, and the possible solutions that directors offer in the beginning of the 21st century as a way of escaping the ideological and cultural impasse of the end of the 20th century. Students who have completed the Notre Dame language requirement in Spanish are eligible to sign up for an additional single-credit discussion section as part of the Languages across the Curriculum (LAC) initiative in the College of Arts and Letters.

### **IIPS 40729. Contemporary French and Francophone Fiction**

(3-0-3) Perry

*Corequisite:* IIPS 27999

Through recent fiction by Francophone writers of Muslim origins, this course will offer us an opportunity to understand and reflect critically upon contemporary issues affecting relations between Muslim and Western cultures. We will read Tahar Ben Jelloun from Morocco (*Partir*, 2006), Yasmina Khadra from Algeria (*Les Sirènes de Bagdad*, 2006), Salim Bachi from Algeria (*Le Silence de Mahomet*, 2008), Chahdortt Djavann from Iran (*La Muette*, 2008), and Atiq Rahimi from Afghanistan (*Syngué sabour: Pierre de patience*, 2008, Prix Goncourt). Apart from their literary merits that call for examination and appreciation, these novels raise key issues in our world today, including exile; immigration; post-colonialism; the wars in Iraq and Afghanistan; Islamic extremism and terrorism; gender and social disparities; and various forms of violence, especially toward women. They also demonstrate attempts to engage Western readers, in particular through an original, literary approach to the Prophet Muhammad's biography. Students are expected to participate fully in class discussions and will be responsible for two essays (one with the opportunity to revise and rewrite) as well as one oral presentation (done in a group). This class is taught in French.

### **IIPS 40801. Conflict Resolution: Theory and Practice**

(3-0-3) Fast

*Corequisite:* IIPS 27999

This course introduces basic and intermediate level skills useful for resolving interpersonal, inter-group, societal, and international conflicts. A heavy emphasis will be placed on training through simulations and role-plays, and there will be a thorough review of the existing literature and some cases of social conflict resolution. Particular attention will be focused on the more traditional areas of negotiation, mediation, and conciliation in multi-racial, multi-ethnic conflicts. Some attention

will be devoted to how what we know about the causes and sustaining conditions of conflict, which assist what we might do in the conflict resolution process.

### **IIPS 40802. Gender and Peace Studies**

(3-0-3) St. Ville

*Corequisite:* IIPS 27999

This course will place the resources of gender theory into conversation with peace studies. In so doing it will highlight both how the category of "gender" serves as a useful analytical tool for peace scholars, while at the same time noting how specific situations of conflict and peacebuilding call into question and so prompt a reshaping of prominent concepts in gender theory. In the first section of the course, we will consider how attention to the social marginalization of women has clarified the differential effects of war and peace efforts. Topics to be covered include women's greater vulnerability to personal and systemic forms of violence in conflict situations, the sexual politics of warfare, including the use of sexual violence as a tool of war, and the role of women as perpetrators of violence. We will consider also the increased roles in peacebuilding that have emerged for women as a result of the attention to gender, including formal calls for women to be included in peace processes, the recognition of gender-based war crimes, and grass-roots peacebuilding initiatives by women. In this section, we will draw heavily on first-hand accounts from specific contexts of conflict, most notably Northern Uganda and Afghanistan. Our study of women's peacebuilding in particular sites will position us in the final section of the course to think still more critically about concepts of gender and power. Critics of contemporary gender theory frequently charge that in its radical questioning of concepts of the self and identity, gender theory has lost its ability to be politically effective. In light of our analyses, we will take up this challenge, asking whether and in what ways "gender" remains a useful tool for students of peace studies and what possibilities our inquiry might open for reimagining concepts of gendered identity to inform future work in peacebuilding.

### **IIPS 40901. Leadership and Social Responsibility**

(3-0-3) Brandenberger

This course examines leadership and empowerment issues from multidisciplinary perspectives, focusing on the role of the leader within organizations that promote service, social action, or other forms of social responsibility. Alternative models of leadership are explored, with attention to value and moral implications.

### **IIPS 40902. Self, Society, and Environment**

(3-0-3) Weigert

*Corequisite:* IIPS 27999

This course focuses on social psychological aspects of relationships between humans and the natural environment. Issues include how humans interact with different environments, symbolic transformations of environments, and competing accounts or claims concerning human-environment relationships. The course is framed in a sociology of knowledge perspective and touches on alternative ways of envisioning and valuing individual and institutional perspectives on human-environment relationships with an eye toward implications for social change.

### **IIPS 40903. International Migration and Human Rights**

(3-0-3) Bustamante

*Corequisite:* IIPS 27999

This course is an extension from the mini-course to a full term offered by Prof. Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the Industrial Revolution to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States' migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United Nations' Commission of Human Rights on the relationship between migration and human rights are also covered.

**IIPS 40904. Labor Movements in Twentieth-Century United States**

(3-0-3)

This course explores American workers' collective efforts as workers in their search for economic security, political power, and social and cultural autonomy from the 1890s to the near present. For the most part, this course will focus on the unions and related organizations forged by workers throughout the past century—from major umbrella groups such as the American Federation of Labor, the Industrial Workers of the World, and the Congress of Industrial Organizations, to important sectoral actors such as the Brotherhood of Sleeping Car Porters, the United Automobile Workers, the American Federation of Teachers, and the United Farm Workers. The central questions of the course will be: When, where, and why have U.S. workers organized collectively in the 20th century—and how successful have they been? What has been the response of employers, the government, and the public at large to these collective efforts of workers, and how and why have those responses changed over time? What has been the relationship between organized labor and racial and gender discrimination, as well as the causes of racial and gender equality? And how have Americans generally, and workers in particular, understood the labor movement in relation to capitalism, freedom, and democracy? Students will be expected to write several short papers, engage in regular classroom discussion, and screen several films outside of class.

**IIPS 40905. International Migration: Mexico and the United States II**

(2-0-2) Bustamante

*Corequisite:* IIPS 27999

A three-week course that refers to a review of basic questions on international migration, with emphasis on immigration to the United States and the methods through which these questions have been adequately or inadequately answered. The numbers, impact, nature, structure, process, and human experience will be discussed in terms of the research methods commonly used to approach them.

**IIPS 40906. Gender and Violence**

(3-0-3) Mahmood

This upper-level anthropology course focuses on the problematic intersection between gender and violence. The question of male aggression and female pacifism is explored, with attention to female fighters and male practitioners of nonviolence. Women in circumstances of war, trauma, and healing are studied for the insight such study may provide for peacebuilding initiatives. Gender in the military, gender and violence ritual cross-culturally, and rape as a sociopolitical phenomenon are among the other topics considered. Primary source readings complement intensive class discussion; substantial writing and speaking buttress academic skills.

**IIPS 40908. International Economics**

(3-0-3)

*Prerequisite:* ECON 10101 OR ECON 10015 OR ECON 12101 OR ECON 20015

A study of the general theory of international trade: the pattern of trade, gains from trade, tariffs, trade and special interest groups, trade and growth, foreign exchange markets, balance-of-payment problems, and plans for monetary reform.

**IIPS 40909. Race, Ethnicity, and Power**

(3-0-3)

*Corequisite:* IIPS 27999

Presents a review and discussion of social scientific research concerning the nature of race and ethnicity and their expression as social and cultural forces in the organization of multiethnic societies. The focus is multidisciplinary.

**IIPS 40913. Global Development in Historical Perspective**

(3-0-3)

*Corequisite:* IIPS 27999

The difference between rich and poor nations is not, as Ernest Hemingway once said, that the rich have more money than the poor, but is, in part, because the rich produce more goods and services. Industrialization, in other words, has

often brought wealth (as well as social dislocation and protest) to some countries, but not to others. This course examines the process of industrialization from a comparative perspective and integrates the history of industrialization and its social consequences, possibly including Western Europe (Britain and Germany), the United States, Latin America (Mexico and Brazil), and East Asia (Japan and South Korea). We will concentrate on these countries' transition from agriculturally based societies to industrial societies. We will analyze the process of industrialization on two levels: from above (the role of political authority), and from below (a view of factory life, industrial relations, and protest from the perspective of workers). No specific prerequisites in history or economics are necessary.

**IIPS 40914. Prophets and Protest in African History**

(3-0-3)

This dialogue-intensive seminar focuses on men and women who led political, religious, and social movements in Africa in the 19th and 20th centuries. The Islamic Murrude brotherhood in Senegal, the Women's Wars of Nigeria, and the Mau Mau uprising in colonial Kenya will introduce students to important episodes in African history and to the intellectual debates of the field. Students are expected to read a variety of texts, participate vigorously in class discussion, make oral presentations, and complete written assignments.

**IIPS 40915. Gandhi's India**

(3-0-3) Sengupta

*Corequisite:* IIPS 27999

The dominant figure in India's nationalist movement for nearly thirty years, M.K. "Mahatma" Gandhi has also been the 20th century's most famous pacifist, and a figure of inspiration for peace and civil rights movements throughout the world. This course offers an examination of Gandhi and the nature of his unconventional and often controversial politics. It charts Gandhi's career against the background of events in London, South Africa, and India. It examines the evolution and practical application of his ideas and techniques of nonviolent resistance, and his attitudes toward the economy, society, and state. Gandhi's influence on Indian politics and society is critically assessed and his reputation as the "apostle of nonviolent revolution" examined in the light of developments since his death in 1948. Some of the questions that will be discussed are: How far did the distinctive character of Gandhian politics derive from his absolute commitment to India's nationalist struggle? Was his success due to the force and originality of his political ideas and his advocacy of nonviolent action? Can his achievements be explained by political wiliness and pragmatism, or by willingness to embark on new experiments with the truth? Though helpful, a prior knowledge of Indian history is not required for this course.

**IIPS 40916. Slavery and Human Bondage**

(3-0-3) Hauser

*Corequisite:* IIPS 27999

For many Americans, the history of slavery is synonymous with plantations in the Atlantic world. This course seeks to expand our view of Atlantic slavery by looking to the Ancient World, Africa, Asia, and Europe in historic and contemporary contexts. This course examines slavery as a labor system and a social form intimately connected with the political economies and cultural groups within which it arose. It will also examine debates about contemporary forms of bonded labor and slavery emerging from global encounters today. By examining different types of bonded and unfree labor, such as chattel, domestic, and wage slavery, we will form an inquiry about slavery's relationship to the following: personhood and social death; the emergence of market economies; systems of differentiation used to maintain the social condition of the enslaved; and power and violence. This course will take an interdisciplinary approach relying on archaeology, anthropology, and history for our case studies in understanding this particular social form.

**IIPS 41246. Transnational Immigration/European Cinema Lab**

(0-0-0)

*Corequisites:* IIPS 27999, IIPS 40728

Certain films will be viewed for discussion in class.

**IIPS 43101. Peace Studies Senior Seminar**

(3-0-3) Fast; Kaufman; Omar; Philpott

*Prerequisite:* IIPS 30101

The peace studies senior seminar is a capstone course for both the supplemental major and the minor in peace studies. The centerpiece of the course is a seminar paper that students research and write on a subject of their choice in light of the theme of the course. The course also consists of readings and discussions that explore familiar topics in peace studies in greater depth as well as introduce research methods to the students. This required course is open to peace studies majors and minors only.

**IIPS 43701. The Ethics of Gender and Race**

(3-0-3)

This course is concerned with two central ideas—equal opportunity and discrimination. It focuses on what constitutes equal opportunity with respect to gender and race and how best to achieve it, as well as what constitutes sexual and racial discrimination and how best to avoid it. It begins by considering arguments of those who hold that feminist causes discriminate against men, and that affirmative action programs discriminate against whites, and then considers opposing arguments. The goal of the course is to help students make up their own minds about which views on these topics are most morally defensible.

**IIPS 43702. Topics in Political Philosophy**

(3-0-3) Weithman

The last four decades have been an extraordinarily exciting time in the development of political philosophy. Many of the central questions in the subject have received their most authoritative formulation and treatment since the 19th century. This course will survey developments in English-speaking philosophical world in that period. Topics to be covered include the foundations of constitutional and human rights, the grounds of economic justice in domestic and global settings, and the point and demands of equality. Other problems to be surveyed include the conditions of just war in the contemporary world (including preemptive war) and moral problems connected with torture. Authors to be covered include John Rawls, Robert Nozick, Michael Sandel, Ronald Dworkin, T.M. Scanlon, Amartya Sen, Martha Nussbaum, Elizabeth Anderson, Jeremy Waldron, and Samuel Scheffler. The course will be run as a seminar. This course will be of special interest to students in philosophy and political science. It has no prerequisites except a willingness to work hard and take part in class discussions. Requirements include frequent writing assignments, a class presentation, and a comprehensive final examination. A substantial writing project will be required of graduate students in lieu of a final. Other students may substitute a substantial paper for the final with the permission of the instructor.

**IIPS 43901. Ethics of Gender**

(3-0-3)

We observe gender differences between men and women, but these differences vary over time and place, depending on the customs and practices of different societies and depending on the choices individuals make. To the degree that gender differences are a product of social and individual choice, we can raise the question, as we will in this course, of what, if any, gender differences we should have in society. This question is of particular ethical significance in light of our commitment to the equality of men and women.

