This course designed as a seminar for upper-level Spanish students aims to critically analyze some of the most important narrative texts by twentieth-century Argentine, Chilean and Uruguayan women authors.

ROSP 40768. Working Memories: New Approaches to the 1970s and 1980s in the Southern Cone

(3 -0- 3)

This upper-level seminar aims to analyze the role of memory in the reconstruction of the history of the 1970s and 1980s in the countries of the Southern Cone of Latin America: Argentina, Chile and Uruguay. We will study the different ways in which revolution and dictatorship have been represented in fiction, poetry, testimonials, and films. We will pay special attention to the civilian and military complexities during dictatorship and post-dictatorship, the search for justice, and the ways in which a generation that did not live the events of the 1970s and 1980s re-visits the recent past in order to find answers for their own present. Topics such as nostalgia, trauma, ruins, subjectivities, and gender will be part of our discussions. Thus, theoretical and critical texts on these subjects will also be included. The seminar will be conducted in Spanish. Students who enroll in this seminar will be offered an intensive, academically specialized experience that will seek to improve critical thinking skills, as well as skills in oral expression and writing. Requirements: Students must participate actively. In addition, each student will lead at least one class discussion, write reaction papers and develop two substantial analytical essays.

ROSP 40774. Good Neighbors? Hispanic Caribbean and Central American Literary Representations of the U.S.

(3 -0- 3)

Examines the relationship between the Hispanic Caribbean and Central American nations and United States through readings of texts by authors from Colombia, Cuba, the Dominican Republic, Guatemala, Nicaragua, Puerto Rico, and Venezuela among others.

ROSP 40776. Literature and Popular Culture in Modern Cuba

(3 -0- 3)

In this class we will study a number of aspects of popular culture in the modern Cuban literature.

ROSP 40778. Topics in Spanish-American Literature: Cuban Literature

(3 -0- 3)

This course focuses primarily on Cuban literature written during the first 100 years of the republic, within the context of the island's history and various aspects of Cuban culture, including art, music, and film.

ROSP 40780. Mexican Literature

(3 -0- 3) Ibsen

An overview of the historical development of prose, poetry, and theatre in Mexico, in its social and aesthetic contexts.

ROSP 40875. Migrant Voices: Latino/a Literature Through Service-Learning

(4 -0- 4) Moreno

Prerequisite: ROSP 27500 or ROSP 30310 or ROSP 30320

This course examines the literary production of U.S. Latinos/as. We will read works by Mexican-American, Puerto Rican, Cuban-American and Dominican-American authors paying close attention to the intersection of race, class, and gender issues. The literature studied will serve as a window into the culture of the local Latino community as students engage in service-learning at Casa de Amistad throughout the semester.

ROSP 40876. Race and Ethnicity in U.S. Latino/a Literature

(3 -0- 3) Moreno

In this course, students will examine the key issues of race and ethnicity in U.S. Latino/a literary production, particularly in the works of Afro-Latina/o, Andean-Latina/o (and other Latinos of indigenous descent), and Asian-Latina/o authors. The range of races, ethnicities, and nationalities of the established and emerging authors studied in the course will enhance the students' understanding of the complexity and heterogeneity of that group that we call "Latinos." The course will be divided into three major units: Caribbean, Central American, and South American Latinos. Students will read works by migrants from a range of countries, including Puerto Rico, Cuba, Dominican Republic, Guatemala, El Salvador, Costa Rica, Panamá, Perú, Ecuador, Uruguay and Colombia. This course will have a service-learning component. Students will be required to spend two hours per week volunteering at the local Hispanic community center Casa de Amistad. The course will be conducted in Spanish. Participation, frequent short essays, a journal, midterm, final exam, and final paper will determine the final grade.

ROSP 40877. Self, Family, Nation: Insular and U.S. Hispanic Caribbean Women Authors

(3 -0- 3)

This course focuses on the literature of Hispanic Caribbean women authors in the islands and in the U.S.

ROSP 40890. From El Barrio to Calle Ocho: The Urban Experience in U.S. Latino/a Literature

(3 -0- 3)

This course examines Latino/a texts of various ethnic backgrounds that offer representations of the urban landscape and experience. Knowledge of Spanish required.

ROSP 40891. Beyond the Islands: Latino/a Caribbean Literature and Culture

(3 -0- 3)

This course examines the literary and cultural production of Latinos/as from the Spanish-speaking Caribbean. Issues of migration, transnationalism, and transculturation will be explored through the analysis of texts by Puerto Rican, Cuban-American, and Dominican-American authors.

ROSP 40901. Human Rights and Social Justice in Latin America through Literature and Film

(3 -0- 3)

This new course will be structured around geographical areas, with approximately equal time divided among the Hispanic Caribbean, the Andean Region and the Amazon, the Southern Cone, Central America and Mexico. For each class students will read literary texts and related secondary readings that deal specifically with human rights issues such as torture, poverty, economic exploitation, women's and children's rights, racism, religious and cultural oppression, etc. Students will also be required to watch approximately 10 films, all of which will be related to the readings. Reading, lectures, and discussions will be in Spanish.

ROSP 40935. Spanish American Short Story

(3 -0- 3)

A survey of the development of the short-story genre in Spanish America. Close readings of works by representative authors.

ROSP 40955. Gender and Nation in Nineteenth-Century Latin America

(3 -0- 3) Miseres

This course will focus on gender relations and the ways they affect and are affected by national projects and processes in nineteenth-century Latin American literature. We will examine the ways in which literature usually portrays nations as masculine public spaces creating a problematic situation for women who seek active participation into the newly emergent or already existing nation. Nevertheless, we will analyze through both canonical and non-canonical texts from the period that women have always been central to the constructions and reproductions of the nation. Although this course is primarily developed around the nature of the woman-nation relationship, it is not solely about women, for one must understand womanhood as a relational category. Thus, we will explore the ways in which the constructions of nation and nationalisms usually involve very specific notions of manhood as well as womanhood. Our investigations of gender and nation will concentrate in the nineteenth-century but will also deal with the impact of this period on ideas of nation and gender on twentieth-century literature and cultural production. We will use as texts a wide range of materials, from novels, essays, periodicals, testimonial literature and films.

ROSP 40977. Modernization in Latin America: Urban Changes, Technology and Desires at Turn-of-the-Last-Century

(3 -0- 3)

This course designed as a seminar for upper-level Spanish students aims to critically analyze some of the major transformations of Latin America at the time of its entrance in the world market (1875–1910).

ROSP 40991. Realism, Imagination, and Social Crisis in Contemporary Mexican Literature

(3 -0- 3)

We will study diverse contemporary themes such as identity, urban chaos, exile, nature, autobiography, and also stressing varied examples of vanguardist techniques in the following novels by Arturo Azuela.

ROSP 40994. Imagining Home from Abroad: Latin American Travelers in Europe and the U.S.

(3 -0- 3)

Prerequisite: ROSP 30310

This course will focus on the concept of cultural encounter and identity formation in the context of the theme of travel. Following a chronological order, we will

explore notions of selfhood and otherness through the reading of nineteenth- and early twentieth-century Latin American travel narratives on Europe and the U.S. We will examine not only how travelers deal with the foreign, but also how the places and cultures portrayed in the texts enable them to express ideas about their personal and national identities. Thus, we will reflect on the political and cultural implications of these stories of contact raising questions on concepts such as gender, “race”, class, imperialism, colonialism and modernity. This course fulfills the modern Spanish American requirement and/or 400-level elective. It is open to both majors and non-majors.

ROSP 41520. Introduction to Spanish Cinema- Lab

(0 -2- 0)

Corequisite: ROSP 40520

This course is the lab component of ROSP 40520.

ROSP 41590. Spanish Theater Workshop

(2 -0- 2)

A full-immersion language experience for the study, practice, production, and performance of authentic Spanish texts. Includes analytical and writing components.

ROSP 47000. Special Studies I

(3 -0- 3)

This course is designed with the purpose of allowing students to engage in an individual or small group study under the direction of a departmental faculty member. Prerequisites: Senior standing, dean's list.

ROSP 47725. Studies in Modern Peninsular Spain

(3 -0- 3)

This advanced level course is intended for students who want to further broaden their knowledge and understanding of the Hispanic world through literature, art, film, and other cultural manifestations. Each course focuses on a different aspect of the culture of modern Peninsular Spain.

ROSP 47825. Studies in Modern Spanish America: El Caribe en la poesía: de Martí a Martín Espada

(3 -0- 3)

Prerequisite: ROSP 30310

This advanced course is intended for students who want to further broaden their knowledge and understanding of the Hispanic world through literature, art, film, and other cultural manifestations. Each course focuses on a different aspect of the culture of Modern Spanish America. Course taught in Spanish.

ROSP 53000. Senior Seminar

(3 -0- 3) Vitulli

The Senior Seminar may actually be any ROSP course number in the range 53000–53999. This course is restricted to senior Spanish majors only and includes an in-depth study of a particular author, theme, genre or century. In addition to treating primary texts, some critical material will be required reading. The course culminates in a substantial research paper. May be taken either fall or spring term.

ROSP 58000. Honors Thesis

(0 -0- V)

This course is restricted to senior Spanish majors only and includes an in-depth study of a particular author, theme, genre or century. In addition to treating primary texts, some critical material will be required reading. The course culminates in a substantial research paper. May be taken either fall or spring term.

Medieval Studies

MI 13185. Philosophy University Seminar

(3 -0- 3) Gersh

Plato on Love and Knowledge: The course is designed to increase the students' ability to read, think, and write about philosophical texts, using a selection of Plato's dialogues as the basic material and using the Platonic doctrines of love and knowledge as guiding themes. The texts to be read include *Phaedo*, *Symposium*, *Republic* (selections), and *Phaedrus*, and students will write short paraphrases, summaries, and commentaries on the assigned passages throughout the course. By the end of the first week, students should have obtained a copy of Hamilton, Edith and Cairns, Huntington (eds.), *Plato, The Collected Dialogues*, New York: Pantheon, 1961 (or a later edition).

MI 20001. The World of the Middle Ages

(3 -0- 3) Constable

Corequisite: MI 22001

The Middle Ages have been praised and reviled, romanticized, and fantasized. Books, movies, and games like *Harry Potter*, *The Lord of the Rings*, *Prince of Persia*, *Assassin's Creed*, and *Game of Thrones* continue to spark our interest in and curiosity about the Middle Ages. Because of these, most of us have some kind of imaginative vision of the Middle Ages. But what were these ten centuries between Rome and the Renaissance really like? What do we mean when we talk about a “Medieval World”? This course will consider major themes and creations of the medieval civilization(s) that grew up in Europe, the eastern Mediterranean, and the Islamic world after the fall of Rome, exploring continuities and changes, war and peace, contacts and separations. We will constantly ask how can we know about the Middle Ages, and what kinds of things can we know, as we examine many types of medieval sources, including literary works, historical texts, religious and philosophical writings, and works of art. We will especially focus on certain kinds of people in medieval history and literature across cultures: rulers, lovers, warriors, traders, and believers. This course will constitute an extended introduction to the dynamic and fascinating world of the Middle Ages.

MI 20181. Dreaming in the Middle Ages

(3 -0- 3) Frese

In this class we will read, analyze, discuss & write about an array of texts from the Middle Ages—all in Modern English translation—that feature the experience of human dreaming. To ground our analyses, we will begin with some readings from 20th century Freud and 5th century Macrobius on dream types and techniques for interpreting dreams. Religious and secular subjects—and their ‘dreamers’—including Boethius, King Arthur, St. Perpetua, and Chaucer's magnificent rooster, Chanticleer, will occupy us for the semester as we work to understand the universal and historically conditioned experience of dreams, as imagined by medieval poets and writers from the 5th to the 15th century.

MI 20185. Arthurian Literature

(3 -0- 3)

The large body of history, verse chronicle, heroic narrative, poetic romance, and prose fiction—all gathered under the canopy term “Arthurian Legend”—represents one of the most fascinating and most enduring literary phenomena of western culture. In this class, which will follow a lecture-discussion format, we will read a selection of writings that reflect the textual trace of Arthur from his earliest appearances in mytho-historical chronicles beginning in the sixth century and extending from the earliest medieval poetic and prose fictions featuring Arthur and the members of his court, through the great array of writers, past and present, who have tended these myths and legends with such imaginative care. Our readings, which begin in the Middle Ages, will culminate with the “Arthurian revivals” of the nineteenth and twentieth centuries, the latter extending to theatrical and film texts ranging from *Camelot* and Eric Rohmer's *Perceval* to Monty Python and Indiana Jones in their post-modern questing for the Holy Grail. In addition to attending ways in which the sheer pleasures-of-the-text have been constructed by these gifted authors, our own “literary quest” will involve questions of historical and social context, gender and genre, the history of reception, modes of literary

representation including techniques of symbolic and allegorical figuration, and ways in which the theoretical and/or ideological positions of both writers and their audiences constrain and inspire the works they produce. While pondering how and why this vast body of myth and legend, clustered around the figure of Arthur, has managed to survive and thrive through such remarkably variant shifts of time, place, and circumstance; and while reflecting thoughtfully on our own investment in—or resistance to—the variety of assigned readings, each student will choose for particular close study an Arthurian hero, heroine, or villain (Lancelot, Gawain, Guinevere, Galahad, Merlin, Modred, etc.), as well as some mytho-historical theme like the Round Table, the Grail Quest, the Sword-in-the-Stone, the Bride Quest, the Giant Combat, the Fatherless Boy, the Childless Queen, etc., as this character or motif presents some specific problem in interpretation. These character studies and thematic clusters will form the basis of two short essays, one due at mid term, one at end term. Specific topics, which will be shaped through individual consultation with the teacher, should, in the course of their critical argument, engage a variety of formal, stylistic, and rhetorical practices that have been employed by writers from the twelfth to the twentieth century as they conform to—and create fresh versions of—the plenitude of literary exemplars that characterize Arthurian Legend. Creative projects—individual or collective—are also welcome and, with the approval of the teacher, may be substituted for one of the essays. These alternative ways of investigating the materials of Arthurian Legend might include original poetic or prose compositions, dramatic presentations, graphic arts, videos, and/or musical performances, vocal or instrumental performances.

MI 20207. The Good Life in Medieval Islam

(3 -0- 3)

One learns a great deal about a society from its definition of what constitutes the good life. This textually-based course will therefore examine the lifestyles of the rich, the famous, and the not-so-famous in the medieval Islamic world, in order to learn about that civilization's mores, material culture, technological sophistication, material wealth, and social customs. Issues that will be covered include the conspicuous consumption of the elite—in feasting; court ceremonial; slaves, eunuchs, and concubines; harems; hunting; extravagant parties; sartorial magnificence; retinues and private armies; jewels and objets d'art; praise poetry; and much more. In the process of exploring these issues, students will discover much about trade and agriculture in the Islamic Middle Ages; the role of women, slaves, eunuchs, and poets; the internal divisions within Muslim society; courtly life and culture; and, finally, the alternative definitions of the good life offered by religious ascetics, mystics, and chivalric brotherhoods.

MI 20276. Introduction to Islamic Civilization

(3 -0- 3) Guo

This course is designed to introduce students to Islamic civilization and Muslim culture and societies. The course will cover the foundations of Islamic belief, worship, and institutions, along with the evolution of sacred law (al-shari'a) and theology, as well as various aspects of intellectual activities. The Koran and the life of the Prophet Muhammad will be examined in detail. Both Sunni and Shi'i perspectives will be considered. Major Sufi personalities will be discussed to illuminate the mystical, and popular, tradition in Islam. Topics on arts, architecture, literary culture, and sciences will be covered. Although the course is concerned more with the history of ideas than with modern Islam as such, it has great relevance for understanding contemporary Muslim attitudes and political, social, and cultural trends in the Muslim world today.

MI 20348. The Thought of Aquinas

(3 -0- 3) O'Callaghan

This course provides an overview of certain central teachings of St. Thomas Aquinas with attention particularly to philosophical topics touching upon theological questions. 1) Faith and reason and the ways to God; 2) Human nature, particularly soul, body, and the image of God; 3) Law and Virtue; 4) Nature and Grace.

MI 20406. The Mass of the Roman Rite

(3 -0- 3)

An examination of the Catholic Eucharist as celebrated according to the Roman rite. Students explore the earliest witnesses of the Eucharist in Scripture and Tradition, then trace the emergence and development of the eucharistic rite in Rome itself and in areas influenced by Rome. Attention is paid to the origins and formation of liturgical texts, and their compilation into various books; vestments and vessels; and the arrangement of church architecture over the centuries. The course follows the Roman liturgy from the Eternal City (ca. 700) over the Alps into the Frankish realms and even into southern England in the early Middle Ages; then traces its reintroduction to the City in the eleventh and twelfth centuries, through the pontificate of Innocent III (1198–1216), and its reform after the Council of Trent. The course finally examines the Liturgical Movement of the twentieth century and developments after Vatican II. Due consideration is given to the role of Joseph Ratzinger-Pope Benedict XVI in the new liturgical movement with particular focus on his liturgical legislation (*Summorum pontificum*, 7-7-2007), the *ars celebrandi*, and “the hermeneutic of continuity.”

MI 20408. The Eastern Church: Theology and History

(3 -0- 3) Avvakumov

The course provides an overview of the variety of the Eastern rite Churches belonging to different cultural traditions of Eastern Europe and the Eastern Mediterranean world. The students will be introduced to the theological views and liturgical life of the Eastern rite Christians, i.e., Orthodox, Oriental and Eastern Catholic, and their fascinating history. In the second part of the course we shall explore the Byzantine rite Churches in more detail, and discuss the challenges their theology and history present to the Christian world at large. Special attention will be given to Slavic Christianity and especially Russian and Ukrainian religious history. Reflection on the diversity of Christian traditions will lead to important insights into theological topics of central importance for today such as theology of culture, ecclesiology, sacramental theology and theology of history.

MI 20473. Regarding the Islamic Challenge to Christian Theology

(3 -0- 3) Reynolds

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 24805
While many Christians have described Islam as a Christian heresy, many Muslims consider Christianity to be an Islamic heresy. Jesus, they maintain, was a Muslim prophet. Like Adam and Abraham before him, like Muhammad after him, he was sent to preach Islam. In this view Islam is the natural religion—eternal, universal, and unchanging. Other religions, including Christianity, arose only when people went astray. Therefore Muslims have long challenged the legitimacy of Christian doctrines that differ from Islam, including the Trinity, the incarnation, the cross, and the new covenant and the church. In this course we will examine Islamic writings, from the Qur'an to contemporary texts, in which these doctrines are challenged. We will then examine the history of Christian responses to these challenges and consider, as theologians, how Christians might approach them today. “Regarding the Islamic Challenge to Christian Theology” is the second of two required theology courses at Notre Dame (the “development” course). These two courses are directed towards a number of goals. First, they provide students with information about the Bible and Christian theology that in itself is important. Second, they form the basis of a Catholic community at Notre Dame where all students (whether or not they are practicing Catholics) have a common experience of texts and questions that might be discussed not only in class but while eating mashed potatoes in North Dining Hall. Third, theology itself is meant as a guiding light for all other classes. As with the great European universities (Paris, Bologna, Oxford, Cambridge etc.), Notre Dame was founded by the church to be a community where students are strengthened in their faith and morals, and therefore more able to see the truth in other fields, whether biology, music, or history. Like the first required course (Foundations), “Regarding the Islamic Challenge to Christian Theology” has the same goals. This is not an Islamic Studies course. It is a course which takes Islam's challenge to Christian teaching as the starting point for Christian theological reflection.

MI 20474. Dying to Live: Martyrdom

(3 -0- 3) Moss

Martyrdom has been centrally important to Christianity from the ancient world to contemporary debates about the category and its application. It is inextricable from questions about persecution and power, death and identity, suffering and truth. Through lectures and tutorial discussions of primary sources, this course examines the experiences, representations, reception, and place of martyrs across two thousand years of the history of Christianity with particular emphasis on the early church and the Reformation era. It analyzes the importance of martyrdom for the definition and development of Christian doctrine, ecclesiology, and devotion, and the influence of these in turn on attitudes about persecution, the imitation of Christ, and martyrdom itself.

MI 20476. The Monastic Way in the History of Christianity

(3 -0- 3) Young

In the history of the eastern and western churches, male and female monastics have composed a long and elaborate tradition of their collective life based on the imitation of Christ. A selection of the written sources attesting to the variety of the forms of monastic life and prayer, and theology and mysticism will form the syllabus for this class. It will explore the modes of life of the solitary monastic as well as those of monastic communities, from earliest Christianity through the present, by reading works from and about this form of life. It will discuss, among other themes, those of discipline, the meaning of the body and its labor, penance, suffering, humility, study and learning, the love of human beings, the love of God, union with God and participation in the life of God within the limits that the monastic life imposes.

MI 20482. Saints in Art and Icons

(3 -0- 3)

A diachronic exploration of the lives and legends of the saints as depicted in art and iconography. Students will explore lives of the saints in select *vitae* as well as the most influential hagiographical collection of the Middle Ages, *The Golden Legend* of Dominican bishop James of Voragine. Due attention is paid to the arrangement of the sanctoral cycle, the compilation of calendars and martyrologies, and the theological underpinnings of classic iconography. Primary focus on identifying saints by iconographical attributes and conventions in both western and eastern iconography.

MI 20485. C.S. Lewis: Sin, Sanctity, and the Saints

(3 -0- 3) Fagerberg

What is the path for each person through sanctification to the beatific vision? Using the fiction of C.S. Lewis for sign posts along that path, this course will consider the doctrine of sin (*Screwtape Letters*), sanctification as cooperating with grace (*The Lion, the Witch & the Wardrobe*, *Perelandra*), and the final formation of saints (*The Great Divorce*, *The Last Battle*). Other authors will be helpful in understanding Christian spirituality as a struggle to overcome the passions and cultivate the virtues: St. Augustine, Maximus the Confessor, Sayings of the Desert Fathers, Dorothy Sayers, Joseph Pieper, and G.K. Chesterton.

MI 20489. St. Joseph in Catholic Teaching

(3 -0- 3)

The figure of Joseph of Nazareth, spouse of the Virgin Mary and foster-father of Jesus Christ, has emerged in increasingly high relief since the Middle Ages and particularly so in the nineteenth and twentieth centuries. The course begins with the scriptural treatment of St. Joseph first in the infancy narratives and in occasional references to him in the Gospels, then in regard to his typological antecedent, the patriarch Joseph, son of Jacob and viceroy of Egypt. After an examination of Joseph in early Christian apocrypha (Protevangelium of James, Gospel of Mary), students will consider his rehabilitation by various Church Fathers (Jerome) and medieval theologians (Bernard of Clairvaux, Bernardine of Siena) despite flawed portrayals in popular hagiography (*The Golden Legend*, religious dramas). The cultus of St. Joseph and that of the Holy Family entered a vigorous phase with the Catholic Reformation (Teresa of Avila) and the establishment of the Church in North America (François de Laval). Attention will be paid to his patronage of

various nations (e.g. Mexico, 1555; Canada, 1624) as well as that of the Catholic Church (1870). Special focus on the liturgical feasts and offices of St. Joseph plus the devotional cult of St. Joseph as it flourished not only under papal influence but also through the zeal of St. André Bessette, CSC (1845–1937, canonized October 17, 2010), founder of the Oratory of St. Joseph, Montreal, Canada and one of the most effective promoters of devotion to St. Joseph. Papal teaching and legislation on St. Joseph. Iconography of St. Joseph. Theological implications of the increased liturgical and devotional prominence of St. Joseph.

MI 20490. The Immaculate Conception: From Bernard to Bernadette

(3 -0- 3)

On February 11, 2008, the Church observed the 150th anniversary of the apparition of our Lady in Lourdes, France. To Saint Bernadette, the “beautiful lady” declared, “I am the Immaculate Conception,” thus confirming the dogma promulgated shortly before by Pope Pius IX in 1854. This Marian dogma deserves serious study from multiple perspectives: its historical development as a contested belief, its relation to other dogmas (Original Sin, the Virgin Birth, Redemption, the Assumption), its liturgical expressions, its crucial link to the understanding of Christian marriage as a sacrament, its representations in visual art and poetry, its special significance for women, and its general importance to Christian anthropology, as well as its particular connection to Lourdes. The syllabus will include readings from all these perspectives, film sessions, and a class trip to the Lourdes grotto on Notre Dame’s campus.

MI 20493. On Conversion

(3 -0- 3)

For all believing people, faith is a journey: a lifelong movement of growth in understanding of the divine Mystery in whose presence we live, and of commitment to serving God. Christian faith begins in Jesus’ call to each person to follow him as a disciple; and while the general shape of that journey of companionship is modeled in the Gospels, it takes on very different concrete features in each particular life. In this course, we will reflect on the theological importance of conversion and spiritual growth for the life of faith, and will consider the stories of several well-known Christians (Augustine of Hippo, Francis of Assisi, Ignatius of Loyola, John Woolman, Dorothy Day, C.S. Lewis) that reveal the long-term implications of conversion to faith. We will also reflect on loss of faith as a kind of anti-conversion peculiar to modern culture.

MI 20494. Mary in the Catholic Tradition

(3 -0- 3)

A study of the Blessed Virgin Mary, Mother of God, as her figure and role in the history of salvation emerge in Scripture and the Tradition of the Church. An examination of the Church’s understanding of Mary as expressed in sacred and historical text, theological reflection, liturgical expression, iconographic representation, magisterial pronouncement, and the life of devotion. The course will also consider the relationship of Mariology to other branches of theology, such as protology, christology, soteriology, ecclesiology, and eschatology, as well as the impact of the cultus of the Virgin Mary on western art, music, and literature.

MI 20497. Heaven, Hell, and Purgatory

(3 -0- 3)

If there is a life after death for human beings, what is it like? How does a person get there? reach one of the eternal destinations envisioned as punishments for our sins or reward for good deeds? Are they states of being, or actual places? If the latter, what do they look like, and who are the inhabitants? Early Judaism and two millennia of Christian tradition have developed a variety of sources to elaborate an answer to these questions. This course will consider how the tradition has proposed answers, and will look at various ways in which the answer has been elaborated. Materials for the course will draw from accounts of visionaries and mystics who ascended to Heaven (or descended to Hell) and reported what they saw, theologians who attempted to give comprehensive and consistent accounts of the paths to these places (or states), and Christian poets who metaphorically evoked Heaven and Hell to express the consequences of contemporary social or political conditions. The course will consider the development, primarily in

Roman Catholicism, of the belief in doctrine of Purgatory and the debates about that belief. The contemporary reconsideration of Heaven, Hell and Purgatory, and the embarrassment about Hell will conclude the course.

MI 20609. Reading and Writing Latin Prose

(3 -0- 3) Mazurek

This second-year language course continues the review of grammar begun in CLLA 20003 and introduces students to stylistic analysis through close readings of Latin prose authors such as Cicero and the younger Pliny. A special feature of the course is that students learn to write classical Latin for themselves.

MI 20671. Celtic Heroic Literature

(3 -0- 3)

An exciting introduction to Celtic literature and culture, this course introduces the thrilling sagas, breathtaking legends, and prose tales of Ireland and Wales. Readings include battles, heroic deeds, feats of strength and daring, and dilemmas faced by the warrior heroes of the Celts. Celtic Heroic Literature, which requires no previous knowledge of Irish or Welsh, studies the ideology, belief system and concerns of the ancient Celtic peoples as revealed in their saga literature. By examining the hero's function in society, students investigate the ideological concerns of a society undergoing profound social transformation and religious conversion to Christianity and the hero's role as a conduit for emotional and social distress. Among the heroes to be studied in depth are: Cu Chulainn, Lug, St. Patrick, and the king-heroes. Wisdom literature, archeological, and historical evidence will also be considered in this course. No prior knowledge of Irish required. All texts provided in English.

MI 20672. Introduction to Medieval Irish Literature

(3 -0- 3)

This course introduces students to various aspects of literature and culture in the Irish language in the period 600–1200. Outside the classical world of Greece and Rome, Ireland has the oldest attested European literature and this fact alone gives the literary products of Medieval Ireland a singular significance. A particular emphasis will be placed on studying mainly the heroic prose saga literature of this period in its various literary, cultural and historical contexts. This will involve both a close reading of the texts themselves in English translation and an examination of the material in the light of recent scholarship in this area. We will, however, also cover something of the breadth of Irish literary production by studying aspects of the poetry composed at this time. All literary genres will be studied with regard to the historical contexts that produced them.

MI 20703. Introduction to Early Christian and Byzantine Art

(3 -0- 3) Barber

This course will introduce students to the visual arts of the period ca. A.D. 200 to ca. A.D. 1600. Our work will take us from the first fashioning of an identifiable Christian art through to the remarkable poetics of Late Byzantine painting. In so doing, the student will be introduced to the full array of issues that arise around the question of there being a Christian art. Working from individual objects and texts, we will construct a variety of narratives that will reveal a vital, complex, and rich culture that, in a continuing tradition, has done so much to shape the visual imagination of Christianity.

MI 20704. Introduction to Renaissance Art

(3 -0- 3)

This course will survey the major trends in the art of Italy and Northern Europe from roughly 1300 to 1575. It will concentrate on such major figures as Giotto, Donatello, Masaccio, Botticelli, Raphael, Michelangelo, and Titian in Italy, and the Limbourg Brothers, Jan van Eyck, Rogier van der Weyden, Hieronymus Bosch, Albrecht Durer, Mathias Grunewald, and Pieter Brueghel in the North. It will consider such themes as artistic production and technique, public and private spirituality, naturalism, narrative, and the changing status of the artist.

MI 20752. Art of the Medieval Codex

(3 -0- 3)

In classical times text and image were applied to papyri and scrolls, in the mid-15th century movable type and woodcuts printed text and images into paper books. During the intervening millennium text and images written drawn, and painted by multiple hands onto the bound parchment of medieval codices. As an introduction to the study of medieval manuscripts, this class will begin with an overview of codicological methods and then move through a series of thematic questions as they relate to specific manuscripts made in Western Europe between the 5th and 15th centuries. We will consider production methods, text-image relationships, issues of patronage and use, and many other questions as we examine the central role manuscripts played in the evolution of medieval European culture.

MI 20772. Medieval and Renaissance Music History I

(3 -0- 3) Blachly

A survey of music. The study of the major forms and styles in Western history. Required of music majors and minors, but open to students with sufficient musical background.

MI 22001. The World of the Middle Ages: Tutorial

(0 -0- 0)

Discussion section accompanying MI 20001.

MI 30203. Middle Ages I

(3 -0- 3)

This course will examine the history of the Roman world from the time of the first incursions of barbarians into the Roman Empire in the third century to the time of the final invasions in the 10th. It will concentrate first on the crises of the third century, and on the consequent transformation of the relatively unified, urbanized, tolerant, polytheistic Roman Empire of Late Antiquity into the two distinct, deurbanized, intolerant, monotheistic, and politically divided civilizations of Latin or Catholic Christendom and Greek or Orthodox Christendom. Next, it will briefly examine the emergence in the seventh century of the new monotheistic religion of Islam and of the new civilization and empire centered on it, which quickly conquered not only the old Persian empire but most of the Asian and all of the African provinces of the continuing Roman empire, and in 711–18 conquered most of Spain as well. The remainder of the course will concentrate on the history of Latin Christendom and its pagan barbarian neighbors to the north and east between the beginning of the Germanic conquests of the western provinces ca. 400 and the final conversion of the peoples of central and northern Europe to Christianity and the simultaneous emergence of a new sociopolitical order in the older kingdoms around 1000. There will be two short papers, two tests, and a final examination.

MI 30204. Castles, Kingdoms, Cathedrals

(3 -0- 3)

This course is a thematic survey of the high (1000–1300) and late (1300–1500) Middle Ages. The course begins with an introduction to three emblematic developments of the high Middle Ages: cathedral-building, the crusading movement, and the beginnings of the universities. Themes addressed include the nature of high medieval religion, the agricultural and commercial revolutions, and high medieval politics and patronage. Treating the later Middle Ages, the course focuses upon a catastrophic event and an epic poem. The Black Death (and related late-medieval catastrophes) has traditionally been seen as marking a turning point in European history. To what extent is this so? Finally, Dante's *Inferno* will offer a window into key issues of late-medieval religious culture, including papal politics, the role of the laity in religion, late-medieval philosophical thought, heresy, and the Italian city-state as the site of a new Renaissance of learning.

MI 30210. Late Antiquity

(3 -0- 3)

This course will explore the transformation of the Roman world from about A.D. 300 to 600 We will ask: was the "fall" of the Roman Empire a civilizational catastrophe? Or was it a slow, messy process blending continuity and change? Or was Late Antiquity itself a dynamic and creative period? Our emphasis will fall on

the changing shape of Roman public life; the barbarians and their relations with Rome; the emergence of the Catholic Church; the triumph of Christian culture; and literature, art, and architecture in the late imperial world. There will be a midterm and a final. Students will write either one term paper or a series of shorter papers. Readings will emphasize primary sources.

MI 30212. The Age of Charlemagne

(3 -0- 3) Noble

The Carolingian (from *Carolus*, Latin for Charles: Charles the Great—Charlemagne—was the most famous Carolingian) period, roughly the 8th and 9th centuries, was foundational for Western Europe. But this was also the time when the mid-Byzantine Empire consolidated its position and when the Abbasid family of caliphs introduced important and durable changes in the Islamic world. This course will focus on the West in the age of Charlemagne, but will draw frequent comparisons with and make continuous reference to Europe's Byzantine and Islamic neighbors. The course will explore such themes as: Europe's Roman and Christian inheritances from antiquity; the peoples of the Carolingian world; kingship and empire; political and social institutions and ideologies; religious and secular law; war and diplomacy; agriculture and trade; the church—popes, bishops, monks, and nuns; theology; art and architecture; Latin and vernacular literature. Reading assignments will combine modern scholarship and primary sources (in translation). Students will write midterm and final examinations and will choose between several short papers or one long paper.

MI 30214. Italian Renaissance

(3 -0- 3)

Corequisite: HIST 32500

This course examines the political, cultural, social, and religious history of Italy from about 1350 to 1550. Starting with an extended study of Florence, its economic foundations, social and political structures, artistic monuments, and key personalities, the course then examines how the culture of the Florentine Renaissance spread to the rest of Italy, especially to the papal court of Rome and the princely courts of northern Italy, and, finally, to the new nation-states of northern Europe. Key topics will include: the growth of the Italian city-state; the appearance of new, Renaissance "characters" (the merchant, the prince, the courtier, the mercenary, the learned lady, the self-made man); Renaissance humanism and the classical revival; the relationship between art and politics; and Renaissance ideas of liberty, virtue, historical change, and the individual's relationship to God. The course will not tell a story of steady progress from medieval to modern institutions, societies, and modes of thinking; rather, we will consider the Renaissance as a period in flux, in which established traditions thrived alongside creative innovations and vigorous challenges to authority. Students will write one long paper and take a midterm and a final exam.

MI 30220. Roman Society and Culture

(3 -0- 3) Bradley

This upper-level course in ancient history is designed to introduce students to the principal features of Roman society and culture in the central era of Rome's history (c.150 B.C.–A.D. 200). After a general introduction to Rome's historical development, the course focuses on topics such as: Roman social structure; marriage and family life; child-rearing and education; demography and disease; labor and leisure; life in the Roman army; religious festivals and rituals; the lives of women; and the practice of slavery. The course concentrates at large on Roman social relations in the transitional age from rule by Republican government to rule by autocratic emperors, and is intended to display what has been called the "fabulous diversity and richness" of Roman socio-cultural life. Original sources are read in translation. Previous exposure to Roman history is recommended but not required.

MI 30221. The Reformation

(3 -0- 3) Gregory

Corequisite: HIST 32352

A narrative history of Christianity in Western Europe from ca. 1500–ca. 1650, which takes an international and comparative perspective, including Catholicism, Protestantism, and radical Protestantism. Topics covered include Christianity

on the eve of the Reformation, Christian humanism, Luther and the German Reformation, the Peasants' War and Anabaptism, the English Reformation, Calvin and Calvinism, Catholic Reform and the Council of Trent, the French Wars of Religion, confessionalization, the Thirty Years War, and the English Revolution. Major themes include matters of religious content (doctrinal positions and devotional sensibilities), the relationship between different Christian groups and political regimes, the impact of religious changes across the population, and the definitive emergence of Christian pluralism. Lectures plus discussion. A narrative history of Christianity in Western Europe from ca. 1500–ca. 1650, which takes an international and comparative perspective, including Catholicism, Protestantism, and radical Protestantism. Topics covered include Christianity on the eve of the Reformation, Christian humanism, Luther and the German Reformation, the Peasants' War and Anabaptism, the English Reformation, Calvin and Calvinism, Catholic Reform and the Council of Trent, the French Wars of Religion, confessionalization, the Thirty Years War, and the English Revolution. Major themes include matters of religious content (doctrinal positions and devotional sensibilities), the relationship between different Christian groups and political regimes, the impact of religious changes across the population, and the definitive emergence of Christian pluralism. Lectures plus discussion.

MI 30222. Tudor England: Politics and Honor

(3 -0- 3) Rappale

The period from 1485 to 1603, often feted as something of a "Golden Age" for England, saw that country undergo serious changes that challenged the traditional ways in which the nation conceived of itself. These included the break from Rome, the loss of England's foothold in France, and the unprecedented experience of monarchical rule by women. Each of these challenges demanded creative political responses and apologetic strategies harnessing intellectual resources from classical, Biblical, legal, chivalric and ecclesiastical sources. This course will examine these developments. It will also look at how the English, emerging from under the shadow of the internecine dynastic warfare of the fifteenth century, sought to preserve political stability and ensure a balance between continuity and change, and, furthermore, how individuals could use these unique circumstances to their own advantage.

MI 30225. After Rome: Birth of the Medieval World

(3 -0- 3)

This course will examine the history of the Roman world from the time of the first incursions of barbarians into the Roman empire in the 3rd century to the time of the final invasions in the 10th. It will concentrate first on the crises of the 3rd century, and on the consequent transformation of the relatively unified, urbanized, tolerant, polytheistic Roman Empire of late Antiquity into the two distinct, deurbanized, intolerant, monotheistic, and politically divided civilizations of Latin or Catholic Christendom and Greek or Orthodox Christendom. Next it will briefly examine the emergence in the 7th century of the new monotheistic religion of Islam and of the new civilization and empire centered on it, which quickly conquered not only the old Persian empire but most of the Asian and all of the African provinces of the continuing Roman empire, and in 711–18 conquered most of Spain as well. The remainder of the course will concentrate on the history of Latin Christendom and its pagan barbarian neighbors to the north and east between the beginning of the Germanic conquests of the western provinces ca. 400 and the final conversion of the peoples of central and northern Europe to Christianity and the simultaneous emergence of a new socio-political order in the older kingdoms around 1000. There will be two short papers, two tests, and a final examination.

MI 30231. Medieval Spain: Land of Three Religions

(3 -0- 3)

This lecture course will cover the history of medieval Spain from the Visigothic period (6th to the 7th centuries) until the time of Ferdinand and Isabella (15th century). The main focus of the course will be the interaction (both congenial and confrontational) of the three religious groups resident in the Iberian Peninsula: Christians, Jews, and Muslims. The course will proceed roughly chronologically, with pauses to consider particular topics in social, intellectual, and economic

history. Interspersed with lectures, discussion sessions will concentrate on close readings of primary texts and consideration of some of the historiographical problems peculiar to Spanish history. There will be several short papers, a midterm, and a final exam.

MI 30233. Early Medieval Ireland

(3 -0- 3)

Consideration of the period between 950 and 1400 is of crucial importance in understanding Irish history. This course not only covers the range of continuities and radical discontinuities that marked Ireland's development during this time, but charts the attempted conquest of the entire country by the English Crown. The lecture series also seeks to answer a number of questions. Why did the Papacy give the English Crown sovereignty over Ireland? Why did a country like Ireland, on the verge of attaining political and economic centralization, not organize better resistance to English attempts to subdue it? Why did the English colony fail to prove more successful in exerting its will over indigenous Irish potentates? Culturally the period also witnessed the growing assimilation of English invaders to the norms of Gaelic Irish politics and society. Lastly, events in Ireland had a serious influence on developments in England, Wales, and Scotland, provoking, amongst other things, the fall of the Plantagenet dynasty and an attempted invasion by King Robert I of Scotland.

MI 30234. Early Modern Ireland

(3 -0- 3)

This course offers new perspectives on the struggle for mastery in Ireland from 1470 to 1660. Though keeping in mind the traditional view of the "English reconquest" (decades of rebellion, dispossession, and plantation until, in the aftermath of Cromwell, all Ireland was finally subjected to English rule) this course will take a different approach. By investigating a range of primary sources from the period, students will explore the interactions between the three different models of conquest: 1) descendants of the old Norman colonists (e.g., Fitzgeralds and Butlers) seeking to finish the job; 2) Tudor reform (inspired by Renaissance optimism), by which the English attempted to establish rule by means of legal, social, and cultural assimilation; and 3) unabashed exploitation by English private entrepreneurs on the make. The most important effect of these "contending conquests" was the way they shaped the diverse responses of the native Irish, ranging from accommodation and assimilation to outright rebellion and national war.

MI 30235. Medieval Middle East

(3 -0- 3)

Corequisite: HIST 32080

This course offers a survey of Middle Eastern history from the rise of Islam in the seventh century CE until the rise of Mongol successor polities in the fifteenth century. The course is structured to cover political and cultural developments and their relationship with broader changes in society during the formative centuries of Islamic civilization. Specific topics include: the career of the Prophet Muhammad and the origins of the earliest Muslim polity; the creation and breakup of the Islamic unitary state (the Caliphate); the impact of Turkish migrations on the Middle East; social practices surrounding the transmission of learning in the Middle Ages; the diversity of approaches to Muslim piety and their social and political expression; popular culture; non-Muslims in Islamic society; the creation of the medieval Islamic "international" cultural order. Among the more important themes will be long-term cultural and social continuities with the Islamic and ancient Near East, and concepts of religious and political authority.

MI 30237. Medieval and Early Modern Russia

(3 -0- 3)

This course will examine the history of Russia from its medieval origins until the age of Catherine the Great in the 18th century. We will begin with the genesis of Orthodox Slavic civilization in medieval Kievan Rus and that state's destruction in the Mongol invasion. Then we will study the rise of the tsardom of Muscovy and the fateful developments that nearly doomed it in the 16th–17th century: the reign of Ivan the Terrible, the Time of Troubles, the imposition of serfdom, the schism of the Orthodox Church, and widespread popular revolts. Lastly, we will

see how Peter the Great and his 18th-century successors attempted to stabilize the social order, Westernize the upper classes, and make Russia a great European power.

MI 30238. Early Modern Rome

(3 -0- 3) Meserve

This course traces the interlocking histories of the papacy and the city of Rome from the Renaissance to the birth of the modern Italian state. Topics will include the rise and fall of the papal monarchy; cultural and intellectual life at the Vatican court; the urban fabric of Rome from the Renaissance to the Baroque; the peculiar strains of Roman society; and the tumultuous relationship, both political and cultural, between Rome and the rest of Europe from the Reformation to the age of revolution. The course will proceed chronologically, but will pause frequently to examine special topics including: the Renaissance cardinal and his household; Michelangelo's Rome; the building of St. Peter's; Jesuit science; the trial of Galileo; archaeology and antiquarianism; the Roman Carnival; the Inquisition; Bernini's Rome; the Grand Tour; Rome in the Romantic imagination; and Napoleon's Rome. Students will write several short papers in response to readings and visual materials, and take a midterm and a final exam.

MI 30241. Ancient Japan

(3 -0- 3)

History is not a single "true story," but many competing narratives, each defined by values, interests, and political commitments. This course on ancient Japanese history provides an overview of three sets of competing narratives: first, the politically charged question of Japan's origins, when we explore archeological evidence and chronicles of the Sun Goddess; second, the question of whether culture (through continental imports of writing, religious forms, and statecraft) or nature (as disease and environmental degradation) defined the Yamato state from the sixth to the ninth century; and, third, whether Heian court power rested on economic, political, military, judicial, or aesthetic grounds and if its foundations were undermined internally or by the invasion of the Mongols. In examining these competing narratives, we aim to develop the disciplined imagination necessary to enter another culture and another time.

MI 30242. Ancient and Medieval South Asia (before Europe)

(3 -0- 3)

This course covers the history of the South Asian subcontinent from the beginning of the historical period to about 1700. During this period, the region witnessed the formation of regional states, the rise and fall of strong empires, the evolution of increasingly complex forms of caste and kinship ties, multiple religious traditions including Hinduism, Buddhism and Islam, and the coexistence of different economic organizations ranging from hunting and food-gathering to sophisticated urban communities. Discussion will focus on the transformation of local kinship ties into regional kingdoms and empires, the evolution of religion and the legacy of the expansion of Islam and the consequent rise of Turkish, Afghan and Mughal empires in the area. The main purpose of the course is to introduce students to South Asian civilization in a global context, with special emphasis on the wider linkages of transnational and world history. Finally, there will be a discussion of how interpretations of the South Asian past resonate in the region's modern politics. Besides learning about India this course will provide transferable skills about analyzing primary resources, seminar presentation and effective ways of using Internet resources.

MI 30245. The Medieval Iranian World

(3 -0- 3) Tor

Corequisite: HIST 32083

The Iranian cultural world, from late antiquity until the 13th century, stretched from what is today Iraq all the way to India, and from the Persian Gulf deep into Central Asia. Although in the seventh century the early Islamic conquests put an end to the Persian Empire and occupied the Iranian world, a new era of Iranian hegemony began in Islamic history with the 'Abbasid Revolution in 750 and the establishment of the new Islamic capital, Baghdad, in the old Persian heartland. This event inaugurated a growing dominance by Iranians, and Persian traditions,

in all areas of Islamic civilization—cultural, religious, military, and political—culminating in the establishment of the autonomous Persianate dynasties which ruled the Islamic heartland from the ninth century until invading Turco-Mongol tribes seized political control of the Islamic world in the twelfth century. This course will explore the many ways in which the Persianate world—today’s Iran, Afghanistan, and Central Asia—helped form the Islamic world, focusing on its contributions to political order and ideology; its leading role in the formation and elaboration of Sunnism; its rich cultural productions; and its expansion of the borders of Islam.

MI 30249. Italy in the Middle Ages

(3 -0- 3) Milani

It is difficult to understand the works of Dante or Giotto without having some knowledge of the Italy of their times. The course will provide an introduction to the economic, social, political and cultural history of Italy from about 1050 to 1350 with particular focus on the communal cities of the center and north peninsula. Among the topics to be covered there will be: the growth of rural economy, the emergence of an urban class of knights, the commercial revolution, the rise of city communes, the mechanisms of government, the internal conflicts, the diplomatic and military relations between cities and other powers. Each topic will be introduced through formal lectures, and then illustrated through the reading of primary sources and chronicles in translation, images, and scholarly papers. In this way the course will also act as a discussion on how historical developments can be reconstructed from the analysis of medieval documents and modern research.

MI 30251. Medieval Cities

(3 -0- 3)

Corequisite: HIST 32255

This course will cover the structure and development of urban centers in Europe and the Mediterranean World from the Late Antique period until the 14th century. The course will begin with a general discussion of modern urban theory together with ancient and medieval conceptions of what makes a “city.” From this point, we will track the history of urban life in medieval Europe, Byzantium, and the Islamic World, with lectures devoted to urban geography, architecture, society, economy, and demography. We will also look in depth at medieval life in individual cities, including London, Paris, Cairo, and Constantinople, in order to consider variations in urban society and institutions in different regions.

MI 30255. Twelfth-Century European Renaissance and Reform

(3 -0- 3)

The thousand years of history we call “the middle ages” witnessed repeated efforts to reform and enlighten society through learning and religion. Such aspirations did not wait for the periods we call Renaissance and Reformation. This course will examine reform movements in the years 1050–1215, a time of great cultural expansion often called the “twelfth-century renaissance.” Here we find the invention of the university and also of chivalry, mystics as well as satirical mockers. We will read original sources dealing with ethics, politics, love, and religion in that society. We will ask what it means, historically, to speak of a society as undergoing renewal or reform: Can a whole society be reformed? By whom? By what means? Three short papers, and a midterm, will be required.

MI 30257. The Medieval Mind

(3 -0- 3)

This course offers an introduction to thought and culture in the European Middle Ages, the era of romance, scholastic theologians, and female mystics. After a relatively brief look at the early Middle Ages, the course will focus on the origins of the literature of love and chivalry, of schoolmen in universities, and of women religious writers. There is a general textbook to guide the course, but much of the reading will be in primary sources, that is, in the thinkers and poets and mystics of the medieval period.

MI 30261. Politics and Religion in Medieval Europe

(3 -0- 3) Van Engen

This course considers the intersection between political action and religious claims in medieval Europe. Virtually all the powers—kings and popes, princes and bishops—claimed to act on religious principle and in accord with transcendent

notions of virtue or world order. And yet they fought bitterly with each other, with words and with swords, and mutually condemned one another. The course will begin with the showdown between emperors and popes known as the investiture contest, then take up pivotal figures like Pope Innocent III, King Frederick II, and Pope Boniface IX, and conclude with sections on the spiritual Franciscans and on conciliarism. Two papers based on primary sources, one midterm, and a final.

MI 30272. Christian/Jew/Muslim in the Middle Ages

(3 -0- 3) Whitnah

This course examines the three major Abrahamic religions of the medieval West. We will explore the similarities and the differences among the three religions, and consider how they influenced each other and how they distanced and refuted each other. The goal is to investigate the range of ideas concerning the nature of faith and law existing in the Middle Ages and to think about how context—political, social, cultural, and intellectual—informs those ideas. During the semester students will compare important texts from the three major religions, analyze their content, and evaluate the relationships among them. All of our reading will be primary sources, available for purchase at the bookstore or as part of a course pack.

MI 30275. Castles and Courts in Medieval Europe

(3 -0- 3) Boulton

The expanded title of this course is Castles, Castellannies, and Courts in Latin Europe, 900–1650. This course will examine the high period in the history of the castle—a combination of fort and residence—of the castellany or district subjected to the domination of a castle, and of the household and court of the kings, princes, and barons who built such residences and organized their lives and their activities within their various structures. It will first consider the castle as a form of fortification, review briefly the history of fortifications before 900, and examine the ways in which lords and their builders steadily improved their defensive capabilities in response to new knowledge and to new methods and tools of siegecraft. It will then examine the relationship of the castle to the contemporary forms of non-fortified or semi-fortified house, and finally its relationship to the lordly household (the body of servants organized into numerous departments associated with particular rooms or wings of the castle) and with the court (or body of soldiers, officers, allies, students, and temporary guests) who filled the castle when the lord was present. The course will conclude with an examination of the history of the castellany as a form of jurisdiction. The course will concentrate on the castles of the British Isles and France, but will examine the great variety of types found throughout Latin Europe.

MI 30278. King Arthur in History and Literature

(3 -0- 3)

This course—intended to introduce undergraduates to one of the major themes as well as to the interdisciplinary approaches characteristic of medieval studies—is a team-taught examination of the development and influence of the legend of Arthur, King of Britain, both in history and in literature. The historical Arthur is very obscure, but he was probably a Romanized Celtic war-leader who fought the invading Angles and Saxons at the beginning of the history of what was to become England. His memory was preserved in the oral literature of his own people, now called the Welsh, but he was soon converted into a mythic hero surrounded by magical companions. In the 12th century this legendary Arthur was not only incorporated into the new historiography of England (since 1066 under the rule of French-speaking Normans) but into the new genre of literature created in France around 1150—the chivalric romance—that itself embodied a new ideal for the relationship between men and women derived from the songs of the troubadours of the south. The great majority of these tales of love and marvelous adventures written over the next four centuries were to be set in the court of the legendary Arthur, and the Round Table was invented in this period as the central focus of the ideals it was made to represent. History soon began to imitate literature, as kings and princes attempted to emulate the idealized Arthurian court in their tournaments and other court festivities, and from 1330 to 1469 actually founded orders of knights based on the Round Table. The class will read the relevant parts of some of the chronicles, histories, and epics in which Arthur was mentioned, as

well as a representative sample of the Arthurian romances of the later period, and of related documents like the statutes of the chivalric orders. Two in-class tests, two short papers, and a final examination will be required.

MI 30283. Heresy and Dissent in Medieval Europe

(3 -0- 3)

Burning at the stake was the ultimate punishment for heretics and witches in the European Middle Ages. This course examines the phenomenon of heresy and its repression concentrating on the fascinating but controversial primary sources that are our chief source of knowledge about it. We will explore religious heresy and dissent, both intellectual and popular, reappearing in Western Europe around A.D. 1000 for the first time since late antiquity. Several key questions will be addressed: how are heresy and orthodoxy defined? and by whom? How was heresy dealt with and what impact, social and ecclesiastical, did it have? Of particular interest is the fragile definition of heresy in the medieval West and the ways in which inquisitors understood and explained their work.

MI 30287. The Catholic Reformation

(3 -0- 3)

Corequisite: HIST 32353

This course will examine some of the main historical realities, theological developments, and traditions of spirituality within Roman Catholicism ca. 1450–ca. 1700, the period of Catholic reform both before and after the emergence of the Protestant Reformation. The class format will be two lectures plus one discussion-based tutorial section per week, the latter based on the reading of primary sources in translation. Major topics to be discussed include the character of the late medieval church and reforming efforts within it (e.g., the Observantine movement, Christian humanism); Roman Catholic response to the Protestant Reformation, including the Roman Inquisition; the revival of existing and emergence of new religious orders (especially the Society of Jesus); the Council of Trent and its implementation among the clergy and laity; Catholic missionary activity in Asia and the Americas; post-Tridentine Catholic art and scholarship; the relationship between the Church and European states in the 16th and 17th centuries; Jansenism; and the flowering of Catholic spirituality in the 17th century.

MI 30294. Muhammad and the Qur'an

(3 -0- 3)

Islamic law, theology, and spirituality are all derived primarily from the Qur'an and the practice (sunnah) of the messenger and exemplar Muhammad. This course provides students with an in-depth introduction to these twin foundations of the Islamic religious tradition. Students will read a comprehensive biography (sira) of Muhammad based on the earliest sources. Students will also read selections from the Qur'an, contextualized within the narrative of Muhammad's prophetic career. In addition to familiarizing students with the traditional narrative of Muhammad's life and the style, content and structure of the Qur'an, this course also explores contemporary questions and debates in the historical-critical study of Islamic origins.

MI 30297. The Church in the Middle Ages

(3 -0- 3)

This course offers an introduction to the story of the medieval church in the thousand years of the Middle Ages. It will begin in Late Antique Rome with Christians becoming the privileged majority religion, and will conclude in the late middle ages with attempts to reform the church on the eve of the Reformation. The course will draw upon primary sources as much as possible, and students will write papers on those sources. The lectures will balance matters of ordinary practice (such as the cult of saints) with organized religious life (such as monasticism) and the high politics of the papal church.

MI 30301. Ancient and Medieval Philosophy

(3 -0- 3)

This course will concentrate on major figures and persistent themes. A balance will be sought between scope and depth, the latter ensured by a close reading of selected texts.

MI 30370. Platonic Love

(3 -0- 3)

This course will study the theme of platonic love from Plato (via Augustine and Aquinas) to Marsilio Ficino, focusing on half a dozen key texts in English translation.

MI 30404. Christianity in the Middle East

(3 -0- 3) Amar

The spread of Christianity from Palestine to the West is well-documented. Less well-known is the development of Christianity in the lands of its origin, the Middle East. This course introduces students to the largely untold story of Christianity that expresses itself in the native Aramaic language and culture of the Semitic East. Topics include: the origins of the indigenous Christian churches of Syria, Lebanon, Palestine, Armenia, Iraq, and Iran; The development of these traditions will be viewed in relation to western/European forms of Christianity that have come to dominate and that are viewed as "mainstream" and "normative." The course concludes with an assessment of the impact of religious "fundamentalism," the diaspora of Middle Eastern Christians throughout Europe and the United States, and the contemporary state of Christianity in the Middle East.

MI 30405. The History of Catholicism 300 to 1500

(3 -0- 3)

Course explores the evolution of Catholicism from 300 to 1500.

MI 30411. Christian Theological Traditions I

(3 -0- 3) Heintz; Wawrykow

A survey of Christian theology from the end of the New Testament period to the eve of the Reformation. Through the close reading of primary texts, the course focuses on the Christology of such influential thinkers as Origen, Athanasius, Augustine, Anselm, and Aquinas. How do these thinkers understand the person and work of Jesus Christ? What are the Christological problems that they tried to resolve? How do the different Christologies of these thinkers reflect their differing conceptions of the purpose and method of "theology"? Some attention will also be given to non-theological representations of Christ. How does the art of the early and medieval periods manifest changes in the understanding of the significance of Jesus? This course is obligatory for all first and supplementary majors but is open to others who have completed the University requirements of theology and who wish to gain a greater fluency in the history of Christian thought.

MI 30477. The Qur'an and Its Relation to the Bible

(3 -0- 3) Reynolds

To Muslims the Qur'an is the uncreated, eternal Word of God. As Jesus Christ is to Christians, the Qur'an to Muslims is the fullest expression of God's mercy and concern for humanity. It is both the source of complete spiritual wisdom and the constitution for a more perfect society. In the present course we will encounter this revered text with the following goals: to examine the history of the Qur'an's composition and reception; to explore the major themes of the Qur'an; to discuss new theories on and debates over the Qur'an, and, finally, to research the Qur'an's statements on issues of contemporary interest, especially sex, politics, and war.

MI 30500. Survey of Spanish Literature I

(3 -0- 3) Juarez-Almendros; Vitulli

A survey of Spanish literature through 1700. Readings of selected texts in prose, poetry, and theater from the medieval, Renaissance, and baroque periods.

MI 30530. Survey of French Literature and Culture I

(3 -0- 3) Douthwaite

Reading of selections and complete works of outstanding French authors from major genres and periods. Students are expected to have already taken ROFR 30310.

MI 30577. Medieval-Renaissance Italian Literature and Culture

(3 -0- 3) Moevs

Prerequisite: ROIT 20215 or ROIT 27500 or ROIT 20505

An introduction to the close reading and textual analysis of representative texts from the Duecento through the Renaissance, including Lentini, Guinizzelli, Cavalcanti, Dante, Petrarch, Boccaccio, Poliziano, Machiavelli, and Ariosto.

MI 30610. Latin History-Writing

(3 -0- 3) Hernandez

This third-year course builds on CLLA 20003 and CLLA 20004, and offers close reading of passages from the works of the historical writers Caesar and Sallust.

Latin historiography is a sophisticated instrument for narrating past events, for showing how notions of cause and effect and change over time develop in historical thinking, and for indicating the relevance of the past to the present. The political and social conditions of Rome that informed the writings of Caesar and Sallust are discussed, and the compositional techniques of their works are examined. The course prepares students for advanced offerings in Latin literature, especially CLLA 40022, CLLA 40032, and CLLA 40052.

MI 30615. Exploring Late Antiquity

(3 -0- 3) Muller

In this course, we will study late antiquity both as a fascinating era in its own right and as a gateway to the Western Middle Ages and ultimately towards the emergence of modern Western civilizations. The Greco-Roman world of the late second to the early seventh century witnessed such important developments as the rise of Christianity, the birth of asceticism and monasticism, the fundamental transformation of the Roman Empire, and an ethical and cultural shift in the population of its former realm. We will base most of our coursework on readings of original literary sources (both pagan and Christian), accompanied by the testimony of art and archaeology.

MI 30630. Introduction to the Latin Vulgate

(3 -0- 3)

Recommended for students who have completed CLLA 20003 or equivalent. Readings in the prose and poetry of the Latin Bible. The peculiarities of its Latin, influenced by Greek and Hebrew, will be analyzed from an historical linguistic perspective and also interpreted according to Christian exegetical tradition. Special stress on the Psalms with accompanying readings in Augustine's *Enarrationes*. No knowledge of Hebrew or Greek required.

MI 30639. Latin Saints' Lives

(3 -0- 3) Muller

Recommended for students who have completed CLLA 20003 or equivalent. Hagiography is one of the most versatile literary genres of Late Antiquity, and saints' lives are among the most famous and celebrated texts of that age. Starting out as simple eye-witness accounts of martyrdom and minutes of the martyrs' trials (Acta), they soon evolved into far more sophisticated literary forms: they served not only for the edification, but also for the amusement of the Christian people, replacing the pagan novel with their fanciful narratives of persecution and constancy, and they merged with the traditions of classical poetry to create a wide range of poetic forms: epigrams for martyrs' tombs (by Pope Damascus), hymns for liturgical use (Ambrose of Milan) and private piety (Prudentius), epic poems (the highly influential *Life of St. Martin of Tours* by Venantius Fortunatus) and the laudatory "Birthday Poems" that Paulinus of Nola wrote for the patron saint of his city. In this course, we will cover both prose and poetic texts (authors, apart from the abovementioned, will include Jerome, Eusebius, Vita Severini, and the Passio Perpetuae and Felicitatis). Due to the historical importance and the wide later tradition of ancient hagiography, we will frequently refer to art and archaeology, history, and music. The texts are suitable for students with intermediate and advanced Latin knowledge. Some experience with classical poetry (Vergil) will be helpful.

MI 30641. Cicero, Augustine, and Rhetoric

(3 -0- 3)

How did Latin rhetoricians signal their attitude towards their topic? How did those compositional techniques affect them as readers? How do compositional techniques develop over time? The classical rhetorical concept of "types of style" (genera dicendi) gives one point of entry into those questions. This class will center around the theory and practice of that idea, considering the relevant sections of the *Rhetorica ad Herennium*, Cicero's *Orator*, Quintilian and Augustine's *de Doctrina Christiana*, as well as Cicero's speeches, including *de lege Manilia*, *pro Rabirio perduellionis reo*, *pro Cluentio* and some of Augustine's sermons.

MI 30663. Historical Survey: Arabic Middle East

(3 -0- 3) Amar

This course will chart the history of the Arab Middle East from the formative period of the emergence of Islam in the seventh century through the fall of Constantinople in 1453 and the creation of the Ottoman Turkish Empire. Intended to be broad in its coverage and comprehensive in its scope, the course will introduce students to the social, cultural, and religious crosscurrents that came to define the Arab life and culture in the region.

MI 30664. Islamic Religious Thought

(3 -0- 3)

This course traces developments in the first few centuries of Islam in theology (kalam), law (shari'a and fiqh), and mysticism (tasawwuf or sufism). Students will gain a solid understanding of diversity within Islam including and beyond the typical distinction between Sunnism and Shi'ism. Beginning with a brief overview of Muhammad and the Qur'an, the course explores the issue of succession, codification of hadith, formation of major schools of thought, and development of consensus. Students will receive both a historical survey and read primary texts in translation. Given that most modern Islamic movements view the first few centuries of Islam as a "golden age"—this course provides essential background for students to engage debates that are taking place within contemporary Islam.

MI 30673. Celtic Otherworld: Early Irish

(3 -0- 3)

In early Irish tradition, the everyday world (of men, women, kings, warriors, and cattle) and the Otherworld stand in unstable and uneasy relation to one another. The Otherworld has several aspects: it can be positive and beneficial—indeed it is viewed as the legitimating source of rule in this world—but also baleful and destructive. In this course, we will study a range of Otherworld encounters, seeking to understand the vast range of contacts between the human world and the other world (or worlds) of early Irish tradition.

MI 30674. The Irish Tradition I

(3 -0- 3)

Ireland possesses the oldest vernacular literary tradition in Europe, spanning over 1500 years to the present day. This course will provide a survey of the origins and development of that literary tradition through more than a millennium from its beginnings until the seventeenth century, when political circumstances led to the collapse of the highly-developed native system of learning, poetry and patronage. The development of the Irish literary tradition will be traced against this background of political and cultural upheavals from approximately 500 to 1650.

MI 30680. Medieval German Literature

(3 -0- 3)

This course constitutes a survey of German literature from its beginnings during Germanic times until the sixteenth century. Ideas, issues, and topics are discussed in such a way that their continuity can be seen throughout the centuries. Lectures and discussions are in German, but individual students' language abilities are taken into consideration. Readings include modern German selections from major medieval authors and works such as *Hildebrandslied*, *Rolandlied*, *Nibelungenlied*, *Iwein*, *Parzival*, *Tristan*, courtly lyric poetry, the German mystics, secular and religious medieval drama, *Der Ackermann aus Bohmen*, and the beast epic *Reineke*

Fuchs. Class discussions and brief presentations in German by students on the selections are intended as an opportunity for stimulating exchange and formal use of German.

MI 30700. Introduction to Medieval Art

(3 -0- 3)

This course will introduce the visual arts of the period ca. A.D. 300 to ca. A.D. 1300. In the course of the semester, we shall devote much time to considering the possibility of a history of medieval art, as the objects and practices of the Middle Ages will be shown to make our assumptions about the nature of art history problematic. Working from individual objects and texts we will construct a series of narratives that will attend to the varieties of artistic practices available to the Middle Ages. From these, it will be shown that art was a vital, complex, lucid, and formative element in the societies and cultures, both secular and sacred, that shaped this period.

MI 30704. Survey of Italian Renaissance Art

(3 -0- 3) Rosenberg

This course will examine the painting, sculpture and architecture produced in Italy from the very end of the twelfth through the beginning of sixteenth century; from Giotto's Franciscan spirituality to Michelangelo's heroic vision of man and God. A wide variety of questions will be considered in the context of this chronological survey including changing conventions of representation, the social function of art, and the impact of the Renaissance ideology of individual achievement on the production of art and the role of the artist.

MI 30720. Late Antique and Early Christian Art

(3 -0- 3)

Art in Late Antiquity has traditionally been characterized as an art in decline, but this judgment is relative, relying on standards formulated for art of other periods. Challenging this assumption, we will examine the distinct and powerful transformations within the visual culture of the period between the third and the eighth centuries A.D. This period witnesses the mutation of the institutions of the Roman Empire into those of the Christian Byzantine Empire. The fundamental change in religious identity that was the basis for this development had a direct impact upon the visual material that survives from this period, such that the eighth century witnesses extensive and elaborate debates about the status and value of religious art in Jewish, Moslem, Byzantine, and Carolingian society. This course will examine the underlying conditions that made images so central to cultural identity at this period.

MI 30724. Gothic Art and Architecture

(3 -0- 3) Joyner

The first monument definitively labeled as "Gothic" is the Abbey church at St. Denis, yet no correlating monument or object exists to mark the finale of Gothic art. The term "Gothic" carries a wide range of connotations and it is applied to European art and architecture from the mid-12th century to roughly the 15th century. In examining the architecture, sculpture, manuscripts, metalwork, wall-paintings & textiles from these centuries, this class will compare the implications historically ascribed to "Gothic" with the ideas promoted by the cultures and individuals actually creating these objects. Although the focus of this course will be France, comparative material from Germany, England, Austria, and Italy will be included.

MI 30726. Northern Renaissance Art

(3 -0- 3)

This course traces the development of painting in Northern Europe (France, Germany, and Flanders) from approximately 1300 to 1500. Special attention is given to the art of Jan Van Eyck, Rogier van der Weyden, Heironymus Bosch, and Albrecht Dürer. Through the consideration of the history of manuscript and oil painting and the graphic media, students will be introduced to the special wedding of nature, art, and spirituality that defines the achievement of the Northern Renaissance.

MI 30753. Art into History: Reading the Art of Medieval Byzantium

(3 -0- 3)

Byzantine art has often been opposed to the traditions of Western naturalism, and as such has been an undervalued or little known adjunct to the story of medieval art. In order to develop a more sophisticated understanding of this material we will examine the art produced in Byzantium in the period from the ninth to the twelfth century, a period marking the high point of Byzantine artistic production and influence. Stress will be placed upon the function of this art within the broader setting of this society. Art theory, the notions of empire and holiness, the burdens of the past, and the realities of contemporary praxis will be brought to bear upon our various analyses of material from all media. How we, as art historians, can write the history of this rich culture will be a central issue of this course.

MI 30757. Venetian and Northern Italian Renaissance Art

(3 -0- 3)

This course focuses on significant artistic developments of the sixteenth century in Venice with brief excursions to Lombardy and Piedmont. Giorgione, Titian, and Palladio, the formulators of the High Renaissance style in Venice, and subsequent artists such as Tintoretto & Veronese are examined. An investigation of the art produced in important provincial and urban centers such as Brescia, Cremona, Milan and Parma also provide insight into the traditions of the local schools & their patronage.

MI 30758. Kingdom, Empire and Devotion: Art in Anglo-Saxon, Ottonian and Romanesque Europe

(3 -0- 3)

Although the Anglo-Saxon kingdom and Ottonian Empire overlap in time during the 10th and 11th centuries, the images and objects produced by both cultures manifest the different political, social, and religious identities being deliberately constructed. By the mid-11th century, the Normans had invaded England, the Salian emperors had succeeded the Ottonians, and European art is more cohesively and problematically labeled as Romanesque. This class will examine Anglo-Saxon and Ottonian art as individual visual traditions and trace their impact on images, objects, and monuments of the more loosely defined Romanesque era.

MI 30800. Ancient and Medieval Political Theory

(3 -0- 3)

What is the meaning of justice and why should we care about it? Can politics ever perfectly establish justice? Which forms of government are best for human beings to live under, and why? What is the political relevance of religion and philosophy, family and ethnicity, war and peace, nature and freedom, law and right? What are the qualities of a good citizen and political leader? How should relations among diverse political communities be conducted? This course introduces students to theoretical reflection on these and related questions through the study of some of the great works of ancient and medieval political thought. Readings will include writings of authors such as Thucydides, Plato, Aristotle, Cicero, Augustine, Farabi, Maimonides, and Aquinas.

MI 35811. Archaeology of Ireland

(3 -0- 3)

This course examines the cultural and historical trajectory of the archaeology of Ireland through a series of richly illustrated lectures, organized chronologically, that trace cultural, social, and technological developments from the Neolithic through the Viking period. Integrated with this lecture series, and running concurrently on alternate days, will be a series of seminar and discussion classes focused upon a number of anthropological and archaeological issues related to each of these periods of time. This includes the emergence of the unique systems of communities, and the development of systems of metallurgy in the Iron Age. Other classes will touch upon the topics of regionalism, identity and contact at different periods of time; mortuary practices and ritual; and discussion of village life in ring forts during the Bronze Age.

MI 40003. Introduction to Christian Latin Texts

(3 -0- 3) Bloomer

Prerequisite: CLLA 20004

This course will introduce students to early Christian literature and the language and styles in which scripture, commentaries, homilies, epistles, treatises, hymns, and poetry were written. There is no single phenomenon which we can label Christian Latin. Rather we must trace the influence that the translation of scripture, the changing vernacular, and the Late Antique literary genres had on the various writers and genres of the Latin Christian communities of roughly the second through the fifth centuries A.D. While the course's goals include the training of students in the research tools and methods for advanced work in early Christian, late antique, and medieval literature, we shall focus on improving students' abilities to read Latin with understanding and fluency. Preparation for translation in class will constitute the lion's share of homework. Grammar will occupy us as it did the authors we read: orthography, morphology, syntax, and lexicography will not, however, be as uniform as textbooks or dictionaries or grammars of classical Latin lead one to believe. Fundamentals of Latin style (prose and verse) will be emphasized. So too basics of literary history and of ancient literary terms and techniques.

MI 40004. Medieval Latin

(3 -0- 3)

This course is an introduction to the Latin language and literature of the late antique and medieval periods (ca. A.D. 200–1500). Designed to move students toward independent work with medieval Latin texts, the course will emphasize the close reading and careful translation of a variety of representative medieval Latin texts and documents with attention to vocabulary and word formation, orthography and pronunciation, morphology and syntax, and prose styles and metrics. The course will provide a review of the principal constructions of classical Latin and an introduction to some of the areas of medieval Latin scholarship, including lexicography, bibliographies, great collections and repertoires of sources, and reference works for the study of Latin works composed in the Middle Ages.

MI 40102. History of the English Language

(3 -0- 3)

This is a course on the history of the English language from its elusive but largely reconstructible roots in Indo-European to more or less the present, with a heavy bias towards the earlier pre-modern periods. The goals of the course are to acquaint students with the development of English morphology, phonology, syntax, semantics, graphics, and vocabulary, and to explore the cultural and historical contexts of the language's transformation from the Anglo-Saxon period onward. In working toward these goals, we'll spend time rooting around in the dustbins of English etymology, lexicography, onomastics, and dialectology, and we will explore some current problems in usage and idiom. The course is by nature heavily linguistic, which is to say we'll be spending a lot of time talking about language, grammar, and the forces that act upon spoken and written English. Students can expect to achieve a basic understanding of the cultural and linguistic phenomena that have shaped the language we now speak and write; they will become versed in the fundamental methodology and terminology of historical and descriptive linguistics; they will learn to effect a reasonably credible pronunciation of Old, Middle, and Early Modern English (including something very close to Shakespeare's probable pronunciation); they will discover the true meanings of their own given name and surname; and they will gain experience researching a couple of aspects of the language that interest them. In addition to regular reading and workbook assignments, the course's requirements include two exams, three essays, and responsible attendance.

MI 40110. Introduction to Old English

(3 -0- 3)

In November 1882, Gerard Manley Hopkins wrote to his friend and fellow-poet Robert Bridges: "I am learning Anglo-Saxon and it is a vastly superior thing to what we have now." Auden was similarly moved by his first encounter with Old English: "I was spellbound. This poetry, I knew, was going to be my dish . . . I learned enough to read it, and Anglo-Saxon and Middle English poetry have been

one of my strongest, most lasting influences." This course is an introduction to the language and literature that so captivated Hopkins and Auden, that later inspired Tolkien and Lewis, and that remains the historical and linguistic foundation of English literary studies. Our focus for about half the term will be the grammar of Old English, but from the very beginning we will read from a variety of texts in verse and prose (including riddles, a monastic sign-language manual, and King Alfred's prefatory letter to the Old English translation of Gregory the Great's *Pastoral Care*), and the course will culminate in a focused study of *The Wanderer* and *The Dream of the Rood*. This course may be especially useful for students interested in historical linguistics and the history of the English language, in the Anglo-Saxon foundations of British literature, and in medieval literature in general. Requirements include two exams, a series of grammar quizzes, and a translation project. The final exam will involve a short oral recitation. Graduate students will meet for two extra class periods and will be assigned some additional reading.

MI 40111. Beowulf

(3 -0- 3)

An intensive study of *Beowulf* and the critical literature surrounding it. We will first read the poem in translation, then move slowly through the text in Old English, addressing the key problems and questions that have dominated recent scholarship. Previous experience reading Old English will be necessary. Requirements include regular reading and contribution to class discussion, a lexicography project, a translation exercise, and a research paper.

MI 40123. Beowulf and Heroic Legend

(3 -0- 3)

Beowulf is one of the oldest poems in English, the closest thing we have to a medieval English epic, a literary monument of extraordinary complexity, and a study in heroic behavior that evaluates and problematizes every aspect of the folklore, myth, and legend that it weaves into its narrative. The relationship between *Beowulf* and early medieval heroic legend will be front and center in this course, which will undertake a close reading of the poem set against several comparable exemplars of heroic behavior in neighboring medieval traditions, including the Old English *Battle of Maldon*, the Old High German *Hildebrandslied*, the Old Welsh *Gododdin*, the Latin *Waltharius*, the Old Irish *Táin Bó Cúailnge*, the Old French *Chanson de Roland*, and the Old Icelandic *Hrólfs saga kraka* (all in modern English translation). We'll look carefully at how heroic characters are represented and defined in these texts, and we'll consider the part played by feud, revenge, honor, loyalty, and social bonds and allegiances in constructing a heroic ethos. Weekly response papers, two essays, and a final exam.

MI 40143. Chaucer's Early Poetry

(3 -0- 3) Frese

If Chaucer had never written the *Canterbury Tales* he would still be counted as a major medieval poet whose fictions rank among the most supreme examples of poetic complexity and enduring fascination. In this class we will read some of Chaucer's short lyrics—amorous, ironic, satiric and politically engaged—and his three major 'dream vision' texts: *Book of the Duchess*, an elegy composed to commemorate the death-by-plague of Blanche of Lancaster, the young wife of Chaucer's patron, John of Gaunt; *House of Fame*, a fabulous fable of poetic, personal, philosophical and political satire and reflection; and *Parliament of Fowls*, a joyous combination of erotic, ethical, political & poetic strands that begin in anxiety & conclude in lyrical delight. We will conclude by reading *Troilus & Criseyde*, Chaucer's incomparable retelling of the 'tragedy' of 'star-crossed lovers, set against the mythopoetic backdrop of the Trojan War.

MI 40151. Book Under Suspicion: Censorship and Freedom of Expression in Medieval English Literature

(3 -0- 3)

Late medieval writers operated in a world distressed by social injustice, political oppression and church controversy. Although this period saw the rise of modern English literature itself, it was also a time when starving peasants rebelled against their overlords, knights rode off on crusade amidst anti-war critique, English translations of the Bible were suppressed, women mystics struggled to be heard amidst

gender prejudice, and the king Chaucer worked for was deposed and murdered. This course will examine how the major writers of late medieval England negotiated these troubled waters, writing sometimes candidly and sometimes secretly about dangerous or disturbing matters. Authors to be studied will include Geoffrey Chaucer, William Langland, the Wakefield Master playwright, Julian of Norwich, Margery Kempe, and Marguerite Porete (the only medieval woman author to have been burned at the stake for her writings). The aim is to help illuminate how literary writers sought to defend or enlarge their religious or political orthodoxies in response to the challenges of the time.

MI 40153. Chaucer: *Canterbury Tales*

(3 -0- 3) Kerby-Fulton

Geoffrey Chaucer wrote in a time of great social, political, and religious upheaval, a time in which the stakes of English writing were uncertain. This course examines Chaucer's efforts during that period to create sustained fiction in English through his most ambitious and experimental work, *The Canterbury Tales*. Ultimately, we will find out what earned Chaucer the title "Father of English poetry."

MI 40161. Arthurian Legends

(3 -0- 3)

An examination of the textual traditions surrounding the once-and-future-king, Arthur, through readings of Geoffrey of Monmouth's *History of the Kings of Britain*, Chretien de Troyes' *The Story of the Grail*, *The Quest of the Holy Grail*, selected short fictions from the Welsh *Mabinogion*, Marie de France's *Lais*, *Sir Gawain & the Green Knight*, and selections from Malory's *Morte D'Arthur*, Tennyson's *Idylls of the King*, and T.H. White's *The Once & Future King*.

MI 40180. Medieval Drama

(3 -0- 3) Zieman

This course will examine the performance of drama in England in the era before the establishment of professional theaters. Our starting point will be the actual play texts and records that survive from the Middle Ages. With our primary focus on biblical plays (plays that reenact stories from the bible) and morality plays (allegorical plays that explore the moral framework of humanity), we will pursue a number of questions: Who wrote these plays? Who performed them, how, and for whom? What was their purpose? We will investigate these issues through research and textual analysis, but also through our own experimentation in staging and performing parts of the plays in class. We will then put our knowledge to use in a class project: the mounting of a medieval play for the Notre Dame community. Together we will select the play, edit the text, design costumes, props and sets, all while we consider how and what it means to "translate" these pre-modern plays for a modern audience. Major writing requirements will include a short paper involving textual analysis, a slightly longer research paper on some aspect of medieval dramatic performance, and in-class essays. As mentioned above, the course will involve in-class performances, but this is not a class in performance itself: you will not be graded on your acting ability. All students will be required to contribute in some capacity to our class performance and to reflect on the this project in a short final essay.

MI 40181. Medieval Dreaming/Dream Texts

(3 -0- 3)

Where do our dreams come from? What do they "mean?" How and why do they matter? From ancient times to the contemporary present, the power of dreams to shape public and private experience has commanded the attention of authors writing both sacred and secular texts, with the human experience of dreams figured as crucial. In this class we will read an array of works from the medieval tradition in English where dreams hold a central place in the construction of meaning. Our conversation will be grounded in an initial reading of key selections from two seminal theoretical works on dreams, one medieval; one modern: Freud, *On the Interpretation of Dreams* and Macrobius, *Commentary on the Dream of Scipio*. Subsequent readings will include the account in Bede's *History of the English Church and People* of how Caedmon's "Hymn of Creation"—the earliest surviving piece of poetry written in English—came to be composed by an illiterate cowherd under the inspiration of a dream; the Anglo-Saxon *Dream of the Rood*;

some Middle English lyrics and ballads featuring dream texts; the Gawain-poet's powerful and moving dream-vision, *Pearl*; Chaucer's early *Book of the Duchess*, an elegiac dream vision composed (probably for a memorial service) for Blanche, Duchess of Lancaster and wife of Chaucer's royal patron, John of Gaunt, after her death from plague. We will conclude the semester's readings with selections from the English Arthurian poetic tradition that were influential in Malory's great prose composition, *Le Morte D'Arthur*, followed by close reading of Malory's final book in that great compendium of Arthurian stories—*The Death of Arthur*—where the accumulating burden of portentous dreams, and the failure to "read" them correctly, results in those tragic and apocalyptic scenarios surrounding the death of the "once and future king." Throughout the term, we will be observing connections between biblical and secular traditions of reading and writing dreams and their imaginative entwinement by medieval fictionists. We will also be building an articulate sense of what dreams might have to do with the theory and practice of allegory, a major aesthetic mode of imaginative creation and reader-reception in the Middle Ages.

MI 40194. Readings in Medieval Literature

(3 -0- 3) Frese

In this class we will read nine (9) representative texts that trace and track the formation, and creative development, of literary imagination in the European Middle Ages. All readings will be in Modern English translation. We will begin with one foundational text from each of the three fields of theology (Augustine, *On Christian Doctrine*); philosophy (Boethius, *Consolation of Philosophy*); and literary criticism (Boccaccio, "On Poetry"). Building on these three highly influential master-texts, we will then read a variety of poetic and prose works composed by medieval artists who are named and anonymous, male and female, laity and religious, whose creative range includes the genres of romance; lai; drama; chanson de geste; lyric; dream vision and Norse saga. In addition to the 3 titles, above, by Augustine, Boethius and Boccaccio, our readings will include Chaucer's "Knight's Tale" and *Book of the Duchess*; the *Lais* of Marie de France; *The Song of Roland*; the *Play of Adam* and the great Njal's *Saga*, often identified—on the basis of its striking stylistic compression and acute psychological representations of fatefully intersecting public and personal events—as the ancestor of the modern historical novel. These six (6) fictional titles—individually and collectively—constitute exemplars of both continuity and creative departure that will form the basis of our individual and collective study during the semester. Together, the foundational texts of Augustine, Boethius and Boccaccio + the syllabus of nine fictional readings can be seen as mapping many of the personal and political tensions that attended the emergence and evolution of amorous, social, political, mythic, ethnic, legal, religious and secular strands of culture in England, France, Italy, and Scandinavia between the 5th and 15th centuries. Additionally, while providing a rich, representative introduction to western medieval literary imagination, the class can also supply a sound basis for understanding certain subsequent developments and departures in British and American literary culture. Requirements: Midterm and final exams; class attendance and participation; possible, occasional short quizzes; occasional short supplementary readings. A literary/critical term paper: topic chosen and plan of development submitted in first quarter (for feedback); written and revised in second quarter.

MI 40206. Augustine and Cicero

(3 -0- 3)

Augustine of Hippo is best known and is most intensively studied as the theologian whose *Confessions*, *Commentaries on Genesis*, *Trinity*, *On Christian teaching*, and *City of God* have shaped Christian thinking for centuries, and do so even now. His engagement with classical Greek and Roman authors has also been studied, but much less so. The purpose of this course is to follow Augustine's lifelong interest in the writings of the Roman orator, statesman and philosopher Cicero. It was Cicero who inspired Augustine's early interest in philosophy, and references to Cicero's ethical enquiries in the *Tusculan Disputations* and elsewhere appear frequently in Augustine's writings. He also thought about Cicero the orator when considering the tasks of Christian writers and preachers. Above all, in the

City of God, Augustine responded to Cicero's dialogue *On the nature of the gods*, which in turn conditioned his understanding of Roman history and of the content of human history at large.

MI 40220. The Roman Empire

(3 -0- 3)

This advanced course in ancient history examines the Roman Empire from Augustus to Constantine. It deals with the establishment of the Augustan Principate and the progression of autocracy at Rome in the first two centuries of the imperial age, leading to discussion of what is generally called the third-century crisis and the new monarchy of Diocletian and Constantine. It investigates how the Roman Empire as a geopolitical unit was governed and administered (paying particular attention to the all-powerful figure of the Roman emperor), and how the diverse regional cultures of the greater Mediterranean world were affected by Roman rule. Among topics studied are contemporary debates on Roman society, economy, demography, and culture.

MI 40252. Medieval Nobilities

(3 -0- 3)

This course will introduce students to one of the major areas of historical investigation in Europe since 1945: the evolution and function of the hereditary élites now generally called "nobilities". Although alien to the culture and legal system of the United States, an élite social category of this general type dominated the economic, political, social, and cultural life of every major European people and state throughout and often somewhat beyond the agricultural or pre-industrial era of its history—most commonly to about 1918—and may be seen as a characteristic feature of polities on the levels of chiefdom and agricultural state throughout the world. Thus some understanding of the phenomenon of nobility and its many variant forms is essential to an understanding of the history not only of Europe, but of the civilized world in general before the twentieth century. The course will begin with an examination of both medieval and modern ideas of "nobility" (which designated at once an inherent condition, a legal status, and a social category), the words employed to express those ideas, the ways in which noble status could be acquired and lost, the attributes that might be used to express it (including heraldic emblems), and the approaches taken to the whole phenomenon by social, political, constitutional, and cultural historians of various schools. It will then examine the history of a few of the numerous different nobilities that developed in the countries of Catholic Europe between 400 and 1500, and finally examine what is currently known about such themes as noble privilege, power, wealth, and influence.

MI 40300. Early Medieval Philosophy

(3 -0- 3)

A survey of medieval philosophical literature from ca. 400 to ca. 1200 based on original texts. We shall review the most well known authors and works in the first instance: Augustine (*Soliloquies*, *De Libero Arbitrio*, *Confessions*), Boethius (*Opuscula Sacra*, *De Consolatione Philosophiae*, logical works), Eriugena (*Periphyseon*), Anselm of Canterbury (*Monologion*, *Proslogion*), the "School of Chartres" (*Commentaries on Boethius*). However, considerable emphasis will be placed on major traditions ignored by earlier histories of medieval philosophy: glossing of Plato Latinus, Aristotles Latinus, Macrobius, and Martianus Capella.

MI 40320. Introduction to Plotinus

(3 -0- 3)

A study of Plotinus' *Enneads* in which a close reading of selected texts roughly in their chronological order will be interspersed with commentary on their historical and philosophical background. After an introduction based on Porphyry's *Life of Plotinus*, we will read a selection of earlier treatises (including I. 6, V. 9, V. 1, and VI. 9), a selection of writings from the author's middle period (concentrating on III. 8, V. 8, V. 5, and II. 9), and a selection of later texts (including III. 2-3, I. 8, and VI. 8). Since the texts will be read in the English translation of A.H. Armstrong, knowledge of Greek is an advantage but not a necessity. Written requirement: one final paper of about 20 pages.

MI 40321. Boethius's *De Consolatione Philosophiae*: Construction and Deconstruction

(3 -0- 3)

Boethius's *De Consolatione Philosophiae* is perhaps one of the few texts of late antiquity that can truly be said to have equal importance for philosophical and literary studies. Boethius here presented a compelling digest of late ancient philosophy in general and especially of the harmony of Platonism and Aristotelianism. In so doing, he explored a variety of literary genres and topics in both prose and verse. Perhaps most remarkably, he produced a document that is ambiguous enough to have stimulated and to continue to stimulate a variety of creative readings. The aims of this course are threefold: 1) to introduce the work as a philosophical and literary artifact within its historical context and initiate the study of its sources and influences; 2) to test to destruction the limits of the hermeneutic flexibility that it seems to invite; and 3) to examine the epistemological and methodological issues raised by the tension between aims 1 and 2. The course is designed for students both with and without a mastery of Latin. Requirements: one final essay of about twenty pages (chosen by the student in consultation with the instructor) either on Boethius himself or on the repercussions of his thought in later philosophy and literature.

MI 40322. Founders of the Middle Ages

(3 -0- 3) Gersh

The course will introduce the work of four Christian writers of late antiquity who can be considered as foundational with respect to the early medieval understanding of the relation between the trivium and quadrivium and biblical study, and therefore to the early medieval approach to the intellectual life in general. We will take a predominantly historical and biographical approach in order to examine the life, sources, works, and ideas of Augustine, Boethius, Cassiodorus, and Isidore of Seville by means of selected readings in Latin and in English translation. Using similar methods, we will also look more briefly at the influence of the four writers on certain later figures such as Bede and Alcuin who were themselves foundational with respect to medieval pedagogy. Although some of the textual materials will be read in class in the original language, demonstrable knowledge of Latin will not be required in order to take the course. Requirements: one oral presentation and one final paper of about 20 pages, these two projects being either related to or independent of one another.

MI 40325. Anselm and His Biographer

(3 -0- 3)

The course will be of a philosophical-theological, historical, and literary-philosophical nature. It will also have two more specific aims: 1) to introduce the philosophical work of Anselm of Canterbury, and investigate some of its sources and influences during the Middle Ages, and 2) to pursue Latin readings in works by Anselm himself, and in works by other medieval writers about Anselm. One session of each week will be devoted to Latin reading. Students will be required to prepare a Latin text for oral translation and be prepared to comment on philological issues. Texts will be distributed in advance by the instructor. The second session of the week will be devoted to lectures on Anselm and his milieu by the instructor, although students will be required to make a short oral presentation on a topic of their choice but approved by the instructor towards the end of the semester. Requirement: competence in Classical Latin (intermediate or advanced level).

MI 40330. The Philosophy of Augustine

(3 -0- 3) Gersh

The course is intended as an introduction to Augustine's work from the philosophical viewpoint, although necessarily certain theological questions will also be examined. The emphasis will fall partly on the reading of selected texts (in English translation) beginning with dialogues of Cassiciacum such as *Against the Academics*, *On Order*, *Soliloquies*, *On the Teacher*, continuing with *On the Quantity of the Soul*, *On Music*, *On the Immortality of the Soul*, *On Free Choice of the Will*, and concluding with *The City of God*. The course will also identify certain philosophical themes as particularly worthy of discussion, including Augustine's ideas

about the nature of God, his theories of knowledge and language, and his notions of the relations between good and evil, providence and free will. Requirement: one final paper (about 20 pages) and an oral book report.

MI 40332. Augustine on Thinking and Language

(3 -0- 3)

As indicated by autobiographical references in the *Confessions*, an understanding of the nature and function of language, from the simplest notions of orthography to the most subtle and complex aspects of hermeneutics, was always a central issue in Augustine's thought. Our course on the Augustinian philosophy of language, which will be based on a close reading of selected texts or parts of texts in English translation (but always with an eye on the original Latin), will be divided into three segments in accordance with the philosopher's own development from the liberal arts, through Platonic philosophy, to Biblical exegesis: 1) The human languages: Grammar and Rhetoric (with readings of *De Dialectica*, *De Magistro*, *De Doctrina Christiana*); 2) Language, Logic (Dialectic), and Ontology (with readings of *Contra Academicos*, *De Ordine*, *De Immortalitate Animae*, *De Quantitate Animae*); and 3) The divine and human Words (with readings of *Confessions* and *De Trinitate*). Requirements: two brief oral reports and a final written paper (about 20 pages).

MI 40340. Aquinas on God

(3 -0- 3)

A close reading of the first forty-three questions of the first book of the *Summa Theologiae*. These questions, which deal both with the divine essence and with the three divine persons, provide a comprehensive survey of St. Thomas's *Metaphysics*.

MI 40361. Plato Christianus

(3 -0- 3)

This course is designed as an introduction to the philosophy of Plato, the "Platonism" (i.e., Middle Platonism, Neoplatonism) of antiquity, the transformation of Platonism by the Greek and Latin Church Fathers, and the medieval and Renaissance traditions derived from the above. In the first half of the semester, we shall survey the tradition as a whole and deal with a variety of general questions. However, particular attention will be given to two fundamental hermeneutic criteria employed by the followers of this tradition: namely, "radical selectivity" and "philosophical allegorization." In the second half of the semester, two specific texts that have arguably set the pattern for the Latin and Greek intellectual traditions respectively will be studied in more detail: Augustine's *On the City of God* and the works of Pseudo-Dionysius the Areopagite. The course is intended to be accessible to students without knowledge of Latin or Greek. Requirement: one final paper of approximately 20 pages.

MI 40367. Medieval and Renaissance Platonism

(3 -0- 3)

This course aims to study the transition between medieval and Renaissance philosophy with special reference to the Platonic tradition. In order to achieve this aim, we will focus on a small group of central figures and study some of their works in detail. Texts to be studied in whole or part will include Nicholas of Cusa: *On Learned Ignorance*, *On the Beryl*, *On the Vision of God*, Marsilio Ficino: *Platonic Theology*, *On Love*, *On Plato's Phaedrus*, and Giovanni Pico della Mirandola, *On the Dignity of Man*, *On being and unity*, *Heptaplus*. We will study not only the general question of the impact of Humanism on the scholastic method of the Middle Ages but also such more specific questions as the expansion of the "Platonic" corpus and the new viewpoints on the history of philosophy. Knowledge of Latin will be helpful but not essential (since all above texts are available in English). Written requirement: one final paper of about 20 pages.