**IIPS 43902. Population Dynamics**

(3-0-3) Williams

*Corequisite:* IIPS 27999

Demography, the science of population, is concerned with virtually everything that influences, or can be influenced by, population size, distribution, processes, structure, or characteristics. This course pays particular attention to the causes and consequences of population change. Changes in fertility, mortality, migration, technology, lifestyle, and culture have dramatically affected the United States and the other nations of the world. These changes have implications for a number of areas: hunger, the spread of illness and disease, environmental degradation, health services, household formation, the labor force, marriage and divorce, care for the

elderly, birth control, poverty, urbanization, business marketing strategies, and political power. An understanding of these is important as business, government, and individuals attempt to deal with the demands of the changing population.

**IIPS 43903. Confronting Homelessness**

(3-0-3)

*Corequisite:* IIPS 27999

The purpose of this seminar is to examine the conditions of extreme poverty and homelessness within the broader context of American culture and society. In order to confront the nature of these conditions, this seminar will draw upon insights from history, literature, documentary film and photography, and the social sciences. We will focus on the degree of permanence and change in our approach to both traditional and modern forms of the social problem. There will be an experiential component to the seminar as well.

**IIPS 43904. Children and Poverty: Developmental Implications**

(3-0-3)

*Corequisite:* IIPS 27999

Every fifth child in America faces hunger or poverty. This course examines the impacts of youth poverty and related risks from the perspectives of developmental and social psychology. Key topics include changing family patterns, violence and conflict resolution, moral development, resiliency, and educational inequalities/potentials. Central to the course will be an emphasis on children's developing cognitive perceptions of self in relation to society and an examination of potential solutions, model programs, and relevant social policy. Readings will be drawn from a variety of sources and discussed in seminar format. Active student participation and service-learning engagement or community-based research are fundamental to the course. Students currently working with youth via student organizations or local entities are especially encouraged to apply.

**IIPS 43906. Moral Development**

(3-0-3) Narvaez

*Corequisite:* IIPS 27999

Students are challenged to think about the nature of moral development, learn how to examine and compare theories in moral development, develop critical thinking, and have the opportunity to create a study of moral development. The course reflects on Catholic social teaching and its relation to moral identity and social action generally and in our own lives.

**IIPS 43907. Consumption and Happiness**

(3-0-3) Dutt

*Corequisite:* IIPS 27999

Do increases in consumption increase happiness? This course will look at the available evidence, which suggests that happiness does not increase with consumption and income for people beyond a point, by their own reckoning. It will examine why this may be so, looking especially at the idea that happiness from consumption depends not on the amount we consume, but rather on the amount we consume relative to others. It will also examine how increases in consumption can adversely affect other things many people think are important—including time with family and friends, the environment, economic growth, and income distribution.

**IIPS 45501. Global Crime and Corruption**

(3-0-3) Nordstrom

*Corequisite:* IIPS 27999

As the world of the 21st century globalizes, so, too, does crime. Millions of people and trillions of dollars circulate in illicit economies worldwide. This represents power blocks larger and more powerful than many of the world's countries. This class will look at what constitutes the illegal today; who is engaged in crime and corruption; and what kinds of economic, political, and social powers they wield. It will also look at the societies and cultures of "out-laws." For example, internationalization has influenced crime in much the same ways that it has multinationals and nongovernmental organizations: Criminal networks now span continents, forge trade agreements and hone foreign policies with other criminal organizations, and set up sophisticated systems of information, exchange, and

control. Anthropology—with its studies of cultures—provides a dynamic approach to the illegal: What customs inform law abiders and criminals? What values guide their actions? What behaviors shape their worlds? The course will explore the many kinds and levels of criminality and corruption: How do we consider the differences (or similarities) among, for example, drug and arms smugglers, white collar corruption, gem runners, or modern day slavers, and governmental or multinational corporate crime? What impact does each have on our world and in our lives? What solutions exist? Class is interactive in nature and, in addition to the normal reading and writing, students will do an anthropological class project on a topic of their choice concerning global crime and corruption.

### **IIPS 45701. Ethnographic Method and Writing for Change**

(3-0-3)

*Corequisite:* IIPS 27999

The notion that a written text can, itself, be a “site of resistance,” a location where political commitment and rigorous scholarship intersect, undergirds this course on ethnographic method. We study the construction and interpretation of field notes, subjectivity and objectivity in research, ethical issues in fieldwork, feminist and postcolonial critiques of ethnographic practice, “voice” and oral history, and aspects of ethnographic inquiry that impact change processes. Students engage in field projects in the local community and produce experimental ethnographic text as a central part of coursework. We also examine the writing process, rhetorical style, the responsibilities of the author, and polyvocality and inclusivity. Ethnography as a nexus of theory and practice, of scholarship and action, emerges from our work in the course.

### **IIPS 45902. Anthropology of Poverty**

(3-0-3)

*Corequisite:* IIPS 27999

What is poverty? What does it mean to be poor, destitute, and powerless? Does poverty in the developed world refer to the same conditions and factors that determine poverty in developing and undeveloped countries? What does genteel poverty mean? Does the ability to possess material goods and to consume indicate lack of poverty? What is the cycle of poverty? Can one break out of it? This course will address these and other questions on poverty through anthropological analysis. The course is divided into two parts: (a) poverty in the pre-industrial era, and (b) poverty in contemporary societies. Topics covered in the first part include the beginnings of poverty and social inequality in the earliest complex urban societies of the Middle East, Africa, and South Asia; urbanism, production, distribution and poverty in various time periods including classical Greece and Rome, the Middle Ages and the Early Modern Era; and slavery, colonialism, and poverty. The second part will address issues such as the relationship between industrialism, colonialism, and poverty in the 19th and 20th centuries, instituted poverty in post-colonial and post-industrial societies, and global manifestations of poverty in the 21st century. The course materials include readings from anthropology (archaeology, cultural anthropology, and biological anthropology), history, economics, theology, and political science, as well as documentaries and films.

### **IIPS 47901. Cultural Difference and Social Change**

(3-0-3)

*Corequisite:* IIPS 27999

This course is designed especially for students returning from summer service projects or study-abroad programs in the developing world. Students can enroll only with the permission of the instructor. In the class, students will conduct research to better understand the sites that they visited during their overseas projects, orienting them in relation to broader global, regional, and national patterns. Course readings will cover such topics as world systems theory, globalization, development, NGOs, various understandings of “human rights,” applied anthropology, activism, and the relation between cultural relativism and service. Students will develop three collaborative websites during the semester (although each student will receive individual grades for his or her work). These collective projects will present the students’ own research interests based on their overseas experience, and will focus on the site where they worked, a problem that they observed in cross-cultural perspective, and an analysis of strategies for redressing

this sort of problem. The overall goal of the course will be for students to gain an understanding of how social science analysis might help to understand and confront problems in cross-cultural contexts.

### **IIPS 50201. Design and Methods in Peace Research**

(3-0-3)

This course provides an overview of social science research methods with special attention to the application of research principles and practices to research projects in the areas of peace and conflict resolution. The aim of the course is to provide students with the basic tools needed to develop their own research project and to strengthen their skills in reading published research articles. Students will gain familiarity with commonly used research methods such as ethnography, survey research, interviews, document/content analysis, and basic statistical analysis. Students who are developing their final MA projects will have opportunities to present and discuss their work throughout the semester. Also, we will devote some time to considering the processes of writing grant proposals to fund research and publishing research results.

### **IIPS 50601. Catholic Peacebuilding**

(3-0-3)

The tradition of Catholic thinking on war and peace has reached an exciting new point in its development, best captured in the term “peacebuilding.” Though it draws on traditional conceptions of the justice (or injustice) of war, its focus is on the ethics and practice of repairing the wounds of war and unjust regimes in Bosnia, Rwanda, El Salvador, East Timor, and Northern Ireland and elsewhere. Students will examine—and indeed develop—the concept of peacebuilding through both theology and actual cases, both historical and contemporary. Seniors only—with permission of instructor.

### **IIPS 50704. History From Below: Colonialism, Nationalism, and Subalterns**

(3-0-3)

This course introduces advanced undergraduates and graduate students to methods of doing and writing history that intervene within dominant historical narratives and frameworks by redefining historians’ relationships with sources and the questions asked of them. The subaltern studies collective that emerged from South Asia in the 1980s and 1990s is now recognized as one of the more important historical interventions in recent years. Subaltern studies’ historiographic writing has questioned dominant nationalist narratives by arguing that they represent only the history of elites. The objective of the course is to draw attention to differing understandings of colonialism and nationalism by laying out the perspectives of “subalterns”—untouchables, tribals, peasants, workers, women, and other marginalized groups. In addition “subaltern” perspective would also be extended to studying themes like democracy, politics, modernity, development, cities, environment, films, and television in South Asia. The interventions by the subaltern studies collective will be situated in relationship to developments in European historiography, with special attention to the unique departures of this new school. Debates within and critiques of the collective’s approach will also be examined. A background in South Asian history or culture is not a prerequisite.

### **IIPS 50705. Feminist and Multicultural Theologies**

(3-0-3)

An exploration of how the voices of women have helped to reshape theological discourse and to bring to light new dimensions of the living Christian tradition. Like other liberation theologies, feminist theologies take the experience of suffering and missing voices in the tradition as the starting points for theological reflection on the mystery of God and all of reality in relation to God. Using the writings of feminist, womanist, Latina, mujerista, Asian, and Third World theologians, this class will focus on the following questions and areas of theology: the theological task and vocation, the significance of gender and social location in the fields of theological anthropology and Christology, theologies of the cross in the face of contemporary suffering, the mystery of God, and implications of women’s spirituality in our day. Students will have the opportunity to join an optional reading group that will focus on classic texts in the development of feminist theologies.

**IIPS 50801. Nonviolent Social Change**

(3-0-3) Cortright

*Corequisite:* IIPS 27999

This course will help students understand and participate more effectively in movements for nonviolent social change. Students will become familiar with both the theories of nonviolence and social action and the practice of effective social organizing. Topics to be addressed include the religious roots and philosophy of nonviolence, recent cases of nonviolent social struggle, principles of strategy, and the techniques and methods of nonviolent action, including media communications, fundraising, lobbying, grass roots organizing, and coalition building. Relevant historical and contemporary examples will be reviewed to illustrate how movements for social change work in practice. Coursework will consist of readings, lectures, videos, and class discussion on the identified topics. In addition, students will be asked to participate in class activities and team learning exercises. Two team-learning exercises are scheduled during the semester.

**IIPS 50802. International NGO Management**

(3-0-3) Culbertson

*Corequisite:* IIPS 67999

This course will provide an introduction to concepts and skills needed to effectively manage projects in international nongovernmental organizations (NGOs). Through simulations, case studies, and discussion, the class will critically examine the logframe approach to project planning, which is widely used by NGOs and often required by donor agencies. As a primary assignment in the class, each student will develop a grant proposal and budget for a project he or she has designed using methods discussed in class. The class will also explore several issues related to project evaluation, including how to design a project monitoring and evaluation system, approaches to “scaling up” project impact, stakeholder perspectives on evaluation, and the unique challenges that arise in evaluating peacebuilding projects.

**IIPS 50901. Environmental Justice**

(3-0-3) Shrader-Frechette

*Corequisite:* IIPS 27999

This course will meet once a week on Wednesdays, from 4:00 to 6:30 p.m. It features outside speakers, including African Americans from East Chicago and South Chicago. The course will examine the way poor people and minorities, because of their political powerlessness, face environmental and health threats that are hundreds of times greater than those faced by the average person. There are no tests, and all student work will be on a self-chosen project. These student projects can deal with any of the current 2,500 environmental justice problems in the United States/world. The goal will be for students (1) to learn specific tools for assessing environmental justice threats; (2) to use these tools to empower and assist vulnerable communities; (3) to actually correct environmental justice problems on the basis of material learned in the course; (4) to work with governmental justice problems on the basis of material learned in the course; and (5) to work with government agencies and local communities, both to correct environmental justice problems and to publish reports of the students’ analyses.

**IIPS 50904. Political Economy of Development**

(3-0-3) Kim

*Corequisite:* IIPS 27999

The course is divided into two parts. The first part provides an overview of the institutional and empirical features of the developing world, followed by a survey and critical evaluation of the conventional development theories. The second part looks into the selected topics evoking the critical, controversial stakes in Third World development debates today. The topics include rent-seeking activities, land tenure and peasantry, micro-financing, corporate governance, failed state and market failure, market and democracy, income-distribution and poverty, feminism in development, ethnic conflicts in resource use, and population pressures. The approach taken in this course is a political-economy perspective with references to the historical, cross-cultural, and empirical materials. The course aims at providing the students with intellectual spaces for alternative development paradigms and

strategies. Where appropriate, the tools used in economic analysis will be reviewed at an elementary and accessible level.