MI 40369. Medieval Negative Theology

(3 -0- 3)

The course will begin by examining the historical background in ancient and later ancient philosophy (Plato, the Neopythagoreans, the Neoplatonists) of the theological and philosophical method which later became known as "negative theology." Having extracted a kind of definition from the historical survey, we will look at four major figures of the early Christian and medieval periods in greater

detail, reading selected works or parts of works in English translation but also paying attention to the original Latin (or Greek). The authors and works will be: 1) Pseudo-Dionysius the Areopagite (*On Divine Names*, *On Mystical Theology*, *On the Celestial Hierarchy*), 2) Iohannes Scottus Eriugena (*Periphyseon*, books I-III), 3) Meister Eckhart (*Parisian Questions*, selections from biblical commentaries, selected German and Latin sermons), 4) Nicholas of Cusa (*On Learned Ignorance*, books I-II, *On the Vision of God*). The last part of the course will consist of a brief survey of the many other medieval writers who used the negative method, and also some notes on its influence in the Renaissance and later times. Knowledge of Latin will be useful but not necessary for the course. Written requirement: one final paper of about 20 pages.

MI 40373. Philosophy and Humanism in the Twelfth Century

(3 -0- 3)

The course will concentrate on the writings of a group of French thinkers—Bernard of Chartres, William of Conches, Thierry of Chartres, Clarembald of Arras, and Bernard Silvestris (often known collectively as "The School of Chartres") who exemplify the combination of philosophical and literary interests that is perhaps unique to the first half of the twelfth century. We will consider the texts not only in themselves but in relation to the Latin writers of late antiquity (Calcidius, Macrobius, Martianus Capella, and Boethius) whose influence formed the philosophical-humanist mentality. Knowledge of Latin is desirable for this course. Written requirement: one final paper of about 20 pages.

MI 40374. Hermeneutics: Ancient and Modern

(3 -0- 3) Gersh

The course will be a study of general hermeneutics (with special reference also to philosophical-theological and literary hermeneutics) through the staging of an encounter between classic texts dealing with this subject from the late ancient period and from the twentieth century respectively. From the earlier time-period the texts will include Origen: *On First Principles*, book IV, Augustine: *On Christian Teaching*, *On the Literal Interpretation of Genesis*, books I-IV, and Proclus (selections from exegetical works dealing with Homer and Plato); from the later time-period, Heidegger: *Being and Time*, introduction, *Elucidations of Holderlin's Poetry*, Gadamer: *Truth and Method*, Derrida: *Of Grammatology*, *Dissemination*. In addition to studying the texts carefully—the first requirement of an exegete—we will consider such questions as: Is a "non-hermeneutic" view of reality possible?; What is the difference between philosophical-theological and literary hermeneutics?; What is the relation between translation and hermeneutics?; Can one have a theory of hermeneutics independent of its practice. Requirement: one final paper of about 20 pages.

MI 40407. Introduction to the Early Church

(3 -0- 3)

This course offers a basic introduction to the theology and life of the early Church from the second to the fifth centuries. Special emphasis is given to the development of doctrine, the development of a spiritual theology, and the shape of the lives of Christians both ordinary and extraordinary.

MI 40429. Spiritual Masters: Early Christianity

(3 -0- 3) Young

An examination, through primary sources and selected interpretive studies, of the lives and works of ten accomplished male and female guides to the life of prayer and contemplation. The class will study their social contexts, sources and disciples as well as their formation in communal worship. Requirements: attentive reading and note-taking on each author, with notes submitted bi-weekly; one paper; one in-class presentation.

MI 40433. Augustine

(3 -0- 3)

Augustine of Hippo was arguably the most influential theological thinker in the history of western Christianity. A brilliant professional rhetorician and a profound student of Neoplatonic philosophy, Augustine brought his gifts and training to the service of the Church when he was baptized, after a long struggle of faith, in 387. Yet perhaps because of his gifts, he was always surrounded by controversy,

and has remained so down to the present—appearing to many to be responsible for some of the main shortcomings of the Church's theology and practice, even as his writings largely set the agenda for later theological discussion in the West. In this course, we will read a representative sample of his major works—some of his early philosophical treatises, the *Confessions*, his homilies on I John and on some of the Psalms, some of his controversial works on grace and human freedom, and parts of *On Christian Teaching*, *On the Trinity*, and *On the City of God*. Our goal will be to discover Augustine's characteristic blend of exegesis, pastoral concern, philosophical speculation, and spirituality, and to let it challenge and nourish our own reflective faith.

MI 40442. Thomas Aquinas and the Pursuit of Wisdom

(3 -0- 3) Wawrykow

This course offers an orientation to the theology of Thomas Aquinas through his account of “wisdom,” which in Thomas refers to the contemplation of divine things and the ordering of all else in that light. The theme of “wisdom” threads its way through the entire range of Thomas's theology, and attention to “wisdom” will make clear many of Thomas's most important convictions about the nature of the theological enterprise; the interrelated doctrines of God, and, of Christ; and, the specific character of Christian discipleship.

MI 40453. Three Twelfth-Century Cistercians

(3 -0- 3)

Contemporaries of one another, Bernard of Clairvaux (1090–1153), William of St. Thierry (1085–1148), and Aelred of Rievaulx (1110–1167) each contributed with passion and genius to the great twelfth-century Cistercian reform of Benedictine spirituality. They did so in complementary ways, reflecting their unique temperaments, backgrounds, geographic surroundings, mystical experiences, and missions. In this course we will read the principle writings of each, comparing and contrasting their approaches to the central Cistercian themes of self-knowledge, charity, and reform (personal and communal). Emphasis will be placed on their common engagement with Augustinian theology and their novel insights into its richness as a mystical way.

MI 40474. Sacramental Mystery in Medieval Theology

(3 -0- 3) Avvakumov

The course will provide an overview of the history of sacramental theology in the Middle Ages, on the basis of the reading of primary texts. We shall start from St. Augustine's ideas on the sacraments and follow the formation of the a systematic treatise on the sacraments in the Early Scholasticism of the 12th century. Special attention will be given to the most important theologians of the High Scholastic period, such as Thomas Aquinas, Bonaventure, and Duns Scotus. The students will also be introduced to the main personalities of the Byzantine theological interpretation of the liturgy, ritual and mysteries of the church, in particular Nicolaos Cabasilas and Symeon of Thessalonike.

MI 40479. Prayer and Mysticism

(3 -0- 3)

Prayer, for religious people, is the central activity in which faith becomes the personal focus of consciousness; mysticism usually means a type of prayer, or prayerful relationship to God, that leads the believer beyond the normal boundaries of consciousness and unites him or her to God in a way that transcends the limits of the self. In this course, we will reflect on representative works on prayer and mysticism from the whole history of Christian thought, from Origen, Gregory of Nyssa, and Dionysius the Areopagite in the early Church, through Gregory Palamas, Julian of Norwich and *The Cloud of Unknowing* in the Middle Ages, to Teresa of Avila and John of the Cross in the early modern period, and more recently to Therese of Lisieux, Pierre Teilhard de Chardin, and Hans Urs von Balthasar. We will be asking how the discipline and the grace of prayer transforms the human heart and mind, allowing it to experience personally the presence of God who is beyond understanding, but who has experienced our own limitations in Christ and through him has taught us how to pray.

MI 40481. Mysticism and Morality

(3 -0- 3)

Is mysticism (variously described as the presence of God, a direct experience of God, a consciousness of God, or pure love of God) the culmination of the moral life or its true beginning? To what extent should our moral decisions be guided by our personal experiences of the divine? Given the frequent appeals that thoughtful Christians make to the judgments of conscience, how if at all can we distinguish between the true voice of God in the human heart and self-consoling delusion? Are those who claim to have had, and write sweetly about, an “experience” of God real guides to be trusted by the Christian community or are they dangerous spiritual individualists who threaten the coherent moral witness of the Church? How, if at all, are we to reconcile the teachings of Christian mystical writers with the sacramental life of the Church and the cultivation of Christian virtue? Is a life of intense asceticism, or even an explicitly Christian faith, necessary for mystical knowledge? We will examine these and other questions in the four parts of the course: 1) Maps of the Soul (through a comparison of Augustine's *Confessions* and Teresa of Avila's *Interior Castle*), 2) Reasons of the Soul (through a comparison of Bonaventure's *Journey of the Mind into God* and Marguerite Porete's *Mirror of Simple Souls*), 3) Loves of the Soul (through a comparison of Catherine of Siena's *Dialogue* and Ignatius of Loyola's *Spiritual Exercises*, and 4) Questions of the Soul (through a comparison of Simone Weil's *Waiting for God* and *The Dark Night of the Soul* by John of the Cross). Course requirements include two class presentations and a final paper comparing two of the authors examined during the semester.

MI 40491. The Holy Land

(3 -0- 3)

This course will investigate the manner in which Christians and Muslims through the centuries have understood the religious dimension of Palestine, and of Jerusalem in particular. In the first section of the course we will analyze classical religious texts, including: the New Testament prophecies of Jerusalem's destruction; the narratives surrounding Saint Helen's recovery of the true Cross and sacred relics; the traditions of Muhammad's night journey to Jerusalem, and Muslim narratives on the conquest of Palestine and the construction of the Dome of the Rock. In the second section of the course we will turn to the memories and visions of individual believers, such as the descriptions of medieval Muslim geographers, the travelogues of European Christian pilgrims, the writings of Eastern Orthodox monks of the Palestinian desert, and the popular religious pamphlets and web sites of the Muslim and Christian faithful today.

MI 40502. Renaissance and Baroque Poetry of Spain

(3 -0- 3) Juarez-Almendros

A close reading of traditional and Italianate poetry that includes villancicos, romances, and the works of Garcilaso de la Vega, Fray Luis de Leon, San Juan de la Cruz, Gongora, Quevedo, and Sor Juana Ines de la Cruz.

MI 40504. Cervantes: *Don Quixote*

(3 -0- 3)

A close reading of Cervantes' novel in relation to the prose tradition of the Renaissance: novella, the pastoral romance, the romance of chivalry, the humanist dialogue, and the picaresque novel. We will also pay attention to the historical, social, and cultural context of the work. Students in this seminar must participate actively in class discussions. Each student will be required to make a presentation (15 minutes) upon the subject of his/her term paper. The term paper, of approximately 8–10 pages, will be on a topic individually agreed upon and discussed by each student with the instructor. No prior knowledge of Cervantes is necessary to take this course, but a solid knowledge of Spanish is required.

MI 40505. The Picaresque Novel

(3 -0- 3)

An introduction to a unique Spanish genre, the picaresque novel, or literature of the delinquent, with major focus on the Spanish Golden Age masterpieces: *Lazarillo de Tormes*, *Guzman de Alfarache*, and *El Buscon*.

MI 40509. Spanish Golden Age Short Novel

(3 -0- 3)

A close reading of traditional peninsular narratives.

MI 40510. Picaresque and Golden Age Autobiography

(3 -0- 3)

A study of major themes, structure and discursive models that give literary shape to autobiographical narratives in early modern Spanish literature. Works to be read in this course include Lazarillo de Tormes, Santa Teresa de Jesús' *Libro de la Vida*, Guzmán de Alfarache, El Buscón, Alonso de Contreras' *Discurso de mi vida*, *Vida i sucesos de la Monja Alférez*, and some selections by Cervantes. Active student participation in the analysis and discussion of the texts is required. The class will be conducted in Spanish.

MI 40531. Introduction to Old French

(3 -0- 3)

This course is designed to be an introduction to the language and dialects of medieval France, including Anglo-Norman. Readings will include texts written between the 12th and the 14th centuries, such as the *Lais* of Marie de France, trouvère poetry, the prose Lancelot, Machaut, and Froissart.

MI 40532. From Roland to the Holy Grail

(3 -0- 3)

This is a survey of medieval French literature from 1100 to 1300, including the epic, the romance, drama, and poetry.

MI 40533. Life, Love, and Literature in Renaissance Lyons

(3 -0- 3)

The city of Lyons was a cultural center of Renaissance France. This course will focus on the literature that arose from that location, most especially (but not exclusively) the love poetry of three French Renaissance lyricists: Maurice Scève's *Délie*, the *Rymes* of Pernette Du Guillet, and the *Oeuvres Poétiques* of Louise Labé. Excerpts from other authors associated with Lyons, including Rabelais, Marot, and Du Bellay will also be treated. This course will take a "cultural studies" approach, and students will be expected to work on topics such as the presence of Italians, royal pageantry and celebrations, the presence of the court, industry, fairs, banking and trade, architecture, art and music, intellectual circles, and the Reformation in the city of Lyons. Special attention will be given to the role of women in Lyonnais society and the *Querelle des Amyes* generated in that city. This course will be taught in French. ROFR 30310 (Textual Analysis) or prior experience with textual analysis highly recommended. NOTE: If there is sufficient interest, it may be possible to arrange a "field trip" to Lyons over spring break. Please contact the professor immediately if you have an interest in pursuing this possibility.

MI 40538. La femme à la Renaissance

(3 -0- 3)

This course will consider the image of women in the works of Renaissance male writers as well as the literary production of women in Renaissance France. Authors to be discussed include Jeanne Flore, Hélienne de Crennes, Marguerite de Navarre, Louise Labé, and Pernette Du Guillet. Taught in French.

MI 40541. Music and Lyrics of the French Renaissance

(3 -0- 3)

This course constitutes a survey of French Renaissance poetry on various topics: love, religion, politics, social satire, etc. Special attention is given to poetry that was set to music at that time.

MI 40552. Dante I

(3 -0- 3)

An in-depth study, over two semesters, of the entire *Comedy*, in its historical, philosophical, and literary context, with selected reading from the minor works (e.g., *Vita Nuova*, *Convivio*, *De vulgari eloquentia*). Lectures and discussion in English; the text will be read in the original with facing-page translation. Students may take one semester or both, in either order.

MI 40553. Dante II

(3 -0- 3) Moevs

An in-depth study, over two semesters, of the entire *Comedy*, in its historical, philosophical and literary context, with selected readings from the minor works (e.g., *Vita Nuova*, *Convivio*, *De vulgari eloquentia*). Lectures and discussion in English; the text will be read in the original with facing-page translation. Students may take one semester or both, in either order.

MI 40564. Machiavelli NOW

(3 -0- 3)

In this seminar we will approach Machiavelli through the careful study of his major works, read against the background of the political crisis of the Italian Renaissance, and with particular attention to their resonance for subsequent political analyses of the condition of modernity. Reading will include: *On the method of dealing with the Rebellious Peoples of Valdichiana*; *A Description of the Methods Adopted by the Duke Valentino when Murdering Vitellozzo Vitelli, Oliverotto da Fermo, the Signor Pagolo, and the Duke di Gravina Orsini*, *The Prince*, *Mandragola*, *Belfagor*, *the Discourses on the First Decade of Livy*, and the *Dialogue on the Language*. The course will be offered in English.

MI 40581. Renaissance Woman

(3 -0- 3)

This course is designed as an introduction to the study of women and literature of the Renaissance period in Europe. It will treat the subject of the "Renaissance woman" in three ways. First, there will be a brief historical overview of the condition of women of different social classes during this period, focusing on topics such as their education, the role of marriage, and the convent as an alternative to married life. Secondly, it will survey how women were viewed in the literature written by men in various European countries. Here we shall read excerpts from Dante and the courtly love tradition, Petrarch and the Petrarchists, Shakespeare, and Rabelais, among others. We shall also consider the portrayal of women in artistic works of this time, comparing this to their literary representation. Next, we shall study the literature created by women during the Renaissance in Europe. During this part of the course, we shall consider some of the problems generated by women's writing, using Virginia Woolf's *A Room of One's Own* as a point of departure for our discussions. At the end of the course, we will resume our study of the image of woman in the Renaissance by reading a modern play set at that time (Peter Whelan's *The Herbal Bed* on the trial of Shakespeare's daughter) that treats some of the issues facing women at that time. All foreign texts will be read in English translation.

MI 40584. Between Religion and Literature: Meaning, Vulnerability, and Human Existence

(3 -0- 3)

This course explores the contribution that the coming together of theological and literary reflection can make to our understanding of the nature of meaning. Focusing on the work of Augustine, Aquinas, Dante, Primo Levi, Dostoevsky and Shakespeare, students will address questions such as: What is it we are doing when speaking, reading, using language? How do the intellect and the imagination work in relation to literary texts? How might all this relate to our ways of thinking about God, human nature, and the relationship between them? Such questions will be addressed, in particular, through reflection on how the texts studied invite us to think about the nature of love, forgiveness, vulnerability and creativity.

MI 40632. Medieval Latin Survey

(3 -0- 3) Bloomer

The aim of this course is to experience a broad spectrum of Medieval Latin texts. Readings representative of a variety of genres (literary and subliterary), eras, and regions will be selected. Students planning to enroll in this course should be completing Introduction to Christian Latin Texts or they must secure the permission of the instructor.

MI 40636. Augustine and the *City of God*

(3 -0- 3)

The aim of the course is to gain a detailed understanding of one of the world's important works of historical and political theology. Writing in response to the destruction of the City of Rome by Visigothic invaders in A.D. 410, Augustine devoted the first half of this "long and difficult work" to a refutation of Roman religion and ancient philosophy (Books I–X). In the second half (Books XI–XXII) he explained what he meant by City of God and Terrestrial City and traced the evolution through time of the two cities in relation to each other. We will study the *City of God* in light of the sources Augustine engaged with. For the first part, these include the philosophers Plato, Apuleius, Plotinus, and Porphyry; the historians Sallust and Livy; and also the statesman Cicero and the poet Vergil. In the second part, Augustine builds on biblical theology, history, and chronology. To conclude, we will devote some time to the influence of this very long book. It will be studied in English, but those with viable Latin will be encouraged to use it.

MI 40665. The Family in Muslim Societies

(3 -0- 3)

Prerequisite: MEAR 14105 or MEAR 14106 or MEAR 20004 or MEAR 30005 or MEAR 30006 or MEAR 30007 or MEAR 34008 or MEAR 40007 or MEAR 40008 or MEAR 40025 or MEAR 40026

High rates of divorce, often taken to be a modern and western phenomenon, were also typical of pre-modern Muslim societies. How was that possible, insofar as "Marriage is half [fulfillment of one's] religious duties," as the Prophet Muhammad once famously dictated? What, then, is the Islamic ideal of marriage? What were the patriarchal models advocated by medieval Muslim jurists and moralists? Did the historical reality of marriage and family life in the Islamic Near East have anything in common with these models? Do the assumptions about the legal inferiority of Muslim women and their economic dependence on men hold truth? These are the questions this course will try to address. To that end, we will read and discuss a wide range of primary sources (all in English translation)—the Koran and Hadith (Muhammad's saying and deeds), legal writings, narrative (chronicles, belles-lettres) sources, and documentary (archives, contracts) materials' as well as recent scholarship on the subject. While our theoretical framework is that of social history, we will also pay close attention to intimate accounts of, and reflections on, individual medieval lives. We will conduct case studies as for group projects. While the focus is on the Islamic Near East (700–1500), we will extend our inquiry to include the modern Middle East as well. *Prerequisites:* Two years of college Arabic or by instructor's permission.

MI 40670. The Irish in Their Own Words

(3 -0- 3)

This course is designed as an introduction to the literature of medieval Ireland. The manner in which such texts shed light on the nature of medieval Irish society will be examined.

MI 40724. High Renaissance in Rome and Florence

(3 -0- 3) Coleman

This course will focus on the major artistic developments in Rome and Florence from 1480 to 1520. We will begin with the revolutionary works of Leonardo da Vinci in Florence and Milan, and will return to Florence to witness the emerging geniuses of Michelangelo and Raphael. In Rome during the pontificates of Julius II and Leo X, Bramante, Michelangelo and Raphael will reach full maturity with their papal projects as in the radical new design for St. Peter's, Pope Julius' Tomb, the fresco and tapestry decorations for the Sistine Chapel, and the frescoes in the papal apartments in the Vatican Palace. Additional discussion will be devoted to the artistic achievements of such artists as Andrea del Sarto, Luca Signorelli, Andrea and Jacopo Sansovino, and Sebastiano del Piombo.

MI 40725. Fifteenth-Century Italian Renaissance Art

(3 -0- 3)

This course investigates the century most fully identified with the Early Renaissance in Italy. Individual works by artists such as Brunelleschi, Donatello, Ghiberti, Botticelli, and Alberti are set into their social, political, and religious

context. Special attention is paid to topics such as the origins of art theory, art and audience, Medician patronage, and art for the Renaissance courts of northern Italy and Naples.

MI 40784. Vocal Sacred Music II

(3 -0- 3)

Vocal Sacred Music II is devoted to Renaissance polyphony (ca. 1400–1600). The course will cover matters of liturgy, performance practice, musical forms, notation, sources, and major composers. The course is open to upper-class music majors and graduate students in the Medieval Institute and Master of Sacred Music Program.

MI 40786. Getting Medieval: Music and Technology in the Latin Middle Ages (800–1400)

(3 -0- 3)

Napster would never have been sued in the Middle Ages. Rather the culture embraced song, singing, and the free transmission of music in as many ways as possible. Music that was transmitted survived! This course is about how music was recorded, changing modes of transmission, and the interactions between the performer, the notator, the poet/dramatist and the scholar. How did media shape the messages of music? We begin in around 800, when a new technology slowly began to transform cultures of song in the West, to around 1400, when a system for recording music was fully developed that has been primary until the twentieth century. In the first half of the course, we study manuscripts and musical repertory from before, during and after the monumental changes of the Carolingian period. Students will sharpen their quills and prepare transcriptions for us to use; expertise in a variety of subjects will be well-received, from composition and music theory, to music performance, to Latin studies, history, and liturgics. A class project at mid-term will involve the reconstruction of a medieval Vespers service from the manuscripts we have been studying, singing antiphons by the nun Hildegard of Bingen, and working with manuscripts from the Rhineland, including one source that is the closest extant to Hildegard's own monastery as well as those prepared in her scriptorium. The second half of the course will focus on rhythm, music and poetry, and dramatic and narrative structures, ending with the performance of a liturgical drama, the scale of which will depend upon the numbers of students in the course, and their proclivities. We will examine dramatic musical works in their ritual contexts, from the Christmas cycle, to the Beauvais Play of Daniel, to saints' plays, to a range of Easter dramas. There will be an emphasis on the great "Fleury Playbook," the Circumcision office from Beauvais, and a satirical review from the 14th century, the *Roman de Fauvel*, starring a donkey who represents the seven deadly sins. All these musical works will be studied from original manuscripts. The course is open to graduate and professional students, as well as to undergraduates, and work will be geared to particular interests and abilities. The inter-disciplinary nature of the subject precludes prerequisites; all are welcome. The instructor's textbook on medieval music (WWNorton, 2011) will be given a test-drive in this course.

MI 40806. Early English Theatre

(3 -0- 3)

This course focuses on English theatre during the two-century "run" from ca. 1350–1576 of the great civic religious dramas known as cycle plays, which depict the breadth of cosmic and human history from the Creation to Doomsday. The study of drama and theatre of this period will help to establish the context for Shakespeare and his contemporaries by examining not only the surviving plays but also the sources that provide external evidence of drama, secular music, and other communal entertainment and ceremony.

MI 40809. Archaeology of Religion

(3 -0- 3)

Religion and ritual have been part of humanity since the Upper Paleolithic and possibly earlier. In this class, we will use the archaeological record to explore the deep history, richness, and diversity of religious practice throughout the world. The first issue to grapple with is the extent to which we can learn about religion through material culture and how this perspective adds to our understanding of the role religion plays in the human experience, how religions are organized, and how they change through time. These issues will be explored using examples from

the Upper Paleolithic, Egypt, U.S. Southwest, Maya, and the Andes, to name a few, and we will also investigate the origins of Christianity, Islam, Hinduism, Judaism, and Buddhism.

MI 43001. Senior Seminar: Medieval Studies

(3 -0- 3)

Required for a major in Medieval Studies, the advanced seminar presents students with an issue of multidisciplinary significance to scholars of the Middle Ages and asks them to analyze the topic from a variety of viewpoints. The analysis requires extensive primary source readings as well as a review of secondary source literature. Thoughtful class discussion encourages more detailed individual exploration in the form of a substantial research paper on a topic selected in consultation with the instructor. The goal of the seminar is to engage students in thinking critically and knowledgeably across the boundaries of traditional disciplines while maintaining a focus on a particular time, place, or issue.

MI 43285. Knighthood and Chivalry in Medieval Europe, 750–1625

(3 -0- 3)

This course introduces students to the history of knighthood (the status of noble heavy cavalryman) and chivalry (the distinctive ethos and code of the knightly class) from their emergence in Western Europe between 950 and 1180 through their apogee between 1180 and 1380 to their slow decline between 1380 and 1625 (and their revival in the 19th century). It will deal first with the knight as warrior, vassal, and monk (in the religious orders of knighthood), then with the knight as nobleman and landowner, and finally with the knight as courtier and civil servant in the emerging state. It will next proceed to an examination of knightly games, festivals, and iconography, and conclude with a look at the survival and revival of chivalry in the post-Gothic period.

MI 43295. Seminar: Travel in the Middle Ages and Beyond

(3 -0- 3)

Many familiar events (from Exodus, to the voyages of Columbus, the Crusades, or the American Gold Rush) can be seen as examples of travel in history. This seminar will examine the phenomenon of travel, and will look at different types of travelers, including soldiers, pilgrims, explorers, missionaries, adventurers, and merchants. We will concentrate on the medieval period (500–1500 C.E.), but will also consider travel in other periods. The chronological scope of the course will be broad in order to trace changing perceptions of the world from the early Middle Ages up through the voyages of Marco Polo and Christopher Columbus. We will read the writings of Christian, Jewish, and Muslim travelers, and will discuss the differing motives, interests, and concerns of these itinerant men and women. We will also discuss the evolution of cartography, and shifting views of the world as revealed in early maps. The course will cover the technical aspects of medieval travel, with a discussion of roads, bridges, inns, overland transport, and shipping. We will also consider less physical aspects of travel and the ways in which medieval writers employed the metaphor of travel in different genres of literature such as the epic quest and accounts of spiritual journeys. Students will write a research paper based on primary sources broadly concerned with issues of travel in a historical period of their choice.

MI 43303. The History of Medieval Philosophy

(3 -0- 3)

A semester-long course focusing on the history of medieval philosophy. It provides a more in-depth consideration of this period than is allowed in PHIL 30301, Ancient and Medieval Philosophy and may be considered a follow-up to that course.

MI 43326. St. Anselm's Philosophy/Theology

(3 -0- 3)

An examination of the major philosophical and theological writings of St. Anselm. His *Monologion*, *Proslogion*, and *Cur Deus Homo* will be of central concern, but several lesser known texts will also be read. Topics discussed in these writings include arguments for the existence of God, the divine nature, the Trinity, the Incarnation, freedom (and its compatibility with divine foreknowledge), and truth.

MI 43333. Augustine's *Confessions*

(3 -0- 3)

A close reading of Augustine's *Confessions* from a primarily philosophical perspective. It will consider the themes of Faith and Reason, Human Nature, Memory, Understanding and Love, Time and God in Augustine's quest for self understanding and wisdom.

MI 43341. Aquinas's Philosophy and Theology

(3 -0- 3)

A close examination of the philosophical arguments within the first thirteen questions of Aquinas' *Summa Theologiae*, including arguments about the distinction between philosophy and Sacred Theology, the existence of a god, divine simplicity, divine perfection, divine goodness, divine infinity, divine immutability, divine eternity, divine unity, how God is known by us, and how God is spoken about by us.

MI 43343. Aquinas on Human Nature

(3 -0- 3)

A close study of St. Thomas Aquinas's philosophical anthropology, based on questions 75–101 of the First Part of the *Summa Theologiae*. Some topics include: the human soul and its powers, the sentient appetite, higher human cognition and willing, and the production of the first human beings in the state of innocence.

MI 43345. The Ethics of Thomas Aquinas

(3 -0- 3)

A systematic discussion of the main features of the moral teaching of Thomas Aquinas. The *Summa Theologiae*, *Prima Secundae* and Aquinas's commentary on the Nichomachean ethics will be the principal sources.

MI 43346. The Philosophy of Thomas Aquinas

(3 -0- 3)

The course surveys the principal themes of Aquinas's philosophy, focusing on close readings of relevant texts.

MI 43347. Aquinas on Virtue and Law

(3 -0- 3) O'Callaghan

A close study of virtue and law, and of their relation to one another, in the moral theory of St. Thomas Aquinas, as laid out in the First Part of the Second Part of the *Summa Theologiae*.

MI 43375. Aquinas and Scotus: Rival Catholic Thinkers

(3 -0- 3) Cross

This course will cover some of the key points in the philosophical and theological thought of Thomas Aquinas and Duns Scotus, focusing on ways in which their systems contrast with each other on many significant issues. Topics to be discussed will include philosophical ones (some or all of the following: universals and individuation; identity and distinction; essence and existence; univocity and analogy; body and soul; cognitive theory; the freedom of the will; the grounding of the moral law; the existence and nature of God) and theological ones (some or all of the following: Trinity; Christology [hypostatic union and Christocentrism]; grace; sacraments). The texts will be studied in English, when necessary in translations provided by the instructor.

MI 43428. Early Christian Latin Texts

(3 -0- 3)

A close reading of Latin Patristic Texts with attention not only to grammar and syntax but also to their historical context and theological significance.

MI 43499. Joint Seminar in Philosophy and Theology: Augustine

(3 -0- 3)

A close reading and analysis of the some of the more important works of Augustine of Hippo (+430), whose influence on subsequent Western intellectual history has had very few rivals. Particular attention will be paid to questions of faith and reason, God and the soul, and the human person in the light of grace.

MI 43583. King Arthur in European Literature

(3 -0- 3)

We will read representative works chosen from the major medieval European literary traditions, including, for example Latin (Geoffrey of Monmouth), English (Lawman, Malory), French (Chrétien de Troyes, the Vulgate Cycle), Spanish (*La Tragedia de Lançolot, Tristán*), German (Hartmann von Aue, Gottfried von Strassburg), and Italian (*La Tavola Ritonda, Tristan Panciaticchiano*).

MI 43638. Augustine: Selected Readings

(3 -0- 3)

In this course, we will read select passages from Augustine's earliest extant works, the so-called *Cassiciacum dialogues*. Augustine spent the winter between his conversion (386) and his baptism (Easter 387) at a friend's villa in Cassiciacum near Milan, where he wrote four philosophical works, *Contra Academicos, De Beata Vita, De Ordine*, and *Soliloquia*. In choosing the form of the philosophical dialogue, he paid homage to his pagan predecessors, above all Cicero. The influence of pagan philosophy, especially Neoplatonism, is present throughout the dialogues, as is the interest in classical literature and in the Liberal Arts. The dialogues represent Augustine's first attempt to express and structure his new-found belief (as well as the experience of his conversion), and the views and sentiment expressed in them sometimes widely differ from his later works; yet it is unmistakably Augustine who is speaking. We will discuss the position of the dialogues in the course of Augustine's intellectual development by comparing them to selections from later works (above all, *Confessions*) and from pagan philosophers (Cicero, Plotinus). *Prerequisite*: 3 years of college Latin or by permission of the instructor.

MI 43666. Islamic Texts Seminar

(3 -0- 3)

This course offers students the opportunity to read classical Islamic texts in translation, with an optional additional credit for students of Arabic to read them in the original language (MEAR 32305). Topics will vary from semester-to-semester allowing students to take the seminar more than once. Potential topics may be thematic, such as hadith ("tradition" or reports about Muhammad's words and deeds), tafsir (Qur'anic exegesis), fiqh and shari'a (jurisprudence and law), tasawwuf, kalam and falsafa (theology, philosophy and mysticism), or focused around a significant figure such as al-Ghazali. In addition to reading texts, we will also engage contemporary scholarly literature on the sources and their analysis.

MI 46020. Directed Readings—Undergrad

(V -0- V)

Offers advanced undergraduate students a possibility to work closely with a professor in preparing a topic mutually agreed upon.

MI 50001. Introduction to Medieval Studies

(1 -0- 1) Boulton

A one-credit-hour course designed to introduce students to the basic bibliographies, handbooks, and research tools in medieval studies. Professors from various disciplines will participate. Open only to honors track majors in Medieval Studies.

MI 50783. Gregorian Chant: Vocal Sacred Music I

(3 -0- 3) Jeffery

Vocal Sacred Music I is devoted primarily to Gregorian chant, with some study toward the end of the semester of medieval polyphonic works based on chant. The course will cover matters of liturgy, performance practice, musical forms, notation, and sources. The course is open to upper-class music majors and graduate students in the Master of Sacred Music Program.

MI 50787. Transcribing Early Notations and Making Computerized Editions of Gregorian Chant and Early Polyphony

(3 -0- 3) Blachly

The course will focus both on how to interpret early notations and how to make computerized modern editions using MakeMusic's Finale program for Mac or PC. Topics to be addressed will include "barlines: yes or no?," "when to use musica ficta and how to indicate it," "problems of text underlay," "when to transpose

for the convenience of the singers," "reduce the original note shapes or make a diplomatic transcription?" and "the advantages and disadvantages of computer programs that create quadratic Gregorian notation."

MI 53810. Issues in Sacred Architecture

(3 -0- 3) Stroik

An upper-level seminar exploring themes related to issues in sacred architecture. The course is open to architecture students and students in other disciplines.

MI 56001. Senior Research Paper

(3 -0- 3)

This class offers a student a chance to research a topic in medieval studies and write an in-depth seminar paper on the subject. By the end of the semester, a 20- to 25-page research paper will be submitted to the professor for the final grade.

MI 58001. Senior Honors Thesis I—Research

(3 -0- 3)

This course is part of a two-semester sequence open only to seniors in the Medieval Studies honors program. Guided by a faculty adviser, students will research and write a thesis that results in a scholarly examination of a clearly defined topic. In the fall semester, students formalize the choice of a topic initially selected at the end of their junior year and complete the research begun on the project during the preceding summer. Specific deadlines for a thesis proposal and bibliography are available from the Director of Undergraduate Studies.

MI 58002. Senior Honors Thesis II—Writing

(3 -0- 3)

This course is part of a two-semester sequence open only to seniors in the Medieval Studies honors program who have completed MI 58001 successfully. Guided by a faculty adviser, students will use the research completed in the fall to write drafts and a final version of their senior honors thesis. Specific deadlines and requirements for the written stages of the thesis are available from the Director of Undergraduate Studies.

Music

MUS 10010. Rudiments of Music

(1 -0- 1)

A course designed for students with little or no musical background. Topics covered include musical notation, scales, keys, key signatures, triads, seventh chords, rhythm, and meter.

MUS 10090. Theory for Non-Majors

(3 -0- 3)

An introduction to the materials and structure of Western tonal art music, including pitch, rhythm, meter, scales and keys, intervals, chords, harmonic progressions and voice-leading, and form.

MUS 10101. Music and the Christian Tradition, 1500–1800

(3 -0- 3) Frandsen

This course covers sacred art music and hymnody from the years just prior to the Protestant Reformation until the late eighteenth century. We will look at art music from the Catholic, Lutheran, and Anglican traditions, and congregational hymnody from the Lutheran, Reformed (Calvinist), and Anabaptist traditions. We will examine the development of distinct musical traditions among the Lutherans and Anglicans, but also the continued use (by Lutherans in particular) of chant and polyphonic music composed by (and for) Catholics, at times with altered texts. Topics to be covered include sacred music on the eve of the Reformation, Luther's theology of music, Calvin's position on the role of music in the church, music and the Counter- (or Catholic) Reformation, music in the Catholic and Lutheran liturgies, music and various devotional movements, Mary in the Lutheran musical tradition, the music of nuns, the musical influence of Venice and Rome on German Catholics and Lutherans, the psalm motets of the Anglicans, Lutheran organ music, the Bach cantata and Handelian oratorio, and psalmody in Colonial America. No musical background or music-reading ability is required.

MUS 10111. Introduction to Eighteenth-Century Music

(3 -0- 3) Frandsen

Introduction to the major composers and musical genres of the 18th century. Composers studied include Vivaldi, Bach, Handel, C.P.E. Bach, Gluck, Mozart, and Haydn; musical genres studied include the cantata, concerto, sonata, fantasia, quartet, opera, and oratorio. Readings include reactions and criticisms of 18th-century listeners, and writings of modern music scholars.

MUS 10122. Mozart to Minimalism

(3 -0- 3)

A historical survey of major composers and styles of Western art music from the late eighteenth through the twentieth centuries; works studied will be drawn from the solo, chamber, orchestral, and operatic repertoires most widely performed in concert halls today.

MUS 10125. Literature and Opera

(3 -0- 3)

In this course, the full title of which is "Taking Liberties: From Book to Libretto, or French Literature Goes to the Opera" and which is being taught in English for the first time, we will be looking at a series of "parent" texts, written originally in French, and their operatic "offspring." Our objective will be less to highlight textual difference, although in certain cases that is far from being an uninteresting area of investigation, than to appreciate the theme and variation of, let us say, Merimée's *Carmen* and the treatment she gets in Bizet's opera. Among the text/operas we will examine as books (in English translation or in the original French depending on individual student preference) and as operas (DVD projections with subtitles) will be *The Barber of Seville* (Beaumarchais/Rossini); *The Marriage of Figaro* (Beaumarchais/Mozart); *Don Juan* (Molière) and *Don Giovanni* (Mozart); *Manon Lescaut* (Prévost/Puccini), *Carmen* (Mérimée/Bizet). We may try for one more: either *Le roi s'amuse* (Hugo)/*Rigoletto* (Verdi) or *La dame aux camélias* (Dumas)/*La Traviata* (Verdi). As a so-called "appreciation" course, students need not necessarily know French or music theory. What is required are open minds,

eyes and ears. There will be two papers, the second being more ambitious than the first, and a final exam. *Prerequisite:* 300 level literature or music course or permission of instructor. This course does fulfill a 400 level requirement for French majors. This course does not fulfill a 20000 level class for Music majors.

MUS 10131. Introduction to Jazz

(3 -0- 3) Dwyer

A music appreciation course requiring no musical background and no prerequisites. General coverage of the significant musicians, styles, and structures of jazz music.

MUS 10132. Modern Jazz

(3 -0- 3)

A study of the jazz performers and practices of the latter half of the twentieth century to today—the roots, stylistic developments and directions of individual artists, small combos, and big bands, using recordings, videos, and live concerts. No musical experience is required.

MUS 10133. Gender, Sexuality in Pop Media

(3 -0- 3)

This course focuses on predetermined gendered roles and sexuality in our culture as represented in popular media. Special emphasis will be placed on film as we look at, among other things, issues of sexuality and homosexuality on the silver screen. We will also look closely at music, the emergence of a female presence, music videos, and hip-hop culture.

MUS 10140. African American Folklore and Music

(3 -0- 3)

African American history has been characterized by struggles for fundamental human rights and struggles to reclaim their identity as people of African descent in America. Although slavery, segregation and other forms of oppression and deprivation have tended to deny their African heritage, African Americans have nevertheless succeeded in creating cultural space for themselves within the larger community of the American Nation State. Their distinctive identity, rooted in their African cultural past, is evidenced in various recognizable forms of culturally produced social and religious institutions, music, and artifacts. These recognizable forms are studied as the folklore and folklife of the people. This course will explore African American cultural forms in the context of their historical experience. Because African American folklore cannot be explored in isolation from the larger American cultural space, we will also examine the factors of interethnic influence on African American culture, and conversely, African American contributions to American cultural identity.

MUS 10141. Understanding World Music

(3 -0- 3) Jarjour

This course is a gateway to the study of music around the world. Rather than thinking of different musics as a number of regionally defined systems, we will look at a number of ways in which this social and cultural phenomenon may be understood. This course, therefore, takes a thematic approach to the question of studying music, whether it is oceans away or just around the corner, and whether people might agree on calling it "music" or not. At a time when distances no longer seem to matter much and categories appear to account for little, this course addresses questions along the lines of how to think about music, before looking at where it comes from and what systems it might follow. The course is open to majors and non-majors.

MUS 10150. Music of the Catholic Rite

(3 -0- 3) Frandsen

A study of the music composed for the Mass, the Office hours (primarily Vespers), and the Requiem Mass from the Middle Ages to the present day. The musical repertoire of each era is examined both from a purely musical standpoint and in light of the reactions of various popes, from John XXIII through Pius X, to the sacred music of their day. Documents on sacred music issued after Vatican II also are examined in relation to postconciliar church music for both the choir and the congregation.

MUS 10160. Taking Liberties: From Book to Libretto, or French Literature Goes to the Opera

(3 -0- 3)

In this course, which may be taught in either French or in English, we will be looking at a series of parent texts, written originally in French, and their operatic offspring. Works include *The Barber of Seville* (Beaumarchais/Rossini); *The Marriage of Figaro* (Beaumarchais/Mozart); *Don Juan* (Molière) and *Don Giovanni* (Mozart); *Manon Lescaut* (Prévost/Puccini), *Carmen* (Mérimée/Bizet).

MUS 10164. Topics: Film/Popular Music

(3 -0- 3)

Prerequisite: FTT 10101 or FTT 20101*Corequisite:* MUS 11164

This course examines the relationship between popular music and film through an examination of film scores, the genre of the musical, musical performance, the use of pre-recorded pop songs in films, rockumentaries, music video, and biopics. We will see films using popular music of all kinds—Tin Pan Alley, 50s rock 'n roll, jazz, disco, country, French pop, and more. We will consider the role of the star—ranging from Astaire to Travolta, Dylan to Madonna—and films by directors such as Scorsese and Welles. Looking at films from the 1930s to the present, we will consider the narrative function and meaning of music, industrial practices, changing social values, how songs get Academy Awards, how soundtracks circulate, and how film relates to various other musical media, such as radio and MTV. Throughout, we will pay special attention to how pop music affects film's ideologies of gender, race, and sexuality. Students do not need a background in music. Films will include *The Band Wagon*, *American Graffiti*, *A Man and A Woman*, *Saturday Night Fever*, *Touch of Evil*, *Truth Or Dare*, *The Umbrellas of Chergourg*, *Round Midnight*, and *Nashville*.

MUS 10190. Introduction to Classical Music

(3 -0- 3) Buranskas

Historical survey of Western art music from the Middle Ages to the present, with emphasis on the study of selected significant vocal and instrumental works.

MUS 10192. Program Music from the Baroque Period through the 20th Century

(3 -0- 3)

This course will involve the study of instrumental music that was written to convey non-musical ideas derived from novels, plays, poetry, nature, nationalism, etc. It will also consider the relevance of the musical compositions within a historical context by incorporating the discussion of topics that directly relate to the lives of musicians and composers: politics, love, war, and religion.

MUS 10201. Brass Ensemble

(V -0- V)

Special groups of brass instruments meeting weekly. Literature covered will depend upon the nature of the ensembles organized and student enrollment. Will not apply to overload.

MUS 10203. Percussion Ensemble

(V -0- V)

This ensemble is organized according to the needs of those who audition through the regular process at the beginning of each semester. It consists of those for whom the larger ensembles are inappropriate. Examples include Clarinet Choir, Percussion Ensemble, Percussion Ensemble and other band instrument ensembles.

MUS 10210. Chorale

(V -0- V) Blachly

A select group devoted to the singing of diversified sacred and secular literature. Performs at Notre Dame and on tour.

MUS 10221. Glee Club

(V -0- V) Stowe

Notre Dame's traditional all-male choir.

MUS 10222. Collegium Musicum

(V -0- V) Stowe

A select choir that concentrates its performances in the medieval and Renaissance repertoire.

MUS 10230. Jazz Band

(V -0- V) Dwyer

Open through audition.

MUS 10231. New Orleans Brass Band

(V -0- V) Merten

An ensemble performing the traditional and new music of New Orleans style brass bands.

MUS 10233. Jazz Improvisation

(V -0- V) Dwyer

Students will study scales, key centers, and chords, in order to develop improvisation skills using melodic and rhythmic variation, chordal and modal techniques, and aural transcriptions of recorded solos.

MUS 10240. Symphonic Winds

(V -0- V) Dye

This ensemble prepares and performs traditional and contemporary works for band in a smaller, wind ensemble setting, rehearsing twice per week, with a short concert tour and two concerts during the semester.

MUS 10241. Wind Ensembles

(V -0- V)

Wind and brass ensembles assembled for performance with special instrumentation.

MUS 10242. Symphonic Band

(V -0- V) Sanchez

This ensemble prepares and performs traditional and contemporary works for band in a large concert ensemble setting, rehearsing twice per week, with a short concert tour and two concerts during the semester.

MUS 10244. Fall Concert Band

(V -0- V) Sanchez

This ensemble prepares and performs traditional and contemporary works for band in a large concert ensemble setting, rehearsing once per week with one concert near the end of the semester.

MUS 10245. University Band

(V -0- V) Dye

This ensemble will provide a traditional concert band experience for brass, woodwind and percussion players in the Notre Dame community. Under the direction of Dr. Kenneth Dye and the Notre Dame band staff, the University band prepares and performs a wide variety of music, including everything from marches, overtures, and pop melodies to the traditional Notre Dame favorites. Rehearsals take place in the Band Building. Those who are able may register for MUS 10245 "University Band" for one credit, although registration is not required to participate. Application for membership can be made by contacting the band office.

MUS 10246. Varsity Band

(V -0- V) Sanchez

Performs for athletic events and special functions. Does not apply to overload.

MUS 10247. Concert Winds

(V -0- V) Dye

This ensemble prepares and performs traditional and contemporary works for band in a small, wind ensemble setting, rehearsing once per week with one concert near the end of the semester.

MUS 10249. Marching Band

(V -0- V) Dye

Performs for athletic events and special functions. Admission by audition.

MUS 10250. Orchestra

(V -0- V) Stowe

Performs music from the 18th to the 20th century in several concerts a year.

MUS 10251. Chamber Orchestra

(V -0- V) Blachly

An ensemble of 10–15 players drawn primarily from the ranks of the Notre Dame orchestra.

MUS 10300. Piano Class: Beginning Lessons

(1 -0- 1) Blacklow

Piano instruction for beginners. Classes consist of 5 to 10 students meeting one hour per week. Arranged according to student's schedule. A fee is charged per semester that includes instruction and an hour's daily use of the practice facilities. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 10340. Voice Class: Beginning Lessons

(1 -0- 1) Resick

A class for beginners in voice. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 10351. Guitar I: Beginning Lessons

(0 -0- 1) Miller

A class for beginners or those with no formal training. Students learn reading, ear training and basic techniques through solos, chord study and ensemble music in an interactive class. Styles range from classical to blues including contemporary pop melodies. Acoustic six string guitar required. Students must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.**MUS 10352. Guitar II**

(0 -0- 1) Miller

For those who have passed section I or equivalent studies. In class II the student will develop further the ability to play solo and ensemble pieces as they develop chord knowledge and accompaniment styles. Styles range from classical to blues including contemporary pop melodies. Acoustic six string guitar required. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.**MUS 10353. Guitar III**

(0 -0- 1) Miller

For those who have passed section II or equivalent studies. The student continues in all aspects of development and begins learning music of more depth and difficulty. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://music.nd.edu/guitar/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.**MUS 10361. Contemporary Song Writing**

(1 -0- 1)

Prerequisite: MUS 20001

Exploring fundamentals of song writing, composing and performing vocal or instrumental songs.