**IIPS 53901. Social Movements in Global Perspective**

(3-0-3)

This seminar explores how increasing global integration affects political participation and the prospects for democracy. We will briefly review the broader research literature on the sociology of social movements within nations as a first step in our consideration of the relationships between “globalization” and social movements. Seminar discussions will explore how transnational movements compare with those operating at local and national levels. Readings will reflect a range of cases and analytical perspectives. We will explore relationships between movements and political institutions, the factors affecting the abilities of relatively powerless groups to mobilize resources and build coalitions, and the ideological and cultural dimensions of transnational mobilization. Considerable attention will be placed on the contemporary global justice movement as we explore these questions, and methodological issues relevant to this field of study will be addressed throughout the course.

## Institute for Latino Studies

### ILS 20001. Pirates, Planters, and Peasants: Caribbean Experiences in the Past

(3-0-3)

The Caribbean is often depicted as a sea inhabited by pirates, filled with exotic islands, picturesque beaches, and bucolic landscapes. What is often overlooked is the culture and history of the people who actually lived there. Who were the pirates of the Caribbean? Why were the islands so important to European powers? And what were the effects of slavery? Focusing on Jamaica, Belize, and Barbados, this course charts the emergence of a multi-ethnic Anglophone Caribbean through an examination of plantation colonies and the aftermath of slavery. Specifically, it will focus on cultural encounters between Native Americans, Africans, and Europeans through a combination of ethnography, history, and archaeology.

### ILS 20100. Cine de la Raza: Latino Film

(3-0-3)

This mini-course will explore the Latino experience from the perspective of contemporary Latino filmmakers. Ranging from cross-border organizing to economic globalization, transnational communities, American society, and the impact of gentrification, Latino filmmakers are giving voice to the complexity of La Raza in the United States. This course will examine these themes through documentary, independent film, and lectures and discussion with the filmmakers themselves.

### ILS 20300. Introduction to Creative Writing

(3-0-3)

An introduction to writing fiction and poetry, with outside readings and coverage of basic critical terms. In-class discussion of student work.

### ILS 20301. Stories of New America

(3-0-3)

The Latino populations of the United States increasingly influence many sectors of American society. Despite this ongoing demographic shift, mainstream American society often views these populations within the severely restricted fields of view of undocumented immigration, drugs, and crime. In response, this course asks two large questions: What can be said about the complexities of these American populations? And how might the America of the future differ from today's version? Course readings will include Norma Cantus's *Canicula*; Cristina Garcia's *Dreaming in Cuban*; Nuyorican poetry by Tato Laviera; Rudolfo Anaya's *Bless Me, Ultima*; Richard Rodriguez's *An Argument with My Mexican Father*; and various selections by Gloria Anzaldúa, Julia Alvarez, Tino Villanueva, Pedro Pietri, and others. Our films will include *Come and Take It Day* and the film version of Tomas Rivera's class work .... And the Earth Did Not Devour Him<.i>. We will augment our primary fiction and poetry with critical, scholarly articles to illuminate our materials and broaden our discussions. Students will write four essays and take a midterm and final exam.

### ILS 20400. Latinos in the United States

(3-0-3)

This course will examine the history of Latinos in the United States. Readings and discussions will begin by introducing students to early Mexican American communities in the present-day Southwest and proceed topically and chronologically to cover the various urban and regional experiences of immigrants, migrants, and exiles. Other areas include the Chicano Movement, civil rights (broadly construed), Latino music and culture, and trends in transnational migration. Students will necessarily adopt a comparative framework, studying and critiquing a variety of interpretations, approaches, and ideologies.

### ILS 20700. Social Problems

(3-0-3)

Analysis of selected problems in American society, such as crime, narcotic addiction, alcoholism, delinquency, racial and ethnic conflict, prostitution, and others. Discussions, debates, films, tapes, and readings.

### ILS 20701. Introduction to Latinos in American Society

(3-0-3) Cardenas

Cannot take if previously taken SOC 473 or SOC 43473. This course will examine the sociology of the Latino experience in the United States, including the historical, cultural, and political foundations of Latino life. We will approach these topics comparatively, thus attention will be given to the various experiences of a multiplicity of Latino groups in the United States.

### ILS 20800. U.S. Latino Spirituality

(3-0-3) Elizondo

U.S. Latino spirituality is one of the youngest spiritualities among the great spiritual traditions of humanity. The course will explore the indigenous, African, and European origins of U.S. Latino spirituality through the devotions, practices, feasts, and rituals of the people.

### ILS 20801. Latin American and U.S. Latino Theologies

(3-0-3)

This course examines the emergence and development of Latino religion and theology in the United States. In particular, the course will explore how U.S. Latina and Latino theologians have articulated the meaning and implications for Christian living of core theological topics such as Christology, evangelization, social justice, and liturgy.

### ILS 20803. Theology and Social Ministry

(3-0-3)

This course is for students returning from summer service internships or other service experiences who desire an extended opportunity for reflection and analysis. Some of the major themes to be discussed are Christian compassion, discipleship, and Catholic social teaching. The course culminates with a comprehensive research project on a theological question or issue that emerges from the summer and/or other service experiences and is explored with other academic disciplines. More information about the course format, the experiential learning method, and the process of evaluation is explained in the Learning Agreement and Application Form available at the Center for Social Concerns.

### ILS 20804. Migration and Catholicism

(1-0-3)

This course examines the international phenomenon of migration, the factors that give rise to it, and its effects on people. We will examine the Catholic documents that address the issue of migration.

### ILS 20900. Spanish for Heritage Speakers

(3-0-3)

This course of intensive grammar study, reading, and writing is designed for those who may speak Spanish with some fluency, but who need additional work on their grammar and writing skills. It is most appropriate for students who speak some Spanish in the home but whose primary language is English. The goal is to work toward becoming fully bilingual and to strengthen the command of written Spanish and the mechanics of composition and style.

### ILS 20901. La telenovela: History, Culture, and Production

(3-0-3) Mangione-Lora

*Prerequisite:* (ROSP 20202 OR ROSP 201 OR ROSP 202E)

In this course, you will explore the genre of the telenovela (a major social, cultural, political, and economic force in Latin America and, more recently, in the United States) by reading about the genre (in Spanish) and watching two condensed telenovelas (also in Spanish). You will demonstrate your understanding of the telenovela and its importance in Hispanic culture through writing and discussion and through application of these ideas as you write, produce, direct, act in, record, and edit a mini-telenovela as a class. During this process you will learn and apply basic production (videography) and post-production (computer-based video and audio editing) techniques.

**ILS 30000. Topics in Latino Art**

(3-0-3)

Chicanas in the visual arts. This course examines the visual production of Chicana artists. Mastizaje as a feminist paradigm has provided these artists with a powerful venue of expression. Gender, racial, class, and ethnic issues involved in the art created by Chicanas and the important contributions this art has had in Mexican American spirituality will be discussed. The diverse artistic strategies created by these artists, such as altar installations will be addressed, as well as the relevance of this art in the contemporary art scene. The course draws heavily on the visual production of Chicana women artists from the Southwest, but not exclusively from that geographical area.

**ILS 30001. Mexican Photography**

(3-0-3)

This course examines Mexican photography from the 19th century on to contemporary works. Theoretical issues pertaining to the histories of photography, with emphasis in documentary photography, photography as an art form, photojournalism, and photo manipulation are part of this course. Key films, such as *Mala Hierba* from 1940 and *Canoa* (1970), will be discussed in the context of the relation they have with still images. Photography and film will be situated to particular photographic moments and specific socio-cultural and political developments in Mexico. Critical questions on the role of photography in the formation of national narratives and the role of photographers in the life of art and culture will be addressed. Works by Romuldo García, Agustín Casasola, Manuel Álvarez Bravo, Nacho López, Lola Álvarez Bravo, Tina Modotti, Lourdes Grobet, Graciela Iturbide, and other artists will be discussed.

**ILS 30005. Latinos in American Film**

(3-0-3) Ruiz

This course will survey the history of representations of Latinos in American cinema from the silent era to the present. We will examine how stereotypes associated with Latinos have been produced, reinforced, and challenged in American films; from “greasers” and “Latin lovers” to gangsters, kingpins, and border crossers. We will explore the fascinating contradiction that, despite a long history of misrepresentation and underrepresentation, Latinos have made significant contributions to Hollywood and independent cinema. We will also examine the rise of Latino directors in recent years and their drive to reframe the Latino image for American audiences. Screenings will range from the silent epic *Martyrs of the Alamo* (1915) to more recent films such as *Maria Full of Grace* (2004). Our interdisciplinary approach to the subject will draw upon readings from history, film theory and criticism, and ethnic/American studies. Students will take a midterm exam and make class presentations.

**ILS 30007. The U.S.-Mexican-Border**

(3-0-3) Ruiz

The United States-Mexico border has been a hotly contested social and political space since it took its current shape in the mid-19th century. Today, the border remains the source of contentious debates in the United States—from proposed amnesty for undocumented workers and unprecedented activism for migrants' rights to those who argue for a 700-mile fence to physically divide the two nations—even as Latinos have become America's largest minority group. This course will unpack these varied (and often contradictory) meanings of the border, paying particular attention to the history of representations of Mexico and “Mexican-ness” in the United States and their impact upon foreign policy, political organizing, and cultural relations. Our approach will be interdisciplinary, drawing on methods and texts from history, sociology, film studies, critical race theory, cultural studies, and ethnic studies. Together we will read texts as varied as Gloria Anzaldúa's *Borderlands/La Frontera* and Steven Soderberg's *Traffic*.

**ILS 30010. Images of Mexico: A Photographic Journey**

(3-0-3)

This course on Mexican photography is taught from the lens of Mexican documentary photographer, Antonio Turok. We will explore key themes and struggles in Mexican society and culture through the visual legacy of Mexico's

photographers, domestic and foreign, past and present. The primary goal of the course is to analyze photography as a means of understanding Mexico's complex diversity of peoples, landscapes, and history. The goal of the course is not only to motivate students to learn about Mexican photography, but also to analyze the political, social, economic, cultural, and religious contexts informing the work in order to formulate a broader understanding of Mexico and Mexicans. Among the questions we will be asking in our exploration of the photography of Mexico are what motivated the photographer to create the images; how did the photographer shape the images to become visual symbols? Materials for the course include the visual legacies of photographers, photographic criticism, and recorded interviews with the photographers talking about their work.

**ILS 30012. Exploring Society Photographically: Sharing, Voicing, and Healing in Times of Crisis**

(3-0-3) Turok Wallace

Students will work with the internationally known documentary photographer to achieve a body of images along with text to express the issues that we are facing today. Students will be asked to use photography as a means to document the current economic realities that we are facing today, such as home foreclosures, loss of jobs, businesses closing, cost increases in gasoline and food, etc.. These images will be used in a final exhibition at the end of the semester, and it is the hope of the instructor that a catalog can be published to distribute to the community at-large as well as the local, state, and new federal administration. This class will engage students in a positive and creative manner as to how to make a difference in society through their reflective images and words for change.

**ILS 30015. The Hyphenated American**

(3-0-3) Prizant

This course will engage theatrical works for, by, and about hyphenated Americans (African-Americans, Asian-Americans, etc.) Students will see live theatre, theatre on video, and interviews with dramatists and performers. Reading and understanding plays and various theoretical materials on race, culture, and immigration will also be vital components of the course. The course will require a large research project based on a topic of the students' choosing.

**ILS 30016. Latin American Theatre**

(3-0-3) Prizant

This course will serve as a basic introduction to plays from Latin America. Models from South America, Central America, North America, and the Caribbean will be included in order to give students a general overview of significant contemporary plays (in English) from a sampling of countries in the Spanish-speaking world. Students will read plays and articles, see and analyze footage of performances (when available), give creative and/or historical presentations, participate in discussions about the theatrical methods and materials, and further research areas that particularly interest them. Making connections between ideas and life experiences, while deepening appreciation for the arts and literature in Latin America are crucial goals of this class.

**ILS 30020. Beyond Beans and Rice: Theatre From Latin America**

(3-0-3) Prizant

What does popular theatre look like beyond our borders? What can we learn from artistic choices in Mexico, Argentina, or Cuba? This course will serve as an introduction to contemporary plays, playwrights, and performances from Latin America. Models from South America, Central America, North America, and the Caribbean will be included (in English) to give students an overview from a sampling of the Spanish-speaking world. Students will be expected to read plays and articles, analyze scripts and performances, give creative and/or historical presentations about contexts in Latin American countries, participate in discussions about theatrical methods and materials, and research areas of particular interest to them. No previous Spanish language or acting experience is necessary.

**ILS 30100. Societies/Cultures of Latin America**

(3-0-3)

This course introduces students to the diverse cultures and societies of Latin America through historical, ethnographic, and literary study. Contemporary issues

of globalization, violence, and migration will preoccupy the discussion of Central and South America and the Caribbean today.

**ILS 30101. Caribbean Diasporas**

(3-0-3) Richman

This course examines the development of Creole societies in the French, Spanish, Dutch, and British Caribbean in response to colonialism, slavery, migration, nationalism, and, most recently, transnationalism. The recent exodus of as much as 20 percent of Caribbean populations to North America and Europe has afforded the rise of new transnational modes of existence. This course will explore the consciousness and experience of Caribbean Diasporas through ethnography and history, religion, literature, music, and culinary arts.

**ILS 30102. Creole Language and Culture**

(1.5-0-1.5)

This course introduces students to the vivid, sonorous language of Kreyòl, or Creole, and to the fascinating culture of its speakers. This intensive, beginning-level course is intended for students with no knowledge of Creole. In small-group teaching sessions, students will be prepared for conversational fluency with basic reading and writing skills, emphasizing communicative competence as well as grammatical and phonetic techniques. Our study of Kreyòl is closely linked to our anthropological exploration of how the language is tied to Caribbean society and culture. The course takes a holistic, anthropological approach to the history, political economy, and religion of Haiti. In addition to class work, audiotapes, music, and film enhance the study of the Haitian language and culture.

**ILS 30103. Intermediate Creole Language and Culture**

(1.5-0-1.5)

This intermediate level course is intended for students who have taken beginning-level Creole. In small-group teaching sessions, students will be prepared for conversational fluency with basic reading and writing skills, emphasizing communicative competence as well as grammatical and phonetic techniques. Our study of Kreyòl is closely linked to our exploration of how the language is tied to Caribbean society and culture. Evaluation of student achievement and proficiency will be conducted both informally and formally during and at the conclusion of the course. Those looking to develop or improve their language skills are welcome to the class. The program is designed to meet the needs of those who plan to conduct research in Haiti or in the Haitian Diaspora, or who intend to work in a volunteer or professional capacity either in Haiti or with Haitians abroad.

**ILS 30201. Latinos in the United States: Wealth, Inequality, and Asset Building Policies**

(3-0-3)

This course introduces students to the public policy making process in an interdisciplinary context. Many disciplines (such as sociology, political science, anthropology, cultural studies, communications, business, economics, education, psychology, social work, computer science, engineering, and the natural sciences) touch upon public policy issues that affect Latino communities in the United States. The course will focus on how particular policy debates are enriched and bring new solutions to old problems when an interdisciplinary approach is used. The policy issues that will be covered and discussed in class include demographic changes in the Latino population and how this impacts the wealth position of Latinos in the United States, educational issues, cultural and socio-psychological issues in Latino communities, media and journalistic portrayals and images of Latinos, rapid technology changes and its effect on Latino communities, and most importantly, asset building and capacity building in Latino communities in the United States.

**ILS 30300. Latino/a History**

(3-0-3)

This course will examine the history of Latinos in the United States. Readings and discussions will begin by introducing students to early Mexican American communities in the Southwest and proceed topically and chronologically to cover the diverse Latino population.

**ILS 30301. Latin American Images of the United States**

(3-0-3)

Drawing upon a wide variety of sources—novels, essays, poems, travel literature, social science texts, film, art, etc.—a survey Latin American views of North American society, customs, politics, and individual character, with a particular emphasis on United States interventionism.

**ILS 30302. Latino/a American Literature**

(3-0-3)

Studies of Latino and Latina authors, including Chicano, Caribbean, or South American.

**ILS 30303. West Indian Poetry**

(3-0-3)

Poems from the many languages and cultures of the Caribbean region.

**ILS 30304. Border Crossings: Mexican and Canadian Literature**

(3-0-3)

Mexican and Canadian literature emphasizing cultural interaction between the United States and its southern and northern neighbors.

**ILS 30305. Introduction to Post-Colonial Literature**

(3-0-3)

Traces the development of literature from the former colonies of various empires, but principally the British and the French.

**ILS 30306. Women in the Americas**

(3-0-3)

This introductory course will survey a wide variety of literature (fiction, poetry, testimonios, personal essays, autobiographies, critical essays, and oral histories) and film written by and about women in the Americas from the time of the conquest/encounter to the present. We will focus on literature and film produced by women of color in the Americas (South, Central, and North, as well as the Caribbean). Issues to be explored include colonization and resistance; slavery; intercultural contact, exchange, and transformation; the place of womanhood in the development of nation; woman of color feminism; and religion and spirituality. We will read materials from previous historical periods, but we will primarily focus on 20th-century representations and interpretations of these issues.

**ILS 30307. Icons and Action Figures in Latino/Latina Literature**

(3-0-3)

Understanding U.S. Latino/Latina literature, art, and film through its many allusions to and re-interpretations of traditional icons and historic figures as well as legends, myths, popular figures, and action heroes/heroines of the Americas (including those with origins in Native American, Latino/Latina, African, Asian, and European cultures).

**ILS 30308. Latino/a Poetry**

(3-0-3)

This course will focus on several prominent contemporary Latino poets whose work has enriched and diversified the canon of American poetry in the last 20 years. Among them are such established and acclaimed authors as Gary Soto, Lorna Dee Cervantes, Pat Mora, Martín Espada, and Victor Hernández Cruz. Because Latinos are not homogeneous, emphasis will be given to these poets' diverse ethnic and cultural origins. In this regard, one important component of the course is the various ways in which Latino poets respond to the spiritual and the sacred. Other topics to be discussed include social justice, the family, identity (in its multiple forms), and, of course, poetics. Readings will be assigned in individual poetry collections and in one anthology.

**ILS 30309. Latino Literatures**

(3-0-3)

A survey of Latino fiction, poetry, and other literary works.

**ILS 30310. Tropical Heat Waves: Contemporary Latino/a and Caribbean Literature**

(3-0-3)

A review of selected contemporary Latino/a and Caribbean novels.

**ILS 30315. U.S. Latino/a Poetry**

(3-0-3) Rodriguez

The literature of Latina/o immigration and migrancy brings together a range of contemporary concerns, from identity to the transnational to definitions of the literary. How does international movement inflect notions of American identity? How do writers create and describe communities in constant movement? These are only two questions that can be posed to the literatures of Latina and Latino transnational and intra-national movement. In this course, we will read a range of recent materials dealing with immigration between Mexico and Latin America and the United States, and with intra-national migrancy. Key texts will include Luis Alberto Urrea's *The Devil's Highway*, Julia Alvarez's *How the Garcia Girls Lost Their Accents*, Cristina Garcia's *Dreaming in Cuban*, Tomas Rivera's *...And the Earth Did Not Devour Him*, and Elva Treviño Hart's *Barefoot Heart: Stories of a Migrant Child*. In addition, we will draw upon various critical readings focusing on transnationalism, displacement, and new theories about contemporary globalization. Students will write three short essays and a final exam, and will be required to participate actively in class.

**ILS 30400. History of Modern Mexico**

(3-0-3) Pensado

This course examines the complex nation that is Mexico in the 20th century, its challenges, and its prospects. Focusing primarily on the period since 1870, we will study the social, economic, political, and cultural forces that have shaped the history of the United States's southern neighbor.

**ILS 30401. Mexican-American History**

(3-0-3) Rodriguez

*Corequisite:* HIST 32621

This course surveys the social, economic, and political evolution of Mexican Americans with a special emphasis on the post-1848 period. It examines the key processes by which a small colonial population grew to become a significant minority in the 20th century. The course covers three broad historical periods: (1) the Colonial Southwest, 1500–1848; (2) the New Southwest, 1848–1900; and (3) the long 20th century. The first era focuses on Spanish Mexican settlement, social structures, economic development, the War of Independence, the Mexican Southwest, and the War with Mexico, 1846. The second era examines land grant adjudication, the ranching economy, rural and urban employment, and conflict and accommodation between the Mexican settlers and Anglo and European newcomers. The last era explores key themes, including Mexican immigration and settlement, economic life, migrant life, urbanization, politicization, the Chicano Movement, and the acculturation of Mexican Americans. Our main objectives are to assimilate a wealth of new knowledge and to appreciate and understand the historical roots and development of the Mexican American people.

**ILS 30402. Modern Latin America**

(3-0-3)

A survey of modern Latin American history.

**ILS 30500. Latino Politics**

(3-0-3)

This course provides a careful and “critical” analysis of the political status, conditions, and the political activities of the major Latino (or “Hispanic”) groups in the United States—Mexican Americans, Puerto Ricans, and Cuban Americans. To provide a context and grounding, various theoretical perspectives are first considered, followed by discussions of the historical experiences and contemporary socioeconomic situations of the several Latino groups. Attention then turns to a number of issues concerning political attitudes, behaviors, and activities. Assessments of Latino influence upon major local, state, and national institutions of the political system—and vice versa. Policy areas particularly significant for

Latinos are also examined. Finally, the major issues, questions, and themes considered throughout the semester are “revisited” and reconsidered.

**ILS 30502. Race/Ethnicity and American Politics**

(3-0-3)

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What role do American political institutions—the Congress, presidency, judiciary, state and local governments, etc.—play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society?

**ILS 30504. U.S.-Latin American Relations**

(3-0-3) Hagopian

The primary goal of the course is to understand the bases for the political, economic, and security relations of Latin American states with the United States. The course begins with a theoretical and historical examination of the competing perspectives on what determines United States policy toward Latin America: its normative ideals, its security interests, or its economic interests. It then takes up several enduring themes in U.S.-Latin American relations, including the response of the United States to dictatorships, expropriations of United States-owned property, and revolution; and efforts to promote development, democracy, and human rights. Next, it considers the relations of several Latin American states with each other and the United States, from the Latin American point of view, with special attention paid to the foreign policies of Cuba and Mexico. Finally, it examines several new issues in U.S.-Latin American relations, including regional free trade agreements and trade policy, the environment, migration, and drugs, in a post-Cold War environment.

**ILS 30505. Latin American Politics**

(3-0-3)

Latin America is vital for the United States because of the region's importance in trade, migration, the environment, and security issues. This course is an introduction to the politics of this important region of the world. What are the major challenges facing Latin America in the early 21st century? How are different countries facing these challenges? What are the origins of the current dilemmas and opportunities facing Latin America? The main objective of the course is to provide understanding of some of the major political challenges facing Latin America today. The final section will provide an overview of some of the outstanding issues in US/Latin American relations.

**ILS 30700. Problems in Latin American Society**

(3-0-3)

Since the fall of dictatorships in the 1980s, a multitude of new organizations has emerged in Latin America. At the same time, globalization has presented new challenges to social groups struggling to retain their livelihoods and their communities. This course examines traditional and new social movements, organizations, and institutions in contemporary Latin America.

**ILS 30701. Human Rights and Migrants**

(3-0-3)

This course is an extension from the “mini-course” to a full term offered by Prof. Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the Industrial Revolution to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States' migration policies, and its social and economic implications, are discussed. The recent developments within the context of the

United Nations' Commission of Human Rights on the relationship between migration and human rights are also covered.

### **ILS 30702. Historical Memories and the Developments Bridging Latino and Latin American Cultures**

(3-0-3)

This course introduces students to the political processes affecting the development and transformation of Latin identities in the Americas. The length and arduous path to the development of Latin America and the Hispanic Caribbean identities began with the conquest of the New World. It began with the miscegenation of races and cultures and continued with the multiple and never-ending attempts of establishing democratic national states from south of the Rio Grande to the Patagonia. The political dynamics in Latin America have maintained a constant movement of people and cultures. Civil wars, dictatorships, social exclusion, hunger, but also the dreams of a better life constantly rupture the ties that link the people from their homeland. The United States is the magnet, and recipient of thousands of Latin Americans who entered legally or illegally into the country. Their process of assimilation and acculturation has transformed their original identities, while at the same time it has transformed Latinidad in American society. This course should be of interest to both Latino and Latin American students.

### **ILS 30703. Migration, Race, and Ethnicity in Twenty-First-Century America**

(3-0-3)

Migration from Latin America and Asia over 1970–2000 brings a new heterogeneity for the United States that mirrors the global population. Now, the consequences of this migration are reflected in federal statistical policy to expand official population categories of five categories on race and two on ethnicity. This course is an introduction to these U.S. populations of whites, blacks or African Americans, American Indians or Alaskan Natives, Native Hawaiians or Other Pacific Islanders, and Latinos or Hispanics as to historical context, social and economic characteristics, and current research and policy issues. Migration in the post-1965 era of Asians and Latinos created new racial and ethnic communities geographically concentrated in California, Texas, Florida, New York, Illinois, and Arizona. Conceptualization and quantification involve new challenges increasingly relevant for governmental and private sectors, nationally and for communities. Scholars are more attentive to changing identities and population heterogeneity for social institutions of family, education, and government. The 2000 census and population projections show the future population as considerably different from that of the past. These topics hold relevance in contemporary discussions of world population growth, immigration policy, social change, globalization, and environment.

### **ILS 30704. Race and Ethnicity**

(3-0-3)

This course focuses on race and ethnic relations in the United States. Current cases involving racial and ethnic issues will be presented and discussed in class. Readings and materials will present three approaches to the study of majority-minority group relations, the emergence and maintenance of group dominance and minority-group adaptations to modes of dominance, including separation, accommodation, acculturation, and assimilation. Class participation and students' experiences will be emphasized.

### **ILS 30705. Toward Equity and Excellence in Education: A Review of Pedagogical Approaches From 1950 to Now**

(3-0-3)

Students will examine issues of educational equity and achievement in the United States from 1950 to the present. The course begins by framing these issues in terms of social and cultural processes, using an anthropological perspective. Students then will examine issues of educational equity in relation to long-established patterns of social stratification by race, ethnicity, and class. The course will conclude with a discussion of equity in light of the nation's rapidly changing demographics.