MUS 10912. Famous First Performances

(3 -0- 3)

Our study of the first performances of five famous works of the Western canon—Monteverdi's *Orfeo* (1607), Handel's *Messiah* (1742), Beethoven's *9th Symphony* (1824), Berlioz's *Symphonie fantastique* (1830), and Stravinsky's *Rite of Spring* (1913)—will provide a lens through which we will explore how music both shapes and reflects the particular social and cultural contexts in which it is created. Although these works remain widely beloved and frequently performed in concert halls and opera houses, each originated in circumstances that diverged from one another as much as they do from today's. Through our consideration of how earlier ears heard these groundbreaking compositions and reacted to them, we will develop a common vocabulary for speaking and writing about music, and reflect on the nature of music criticism. We will use these five works, furthermore, as starting points for an introductory study of several key genres of Western art music: opera, oratorio, symphony, and ballet.**MUS 11164. Topics in Film/Popular Music Lab**

(0 -0- 0)

Prerequisite: MUS 10101 or MUS 20101*Corequisite:* MUS 10164This course examines the relationship between popular music and film through an examination of film scores, the genre of the musical, musical performance, the use of prerecorded pop songs in films, rockumentaries, music video, and pop biopics. We'll see films using popular music of all kinds—Tin Pan Alley, 50s rock 'n' roll, jazz, disco, country, French pop, and more. We'll consider the role of the stars—ranging from Astaire to Travolta, Dylan to Madonna—and films by directors such as Scorsese and Welles. Looking at films from the 1930s to the present, we'll consider the narrative function and meaning of music, industrial practices, changing social values, how songs get Academy Awards, how soundtracks circulate, and how film relates to various other musical media, such as radio and MTV. Throughout, we will pay special attention to how pop music affects film's ideologies of gender, race, and sexuality. Students do not need a background in music. Films will include *The Band Wagon*, *American Graffiti*, *A Man and A Woman*, *Saturday Night Fever*, *Touch of Evil*, *Truth Or Dare*, *The Umbrellas of Cherbourg*, *Round Midnight*, and *Nashville*.**MUS 11300. Piano Lessons for Non-Majors**

(V -0- V)

Some prior study of piano is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11301. Organ Lessons for Non-Majors

(V -0- V)

Some prior study of organ is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11302. Harpsichord Lessons for Non-Majors

(V -0- V)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11303. Jazz Piano for Non-Majors

(V -0- V)

Individual instruction according to the level and ability of the student. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11307. Fortepiano Lessons for Non-Majors

(0 -V- V)

Lessons on an early 19th century, Graf-style piano. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 11310. Violin Lessons for Non-Majors

(V -0- V)

Some prior study of violin is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11311. Viola Lessons for Non-Majors

(V -0- V)

Individual instruction. Some prior study of the viola is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11312. Cello Lessons for Non-Majors

(V -0- V)

Some prior study of cello is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11313. String Bass Lessons for Non-Majors

(V -0- V)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11314. Harp Lessons for Non-Majors

(V -10- V)

Prerequisite: Musical background. Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11320. Woodwind Lessons for Non-Majors

(V -0- V)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11321. Brass Lessons for Non-Majors

(V -0- V)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11330. Percussion Lessons for Non-Majors

(V -0- V)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11340. Voice Lessons for Non-Majors

(V -0- V)

Some prior study of voice is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability. Lessons are given

by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11350. Guitar Lessons for Non-Majors

(0 -V- V)

Individual instruction in Jazz, Classical or independent styles. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.

MUS 11351. Jazz Guitar Lessons for Non-Majors

(V -0- V)

Classes consist of seven to 12 students meeting one hour per week. Arranged according to student's schedule. A fee is charged per semester. Does not apply to overload. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 11390. Music Technology Lessons

(V -0- V)

Private instruction on the various facets of music technology including, but not limited to Finale, Reason, Cool Edit and other music technology programs. Lesson fee applies. Does not count toward lesson requirement for Music majors. Deadline for sign up is noon on the first Thursday of classes.

MUS 13182. Fine Arts University Seminar

(3 -0- 3) Johnson

Music: 1945–1980. This seminar will track a twenty-five year period in (mostly) American music, or music that was derived from American models. During this time music existed in three, intertwined strands: jazz, rock and roll, and "classical". This course will acquaint you with various musical styles and ideas, but will also consider how technology, marketing, demographic shifts, and other social changes shaped the music that was created. The course will examine the avant-garde concert music of the period, and American and British popular music that coexisted and sometimes cross-pollinated with the 'classical' avant-garde. Jazz styles to be covered will include Swing, Bop, Cool, and Jazz Rock. Popular music will include early Rock and Roll, the British invasion, Vietnam war era. No knowledge of musical notation will be required for this seminar.

MUS 20001. Harmony and Voice Leading (Theory I)

(3 -0- 3) Johnson; Smith

A systematic approach to the understanding and manipulation of the basic materials of music. Required of and intended for music majors and minors, but open to students with sufficient musical background.

MUS 20002. Music Theory II

(3 -0- 3) Mayes

Prerequisite: MUS 20001

A systematic approach to the understanding and manipulation of the basic materials of music. Required of and intended for music majors and minors, but open to students with sufficient musical background.

MUS 20011. Musicianship I

(1 -0- 1) Tidback

Exercise and mastery of basic skills in music: melodic, harmonic, rhythmic, and keyboard. To be taken along with Theory I and II. Required of all students intending to major in music.

MUS 20012. Musicianship II

(1 -0- 1) Tidback

Prerequisite: MUS 20011

Exercise and mastery of basic skills in music: melodic, harmonic, rhythmic, and keyboard. To be taken along with Theory I and II. Required of all students intending to major in music.

MUS 20041. Counterpoint

(3 -0- 3)

Prerequisite: MUS 20001 or MUS 10090

This course will focus on the practice of counterpoint—the writing of independent voices and their polyphonic combination. This course is designed primarily for music majors, but qualified non-majors are also welcome. (The prerequisite for the course is normally Theory I, but Theory for non-majors can also serve as a prerequisite.) For more than 400 years, the polyphonic vocal music of the sixteenth century (and the music of Palestrina in particular) has been viewed as an ideal. Ever since the eighteenth century the craft of counterpoint has been learned using a pedagogic method called “species counterpoint.” (When Beethoven came to Vienna to study with Haydn, he studied species counterpoint with Haydn.) Species counterpoint is a graded set of compositional problems that take the student from the simplest rhythmic situations for two voices, progressively through more complicated rhythmic situations, all the way to free writing for four or more voices. Students will be assigned species counterpoint exercises for every other class. In class, the assignments will be put up on the board and critiqued. The final project for this course will be the writing of a motet for four voices in the style of Palestrina. Essential for any student interested in composition, species counterpoint is also invaluable as a tool to understand the inner workings of polyphonic music and the treatment of dissonance throughout the Baroque, Classical, and Romantic Eras.

MUS 20101. Medieval and Renaissance Music History I

(3 -0- 3) Blachly

A survey of music. The study of the major forms and styles in Western history. Required of music majors and minors, but open to students with sufficient musical background. MUS 20001 and MUS 20002 recommended before taking this class.

MUS 20112. Baroque Music (History II)

(3 -0- 3) Frandsen

Prerequisite: MUS 20001

A survey of music. The study of the major forms and styles in Western history. Required of music majors. A survey of the styles and forms of Baroque music (ca. 1600 and 1750). Restricted to music majors; non-majors with sufficient musical background who wish to enroll in the class should contact the professor. Prerequisites: MUS 20001 (Theory I). It is strongly recommended that students also take MUS 20101 (History I) before enrolling in MUS 20112.

MUS 20131. Introduction to Jazz

(3 -0- 3) Dwyer

A music appreciation course requiring no musical background and no prerequisites. General coverage of the significant musicians, styles, and structures of jazz music. To request departmental approval, send a one-paragraph hard-copy statement of your reason to take the course to Prof. Dwyer, 106 Ricci Band Rehearsal Hall. Include your first and last name, email address, and Student ID#. Students currently abroad may email their request to ldwyer@nd.edu; all other students must print out and deliver a hard-copy request.

MUS 20140. Ballads to Hip-Hop: Music, Culture, and Society in Mexican America

(3 -0- 3)

This course is designed to introduce students to important historical and stylistic musical developments as part of the cultural experience of ethnic Mexicans in the United States. To this end, we examine both music-making and performance as aesthetic dialects of the social texture of “everyday life”. We will cover various styles and genres, including corridos (the Mexican ballad form), Chicano rock ‘n- roll and hip-hop, jazz, and contemporary folk-derived styles (i.e. Banda, Pasito Duranguense, Norteño) with attention to their historical, political, and musical significance. In order we achieve our aims, the course is organized along two axes: one chronological, the other conceptual—neither complete. The chronological portion will allow us to survey the various genres, styles, and ensembles of ethnic Mexican musical production. We dovetail this effort with a focus on important themes and concepts, identity, race, gender, migration, hybridity, that pertain to

the present and historical social conditions of this community. Our approach, such that we are dealing with music-cultures, is at once anthropological and ethnomusicological, yet we are guided more broadly, by the paradigm of cultural studies, as we interrogate the expressive terrain where history, language, performance, and social bodies intersect.

MUS 20141. Understanding World Music

(3 -0- 3)

This course introduces a wide variety of musical systems, emphasizing the integration of culture-specific concepts about musical sound with the particular historical, social, and political contexts that shape and are shaped by that sound. Select musical case studies from South Asia, Africa, and Latin America will be explored and juxtaposed to reveal relationships to relevant themes such as nationalism, migration/diaspora, spirituality, the social position of music/musicians, improvisation, and social protest. No background in music is required, only open ears and minds.

MUS 20142. Music In Africa

(3 -0- 3)

Africa’s musical culture is as diverse as the landmass, peoples, and languages of the continent. Africans’ social systems, politics, their economics, and their religions are integrated with music as creative and expressive form. Like any human cultures in the world, African music has historical and ecological contexts that inform the meanings various communities make of, and express in their music. As a survey course, the class will explore the diversity of cultural and musical expressions in Africa, how Africans create, perform, think about, and use music in their lives. Special attention will be paid to traditional, popular and religious music genres with specific regional examples. Also issues related to intra-African and global components of the production and consumption of music will be explored.

MUS 20143. Music in the African Religious Experience

(3 -0- 3)

This course will explore the role of music in African religious traditions.

MUS 20145. Appreciating World Music

(3 -0- 3)

Prerequisite: MUS 20001 and MUS 20002

This course introduces students to the methods for conducting field research, reviewing live musical events and evaluating world music recordings. Through discussions about music from South Africa, Mexico, the Philippines, Indonesia and China, students learn about the musical practices of these other cultures and understand their motivations for musical production. Challenges faced by musicians from colonialism, racism, nationalism, cultural imperialism and commercialism are also engaged. In addition, students are encouraged to discover world music among the diasporic communities within their own societies, and get the opportunity to perform music of some of the cultures studied.

MUS 20146. Music and Globalization in Asia

(3 -0- 3)

This course explores musical production in India and China, the “new cultural cores” that are gradually replacing the U.S.A. and Western Europe in cultural influence in Asia and the Asian diaspora. Taking into account these countries’ colonial and semi-colonial histories, their political and economic development, and the increasing transnational movement of their citizens, this course charts the development of commercially successful music from these countries—bhangra; Bollywood; Chinese pop; and fusion music popularized by bands like Twelve Girl Band and composers like Tan Dun in films like *Crouching Tiger, Hidden Dragon*—that have not only captured Asia but the West as well, and shaped the imagination of what Indian-ness and Chinese-ness are, both to the Chinese/Indians and non-Chinese/Indians. In addition, this course examines Filipino entertainers, a group of musicians who provide live entertainment of a transnational capacity throughout Asia. They represent important channels for the dissemination of Indian and Chinese popular music in that region. Globalization and cosmopolitanism theories will be discussed in this course.

MUS 20147. Music of Africa and the African Diaspora

(3 -0- 3)

Students explore music from West Africa, Southern Africa, East Africa, and the Caribbean, South America, and the United States, paying close attention to how their reception and performance inform and influence each other historically and contextually. The seminar emphasizes an interdisciplinary approach to the subject, drawing from the ethnomusicology, African and African American studies, anthropology, colonial and postcolonial studies.

MUS 20148. Music and World Religions

(1.15 -0- 3)

Through this ethnomusicology course students will learn the roles music occupies in world religions. More than a world music course, we will examine the creative expression of the divine through the universal language of organized sound as music, as music plays a major role in the in the practice of most religions worldwide. This study involves all the major continents, highlighting new perspectives as to the confluence between religious culture and musical expression. Knowledge of music beneficial but not required, just open ears and minds to the diverse ontological understandings comprising various worldviews.

MUS 20161. Medieval Theories of Cosmic Harmony

(3 -0- 3)

A study of Pythagorean tradition in the Middle Ages using both philosophical-theological and music-theoretical texts.

MUS 20162. Music and the Olympics: A Soundtrack for Competition, Ceremony, and Celebration

(3 -0- 3) Dye

A survey course of Music's role and history in athletic competition, training, ceremonies, and celebrations. Music's societal impact and power is evident in women's integration into the Olympics as well as music's role in nationalism and politics. In technologies, the development of sound reinforcement and acoustical architecture expanded the Olympic venue and ensemble size as well as the scope and content of ceremonial music. Music as the true "Universal Language" was used extensively to reach a world audience as the broadcast media commanded a global stage. All of these elements of culture, athletics, gender, technology, and nationalism present a vast dimension to study music in the Olympics.

MUS 20491. Instrumental Techniques

(3 -0- 3) Rosas

A hands-on music and liberal arts course designed to teach students instrumental techniques in preparation for experiential learning experiences within the local community and abroad. Students will receive instruction on wind and percussion instruments that will enable them to excel while outside the classroom. Students will apply these skills as directors and mentors in the Bandlink program and service opportunities overseas.

MUS 20651. Ensemble Management

(3 -0- 3) Dye

Students will learn pedagogical techniques to help them manage a large ensemble rehearsal. Students will receive one-on-one instruction from faculty as well as have extensive hands-on opportunities to practice these techniques. Students will serve as directors within the Bandlink program and share responsibility for classroom management, literature selection, instruction, logistics and budget. Students will learn pedagogical techniques to help them manage a large ensemble rehearsal. Students will receive one-on-one instruction from faculty as well as have extensive hands-on opportunities to practice these techniques. Students will serve as directors within the Bandlink program and share responsibility for classroom management, literature selection, instruction, logistics and budget.

MUS 20691. Instrumental Pedagogy

(1 -0- 1) Dye

Notre Dame students will learn teaching techniques on their instruments through hands-on instruction of local students in the Bandlink program. Instruction will be in individual lessons and small group rehearsals.

MUS 20890. The Business of Music

(3 -0- 3) Dye

A historical survey of the synergistic relationship between music and business. Covering major technological, legal, and economic forces influencing the musical arts. This class will address the latest developments by studying historical practices, cutting-edge technologies, emergent business practices and global trends in both business and music.

MUS 20941. Vocal Physiology and Pedagogy

(1 -0- 1)

In this class, students will learn in detail the anatomical structures and processes that are involved in singing. They will also be introduced to important concepts and issues involved in vocal pedagogy. Coursework will involve class participation, reading assignments, tests, and a small project.

MUS 21300. Piano Lessons for First-Year Majors

(0 -2- 2)

Some prior study of piano is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability as determined through audition. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21301. Organ Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21302. Harpsichord Lessons for First-Year Majors

(0 -1- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21303. Jazz Piano Lessons for First-Year Majors

(0 -2- 2)

Individual instruction according to the level and ability of the student. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21307. Fortepiano Lessons for First-Year Majors

(0 -V- V)

Lessons on an early 19th Century, Graf-style piano. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 21310. Violin Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21311. Viola Lessons for First-Year Majors

(0 -2- 2)

Individual instruction. Some prior study of the viola is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability as determined through audition. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21312. Cello Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21313. String Bass Lessons for First-Year Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21314. Harp Lessons for First-Year Majors

(2—2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21320. Woodwind Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21321. Brass Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21330. Percussion Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21340. Voice Lessons for First-Year Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 21350. Guitar Lessons for First-Year Majors

(0 -2- 2)

Individual instruction in Jazz, Classical or independent styles. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.

MUS 21351. Jazz Guitar Lessons for First-Year Majors

(0 -2- 2)

Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 23140. Politics and Economics of Music

(3 -0- 3)

Using relevant case studies, this course explores various issues pertaining to music: its commoditization, use in advertising and to promote tourism, its representation of gender identities and sexuality, its function in furthering nationalism and transnationalism, its role in projecting class, racial and ethnic identities, and its power to ignite political and social change. A wide range of music will be engaged with from Chopin and Celtic music to Balinese dance and the music of the Australian aborigines.

MUS 30003. Chromatic Harmony (Theory III)

(3 -0- 3)

Prerequisite: MUS 20002
Studies in advanced harmony.

MUS 30004. 20th-Century/Music Theory IV

(3 -0- 3) Mayes

Prerequisite: MUS 30003

Intended for music majors. The theoretical and historical sources and development of music from Debussy to the present.

MUS 30013. Musicianship III

(1 -0- 1) Tidback

Prerequisite: MUS 20012

Exercise and mastery of more advanced skills in music: melodic, harmonic, rhythmic, keyboard, and score-reading. To be taken along with Theory III and IV. Required of all students majoring in music.

MUS 30050. Orchestration

(3 -0- 3)

A class focusing on: (1) the ranges, techniques, and timbres of each orchestra instrument, and (2) major scoring problems, as well as techniques of transcribing piano, chamber, and band music for orchestra.

MUS 30123. Classical and Romantic Music (History III)

(3 -0- 3) Youens

Prerequisite: MUS 20001 and MUS 20002

A survey of music. The study of the major forms and styles in Western history. Required of music majors and minors, but open to students with sufficient musical background.

MUS 30141. Music, Religion, and Media in South Asia

(3 -0- 3)

This course explores the meaning of musical sound across a range of spiritual and mass-mediated contexts from North and South India, Pakistan, and Nepal. Special attention is paid to the ecstatic and spiritual uses of music in the rituals and performances of various Buddhist, Hindu, Muslim (especially Sufi), Christian, Sikh, and agnostic communities. An underlying focus of the course is the relationship between the sacred and the secular, and between commercial and devotional practices of music making and music listening: How do musical and spiritual practices become commercialized by mass-mediated production and reception? Conversely, are there ways in which the uses of mass-mediated music are ritualized and take on a spiritual dimension? We will approach these and other related questions through case studies, such as Muslim-Hindu relations as depicted in “Bollywood” movies, cassette-playing as a devotional act on Himalayan pilgrimages, and classical music performance as the expression of religious sentiment. Musical experience and ability to read music are preferred, but not required.

MUS 30142. Post 19th-Century Music of Africa and the Diaspora: its influences on religious and social change

(3 -0- 3)

Students explore music from North, East, Central, Southern, and West Africa in the contexts of both 19th and 20th century colonialism and post-colonialism. Additionally, students will be exposed to the music of the African Diaspora in South America, the Caribbean, the United States and Europe, paying close attention to how religious and socio-political themes infuse and inform performance practices as well as societal change. Many musical genres—from reggae to rap and salsa to funk—will be covered. The course emphasizes an interdisciplinary approach to the subject, drawing from ethnomusicology, African and African American studies, Diaspora studies, anthropology, history, religious, colonial and post-colonial studies. Although not a prerequisite, this is a continuation of Music of Africa and the Diaspora (MUS20147). Preparation for lectures include select readings and occasional listening. Please bring open ears as much listening will be done in class.

MUS 30200. Chamber Music

(V -0- V) Buranskas

Study and performance of selected chamber compositions. Intended for music majors or with special permission.

MUS 30211. Opera Production

(V -0- V) Beudert

This class focuses on Mozart's *Le nozze di Figaro*. In this course both students and instructors will be engaged in a team effort to approach the production of opera both through critical understanding of the work (sources, context, meanings) and their active participation in a real opera production. The opera will be performed on campus in the course of the semester, with students involved at different levels, whether singing, playing in the orchestra, organizing the stage sets, or participating in other aspects of opera performance, from promotion and management to scholarly work for program notes and other critical essays. The class is team-taught. Dr. Beudert, the director of the Opera Notre Dame program and of Eugene Opera in Oregon and by Dr. Polzonetti, a musicologist specializing in 18th-century Italian opera. Students who take the class for 3 credit hours will have to write a paper and will have a final exam.

MUS 30213. Opera Workshop

(V -V- V) Beudert

The course will end with workshop performances of various scenes, accompanied by piano, taking place in early December at a venue to be announced.

MUS 30400. Piano Performance Class

(1 -0- 1) Blacklow

Master class format designed to give piano students opportunities in which to perform. This course is to be taken by Piano Performance majors or by permission of the instructor

MUS 30410. String Performance Techniques

(1 -0- 1) Buranskas; Plummer

Performance class/master class format designed to give string students opportunities to perform.

MUS 30451. Conducting I

(2 -0- 2) Stowe

Basic techniques of instrumental and choral conducting. For music majors only or with special permission of the instructor.

MUS 30453. Instrumental Conducting

(3 -0- 3) Rosas

Instrumental conducting provides basic to intermediate theory and technique for rehearsing and conducting instrumental ensembles. Presented in a participatory ensemble setting in which students conduct and play for their peers, the course provides opportunities for development and growth through peer feedback, video tape evaluation, and staff mentoring. Specific areas of instruction related to conducting will include fundamentals of score reading, baton technique, rehearsal techniques, and musical interpretation. As a significant portion of the course takes place in an ensemble setting, all students are expected to have performing experience on an instrument (brass, woodwind, percussion, string, piano, guitar), be able to read music notation competently, and participate as an instrumentalist in the class ensemble.

MUS 31300. Piano Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31301. Organ Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31302. Harpsichord Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31303. Jazz Piano Lessons for Sophomore Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31307. Fortepiano Lessons for Sophomore Majors

(0 -V- V)

Lessons on an early 19th Century, Graf-style piano. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 31310. Violin Lessons for Sophomore Majors

(2 -0- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31311. Viola Lessons for Sophomore Majors

(2 -0- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31312. Cello Lessons for Sophomore Majors

(2 -0- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31313. String Bass Lessons for Sophomore Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31314. Harp Lessons for Sophomore Majors

(2 -0- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31320. Woodwind Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31321. Brass Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31330. Percussion Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31340. Voice Lessons for Sophomore Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31350. Guitar Lessons for Sophomore Majors

(0 -2- 2)

Individual instruction in Jazz, Classical or independent styles. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.

MUS 31351. Jazz Guitar Lessons for Sophomore Majors

(0 -2- 2)

Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 31360. Composition

(V -0- V)

Creative writing in various forms, conventional and contemporary. Private instruction only. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 37900. Special Studies

(V -0- V)

An individualized course in directed studies under personal supervision of the teacher.

MUS 38390. Junior Recital

(V -0- V)

Majors only. Public performance of appropriate solo repertoire.

MUS 40023. Twentieth Century Russian Composers: Skryabin, Stravinsky, Prokofiev, Shostakovich

(3 -0- 3)

Prerequisite: MUS 30003 and MUS 30004

The analysis of works by Skryabin, Stravinsky, Prokofiev and Shostakovich with particular attention to theories that have been developed to explain their music.

MUS 40024. Debussy, Ravel, Stravinsky

(3 -0- 3)

Prerequisite: MUS 30003

Study and analysis of the music of Debussy, Ravel and Stravinsky up to 1920.

MUS 40042. Baroque Counterpoint

(3 -0- 3)

Prerequisite: MUS 10090 or MUS 20001

This course will focus on the practice of counterpoint—the writing of independent voices and their polyphonic combination. This course is designed primarily for music majors, but qualified non-majors are also welcome. (The prerequisite for the course is normally Theory I, but Theory for Non-Majors can also serve as a prerequisite.) We will study contrapuntal style and procedures of Bach through original student compositions in formal models of the 18th Century.

MUS 40100. Getting Medieval: Music and Technology in the Latin Middle Ages (800–1400)

(3 -0- 3)

Prerequisite: MUS 20002

Napster would never have been sued in the Middle Ages. Rather the culture embraced song, singing, and the free transmission of music in as many ways as possible. Music that was transmitted survived! This course is about how music was recorded, changing modes of transmission, and the interactions between the performer, the notator, the poet/dramatist and the scholar. How did media shape the messages of music? We begin in around 800, when a new technology slowly began to transform cultures of song in the West, to around 1400, when a system for recording music was fully developed that has been primary until the twentieth century. In the first half of the course, we study manuscripts and musical repertory from before, during and after the monumental changes of the Carolingian period. Students will sharpen their quills and prepare transcriptions for us to use; expertise in a variety of subjects will be well-received, from composition and music theory, to music performance, to Latin studies, history, and liturgics. A class project at mid-term will involve the reconstruction of a medieval Vespers service from the manuscripts we have been studying, singing antiphons by the nun Hildegard of Bingen, and working with manuscripts from the Rhineland, including one source that is the closest extant to Hildegard's own monastery as well as those prepared in her scriptorium. The second half of the course will focus on rhythm, music and poetry, and dramatic and narrative structures, ending with the performance of a liturgical drama, the scale of which will depend upon the numbers of students in the course, and their proclivities. We will examine dramatic musical works in their ritual contexts, from the Christmas cycle, to the Beauvais Play of Daniel, to saints' plays, to a range of Easter dramas. There will be an emphasis on the great "Fleury Playbook," the Circumcision office from Beauvais, and a satirical review from the 14th century, the *Roman de Fauvel*, starring a donkey who represents the seven deadly sins. All these musical works will be studied from original manuscripts. The course is open to graduate and professional students, as well as to undergraduates, and work will be geared to particular interests and abilities. The inter-disciplinary nature of the subject precludes prerequisites; all are welcome. The instructor's textbook on medieval music (WWNorton, 2011) will be given a test-drive in this course.

MUS 40120. Exoticism in Music

(3 -0- 3)

Prerequisite: MUS 20002

This seminar explores the concept and practice of exoticism in Western art music from the 18th through the early 20th centuries, as well as the related topic of national style. We will study examples from both instrumental music and opera, including works by Mozart, Schubert, Liszt, Bizet, Puccini, and Debussy, among others, considering not only how foreign elements are evoked, but what they might have meant to composer and audience. Students will be expected to write several short papers as well as a longer term paper.

MUS 40121. Music: 1945–1980

(3 -0- 3)

Music 1945-1980 will examine the leading edge concerted music of the period, and American and British popular music (Jazz, rock and roll) that coexisted and sometimes cross-pollinated with the 'classical' avant-garde. Jazz styles to be covered will include Swing, Bop, Cool, and Jazz Rock. Popular music will include the Folk revival, early Rock and Roll, the British invasion, Vietnam war era. Concert music will involve the end of the neoclassical, the cult of Webern, electronic and computer music, John Cage and his followers, total serialism, and minimalism.

MUS 40122. Goethe and Song

(3 -0- 3) Youens

Prerequisite: MUS 20002

A study of 19th and 20th century songs to poetry by the great German writer Johann Wolfgang von Goethe (1749–1832), including music by Schubert, Schumann, Brahms, Hugo Wolf, and many others.

MUS 40124. Schubert: His Life and Works

(3 -0- 3) Youens

Prerequisite: MUS 20002

A comprehensive survey of the life, cultural and historical contexts, and music of Franz Schubert

(1797-1828).

MUS 40125. Shakespeare and Verdi

(3 -0- 3)

An in-depth study of 19th-century Italian operatic adaptations of Shakespeare, with particular focus on Macbeth, Otello, and Falstaff by Giuseppe Verdi.

MUS 40160. Words and Music

(3 -0- 3)

Prerequisite: MUS 20002

We'll investigate three areas: (1) new psychological research on relationships between music and language, (2) how composers of many eras and cultures have set texts to music, (3) the uses of linguistic concepts in music theory and analysis. Units will include phonology (classification of sounds), prosody and rhythm, speech and melody, syntax and grammar, rhetoric and semantics (meaning).

MUS 40161. Psalmody

(3 -0- 3)

Prerequisite: MUS 20001

This hands-on course will cover all the ways that the psalms have been sung in Jewish and Christian worship, from ancient times to the present. All the major styles and practices of monophonic and polyphonic singing, as well as keyboard accompaniment, will be included. We will also trace how the various ways of interpreting the psalm texts throughout history have shaped liturgical practices, prayer and spirituality, and the creation of hymnody.

MUS 40402. Piano Collaboration

(V -0- V) Blacklow

This course is to be taken by Piano Performance and/or by permission of the instructor. Pianists in this course have an opportunity to develop the specific skills and abilities needed for accompanying vocalists and/or instrumentalists, and are encouraged to bring their colleagues to class.

MUS 40441. Diction I—German

(1 -0- 1)

Elements and expressive techniques of German diction, utilizing the International Phonetic Alphabet.

MUS 40442. Diction II—English, Italian

(1 -0- 1)

Elements and expressive techniques of English and Italian diction, utilizing the International Phonetic Alphabet.

MUS 40443. Diction III—French

(1 -0- 1) Resick

Elements and expressive techniques of French diction, utilizing the International Phonetic Alphabet.

MUS 40444. French Vocal Literature

(1 -0- 1) Resick

Prerequisite: MUS 20001 and MUS 20002

A survey of vocal literature in France from the 16th century to the present with an emphasis on comparative listening.

MUS 40490. Orchestral Excerpts

(1 -0- 1)

Excerpts from the standard orchestral literature encompassing styles from the 18th century through the 20th century. Instructed by individual members of the faculty.

MUS 40500. Music Through Technology

(3 -0- 3) Dye

Music through Technology is a lecture/lab course open primarily to CAPP and music majors, with consideration of other talented students. Lecture topics include the historical evolution of technology in music, surveying the influence that technology had on the music world, both from a creative standpoint to the accessibility and distribution of music to the masses. Other examples of technology's influence in music may include the development of multi-track recording on popular music, synthesizer, and midi technology, technology's applications for musical composition, and the adaptation of CD and mp3 formats to musical performers. The historical influence of technology is an illuminating foundation to current developments in the creative processes of music. Lab topics cover and introduction to current music technology including digital audio recording and editing, midi technology (sound and notation) and the digital management and distribution of music. Students will experience all of these technologies on an introductory level, but focus their interests on a technology-based final project to develop and display their acquired skills.

MUS 40941. Vocal Physiology and Pedagogy

(1 -0- 1) Lancaster

In this class, students will learn in detail the anatomical structures and processes that are involved in singing. They will also be introduced to important concepts and issues involved in vocal pedagogy. Coursework will involve class participation, reading assignments, tests, and a small project.

MUS 41300. Piano Lessons for Junior Majors

(0 -2- 2)

Some prior study of piano is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability as determined through audition. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41301. Organ Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41302. Harpsichord Lessons for Junior Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41303. Jazz Piano Lessons for Junior Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41307. Fortepiano Lessons for Junior Majors

(0 -V- V)

Lessons on an early 19th Century, Graf-style piano. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 41310. Violin Lessons for Junior Majors

(-2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41311. Viola Lessons for Junior Majors

(0 -2- 2)

Individual instruction. Some prior study of the viola is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability as determined through audition. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41312. Cello Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41313. String Bass Lessons for Junior Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41314. Harp Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41320. Woodwind Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41321. Brass Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41330. Percussion Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41340. Voice Lessons for Junior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 41350. Guitar Lessons for Junior Majors

(0 -2- 2)

Individual instruction in Jazz, Classical or independent styles. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.

MUS 41351. Jazz Guitar Lessons for Junior Majors

(0 -2- 2)

Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 43140. The Politics and Economy of Music

(3 -0- 3)

Using relevant case studies, this course explores various issues pertaining to music: its commoditization, use in advertising and to promote tourism, its representation of gender identities and sexuality, its function in furthering nationalism and transnationalism, its role in projecting class, racial and ethnic identities, and its power to ignite political and social change. A wide range of music will be engaged with from Chopin and Celtic music to Balinese dance and the music of the Australian aborigines."

MUS 43160. Music, Nation, State

(3 -0- 3)

This seminar explores the intersection of music with the nation and the state from the eighteenth through the twenty-first centuries, including topics such as music and the construction of national consciousness and national identity; music and propaganda; music and state control; music and war; and music and torture. Students will also become familiar with reading and writing musicological scholarship.

MUS 43991. Issues in Film and Media

(3 -0- 3)

Corequisite: FTT 41601

This course serves as a capstone course for film, television and media students, and an elective course for music students. It combines theoretical and historical reading and the opportunity for applied research, either as a 20-page term paper or as a creative project in film or music. There is a class topic that varies each semester. Readings will highlight the historical and aesthetic development of the acoustic dimension of cinema (and to some extent, television and video) from pre-cinema to contemporary sound design to the Video iPod. The student projects may concentrate on some aspect of the class topic, or compose an accompaniment for a film, or create a sound design for a film. The course will be conducted as the kind of seminar that one might encounter in a graduate program, with students giving oral presentations based on readings and screenings. The class meets in weekly 150-minute sessions, with a short mid-session break. There will be guest faculty visiting the class. The term projects are developed over the semester in close consultation with the instructor. For the music students in the class, there is the possibility of traveling to a silent film and music festival in Italy, October 7-14. (This is contingent on a successful grant application for the course, on the students' eligibility for international travel, and on the permission of their instructors for them to miss classes during that week.) Lab attendance at weekly screenings, Tuesday at 7:00-9:30 pm, is required.

MUS 48390. Senior Recital

(1 -0- 1)

One full-length (one hour) or two half-length (30 min.) recitals required for all performance majors. An additional full length recital required for honors.

MUS 48900. Senior Thesis

(V -0- V)

Music history and theory majors in the honors program must write a senior thesis. They will be assigned an advisor with whom they will work.

MUS 50021. Tonal Forms

(3 -0- 3) Smith

Prerequisite: MUS 30003

This course engages the practice of hands-on analysis of musical form in compositions of the Baroque, Classical, and Romantic eras of music history. Our interaction with the music will be holistic, with light cast on the contribution of thematic design, key scheme, and large-scale harmonic pillars to the articulation of musical form. The focus will be on the main formal types characteristic throughout the eighteenth and nineteenth centuries: basic phrase types (the period and sentence); binary and rounded binary; theme and variations; ternary and compound ternary; rondo; sonata form and sonata-rondo form. Much of the course will address the music itself, but there will also be required readings from select secondary sources,

which will provide background on the relevant analytical methodologies. Course work will include weekly listening and score study, readings from the secondary literature, written analysis assignments, and a final exam.

MUS 50022. Schenkerian Analysis

(3 -0- 3) Smith

Prerequisite: MUS 30003

This course will focus on techniques of analysis for music of the common practice era (Bach to Brahms) through study of the groundbreaking methodology developed by the Viennese music theorist Heinrich Schenker (1868-1935). Schenker's theory focuses on the interaction of harmony and voice leading on local, chord-to-chord levels of musical organization, what he termed the foreground, to the most global levels of large-scale structure, the background, and the intermediary levels through which he relates these two extremes—the middle ground. But the theory is much more than a study of harmony and voice leading: it confronts these musical dimensions through their relationship with rhythmic, formal, and motivic aspects of musical organization, in essence aspiring to a holistic method of analysis that traces both the interrelatedness and tension among multiple aspects of musical structure. The class will engage Schenker's method primarily through hands on application of his approach to actual music. In the process, students will learn to express analytical insights through Schenker's own novel method of musical "graphing" which reinterprets aspects of traditional musical notation to communicate interpretive perceptions about actual pieces. We will also read from Schenker's own published analyses and theoretical writings and from select publications drawn from the enormous body of scholarship that has followed in his wake. In addition to the readings, the course will require weekly graphing assignments, classroom presentation of analytical work and individual research, and a final analysis project. The course is open to all students who have completed Theory III (MUS 30003) as a prerequisite.

MUS 50024. The Chamber Music of Schubert, Schumann, and Brahms

(3 -0- 3)

Prerequisite: MUS 30003

The course focuses on the practice of hands-on analysis of the chamber music of these three nineteenth-century masters of the genre. Our engagement with the music will be holistic, with light cast on each composer's diverse yet related approaches to aspects of form, tonal-harmonic language, thematic process and motivic development, and rhythmic-metric characteristics. Secondarily, we will study the important historical relationships among Schubert, Schumann, and Brahms, as exhibited in the technical characteristics of their music. Much of the course will address the music itself, but there will also be readings from select secondary sources, which will provide background on the relevant analytical methodologies. Assignments will include weekly listening and score study, readings from the scholarly literature, periodic analysis assignments and short essays, and a final exam and final paper.

MUS 50101. Gregorian Chant: Vocal Sacred Music I

(3 -0- 3) Jeffery

Vocal Sacred Music I is devoted primarily to Gregorian Chant, with some study toward the end of the semester of medieval polyphonic works based on chant. The course will cover matters of liturgy, performance practice, musical forms, notation, and sources. The course is open to upper-class music majors.

MUS 50102. Polyphony: Vocal Sacred Music II

(3 -0- 3)

Vocal Sacred Music II is devoted to Renaissance polyphony (ca. 1400-1600). The course will cover matters of liturgy, performance practice, musical forms, notation, sources and major composers. The course is open to upper-class music majors and graduate students in the Medieval Institute and Master of Sacred Music Program.

MUS 50103. Transcribing Early Notations and Making Computerized Editions of Gregorian Chant and Early Polyphony

(3 -0- 3) Blachly

The course will focus both on how to interpret early notations and how to make computerized modern editions using MakeMusic's Finale program for Mac or PC. Topics to be addressed will include "barlines: yes or no?", "when to use musica ficta and how to indicate it," "problems of text underlay," "when to transpose for the convenience of the singers," "reduce the original note shapes or make a diplomatic transcription?" and "the advantages and disadvantages of computer programs that create quadratic Gregorian notation."

MUS 50113. Vocal Sacred Music III

(3 -0- 3)

This is a seminar designed for graduate students in the Master of Sacred Music program. Senior music majors may also register for this course (under this number only). The course covers sacred art music composed for performance within a liturgical context as well as in public concerts between ca. 1600 and 1750, or from Monteverdi and Schütz to Bach and Handel, and examines this repertoire both from an analytical perspective and in relation to its various performance contexts. Students will read a variety of studies from the disciplines of musicology, music theory, and church history (including papal legislation on music), and will be expected to be able to discuss the works under consideration in class from a variety of perspectives, including musical form, musical style, harmonic language, and liturgical use. Questions of the relationship between music and liturgy, devotion, spirituality, and contemporary culture will also be considered. The hymnody of this era will also be examined. The course will also include the examination of contemporary musical sources, both print and manuscript. Students will be asked to make several class presentations throughout the semester, and to write a research paper of at least 15 pages. Grading will be based on class participation, class presentations, and the research paper.

MUS 50114. Vocal Sacred Music III: Cantatas, Passions, and Oratorios of Bach and Handel

(3 -0- 3)

This is a seminar designed for graduate students in the Master of Sacred Music program. Music majors who will be seniors may also register for this course (under this number only). The course covers the cantatas, Passions, and Mass in B minor of Bach, and the oratorios of Handel, and examines this repertoire both from an analytical perspective and in relation to its various performance contexts. Students will read a variety of studies from the disciplines of musicology, music theory, and church history, and will be expected to be able to discuss the works under consideration in class from a variety of perspectives, including musical form, musical style, harmonic language, and liturgical use. Questions of the relationship between music and liturgy, devotion, spirituality, and contemporary culture will also be considered. Students will be asked to make several class presentations throughout the semester, and to write one or two short papers, and a research paper of at least 15 pages. Grading will be based on class participation, class presentations, and the papers.

MUS 50121. 19th Century Sacred Music

(3 -0- 3)

A study of sacred music between 1750 and 1900. The course will examine the sacred art music of this period, both that composed for liturgical use and that composed for the concert stage, and will also cover important developments during this period such as the Cecilian Reform Movement. The course is open to upper-class music majors and graduate students in the Master of Sacred Music Program.

MUS 50122. Vocal Sacred Music V

(3 -0- 3)

Survey and analysis of Christian sacred music of the 20th and 21st centuries, including both sacred art music and repertoires composed for the congregation. Official denominational directives for, scholarly assessments of, and pastoral evaluations concerning these repertoires. The course is open to upper class music majors and graduate students in the Master of Sacred Music Program.

MUS 50123. Heinrich Heine and The Lied

(3 -0- 3)

The history of German Romantic song in the late 19th century through the poetry of Heinrich Heine (1797-1856).

MUS 50124. The Song Cycle from 1800 to the Present

(3 -0- 3) Youens

Prerequisite: MUS 20001

When the century turned over a new leaf in 1800, composers began experimenting with new ways to link songs for voice and piano together in larger groupings called “cycles.” As song became a more important genre for 19th-century musicians, the cycle was a way to make song—a miniature genre—challenge the established big genres (symphony, opera, string quartet) in length and complexity. In this course, we start with the first cycles by Johann Friedrich Reichardt and go on from there to works by Beethoven, Schubert, Schumann, Loewe, Brahms, and many more in Germany; to the migration of song cycles to France, in particular the great cycles by Gabriel Fauré; and to numerous 20th- and 21st-century song cycles by the likes of Britten, Krenek, Schoeck, Eisler, Dutilleux, Poulenc, Hindemith, and more.

MUS 50440. Vocal Performance Techniques

(1 -0- 1)

Development of interpretation skills pertaining to songs and operatic literature. For advanced undergraduate students only.

MUS 51300. Piano Lessons for Senior Majors

(0 -2- 2)

Some prior study of piano is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability as determined through audition. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51301. Organ Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51302. Harpsichord Lessons for Senior Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51303. Jazz Piano Lessons for Senior Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51307. Fortepiano Lessons for Senior Majors

(0 -V- V)

Lessons on an early 19th Century, Graf-style piano. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 51310. Violin Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51311. Viola Lessons for Senior Majors

(0 -2- 2)

Individual instruction. Some prior study of the viola is advised. Half-hour lessons or one-hour lessons reserved for students of upper-intermediate performance ability as determined through audition. Lessons are given by members of the department and by outside part-time associate instructors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51312. Cello Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51313. String Bass Lessons for Senior Majors

(0 -2- 2)

Individual instruction. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51314. Harp Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51320. Woodwind Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51321. Brass Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51330. Percussion Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51340. Voice Lessons for Senior Majors

(0 -2- 2)

Private lessons at an advanced level for music majors. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51350. Guitar Lessons for Senior Majors

(0 -2- 2)

Individual instruction in Jazz, Classical or independent styles. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. For more information about guitar lessons, please visit <http://www.nd.edu/~smiller2/> or email Stephen Miller. Deadline for sign up is noon on the first Thursday of classes.

MUS 51351. Jazz Guitar Lessons for Senior Majors

(0 -2- 2)

Must sign up in the Music Department Office (105 Crowley Hall) to get department approval. Deadline for sign up is noon on the first Thursday of classes.

MUS 51360. Composition

(V -0- V)

Creative writing in various forms, conventional and contemporary. Private instruction only. Must sign up in the Music Department Office (105 Crowley Hall) to get department approval.

MUS 53440. Vocal Pedagogy

(1 -0- 1)

Basic techniques of vocal pedagogy.

Philosophy

PHIL 10100. Introduction to Philosophy

(3 -0- 3) Kelsey

Corequisite: PHIL 12100

A general introduction to philosophy, with emphasis on perennial problems such as the existence of God, human freedom, and moral obligation. The course is also intended to sharpen the student's skills of critical thinking.

PHIL 10101. Introduction to Philosophy

(3 -0- 3)

A general introduction to philosophy, with emphasis on perennial problems such as the existence of God, human freedom, and moral obligation. The course is also intended to sharpen the student's skills of critical thinking.

PHIL 13185. Philosophy University Seminar

(3 -0- 3)

A general introduction to philosophy, taught in a seminar format, with emphasis on perennial problems such as the existence of God, human freedom, and moral obligation. The course is also intended to sharpen the student's skills of critical thinking.

PHIL 13195. Honors Philosophy Seminar

(3 -0- 3)

A general introduction to philosophy, taught in a seminar format for students in the science and arts and letters honors program, with emphasis on perennial problems such as the existence of God, human freedom, and moral obligation. The course is also intended to sharpen the student's skills of critical thinking.

PHIL 20101. Introduction to Philosophy

(3 -0- 3)

A general introduction to philosophy, with emphasis on perennial problems such as the existence of God, human freedom, and moral obligation. The course is also intended to sharpen the student's skills of critical thinking.

PHIL 20201. Philosophy of Human Nature

(3 -0- 3) Reimers

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An examination of some competing views of human nature based on classical readings ranging from Plato to the present day.

PHIL 20202. Existentialist Themes

(3 -0- 3) Ameriks

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This course focuses on writings from three main figures: Kierkegaard, Nietzsche, and Sartre. The contrast of aesthetic, ethical and religious views, as discussed from an existentialist perspective, is the main thematic focus of the course. Students are advised to purchase texts in the editions that are on order for the course at the Notre Dame bookstore.

PHIL 20203. Death and Dying

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

Course content varies by semester and instructor. Topics may include the nature and definition of death, end of life medical issues, capital punishment, the possibility of survival of death, the value of death, existentialist thinking about death, and others.

PHIL 20204. Women: Alternative Philosophical Perspectives

(3 -0- 3)

An examination of some of the most pressing problems currently confronting women, the more important theories, from the ultraconservative to the radical feminist, that have been proposed to explain these problems and the concrete proposals for change in society suggested by such theories.

PHIL 20205. Theories of Sexual Difference

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An examination of the following questions: What kind of differences separate men and women? Are these differences natural or are they socially produced, and are these differences beneficial to us or are they limiting? What does equality mean for people characterized by such differences?

PHIL 20207. Self and World

(3 -0- 3) Dumont

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

A general introduction to the fundamental questions about the nature of the world and our place in it, the area of philosophy called metaphysics.

PHIL 20208. Minds, Brains, and Persons

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This course will treat some central issues in the philosophy of mind, such as freedom of the will, personal identity, and the relationship between mind and body.

PHIL 20214. Ancient Wisdom and Modern Love

(3 -0- 3) O'Connor

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An examination of contemporary issues of love and friendship from the perspective of ancient philosophy. Course materials range from Plato and Aristotle to Shakespeare and contemporary film.

PHIL 20218. Chinese Ways of Thought

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This is a special topics class on religion, philosophy, and the intellectual history of China that introduces the student to the world view and life experience of Chinese as they have been drawn from local traditions, as well as worship and sacrifice to heroes, and the cult of the dead. Through a close reading of primary texts in translation, it also surveys China's grand philosophical legacy of Daoism, Buddhism, "Confucianism," and "Neo-Confucianism" and the later religious accommodation of Christianity and Islam.