### **ILS 30706. Toward Equity and Excellence in Education: A Review of Pedagogical Approaches From 1950 to Now**

(3-0-3)

Students will examine issues of educational equity and achievement in the United States from 1950 to the present. The course begins by framing these issues in terms of social and cultural processes, using an anthropological perspective. Students then will examine issues of educational equity in relation to long-established patterns of social stratification by race, ethnicity, and class at the dawn of the Civil Rights era. Studies evaluating these efforts will be reviewed, and contemporary efforts to promote equity and excellence will be examined in relation to what has been learned from past efforts. The course will conclude with a discussion of emerging challenges in promoting educational excellence and equity in light of the nation's rapidly changing demographics, especially those related to immigration and the growth of the Latino population.

### **ILS 30707. Migration, Documented**

(1-0-1)

The migration of people from their homelands is as old as humanity. Yet migration is still misunderstood; emigrants are often seen as traitors and immigrants as dangerous and self-serving invaders. Film is a burgeoning medium for documenting experience of migration for the migrants themselves, the communities they leave, and the societies in which they settle. Documenting migration compels us to question the meanings of borders, the nature of identity, and the possibility of cultural pluralism and integration. This course showcases documentary films about migration in the Americas.

### **ILS 30709. Undocumented Immigrants in the American Imagery**

(3-0-2)

This course examines the social realities of undocumented immigration to the United States. Special attention will be given to the historical presence and current dynamics of migration in the contemporary era drawing on the visual record of migration from the western hemisphere. A film series will accompany this course, and attendance is required.

### **ILS 30710. The Catholic Church and Immigrant Rights Movement: The Ethics of Mobilizing for Immigration Reform**

(1-0-1)

One cannot study the Church's efforts on immigrant rights without first understanding the religious values that drive and constrict the Church's actions. Thus, in this course we will examine Catholic social thought as the impetus for the Church's policy positions and activism on immigration legislation. We will examine the values and ideas of Catholicism regarding immigration as expressed through the Gospel, Papal Statements, and Bishops Statements. We will limit our discussion of the Catholic Church's activism and policy positions to two legislative campaigns: the Immigration Reform and Control Act of 1986 and the current of HR4437/S2611 campaign.

### **ILS 30802. From Power to Communion: Toward a New Way of Being Church—Based on the Latin American Experience**

(3-0-3)

This seminar explores the present and the future of the Catholic Church, placing emphasis on how its future is foreshadowed in the growing ecclesial interdependence that exists between the churches of North and Latin America. Emphasis is placed on the growing involvement of the laity in Latin America and where this may lead the North American church. In a particular way, attention is given to the role of small Christian communities.

### **ILS 30803. Social Concerns Seminar: Hispanic Ministry**

(0-1-1) Toms Smedley

The Center for Social Concerns and the Hispanic Ministry jointly offer a pilgrimage based in the Parish of Nuestra Senora de Soledad in Coachella, Calif. Participants will have the opportunity to experience the Church's option for the poor through an immersion into the spirituality, culture, and economy of the rural southern California community of Coachella. Students will meet with resource people making a difference in the lives of valley residents by helping them

with immigration issues, housing, access to education and health programs, and overcoming addiction.

#### **ILS 30804. Social Concerns Seminar: Border Issues**

(0-1-1) Toms Smedley

This seminar examines immigration and related issues that surface between the United States and Mexico. Participants travel to El Paso and Ciudad Juarez, Mexico, to meet refugees, work with parish organizations, and discuss policy issues.

#### **ILS 30805. Latino Theology and Christian Traditions**

(3-0-3)

This course examines the emergence and development of Latino religion and theology in the United States. In particular, the course will explore how U.S. Latino and Latina theologians have articulated the meaning and implications for Christian living of core theological topics such as Christology, evangelization, social justice, and liturgy.

#### **ILS 30900. Nations in Motion: Latino/Latina Literature in the United States**

(3-0-3)

This course focuses on the analysis of literary works by Mexican American, Cuban American, Puerto Rican, and Dominican American authors. Some reading knowledge of Spanish recommended.

#### **ILS 30901. Survey of Spanish American Literature II**

(3-0-3)

A survey of literary trends and major figures in modern Spanish American literature from 1880 to the present. Readings of selected texts in prose, poetry, and theatre.

#### **ILS 35000. Cross-Cultural Leadership Internship Program**

(0-0-3)

This is a leadership internship for cross-cultural/urban studies working eight weeks in Los Angeles in a multicultural area with organizations dedicated to empowering local communities. Students will work with ILS to build partnerships with the agencies and people involved. Students will complete academic requirements including readings, reflection sessions, and a presentation of a synthesis paper at the end of the internship. Application and interview necessary for participation.

#### **ILS 35801. Summer Service Learning: Latino Leadership Intern Program**

(3-0-3)

This is a leadership internship for Hispanic studies working 10–12 weeks in a Hispanic/Latino area with organizations dedicated to empowering local communities. Students will complete the requirements of THEO 33931 and work with the Center for Social Concerns to build partnerships with the agencies and people involved. Application and interview necessary for participation.

#### **ILS 40100. Applied Anthropology: Immigrant Labor Rights**

(4-0-4)

In conjunction with local organizations and social science researchers, students will work within Elkhart, collecting ethnographic data from immigrant community members. They will also learn how to apply the data they have collected to models for serving the community to find ways to better serve the local community and meet its needs.

#### **ILS 40103. Mexican Immigration: A South Bend Case Study**

(3-0-3)

This course uses experiential learning in the Mexican community of South Bend in order to understand how Mexican migrants conduct their lives across the vast distances separating South Bend and their homeland. The course begins with readings in social science and fiction about transnationalism, Mexican-U.S. migration, and the history and sociology of the local community. Next we learn ethical fieldwork methods in preparation for community research. Students working in two-person

teams will gather data on local and transnational households and kin networks, political involvement, employment, consumption practices, cultural activities, and religious life, working through contacts with social service agencies, the Mexican consulate, and Mexican- or Latino-run media, businesses, food stores, and sports leagues. We will document the innovative adaptations of this migrant community, especially the growth of an ethnic enclave of small businesses that both unite Mexicans as an ethnic group and sustain their ties to their homeland. We intend to compile the research in a volume published by Latino Studies to be given to those who shared their lives with us and to entities that are committed to helping them.

#### **ILS 40105. Migration, Markets, and Entrepreneurship**

(3-0-3)

This course combines methodological tools from business and anthropology for analyzing the impact of migration movements on local socio-economic conditions and on the markets and the economy. This joint approach will focus on the study of the economic, social, and cultural dimensions of Mexican migration—the largest contemporary source of migration to the United States—with a particular emphasis on two economic aspects, namely (1) entrepreneurial traits and skills of the migrant population, and (2) the pattern and level of remittances by the migrant sector residing in the United States. The course also considers how transnational social, cultural, political, and religious networks and institutions affect and are affected by Mexicans' activities as workers, consumers, entrepreneurs, and general economic agents. The course will examine the following topics: the role of remittances in the Mexican economy; local business partnerships between migrant organizations and the state; Mexican transnational households' financial structure; characteristics of the Mexican migrant labor force; consumption patterns and savings behavior; and the study of a Latino/Hispanic market segment in the United States that includes the production and/or sales of Mexican products, special advertising, and promotion techniques specifically targeted for that market. Comparative case studies of entrepreneurs based in central Mexico and those of Mexican immigrants in the U.S. Midwest complete the course and seek to understand how these economic agents and community leaders build economic, social, and cultural capital in the context of the communities where they reside.

#### **ILS 40300. Growing Up Latino: Narrative and Literature**

(3-0-3)

This course will explore the ways in which narratives/stories, specifically autobiographical and biographical ones, tell an individual as well as a total story. What do the Latino/a writers say about their own identities and cultures as Chicanos/Mexicanos, as Cubanos, Puertorriquenos, and as women? How and in what ways are ethnic identities within a Latino diaspora constructed, and what issues cut across ethnic and racial lines. How do Latinos construct race/ethnicity vis-à-vis whiteness? In other words, how do we frame ourselves, and how are we framed in relation to the dominant constructions of race in this country? How is gender constructed, and how do we construct gender? What emerges as counter-hegemonic for us and these writers?

#### **ILS 40301. Memory in Latino/a Literature**

(3-0-3)

What is memory? Do we have national or communal memories and, if so, how are these formed? Does the present affect the memory of the past? What is the relationship among memory, history, and fiction? In this course, we will consider these questions as we study Latino/a novels, short stories, autobiographies, memoirs, poetry, film, and performance. Our selected texts frequently address or invoke memory, linking it to an exploration of belonging and to individual and communal identities (national, ethnic, racial, gendered, sexual). Some of the questions we might ask ourselves as we read include: What is remembered in Latino/a literatures? How and why do these literatures invoke and create individual and collective memories? How does memory intersect with the “stance of resistance” that Ramon Saldívar suggests is central to Chicano/a literature? Who does the remembering? How do acts of memory expand the parameters of what constitutes “Latino/a” or map multiple Latino/a nations? Requirements for this research seminar include weekly 1-page critiques, regular participation in discussion, one oral presentation, and an original research paper of 15 pages (including bibliography

and first draft for review. This small group research seminar affords students the opportunity for more in-depth work with professor and peers.

### **ILS 40302. Crossing Color Lines**

(3-0-3)

An exploration of the conflicted and contradictory ways in which racial and ethnic identities have been constructed and mediated in American culture.

### **ILS 40303. American War Literature**

(3-0-3)

Beginning with Mary Rowlandson's captivity narrative and ending with Tim O'Brien's *The Thing They Carried*, an exploration of the aesthetic, historical, and theoretical functions and values of war writing in the United States.

### **ILS 40304. Icons and Action Figures in Latino/a Literature**

(3-0-3)

Understanding U.S. Latino/a literature, art, and film through its many allusions to and representations of traditional icons and historic figures as well as legends, myths, popular figures, and action heroes/heroines of the Americas (including those with origins in Native American, Latino/a, African, Asian, and European cultures).

### **ILS 40305. Migrating Melodramas: Latino/a Literature and Popular Culture**

(3-0-3)

This course examines how various forms of popular culture from Latin America and the Caribbean migrate to the United States and are reappropriated by Latina/o cultural producers. Focusing particularly on theories of melodrama as a feminine discursive space, we will analyze several works of Latina/o literature that underscore women's active interpretation of music, film, and television. While this is a literature-based course, students will also examine how hybrid cultural products such as contemporary boleros, films, and telenovelas produce a transnational imaginary that connects Latinas/os in the United States with Latin America and the Caribbean. We will read novels such as *Loving Pedro Infante* by Denise Chavez, *The Mambo Kings Play Songs of Love* by Oscar Hijuelos, and *Tomorrow They Will Kiss* by Eduardo Santiago.

### **ILS 40306. Literature of Immigration: The Latino/a Transnational Experience**

(3-0-3)

The literature of Latina/o immigration and migrancy brings together a range of contemporary concerns, from identity, to the transnational, to definitions of the literary. How does international movement inflect notions of American identity? How do writers create and describe communities in constant movement? How are struggles against poverty interwoven with discussions of gender and cultural discrimination? How might literature itself respond to these concerns? Finally, how do these experiences shape our conceptions of the literary itself? In this course, we will read a range of recent materials dealing with immigration between Mexico and Latin America and the United States, as well as with intra-national migrancy. Key texts will include: Luis Alberto Urrea, *The Devil's Highway*; Julia Alvarez, *How the Garcia Girls Lost Their Accents*; Cristina Garcia, *Dreaming in Cuban*; Tomas Rivera, *...and the Earth Did Not Devour Him*; Luis Rodriguez, *Music of the Mill*; and Elva Treviño Hart, *Barefoot Heart: Stories of a Migrant Child*. In addition, we will draw upon various critical readings such as María Herrera Sobek's *Northward Bound: The Mexican Immigrant Experience in Ballad and Song*. Students will write a variety of in-class projects and three full-length essays, and take a final exam.

### **ILS 40307. Literatures of Immigration**

(3-0-3)

Closed reading of recent literature that explores the immigration between Mexico, Latin America, and the United States.

### **ILS 40310. Latino/a Literature**

(3-0-3)

This course will focus on several prominent contemporary Latino/a poets and fiction writers whose work has enriched and diversified American literature in the last 20 years. Among them are such established and acclaimed authors as Gary Soto, Lorna Dee Cervantes, Pat Mora, Martín Espada, Victor Hernández Cruz, Helena Viramontes, and Cristina García. Because Latinos are not homogenous, emphasis will be given to these writers' diverse ethnic and cultural origins. Readings will be assigned in individual poetry collections, novels, and in one anthology of poetry. Assignments: group presentations, response papers, three 4- to 5-page papers, a final examination, and regular attendance.

### **ILS 40402. History of Cubans in the United States**

(3-0-3)

This course will examine the Cuban experience in the United States, especially through the concept of exile. We will examine the history of Cuban immigration, community formation, socioeconomic integration, political development, expressions of exile and national identity, the emergence of Cuban-American identity, and impact of Cuban exiles on U.S. foreign policy toward Cuba. The course will also explore those aspects of Cuban history that have contributed historically to the creation of exile communities in the United States, including Cuba's 19th-century wars of independence against Spain, early 20th century-efforts at political stability, and the Cuban Revolution of 1959.