PHIL 20222. Love and Friendship: An Introduction

(3 -0- 3)

Love and friendship have been central topics in moral philosophy since the Ancient Greeks. In this course we will be examining these topics through literary and philosophical writings from Aristotle to Stendhal, as well as looking at some of the very best recent philosophical literature.

PHIL 20229. Paradoxes

(3 -0- 3) Speaks

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

Bertrand Russell suggested that philosophical theories can be tested by their ability to deal with puzzles. This is the approach to philosophy taken in this course. The puzzles with which we will be concerned are paradoxes: sets of propositions each member of which is intuitively true which are nonetheless jointly inconsistent.

PHIL 20401. Ethics

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An examination of the relationship between thought and action in light of contemporary and traditional accounts of the nature of ethics.

PHIL 20402. Moral Problems

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An introduction to the field of moral philosophy, with major emphasis on contemporary moral issues.

PHIL 20404. Ethics and Business

(3 -0- 3)

This course aims at helping the student recognize the moral aspects of business decisions on the personal level and of business institutions on the social level.

PHIL 20406. Basic Concepts in Political Philosophy

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An introduction to important thinkers and problems of political philosophy. Basic concepts to be considered are equality, liberty, and authority.

PHIL 20407. Classics of Political and Constitutional Theory

(3 -0- 3)

Prerequisite: PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PHIL 10100

An examination of a number of the fundamental texts in political and constitutional theory, with an emphasis on works of special importance to the British and American political systems.

PHIL 20408. Philosophy of Law

(3 -0- 3) Warfield

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20201 or PLS 20301

Corequisite: PHIL 22408

A survey of foundational and practical philosophical topics arising in law and within legal systems. The course will sometimes be a broad survey but will on some occasions take a narrower focus on a set of related issues (examples: issues in criminal law; issues in constitutional law). The course will typically include a mix of theoretical and applied topics.

PHIL 20411. Aesthetics and the Philosophy of Art

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An introductory course in the application of philosophical methods to questions of aesthetics and art. The first part of the course will concern the history of aesthetics, concentrating on the views of Plato, Aristotle, Horace, Aquinas, Kant, and Hegel. The second part of the course will consider contemporary approaches to problems such as the nature of aesthetic properties and categories, what distinguishes art from other things, and the role of critical interpretation in the experience of art.

PHIL 20415. Morality and Modernity

(3 -0- 3) Solomon

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

Corequisite: PHIL 22415

An examination of the many of the deepest contemporary moral disputes that rest on philosophical disagreements about the nature of modernity. These disputes focus particularly on the modern commitments to individualism and the idea of progress.

PHIL 20418. Living the Virtues

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

“What would make me happy? What is the point of my existence?” No human being can avoid asking himself these questions, and for many philosophers, especially in the pre-modern age, these questions admit of a clear answer: happiness and meaning come from living the virtues. This course will be devoted to examining this answer; that is, to inquiring into the nature of virtue in general, and to the distinction and connection between the various virtues in particular. Guidance will be principally taken from works of Plato, Aristotle, and St. Thomas Aquinas, though some modern and contemporary conceptions of the virtues will be discussed by way of counterpoint. As part of a final course project, each student will be required to employ a work of literature in a discussion of the virtues.

PHIL 20420. Agency, Responsibility and Determinism

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This course will carefully explore some main philosophical problems involving human agency and moral responsibility. The course has four parts. First, we will assess main arguments for and against the compatibility of human freedom and causal determinism (roughly, the view that physical laws and present physical facts jointly necessitate all future facts). Second, we will critically examine numerous substantive, competing analyses of human freedom. Third, we'll consider the question of what's required for moral responsibility. Fourth and finally, we will explore the question whether human freedom is compatible with divine foreknowledge.

PHIL 20421. Political Theory

(3 -0- 3)

Corequisite: PHIL 22421

This course is an introduction to political theory as a tradition of discourse and as a way of thinking about politics. The course surveys selected works of political theory and explores some of the recurring themes and questions that political theory addresses. This introductory course fulfills the political theory breadth requirement for the political science major. For additional information about this course, please visit the following website: <http://www.nd.edu/~government/undergrad/Summer05CourseDescriptions.htm>

PHIL 20423. Self and Society

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

A survey of leading ideas in political and social philosophy primarily from the 18th–20th centuries. Problems considered will be: the relation of individual to society, the relation of society to state, liberalism, the relation of economics to politics, versions of socialism, etc.

PHIL 20424. Friendship and the Good Life

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

An examination of the history of the concept of friendship as it figures in philosophical discussions about the best kind of life.

PHIL 20425. Contemporary Political Philosophy

(3 -0- 3) Weithman

Prerequisite: ALHN 13950

This course will survey the books and papers which have set the agenda for political philosophy in recent decades. Topics covered will include, but not be limited to, the foundation of rights, economic justice and international justice. The course is intended for first year Honors Students, and will allow them to satisfy the second philosophy requirement.

PHIL 20428. Business Ethics—Practice and Norm: Corporate Responsibility, Sustainability and Global Commerce

(3 -0- 3)

This course is a comprehensive introduction to business ethics with a special focus on issues and representative cases drawn from business in recent years. Central questions concern the responsibilities of corporations, especially in regard to their stakeholders and the environment. These concerns range from questions about hiring, firing, and promotion, to executive compensation, to marketing ethics, to financial representation, and to religion in the workplace. The globalization of business is also a main focus, involving such issues as outsourcing (domestic and international), bribery, child labor, and the treatment of women in and beyond the company's home country. The work will consist in readings from texts and cases, short papers, and likely one or two or at most three short essay exams. The aim is both to advance understanding of business ethics and to help students make better decisions both in business practice in particular and in ethical matters generally.

PHIL 20429. Are We Eating Good Food?

(3 -0- 3) Hicks

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

In the last few years, an increasing number of voices have answered the title question for this course with a resounding “no.” In this course, we will develop conceptual tools from ethics, political philosophy, and philosophy of science to critically engage with both proponents and critics of several aspects of our contemporary food system. Possible topics will be picked based on student interest, and include but are not limited to vegetarianism, conventional vs. organic vs. ‘beyond organic’ agriculture, transgenic or GMO crops, justice for food workers, scientific and public policy controversies over nutrition and health, food deserts, and ‘special interest’ control of agricultural politics and economics. We will also be working on a service project with Purple Porch Co-op—a local food co-op—in order to understand how these issues appear in and impact the food system of the Michiana region.

PHIL 20430. History of Aesthetics and Philosophy of Art I: The Ancient, Medieval, and Renaissance Contexts

(3 -0- 3) Rush

A conceptual-historical survey of aesthetic theory and the philosophy of art that beginning in antiquity and concluding in the Renaissance. The main readings will be historical sources in both philosophy and art theory more broadly construed, with ample attention to various types and genres of art and in-depth consideration of several individual works. Topics discussed: the relation of art to truth the nature of artistic representation, tragedy and comedy, natural and artistic beauty, ethics and art, genius and sublimity, social roles of art and of the aesthetic response to nature, etc.

PHIL 20602. Medical Ethics

(3 -0- 3) Solomon

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301*Corequisite:* PHIL 22602

An exploration from the point of view of ethical theory of a number of ethical problems in contemporary biomedicine. Topics discussed will include euthanasia, abortion, the allocation of scarce medical resources, truth-telling in the doctor-patient relationship, the right to medical care and informed consent, and human experimentation.

PHIL 20603. Environmental Ethics

(3 -0- 3)

The course will be an attempt to come to grips critically with the moral significance of contemporary concern for ecology and the environment.

PHIL 20604. Modern Physics and Moral Responsibility

(3 -0- 3)

An examination of such questions as: What are the moral responsibilities of the scientist? Should the scientist be held accountable for what might be done with

the results of his or her scientific research? Does the scientist have any special role to play, as a citizen, in public debate about science policy? Should the scientist sometimes simply refuse to engage in some kinds of research because of moral concern about the consequences of research of that area? No special background in physics will be assumed.

PHIL 20606. Science, Technology, and Society

(3 -0- 3) Jurkowitz

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

Corequisite: PHIL 22606

This course focuses on the many ways in which science and technology interact with society and explores the character of the value-laden controversies that such interaction frequently produces.

PHIL 20609. Environmental Philosophy

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101

A philosophically integrated examination of current environmental issues, drawing on familiar literature from ecology (Leopold), economics (Boulding), and ethics (Singer), as well as recent fiction (Tolkien, Herbert).

PHIL 20612. Philosophy and Cosmology: A Revolution

(3 -0- 3) Bland

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

In the 17th century there was a revolution in our view of the cosmos and of our own place in it. Most vivid, perhaps was the change from believing that the Earth is at the center of everything to believing that the Earth is just one planet among many, orbiting the sun. This course will consider how and why these changes took place.

PHIL 20614. Introduction to Philosophy of Biology

(3 -0- 3)

An examination of key concepts and controversies in contemporary biology. The meaning of gene, organism and environment and their interrelationships in the context of development, evolutionary theory, and ecology are closely considered.

PHIL 20617. Philosophy of Science

(3 -0- 3)

A detailed consideration of the central methodological and epistemological questions bearing on science.

PHIL 20620. Philosophy and Science Fiction

(3 -0- 3) Rea

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101

Corequisite: PHIL 22620

The goal of this course is to introduce students to some central philosophical problems via reflection on classic and contemporary works of science fiction in conjunction with classic and contemporary texts in philosophy.

PHIL 20623. Scientific Images of Humanity

(3 -0- 3)

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101

Attempts to “biologize” everything from religion and morality to love and friendship appear continuously in the popular and scientific media. Genes for traits as various as homosexuality and chocolate consumption are proposed. How should we revise our understanding of human nature in light of these claims? This course examines the tensions between our images of ourselves as human beings and the portraits that the sciences—especially biology—provide.

PHIL 20627. Science and Catholicism

(3 -0- 3) O’Callaghan

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

A historical and philosophical examination of the relations, if there are any, between science and religion with particular reference to the Catholic intellectual tradition. Through the use of historical materials the course will attempt to isolate and examine philosophical difficulties that might be thought to obtain between the claims made by Christian revelation and various scientific theories about features of the world. Emphasis will be placed upon distinctive ways in which the intellectual tradition of the Catholic church has faced the issues raised. Figures to be considered may include Augustine, Aquinas, Galileo, Bellarmine, Darwin, Huxley, Dawkins, Newman, Leroy, Zahm, LeMaitre, and Hawking, as well as others. Topics to be discussed are Language, Meaning, and Revelation, the Nature of Science, Theory, and Hypothesis, Evolution, the Big Bang, Soul and Body, Creation versus Making, Providence and Chance.

PHIL 20628. The Ethics of Emerging Weapons Technology

(3 -0- 3) Lee

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This course explores the ethical challenges posed by the ongoing revolution in the technology of war. After learning about some general, philosophical approaches to ethical decision making, we will examine a wide range of new weapons technologies, from “smart” bombs, drones, and robots to em (electromagnetic) weapons, cyberwar, and bio-enhancement, asking the question whether the existing framework of Just War Theory and the Law of Armed Conflict (LOAC) are adequate for war as it will be fought in the 21st century.

PHIL 20629. Morality and Machines

(3 -0- 3) Arnold

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

Computers are an integral part of modern society. This course looks at several moral issues that arise from the use of computers and associated machines, for example, moral issues surrounding automation and computerization, information privacy and security, intellectual property, virtual worlds, and computer crime.

PHIL 20630. Time in Philosophy, Physics and Fiction

(3 -0- 3)

A seminar covering philosophical and scientific arguments for and against different theories of time and considering ways in which different theories of time are represented in fiction. Are time travel stories logically consistent? Physically possible? Is the future determinate or indeterminate? Can our deepest pre-philosophical convictions about time be reconciled? Is there a sense in which space-time exists?

PHIL 20801. Philosophy of Religion

(3 -0- 3) Dumont

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This course introduces some of the key themes in the philosophy of religion (the nature and existence of God, the rationality of theistic faith, the nature of religious language, miracles, immortality, and religious pluralism) by means of a close study of classic texts in the discipline.

PHIL 20802. Philosophical Reflections on Christian Belief

(3 -0- 3) Potter

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301 or PHIL 30301 or PHIL 30302

An examination of some of the most philosophically fascinating features of the Christian faith, including the Christian conception of God, the doctrine of the incarnation, and the cogency of a Christian world-view.

PHIL 20805. Thought of Aquinas

(3 -0- 3) O'Callaghan

Prerequisite: PHIL 10100 or PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PLS 20301

This course provides an overview of certain central teachings of St. Thomas Aquinas with attention particularly to philosophical topics touching upon theological questions. 1) Faith and reason and the ways to God; 2) Human nature, particularly soul, body, and the image of God; 3) Law and Virtue; 4) Nature and Grace.

PHIL 20806. Philosophy of Judaism

(3 -0- 3)

Prerequisite: PHIL 10101 or PHIL 13185 or PHIL 13195 or PHIL 20101 or PHIL 10100 or PLS 20301

This introduction to the philosophy of Judaism has two tracks, based on the recognition that Judaism as a philosophy can be understood properly only when it is seen in its historical and cultural context. Concerning the latter, we will examine "the history of the Jewish Experience" as provided by Leo Trepp in his book of that title. Regarding philosophy per se, we will base our study on the influential work of Abraham Joshua Heschel (1907–1972), as reflected in his formative work *God in Search of Man*. The ultimate goal of the course for non-Jewish students is to provide an opportunity for the kind of reflective awareness of where one stands provided by the kind of exercise Father John Dunne describes as "crossing over" from one's own tradition to another.

PHIL 20808. Ethical and Religious Obligations

(3 -0- 3)

What is the source of our various obligations and how do they arise? How does a person determine what his or her obligations are? What is the relationship between religious duty and ethical and social duty? Can a person be obligated to hold certain beliefs or to cultivate particular character traits? In this lecture course we will explore these questions about the nature of obligation through the writings of Plato, Cicero, Maimonides, and Kant. We will study how these thinkers answered these questions as well as how their answers influenced the specific obligations they understood us as having.

PHIL 20810. Philosophical Theology

(3 -0- 3)

An examination, from a philosophical perspective, of issues concerning religious faith and the exercise of reason, the existence and nature of a god, language about a god, divine and natural causality, miracles, the problem of evil, human free will and divine determinism, divine eternity and creaturely temporality, life after death, science and religion.

PHIL 26999. Sp Top: Philosophical Issues

(V -0- V)

In exceptional circumstances with written permission of instructor and approval of philosophy director of undergraduate studies, students are permitted to take a tutorial with a faculty member on a particular issue in philosophy. Readings will be assigned and writing assignments required.

PHIL 30301. Ancient and Medieval Philosophy

(3 -0- 3) Dumont Freddoso

This course will concentrate on major figures and persistent themes. A balance will be sought between scope and depth, the latter ensured by a close reading of selected texts.

PHIL 30302. History of Modern Philosophy

(3 -0- 3) Newlands

An examination of the perennial tension between reason and experience as exemplified in classical modern rationalism and empiricism; its subsequent synthesis in Kant.

PHIL 30303. Nineteenth- and Twentieth-Century Philosophy

(3 -0- 3) Ameriks

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A survey of developments in philosophy since Kant. Readings in both the Continental and Anglo-American traditions.

PHIL 30313. Formal Logic

(3 -0- 3) Franks

An introduction to the fundamentals and techniques of logic for majors.

PHIL 30328. Body, Soul and the Image of God

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course will examine from a philosophical point of view the influence exerted by the Greek conception of divinity and the Christian Doctrine of "imago dei" upon accounts of human nature. This course serves as both the capstone course for the interdisciplinary minor Philosophy in the Catholic Tradition and an upper-level elective for Philosophy majors. Its format combines lectures and seminar-style discussion.

PHIL 30354. Gender and Science

(3 -0- 3)

An exploration of the ways in which science is gendered, starting with the ways in which women have been excluded from science, and moving through such issues as the invisibility and shabby treatment of women with the products of scientific research, the contributions of women to science and whether these are different in kind from the contributions of men, and the differential effects of science on men's and women's lives.

PHIL 30389. Philosophical Issues in Physics

(3 -0- 3) Bland

This course is intended for non-science students who desire to begin an examination of the origins of the modern laws of physics and for science students who wish to know the actual route to the discovery and the broader implications of the formal theories with which they are already familiar. The historical background to and philosophical questions associated with major laws of physics will be discussed, in large measure by examining directly relevant excerpts from the writings of some of the creators of seminal concepts and theories in physics. The latter part of the course will concentrate on historical and philosophical issues related to relativity and especially to quantum theory and its interpretation. This course is accepted as a science elective in the College of Science.

PHIL 40314. Morality and Modernity

(3 -0- 3) Solomon

Corequisite: PHIL 42314

An examination of many of the deepest contemporary moral disputes that rest on philosophical disagreements about the nature of modernity. These disputes focus particularly on the modern commitments to individualism and the idea of progress.

PHIL 43101. Plato

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A detailed and systematic reading, in translation, of the fragments of the pre-Socratics and of the following Platonic dialogues: *Euthyphro*, *Apology*, *Crito*, *Meno*, *Protagoras*, *Phaedo*, *Republic*, *Phaedrus*, *Symposium*, and *Theaetetus*.

PHIL 43102. Aristotle

(3 -0- 3)

An examination and evaluation of Aristotle's philosophy, with special emphasis on the logical, physical, and metaphysical writings.

PHIL 43108. Aristotle's Ethics and Politics

(3 -0- 3)

Prerequisite: PHIL 30301 or PHIL 30302 or PHIL 30313

An examination of Aristotle's ethical and political views through a close reading of his "Nicomachean Ethics" and "Politics".

PHIL 43134. History of Medieval Philosophy

(3 -0- 3)

A semester long course focusing on the history of medieval philosophy. It provides a more in-depth consideration of this period than is allowed in PHIL 30301, Ancient and Medieval Philosophy and may be considered a follow-up to that course.

PHIL 43135. St. Anselm's Philosophy/Theology

(3 -0- 3)

An examination of the major philosophical and theological writings of St. Anselm. His *Monologion*, *Proslogion*, and *Cur Deus Homo* will be of central concern, but several lesser known texts will also be read. Topics discussed in these writings include arguments for the existence of God, the divine nature, the Trinity, the Incarnation, freedom (and its compatibility with divine foreknowledge), and truth.

PHIL 43139. Platonic Love

(3 -0- 3)

This course will study the theme of platonic love from Plato (via Augustine and Aquinas) to Marsilio Ficino, focusing on half a dozen key texts in English translation.

PHIL 43140. Ethics of Thomas Aquinas

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A systematic discussion of the main features of the moral teaching of Thomas Aquinas. The *Summa Theologiae*, *Prima Secundae* and Aquinas's commentary on the *Nicomachean ethics* will be the principal sources.

PHIL 43142. Medieval Theories of Cosmic Harmony

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A study of Pythagorean tradition in the Middle Ages using both philosophical-theological and music-theoretical texts.

PHIL 43146. Philosophy of Duns Scotus

(3 -0- 3)

Duns Scotus (1266–1308) was, along with Thomas Aquinas and William of Ockham, one of the three major, scholastic thinkers. This course will examine Scotus's major contributions in metaphysics, epistemology, and ethics, including the univocity of the transcendental concepts, the modal proof for the existence of God, the formal distinction, intuitive cognition, the elimination of the illumination theory of knowledge, and his strong voluntarism, particularly as the origin of the so-called synchronic theory of contingency. Attention will be given to how Scotus develops his views in reaction to his contemporaries, especially Henry of Ghent.

PHIL 43148. Aquinas on Virtue and Law

(3 -0- 3) O'Callaghan

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A close study of virtue and law, and of their relation to one another, in the moral theory of St. Thomas Aquinas, as laid out in the First Part of the Second Part of the *Summa Theologiae*.

PHIL 43149. Aquinas' Philosophical Theology

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A close examination of the philosophical arguments within the first thirteen questions of Aquinas' *Summa Theologiae*, including arguments about the distinction between philosophy and Sacred Theology, the existence of a god, divine simplicity, divine perfection, divine goodness, divine infinity, divine immutability, divine eternity, divine unity, how God is known by us, and how God is spoken about by us.

PHIL 43150. Aquinas on Creation

(3 -0- 3)

An exploration of the central metaphysical questions involved in the claim that God creates the entities in the world *ex nihilo*, along with an examination of hermeneutical questions involved in the interpretation of Genesis 1. The main texts for the course will be the treatment of creation and of the work of the six days found in St. Thomas's *Summa Theologiae*, supplemented by the treatment of creation in Francisco Suarez's *Disputationes Metaphysicae*.

PHIL 43151. Aquinas on Human Nature

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A close study of St. Thomas Aquinas's philosophical anthropology, based on questions 75-101 of the First Part of the *Summa Theologiae*. Some topics include: the human soul and its powers, the sentient appetite, higher human cognition and willing, and the production of the first human beings in the state of innocence.

PHIL 43152. The Philosophy of Thomas Aquinas

(3 -0- 3)

The course surveys the principal themes of Aquinas's philosophy, focusing on close readings of relevant texts.

PHIL 43153. Augustine on Thinking and Language

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

As indicated by autobiographical references in the *Confessions*, an understanding of the nature and function of language, from the simplest notions of orthography to the most subtle and complex aspects of hermeneutics, was always a central issue in Augustine's thought. Our course on the Augustinian philosophy of language, which will be based on a close reading of selected texts or parts of texts in English translation (but always with an eye on the original Latin), will be divided into three segments in accordance with the philosopher's own development from the liberal arts, through Platonic philosophy, to Biblical exegesis: 1. The human languages: Grammar and Rhetoric (with readings of *De Dialectica*, *De Magistro*, *De Doctrina Christiana*); 2. Language, Logic (Dialectic), and Ontology (with readings of *Contra Academicos*, *De Ordine*, *De Immortalitate Animae*, *De Quantitate Animae*), and 3. The divine and human Words (with readings of *Confessions* and *De Trinitate*). Requirements: two brief oral reports and a final written paper (ca. 20 pp.).

PHIL 43156. Augustine's Confessions

(3 -0- 3)

A close reading of Augustine's *Confessions* from a primarily philosophical perspective. It will consider the themes of Faith and Reason, Human Nature, Memory, Understanding and Love, Time and God in Augustine's quest for self understanding and wisdom.

PHIL 43157. Philosophy and Humanism in the Twelfth Century

(3 -0- 3)

Prerequisite: PHIL 30301 or PHIL 30302 or PHIL 30313

The course will concentrate on the writings of a group of French thinkers—Bernard of Chartres, William of Conches, Thierry of Chartres, Clarembald

of Arras, and Bernard Silvestris (often known collectively as “The School of Chartres”) who exemplify the combination of philosophical and literary interests that is perhaps unique to the first half of the twelfth century. We will consider the texts not only in themselves but in relation to the Latin writers of late antiquity (Calcidius, Macrobius, Martianus Capella, and Boethius) whose influence formed the philosophical-humanist mentality. Knowledge of Latin is desirable for this course. Written requirement: one final paper of ca. 20 pp.

PHIL 43158. Introduction to Plotinus

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A study of Plotinus’ *Enneads* in which a close reading of selected texts roughly in their chronological order will be interspersed with commentary on their historical and philosophical background. After an introduction based on Porphyry’s *Life of Plotinus*, we will read a selection of earlier treatises (including I. 6, V. 9, V. 1, and VI. 9), a selection of writings from the author’s middle period (concentrating on III. 8, V. 8, V. 5, and II. 9), and a selection of later texts (including III. 2-3, I. 8, and VI. 8). Since the texts will be read in the English translation of A. H. Armstrong, knowledge of Greek is an advantage but not a necessity. Written requirement: one final paper of ca. 20 pp.

PHIL 43159. Aquinas and Scotus: Rival Catholic Thinkers

(3 -0- 3) Cross

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course will cover some of the key points in the philosophical and theological thought of Thomas Aquinas and Duns Scotus, focusing on ways in which their systems contrast with each other on many significant issues. Topics to be discussed will include philosophical ones (some or all of the following: universals and individuation; identity and distinction; essence and existence; univocity and analogy; body and soul; cognitive theory; the freedom of the will; the grounding of the moral law; the existence and nature of God) and theological ones (some or all of the following: Trinity; Christology [hypostatic union and Christocentrism]; grace; sacraments). The texts will be studied in English, when necessary in translations provided by the instructor.

PHIL 43160. Founders of the Middle Ages

(3 -0- 3) Gersh

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The course will introduce the work of four Christian writers of late antiquity who can be considered as foundational with respect to the early medieval understanding of the relation between the trivium and quadrivium and biblical study, and therefore to the early medieval approach to the intellectual life in general. We will take a predominantly historical and biographical approach in order to examine the life, sources, works, and ideas of Augustine, Boethius, Cassiodorus, and Isidore of Seville by means of selected readings in Latin and in English translation. Using similar methods, we will also look more briefly at the influence of the four writers on certain later figures such as Bede and Alcuin who were themselves foundational with respect to medieval pedagogy. Although some of the textual materials will be read in class in the original language, demonstrable knowledge of Latin will not be required in order to take the course. Requirements: one oral presentation and one final paper of ca. 20 pp, these two projects being either related to or independent of one another.

PHIL 43161. The Philosophy of Augustine

(3 -0- 3) Gersh

The course is intended as an introduction to Augustine’s work from the philosophical viewpoint, although necessarily certain theological questions will also be examined. The emphasis will fall partly on the reading of selected texts (in English translation) beginning with dialogues of Cassiciacum such as *Against the Academics*, *On Order*, *Soliloquies*, *On the Teacher*, continuing with *On the Quantity of the Soul*, *On Music*, *On the Immortality of the Soul*, *On Free Choice of the Will*,

and concluding with *The City of God*. The course will also identify certain philosophical themes as particularly worthy of discussion, including Augustine’s ideas about the nature of God, his theories of knowledge and language, and his notions of the relations between good and evil, providence and free will. Requirement: one final paper (ca. 20 pp.) and an oral book report.

PHIL 43169. Kant

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

An overview and critical assessment of Kant’s transcendental idealism as it is presented in his main work, the *Critique of Pure Reason*.

PHIL 43170. Hegel

(3 -0- 3)

An intensive reading of Hegel’s *Phenomenology of the Spirit*. Issues discussed will be Hegel’s conception of self and society, his treatment of culture, art, and religion, the nature of dialectic, his views on systematic holism and critique, etc.

PHIL 43171. Kierkegaard

(3 -0- 3) Rush

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A comprehensive consideration of the major themes in Kierkegaard’s thought, including: the relation of faith to art, knowledge and morality, the nature of subjectivity, what constitutes effective philosophical communication, etc. Main texts: *Either/Or*, *Philosophical Fragments*, *Concluding Unscientific Postscript*, *Fear and Trembling*, and *Sickness unto Death*.

PHIL 43173. Nietzsche

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A close consideration of Nietzsche’s thought beginning with his early work under the influence of Schopenhauer, through his “naturalistic” or “positivistic” works, and on to his mature work of the 1880s.

PHIL 43179. Hegel and Kierkegaard

(3 -0- 3)

This course is an investigation of central themes in Hegel’s thought and Kierkegaard’s reaction to them. Concentration is on Hegel’s *Phenomenology of Spirit* and the opening sections of his *Logic* and on Kierkegaard’s *Philosophical Fragments* and portions of his *Concluding Unscientific Postscript*.

PHIL 43180. Hume

(3 -0- 3) Joy

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A careful reading of the *Treatise of Human Nature*.

PHIL 43182. Socrates, Nietzsche and Kierkegaard

(3 -0- 3)

Socrates is often understood to have invented philosophy as an art of examination and way of life. In this course we will examine the nature of the Socratic art, along with a few critical appropriations of it by Nietzsche and Kierkegaard among others. The key question of the course is: Is philosophy as Socrates understood it possible today?

PHIL 43183. The Rationalists

(3 -0- 3)

This seminar will critically examine the leading rationalists of the 17th century, most especially Descartes, Malebranche, Spinoza, and Leibniz. Time and interest permitting, it may also consider the applications of the rationalist commitments in contemporary philosophy and examine some criticisms of rationalism (both historical and contemporary).

PHIL 43184. God Evil and the Early Moderns

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course will explore the perennial topic of the problem of evil as it was developed and addressed in the rich context of 17th and 18th century philosophy.

PHIL 43201. Continental Philosophy

(3 -0- 3) Watson

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

An examination of leading issues in contemporary movements in continental philosophy (e.g. existentialism, hermeneutics, poststructuralism) in authors such as Habermas, Gadamer, Sartre, Derrida, and Foucault.

PHIL 43203. Heidegger's Being and Time

(3 -0- 3)

A close reading of Heidegger's seminal work *Being and Time*.

PHIL 43208. Existentialism and Beyond

(3 -0- 3)

Beginning with selections from Sartre, the goal of this course is to see just what his existentialism amounted to and what role it played in his thought as a whole. We will then examine the significance of Sartre for several other French philosophers (some possibilities are Levinas, Foucault, and Derrida).

PHIL 43210. Proust and the Philosophers

(3 -0- 3)

This seminar will begin by reading extensive parts of Proust's "In Search of Lost Time", in translation and considering the philosophical positions it transforms. We will then examine Proust's influence in a number of areas of philosophy, including epistemology, the philosophy of mind, aesthetics, the philosophy of history and social science. This in turn will allow us to confront the relationship between philosophy and literature more particularly. Marcel Proust's *A Recherche Du Temps Perdue (In Search of Lost Time)* has been called the most important novel of the twentieth century. Just previous to its inception, its author was uncertain of its status. "Must I make of it a novel, a philosophical study, am I a novelist?" (Notebook of 1908, p. 60–1). Even well into the project, in a volume not published until after Proust's death, the narrator of the *Recherche* declared "a certain philosopher" to be at the core of his essential personality" (The Captive, p. 5). Philosophy thus was very close to this project. Recent research has revealed the extent to which Proust himself was substantially trained in philosophy (e.g., the metaphysics of Schopenhauer or the aesthetics of Hegel and Schelling). Perhaps even more significant is the extent of the influence of The Search on philosophers after it. Among others, Proust's work played an essential role in the thought of Sartre, Merleau-Ponty, Ricoeur, Beckett, Benjamin, Bataille, Adorno, Rorty, Ricoeur, Kristeva and Taylor. This seminar will begin by reading extensive parts of this multivolume work in translation and considering the philosophical positions it transforms. We will then examine Proust's influence in a number of areas of philosophy, including epistemology, the philosophy of mind, aesthetics, the philosophy of history and social science. This in turn will allow us to confront the relationship between philosophy and literature more particularly. Requirements: Research Paper, Seminar Presentation.

PHIL 43211. Hermeneutics: Ancient and Modern

(3 -0- 3) Gersh

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The course will be a study of general hermeneutics (with special reference also to philosophical-theological and literary hermeneutics) through the staging of an encounter between classic texts dealing with this subject from the late ancient period and from the twentieth century respectively. From the earlier time-period the texts will include Origen: *On First Principles*, book IV, Augustine: *On Christian Teaching*, *On the Literal Interpretation of Genesis*, books I-IV, and Proclus (selections from exegetical works dealing with Homer and Plato); from the later

time-period, Heidegger: *Being and Time*, introduction, *Elucidations of Holderlin's Poetry*, Gadamer: *Truth and Method*, Derrida: *Of Grammatology*, *Dissemination*. In addition to studying the texts carefully—the first requirement of an exegete—we will consider such questions as: Is a "non-hermeneutic" view of reality possible; What is the difference between philosophical-theological and literary hermeneutics?; What is the relation between translation and hermeneutics?; Can one have a theory of hermeneutics independent of its practice. Requirement: one final paper of ca. 20 pp.

PHIL 43301. Ethical Theory

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The most significant work in philosophical ethics in recent decades has been carried out as a project of retrieval from the large scale normative theories scattered throughout the history of philosophy. In this course we will examine four of these historically significant bodies of ethical theory. We will do close readings of Aristotle's *Nicomachean Ethics*, Kant's *Groundwork for the Metaphysics of Morals*, Mill's essays on Coleridge and on Bentham, and Nietzsche's *Genealogy of Morals*. These texts will be read in light of some of the contemporary disputes within ethical theory for which they provide a background. Our primary goal, however, will be to understand the texts themselves. The class will be run as a seminar. Students will be expected to come to class prepared to discuss the reading for the day. Course requirements will include three short papers (5–7 pages) and a take-home final. There are no specific prerequisites for the course, but students will be expected to have the skills and the motivation to engage critically with challenging philosophical work.

PHIL 43302. Twentieth-Century Ethics

(3 -0- 3) Solomon

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The course will begin with an examination of the main metethical positions developed from 1903 to 1970—intuitionism, emotivism, prescriptivism and the various forms of ethical naturalism. This material will provide a background for a discussion of issues arising from the more recent revival of classical normative theory.

PHIL 43308. Environmental Justice

(3 -0- 3) Shrader-Frechette

This course will survey environmental impact assessment (EIA), ecological risk assessment (ERA), and human-health risk assessment (HHRA); ethical and methodological issues related to these techniques; then apply these techniques to contemporary assessments for which state and federal governments are seeking comments by scientists and citizens.

PHIL 43310. Animal Minds and Animal Rights

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

An examination of competing views of the moral status of nonhuman animals. Particular attention is given to views of the relation between the mental lives of animals and their moral status.

PHIL 43312. Aesthetics

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A consideration of some of the fundamental questions in aesthetics and philosophy of art, e.g., the nature of aesthetic representation, expression in art, the concept of beauty, what distinguishes art from "mere things," the structure and function of imagination.

PHIL 43313. Philosophy and Literature Seminar

(3 -0- 3) O'Connor

The course will focus on how Plato enters into the dialectic between skepticism and idealism in Romanticism. Plato's Symposium and Phaedrus be our lenses to look at five writers from the Romantic tradition of the nineteenth and early twentieth centuries who cross the lines between philosophy and literature: Percy Bysshe Shelley, Ralph Waldo Emerson, Walter Pater, William Butler Yeats, and Wallace Stevens. This seminar is the gateway for the undergraduate minor in Philosophy and Literature, but other interested students are welcome. Contact Professor O'Connor at doconnor@nd.edu for permission to register. A limited number of spaces are open to graduate students, who should register under the graduate course number.

PHIL 43314. Abortion, Euthanasia, and Capital Punishment

(3 -0- 3)

This course involves an examination of recent philosophical work on abortion, euthanasia, and capital punishment. Though the focus is on the philosophical debates, some attention is given to relevant legal and public policy discussions.

PHIL 43318. The Ethics of Gender

(3 -0- 3)

We observe gender differences between men and women, but these differences vary over time and place, depending on the customs and practices of different societies and depending on the choices individuals make. To the degree that gender differences are a product of social and individual choice, we can raise the question, as we will in this course, of what, if any, gender differences, we should have in society. This question is of particular ethical significance in light of our commitment to the equality of men and women.

PHIL 43320. History of Ethics

(3 -0- 3)

This course focuses on theories of moral psychology in ancient philosophy, modern philosophy, and contemporary philosophy. It analyzes the changing conceptions of human nature and human action that are the basis of Aristotle's ethics, Hume's ethics, and Kant's ethics. It then discusses what happened to these conceptions in 20th-century ethical theory.

PHIL 43321. The Ethics of Gender and Race

(3 -0- 3)

This course is concerned with two central ideas—equal opportunity and discrimination. It focuses on what constitutes equal opportunity with respect to gender and race and how best to achieve it, as well as what constitutes sexual and racial discrimination and how best to avoid it. It begins by considering arguments of those who hold that feminist causes discriminate against men and that affirmative action programs discriminates against whites, and then considers opposing arguments. The goal of the course is to help students make up their own minds about which views on these topics are most morally defensible.

PHIL 43323. The Demands of Morality

(3 -0- 3)

With a focus on the contemporary literature, this course examines theoretical and practical issues concerning the limits of morality. Questions to be explored include: Is it ever morally permissible to do less than what is morally best? How much does morality demand in ordinary situations? Do the demands of morality change in at least some emergency situations? Which moral theories invite, and which avoid, the charge of being overly demanding? What sense can be made of the claim that some acts are above and beyond the call of duty?

PHIL 43324. Philosophical Issues in Law and Medicine

(3 -0- 3) Warfield

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
Analysis of philosophical and public policy issues at the intersection of law and medicine. Topics may include: the "born alive" rule, defining death, the vegetative state and other disorders of consciousness, assisted suicide, futility laws, and others.

PHIL 43325. History of Aesthetics and Philosophy of Art I: The Ancient, Medieval, and Renaissance Contexts

(3 -0- 3) Rush

A conceptual-historical survey of aesthetic theory and the philosophy of art that beginning in antiquity and concluding in the Renaissance. The main readings will be historical sources in both philosophy and art theory more broadly construed, with ample attention to various types and genres of art and in-depth consideration of several individual works. Topics discussed: the relation of art to truth the nature of artistic representation, tragedy and comedy, natural and artistic beauty, ethics and art, genius and sublimity, social roles of art and of the aesthetic response to nature, etc.

PHIL 43403. Philosophy of Law

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
An overview of central topics in philosophy of law, followed by consideration of a range of theoretical issues in general criminal law.

PHIL 43404. Justice Seminar

(3 -0- 3) Roos

An examination of major theories of justice, both ancient and modern. Readings include representatives of liberal theorists of right, such as John Rawls, as well as perfectionist alternatives. The course also serves as the core seminar for the philosophy, politics, and economics concentration.

PHIL 43427. Social and Political Philosophy

(3 -0- 3)

An investigation of the major concepts and historical movements in political philosophy. Themes treated are state of nature, relationship of society to state, conception of democracy, rights theory, economic justice and justice between groups, and alternatives to liberalism. Readings are drawn inter alia from Plato, Aristotle, Locke, Smith, Rousseau, Marx, Mill, Weber, Lenin, Berlin, Rawls, Nozick, MacIntyre, Taylor, and Habermas.

PHIL 43428. Contemporary Political Philosophy

(3 -0- 3)

The last four decades have been an extraordinarily exciting time in the development of political philosophy. Many of the central questions in the subject have received their most authoritative formulation and treatment since the 19th century. This course will survey developments in English-speaking philosophical world in that period. Topics to be covered include the foundations of constitutional and human rights, the grounds of economic justice in domestic and global settings, and the point and demands of equality. Other problems to be surveyed include the conditions of just war in the contemporary world (including preemptive war) and moral problems connected with torture. Authors to be covered include John Rawls, Robert Nozick, Michael Sandel, Ronald Dworkin, T.M. Scanlon, Amartya Sen, Martha Nussbaum, Elizabeth Anderson, Jeremy Waldron and Samuel Scheffler. The course will be run as a seminar. This course will be of special interest to students in philosophy and political science. It has no prerequisites except a willingness to work hard and take part in class discussions. Requirements include frequent writing assignments, a class presentation and a comprehensive final examination. A substantial writing project will be required of graduate students in lieu of a final. Other students may substitute a substantial paper for the final with the permission of the instructor.

PHIL 43429. Radical Politics

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course is a consideration of classic politically left texts in modern political theory that pose direct challenges to liberal democracy. The course typically takes one of two forms, depending on whether the emphasis falls on one of two traditions: socialism or anarchism.

PHIL 43430. Moral Foundations of Democracy

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This seminar will begin with an intensive review of major ethical theories' virtue ethics, Kantian deontology, utilitarianism, and intuitionism. Part II will take up modern political philosophy with Mill's *On Liberty* and Rawls's *Theory of Justice and Political Liberalism* as central texts. The third and final part will focus on separation of church and state as an element in democratic government and on the proper balance between religious and non-religious standards in political decisions.

PHIL 43431. Politics and Conscience

(3 -0- 3) Keys

Against a backdrop of large-scale society, mass movements, and technological bureaucracy, the invocation of "conscience" recalls the individual human person as a meaningful actor in the political sphere. But what is conscience, and what are its rights and responsibilities? What is it about conscience that ought to command governmental respect? Are there limits to its autonomy? What role should conscience play in questions of war and peace, law-abidingness and civil disobedience, citizenship and political leadership? And how does the notion of conscience relate to concepts of natural law and natural rights, rationality and prudence, religion and toleration? This course engages such questions through readings from the Catholic intellectual tradition (Augustine, Thomas Aquinas, Thomas More, Francisco de Vitoria, Desiderius Erasmus, John Henry Newman, Karol Wojty'a/John Paul II, and Joseph Ratzinger/Benedict XVI) and other writers of the history of ethical-political thought (Cicero, Seneca, John Locke, Mahatma Gandhi, Jan Pato'ka, and Alexandr Solzhenitsyn). We consider also various contemporary reflections on conscience expressed in films, essays, letters, plays, short stories, speeches, and declarations, beginning with Martin Luther King, Jr.'s "Letter from a Birmingham Jail" and Vaclav Havel's speech "Politics and Conscience." This class serves as both the capstone course for the interdisciplinary minor Philosophy in the Catholic Tradition and an upper-level elective for Political Science majors and Peace Studies minors. Its format combines lecture and seminar-style discussion.

PHIL 43432. Radical Politics II: Socialism

(3 -0- 3) Rush

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course is a consideration of classic, politically left texts in modern political theory that pose direct challenges to liberal democracy. The course typically takes one of two forms, depending on whether the emphasis falls on one of two traditions: socialism or anarchism. The subject matter for S12 is socialism. Readings from: Saint-Simon, Fourier, Marx & Engels, Lenin, Trotsky, Luxemburg, Gramsci, Lukács, etc.

PHIL 43501. Metaphysics

(3 -0- 3) van Inwagen

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

An examination of the nature of metaphysics and of those metaphysical issues that have proved central in Western philosophical tradition. Topics discussed will include mind-body problem, freedom of will, universals, substance, time, categories and God.

PHIL 43503. Philosophy of Action

(3 -0- 3) Warfield

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The course will be a study of the major philosophical topics relating to human action and the relations between them, including the nature of intentional action, weakness of will, freedom of the will, and practical rationality.

PHIL 43601. Epistemology

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The aim of this class is to provide an understanding of the fundamental issues and positions in the contemporary theory of knowledge.

PHIL 43603. Philosophy in a Different Voice: Feminist Perspectives on Knowledge

(3 -0- 3)

Traditional epistemology and philosophy of science analyze the prospects and conditions of knowledge in a very abstract, general way—as though our individual characteristics (gender, race, etc.) and the sociopolitical situation in which we find ourselves have no bearing on such knowledge. In contrast, this course will consider such issues as the epistemic resources and liabilities of particular social locations, the ideological role of epistemic norms, and the relation between social values and objectivity.

PHIL 43604. Philosophy Against Itself

(3 -0- 3)

In this lecture and discussion class we will study philosophy as a discipline paying close attention to the origins of its several contemporary streams and its place within explanatory and introspective thought more broadly.

PHIL 43605. Pragmatism

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course comprises both a survey of classical sources in the history of American pragmatism (Charles Peirce, William James, C.I. Lewis, G.H. Mead, and John Dewey), as well as a discussion of pragmatism's impact on more contemporary philosophers (e.g., W.V.O. Quine, Hilary Putnam, Richard Rorty, and Robert Brandom). Special attention is given to the relation of pragmatism to the emergence of a distinctively American analytical philosophy and to the philosophy of social science. Among the issues to be discussed: the connection of rationality to truth, the relation of agency to knowledge, experimentation as a template for experience, varieties of naturalism and instrumentalism in the philosophy of science and in the philosophy of social science, doctrines of meaning as use, etc.

PHIL 43701. Philosophy of Science

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A detailed consideration of the central methodological and epistemological questions bearing on science.

PHIL 43704. Science and Social Values

(3 -0- 3)

A consideration of such questions as: Should science be value-free, or should it be shaped by the needs and ideals of the society that supports it? If the former, how can scientists shaped by society contribute to it, and what claim to the resources of the society can scientists legitimately make? If the latter, how can scientists still claim to be objective?

PHIL 43708. Bio-Medical Ethics, Scientific Evidence and Public Health Risk

(3 -0- 3) Shrader-Frechette

Designed for pre-med, science, and engineering students, the course will survey ethical issues associated with current public health problems, such as pollution induced cancers, universal health care, occupational injury and death, and inadequate medical attention to prevention, nutrition and environmental health.

PHIL 43711. The Life and Works of Darwin

(3 -0- 3)

Through Darwin's work and biographic material about Darwin, we examine his ideas as well as the social context in which these Ideas were developed.

PHIL 43712. Darwin, Philosophy and Religion

(3 -0- 3)

The year 2009 marks both the 200th anniversary of Darwin's birth and the 150th anniversary of the publication of his *On the Origin of Species*. The Origin has had a profound effect, not just on biology, but also on how we think about ourselves, about human nature in relationship to the natural world, and both of the latter in relationship to God. This class will begin by setting the philosophical and theological scene in the 19th century and then, against that backdrop, reading Darwin's own work (the Origin and excerpts from *Descent of Man*) and biographical material about Darwin's life. We will then embark on an exploration of the impact of Darwin's ideas, focusing on their theological and philosophical implications. This class will thereby provide a deeper understanding of the birth and context of Darwin's ideas and their on-going significance in the twenty-first Century. It will include invited speakers and at least one field trip (to the Evolution exhibit at Chicago's Field Museum). Students will also be required to attend some of the sessions at the second of the two international conferences on evolution being presented by Notre Dame in cooperation with a consortium of Roman Pontifical Universities (Nov. 1–3). Beyond this, and faithful class participation, the course will entail several in-class presentations a midterm and a final paper.

PHIL 43713. The Scientific Self: Body and Soul in the 17th-Century Europe

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
Taking the activities of the Royal Society of London and the "birth of modern science" as our focal point, this seminar examines the profound changes in our conception of self—of who and what we are, our place in the cosmos, and our relationship to that cosmos and to God—that took place in the seventeenth century.

PHIL 43715. Philosophy of Science and Public Policy

(3 -0- 3)

This course will focus on how philosophy of science can illuminate and help resolve real-world problems such as evolution, climate change, environmental harms, biomedical health risks, economic costs/benefits, and pharmaceutical safety.

PHIL 43716. Philosophy of Psychology

(3 -0- 3)

A focus on foundational issues concerning psychopathology, mental disorder, etc.

PHIL 43717. Forbidden Knowledge: The Social Construction and Management of Ignorance

(3 -0- 3) Kourany

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
Within the last 10 years historians of science such as Robert Proctor, Londa Schiebinger, Peter Galison, and Naomi Oreskes, have been promoting a new area of enquiry—Proctor calls it agnotology, the study of ignorance—which they suggest is of as much relevance to philosophers and social scientists and others as it is to historians. Indeed, the suggestion is that agnotology offers a new approach to the study of knowledge, an approach at least as complex and important as its more established sister, epistemology. In this course we shall focus especially on socially constructed ignorance—the kind exemplified by governmental secrecy and censorship, or industry-engineered confusion (think of the tobacco industry or the pharmaceutical industry), or the 'virtuous ignorance' that would ensue if certain kinds of research (think of race- and gender-related cognitive differences research) were no longer supported. This will lead us to consider the kinds of freedom

of research and other social structures that need to be in place to support the legitimate quest for knowledge, and thence to the recognition that agnotological/epistemological questions are also, ultimately, political questions.

PHIL 43802. Philosophy of Religion

(3 -0- 3)

A critical examination of some classical philosophical theories of religion. The central focus of the course will be issues concerning justification and explanation in religion.

PHIL 43806. Aquinas on God

(3 -0- 3) Freddoso

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
A close reading of the first 43 questions of the first book of the *Summa Theologiae*. These questions, which deal both with the divine essence and with the three divine persons, provide a comprehensive survey of St. Thomas's *Metaphysics*.

PHIL 43807. Divine Attributes

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
Christians have traditionally ascribed a number of rather unusual attributes to God—attributes such as omnipotence, omniscience, omnibenevolence, eternity and simplicity. This course will examine both the reasons for attributing such properties to God and the ways in which philosophers have tried to understand these concepts. For each divine attribute, we will first examine the views of St. Thomas Aquinas; then we will consider some of the questions concerning that attribute which have recently attracted philosophical attention. Contemporary authors to be read include Robert Adams, Peter Geach, William Hasker, Anthony Kenny, Norman Kretzmann, William Mann, Thomas Morris, Nelson Pike, Alvin Plantinga, Eleonore Stump, Edward Wierenga and Nicholas Wolterstorff.

PHIL 43808. Philosophy and Theology of the Body

(3 -0- 3)

The first half of the course will focus on key concepts, such as solitude, gift, communion, shame, and nuptial significance, in relation to human sexual being and behavior. The second half will focus on the application of these theological concepts to ethics and vocation (marriage and celibacy), including John Paul's reflections of the encyclical *Humanae Vitae*.

PHIL 43810. Religion and Science

(3 -0- 3)

An examination of the nature and limits of both scientific and religious knowledge, and a discussion of several cases in which science and religion seem to either challenge or support one another.

PHIL 43811. Chesterton

(3 -0- 3) Freddoso

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)
An exploration of the thought of Gilbert Keith Chesterton (1874–1936) perhaps the best Catholic apologist of his time. The course will feature Chesterton's two greatest apologetic works, *Orthodoxy* and *The Everlasting Man*.

PHIL 43814. Philosophy, Faith, and Atheism

(3 -0- 3)

This course will discuss the role of philosophical reflection in the formation and development of religious convictions. We will talk about traditional and contemporary understandings of faith, the "new atheism" of Richard Dawkins and others, and a variety of skeptical or agnostic positions.

PHIL 43815. On Evil

(3 -0- 3) O'Callaghan

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

Does evil exist? If it exists, what is it? If it exists, is suffering an example of evil? If it exists, does its existence pose an insuperable problem for Christian belief in God? Is there an adequate philosophical approach to understanding evil, or are all such approaches bound to fail? These and other questions often fall under what is called the "problem of evil." This course seeks to better understand what that problem might be, and what might be said about it in the context of orthodox Christian belief, primarily from a philosophical perspective, but also at points theological.

PHIL 43901. Philosophy of Mind

(3 -0- 3) Stubenberg

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

Dualist and reductionist emphases in recent analyses of mind. Topics covered will include identity of mind and body, intentionality, actions and their explanation and problems about other minds.

PHIL 43902. Philosophy of Language

(3 -0- 3) Blanchette

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The aim of this course is to provide an overview of the field. Major topics include the relation between truth and meaning; truth-conditional semantics; the meaning of sentences, proper names, definite descriptions, general terms and indexicals; the relations between expressing a belief, making a statement, and uttering a sentence.

PHIL 43904. The Origins of Analytic Philosophy

(3 -0- 3)

An examination of fundamental writings at the beginning of the 20th century that ushered in the linguistic and logical tradition of analytic philosophy.

PHIL 43906. Philosophy of Mathematics

(3 -0- 3) Franks

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

A survey of central issues in the philosophy of mathematics.

PHIL 43907. Intermediate Logic

(3 -0- 3) Blanchette

Prerequisite: PHIL 30313 or MATH 10130

An introduction to the basic principles of formal logic. The course includes a study of inference, formal systems for propositional and predicate logic, and some of the properties of these systems. The course will concentrate on proving some of the major results of modern logic, e.g., the completeness of first-order logic, the undecidability of first-order logic, the Lowenheim-Skolem theorems, and Goedel's incompleteness theorems.

PHIL 43908. Topics in Philosophical Logic: Modal Metatheory

(3 -0- 3) Bays

Prerequisite: PHIL 30313 or MATH 10130

This course will cover topics in the metatheory of modal logic. We will start with some basic correspondence theory, and then move on to discuss completeness and the finite model property. Also covered is recent work on the relationship between modal logic and classical logic.

PHIL 43909. Perception

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

There are many theories of perception: naive (or direct) realism, the sense-datum theory (and representative theories in general), the causal theory of perception,

adverbialism, the theory of appearing, intentionalism, and disjunctivism. We will try to get an initial grasp of these theories by viewing them as different answers to the problems posed by illusions and hallucinations. To achieve a better understanding of them we will address a number of questions to each theory: Does it provide an explicit analysis of perception? Does it tell us what the objects of perception are? Does it commit us to nonphysical objects of perception? Does it provide an account of the content of perception? Does it account for the phenomenology of perception? Does it explain how perception can serve to justify beliefs about the physical world? Is it compatible with the results of the scientific study of perception?

PHIL 43910. Personal Identity and Unity of Consciousness

(3 -0- 3)

What sort of a thing am I? What is it to be a person? Can one living human body count as two or more persons (split-brain cases, multiple personality disorder)? Through which sorts of changes can a person persist (how much physical and mental change is survivable)? We shall study some of the traditional answers to these questions especially Descartes's ego-theory and Hume's bundle theory.

PHIL 43912. Between Mathematics and Philosophy

(3 -0- 3) Detlefsen

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

The aim of this course is to introduce the student to important interactions between mathematics and philosophy throughout history. After a brief look at examples from antiquity, the middle ages and the renaissance, we'll focus on the modern era, where we'll pay particular attention to Hobbes, Descartes, the Port Royal logicians, Galileo, Leibniz, Berkeley, Kant and others. If time permits we'll also consider certain ideas of the early nineteenth century mathematician-philosopher Bernard Bolzano.

PHIL 43913. Modal Logic

(3 -0- 3)

Prerequisite: MATH 10130 or PHIL 30313 (may be taken concurrently)

This course covers topics in the metatheory of modal logic. We will start with some basic correspondence theory, and then move on to discuss completeness and the finite model property. If we have time, we'll also cover some recent work on the relationship between modal logic and classical logic.

PHIL 43915. Between Religion and Literature: Meaning, Vulnerability and Human Existence

(3 -0- 3)

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

This course explores the contribution that the coming together of theological and literary reflection can make to our understanding of the nature of meaning. Focusing on the work of Augustine, Aquinas, Dante, Primo Levi, Dostoevsky and Shakespeare, students will address questions such as: What is it we are doing when speaking, reading, using language? How do the intellect and the imagination work in relation to literary texts? How might all this relate to our ways of thinking about God, human nature, and the relationship between them? Such questions will be addressed, in particular, through reflection on how the texts studied invite us to think about the nature of love, forgiveness, vulnerability and creativity.

PHIL 43916. Natural Language Semantics

(3 -0- 3) Speaks

Prerequisite: PHIL 30301 (may be taken concurrently) or PHIL 30302 (may be taken concurrently) or PHIL 30313 (may be taken concurrently)

One of the most remarkable facts about natural languages, like English, is that speakers of the language are able to understand sentences which they have never before encountered. Many have thought that this fact is best explained by the fact that the meanings of sentences are determined by the meanings of the expressions of which they are composed, along with the way in which those expressions are combined. To a first approximation, the project of constructing a compositional semantic theory for a natural language is the project of explaining how the

meanings of sentences of that language are determined by the meanings of sub-sentential expressions, plus the way in which those expressions are combined to form the sentence. The task of constructing such a theory has been a central focus of linguistics and the philosophy of language. This course will be an introduction to natural language semantics.

PHIL 46497. Directed Readings

(V -0- V)

With consent of instructor and approval of department, advanced students are permitted to take a tutorial with a faculty member. Readings will be assigned in a particular area and writing assignments required.

PHIL 46498. Directed Readings

(V -0- V)

With consent of instructor and approval of department, advanced students are permitted to take a tutorial with a faculty member. Readings will be assigned in a particular area and writing assignments required.

PHIL 47901. Special Studies

(3 -0- 3)

The nature of attention has been of interest to philosophy, psychology, neuroscience, biologically inspired computer vision, as well as to social science. In this tutorial course, various accounts of the nature of attention will be considered, with the central aim of implementing one of those accounts computationally in a final project, in such a way as to capture a chosen aspect of attention, such as the role of visual attention in multistable perception or in visual search.

PHIL 48498. Senior Thesis Seminar

(3 -0- 3)

This is a required course for students writing a senior thesis in philosophy. The course is an opportunity for students to present their thesis work and developing ideas to their peers and to the professor of the class, and to help each other in the early stages of their thesis work. The course will also include discussion of topics which will be useful to students in writing their theses, including research skills and techniques for organizing and presenting a philosophical work of substantial length. It is a supplement to, rather than replacement for, the student's regular meetings with his or her thesis director over the course of the semester.

PHIL 48499. Senior Thesis

(3 -0- 3)

An opportunity for senior philosophy majors to work on a sustained piece of research in a one-to-one relationship with a faculty member.

PSY 43815. On Evil

(3 -0- 3)

Does evil exist? If it exists, what is it? If it exists, is suffering an example of evil? If it exists, does its existence pose an insuperable problem for Christian belief in God? Is there an adequate philosophical approach to understanding evil, or are all such approaches bound to fail? These and other questions often fall under what is called the "problem of evil." This course seeks to better understand what that problem might be, and what might be said about it in the context of orthodox Christian belief, primarily from a philosophical perspective, but also at points theological.

Program of Liberal Studies

PLS 13184. History University Seminar

(3 -0- 3)

The goals of this seminar, which will be interdisciplinary in character, are simultaneously to provide students with an introduction to the intellectual history of the West from the Greeks to the present and to focus on one issue widely debated from antiquity to the present: the question of the existence, nature, and possible significance of extraterrestrial intelligent life. Authors whose writing will be read in the course include Aristotle, Lucretius, Aquinas, Cusa, Bruno, Kepler, Pascal, Newton, Huygens, Fontenelle, Pope, Voltaire, Franklin, Kant, Swedenborg, Paine, the Herschels, Wordsworth, Shelley, Comte, Emerson, Tennyson, Whewell, and Twain as well as various twentieth-century authors. Scientific, religious, philosophical, and literary aspects of the debate will all be discussed.

PLS 13186. Literature University Seminar

(3 -0- 3)

This seminar functions as an introduction to the Program of Liberal Studies. It is designed to develop habits of careful reading, discussion, and writing through the reading of classic texts. These seminars serve as an introduction to the "Great Books" style of education fostered by the Program of Liberal Studies.

PLS 20201. Literature I: The Lyric Poem

(3 -0- 3)

An introduction to poetry through intensive study of several lyric poets writing in English. Through close reading of selected poems, students will become familiar with central literary devices, including rhythm and meter, image, metaphor, symbol, paradox, and irony. Poems studied will range from the Renaissance to the 20th century, and may include Shakespeare's sonnets and Keats' odes, along with the works of other major poets such as Donne, Herbert, Marvell, Gray, Wordsworth, Dickinson, Hopkins, Yeats, Eliot, and Stevens. Fall.

PLS 20301. Philosophical Inquiry

(3 -0- 3)

This course introduces philosophical inquiry, both as distinct from and as it relates to other disciplines, through the exploration of primary texts representative of its different forms and questions, and within the context of an integrated liberal education. It also investigates the formal and informal principles of logical reasoning. Readings include selections from the Pre-Socratics, Plato's *Meno*, selections from Aristotle, beginning with his *Organon* and *Physics*, and such authors as Boethius, Descartes, and Aquinas. Fall.

PLS 20302. The Bible and Its Interpretation

(3 -0- 3)

A close study of the selected books Bible. The course will consider the role of the Bible in the life of the church, the history of its interpretation and the various approaches of modern scholarship. Spring.

PLS 20412. Fundamental Concepts of Natural Science

(3 -0- 3)

This course raises questions fundamental to our experience of the physical world. Questions such as "What is space?" and "What is time?" and broader issues about the nature of life are initially raised through a close reading of Plato's *Timaeus* and Aristotle's *Physics*, along with excerpts from other ancient texts. In attempting to answer these questions over the course of the semester, we will read a wide variety of sources: principally ancient and modern primary texts, with some secondary readings. These readings will include Euclid's *Elements*, Descartes' *Principles of Philosophy*, and Einstein's *Theories of Relativity*. Spring.

PLS 23101. Great Books Seminar I

(4 -0- 4)

The first in a series of six Great Book seminars, and the first in the sophomore sequence, this course focuses on ancient Greek literature and is designed to introduce students to the great books seminar method, which emphasizes discussion,

close reading, and the communication of complex ideas. The texts include Homer's *Iliad* and *Odyssey*, Herodotus's *Histories*, Aeschylus's *Oresteia*, Sophocles's *Theban Plays*, Aristotle's *Poetics*, Euripides's *Medea* and *The Bacchae*, Thucydides's *Peloponnesian War*, Aristophanes's *The Clouds*, and three early dialogues by Plato: the *Apology*, *Crito*, and *Symposium*.

PLS 23102. Great Books Seminar II

(4 -0- 4)

The second seminar in the sophomore sequence, this course represents a continuation of Great Books Seminar I. The material studied extends from ancient Greece through the Roman period through early Christianity and into the Middle Ages. The texts include Plato's *Republic* and *Phaedrus*, Aristotle's *On the Soul*, Lucretius's *The Way Things Are*, Cicero's *On The Republic*, Vergil's *Aeneid*, Epictetus's *Handbook*, Augustine's *Confessions* and *City of God*, St. Anselm's *Proslogion*, and St. Bonaventure's *Journey of the Mind to God*.

PLS 30202. Literature II: Shakespeare and Milton

(3 -0- 3)

Building on the techniques of close reading developed in Literature I, this course will focus on the expressive power of literary genres, modes, and conventions and will take up the question of the unity and coherence of long works. The reading list will include several plays by Shakespeare and Milton's *Paradise Lost*. In some years, another major English narrative poem may be substituted for *Paradise Lost* (such as Chaucer's *Troilus and Criseyde*, Spenser's *Faerie Queene*, or Wordsworth's *Prelude*). Spring.

PLS 30301. Ethics

(3 -0- 3)

An examination of modes of moral reasoning and what constitutes the good life, based primarily on the study of Aristotle's *Nicomachean Ethics* and the moral philosophy of Kant. Readings may also include a selection from the Utilitarian ethical tradition as well as from works in moral development and in moral theology, such as by Augustine, Aquinas, and Newman. Fall.

PLS 30302. Political and Constitutional Theory: Ancient and Modern

(3 -0- 3)

An approach to understanding the fundamental problems of political community and the nature of various solutions, especially that of democracy. Readings will include, but are not limited to, Aristotle's *Politics*, Locke's *Second Treatise*, and selections from *The Federalist Papers* and American founding documents. Spring.

PLS 30411. Scientific Inquiry: Theories and Practices

(3 -0- 3)

Using major historical texts as primary material, students will investigate crucial philosophical and methodological issues that arise in modern scientific inquiry, especially in the physical and life sciences. What can cause scientists to adopt (or resist) new theories? What relationships has science held to other intellectual disciplines, and how have those relationships changed over time? What fundamental assumptions about the natural world are adopted in much of modern science? What methods have scientists advocated for creating reliable knowledge? Students will grapple with these questions as we study and discuss central texts in the development of modern science, including the works of Ptolemy, Copernicus, Galileo, Descartes, and Newton.

PLS 30501. Music as a Liberal Art

(3 -0- 3)

The study of music has occupied a central position in the liberal arts curriculum since the foundation of the earliest universities in the Western world. Music is studied in this PLS tutorial in line with that tradition, taking into account the way the liberal arts have developed during our contemporary era. This course will focus on 1) the scientific and philosophical foundations of harmonic principles from the pre-Socratic philosophers to post-tonal theory; 2) the aesthetic, social, and political relevance of music during selected historical epochs; and 3) the syntactical

and formal structures through which composers organize sound in such relevant genres as the Mass, the opera, and purely instrumental musical forms such as the symphony and sonata.

PLS 33101. Great Books Seminar III

(4 -0- 4)

Continuing from Great Books Seminar II, and the first in the junior seminar sequence, this course focuses on great works of the High Middle Ages and the Renaissance. The texts include two treatises from Aquinas's *Summa Theologiae* (*On Law* and *On Faith*), Dante's *Divine Comedy* (in its entirety), Petrarch's *Ascent of Mont Ventoux* and *On His Own Ignorance and that of Others*, selections from Chaucer's *Canterbury Tales*, Julian of Norwich's *Showings*, Erasmus's *Praise of Folly*, Machiavelli's *The Prince*, More's *Utopia*, essays by Montaigne, St. Teresa of Avila's *Interior Castle*, and Cervantes's *Don Quixote*.

PLS 33102. Great Books Seminar IV

(4 -0- 4)

Continuing from Great Books Seminar III, and the second in the junior seminar sequence, this course focuses on works from the Renaissance to the Enlightenment period. The texts include Shakespeare's *Tempest*, Bacon's *New Organon*, Descartes' *Discourse on Method* and *Meditations on First Philosophy*, Hobbes's *Leviathan*, Pascal's *Pensées*, Swift's *Gulliver's Travels*, Hume's *Enquiry Concerning Human Understanding*, Rousseau's *Discourse on the Origin of Inequality*, Smith's *Wealth of Nations*, Kant's *Prolegomena to Any Future Metaphysics*, Malthus's *Essay on the Principles of Population*, Austen's *Pride and Prejudice*, Goethe's *Faust*, and Mozart's *Don Giovanni*.

PLS 40301. Christian Theological Tradition

(3 -0- 3)

A study of the major Christian doctrines in their development, including God, creation and humanity, incarnation and redemption, and the sacraments. The course moves toward a historical and systematic understanding of Christianity, especially the Roman Catholic tradition. Readings typically include patristic authors, medieval authors such as Aquinas, and the documents of Vatican II. Fall.

PLS 40302. Metaphysics and Epistemology

(3 -0- 3)

An engagement with philosophical conceptions of the nature of knowledge, reality, and the relation between them. Selections from the Platonic tradition, Aristotle's *Metaphysics*, and Kant's *Critique of Pure Reason* form the basis of the course. Other readings may include works by such thinkers as Aquinas, Heidegger, and other 20th-century authors. Spring.

PLS 40412. Science, Society and the Human Person

(3 -0- 3)

In this course students will explore what can science tell us about human nature and human social interactions. By reading and discussing important historical and contemporary texts, students will engage the conundrums, challenges and insights created through the scientific study of human beings and society. Readings will include works by Charles Darwin, William James, and Jean Piaget. Spring.

PLS 40601. Intellectual and Cultural History

(3 -0- 3)

This course will deal with the issue of historical consciousness and with the limits and possibilities of historical understanding. The first portion of the course will examine the issues of historiography and the use of historical analysis in the contextualized reading of texts. From this foundation, the issue of history will be explored with reference to authors such as Augustine, Bossuet, Montesquieu, Kant, Hegel, Ranke, and Eliade. Fall.

PLS 43101. Great Books Seminar V

(4 -0- 4)

The first in the senior Great Books seminar sequence, this course focuses on classic texts from the nineteenth-century literature, and, in addition, on important works from the Eastern tradition that entered the European canon during the nineteenth

century. The works studied include Tolstoy's *War and Peace*, Confucius's *Analects*, *The Way of Lao Tzu*, the *Bhagavad Gita*, Hegel's *Philosophy of History*, Kierkegaard's *Philosophical Fragments*, Newman's *Idea of a University*, De Tocqueville's *Democracy in America*, Melville's *Moby-Dick*, Thoreau's *Walden*, Mill's *On Liberty*, and Darwin's *Descent of Man*.

PLS 43102. Great Books Seminar VI

(4 -0- 4)

The second in the senior Great Books seminar sequence, this course focuses on works of seminal importance from the nineteenth and twentieth centuries. The texts studied include Dostoevsky's *Brothers Karamazov*, Marx's *Capital* and *Communist Manifesto*, Flaubert's *Madame Bovary*, Nietzsche's *Beyond Good and Evil*, William James's *Varieties of Religious Experience*, Freud's *Introductory Lectures on Psycho-Analysis*, Buber's *I and Thou*, Weber's *Protestant Ethic* and *The Spirit Of Capitalism*, Wittgenstein's *Blue Book*, Heidegger's *What Is Philosophy?*, and Ellison's *Invisible Man*.

PLS 46000. Directed Readings

(V -0- V)

Instructor's written permission and permission of chair required. Reading courses in areas of interest to the student.

PLS 47002. Special Studies

(V -0- V)

Instructor's written permission and permission of chair required. Reading courses in areas of interest to the student.

PLS 48701. Thesis—Tutorial

(2 -0- 2)

This course provides the framework in which seniors in the program prepare a substantial essay, as the culmination of their three years in the program. Faculty members working with small groups of students help them define their topics and guide them, usually on a one-to-one basis, in the preparation of their essays. Fall.

PLS 48702. Thesis—Tutorial

(3 -0- 3)

This course provides the framework in which seniors in the program prepare a substantial essay, as the culmination of their three years in the program. Faculty members working with small groups of students help them define their topics and guide them, usually on a one-to-one basis, in the preparation of their essays. Spring.

Political Science

POLS 10100. American Politics

(3 -0- 3) Kaplan

This course surveys the basic institutions and practices of American politics. It examines the institutional and constitutional framework of American politics and identifies the key ideas needed to understand the subject and develop a basis for evaluating American politics today. This introductory course fulfills the American politics breadth requirement for the political science major.

POLS 10200. International Relations

(3 -0- 3) Rosato

Corequisite: POLS 12200

This course provides students with an understanding of historical and current events in world politics. As such, the course has three central objectives: to introduce various theoretical frameworks for analyzing international political and economic events, to provide an overview of substantive topics in international relations, and to supply a basic understanding of contemporary international events. We explore substantive issues such as cooperation and conflict in international relations, the causes of war, nuclear proliferation, regional free trade agreements, the causes and effects of economic globalization, and the role of international law and institutions. Discussion sections use historical case studies and current events to illustrate concepts introduced in lectures. This introductory course fulfills the international relations breadth requirement for the political science major.

POLS 10400. Comparative Politics

(3 -0- 3)

Corequisite: POLS 22400

This course surveys the "big themes" in comparative politics—Democratization, Economic Development, and Internal Conflict. It offers an introduction to key concepts and theoretical approaches in the field and seeks to provide students with grounding in the basic tools of comparative analysis. Cases are drawn from a variety of different continents, providing examples from all over the world for the topics being studied.

POLS 10600. Political Theory

(3 -0- 3) Kaplan

This course is an introduction to political theory as a tradition of discourse and as a way of thinking about politics. The course surveys selected works of political theory and explores some of the recurring themes and questions that political theory addresses. This introductory course fulfills the political theory breadth requirement for the political science major.

POLS 10612. Democracy in America

(3 -0- 3)

This class offers first year students a challenging introduction to social science, political theory, and American politics by means of a careful reading and study of Alexis de Tocqueville's great classic *Democracy in America*. We will read both volumes of *Democracy in America* as well as selections from *The Federalist Papers* and a variety of other short readings. This class combines lecture with seminar-style discussion. Students are required to write several essays, to participate actively in class, and to give one oral presentation. All students will participate in an interdisciplinary fall conference here at Notre Dame sponsored by Notre Dame's Center for Ethics and Culture, and will have the possibility of participating in additional public events and lectures throughout the semester. Topics to be studied in this course include democracy and aristocracy as social conditions and political forms; republican institutions and federalism; rule of law; rights and virtue; individualism, freedom, and civic participation; education for becoming a good human being and a good citizen; and the relationship of politics to religion, culture, professional life, and the family. This course counts toward the political science major and fulfills its political theory breadth requirement.

POLS 10660. Friendship: From Aristotle to Facebook

(3 -0- 3)

The question in this course's title sounds like a no-brainer. Friendship is such a common and ordinary part of human experience: how can anyone be in doubt about what it is? Yet some of the great minds in the western philosophical tradition have thought long and hard about friendship—its distinctive nature; its real meaning. For that reason, we will examine the writings of Plato, Aristotle, Montaigne, Nietzsche and Mary Wollstonecraft, among others, on friendship. Do we have anything to learn from these thinkers of the past about our own lives and relationships? We will also consider the representation of friendship in popular culture. Participants in this course will raise and try to answer a number of questions about friendship, such as: Can I be friends with family members? Is friendship an appropriate and viable model for marriage? Is friendship possible between humans and animals? Can friendship provide a model for political relations? And we will, of course, reflect on the meaning of friendship in the age of social networking sites such as Facebook. This course counts toward the political science major and fulfills its political theory breadth requirement.

POLS 13105. Introduction to Globalization and International Studies

(3 -0- 3)

Corequisite: POLS 12105

This course has two purposes. First, it will examine the economic, political, and cultural impacts of easy movement of money, goods, and people that are collectively known today as “globalization.” The course will consider the pros and cons of the roles played by the institutions that enforce growing financial trade integration and the international promotion by governments and transnational activists of democracy and human rights. It will also highlight the cultural reactions to globalization, including the resurgence of ethnic identities and religious fundamentalism. A second purpose is to introduce the educational opportunities at Notre Dame in international studies and international career options. Representatives of regional study programs and foreign languages, the Study Abroad Office, and several international institutes and the Center for Social Concerns will visit the class to explain the requirements for various undergraduate majors and minors and study abroad programs, as well as international internship and research opportunities for undergraduates. Visits by career professionals in international diplomacy, journalism, human rights, and business will also be arranged.

POLS 13181. Social Science University Seminar

(3 -0- 3)

A seminar for first-year students devoted to an introductory topic in political science in which writing skills are stressed.

POLS 13201. U.S. Foreign Policy

(3 -0- 3)

The United States is the most powerful state in the world today. American foreign policy is important for U.S. citizens, but it also affects whether others go to war, whether they will win their wars, whether they receive economic aid or go broke, and whether they will be swept by famine and disease. With these issues at stake, we want to know what determines U.S. foreign policy? What is the national interest? When do we go to war? Would you send U.S. soldiers into war? If so, into which wars and for what reasons? How do our economic policies affect others? Does trade help or hurt the U.S. economy and its citizens? To answer these questions, we first study several theories about foreign policy ranging from decision-making to organizational politics. We then examine the U.S. foreign policy process, including the president, Congress, the bureaucracy, the media, and public opinion. To see these theories and the policy process in action, we turn to the history of U.S. foreign policy, from Washington's farewell address through the World Wars and the Cold War to the Gulf War. We then study several major issue areas, including weapons of mass destruction, trade and economics, and the environment. Finally, we develop and debate forecasts and grand strategies for the future.

This course requires a paper about the history of American foreign policy, a paper about a current policy problem, as well as a midterm and a comprehensive final. This course will count for POLS major.

POLS 20100. American Politics

(3 -0- 3) Radcliff

This course examines the American political system from the point of view of democratic theory. While we will cover the usual range of topics for an introductory course, particular attention will be devoted to understanding whether, or in what ways, the practice of American politics conforms to conventional understandings of democracy. The course thus stresses theoretical understanding and critical appraisal rather than description. No conventional text book will be used; instead, students will be asked to read a series of more challenging books (and some shorter pieces) on individual topics. Course requirements include a substantial paper.

POLS 20200. International Relations

(3 -0- 3) Guisinger

The study of International Relations (IR) is the study of human organization at its highest and most complex level. The goal of IR scholarship is thus to try to manage this complexity intellectually by devising theories which help us to understand and predict state behavior. The main purpose of this course, therefore, will be to introduce students to the most important IR theories. These theories will then, in turn, be applied to real-world IR events in order to test their utility in helping us to understand the world as it actually is. By the end of the course, therefore, the student will have a grounding in both theoretical and factual aspects of IR analysis.

POLS 20400. Comparative Politics

(3 -0- 3) Dowd

This course teaches students how to think comparatively about politics. We study how nation-states emerged as the dominant form of political organization, explain the differences among various states, and explore diverse responses to economic, cultural, and military globalization. The empirical material is drawn from around the globe. This introductory course fulfills the comparative politics breadth requirement for the political science major.

POLS 20600. Political Theory

(3 -0- 3) Villa

Corequisite: POLS 22600

This course is an introduction to political theory as a tradition of discourse and as a way of thinking about politics. The course surveys selected works of political theory and explores some of the recurring themes and questions that political theory addresses, especially the question of justice. This introductory course fulfills the political theory breadth requirement for the political science major.

POLS 30001. Presidential Leadership

(3 -0- 3) Arnold

Prerequisite: POLS 10100 or POLS 20100

This course examines the role of the presidency in the American regime and its change over time. Particular attention will be given to expectations about presidential leadership through the course of American political history. Beginning with questions about the original design and role of the presidency, the course turns to consideration of the role of leadership styles for change and continuity in American politics. Finally, cases of presidential leadership are studied to comprehend the way leadership and political context interact.

POLS 30005. American Congress

(3 -0- 3)

This course will approach the United States Congress from several perspectives. First Congress will be viewed from the perspective of the American founding. Then we will read several major studies of Congress including Mayhew's *Congress: the Electoral Connection*, Cox and McCubbins' *Legislative Leviathan*, and Jacobson's *Congressional Elections*. Students will also learn how to do basic roll call analysis

through short data assignments. In addition they will prepare a complete legislative history, using primary materials. In addition to these writing assignments, there will be a mid-term and a final.

POLS 30010. American Political Parties

(3 -0- 3) Wolbrecht

Prerequisite: POLS 10100 or POLS 20100

Political parties play many vital roles in American politics: They educate potential voters about political processes, policy issues, and civic duties. They mobilize citizens into political activity and involvement. They provide vital information about public debates. They control the choices—candidates and platforms that voters face at the ballot box. They influence and organize the activities of government officials. Most importantly, by providing a link between government and the governed, they are a central mechanism of representation. These roles—how well they are performed, what bias exists, how they shape outcomes, how they have changed over time—have consequences for the working of the American political system.

POLS 30022. Public Opinion and Political Behavior

(3 -0- 3) Davis

A principle tenet underlying democratic governance is the belief that public opinion or the “will of the people” should dictate governmental behavior. To the extent this belief is a realistic consideration, difficult questions remain concerning the capacity for citizens to develop reasoned opinions and how to conceptualize and measure opinion. This course explores the foundations of political and social attitudes and the methodology used to observe what people think about politics.

POLS 30028. Religion in American Politics

(3 -0- 3)

This course begins by examining the unique religious “economy” within the United States, and the extent to which it is a function of the First Amendment and/or other factors. We will then explore the imprint religion has made on the American political landscape, drawing on both historical and contemporary examples. From abolitionism to school vouchers, from William Jennings Bryan to George W. Bush, the course will address how religion and politics have converged to affect public policy in the courts, Congress, and the executive branch.

POLS 30029. American Public Opinion and Voting Behavior

(3 -0- 3)

A central tenet of democracy is that citizens exert some degree of control over the actions of government, a requirement that places responsibilities on both government office holders and citizens. In this course, we will focus on whether American citizens live up to their end of the democratic bargain both in the depth and breadth of their political opinions and in the quantity and quality of their participation in American elections. We will assess the degree to which citizens hold real opinions on political issues and how those opinions are formed, the extent to which they turn out to vote in elections and the factors determining voter turnout, the nature of voting behavior in various types of elections, the characteristics of the parties’ electoral coalitions, and long-term changes in those coalitions.

POLS 30030. Political Participation

(3 -0- 3)

Prerequisite: GOVT 10100 or GOVT 20100 or POLS 10100 or POLS 20100

This course is intended to explore some of the causes of citizens’ differentiated rates of political participation in American politics, as well as the impact that this has on the representational relationship between constituents and legislators. We will begin with a theoretical overview of some of the unique aspects of our representational system. After analyzing the factors that influence the formation of individuals’ political preferences, and their propensity to undertake various forms of political participation, we will focus on the historical developments and reforms that have fundamentally shaped the institutions that connect constituents to their government representatives. We will also review the uses of public opinion polls, and end the class by discussing the consequences of using institutional reforms geared toward “direct democracy” to increase political participation and/or the weight of public opinion on the legislative process.

POLS 30031. American Voting and Elections

(3 -0- 3) Ramirez

This course will examine voting and opinions, and the linkage between political leaders and the mass public. Possible topics include an introduction to electoral analysis; the history of recent electoral politics; the nature of political participation, especially the rationality of voting turnout and non-electoral specialization; party identification and opinions, attitudes, and ideology; social groups and cultural identities; mass media and image campaigns; and differences between presidential and congressional elections.

POLS 30032. Latinos in the Midterm Elections

(3 -0- 3)

Participation among Latino voters surged in the 2008 Presidential election. In 2010, the Latino electorate is poised to play an important role in several key states with hotly contested statewide elections. This increased awareness of the role of Latinos is evident by increased efforts of both major parties since the 2000 presidential election. Despite their augmented presence, many misconceptions plague national understanding of this diverse population. This course will cover a broad range of issues to draw connections between the Latino community and American political systems and institutions. Questions that arise are: What difference does it make to be Latino and are there Latino-specific issues and concerns? How does the political system view and treat Latinos? To what extent do Latinos participate in politics and mobilize to advance their political interests? These questions will help us highlight the role of Latinos nationally and locally in the 2010 midterm elections.

POLS 30033. Political Psychology

(3 -0- 3)

Political psychology is a multidisciplinary field of study concerned with how psychological processes are influenced by and inform political behavior of individual citizens, groups, political leaders, and behavior within political institutions. This class explores some of the major lines of political psychology theory and research, and their application to political life. These applications include the role of personality in the formation of political attitudes and democratic values; racism, stereotyping, ethnocentrism, and nationalism; the influences of emotion and cognition on voting decisions; social identity theory; information processing and political decision making; inter-group conflict; political intolerance; and methodological approaches in political psychology. This course will attempt to answer the following questions: What is racism and where does it come from? Is political intolerance an automatic response to objective stimuli or is intolerance functional? To what extent are political attitudes and values ingrained in personality? Is the support for democracy, political trust, and support for the political system linked to personality? How do individuals utilize and process information in political campaigns? Is negative campaigning effective? How did a heightened sense of fear and anxiety, following the September 11 terrorist attacks on America, influence political decisions, the support for President Bush’s policies, and intolerance toward social groups? How does social group identity form? Does linking or identifying with one group leads to the rejection of other groups? What motivates George Bush? To what extent are personality theories useful in explaining the behavior of presidents and other political leaders? What are the political psychological underpinnings of inter-group conflict, mass violence, and genocide? Is the truth and reconciliation movement an effective means of recovering from genocide and violence?

POLS 30034. African-American Politics: The End or a New Beginning?

(3 -0- 3) Pinderhughes

This course explores the basic elements associated with black politics in the U.S.: the role of black institutions such as the black church, the importance of the civil rights movement in challenging barriers to black political participation, the mid-20th-century legal framework created to create access to the political system, and an exploration of black political participation in northern cities, where there are also increasing numbers of Latinos and other nonwhite groups. Since the course will be taught in spring 2009 immediately after the 2008 presidential

campaign, we will also have the chance to explore the impact of Illinois Senator Obama's campaign on national politics, whatever the outcome, and to consider the impact on African-American politics itself.

POLS 30035. Race/Ethnicity and American Politics

(3 -0- 3)

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What role do American political institutions the Congress, presidency, judiciary, state and local governments, etc. play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society?

POLS 30037. Black Chicago Politics

(3 -0- 3)

This course introduces students to the vast, complex and exciting dimensions of black Chicago politics. First, institutional structures, geographic distribution and population characteristics will inform students about the sociodemographic background of the African-American population in the city. Second, the course explores varying types of political expression that have developed over more than a century, including electoral politics, mass movements, partisan politics; it will also examine the impact of the Chicago machine, and of the Washington era on the political and economic status of African Americans in the city. Third, public policy developments in housing, education and criminal justice will be discussed. Fourth, the course also compares black political standing with other racial and ethnic groups in the city. Finally, the course will introduce students to the long tradition of social science research centered on the city of Chicago.

POLS 30038. Latinos and the U.S. Political System

(3 -0- 3)

This course provides a careful and critical analysis of the political status, conditions, and the political activities of the major Latino (or Hispanic) groups in the United States—particularly, Mexican-Americans, Puerto Ricans, and Cuban-Americans. To provide a context and grounding, various theoretical perspectives are first considered, followed by discussions of the historical experiences and contemporary socioeconomic situations of the several Latino groups. Attention then turns to a number of issues concerning political attitudes, behaviors, and activities. Assessments of Latino influence upon the major local, state and national institutions of the political system—and vice versa—are next considered. Policy areas particularly significant for Latinos are also examined. Finally, the major issues, questions, and themes considered throughout the semester are revisited and reconsidered.

POLS 30039. Black Politics in Multiracial America

(3 -0- 3) Pinderhughes

This course undertakes a broad examination of black politics in multiracial America. Racial issues have provoked crises in American politics; changes in racial status have prompted American political institutions to operate in distinctive ways. The course examines the interface of black politics with and within the American political system. How successful have blacks been as they attempted to penetrate the electoral system in the post civil rights era. What conflicts and controversies have arisen as African Americans have sought to integrate the American system of power. Now that the laws have been changed to permit limited integration, should African Americans integrate politically, that is should they attempt to deracialize their political appeals and strategy, with an effort to crossover politically; are some approaches such as those of Illinois Senator Barack Obama not "black" enough? What internal political challenges do African Americans face; some such as the increasing importance of class and socioeconomic factors, as well as gender and sexuality may reshape the definition of the black community Finally how stable

will the past patterns and political organizations and institutions of African-American politics be, as America and American politics becomes increasingly multiracial.

POLS 30040. Introduction to Public Policy

(3 -0- 3)

Prerequisite: POLS 10100 or POLS 20100

The objective of this course is to introduce students to the process of public policy formation in American politics. The course will be divided into three parts. The first section will encompass a brief review of some of the more important mechanisms of American politics that impact on the legislative process (i.e. political participation, interest groups, congressional elections, etc.). We will then engage in a general review how such factors have impacted the direction and tone of federal public policy over the last 30 years. The final two sections of the course will be devoted to detailed analysis of two public policy areas of particular interest to younger voters, education reform and drug laws. Building on the earlier readings and the analytical tools developed, we will examine the current debates and prospects for reform in these policy areas, with an eye towards understanding the political realities of public policy formation.

POLS 30041. Public Policy and Administration in the United States

(3 -0- 3)

This course examines recent developments in public policy and administration in American politics.

POLS 30042. Understanding Food and Agriculture Policy

(3 -0- 3) Doppke

This course introduces students to agro-food studies: the linked systems of agricultural production, food processing, distribution, and consumption. Market forces, technology, public policies, and increasingly, quasi-private systems of governance structure agro-food systems. Our aim is to understand how these forces have together shaped what we call modern agriculture, and how to realistically evaluate criticisms against it.

POLS 30045. The State of the American States

(3 -0- 3)

This course provides a critical and comprehensive examination of politics in the states of the U.S., and does so by analyzing topics from several theoretical perspectives. States are major policymakers concerning such central public policies as education, welfare, and criminal justice, among a host of others. There is tremendous variation, yet, at the same time, there are similarities between and among the 50 states in their political processes and governmental institutions as well as in their public policy concerns and outcomes. The focus of the course is on understanding why the states vary as they do and the consequences of that variation for such core American values as democracy and equality, and how states have different conceptualizations, or different visions or versions, of those core values.

POLS 30050. Politics and the Human Condition

(3 -0- 3) Radcliff

Political and social theorists have long speculated on how the political organization of society affects the quality of human life. This course examines the fundamental question of how political factors affect material and subjective conditions of life. The class utilizes material from philosophy and literature, as well as the emerging social science of subjective well-being. This course fulfills a seminar requirement for the political science major.

POLS 30051. Urban Politics

(3 -0- 3) Ramirez

This course introduces students to major actors, institutions, processes, and policies of sub-state governments in the United States. Through an intensive comparative examination of historical and contemporary politics in city governments, we will gain an understanding of municipal government and its role within the larger contexts of state and national government.

POLS 30060. Constitutional Law

(3 -0- 3)

This course examines the main principles of American Constitutional law, the process of constitutional interpretation, and the role of the Supreme Court in the American political system. Topics covered are presidential war powers, congressional-executive relations, free speech, church-state relations, the right to life (abortion, right to die, and death penalty), race and gender discrimination, and the American federal system. A good deal of attention is given over to recent personnel changes on the Supreme Court and the extent to which these changes are reflected in the court's opinions. A background in American national government is desirable.

POLS 30062. Civil Liberties and Civil Rights

(6 -0- 3)

How do courts decide cases involving civil liberties and civil rights? What rationales support the different interpretations of constitutional rights? How has the doctrine of incorporation affected our understanding of constitutional rights? Why is the concept of neutrality so important in current jurisprudence? How does the court balance formal assumptions and attention to particular situations? The purpose of this seminar is to help answer these and other questions about the law and politics of basic constitutional rights, including freedom of expression, due process, and equal protection. Course assignments include a critique of a law review article, an essay addressing an issue in civil liberties jurisprudence, and a hypothetical case. This course fulfills a seminar requirement for the political science major.

POLS 30063. Original Intent and Freedom of Religion

(3 -0- 3)

This course is designed to help students understand the original intent behind the meaning of the First Amendment's two religion clauses: the Establishment Clause and the Free Exercise Clause. It also explores the role that the intent of the founders plays in interpreting freedom of religion cases today.

POLS 30064. Constitutional Rights

(3 -0- 3)

This course will consist of an examination of how our rights are defined, protected, and limited by the judiciary under the Bill of Rights and Fourteenth Amendment of the Constitution. Our primary method of study will be to read, analyze, and debate landmark Supreme Court opinions.

POLS 30065. Constitutional Leadership

(3 -0- 3)

Means are normally subordinate to the ends they serve, and practical reasonableness calls for new means when the old means fall short of their goals. Yet American-style constitutions establish their institutional means as the "supreme Law of the Land," and this yields a tension between the Constitution's ends-oriented and legal aspects. The chief function of constitutional leadership is coping with this tension, and though the task has historically fallen mostly to executive leaders like Abraham Lincoln and Franklin D. Roosevelt, other leaders include collective actors like the Joint Committee on Reconstruction of the 39th Congress, the Civil Rights Movement of the 1960s, and the framers of the American Constitution themselves. The course will ask how the phenomenon of constitutional leadership both illuminates and is illuminated by different models of leadership from those of Plato and Aristotle to those of Machiavelli, Hobbes, Locke, *The Federalist Papers*, and modern scholars like Richard Neustadt, Carl Schmitt, Theodore Lowi, Jeffrey Tulis, James McGregor Burns, Clement Fatovic, and Nannerl Keohane. This course would impart to the student a framework for assessing the performance of political leaders in the tasks of maintaining, reforming, and if necessary changing constitutions. It will emphasize the intellectual and moral virtues and the political skills that these functions demand. Course requirements include two objective exams and, with the instructor's permission, an optional term paper. Previous courses in American government and constitutional law are strongly recommended.

POLS 30066. Constitutionalism, Law and Politics

(3 -0- 3)

In the Gettysburg Address Abraham Lincoln famously spoke of "government of the people, by the people, for the people." Why should government be of the people, by the people, and for the people? And if it should be so constituted, how is such a political order to be founded, designed, and maintained? In this course we shall address these fundamental questions of political science by examining the idea of constitutionalism and the role constitutions play in political life. By reading classic texts in ancient and modern political philosophy, studying fundamental texts of the American political tradition, and examining contemporary legal and political issues, we shall study questions such as: How do different constitutional orders or regimes nurture different forms of political life and different types of citizens? How do different regimes rise and fall? What is the proper relationship between political authority and individual liberty? What, if any, are the limits on a just constitutional order? Readings may include selections from Aristotle, Aquinas, Machiavelli, Locke, Montesquieu, Jefferson, Madison, Lincoln, Roosevelt, and great cases of American and foreign constitutional law.

POLS 30080. Is Post Race Politics Possible: Race, Ethnicity and American Democracy

(3 -0- 3)

President Obama's election has set off a series of debates about the continuing importance of race in American politics. This course is an advanced exploration of the construction of race and ethnicity in American political life. After a review of definitions of race and ethnicity, the course examines the differing patterns African-American, Latino/a, Asian-American and Native American communities and elected officials confronted as they struggled to integrate their values into U.S. public life. We also consider the interactions of race and ethnicity with other identities such as gender and class. The seminar is organized around a study of contemporary elected women and men officials of color which will allow students to create specialized studies of groups, to compare sets of political leaders, and to evaluate the ongoing importance of race in everyday politics.

POLS 30105. The Modern Presidency

(3 -0- 3)

Presidential scholars have argued that the modern presidency has unique characteristics. This course identifies the ways that the powers and institution of the presidency have evolved over the last 60 years. It identifies the institutional and structural forces that have shaped the power of the presidency, and includes examination of the president and foreign affairs including war powers, the organization of the presidency, the president's role in the legislative and budgetary processes, the rise of party primaries, presidential elections, and relations between the president and Congress, the President and the Supreme Court, and the president and the bureaucracy, as well as theories of presidential power.

POLS 30106. Reinventing Government

(3 -0- 3)

Since World War II, many presidential candidates have campaigned on promises to make government more efficient, delivering services to individuals more cheaply, faster, and with fewer errors. We will explore the attempts made to reinvent the federal bureaucracy since the advent of the spoils system with Andrew Jackson's presidential victory in 1828. We will examine the regulatory challenges presented to the federal government by the Industrial Revolution and how the federal government responded. Finally, we will examine critically, the presidential initiatives of the last quarter century to improve the national bureaucracy. This class will provide the student with the tools to understand the challenges of public administration, measure the effectiveness of various improvement initiatives, and diagnose potential maladies within the current system.

POLS 30120. Party Polarization in American Politics

(3 -0- 3)

This course examines questions concerning party polarization in American Politics. Is party polarization increasing? Does the concept of “culture wars” explain party polarization? What are the causes of party polarization in government and the electorate?

POLS 30135. Campaigns, Elections and American Democracy

(3 -0- 3)

This class introduces students to the importance of the electoral process for American democracy. We will begin by studying the significance of elections for linking citizens with their government. This involves discussing whether election winners receive a mandate from voters and assessing the extent to which elections help translate citizens’ political opinions to their elected officials. We then turn to the importance of elections in stimulating citizens’ interest in politics and study how campaign organizations strategically use their resources to maximize support for their candidate on Election Day. We will then assess how elections actually function in the United States by examining topics such as media coverage of campaigns, the Electoral College, differences between presidential and mid-term election cycles and between national and state/local elections, incumbency advantage, and the mechanics of voting. Students will apply the theories covered in class to carefully analyze the campaign and outcome of a race of their choosing.