### **ILS 40403. Survey of Latin American History**

(3-0-3)

This course provides an introduction to the major themes of Latin American colonial history, including the discovery, conquest, and settlement of the New World, the institutional framework established by the Iberian countries to advance their economic, political, and religious interests in the region, and various aspects of Latin American society and culture until independence in the early 19th century.

### **ILS 40404. Hispanic Origins in the United States**

(3-0-3)

The Hispanic presence in territories that are today part of the United States date from the foundation of communities like San Agustín, La Florida (1565), Santa Fe, San Antonio, Tex. (1718), and Los Angeles, Calif. (1781). This course will examine the foundation and historical development of these and other communities within the context of Spanish and Mexican civilization, tracing their trajectory toward their eventual conquest and incorporation into the United States during the first half of the 19th century. Placing this story within the larger picture of U.S. Latino history, the course will examine the political, socioeconomic, religious, and cultural dimensions of early U.S. Hispanic history.

### **ILS 40406. Latinos and Christianity**

(3-0-3)

This course examines the unique religious history of U.S. Latinas/os, starting with the Spanish and Latin American colonial origins and outlining the rise of parishes and congregations north of Mexico. Readings and lectures will present historical, sociological, and theological methods for examining contemporary issues facing Latino Catholics and Protestants, such as social justice movements, religion in the thought of prominent Latina/o writers and commentators, and ecumenical trends in Latin American and U.S. Latino Christianity. Other important themes include the changing role of Latinos in the U.S. immigrant church, the impact of Latin American liberation theology on U.S. Latinos, and the linkages between religion and cultural identity among peoples with roots in Mexico, the Hispanic Caribbean, and Central and South America presently living in the United States. Lectures and discussions will be supplemented with visual material.

### **ILS 40407. Latinos in Modern America**

(5-0-3)

This is an interdisciplinary history course examining the Latino experience in the United States after 1848. We will examine the major demographic, social, economic, and political trends of the past 150 years with an eye to understanding

Latino/a America. Necessarily a large portion of the subject matter will focus on the history of Mexican Americans and Mexican immigrants in the Southwest and Midwestern United States, but we will also explore the histories of Puerto Ricans, Cubans, and Latin Americans within the larger Latino/a community. Latinos are U.S. citizens, so the course will spend significant time on the status of these groups before the law, and their relations with the state, at the federal, local, and community level. To explore these issues within the various Latino communities of the United States, we will explore the following key topics covered: historical roots of “Latinos/as” in the United States; the evolution of a Latino/a ethnicity and identity within the United States; immigration, transmigration, and the shaping of Latino/a communities; Latino/a labor history; segregation; civil rights; nationalism and transnationalism; the Chicano Civil Rights Movement; Latinos in film; and post-1965 changes in Latino/a life.

### **ILS 40500. Human Rights in Latin America**

(3-0-3)

This course takes the concept of international human rights as the framework to explore contemporary cultural, economic, and political debates about identity, culture, and society in Latin America. We will review the civil and political rights, the social and economic rights, and the indigenous people's rights of the International Declaration of Human Rights through ethnographic case studies. For example, we will explore (1) freedom of speech in Chile and review the report of the findings of the Truth Commission; (2) indigenous people's rights in Colombia and learn about the Afro-Colombian movements for ancestral lands; and (3) social and economic rights in Guatemala and current efforts to implement socio-economic recommendations of the Commission for Historical Clarification. In each area, we will specifically address the role of anthropology, the American Anthropological Association's human rights declaration, and the unique contribution anthropologists can make to international efforts to understanding human rights.

### **ILS 40600. Latino Psychology**

(3-0-3)

The purpose of this course is to examine the psychosocial research and literature about Latino/a individuals and communities within the United States. Students will be actively involved in discussing issues relevant to Latino/a well-being, including immigration and acculturation, ethnic identity, religiosity, family life, prejudice and discrimination, and multiracial identity. Economic, educational, and social opportunities for Latinos also will be studied, and efforts toward social advocacy and the delivery of psychological interventions for Latino communities will be critically examined.

### **ILS 40601. Psychology of Race: Examining Racial and Ethnic Identity Development**

(3-0-3) Pope-Davis

The purpose of this course is to examine the psychological aspects of racial and ethnic identity development in the United States. This course will look at the general ideas of identity development from a psychological basis as well as the personal identities of American groups. The main course objectives are to increase students' cultural awareness of their own and others' racial and ethnic identities; to develop relevant knowledge of about identity constructs in understanding different populations; and to develop critical thinking skills in studying and evaluating research on the role of racial and ethnic identity development in psychological processes and human behavior.

### **ILS 40700. International Migration and Human Rights**

(2-0-2) Bustamante

A three-week course that refers to a review of basic questions on international migration, with emphasis on immigration to the United States and the methods through which these questions have been adequately or inadequately answered. The numbers, impact, nature, structure, process, and human experience will be discussed in terms of the research methods commonly used to approach them. Spring.

### **ILS 40702. Qualitative Methodology**

(3-0-3)

The seminar will cover the general topic, with particular attention to ethnography and fieldwork, visual methods, archival research, and related strategies. Heavy emphasis will be placed on cross-cultural research in minority communities in the United States.

### **ILS 40703. Latino Image in American Films**

(3-0-3)

This course traces the historical depiction of Chicanos, Mexicanos, Puerto Ricans, Cubans, and other Latinos in Hollywood-made movies. Cinematic plots, roles, and motifs—from the earliest of silent films through the onset of the 1980s—are examined to explore the changing physical, social, and cultural definitions of Latinos in the United States. All films and filmmakers are considered within their historical context. Though the main object of study is the Latino image, the course also surveys corresponding images for other ethnic minority groups.

### **ILS 40705. Religion and Power in Latin America**

(3-0-3)

The cultural dimension of religion and the institutional building abilities present in religious communities are building new power sources for religious in present Latin American context. Taking the experience of Peru, we will look at Latin American recent processes in the religious domain. The course will describe the changing conditions of the Catholic Church in Latin America and the new situation of religious pluralism produced by the growing presence of evangelical groups and Pentecostalism. We will look at the impact of religion in the empowerment of people from below, and its relation to new social movements as well as to the institutionalization of power at the state level in the new context of globalization.

### **ILS 40706. Latinos in American Society**

(3-0-3)

This seminar will focus on the breakdown of the Spanish empire in Latin America and the emergence of new nation-states in the region in the first quarter of the 19th century. Contrary to common expectations, the former colonies did not form a united nation, but rather split into 10 different republics that developed their own unique histories, only to split further apart during the course of the century. This seminar will examine the origins and actors of the independence movements, the development of an ideology of emancipation, and the variegated causes of fragmentation.

### **ILS 40707. International Migration and Human Rights**

(3-0-3) Bustamante

This course is an extension from the mini-course to a full term offered by Prof. Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the Industrial Revolution to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States' migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United Nations' Commission of Human Rights on the relationship between migration and human rights are also covered.

### **ILS 40708. Social Demography of U.S. Minorities**

(3-0-3)

The intent of this demography course is to familiarize students with basic statistical methods and techniques that are applied to the study of population data. The course will offer students an opportunity to gain “hands-on” experience with manipulating quantitative data and generating results. The backdrop for the class is ethnic status. Because we will have access to social data for major ethnic categories (e.g., white, African American, Hispanic, Asian, and American Indian), one of the byproducts of learning the methods and techniques of demographic analysis will be a comparative study of ethnic groups across several social dimensions.

**ILS 40709. Ideology and Politics/Latin America**

(3-0-3)

Ideological discourse shapes political action in Latin America. Thinkers such as Martí, Mari, Cardoso, and others, and their discourses—nationalism, revolutionary nationalism, Latin American Marxism, developmentalism, modernization theory, dependency theory, democratization—acted within specific historical contexts and contributed actively to the conformation of political action. It is our purpose to present the main ideological positions and their impact upon political action in the continent. Their constituent elements conform a unity we will discuss on the basis of lectures, reading of the texts, and debates presented by teams of students.

**ILS 40710. Aesthetics of Latino Cultural Expression**

(3-0-3) Cardenas

This course analyzes the philosophy and principles underlying the social and political aspects of Latino art.

**ILS 40715. Latinos in Education**

(3-0-3)

This course examines the educational experiences and struggles of Latinos in U.S. public schools. Students will study these experiences through legal, political, historical, social, and economic perspectives, regarding educational policies and practices. Additionally, this course focuses on the potential of education as an agent for social justice and change for linguistically and culturally diverse groups, and thus its important role in the Latino experience. The goal of this course is to develop a reflective individual who is able to understand the educational context of Latinos in the United States.

**ILS 40717. Race Relations in the United States**

(3-0-3)

This course focuses on racism and race relations in the United States. Current cases involving racial issues will be presented and discussed in class. Readings, discussion, and lectures will examine the background and current status of the dominant ethnic minority groups in the United States today. The issue of race will also be viewed in relationship to police practices, housing patterns, economic opportunities, gender relations, and politics. Class participation and student experiences will be emphasized.

**ILS 40722. Mestizo Stories**

(2-0-2)

Mestisaje (racial-cultural blending) is a foundational paradigm for understanding Latino history, culture, and politics. The course provides students a wide-ranging, interdisciplinary introduction to the subject of mestisaje. Jose Vasconcelor's influential book *La Raza Cósmica* (The Cosmic Races) will be the conceptual anchor for analysis and interpretation. The book will be augmented by films, videos, recordings, and assigned readings exploring three core areas of concerns: (1) the historical origins of mestizo/a identity and cultural production; (2) the experience and narratives of mestisaje in the United States; and (3) the global implications of mestisaje as a transcendent social and cultural manifestation. Students are expected to be critical readers of the assigned texts, which will be primarily in English, though some will be in Spanish or bi-lingual. Active participation in class discussions is also essential. Students are also expected to present a PowerPoint presentation on a selected aspect of mestisaje from a wide range of humanities and social science topics to be investigated. The oral-visual presentation will become the basis for a written research paper. Mestizo Stories will explore visual, musical, literary, and performative texts of human agency, resistance, and survival.

**ILS 40801. Theology and Popular Piety in U.S. Catholicism**

(3-0-3)

This course explores the theological insights inherent in the religious practices and spiritual traditions of African American, Latino/a, and European American Catholics. Particular emphasis is given to popular piety as a source for theology and the ways theologians and pastoral ministers can critically engage popular religious traditions.

**ILS 40802. Culture, Religion, and Evangelization**

(3-0-3)

This course will examine the theological basis of inculturation, its historical development, ecclesial documentation, and the implications for ecclesiology, liturgy, catechesis, and the theological elaboration. The course will include lectures, videos, class discussion, and practical exercises.

**ILS 40803. Memory and Prophecy**

(3-0-3)

In the last decades, significant theological trends have emerged both from poor countries and from marginalized groups within wealthy countries. Why have they emerged from different Christian churches of our time? This course will explore this question taking the case of Latin American theology. In particular, it will consider the implications of the “preferential option for the poor” for the areas of theological reflection, pastoral work, and spirituality. Special attention will be paid to the biblical foundations of that option as summed up in two crucial concepts: memory and prophecy. The 16th-century Dominican, Bartolome De Las Casas, said, “Of the least and most of forgotten people, God has a very fresh and vivid memory.” The Bible invites us to make God’s memory our own, and one component of that memory is the remembrance of the “least ones.” The announcement of the Gospel is linked to the advice received by Paul to “remember the poor” (Gal. 2:10). Theologically, poverty is the negation of creation. Poverty means death. Thus, the option for the poor also manifests in the prophetic opposition to that which means death for the poor. The course will examine what memory and prophecy signify for living a Christian life and doing theology in light of some of the major challenges to Christian faith today.

**ILS 40804. Latino Film: Culture, God, and Redemption**

(3-0-3)

The course will view great films from Latin America and the Latino United States and discern what culture is portrayed, the presence or absence of God within the film, and how redemption is expressed in the film. Since some of the films will not have subtitles, a working knowledge of Spanish is helpful.

**ILS 40900. From El Barrio to Calle Ocho: Urban Experience in U.S. Latino/a Literature**

(3-0-3)

In this course, students will examine Latino/a texts of various ethnic backgrounds that offer representations of the urban landscape and experience. Issues of migration, discrimination, social mobility, gender, class, race, and transnationalism will be central to our discussions of the cultural politics of urban space. Knowledge of Spanish required.

**ILS 40901. Cuban Literature**

(3-0-3)

An in-depth study of a particular theme, author, or genre in Cuban literature.

**ILS 40902. Mexican Literature**

(3-0-3)

Combines an overview of the historical development of prose, poetry, and theatre in Mexico, with a close look at special problems and issues in Mexican literature.

**ILS 40905. Beyond the Islands: Latino/a Caribbean Literature and Culture**

(3-0-3) Moreno

This course examines the literary and cultural production of Latinos/as from the Spanish-speaking Caribbean. Issues of migration, transnationalism, and transculturation will be explored through the analysis of texts by Puerto Rican, Cuban American, and Dominican American authors.