POLS 30140. Politics of Science

(3 -0- 3)

This course examines the increasing politicization of science, and the escalation of the enrollment of science in political controversies over the past century. Starting out with brief characterizations of major political theories such as liberalism, communitarianism, republicanism and neoliberalism, we then turn to the origins of the conviction that science was inherently “apolitical” rooted in the 1930s–50s in the philosophy, sociology and history of science, and in popular culture. The purported alliance of science with democratic structures is considered. Political controversies over Nazi science, Soviet science, atomic war and Cold war science are surveyed, followed by more recent controversies over the so-called “Science Wars,” the treatment of expertise, Foucault, feminism, and actor-network theory. The economics of science movement is treated as a reaction to the above. We then turn from theory to description of modern incidents of the relationship of science to politics, beginning with surveys of the history of science policy, controversies over biotechnology, global warming, intellectual property, the pharmaceuticals industry, and attempts by international agencies and NGOs to regulate the international diffusion of science. Readings: Mark Brown, *Science in Democracy*; May & Susan Sell, *Intellectual Property Rights: a critical history*; Thomas McGarity and Wendy Wagner, *Bending Science*; Philip Mirowski, *ScienceMart*.

POLS 30141. Politics and Science Policy

(3 -0- 3)

This class will meet in seminar format. We will examine the general process for science policy making and emphasize the role played by politics in several specific science programs such as the space program and the Human Genome Project. The first part of the seminar will be devoted to an overview of science policy in the U.S., to provide students with a grounding in how science has generally been undertaken by the federal government up until World War II. We will also examine the role of both the executive and legislative branches of government in supporting science and identify interest groups which have been influential in shaping science policy. The final portion of the course will require students to undertake an actual exercise in budget allocation, based on budget figures for various science programs in the federal government. The readings for the class will consist of excerpts from several books about science policy and politics, federal budget documents, and potentially transcripts of congressional committee hearings. There will also be at least one additional class meeting outside of the regularly scheduled time to view the film *The Right Stuff*. Students will be evaluated on the basis of one essay exam, one presentation, a group project (the budget exercise), and one research paper. Class participation will also be evaluated toward the final grade.

POLS 30143. Environmental Politics

(3 -0- 3)

The first half of the course provides an overview of major American environmental policies such as regulating land use and preservation, water, air, and endangered species. The second half of the course deals more directly with issues of policy formulation, implementation and enforcement.

POLS 30152. Analyzing Public Policy

(3 -0- 3) Betson

Prerequisite: ECON 10010 or ECON 20010

Public policy can be viewed as the adoption of a collective response to a perceived problem facing society. But what differentiates one course of action from another? What makes one policy better than others? This course will provide students with instruction into the welfare economics paradigm as a basis to develop and analyze policy alternatives.

POLS 30153. Spending, Taxes, Deficits

(3 -0- 3) Betson

In 2001, Alan Greenspan expressed his concern to Congress with the speed by which the country was reducing the federal debt. A decade later, the black ink of the federal budget has been replaced with red and the once shrinking debt is now growing to the public’s consternation. This course will examine the factors that are responsible for this about face in the direction of federal debt; entitlement reform in the Medicare program; and fundamental tax reform options and proposals.

POLS 30154. Education Law and Policy

(3 -0- 3) Schoenig

This course focuses on selected legal and policy issues related to K–12 education in the United States. A central theme is the intersection of K–12 schooling and the state, with a particular focus on Constitutional issues of religious freedom and establishment, student speech and privacy, parental choice, educational opportunity, and education reform trends such as charter schools and accountability measures. Questions examined over the course of the semester include: What are the most basic obligations of the state with regard to its regulation of K–12 education? What are the most basic rights of parents in this regard? In what ways does the 1st Amendment protect—and limit—the speech and privacy rights of K–12 schoolchildren? In what ways may the state accommodate K–12 schools with an explicitly religious character? What are the Constitutional requirements with regard to religious speech or expression within K–12 public schools? To what degree is the principle of equality manifest in the form of educational opportunity? How has this changed over time? In what ways have education reform trends such as charter schooling and increased accountability changed the policy landscape of K–12 education?

POLS 30155. U.S. Health Care Policy

(3 -0- 3)

The relationship between health and poverty is complex and challenging. The inability of the poor to maintain adequate nutrition, shelter and have access to preventative medical care can contribute to their poor health status. But even if one isn’t poor, one illness or hospitalization can test their ability to meet both their ability to meet the financial burden of their medical care as well as their other needs. In either case, individuals have to face difficult choices between their health and other material needs. This course examines the consequences of the health risks the poor face and the difficulties that they have in obtaining medical care whether they are uninsured, seek “charitable” care, or utilize public programs such as Medicaid. The course will also examine the impact of the Affordable Care Act that will require all individuals to have at least a minimal level of health care coverage.

POLS 30156. Democracy and Our Schools

(3 -0- 3)

Politics arguably influences education policy more than any other domestic issue in American life. This seminar explores education policy in the United States through the lens of American politics. We will examine the complex and inter-related relationship between democracy and schools. On the one hand, we know

that education shapes our democracy by cultivating norms of civic engagement and political participation. Yet, public schools are themselves profoundly shaped by democratic politics. After all, schools are agencies of government and nearly everything about them—their organization, their funding, and who has access to them in the first place—is determined through the political process. Over the course of the semester, we will consider the causes and consequences of living in a nation that relies on elected officials to govern its schools. Key questions we will address include: Does politics compromise equality in education and for whom? Are school officials more responsive to the needs of some groups over others? How does the electoral process shape incentives for education officials to pursue school reform? How much voice should the public have in setting education policy?

POLS 30157. Healthcare and the Poor

(3 -0- 3) Betson

The relationship between health and poverty is complex and challenging. The inability of the poor to maintain adequate nutrition, shelter and have access to preventative medical care can contribute to their poor health status. But even if one isn't poor, one illness or hospitalization can test their ability to meet both their ability to meet the financial burden of their medical care as well as their other needs. In either case, individuals have to face difficult choices between their health and other material needs. This course examines the consequences of the health risks the poor face and the difficulties that they have in obtaining medical care whether they are uninsured, seek "charitable" care, or utilize public programs such as Medicaid. The course will also examine the impact of the Affordable Care Act that will require all individuals to have at least a minimal level of health care coverage.

POLS 30162. Common Law and the Common Good

(3 -0- 3)

This course begins by exploring alternative concepts of the common good and asks the following question: Is the law capable of promoting justice or fairness within a society or is and should its role be limited to facilitating and promoting business and commercial transactions to ensure efficiency in a market economy? Court decisions from the areas of property, contract and tort law will be used to explore how the American common law tradition has evolved over time to promote efficiency in market transactions with limited attention paid to broader societal concerns for equality and justice. While some readings will be from law journals, most of the readings for this course will consist of court decisions which will serve as the basis for class discussions.

POLS 30201. United States Foreign Policy

(3 -0- 3) Saiya

Prerequisite: POLS 10200 or POLS 20200

The United States is the most powerful state in the world today. Its actions are important not just for U.S. citizens, but they also affect whether others go to war, whether they will win their wars, whether they receive economic aid, whether they will go broke, or whether they will starve. What determines U.S. foreign policy? What is the national interest? When do we go to war? Would you send U.S. soldiers into war? If so, into which wars and for what reasons? How do our economic policies affect others? Does trade help or hurt the U.S. economy and its citizens? We first study several theories about foreign policy. We then examine the U.S. foreign policy process, including the president, Congress, the bureaucracy, the media, and public opinion. To see how this all works, we turn to the history of U.S. foreign policy, from Washington's farewell address through the World Wars and the Cold War to the Gulf War. We then study several major issue areas, including weapons of mass destruction, trade and economics, and the environment. Finally, we develop and debate forecasts and strategies for the future.

POLS 30202. War and the Nation-State

(3 -0- 3)

Prerequisite: POLS 10200 or POLS 20200 or IIPS 20501

This course will examine the phenomenon of war in its broader political, social, and economic context since the emergence of the modern nation-state. The general themes of the course include the impact of nationalism, democratization,

industrialization, military professionalization, the nuclear revolution, and the information and communication revolution on the development of warfare and the state. Particular historical emphasis will be placed on exploring the causes and conduct of World War I and World War II.

POLS 30203. On War

(3 -0- 3) Rosato

This course is about the causes and conduct of war. As regards causes, the focus is on evaluating the strengths and weaknesses of the most prominent explanations for the outbreak of major war, including balance of power, regime type (democracy/autocracy), civil/military relations, and the personality traits of individual leaders. As regards conduct, the emphasis is on considering the effect of broad political, social, and economic factors (nationalism, democratization, industrialization, military professionalization) on how wars are and have been fought. Particular historical emphasis is placed on the causes and conduct of great power wars (especially the two World Wars), although other wars will be discussed.

POLS 30210. Domestic Sources of U.S. Foreign Policy

(3 -0- 3)

This course provides students with the analytical tools to understand and critically analyze the impact of domestic actors within the U.S. foreign policy decision-making process. This course examines the roles of the president, Congress, the bureaucracy, public opinion, interest groups, the media and other sources of influence on the foreign policy-making process and its outcomes. Particular emphasis is given to the study of domestic foreign policy actors through the use of case studies as a qualitative tool of political science research. This course is designed to give the student a sense of real-world involvement in American foreign policy making by means of various exercises involving active student participation, especially case memos, simulations, and case discussions. Students will be required to integrate the conceptual and theoretical material presented in class discussions and readings with the case studies presented. In addition to improving students' understanding of how domestic actors impact foreign policy choices, this course is also designed to enhance analytical thinking and problem-solving skills. Short research assignments, especially preparation for case memos, will increase students' "information literacy," or research skills. Because all students will be expected to participate in class discussions and debates, the course should also improve communication skills.

POLS 30211. Intelligence and National Security Decision-making

(3 -0- 3)

The purpose of this class is to introduce students to the role of intelligence (collection, analysis, and covert action) in U.S. national security decision-making. The course will begin with a discussion of the evolution of U.S. national security decision-making apparatus and the Intelligence Community. It will then explore major issues of intelligence in U.S. history since the Second World War. Finally, it will conclude with a discussion of some of the future intelligence challenges the United States is likely to face in coming years.

POLS 30212. Asymmetrical Warfare

(3 -0- 3)

For the past generation the United States has been the world's dominant military power, easily able to subdue any potential opponent in a straight fight. This situation has given rise among those among those opposed to American interests or those fearful that their own interests might be vulnerable to American coercion to a kind of military/political theorizing now dubbed "asymmetrical warfare," the attempt to devise strategies and tactics whereby a weaker power can defeat or defend itself against a stronger. The doctrine as such has been articulated most explicitly by theorists within the Chinese military and has precedent both in classical Chinese military thinking and in early twentieth century Maoist doctrines concerning "people's war" or "wars of national liberation." More recently, though, the most active practitioners of asymmetrical warfare have been non-state groups, such as al-Qaeda or the Iraqi "insurgents." From the American perspective, asymmetrical warfare presents a challenge to conventional military thinking and new problems in gathering information ("intelligence") about the potential enemy,

his capabilities and his intentions. This semester will explore some of the historical background of asymmetrical warfare and the political, strategic, and moral problems surrounding its practices and the countermeasures to them.

POLS 30220. International Law

(3 -0- 3)

This course introduces the student to the sources, the subjects, and the institutions of the international legal order. Substantive international law is discussed on the basis of cases. Time is also made for discussing current issues, e.g., the docket of the International Court of Justice, the ad hoc UN International Criminal Tribunals for the former Yugoslavia and Rwanda, and the International Criminal Court, and the Iraqi question before the UN Security Council.

POLS 30221. International Law and International Relations

(3 -0- 3)

This course examines the intersection of international law and international relations, examining international law not as a technical specialty but as part of international relations more generally.

POLS 30225. United Nations and Global Security

(3 -0- 3)

Prerequisite: POLS 10200 or POLS 20200

This course explores the United Nations' responsibility for maintaining international peace and security; the reasons for its successes and failures in peacekeeping, enforcement, and peacebuilding in recent cases; the international legal basis for humanitarian intervention and for preventing crimes against the peace, war crimes, crimes against humanity and other gross violations of human rights; and the ethical challenges posed for people seeking to be good citizens both of their nation and of the world. Students evaluate ways to strengthen the role of international law and organization in preventing war and terrorism while addressing ethical issues related to international peace and security.

POLS 30229. Genocide in the Modern World

(3 -0- 3)

This course investigates modern genocide. We will consider several cases: Armenia, the Jewish Holocaust, Cambodia, Rwanda, and possibly Darfur, and examine the conditions that lead to genocidal violence. We will also examine the uses of humanitarian interventions, trials, and strategies of societal reconciliation, and relevant conceptions of justice, guilt, forgiveness and moral responsibility.

POLS 30240. International Organizations

(3 -0- 3)

This course examines governance in international relations, including both formal and informal institutions, and the functioning of organizations such as the United Nations, International Monetary Fund, World Trade Organization, European Union, and multilateral development banks. Students will conduct research on topics including peacekeeping and humanitarian intervention, political conflicts surrounding trade liberalization, and assessment of economic development programs.

POLS 30241. NGOs in International Relations

(3 -0- 3)

Prerequisite: GOVT 10100 or GOVT 20100 or POLS 10100 or POLS 20100
This course examines the role that non-governmental organizations (NGOs) play in international relations. Since the end of World War II, international relations scholarship has been dominated by theories that assume privacy of the state. However, in the last 20 years, non-state actors have grown in number, size, and influence. We will analyze the impact that this development has had on both traditional approaches to international relations as well as empirical problems associated with the prominence of NGOs in IR. The first half of the course will analyze several competing theoretical approaches to NGOs, while the second half of the course will focus on empirical topics and contemporary case studies that highlight the efforts of NGOs to influence state behavior. Topics covered include: the origins of NGOs, NGOs as interest groups, transitional advocacy networks, epistemic communities, globalization, human rights, the environment, the United

Nations, access to international negotiations, and the effectiveness of NGOs in altering state behavior. This course examines governance in international relations, including both formal and informal institutions, and the functioning of organizations such as the United Nations, International Monetary Fund, World Trade Organization, European Union, and multilateral development banks. Students will conduct research on topics, including peacekeeping and humanitarian intervention, political conflicts surrounding trade liberalization, and assessment of economic development programs.

POLS 30260. International Political Economy

(3 -0- 3)

This course examines the interaction of politics and economics in the international arena. We begin with a brief historical exploration of the international political economy, and introduce four analytical perspectives on state behavior and international outcomes. Topics include trade policy, foreign direct investment and multinational corporations, international capital flows, exchange rate regimes and currency unions (including European Monetary Union), financial crises, and the fight against money laundering and terrorist financing.

POLS 30263. International Environmental Politics

(3 -0- 3)

This course examines the responses of nations and international organizations to the environmental challenges of the present and future, including pollution, depletion of natural resources, and global warming.

POLS 30265. Politics of Globalization

(3 -0- 3)

This course analyzes the emerging world order and U.S. foreign policy at the end of the Cold War. After a brief examination of the end of the Cold War, it discusses a number of underlying causes for various global problems, including colonization, state failure, political domination, poverty, and civilizational differences. The course samples some vexing problems on the ground such as ethnic identity and violence, religion and violence, humanitarian crises and humanitarian intervention, conflict resolution, post-conflict reconstruction, and transnational and transitional justice, and addresses various foreign policy questions that have become amplified by the war on Iraq, including international terrorism, rogue states, weapons of mass destruction, American primacy, democracy promotion, constitutional engineering, the democratic peace and the perils of illiberal and unconsolidated democracies.

POLS 30266. Political Economy of Globalization

(3 -0- 3) Rosato

This course examines the intersection of politics and economics in an increasingly global world. Economic interdependence has increased dramatically over the past fifty years. While this has raised living standards in many countries, it has also given rise to new social, economic, and political tensions. This course offers an analytical framework for evaluating the consequences of globalization and provides an overview of several theoretical approaches to and empirical issues in today's global economy. The course is divided into three main sections. The first part of the course focuses on understanding what is meant by 'globalization' as well as an introduction to several contending theories of globalization. The second part of the course will focus on managing globalization, and will evaluate different options available to states, institutions, and other actors. The final section of the class will be devoted to empirical issues associated with globalization. Topics discussed include: the environment, corruption, human rights, non-governmental organizations, democratization, and regional trading blocs.

POLS 30267. Global Politics in Post-Cold War Era

(3 -0- 3)

This course analyzes U.S. foreign policy in the post-Cold War and post-September 11 world. We first examine a number of underlying causes for global problems in the post-Cold War world, including civilizational differences, state failure, poverty, and political domination. We then discuss the vexing problems of religious violence, ethnic cleansing, and genocide. Humanitarian crises present the challenges of humanitarian intervention, peace-making, post-conflict reconstruction,

democracy-building, and bringing justice for crimes against humanity. We will also explore a wide range of foreign policy issues in the post-Sept. 11 world, including international terrorism, rogue states, weapons of mass destruction, American primacy, anti-Americanism, unilateralism and multilateralism, and the war in Iraq.

POLS 30271. International Development

(3 -0- 3)

This course looks at why some countries are more economically developed than others, and why some are developing more than others, using a political economy perspective. It discusses alternative meanings and measures of development. It then examines alternative views on the constraints to development, at different levels of analysis, individual, sectoral, national and global. In so doing it analyzes economic factors, and their interaction with broader political, social and cultural factors, and explores both problems internal to countries and to those arising from international interactions and globalization. Finally, it critically examines different strategies and policies for development.

POLS 30280. International Relations in East Asia

(3 -0- 3) Moody

This course explores the interactions of the states and societies in the East Asian region, focusing mainly on the relationships of China and Japan, their interactions with each other and with the outside “Asian” powers, the United States, and Russia (Soviet Union). The first set of class discussions examines the China-centered system in East Asia prior to the intrusion of the new world system carried by Western imperialism. The course then turns to a discussion of this western impact: the colonization of most of the Southeast Asian societies, the reduction of China to a “semi-colony” and the subsequent process of revolution, both nationalist and communist, in that country, Japan’s turn to “defensive modernization” and its own imperialism to ward off the West and claim status as a great power on a par with the Western countries.

POLS 30292. U.S.–Latin American Relations

(3 -0- 3)

The primary goal of the course is to understand the basis for the political, economic, and security relations of Latin American states with the United States. The course begins with a theoretical and historical examination of the competing perspectives on what determines United States policy toward Latin America: its normative ideals, its security interests, or its economic interests. It then takes up several enduring themes in U.S.–Latin American relations, including the response of the United States to dictatorships, expropriations of United States-owned property, revolution, and efforts to promote development, democracy, and human rights. Next, it considers the relations of several Latin American states with each other and the United States from the Latin American point of view, with special attention to the foreign policies of Cuba and Mexico. Finally, it examines several new issues in U.S.–Latin American relations, including regional free trade agreements and trade policy, the environment, migration, and drugs, in a post Cold-War environment.

POLS 30302. Ideas and American Foreign Policy

(3 -0- 3)

The aim of this course is not to consider policy as such but to examine the ideas underpinning U.S. foreign policy and informing the foreign policy debate. Some (affirming) ideas inspire or explain or justify actually existing policy. Other (dissenting) ideas call into question or challenge government actions and priorities while advancing alternatives. The course takes a chronological approach. It begins with the founding of Anglo-America and concludes with the period since 9/11. Throughout, we will examine the assigned readings to determine what they can tell us about the following: the image and role of America; the definition of U.S. national interests; the image of the world as viewed by Americans; the existing or proposed terms of the relationship between the United States and the rest of the world.

POLS 30322. Political Economy of North/South Relations

(3 -0- 3)

This course will introduce the changing perspectives and current controversies concerning international economic relations between the developed and developing worlds. What do we mean by “development”? To what extent should states intervene in free markets? Does it matter that today’s developing countries operate in a different global environment than countries like Britain and the U.S. did during their development period? Should developing countries be given special consideration in trade and financial agreements? Do international financial institutions (IFIs) like the IMF, the World Bank and the WTO act in the interest of the world as a whole or serve the narrower interest of the powerful north? How are domestic imperatives balanced with global aims? The course will have a strong interdisciplinary flavor, with readings taken from both political science and economics.

POLS 30323. Genocide in the Modern World

(3 -0- 3)

This course investigates modern genocide. We will consider several cases: Armenia, the Jewish Holocaust, Cambodia, Rwanda, and possibly Darfur, and examine the conditions that lead to genocidal violence. We will also examine the uses of humanitarian interventions, trials, and strategies of societal reconciliation, and relevant conceptions of justice, guilt, forgiveness and moral responsibility.

POLS 30338. The Transatlantic Relationship

(3 -0- 3)

Since the end of the Cold War, there have been two notable ideas developed by scholars of International Relations. The first idea—first developed by Francis Fukuyama—is that western civilization has triumphed globally over other civilizations, while the second idea—first developed by Samuel Huntington—is that western civilization is about to enter a period of greater weakness, vis-à-vis other civilizations. In order to understand which argument is correct, we must first understand the current strength of western civilization, and in particular, the relationship between its two halves—Western Europe and North America. In this course, therefore, we will undertake a study of the history and current state of that relationship, focusing primarily on the post-WWII period, and particularly on the security arrangements that have developed between the two regions. In this light, special attention will be applied to the NATO alliance and to the developing security capabilities of the European Union. Having considered the objective facts of the transatlantic security situation, we will then be able to return to the Fukuyama-Huntington debate in order to determine what the future of intercivilizational relations does indeed portend.

POLS 30342. Security Motivations of Regional Integration

(3 -0- 3)

In many regions of the world, states are combining aspects of their political authority in order to create transnational structures and agreements. Although these integrating structures—such as the European Union (EU), the North American Free Trade Agreement (NAFTA), etc.—are often treated as primarily economic institutions, they also address important security needs. In this course, therefore, we will explore the security concerns that prompted the creation of not only the EU and NAFTA, but also the Central American Free Trade Agreement (CAFTA), the Mercosur project in South America, the ASEAN project in South East Asia, as well as notable failed integrative attempts in the Middle East, Africa, and Eastern Europe.

POLS 30344. Alternative and International Perspectives in IR Theory

(3 -0- 3)

Prerequisite: POLS 20200 or POLS 10200

In introductory International Relations courses, we learn about the central themes in IR from an all-American perspective and mostly through the lenses of the Realist and Liberal schools. These themes refer to the causes of interstate war and the conditions for peace and international cooperation between states. These topics represent the spine of IR theory and a hierarchy of issues and theories that have

traditionally defined American IR but that by no means constitute the totality of IR theory. This seminar is intended to explore the wider range of IR scholarship in order to complement previous courses as well as to inspire new questions and answers to political challenges at a global scale. Under the label Critical or Radical theory you will find different approaches that challenge mainstream IR, both in terms of what we study and how we study it. This course will address the role of civil society in world politics poverty, development and wealth distribution, civil wars and other non-traditional security threats, environmental concerns and different aspects of the human rights problematic. In order to accomplish this, we will explore these topics in the light of Constructivist, Postmodernist, Feminist, Ecological and Neomarxist and Development theories, as well as from an international IR perspective.

POLS 30345. Political Economy of Developing Countries

(3 -0- 3)

How do politics and economics interact to promote or deter the economic development of developing countries? Do least developed countries have any usable strategies to alleviate poverty and income inequality? This seminar aims at building on your existing knowledge of economics, political science, and global development to examine past, present, and future political strategies for developing nations to promote economic development. The course is divided in four parts. The first part will explore contending theories of economic development, and the common explanations for the failure of some states to achieve sustained economic growth. The second part will examine the politics of development policies, corruption, social development, and the role of foreign aid and international financial institutions. In the third part we will focus our attention on the political economy of democracy and on issues of poverty and inequality. The course concludes by examining selected case studies from Latin America, Africa, South East Asia, and Eastern Europe.

POLS 30347. Religion and Global Politics

(3 -0- 3)

The motivation behind this course is to introduce students to the role of religion in global politics, both in its theory and its practice. After framing the role of religion in world politics through the existing paradigm groups within International Relations theory, we will survey six current areas of scholarship which explore the intersection of religion and world politics. These will include the study of 1) religion as a non-state actor in the global arena, 2) religion as a generator of “civilization(s),” 3) religion as an inspiration for war and violence, 4) religion as an inspiration for peace and development, 5) religion as an element of foreign policy and 6) religion and state relations today. Students will have the opportunity to use and critique the concepts introduced in the course by researching and writing a term paper on a case of religion intersecting with international relations today. Possibilities include, but are not limited to, the Iraq war debate; the EU vs. the Crucifix debate; the Islam and Democracy debate; and the U.S. foreign policy debate over the engagement of the “global Muslim community.” Intro to International Relations is recommended but not absolutely essential as a course pre-requisite.

POLS 30348. Saving the World or Wasting Time? The Effectiveness of Social Movements

(3 -0- 3)

This course is geared toward constructing a successful social movement organization. To do this, students will evaluate the existing theoretical literature based in political science and sociology to explore what a social movement is as well as how it attempts to achieve its objectives. We will also address the issue of how one evaluates progress toward a specific end and what leads to/hinders this progress. Students will examine existing statistical databases on the topic (e.g., a database of all collective action in the united states from 1960 to 1995) as well as detailed cases of both attempts as well as outcomes of these efforts. The former is taken from research compiled by the professor as well as other scholars of conflict/contentious politics. The latter is taken from diverse documents housed at the

Radical Information Project as well as from diverse human rights organizations associated with the Robert F. Kennedy Center for Human Rights: these are based in the U.S., India, Northern Ireland, Rwanda and Zimbabwe.

POLS 30351. Global Activism

(3 -0- 3)

Take action now! This course is about transnational networking, organizing, and campaigning for social change, with equal attention for conceptual and substantive issues. Conceptual issues include framing, strategies, tactics, and actors. The issue areas examined are labor, human rights, women’s rights, the environment, peace and disarmament, and anti-globalization. The course zooms in on specific campaigns like global warming, violence against women, and ban-the-bomb. Counter-campaigns are also reviewed and readings on any given issue or campaign always include a critical or dissident voice.

POLS 30352. The International Human Rights Movement

(3 -0- 3)

Bound by a common and hitherto nearly unassailable discourse, the international human rights movement ascended at the turn of the 21st century. The first line of inquiry of this course considers the history and evolution of transnational human rights activism, from ad hoc campaigns in late 18th century to the emergence of a social movement in the mid-1970s and its ascendancy thirty years later; the second compares the human rights movement with other transnational social movements, viz. global labor, the women’s movement, the environmental movement, the peace and disarmament movement, the humanitarian movement, and the global justice and democracy movement; the third line of inquiry investigates the movement’s relationship with these other social movements, with states and intergovernmental organizations, and with the market; the fourth examines the impact of “rights talk” and activism on the political realm; the final inquiry is a political economy analysis of the contemporary human rights movement. The course ends with considerations about the future of a movement that is increasingly perceived as hegemonic, a(anti)-political and un-democratic, and market-oriented. It speculates about possible challengers and investigates whether the movement may have reached its limits. The broader background of this course is (1) the growing debate about the marketization and corporatization of the nonprofit sector generally (estimated \$1 trillion a year globally), NGO accountability, legalization and instrumentalization of human rights, and top-down global legalism, and (2) the current re-reading and reinterpretation of the history of human rights.

POLS 30353. Conflict and Development

(3 -0- 3)

The aim of this course is to introduce students to the political and humanitarian dimensions of complex emergencies. Complex emergencies are situations of disrupted livelihoods and threats to life produced by warfare, civil disturbance and large-scale movements of people, in which any emergency response has to be conducted in a difficult political and security environment. The course will explore the challenges the development community faces when operating in complex emergencies and discuss the different stages of the conflict and development relationship. It will also look at the ways in which social and economic development can contribute to, or undermine, peace; the ways in which conflict complicates development; the various ways in which peacebuilding strategies can impact development and, finally, explore the transition from relief to development.

POLS 30361. Politics of Money and Banking

(3 -0- 3)

This course investigates the political foundations of financial markets and banking regulatory structures. The objective is two-folded: 1) to provide an understanding of the function of money and the banking system within an economy, and 2) to offer an analytical framework with which to understand monetary, financial, and banking regulatory policies. Topics include, among others, the performance of banking systems, the role of international financial institutions, central bank independence, and banking regulation. Comparisons between the U.S. and other banking systems (such as the Brazilian, and the Japanese banking systems) will also be covered.

POLS 30362. Economics of War and Peace

(3 -0- 3)

This course is the seminar version of ECON 30240. The course examines the consequences of wars, including international wars, civil wars and terrorism. It also examines approaches to peace building and post-war reconstruction. While it focuses mainly on economic factors at work and makes use of the tools of economic analysis, it adopts a broader political economy framework.

POLS 30363. Intro to International Development Studies

(3 -0- 3) Dutt

An introduction to the field of international development, with particular focus on the various disciplines that have contributed to and shaped the development discourse. Readings and lectures will draw from various disciplines, including economics, political science, sociology, anthropology, environmental and technological sciences, public health, area studies, ethnic studies, and gender studies. They will examine: debates on the meaning and measurement of development; alternative approaches to, and methods in, the study of development; and some of the main issues discussed in development studies. A large component of the course will focus on in-class discussions and presentations.

POLS 30365. World Poverty and Inequality Across Nations

(3 -0- 3)

This course is the seminar version of ECON 40850. Analysis of the trends, causes and consequences of the inequality between rich and poor nations, or what are called the North and South. The course uses theoretical, empirical and broader political-economy analyses to examine the implications of international trade, capital and labor movements, technological transfers and environmental interactions between rich and poor countries. Particular emphasis is given to globalization and its effects on poor countries.

POLS 30390. Diplomatic History of the Middle East

(3 -0- 3)

The course deals with three main issues: 1) motivation and interests behind the foreign policies of all players relevant to the Middle East. 2) Main events in the diplomatic history of the region since the 17th century and their analysis based on international relations theories. 3) Mutual relations between the contemporary regional system and sub-systems and the international system as well as current state and non-state players in the contemporary Middle East and their relations with international players. The course makes use of the wealth of sources opened in recent years to present new and conservative approaches to many elements of the regional diplomatic history.

POLS 30391. Arab-Israeli Relations: From Confrontation to Coexistence

(3 -0- 3)

This course is following and analyzing the complexity of relations between the Arab countries and the State of Israel (and the State in the making) since the early 20th century to this day. This conflict has been one the major elements shaping the political, diplomatic and military history of the region drawing into the conflict a variety of actors among them the super powers, nation states from within and outside the region, sub-states, and supra states. The effects of the conflict on these respective regimes are analyzed as well. Three major processes became the main source of interest for all actors: the Arab effort to prevent the creation of the Jewish state; the armed conflicts, and finally the diplomatic processes that continue today. Most of them will be studied in the context of the diplomatic and political history of the Middle East.

POLS 30392. Diplomacy and Conflict in the Middle East

(3 -0- 3)

This course examines the role of diplomacy in shaping the Middle East and in managing conflict in the region today.

POLS 30393. Arab Spring

(3 -0- 3) Baluch

The Arab Spring is arguably the most significant development to take place in the Arab world since decolonization. In this course we will study the Arab Spring and compare it to other revolutions that have overthrown authoritarian rule. We will focus on two key interconnected questions regarding the Arab Spring: Why the revolutions? And why now? Our aim will be to identify the key grievances that led to the unrest, the parties involved, and the prospects for permanent change as a result of these revolutions. We will also consider the impact of these revolutions on the security situation of the region. We will begin by studying revolutions and social movements in general. Our comparative approach will lead us to briefly study the French revolution, decolonization movements in the Arab world, and the movements against totalitarianism in Eastern Europe.

POLS 30401. Latin American Politics

(3 -0- 3)

This course is an introduction to Latin American politics. What are the major challenges facing Latin America in the new millennium? How are different countries facing these challenges? What are the origins of the current dilemmas and opportunities facing Latin America? This course is intended to give students an understanding of the major political and development challenges that Latin America has faced in the mid-20th to early 21st century. The course will survey the major theories and strategies of economic industrialization and neo-liberalism, and it will consider questions of reform, revolution, authoritarianism, and democracy. Throughout the course we will use case studies focusing on specific countries and specific problems.

POLS 30402. Politics and Institutions in Latin America

(3 -0- 3)

This course aims at enabling students to understand politics in the Latin American region by introducing important concepts of comparative politics and discussing, from a comparative perspective, institutional components and configurations of Latin American countries. We will focus on the question of how institutional frameworks influence policy decisions and actors' behavior, that is, how they affect governability and representation. The course will revolve around central issues such as electoral systems, party system, legislative decision-making and executive-legislative relations, and representation. One important aspect of the course is to get students acquainted with quantitative indicators of comparative politics that not only help to map representation, but also to understand some puzzles of policy making we will encounter throughout Latin American countries. Thus, the course will help students to better understand democratic representation as well as quantitative approaches to the study of democratic institutions.

POLS 30403. Latin American Development and Politics

(3 -0- 3)

Latin American countries face many challenges, some inherited from Spanish and Portuguese colonial rule, some created by today's globalization, and some common to all developing countries. This course examines how several Latin American countries have responded to the most important of these challenges: How to build a state that can maintain order at home and stay at peace with its neighbors, how to form legitimate governments that can pass needed laws, how to ensure that citizens have political rights and a say in the political process, how to promote industrialization and economic growth, and how to achieve a more equal distribution of wealth and ensure that basic human needs are met.

POLS 30404. U.S.–Latin American Politics

(3 -0- 3)

The primary goal of the course is to understand the bases for the political, economic, and security relations of Latin American states with the United States. The course begins with a theoretical and historical examination of the competing perspectives on what determines United States policy toward Latin America: its normative ideals, its security interests, or its economic interests. It then takes up several enduring themes in U.S.–Latin American relations, including the response of the United States to dictatorships, expropriations of United States-owned

property, and revolution, and efforts to promote development, democracy, and human rights. Next, it considers the relations of several Latin American states with each other and the United States, from the Latin American point of view, with special attention paid to the foreign policies of Cuba and Mexico. Finally, it examines several new issues in U.S.–Latin American relations, including regional free trade agreements and trade policy, the environment, migration, and drugs, in a post-Cold War environment.

POLS 30405. Law and Democracy in Latin America

(3 -0- 3)

Democracy and the rule of law seem to be the prescription for what ails the developing world. But they are harder to put into practice than they at first appear. This course explores many of the challenges to the rule of law across Latin America, and how they affect the quality of democracy in the region. We begin by examining the meaning of democracy and its relationship to the rule of law. Then we look at a series of issues that illustrate the strength or weakness of the rule of law in the region. We use academic writings primarily, but also movies, news reports and statistical reports to examine topics such as violence and crime, human rights violations, judicial independence and corruption. Rather than focusing on one country at a time or a few countries in depth, we will use events and systems in various countries as illustrations of important themes. We will then look at the possible consequences of these challenges for democracy in the region, and possible solutions.

POLS 30420. Building the European Union

(3 -0- 3)

This undergraduate lecture course introduces the contemporary project for greater economic, political, and security integration among the current 27 members of the European Union within its appropriate historical context, its current economic and political setting, and its projected future ambitions. The course is thus very much concerned with recent events and important European events-in-the-making, including the implementation of the Amsterdam Treaty, the expansion of the membership of the European Union and EU-sponsored strategies to facilitate democratic transitions in Eastern Europe.

POLS 30421. European Politics

(3 -0- 3)

In this course on European politics we will examine the literature on three major issues: regional integration, origins of modern political authority, and industrial political economy. We will seek to understand the origin, current functioning, and possible futures for key European institutions, including the EU, nation-states, social provision, unions, and political parties. Readings on the European Union, monetary politics, Germany, France, and Spain will be drawn from both scholarly sources and contemporary analyses of political events.

POLS 30423. Irish Politics—1916–2009: From Colonialism to the Celtic Tiger and Beyond

(3 -0- 3)

Ireland, a country rich in history, has undergone dramatic changes in the twentieth century beginning with its fight for independence and culminating in its meteoric rise during the Celtic Tiger years. What explains Ireland's distinctive political trajectory and how does it compare to other European nations? How should we understand the Celtic Tiger, the rapid series of social, economic and political transformations that have occurred within Ireland since the 1990s? This course explores these questions by studying the political actors and institutional settings of Irish politics, the nature of political influence and the shaping of political priorities, and the forces that shape policy outcomes. It will address such critical issues as the legacies of colonialism and civil war, nationalism, democratization, the relationship between the Church and State, the Northern Ireland Troubles and the European Union. While the course focuses on the Republic of Ireland, it will adopt a broad comparative perspective, situating the country both within the wider global context and within the political science literature.

POLS 30424. Eastern European Politics

(3 -0- 3)

This course examines the institutions and practices of Eastern European politics, with an emphasis on the developments of the past 50 years.

POLS 30451. Politics of Southern Africa

(3 -0- 3)

This course focuses on the key state of the region—the Republic of South Africa. After outlining the political history of apartheid, the phenomenon of Afrikaner nationalism, and the rise of African nationalism and the liberation movements, attention turns to the country's escalating turmoil of the 1980s and resulting political transition in the 1990s. South Africa's political and economic prospects are also examined. The semester concludes with a survey of the transitions that brought South Africa's neighboring territories to independence, the destabilization strategies of the apartheid regime and United States policy in that region.

POLS 30452. Politics of Tropical Africa

(3 -0- 3)

Following an introduction to traditional political institutions, the colonial inheritance and the rise of African nationalism, the course concentrates on the current economic and political problems of tropical Africa. This includes case studies of political organizations, ideologies and government institutions in Ghana, Nigeria, and Tanzania.

POLS 30453. Globalization in Africa

(3 -0- 3) Bleck

This course will explore contemporary globalization in sub-Saharan Africa and its effects on political change. Departing from the macro-perspective of Africa's marginalized role in the global economy, this course will focus on the ways that international forces and new technologies are affecting citizens and countries on the continent. Through country case studies and reviews of current events in Africa, the course will explore a diverse set of topics including technological change and development, immigration, art and culture, foreign aid, and China's role in Africa. The course will attempt to highlight the new opportunities for citizens as well as the challenges that remain for African countries in the globalized world.

POLS 30456. Democracy, Development and Conflict in Africa

(3 -0- 3) Shahin

This course surveys African politics through the lens of the “big themes” in comparative politics— Democratization, Economic Development, and Internal Conflict. Each theme is approached through both broad theories and specific case studies, so that students will learn about Africa in general and concrete ways. Students will consider the nature of Africa's challenges, what conditions distinguish Africa's successes from its failures, and what can be realistically accomplished in the future.

POLS 30457. Introduction to African Politics

(3 -0- 3)

Every week there is a news story concerning some tragedy in Africa. But what does it really mean? How do we understand what's going on in Africa right now? Is there any good news at all coming from the “Dark Continent”? Why is Africa so poor and so violent? How did Africa get this way? What can we do about it? Is there a realistic basis for optimism about Africa? This class will be structured around a series of issues “ripped from today's headlines” so as to provide participants with a more thorough understanding of African politics today.

POLS 30458. Dictators, Democrats and Development: African Politics Since Independence

(3 -0- 3)

This course will focus on the causes and consequences of political change in sub-Saharan Africa since the late 1950s and early 1960s. Special attention will be focused on the relationship between political change and economic/human development. The key questions this course will address include the following: 1) What explains the rise of post-colonial authoritarian regimes? 2) What explains the

demise of post-colonial authoritarian regimes? 3) What might affect the variation in the extent to which Africans participate in politics, engage in protests, and join movements devoted to promoting democracy? 4) What explains the variation in the extent of democratization that has taken place across sub-Saharan Africa since the late 1980s and early 1990s? 5) Should it matter to the rest of the world that sub-Saharan African countries become more developed and democratic? 6) If it should matter, can/how can the United States and other countries promote development and democratization in the region?

POLS 30462. Islam and Politics in the Middle East

(3 -0- 3) Shahin

This course is designed to provide students with an understanding of the phenomenon of political Islam in the Arab and Muslim worlds. It examines the reasons, implications, and consequences of the reassertion of Islam in today's politics. The first part of the course provides a thorough analysis of the Islamic order and the model(s) that inspires modern Islamist activists. The second part critically examines the ideas of the main ideologues of contemporary Islamic movements. The third part discusses the approaches to the understanding of contemporary political Islam and the Islamic movements and presents cases studies of mainstream and radical Islamic movements in a number of Arab and Muslim countries. Finally, the course concludes with a critical analysis of the future of political Islam and its relations with the West.

POLS 30465. Chinese Politics

(3 -0- 3)

Study of the contemporary Chinese political system and process in the light of Chinese history and culture. Some of the topics treated include the traditional political order; the revolutionary movements; the rise of communism; Maoism and the rejection of Maoism; the political structure; leadership, personalities, and power struggles; economic policy; social policy and movements; problems of corruption and instability; and prospects for democratic development. There will be some attention to Taiwan and Hong Kong as special Chinese societies.

POLS 30466. Political Movements in Asia

(3 -0- 3)

This course analyzes a wide range of political movements including nationalist and revolutionary movements, guerrilla insurgencies, terrorist organizations, democracy movements, and peace movements. The Asian region encompasses China (including Taiwan, Tibet, Xinjiang, Hong Kong), Mongolia, North and South Korea, Japan, the Philippines, Vietnam, Thailand, Cambodia, Burma, Malaysia, Indonesia, India, Pakistan, Nepal, Afghanistan, and so on. To understand various movements, we will study global trends, human rights values, cultural differences, religious doctrines, historical legacies, state-society relations, leadership skills, mobilization strategies, and violent vs. nonviolent trajectories. In addition to analytical readings, we will also watch a series of documentaries and read a number of prominent (auto-)biographies.

POLS 30467. South Asian Politics

(3 -0- 3)

This course will present an overview of the politics of modern South Asia focusing on Afghanistan, Bangladesh, India and Pakistan. We will begin by studying the impact of the British colonial experience, the rise of nationalism and the emergence of independent nation states. To develop a broad understanding of the political and economic experience of the region we will spend time analyzing the four countries individually before moving on to explore four important themes in Political Science. First, regime choice and regime survival in the four countries. Second, the role of women in the development experience. Third, identity politics and the emergence of violent domestic and international movements. Fourth, international relations focusing on the role of three key actors—the U.S., China and the Middle East in regional politics.

POLS 30468. The Catholic Church and China

(3 -0- 3)

Reading, discussion, and research on the history and current situation of the Catholic Church in China: the interaction of Catholicism with Chinese religious,

philosophical, and social traditions; the adaptation of Catholicism to the Chinese environment; the interactions between the Church, Chinese Catholics, and the Chinese state; diplomatic dealings between the Holy See and the PRC; relations among Chinese Catholics, particularly the “official” Church and the underground Church; questions of the relationship between Church and state, freedom of religion, freedom of conscience. Assignments will include one or more short discussion papers and a longer research paper.

POLS 30476. Political Movements in Asia

(3 -0- 3)

This course analyzes a wide range of political movements including nationalist and revolutionary movements, guerrilla insurgencies, terrorist organizations, democracy movements, and peace movements. The regional scope covers East Asia, Southeast Asia, and South Asia. To understand various movements, we will study global trends, human rights values, cultural differences, religious doctrines, historical legacies, state-society relations, leadership skills, mobilization strategies, and violent vs. nonviolent trajectories. In addition to analytical readings, we will also watch a series of documentaries and read a number of prominent (auto) biographies.

POLS 30480. Religion and Politics in Comparative Perspective

(3 -0- 3)

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America and South America) discuss the robustness of such hypotheses. The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on the effects of modernization and globalization on the political salience of religion and whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others.

POLS 30482. State Terror and Violence

(3 -0- 3)

This course on state sponsored terror, repression, and violence examines its causes and implications, and the role of the international community in responding to it.

POLS 30483. Contentious Politics and Resistance Movements

(3 -0- 3) Hui

This course analyzes prominent resistance movements in the twentieth and twenty-first centuries. We first examine the conceptual tools of contentious politics, domination and resistance, state-society relations, and violent vs. nonviolent strategies of resistance. We then examine various nationalist independence movements, revolutionary movements, communist insurgencies, civil wars, and peaceful democracy movements. To better understand resistance movements from the perspectives of leaders and participants, we will watch a series of documentaries and read the (auto-)biographies of Mahatma Gandhi, Nelson Mandela, Aung San Suu Kyi, the Dalai Lama, Wei Jingshen, and others. In analyzing democracy movements, we will further examine what the third wave of democracy entails, why some movements succeed while others fail, how new democracies should reconcile with past dictators, to what extent constitutional engineering can solve past problems and facilitate successful transitions, and why some new democracies remain fragile.

POLS 30484. Courts and Politics Around the World

(3 -0- 3)

This course carries out a comparative study of the nature of courts and law, their position in political systems, and their potential impact on society. The course is very theoretical, and organized around key themes rather than countries. The main themes of the course include the following: why politicians create powerful courts, how do judges and courts make decisions, what is judicial independence, how do we get it, and which systems have it, and how effective are courts as tools for political and social change. The court has a heavy emphasis on judicial design, and the class will design a court structure for an imaginary country.

POLS 30486. Globalization

(3 -0- 3)

This course will examine the movement of money, goods, information, and cultural norms that are collectively known today as “globalization.” We will consider the pros and cons of the roles played by the institutions that enforce growing financial and trade integration and the international promotion by governments and transnational activists of democracy and human rights. It will also highlight the cultural reactions to globalization, including the resurgence of nationalism, ethnic identities and religious fundamentalism. Special emphasis will be placed on contrasting the approach of the U.S. and other advanced industrial and developing countries.

POLS 30487. The Rise and Fall of World Communism

(3 -0- 3)

Corequisite: POLS 32487

For most of the twentieth century, communist states, like the Soviet Union and China, represented the greatest political, ideological, and military challenges to the western world. But now, most of these states are gone; of those that still exist, only one (which one?) can credibly live up to the bloody examples set by Josef Stalin and Mao Zedong. In this course, we will draw upon an eclectic mix of approaches from political science, history, sociology, and political philosophy to make sense of both the rise and the demise of the communist phenomenon. Rather than focusing on only one country or region, we will consider an array of different cases. These will include not only the Soviet Union and China but also such fascinating examples as Cuba, Vietnam, East Germany, Poland, Romania, Yugoslavia, and—my favorite—North Korea. There are no prerequisites for this course, although I do hope you will be inclined to view world communism as one of the most intriguing political movements of all time.

POLS 30488. Transitions to Democracy

(3 -0- 3)

In this class, we will analyze the institutional underpinnings of a successful transition to democracy, and we will discuss ways in which democratic institutions following the transition are set up. Obviously, to understand what contributes to successful transitions, we need to analyze the cases of failed transitions to democracy and failed processes of democratization. Most examples in this class come from the former Soviet Union and from East and Central Europe. Our ambitions, however, are more universal. By the end of the class, you should be able to apply the theories and concepts you learn to transitions taking place in other parts of the world.