**ILS 40908. Self, Family, Nation: Insular and U.S. Hispanic Caribbean Women Authors**

(3-0-3)

This course focuses on the literature of Hispanic Caribbean women authors in the islands and in the United States. By contrasting the works of recent and more

established authors from Puerto Rico, Cuba, the Dominican Republic, and their counterparts in the United States, we'll explore the construction of gender and sexuality from a Caribbean feminist perspective. Some of the texts that this course will examine include *In the Time of the Butterflies* by Julia Alvarez, *Papi* by Rita Indiana, *When I was Puerto Rican* by Esmeralda Santiago, *Maldito amor* by Rosario Ferré, and *Dreaming in Cuban* by Cristina García.

**ILS 45103. Mexican Immigration: A South Bend Case Study**  
(3-1-4)

This course uses experiential learning in the Mexican community of South Bend in order to understand how Mexican migrants conduct their lives across the vast distances separating South Bend and their homeland. The course begins with readings in social science and fiction about transnationalism, Mexican-U.S. migration and the history and sociology of the local community. Next, we learn ethical fieldwork methods in preparation for community research. Students working in two-person teams will gather data on local and transnational households and kin networks, political involvement, employment, consumption practices, cultural activities, and religious life, working through contacts with social service agencies, the Mexican consulate, and Mexican- or Latino-run media, businesses, food stores, and sports leagues. We will document the innovative adaptations of this migrant community, especially the growth of an ethnic enclave of small businesses that both unite Mexicans as an ethnic group and sustain their ties to their homeland. We intend to compile the research in a volume published by Latino Studies to be given to those who shared their lives with us and to entities that are committed to helping them.

**ILS 46711. Directed Readings: Latino Studies**  
(V-0-V)

Independent faculty supervised readings. Credits 1–6

**ILS 46713. Directed Readings**  
(V-0-V)

Independent faculty supervised readings. Credits 1–3

## Department of Military Science (ROTC—Army)

**MSL 10101. Introduction to Military Leadership I**  
(1-2-1) Tripp

A study of the organization of the Army with emphasis on understanding and implementing officership, leadership, and the Army values. Military courtesy, discipline, customs, and traditions of the service, fitness, and communication are taught and demonstrated through practical exercise. Includes a 48-hour field training exercise and a weekly two-hour laboratory emphasizing basic soldier skills such as land navigation and marksmanship.

**MSL 10102. Introduction to Military Leadership II**  
(1-2-1) Tripp

A study of functions, duties, and responsibilities of junior leaders. Emphasizes operations of the basic military team to include an introduction to the Army's problem-solving process as well as the fundamentals of time and resource management. Includes a 48-hour field training exercise and a weekly two-hour laboratory emphasizing basic soldier skills such as first aid, U.S. weapons, and military communication.

**MSL 20201. Foundations of Military Leadership I**  
(2-2-2) Carter

Study and application of map-reading skills, military communications, and development of individual leadership techniques by learning the fundamentals of small-unit tactical operations. Emphasis on individual physical fitness and conducting self-evaluations to facilitate growth. Includes a 48-hour field training exercise and a weekly two-hour laboratory that offers the opportunity to demonstrate learned leadership techniques along with instruction on basic military skills of land navigation and rifle marksmanship.

**MSL 20202. Foundations of Military Leadership II**  
(2-2-2) Carter

Study and application of mission planning and orders with an emphasis on small-unit leadership in tactical settings. Land navigation, map reading, marksmanship, and communication skills will be evaluated. Students are expected to demonstrate that they have mastered basic soldier skills and leadership fundamentals. Includes a 48-hour field training exercise and a weekly two-hour laboratory that offers the opportunity to demonstrate learned leadership techniques along with advanced instruction on military skills.

**MSL 30301. Tactical Military Leadership**  
(2-2-2) Straus

Military decision making, problem analysis, and integrated planning of platoon operations. Analysis of the components of leadership through practical exercises and historical examples. Includes one 48-hour field training exercise.

**MSL 30302. Applied Military Leadership**  
(2-2-2) Straus

Advanced military decision making, problem analysis, and integrated planning with synchronization of multiple assets. This is conducted on the basis of platoon operations and tactics. Includes two 48-hour field exercises.

**MSL 40401. The Professional Officer and Developmental Military Leadership**

(2-2-2) Crist

Advanced study of the military profession and of the concept of officership. Addresses training management, along with staff organization, functions, and processes, the components of officership, which include requirements to be a leader of character, a war fighter, a member of the profession of arms, and a servant of the nation, and the just war tradition.

**MSL 40402. Adaptive Military Leadership and Military Ethics**

(2-2-2) Crist

Advanced study of military leadership, military ethics, and a variety of issues relevant to junior military officers. Addresses the Army's leadership doctrine in depth, paying particular attention to the Army's leadership requirements model, along with military ethics and ethical decision making in professional situations. Additional topics include the law of war, cultural awareness, Army organization, and Army administration.

**MSL 40414. American Military History I**

(1.5-0-1.5) Dukeman

This course is the first part of a two-semester survey course with an analysis of American military history from the early American colonial period through the current global war on terrorism. The MSL 40414 course is designed to be an exploration into the evolution of modern warfare with special emphasis on the technological developments, organization adaptations, and doctrinal innovations that have shaped the American military from its first conception in 1607 through the 1900s. The successful completion of MSL 40414 and 40415 meets the military history pre-commissioning requirement for U.S. Army ROTC cadets.

**MSL 40415. American Military History II**

(V-0-V) Dukeman

This military history course is the second part of a two-semester survey course with an analysis of American military history from the Revolutionary War through the current global war on terrorism. The MSL 40415 course is designed to be an exploration into the evolution of modern warfare with special emphasis on the technological developments, organization adaptations, and doctrinal innovations that have shaped the American military from 1900 through the modern day war on terrorism. Part of this course includes a field trip to the nearby First Division Museum at Cantigny in Wheaton, Ill. The successful completion of MSL 40414 and 40415 meets the military history pre-commissioning requirement for U.S. Army ROTC cadets.

**MSL 40498. Topics in Military History**

(2-0-2)

This course is a study of military tactics, leadership, doctrine, technologies, techniques, and procedures as they relate to historical military campaigns.

**MSL 47498. Topics in Military Studies**

(3-0-3)

This is an independent study course that will allow contracted ROTC cadets to design a course of study to more completely investigate selected topics in military science.

**Department of Naval Science (ROTC—Navy)****NSCI 10101. Introduction to Naval Science**

(2-0-2) Dewalt

*Corequisite:* NSCI 41000

An introductory study of the U.S. Naval customs and traditions, military courtesies, organizational structure, officer career paths, and the role of the Naval Service in supporting national policies. Required for all NROTC freshmen. (Fall)

**NSCI 10102. Maritime Affairs**

(2-0-2) Dewalt

*Corequisite:* NSCI 41000

A comprehensive study of the development of seapower throughout history, focusing on the important role played by the American Navy in the formation of an independent United States. Includes analysis of the Roman and Greek Navies, but focuses on the American Navy from the Revolutionary War through the global war on terrorism. This course is required for all NROTC freshmen. (Spring)

**NSCI 20201. Leadership and Management I**

(3-0-3) Teuscher

*Corequisite:* NSCI 41000

A comprehensive study of organizational leadership. Emphasis on motivation, planning, communication, feedback, and subordinate needs. Introduction to moral leadership. (Fall)

**NSCI 20202. Navigation**

(3-0-3) Fensterer

*Corequisite:* NSCI 41000

A study of the theory and principles of navigation. The course covers dead reckoning, piloting, and navigation tools. Electronic, inertial, and celestial navigation systems are discussed. Nautical rules of the road and laws regarding vessel operation are also included. (Spring)

**NSCI 30301. Naval Ships Systems I**

(3-0-3) LaFleur

*Corequisite:* NSCI 41000

A detailed study of ship propulsion and auxiliary systems. Emphasis on fossil fuel, nuclear, and gas turbine systems. Introduction to ship design and damage control. (Fall)

**NSCI 30302. Naval Ships Systems II**

(3-0-3) LaFleur

*Corequisite:* NSCI 41000

An overview of basic theory and principles of modern naval ordnance, weapon systems, and their interaction with the physical constraints of the environment from initial target detection to final target engagement. Course contains an overview of types of weapon systems, including a study of target identification, detection, acquisition, tracking, and engagement. (Spring)

**NSCI 40401. Naval Operations and Seamanship**

(3-0-3) Fensterer

*Corequisite:* NSCI 41000

A study of ship handling and employment, including communications, and sonar and radar searches. Tactical formations, dispositions, and basic seamanship are taught. Relative motion and the maneuvering board are introduced. Naval command and control issues are also discussed. (Fall)

**NSCI 40402. Leadership and Ethics**

(3-0-3) Nees

*Prerequisite:* (CSE 30264 OR CSE 364)*Corequisite:* NSCI 41000

A study of practical leadership skills for any manager focusing on the specific leadership and management responsibilities of a Naval officer. Teaches skills

needed to transition from student to manager. Explores Naval ethical issues, Naval law, and Navy policies and programs. (Spring)

### **NSCI 40413. Amphibious Warfare I**

(3-0-3) Hart

*Corequisite:* NSCI 41000

A study of the origin and development of amphibious warfare with emphasis on leadership, tactics, the principles of war, and application to the modern battlefield. This course is required for Marine options and alternates every other fall semester with Evolution of Warfare.

### **NSCI 40415. Evolution of Warfare I**

(3-0-3) Hart

*Corequisite:* NSCI 41000

An exploration of warfare as an instrument of foreign policy throughout history. An analysis of the great captains, military organizations, and military theorists of history. This course is required for Marine options and alternates every other fall semester with NSCI 40413 Amphibious Warfare. (Fall 2009)

### **NSCI 41000. Drill/Leadership Laboratory**

(0-1-0)

Practical exercises in leadership, including close order drill and professional development classes.

## Department of Physical Education and Wellness Instruction

### **PE 10000. Physical Education**

(0-0-0)

*Corequisite:* PE 11000; PE 12000

All Notre Dame first-year students must take two semesters of physical education as a University requirement. However, those who enroll and remain in an ROTC program are exempted from physical education. The department believes that basic swimming skills are important for the student. A swim test will be administered at the beginning of the year to determine each student's ability. Most students will be able to elect four of the following activities to complete their requirement. It is strongly recommended that activities from both the wellness and lifetime sports tracks be taken: American Ballroom Dance, Contemporary Topics for College Students, Fencing, First Aid, Fitness for Life, Fundamentals of Basic Activity, Golf, Handball, Hiking/Orienteering, Ice Skating, Latin Ballroom Dance, Racquet Sports, Self-Defense, Skiing: Cross Country or Downhill, Soccer, Lifeguard Training, Water Safety Instruction, Team Handball, Tennis, Volleyball, Weight Training, and Yoga. All activities are offered at the beginning level; however, some activities are offered at an intermediate level. If the student has a physical disability and is unable to participate in activity classes, a specially designed program will be arranged.

### **PE 10001. Physical Education**

(0-0-0)

All Notre Dame first-year students must take two semesters of physical education as a University requirement. However, those who enroll and remain in an ROTC program are exempted from physical education. All students are required to register for the course "Contemporary Topics for College Students." The department believes that basic swimming skills are important for the student. A swim test will be administered at the beginning of the year to determine each student's ability. Most students will be able to elect four of the following activities to complete their requirement. It is strongly recommended that activities from both the wellness and lifetime sports tracks be taken: American Ballroom Dance, Basic Activities, Fencing, First Aid, Fitness Development, Golf, Handball, Hiking/Orienteering, Ice Skating, Latin Ballroom Dance, Officiating, Racquet Sports, Self-Defense, Skiing: Cross Country or Downhill, Soccer, Lifeguard Training, Lifesaving, Team Handball, Tennis, Volleyball, Weight Training, and Yoga. All activities are offered at the beginning level; however, some activities are offered at an intermediate level. If the student has a physical disability and is unable to participate in activity classes, a specially designed program will be arranged.

### **PE 11001. Contemporary Topics I**

(0-0-0)

*Corequisite:* PE 10001

This course is designed to aid the student in transition from high school to university life issues. The class will address the unique demands on the student and will be directed toward the different dimensions of wellness. Emphasis is on decision-making skills and positive life choices in areas of personal, academic, and professional success. Opportunities will be presented to enable the student to increase awareness of self-responsibility, enhanced self-understanding, exposure to campus resources, and strategies for improved behavior change.

### **PE 11002. Contemporary Topics II**

(0-0-0)

*Corequisite:* PE 10001

This course is designed to aid the student in transition from high school to university life issues. The class will address the unique demands on the student and will be directed toward the different dimensions of wellness. Emphasis is on decision-making skills and positive life choices in areas of personal, academic, and professional success. Opportunities will be presented to enable the student to increase awareness of self-responsibility, enhanced self-understanding, exposure to campus resources, and strategies for improved behavior change.

**PE 11003. Contemporary Topics I and II**

(0-0-0)

*Corequisite:* PE 10001

This course is designed to aid the student in transition from high school to university life issues. The class will address the unique demands on the student and will be directed toward the different dimensions of wellness. Emphasis is on decision-making skills and positive life choices in areas of personal, academic, and professional success. Opportunities will be presented to enable the student to increase awareness of self-responsibility, enhanced self-understanding, exposure to campus resources, and strategies for improved behavior change.

**PE 11004. Athlete**

(0-0-0)

*Corequisite:* PE 10001

This course is for student-athletes.

**PE 11005. American Dance—Female**

(0-0-0)

*Corequisite:* PE 10001

These activities are among the departments most popular. The basics of ballroom dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

**PE 11006. American Dance—Male**

(0-0-0)

*Corequisite:* PE 10001

These activities are among the departments most popular. The basics of ballroom dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

**PE 11007. Latin Dance—Female**

(0-0-0)

*Corequisite:* PE 10001

These activities are among the departments most popular. The basics of ballroom dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

**PE 11008. Latin Dance—Male**

(0-0-0)

*Corequisite:* PE 10001

These activities are among the departments most popular. The basics of ballroom dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

**PE 11009. Fencing**

(0-0-0)

*Corequisite:* PE 10001

Fencing is the art and sport of swordsmanship using a blunt weapon. Fencers use one of three types of weapons—the foil, the epee, or the sabre. Students will learn fencing moves such as on guard, lunge, attack and parry, and touch; as well as understanding basic rules of competition.

**PE 11010. First Aid / CPR (AED)**

(0-0-0)

*Corequisite:* PE 10001

The principle objective in this course, through knowledge and skill development, is to be prepared and meet the needs of most situations where emergency action is required. In this course Adult CPR and First Aid sections are certified separately. Automated external defibrillation is included if time allows.

**PE 11011. Fitness for Life**

(0-0-0)

*Corequisite:* PE 10001

These activities focus on several methods of achieving and maintaining a healthy level of fitness. Emphasis will be on aerobic conditioning and cardiorespiratory endurance, but flexibility, agility, coordination, and balance will be addressed. Many activities are group oriented; such as soccer, team handball, circuit training, jump rope, rabbit runs, interval training, and ultimate Frisbee/football.

**PE 11013. Golf**

(0-0-0)

*Corequisite:* PE 10001

Rules, regulations, and golf etiquette will be introduced via videos and books. Using irons and woods three areas will be addressed: the basics of grip, techniques of a sound swing, and elements of the game. Descriptions and practice of putting, chipping, pitching and the full swing are included in this course.

**PE 11014. Handball**

(0-0-0)

*Corequisite:* PE 10001

This is an excellent activity to develop several elements of fitness: cardiovascular endurance, muscular fitness, coordination, and flexibility. Students will have access to 10 courts in the Rockne Memorial Building. Emphasis is on eyes to hand to ball coordination, developing the weak hand and side, as well as handball skills for play. Rules, regulations, safety, and principles for strategy will be covered.

**PE 11015. Hiking**

(0-0-0)

*Corequisite:* PE 10001

Learn how to prepare for and enjoy a day of hiking in a variety of urban and natural settings. Learn compass techniques, pacing, safety, survival skills, and the climbing wall.

**PE 11016. Ice Skating**

(0-0-0)

*Corequisite:* PE 10001

Ice skating is an important competitive sport as well as a popular form of recreation. This class will teach skating safety, use of the right equipment, basic skating moves and techniques. Class may include games, relays, and broomball.

**PE 11017. Independent Study**

(0-0-0)

*Corequisite:* PE 10001

This course permits individual curriculum design between the student and the PE department.

**PE 11018. Lifeguard Training**

(0-0-0)

*Corequisite:* PE 10001

The purpose of this Red Cross course is to provide students the skills and knowledge needed to prevent and respond to aquatic emergencies. The suggested time for the Lifeguard course is approximately 33 hours. It is all-inclusive with First Aid, CPR, and AED for the Professional Rescuer. Emergency oxygen administration and preventing disease transmission will also be included.

**PE 11019. Racquetball**

(0-0-0)

*Corequisite:* PE 10001

A game similar to handball with respect to rules and the physical skill involved. Since only one hand is used it is more easily learned than handball. This sport has high carry-over potential and can be enjoyed co-recreationally. Emphasis is placed on rules of the game, strokes, footwork, court position and strategy.

**PE 11020. Self-Defense**

(0-0-0)

*Corequisite:* PE 10001

This course will provide knowledge, understanding, and appreciation of the psychological and philosophical fundamentals required to participate in the art of self-defense. Through practice and different example scenarios students will develop a degree of proficiency in a variety of techniques.

**PE 11022. Skiing—Cross Country**

(0-0-0)

*Corequisite:* PE 10001

Learn one of the fastest growing sports in the country. This course will introduce the student to equipment and basic skills necessary for participation. Equipment is provided and classes are taught on the Notre Dame Golf Course. A fee is charged.

**PE 11023. Skiing—Downhill/Snowboarding**

(0-0-0)

*Corequisite:* PE 10001

This course is open to both non-skiers and skiers of various abilities. It is designed to help the beginner to achieve adequate skill in order to enjoy the sport and to ski under control. It will allow a person who has skied before to improve their ability. The fee charged includes transportation, lessons, lift tickets, and use of equipment.

**PE 11024. Soccer**

(0-0-0)

*Corequisite:* PE 10001

Soccer maintains its place in the program because of its contribution to fitness and worldwide popularity. The sport is a combination of individual skills and team play. The course objectives are to develop stamina, agility, balance, and coordination as well as an understanding of the rules and field strategy.

**PE 11026. Sports—Coaching**

(0-0-0)

*Corequisite:* PE 10001

This course explores the art and science of coaching sports at various levels.

**PE 11027. Swimming—Basic**

(0-0-0)

*Corequisite:* PE 10001

It is University policy that all students should be able to protect themselves in the water. Therefore, all students must take a swim test. Our swimming program is designed to equip the student with water safety skills and knowledge in order to be reasonably safe and comfortable in, on, and around the water. BEGINNING SWIMMING (First Unit) instruction covers swimming strokes like the front crawl and elementary backstroke. Safety around water is emphasized. STROKE DEVELOPMENT (Second Unit) will continue skills from unit one as necessary and introduces the breaststroke and sidestroke.

**PE 11028. Team Handball**

(0-0-0)

*Corequisite:* PE 10001

A physical and dynamic sport which combines the skills of running, jumping, and throwing into a fast-moving and exciting game. Team handball incorporates facets of various team sports, most closely resembling basketball; dribbling and passing, picks and rolls, and fast breaks. The basic objective of the game is to out maneuver the opponent by passing the ball quickly and then throw the ball past the defense and goalie to score.

**PE 11029. Tennis**

(0-0-0)

*Corequisite:* PE 10001

Beginning tennis introduces the student with little or no background to a game that can be played throughout one's lifetime. Fundamentals of grip, forehand, backhand, serve and volley as well as rules and etiquette of tennis are stressed. Time for supervised practice is provided. Intermediate tennis will review basic

skills of the game as well as introduce net play, volley, overheads and lob. In addition, court strategy and tactics are taught. The department provides racquets. STUDENTS MUST WEAR TENNIS SHOES TO PARTICIPATE.

**PE 11030. Volleyball**

(0-0-0)

*Corequisite:* PE 10001

Volleyball is an increasingly popular team game that can be played in or outdoors, either recreationally or competitively. Basic skills include fundamentals of the serve, passing, spiking and blocking. Rules and court strategy are a part of this course.

**PE 11031. Walking and Jogging**

(0-0-0)

*Corequisite:* PE 10001

Becoming one of the fastest growing trends for cardiorespiratory endurance, it is used for recreational fitness as well as an Olympic sport. Students will learn about proper shoes, safety, correct stride techniques, as well as designing and monitoring a successful program.

**PE 11033. Weight Training**

(0-0-0)

*Corequisite:* PE 10001

The objectives of this course are to introduce the student to methods and techniques for improving muscular strength and endurance through program design. Methods of training include machines, free weights, and training without apparatus. Orientation to equipment, safety, and proper technique are emphasized.

**PE 11034. Yoga**

(0-0-0)

*Corequisite:* PE 10001

Yoga has a long history of philosophy and tradition, often referred to as the science of spirituality. Used as a form of exercise and cross training, it has profound and far-reaching health benefits. Students will receive information on the benefits, history, and the Eight Limbs of Yoga. Classes will focus on learning different breathing techniques and relaxation to be utilized as stress management tools for everyday life. Through consistent practice a student will gain strength, flexibility, balance, and coordination.

**PE 11035. S.C.U.B.A.**

(0-0-0)

*Corequisite:* PE 10001

This course consists of 28 hours of classroom and pool sessions (six Sundays and one Saturday afternoon). Completion of the course results in receiving a YMCA SCUBA Open Water Diver Certification, which is a lifetime certification. An informational meeting is held before the start of each course for a questions and answers session. This course is taught at the Rockne Memorial. A fee is charged.

**PE 11036. Ultimate Frisbee**

(0-0-0)

*Corequisite:* PE 10001

Ultimate Frisbee is a physical and dynamic sport that includes running, catching, and throwing. The basic objective is to out maneuver the opponent to score a goal.

**PE 11038. Biking for Fitness**

(0-0-0)

*Corequisite:* PE 10001

Biking is an excellent lifetime sport that will increase your cardiorespiratory and muscular endurance and help in maintaining a healthy weight. It's also fun! In this class, you will learn practical and useful information on equipment, maintenance, riding position, techniques, repairing punctures and the different types and styles of bikes. We will ride on and around campus.

**PE 11039. Fencing Advanced Beginner**

(0-0-0)

*Corequisite:* PE 10001

Fencers who successfully completed level I may participate in this class. No intermediate or advanced students are allowed. Students will already have proper understanding of foil, different commands, and proper footwork. Advanced beginner students will learn how to parry in the different zones and learn more advanced footwork and strategies.

**PE 11040. Golf Advanced Beginner**

(0-0-0)

*Corequisite:* PE 10001

This class is for students with a limited background in golf or who have taken Beginning Golf in the fall. Club use skills will be addressed along with an understanding of all rules, terminology, and etiquette. Mental as well as physical aspects of the game of golf will be integrated into this class.

**PE 11041. Tennis**

(0-0-0)

*Corequisite:* PE 10001

Students who took Beginning Tennis in the fall or have limited knowledge of the game may sign up for Advanced Beginner level. You should already be able to execute the basics of the forehand, backhand, serve, and volley. No intermediate or higher players will be allowed to take the class. This class is designed to improve your beginning strokes and learn to use them in a single or doubles play situation. Other advanced beginning strokes will be taught such as lob and overhead. We will also incorporate singles and doubles set up and responsibilities. As we incorporate the principles of mind, body, and spirit into the advanced beginner level, the concepts of relaxation, simplicity, repetition, and preparation will be integrated into this class.

**PE 11042. Weight Training Advanced Beginner**

(0-0-0)

*Corequisite:* PE 10001

Students who have taken beginning weight training or have some basic knowledge of weight training may sign up for this class. This class is for students with basic background knowledge of weight training. This class is designed to teach more advanced lifting techniques and methods of weight training than those taught in the beginning weight training class. The class will allow for individual appraisal of each student's needs when designing a program.

**PE 11043. Swimming For Fitness**

(0-0-0)

*Corequisite:* PE 10001

This class is designed to give students the cognitive know-how to develop a swim-conditioning program that will allow for successful swim training across the students lifespan. Emphasis will be placed on stroke development; students will be exposed to different training methods. Students will experience different training principles aerobic, interval, tempo, training, sprint, middle distance, and distance training. Prerequisites: Student has knowledge of three of the four competitive strokes. Demonstrate the ability to confidently swim 100 yards using any of the four competitive swimming strokes

**PE 11045. Running for Fitness and Competition**

(0-0-0)

*Corequisite:* PE 10001

The design of this class is based around the student currently training for a road race or eventually planning on building off of their fitness base to compete in a road race. Whether the student wants to compete to win or is set out to accomplish a given distance, they will learn the necessary tools to be properly prepared for race day and each day of the journey leading up to the event.

**PE 11046. Bowling**

(0-0-0)

*Corequisite:* PE 10001

The class will cover etiquette and all bowling fundamentals such as scoring, form, stance, grips, approach, delivery and spare pick-up. A fee is charged and will cover transportation, lanes fees, and shoes. Location is "Strikes and Spares." Transportation will leave from the library circle at 3:30 p.m. and return to campus at 5:45 p.m. This class will meet for four 2-hour sessions, one per week.

**PE 11047. Cycling**

(0-0-0)

*Corequisite:* PE 10001

The student will learn basic cycling techniques, training principles, and training routines while enhancing core strength, flexibility, and cardiorespiratory endurance.

**PE 12000. Learning Strategies and Wellness**

(0-0-0)

*Corequisite:* PE 10000; PE 11000

This orientation course is required of all first-year students as a component of their University requirement in physical education.

**PE 12001. Physical Education Makeup**

(0-0-0)

This physical education course is designed to accommodate students who have not yet completed their PE requirement for the First Year of Studies.

**PE 12002. Physical Education Makeup**

(0-0-0)

This physical education course is designed to accommodate students who have not yet completed their PE requirement for the First Year of Studies.