POLS 30489. Saving the World or Wasting Time? The Effectiveness of Social Movements

(3 -0- 3) Davenport

This course is geared toward constructing a successful social movement organization. To do this, students will evaluate the existing theoretical literature based in political science and sociology to explore what a social movement is as well as how it attempts to achieve its objectives. We will also address the issue of how one evaluates progress toward a specific end and what leads to/hinders this progress. Students will examine existing statistical databases on the topic (e.g., a database of all collective action in the united states from 1960 to 1995) as well as detailed cases of both attempts as well as outcomes of these efforts. The former is taken from research compiled by the professor as well as other scholars of conflict/contentious politics. The latter is taken from diverse documents housed at the Radical Information Project as well as from diverse human rights organizations associated with the Robert F. Kennedy Center for Human Rights: these are based in the U.S., India, Northern Ireland, Rwanda and Zimbabwe.

POLS 30490. The Logics and Politics of International Migration

(3 -0- 3)

This course investigates the primary economic, humanitarian, and political forces that are driving and sustaining the complex phenomenon of contemporary transnational migration. Within this context, three core questions are addressed. First, have the forces of globalization and the entanglements of international

commitments and treaty obligations significantly diminished the policy making autonomy of the traditional nation state? Second, what are the significant benefits and costs of transnational migration for the immigration receiving countries? Finally, is a liberal immigration regime desirable and, if so, can it be politically sustained? This is a course with a methodological component.

POLS 30491. Religion, Development, and Democracy

(3 -0- 3) Dowd

The impact of religion on social and political change and the impact of social and political change on the influence of religion are immensely important topics. While many have claimed that religious faith communities essentially impede “human progress,” others have argued that “human progress” is impossible to explain without some reference to such faith communities. In this course, we will take a critical look at religion, particularly Christianity and Islam, and examine two major questions: 1) What effects, if any, do religious beliefs and institutions have on human development and the prospects for and the quality of democracy? 2) What effects, if any, do human development and democratization have on the relevance of religious beliefs and the influence of religious institutions? Students will take an active role in leading in-class discussions, write several short essays and one longer essay on a topic of their choice.

POLS 30492. Contention in China

(3 -0- 3) Hui

Is China next for a “Jasmine Revolution?” Why have pro-democracy efforts repeatedly failed in China? Why is there no organized democracy movement despite the prevalence of sporadic protests about various kinds of social injustices? Is China immune to democratization because of a deeply rooted Confucian culture? This course examines a wide range of contentious politics in modern China, from the May Fourth Movement through the Communist Revolution, the Cultural Revolution, the Tiananmen Democracy Movement to recent protests by workers, peasants, religious followers, and middle-class property owners. In addition to contention by Han Chinese, this course also examines resistance by Tibetans, Uighurs, Mongolians, and other minorities.

POLS 30493. The Politics of Adapting to Climate Change

(3 -0- 3) Javeline

The earth’s climate has changed, is changing, and will continue to change, even if we implement the most extreme mitigation practices and reduce greenhouse gas emissions starting today. The impacts of climate change are enormous: species extinctions, ecosystem dysfunction, sea level rise, storm surge, heat waves, droughts, floods, disease outbreaks, famine, and economic loss. Humans need to adjust to this new reality by reducing their vulnerability, or adapting to climate change. We might have to construct levees to save our cities, implement new agricultural technologies to save our food supply, or move species to save them from extinction. Surprisingly, political scientists have been largely absent from the adaptation conversation. In this course, we explore the many questions that climate change adaptation raises for politics. We will consider adaptation in the context of political economy (adaptation costs money), political theory (adaptation involves questions of social justice), comparative politics (some countries more aggressively pursue adaptation), urban politics (some cities more aggressively pursue adaptation), regime type (democracies and authoritarian regimes may differently pursue adaptation), federalism (different levels of government may be involved), and several other fields of study including institutional development, international security, immigration, media, public opinion, and judicial politics. This course falls at the intersection of political science and environmental studies, but all students interested in our changing world are welcome.

POLS 30494. Theories of Genocide

(3 -0- 3) Singh

As inexplicable as genocides and mass killings are from a moral perspective, they have a political logic of their own. This seminar seeks to unlock the reasons behind 20th- and 21st-century mass killings by bringing an analytical perspective to bear on them. Together, we will explore important questions about the causes and conduct of mass killings. Why do mass occur in some places and not others? Who

participates in the killing? How much support from society is necessary? How does the world react to such events? What can outside actors do to stop the killing? Are there legal options for punishing the perpetrators and hopefully deterring future killings? How can you heal a society after such a tragedy? The course will investigate these questions through the study of the Holocaust, Cambodia, Rwanda, and Darfur.

POLS 30495. Education, Statebuilding, and Democracy

(3 -0- 3) Bleck

This course examines the role of education in the processes of statebuilding and democratization through a comparative lens.

POLS 30523. Contemporary Latin American Political Thought

(3 -0- 3)

This course offers a global perspective on contemporary Latin American politics. It examines the consequences of democratization in different Latin American countries, the connections between democracy and social and economic development, trends in government institutions, political parties and elections, and the still present tensions between democratic and non-democratic practices and ideologies in the region.

POLS 30527. Cuba

(3 -0- 3)

This course will examine social, economic, cultural and political trends in Cuba as the country enters a period of uncertainty following the illness of Cuban President Fidel Castro. Co-taught by two journalists who spent the last five years in Cuba, the course will provide a unique view of day-to-day life on the island as well as study recent changes in U.S. and Cuba relations and the rise in importance of Cuba's ties with Venezuela. Cuban films, television broadcasts, magazines, newspapers, poetry, literature and other primary materials will be used in the class. Spanish fluency is not required.

POLS 30529. Italian Politics

(3 -0- 3)

2011 marks the 150th anniversary of Italian unification. This course is a diachronic overview of Italian politics from the unification of the Italian peninsula as a nation-state in 1861, through fascism and post-war republican reconstruction, up to the super-national perspective of the European Union today. The course incorporates political history, political theory, personal narratives, opera, documentaries, and movies.

POLS 30539. Comparative Justice Systems

(3 -0- 3) Ingram

This course is about judicial politics in different countries. Judicial politics is the study of how political dynamics shape courts (including justice reforms and actual court decisions) and how courts, in turn, shape politics (including the social impact of institutional rules and decisions). The course introduces the two main systems of law in the world and the primary theoretical approaches to understanding judicial politics, proceeding to analyze how institutions and actors in different systems of law interact with various patterns of democracy and democratization. Thus, the course explores two main causal relationships: 1) the effect of politics on the judiciary (politics-to-courts influences), e.g., political interference in the independence of judges; and 2) the impact of the judiciary on politics (courts-to-politics influences), e.g., constraints courts place on governments, or the societal impact of court decisions. The first half of the course emphasizes principal conceptual and theoretical questions facing scholars of judicial politics, while the second half of the course highlights substantive, empirical problems. Examples will draw from experiences inside and outside the U.S., with special emphasis on Latin American judicial politics. Principal course requirements consist of a research paper and an exam.

POLS 30551. Radical Islam in Comparative Perspective

(3 -0- 3)

Muslim radical movements are not new to the Middle East. They made their debut in the 18th century Arabian Peninsula paving the way for the first Saudi Kingdom.

However, the use Islam by individuals, movements and nation states for political purposes has become common since the mid-1970s. Many of the contemporary Muslim actors use religious terminology in their ideology and activities but are active as political actors per se. This course is studying the roots of the political Islam, its current political activities and their implications, the distinction between mainstream Islam and radical Islam, and finally the phenomena of religious terror used by several of these movements.

POLS 30553. Contemporary Political Islam

(3 -0- 3)

This course is designed to provide students with an understanding of the phenomenon of political Islam in the Arab and Muslim worlds. It examines the reasons, implications, and consequences of the reassertion of Islam in today's politics. The first part of the course provides a thorough analysis of the Islamic order and the model(s) that inspires modern Islamist activists. The second part critically examines the ideas of the main ideologues of contemporary Islamic movements. The third part discusses the approaches to the understanding of contemporary political Islam and the Islamic movements and presents cases studies of mainstream and radical Islamic movements in a number of Arab and Muslim countries. Finally, the course concludes with a critical analysis of the future of political Islam and its relations with the West.

POLS 30554. Campaigns and Elections Around the World

(3 -0- 3)

This course examines campaigns and elections in comparative perspective.

POLS 30555. Senior Seminar: Clientelism and Machine Politics in Comparative Perspective

(3 -0- 3)

This course introduces students to the phenomenon of clientelism and machine politics across time in America, Europe, and Latin America. What transformations and continuities can we find in comparing past and present forms of clientelism and machine politics? What does the existence of these machines imply for the quality of democracy? What are the prospects for these machines in the future? We will address these questions by studying various theoretical and historical explanations, empirical evidence, and some formal models of machine politics in the early history of the U.S., present day advanced European democracies, Argentina, México, and Brazil. This course fulfills the POLS writing seminar requirement.

POLS 30556. Globalization, Democracy and Development in the Middle East

(3 -0- 3) Singh

This course examines how Middle Eastern countries are responding to the challenges of globalization and democratization. It investigates the policies and strategies they have adopted to achieve economic growth and political development. The topics that the course covers include: the impact of the global economy on MENA countries; the mismanagement of the region's resources; types of political regimes; problems associated with state-led growth; the process of democratization; and the limits of liberalization. The assigned readings analyze specific case studies.

POLS 30558. Islamist Political Parties in Comparative Perspective

(3 -0- 3)

Islamist political parties play a key role in the politics of Asia, the Middle East, and North Africa, and have had a wide-ranging impact on elections in the Islamic world and international relations around the globe. Yet despite their common "Islamist" label, these parties have critical philosophical and practical differences. In this course we will establish a framework to study political parties from the broader political science literature. We will then focus our attention on individual parties (while keeping the broader comparative perspective in view) as we seek to understand the nature and significance of the differences among these parties. We will consider cases from a number of countries, including Algeria, Bahrain, Egypt, Indonesia, Jordan, Kuwait, Lebanon, Malaysia, Morocco, Pakistan, Palestine, Turkey, and Yemen.

POLS 30559. Democratization and Elections in Islamic Africa

(3 -0- 3) Bramsen

Samuel Huntington famously wrote about the Third Wave of democracy, which swept over much of the developing world. This course examines democratization and elections in what we might call the Third Wave's "shoreline"—Islamic Africa. We will analyze the various post-Wave regime outcomes, including real democratization, semi-democracy, electoral authoritarianism and unabashed authoritarianism. We will examine the impact of political history, state capacity, elections, and religion on how the political regimes did and did not change, with particular focus on how Islam was used to sustain and justify the various regimes. In so doing, we will look at the overall political trends in the region as well as zeroing in on specific cases.

POLS 30560. Elections in Comparative Perspective

(3 -0- 3) Gonzalez Ocantos

Did you know that in Argentina parties hire soccer hooligans to mobilize voters? Or that in Mexico voters are given digital cameras to prove they voted for the party that gave them money? Politicians seek power and legitimacy by galvanizing votes, and do so by applying all sorts of tactics. If you are interested in how political campaigns differ across countries and political regimes, you should take this course. The course begins with a discussion of the role played by elections in facilitating social choice and enhancing political accountability. We then embark in an empirical journey in order to study really existing electoral politics and evaluate how they promote or distort political representation. We study the dynamics of authoritarian elections in order to understand why dictators decide to hold elections. We also explore why parties in democracies resort to different tactics like ideological appeals or vote buying in order to appeal to voters. We pay special attention to the dynamics of vote buying, a widespread practice in the developing world, by studying how parties decide who to target with gifts and how, in the presence of secret ballots, they manage to make that exchange an effective electoral strategy.

POLS 30592. Ethnic Conflicts in Comparative Perspective

(3 -0- 3)

Most nations today may be considered as multi-cultural, that is: they are comprised of at least two distinct societies based on different cultures. About 5000 ethnic groups are found today in about 200 nations. It is evident that in spite of the high hopes since the collapse of the Communist Block the number of ethnic conflicts increased dramatically. At present about 300 conflicts are registered. Each and every one of them is unique and yet there are some similarities which characterize most of them. This course maps the main conflicts, studies the roots and claims of the protagonists, and based on the recognition of the similarities attempts to define a model of ethnic conflicts and some features of possible solutions.

POLS 30595. International Development in Theory and Practice: What works in Development

(3 -0- 3) Reifenberg

This course on international development has three major purposes: 1) to examine diverse approaches to thinking about international development and processes that bring about individual and societal change; 2) to explore the role and constraints of development projects in areas such as poverty reduction, social development, health, education, the environment, and emergency relief; and 3) to develop practical skills related to project planning and management, negotiations, communications, and the evaluation of international development projects. This class aspires to develop relevant knowledge and practical skill for students interested in engaging in bringing about positive change in a complex world. The class is particularly relevant for students planning international summer service internships, studying abroad, or for those considering careers in areas related to social and economic development. The course will make use of specific case studies from Haiti, Peru, Uganda, Mexico, Bangladesh, Pakistan, and Chile, among others, drawing lessons from instructive stories of failure and inspirational stories of change.

POLS 30601. Ancient and Medieval Theory

(3 -0- 3)

What is the meaning of justice and why should we care about it? Can politics ever perfectly establish justice? Which forms of government are best for human beings to live under, and why? What is the political relevance of religion and philosophy, family and ethnicity, war and peace, nature and freedom, law and right? What are the qualities of a good citizen and political leader? How should relations among diverse political communities be conducted? This course introduces students to theoretical reflection on these and related questions through the study of some of the great works of ancient and medieval political thought. Readings will include writings of authors such as Thucydides, Plato, Aristotle, Cicero, Augustine, Farabi, Maimonides, and Aquinas.

POLS 30612. Nineteenth-Century Political Thought

(3 -0- 3)

The problem of 19th-century political thought can be described as follows: We want to believe in something outside ourselves, but we want it to be our own choice. After the French Revolution, universal liberty seemed possible, but the legitimacy of actual institutions was called into question. This made political theory a vital part of political life itself. This course will investigate the themes of liberty, institutions, and change as they appear in selected works of French and German political thought by Joseph de Maistre, Auguste Comte, Alexis de Tocqueville, G.W.F. Hegel, Karl Marx, and Max Weber.

POLS 30615. American Political Thought

(3 -0- 3) Munoz

In this course we shall attempt to understand the nature of the American regime and its most important principles. Since we lack the time for a comprehensive survey of American political thinkers, we shall focus on select statesmen and critical historical periods—specifically, the Founding era, Lincoln and the slavery crisis, and the Progressives. We shall also reflect upon how the American regime relates to the larger tradition of Western political thought.

POLS 30620. Modern Political Thought

(3 -0- 3)

In this course, students will study the focal ideas and arguments that helped shape the development of Western modernity through close readings of the classic texts of modern European political thought. Political theorist Charles Taylor's recent book, *Modern Social Imaginaries*, will provide a helpful historical and philosophical framework for the course and will be read and discussed gradually over the semester. Machiavelli's *The Prince* will give students insight into the philosophical origins of the modern Western experience of secular, power politics. Hobbes's *Leviathan*, Locke's *Second Treatise of Government*, Rousseau's *Second Discourse* and *Social Contract*, and selected political essays by Kant will offer students the opportunity to understand the evolution of the social contract tradition, and how it helped produce the fundamental Western "modern social imaginaries" of natural rights, the contractual social order, popular sovereignty and the public sphere.

POLS 30621. Continental Political Thought

(3 -0- 3)

This course examines the response of leading theorists to the promise and pathologies of the modern age. Among other topics, we will consider the political implications of the decline of authority, community, and the public sphere; the problem of institutionalizing freedom in the modern nation state; and the fate of political and moral agency in a bureaucratized, massified polity. Special attention will be paid to the Continental tradition's critique of liberal institutions and political philosophy. Readings from Hegel, Tocqueville, Marx, Nietzsche, Weber, Schmitt, the Frankfurt School, Arendt, and Foucault.

POLS 30625. Contemporary Political Thought

(3 -0- 3)

This course is an introduction to contemporary American and European political thinkers. The goal of the course is to identify the characteristic questions of modern politics and the challenges to freedom in the modern age.

POLS 30651. Machiavelli NOW

(3 -0- 3)

In this seminar we will approach Machiavelli through the careful study of his major works, read against the background of the political crisis of the Italian Renaissance, and with particular attention to their resonance for subsequent political analyses of the condition of modernity. Reading will include: *On the method of dealing with the Rebellious Peoples of Valdichiana*; *A Description of the Methods Adopted by the Duke Valentino when Murdering Vitellozzo Vitelli, Oliverotto da Fermo, the Signor Pagolo, and the Duke di Gravina Orsini*, *The Prince*, *Mandragola*, *Belfagor*, *the Discourses on the First Decade of Livy*, and the *Dialogue on the Language*. The course will be offered in English. Requirements: brief presentations, midterm and final paper.

POLS 30653. Politics and Conscience

(3 -0- 3) Keys

Against a backdrop of large-scale society, mass movements, and technological bureaucracy, the invocation of “conscience” recalls the individual human person as a meaningful actor in the political sphere. But what is conscience, and what are its rights and responsibilities? What is it about conscience that ought to command governmental respect? Are there limits to its autonomy? What role should conscience play in questions of war and peace, law-abidingness and civil disobedience, citizenship and political leadership? And how does the notion of conscience relate to concepts of natural law and natural rights, rationality and prudence, religion and toleration? This course engages such questions through readings from the Catholic intellectual tradition (Augustine, Thomas Aquinas, Thomas More, Francisco de Vitoria, Desiderius Erasmus, John Henry Newman, Karol Wojtyła/John Paul II, and Joseph Ratzinger/Benedict XVI) and other writers of the history of ethical-political thought (Cicero, Seneca, John Locke, Mahatma Gandhi, Jan Patočka, and Alexandr Solzhenitsyn). We consider also various contemporary reflections on conscience expressed in films, essays, letters, plays, short stories, speeches, and declarations, beginning with Martin Luther King, Jr.’s “Letter from a Birmingham Jail” and Václav Havel’s speech “Politics and Conscience.” This class serves as both the capstone course for the interdisciplinary minor Philosophy in the Catholic Tradition and an upper-level elective for political science majors and peace studies minors. Its format combines lecture and seminar-style discussion.

POLS 30654. Catholicism and Politics

(3 -0- 3) Philpott

Catholicism and Politics poses the question, both simple and complex: How ought Catholics to think about the political order and political issues within it? The first part of the course will survey major responses to this question drawn from Church history: the early church, the medieval church, and the modern church. The second part applies these models to contemporary issues ranging among war, intervention, globalization, abortion, the death penalty, religious freedom, gender issues, and economic development. The course culminates in “Vatican III,” where teams of students, representing church factions, gather to discover church teachings on selected controversial political issues.

POLS 30656. Human Rights and Human Wrongs

(3 -0- 3) Verdeja

This course will examine theories of human rights and their applications and implications for international politics.

POLS 30661. Constitutionalism, Law and Politics

(3 -0- 3) Munoz

In the Gettysburg Address Abraham Lincoln famously spoke of “government of the people, by the people, for the people.” Why should government be of the people, by the people, and for the people? And if it should be so constituted, how is such a political order to be founded, designed, and maintained? In “Constitutionalism, Law, and Politics” we shall address these fundamental questions of political science by examining the idea of constitutionalism and the role constitutions play in political life. By reading classic texts in ancient and modern political philosophy, studying fundamental texts of the American political tradition, and examining contemporary legal and political issues, we shall study

questions such as: How do different constitutional orders or regimes nurture different forms of political life and different types of citizens? How do different regimes rise and fall? What is the proper relationship between political authority and individual liberty? What, if any, are the limits on a just constitutional order? Readings may include selections from Aristotle, Aquinas, Machiavelli, Locke, Montesquieu, Jefferson, Madison, Lincoln, Roosevelt, and great cases of American and foreign constitutional law.

POLS 30668. Feminist Political Thought

(3 -0- 3)

This course will examine different ideas, approaches, and issues within feminist political thought. The first part of the course will compare different theoretical perspectives, from liberalism to Marxism, that have been employed by contemporary feminists. We will pay particular attention to the meanings ascribed to “woman” and her roles in society. The second part of the course will examine how women have been represented throughout Western political thought, and the values ascribed to them by political theorists. Finally, in the last part of the course, we will turn to an examination of several contemporary political issues particularly relevant to feminist thought.

POLS 30672. What is Friendship? Questions and Answers, Old and New.

(3 -0- 3) Abbey

The question in this course’s title “What is Friendship?”—sounds like a no-brainer. Friendship is such a common and ordinary part of human experience: how can anyone be in any doubt about what it is? Yet some of the great minds in the western philosophical tradition have thought long and hard about friendship—its distinctive nature; its real meaning. For that reason, we will examine the writings of Plato, Aristotle, Cicero, Michel de Montaigne, Immanuel Kant, Mary Wollstonecraft, Ralph Waldo Emerson and Friedrich Nietzsche, among others, on friendship. Along with critically examining what such thinkers say about friendship, we will ask whether we have anything to learn from them about our own lives and relationships. Participants in this course will raise and try to answer a number of questions about friendship, such as: Can I be friends with family members? Does the nature of friendship differ by gender? Is friendship an appropriate and viable model for marriage? Can friendship provide a model for political relations? We will also consider the representation of friendship in popular culture. And we will, of course, reflect on the meaning of friendship in the age of social networking sites such as Facebook.

POLS 30727. Theories of Law

(3 -0- 3)

Prerequisite: POLS 20600 or GOVT 20600

This course will explore historical and contemporary theories of law, examining the nature of law in civil society and the moral foundations of systems of law. In examining the accounts offered by Aristotle, Cicero, Aquinas, Hart, Fuller, Dworkin, and Raz, the class will engage in the historical and contemporary debates over the nature of law, such as natural law versus positive law, law’s pedagogical and deterrent functions, the relationship between law and virtue, and establishing a legitimacy of a legal system. The aims of the course will be to develop a theoretical understanding of law and its proper function in modern societies and to trace the historical contours of legal philosophy and the development of our own legal system.

POLS 30733. The Problem of Faction

(3 -0- 3)

Since the heated election of 2000, the terms “red-state” and “blue-state” have become a part of our political lexicon. But the phenomenon of faction—internal political conflict—is neither new nor unique to the United States. After beginning with an assessment of contemporary politics, this course will survey a variety of thinkers—ancient, modern, and American—on the problem of factions.

POLS 30736. Globalization's First Wave: Commerce and Culture in Early Modernity

(3 -- 3)

Today's economic and cultural challenges may be more deeply understood through studying the times when modern capitalism and global trade were new. In the 17th and 18th centuries—when much of the West saw dramatic transformations from rural, subsistence agriculture to commerce, finance, and industry—observers fiercely debated the meaning of these changes. For instance, as much of the population left meager existences for solid worldly comfort or even lavish affluence, would they become more enlightened, peaceable, and tolerant, or just more skeptical, self-centered, and incapable of hardship or sacrifice? Would the lower classes somehow share the new wealth, or be left far behind in degradation, taunted by luxuries they cannot partake of legally? When people have more commerce with foreign cultures, do they tend to adopt the foreigners' best attributes, get corrupted by their worst attributes, or simply be reduced to a materialistic common denominator? Would more trade and interdependence lead to less war? We will pursue such questions with the help of historical, sociological, economic, political, and philosophical studies, especially through thinkers such as Hume, Montesquieu, Rousseau, Adam Smith, Tocqueville, Marx, and Weber—focusing on the 18th century but leading up to our own time.

POLS 30737. Contemporary Christian Political Thought

(3 -0- 3)

This course is designed to introduce students to problems of contemporary politics from various Christian perspectives. Beginning with an overview of medieval and early modern Christian thinkers—Augustine, Aquinas, Luther, Calvin—the course will spend most of the semester reading and discussing theorists who address more recent and immediate political problems within the Christian tradition. A variety of Christian faiths will be represented by people like Stanley Hauerwas, C.S. Lewis, Reinhold Niebuhr, Yves Simon and John Howard Yoder. The class will also read papal encyclicals dealing with political issues and take up particular issues such as capitalism and Christianity, as well as more general problems, such as the danger Christians face when they become involved in politics. The class will not only acquaint students with others' thinking about Christianity's relationship to politics but will also prepare them for thinking about this topic in their own lives, as new circumstances, situations, and questions arise.

POLS 30739. Church and State in American Constitutional Law and Politics

(3 -0- 3)

This course analyzes different approaches to understanding the separation of church and state, and examines how these approaches have played out in political practice and Supreme Court decisions.

POLS 30747. Patriotism and Cosmopolitanism

(3 -0- 3)

This course will explore the perennial conflict between the cosmopolis and the patria; between adherence to a universal morality and loyalty to one's native country. Because of our common humanity are we called to be "citizens of the world" and what does such citizenship entail? Is it possible to be both a "citizen of the world" and a citizen of a particular country? What are the sources of these various loyalties? What are the potential areas of conflict between the two? Are there limits to the loyalty of the patriot, and, if so, what form do these limits take? We will examine various manifestations of this conflict from the history of political thought. Readings will include selections from Plato, Aristotle, Cicero, the Stoics, Kant, Lincoln, and Chesterton as well as some contemporary approaches to both patriotism and cosmopolitanism.

POLS 30748. Utopias and Dystopias

(3 -0- 3)

"Utopia" is a term coined by Thomas More, probably as a pun suggesting that the "good place" is "no place." Exploring utopian traditions in politics and political thought reveals a jarring contrast between the noblest human aspirations and the most devastating outcomes. Even so, some students may find grounds for hope in certain utopian traditions, since these include not only the dozens of

well-intentioned schemes which quickly led to slaughter or starvation, but also some enduring and simple communities such as the Amish. Other students may come to the more sobering conclusion that dramatic social progress is impossible. But even for them, there may be much to learn from the portrayals of shocking corruption and degradation in "dystopias"—for it may still be possible that, if certain social and cultural trends are left unchecked, society can get far worse. Both utopias and dystopias tend to focus especially on two aspects of society—sexuality and economics – which according to some, are the most in need of radical reform, while according to others, are the most dangerous when altered from their traditional patterns. Utopias and dystopias help refine our idea of what excellence and depravity in society look like, how far progress and decline are possible, and what behaviors tend toward these conditions. This course draws from political theory, history, literature, and film.

POLS 30757. Darwin: Political and Moral Perspectives

(3 -0- 3)

Darwin's *On the Origin of Species* and *The Descent of Man* precipitated a major alteration in paradigms of thought extending far beyond the empirical sciences to the realms of political and social theory, ethics, moral philosophy, and even theology. One of the most controversial thinkers in history, Darwin has been both hailed as a visionary genius and blamed as an inspiration for moral atrocities such as the Holocaust. This course will first seek to understand Darwin's thought through a careful reading of his own writings, paying particular attention to the political and moral implications of his thought as well as their context in intellectual history. We will then examine the influence of Darwin's thought on subsequent political and moral theory and practice, including "social Darwinism" and eugenics movements as well as contemporary theories of evolutionary and environmental ethics.

POLS 30758. Natural Rights and Natural Law

(3 -0- 3)

The concept of natural law is commonly taken to delineate a sphere of moral obligation or duty, while that of natural (or "human") rights delineates a sphere of freedom or autonomy. How do these concepts fit together? Or are they ultimately contradictory? This course will explore the concepts of natural rights and the natural law, focusing on the meaning of each concept as well as potential areas of overlap or tension between them. This exploration will be conducted primarily through a broad tracing of the development of each concept, both singly and in tandem, through the history of political thought up to the present time.

POLS 30759. Ancient Political Thought

(3 -0- 3)

The great political thinkers of ancient times died over two thousand years ago, but the questions they addressed remain alive and well today. By grappling with questions about justice, virtue, and human nature, the ancients both framed the terms of debates that continue to this day and provided perspectives on these debates that remain powerful and persuasive. While much has changed since the times of Homer, Socrates, Plato, Aristotle, and Cicero, enough continuity remains to engage them meaningfully in conversation about political philosophical issues of ongoing relevance for us. In this course we will seek both to understand these thinkers through a close reading of their most important writings as well as to relate them to one another and, ultimately, to ourselves.

POLS 30805. How To Do Political Research

(3 -0- 3)

This is a course primarily intended for juniors or seniors who are writing, or are planning to write, a senior essay, although it is open to all majors. It helps students acquire the practical skills that are essential for completing a substantial empirical research project: posing a research question, finding out what is already known, staking out an original argument, identifying counterarguments, deciding what kind of evidence is required to figure out who is right, clarifying concepts and boundary conditions, gathering the evidence, analyzing the evidence, and interpreting the analysis. The course encourages students to consider a variety of approaches and helps them decide whether to use quantitative methods, qualitative

methods, or both. Students will do independent research to compile a bibliography, gather and analyze evidence, and write an outline, but will not write a paper. Instead, they will present and defend their findings orally and visually. All students are expected to participate vigorously in evaluations of their peers' research.

POLS 30806. Economics for Policy Analysis

(3 -0- 3) Betson

This one-semester introduction to economic theory will cover material that is relevant to the study of politics and policy analysis covered in introductory microeconomic and macroeconomic courses. Topics to that will be covered will include demand, supply and the allocation of resources through competitive and non-competitive markets; sources market failures and the governmental regulation of the economy; aggregate models of the economy to study unemployment and inflation and growth.

POLS 30815. Designing and Analyzing Public Opinion Surveys

(3 -0- 3) Campbell

Are you interested in producing your own research rather than just consuming the work of others? Are you interested in learning how public opinion research is done? Would you like to learn the marketable skill set of designing and analyzing public opinion surveys? Would you like to take a class that is student-driven? If so, this is the class for you. Students will develop their own research questions, execute an actual survey of Notre Dame students, and then analyze the results—thus answering their own questions. Along the way, they will learn how to draw a representative sample of a population, the craft of writing informative survey questions, the fundamentals of analyzing survey data, and methods for effectively presenting quantitative data. Students will preferably have been previously exposed to quantitative methodology (i.e. a class in statistics and/or research methodology), but this is not a formal requirement. The only prerequisite is a willingness to learn.

POLS 33002. Sophomore Seminar: Topics will vary by semester

(3 -0- 3) Coppedge

Sophomore seminars provide sophomore political science majors with the opportunity to take an advanced, more demanding course earlier. They are designed to go into a topic in greater depth and introduce students to basic research techniques that will help them do original work. Topics vary from semester to semester. The course fulfills a seminar requirement for the political science major. Department approval is required.

POLS 35901. Internship

(V -0- V)

The goal of the internship program is to provide opportunities to integrate coursework with real work experience. Internships are available throughout the Notre Dame area with a variety of government offices, non-profit agencies and NGO's. Interns work with professionals in their own area of interest, explore career options, and gain real work experience. Permission required. Does not count for the political science major.

POLS 37910. Mock Trial II

(2 -0- 2)

This course is designed to teach students the basic rules and skills required to compete in the American Mock Trial Association ("AMTA") annual mock trial tournaments. Students will learn the modified Federal Rules of Evidence used by the AMTA, and how to effectively articulate and argue evidence objections and responses to a judge. Instruction will also emphasize the structure and preparation of effective direct and cross examinations, and the basic skills needed to effectively conduct witness examinations. Most students in this section will participate in an invitational tournament one weekend during the first semester. Participation in both fall and spring semesters is expected.

POLS 37911. Mock Trial I

(2 -0- 2)

This course is designed to increase the speaking, analytical and adversarial skills of students. Students will immediately be assigned to teams and begin in-depth analysis of the evidence of the annual AMTA case in light of the Rules

of Evidence. Each student will prepare outlines of each witnesses affidavits and exhibits with analysis of evidentiary problems. Special emphasis will be placed upon development of direct and cross examination skills and how to prepare and present effective opening statements and closing arguments. The class will use role playing and video, with individual critiques by the instructor and law student assistant. Students will be instructed on the preparation of effective case theory and themes and presentation of evidence at trial. Participation both semesters, in POLS 37911 and 37910, is required

POLS 40005. The Development of American Political Institutions

(3 -0- 3)

The U.S. Constitution has remained essentially intact since 1787, yet contemporary political institutions and practices would hardly be recognizable to a citizen of the 19th century. Thus, the history of our political institutions is one of change and reform, as well as stability and persistence. This course will focus on the development of the U.S. political system from the late 18th to the early 20th century. Of particular interest will be the evolution of the legislative, executive, and electoral institutions.

POLS 40021. Religion and Politics: Comparative Perspective

(3 -0- 3)

An examination of the linkage among religious beliefs, world views, group identifications, political attitudes and behavior, based on literature in political science, sociology, psychology, and theology. Topics include the meaning and measurement of religiosity; religious and anti-religious values embedded in American political institutions; religious world views and political philosophy; cue giving and political mobilization by religious groups, denominational traditions, partisanship and issue positions; religious movements, social conflict, and political coalitions.

POLS 40025. Schools and Democracy

(3 -0- 3)

Education sits high on the public policy agenda. We are living in an era of innovations in education policy, with heated discussion surrounding issues such as vouchers, charter schools, and the No Child Left Behind Act. This course introduces students to the arguments for and against these and other educational innovations, and does so through the lens of how schools affect the civic health of the nation. Often forgotten amidst debates over school choice and standardized testing is the fact that America's schools have a civic mandate to teach young people how to be engaged citizens. Students in this course will grapple with the civic implications of America's educational landscape, and have an opportunity to propose ways to improve the civic education provided to young people.

POLS 40061. Constitutional Interpretation

(3 -0- 3) Barber

Americans have always debated Supreme Court opinions on specific constitutional questions involving the powers of government and the rights of individuals and minorities. The leading objective of this course is to acquaint students with the basic issues of constitutional interpretation and to show how they influence questions involving constitutional rights and powers and the scope of judicial review.

POLS 40062. Judicial Politics

(3 -0- 3)

This course examines the effect of the legal system on American politics, government, and society. We begin by reviewing the institutions, actors, and processes of the legal system, focusing on the institutional and individual influences on judicial decision-making. In the second part of the semester, we closely analyze the political consequences of legal decisions in areas such as criminal law, race and education-including desegregation, school finance, and school choice-abortion, the death penalty, and homosexual rights. We conclude by evaluating the extent to which courts can and should be expected to bring about social and political change.

POLS 40064. Race and the Constitution

(3 -0- 3)

This course will cover the decisions of the Supreme Court in the area of race relations, from the 19th-century problem of fugitive slaves to current problems involving school desegregation, affirmative action, and “private” acts of race discrimination. Class will focus not only on court cases but also on the broader constitutional and philosophical implications.

POLS 40074. Civil Liberties

(3 -0- 3)

Most courses in constitutional law narrate the Supreme Court’s evolving positions on constitutional rights and institutions. This course starts not with the Supreme Court but with the *Federalist Papers*, from which it develops a general theory of the social and economic goals or ends of constitutional government in America. It then uses this theory as a framework for assessing the Supreme Court’s position on property rights, race relations, personal privacy, and the place of religion in American life. This exercise can yield results that make for lively class discussion, not only about the Court, but about the adequacy of the Constitution itself. Grades will be based on a midterm and a final exam, with a paper option in lieu of the final.

POLS 40150. Executive Branch and Public Policy

(1 -0- 1) Kernan

This course will address public policy issues such as budgets, taxes, health, economic development, welfare and crime. Taught by Joe Kernan, former Mayor of South Bend, Lieutenant Governor and Governor of Indiana, the course will examine the political, economic and ethical dimensions of policy development, as well as the crucial interaction between the executive and legislative branches of state government. There will be approximately 8 pages of writing and a moderate amount of reading, including handouts. Does not count for the political science major. Permission required.

POLS 40201. Diplomacy of U.S. Foreign Policy

(3 -0- 3)

The United States emerged from World War II in a new peacetime role as a super-power. We had to discover for ourselves how to combine diplomacy and military power in a manner consistent with our democratic principles. While the policy choices were stark in the days of the Cold War, they have become more complex in recent years. Presented by a career diplomat who headed U.S. overseas missions in four countries, the course emphasizes case studies and the practical problems that have confronted U.S. leaders from the end of World War II to the present. The issues treated will illustrate the height of tensions in the Cold War, the emergence of detente and deterrence, and the challenges of the global agenda after the end of the Cold War. The course aims to help the student understand current foreign policy issues, which will be discussed briefly in class.

POLS 40202. Iraq War

(3 -0- 3)

This course explores the scope and meaning of the Iraq War for U.S. society and for the dynamics of peace and security in the wider globe. The course brings a variety of disciplinary, conceptual and policy frameworks to bear on the Iraqi experience of internal and external war. The course includes substantial reading and the opportunity for students to do policy relevant research.

POLS 40261. The Politics of International Trade

(3 -0- 3)

If global free trade is theoretically optimal for the economy, why does free trade foster so much concern politically? Spanning events from the 1700s to the present day, this lecture course will discuss the politics of free trade in four different issue areas: 1) global trade and national security; 2) winners, losers, and the domestic politics of trade policy; 3) global trade and the development of democracy; and 4) the rise of international institutions and the decline of sovereignty. The syllabus will draw on classic readings in international relations and comparative politics, and students will be exposed to the variety of methods used by political scientists to analyze these questions: qualitative descriptions, quantitative analysis, formal

models, etc. While the course does not require any background in economics, basic economic models of trade will be covered in the introductory sections. Students will be evaluated by both examinations and short papers.

POLS 40472. Soviet and Post-Soviet Russia

(3 -0- 3)

This course will examine the political system of the Soviet Union, why it lasted and why it collapsed. It will then examine the transition from Soviet rule to the contemporary Russian political system and the various problems of transition.

POLS 40485. Leadership and Social Change

(3 -0- 3)

This course is intended to introduce seminar participants to themes in leadership. Through readings, presentations, and other media (such as film and interaction with visitors), the course aims to provide critical reflections on the nature and sources of differing types of leadership and authority, and a deeper understanding of the vocation to lead.

POLS 40489. Food Politics

(3 -0- 3) Javeline

This class explores modern industrialized agriculture and its impacts on the environment, nutrition, public health, and animal welfare and, in turn, the effects of industry, government regulatory bodies, and the mass public on agriculture and the food supply.

POLS 40617. Constitutional Conventions

(3 -0- 3)

This course will focus on the American constitutional convention of 1787 with an eye to understanding the constitution proposed by the convention and the political process that produced it. The main reading will be James Madison’s notes on the convention debates. We will also experiment with a new simulation role playing game of the convention.

POLS 40642. Women’s Human Rights

(3 -0- 3) Botting

This upper-level political theory course will explore the philosophical origins and evolution of the idea of women’s human rights, which has become a cornerstone of human rights advocacy, women’s non-governmental organizations, and development programs around the world. Readings will be drawn from Scotus, Ockham, Suárez, Grotius, Hobbes, Locke, Rousseau, Kant, Wollstonecraft, Grimké, Stanton, J.S. Mill, Okin, Nussbaum, and MacKinnon. Undergraduate and graduate students will write article-length research papers and make in-class, conference-style presentations on their research projects.

POLS 40651. Politics and Literature: J.R.R. Tolkien

(3 -0- 3)

In this class we will read some of J.R.R. Tolkien’s works, most prominently *The Lord of the Rings*, with attention to the light they shed on politically important problems and themes. These include the relationship between power and wisdom, justice and mercy, war and peace, leadership and citizenship, patriotism and humanism, individuality and friendship, freedom and sacrifice, fear and courage, despair and hope. We will also read some of Tolkien’s letters and essays that treat politics and philosophy, together with selections from the works of ethical and political thinkers Plato, Aristotle, Augustine, Aquinas, Hobbes, Locke, and Tocqueville. An overarching theme of the course will be the interrelation among politics, literature, culture, and education.

POLS 40800. Research Design and Methods

(3 -0- 3) Gould

This course is designed to provide students with the tools to accomplish original research in political science, and is appropriate for students who are preparing to write a senior thesis, who are interested in graduate work in the social sciences, whose careers will involve research, or who are simply interested in making the transition to accomplishing original research in political science. Students will learn the skills necessary for an original research project, including how to

formulate an empirical question, how to gather and analyze relevant data or evidence, and how to interpret this analysis. Students will be exposed to a variety of qualitative and quantitative techniques for the analysis of political data. During this course, students will create an original research proposal for which they will compile a bibliography, gather and analyze relevant data, write a research outline, and present their research to fellow students.

POLS 40810. Quantitative Political Analysis

(3 -0- 3) Coppedge

Students in this course will learn to understand the most common statistical techniques used in political science and acquire the skills necessary to use these techniques and interpret their results. A mastery of these techniques is essential for understanding research on public opinion and voting behavior, electoral studies, and comparative research on the causes of democracy. For each topic, students will read works to orient them to key issues and debates. They will learn the reasoning behind the statistical analysis in these readings and create their own spreadsheet programs to execute such analyses. They will then download and clean datasets actually used in the published research, replicate selected analyses from these readings using a statistical package, and write short papers evaluating the inferences defended in the published research.

POLS 40813. Applied Quantitative Methods

(3 -0- 3)

Students in this course will learn to understand, and to use, the most common statistical techniques used in political science. They will apply this methodological training to the development of a research project that will culminate in a paper modeled upon, and suitable for submission for publication in, peer reviewed scholarly journals. No prior understanding of or experience with statistical methods is expected. While students are encouraged to develop their own projects, and course time will be devoted to precisely the question of how we develop and craft ideas into do-able research projects, some recommended paper topics will be provided. This course is especially recommended to students contemplating graduate work in the social sciences.

POLS 43001. Junior Writing Seminar

(3 -0- 3)

Writing seminars are devoted to a specialized topic and give students a chance to take a writing-intensive course in a seminar setting, with an emphasis on research skills and discussion.

POLS 43640. Justice Seminar

(3 -0- 3) Roos

An examination of major theories of justice, both ancient and modern. Readings include representatives of liberal theorists of right, such as John Rawls, as well as perfectionist alternatives. The course also serves as the core seminar for the philosophy, politics, and economics concentration.

POLS 45999. Summer Internship

(1 -0- 3)

Summer internships are an excellent way to explore career options, to gain valuable work experience and to build your resume. Students who have secured an unpaid summer internship can apply for academic credit by contacting the Director of Internships. To qualify for credit, internships must have prior approval, must be unpaid, be at least 6 weeks in duration and provide at least 100 hours of work.

POLS 46902. Directed Readings

(V -0- V)

Students on the dean's list are eligible for independent study on a topic of the student's choice, under the supervision of a faculty member.

POLS 47905. Research Apprenticeship

(V -0- V)

This one-credit course offers undergraduates a chance to learn about and participate in the research experience. After several training sessions students are assigned to a faculty member to work on an ongoing faculty research project.

POLS 53001. Senior Writing Seminar

(3 -0- 3)

Writing seminars are devoted to a specialized topic and give students a chance to take a writing-intensive course in a seminar setting, with an emphasis on research skills and discussion.

POLS 58901. Senior Thesis

(3 -0- 3)

Students with a grade-point-average of 3.5 or above are encouraged to write a senior thesis. For this two-semester project, the student works on an independent research project under the supervision of a faculty member. Three credits of this two-semester project fulfill one writing seminar requirement; the other three credits count as elective credit, but not toward the major.

Psychology

PSY 10000. Introductory Psychology First Year

(3 -0- 3) Venter; Radvansky

A broad coverage of the methods and findings that characterize scientific psychology, including a description of historical and recent developments in the areas of learning and motivation; perceptual, cognitive, and physiological processes; social, personality, and child development; and abnormal behavior and clinical treatment. Open to first-year students only.

PSY 13181. Social Science University Seminar

(3 -0- 3) Day; Eberhard

An introduction to the seminar method of instruction accenting the organization and expression of arguments suggested by readings in psychology.

PSY 13625. Honors Seminar on the Self

(3 -0- 3) Kelly

Prerequisite: AL 13950

This seminar draws from clinical, personality, and social psychological research to address fundamental questions about who we are and the extent to which we can change. For the first third of the semester, we will explore individual differences, or the key personality characteristics (and causes of these characteristics) that make one person different from the next. During the second part of the semester we will address the social self and examine the role of other people in forming and maintaining our personalities. During the final part of the seminar, we will discuss self-concept change and address the questions, “What does it mean to be a healthy person?” and “Can people really change?” We will discuss whether psychotherapy works and how it can induce self-concept change.

PSY 20000. Introductory Psychology for Sophomores, Juniors, and Seniors

(3 -0- 3) Venter

A broad coverage of the methods and findings that characterize scientific psychology, including a description of historical and recent developments in the areas of learning and motivation; perceptual, cognitive, and physiological processes; social, personality, and child development; and abnormal behavior and clinical treatment. Open only to sophomores, juniors, and seniors.

PSY 20001. Introductory Psychology, Personalized System of Instruction (PSI)

(3 -0- 3) Crowell

This course covers the same content as PSY 20001 but is taught using an individualized, self-paced method of instruction. This method is a variant of the Personalized System of Instruction (PSI) format and includes features such as self-paced learning, emphasis upon mastery of the written rather than the spoken word, frequent testing and an option to retake unsatisfactory quizzes.

PSY 20010. Psychology: Science, Practice, and Policy

(1 -0- 1) Venter

This one-credit seminar introduces the department’s programs and faculty research interests as well as the profession of psychology. The goal is to encourage more active reflection on how psychology can be useful, both personally and professionally; also to present the major tensions within contemporary psychology as well as its potential impact on public policies in the decade ahead.

PSY 20385. Practicum in Diversity Training

(1 -0- 1) Howard

This is a one-credit course designed to instruct students in the theory of diversity education while training them in the art of facilitating diversity discussions. The theoretical framework for the material in this course comes from the “theory of oppression” and the various individual, institutional, cultural, and systemic manifestations of that oppression. The application portion of this course entails the presentation of diversity programs in a required course (Concepts of Wellness) for first-year students. The structure of the Practicum in Diversity Training course

includes theory instruction/training prior to the semester break, and making presentations/facilitating diversity discussions for the remaining portion of the semester.

PSY 20670. Practicum in Teaching Technology

(3 -0- 3) Crowell

An introduction to and experience in applying the principles and methods of behavior instruction in the classroom.

PSY 20671. Computers in Psychological Research and Education

(3 -0- 3) Crowell

Permission of instructor required. Possible projects include: education, work productivity, decision making, database management, expert systems, knowledge retrieval, data analysis, and experiment control. Projects may require campus mainframe computer or microcomputers, particularly the Macintosh or IBM PC. Same as CAPP 30360.

PSY 20678. Business and Psychology

(3 -0- 3) Sucec

This course is designed to provide an integrated understanding of the foundational business disciplines of accounting, finance, marketing, and management, especially for CAPP majors planning a career in business. Fundamental leadership and consulting skills will also be addressed. Case analysis, coupled with a highly interactive format, will be employed to ensure practical exposure to today’s business environment. Primary areas of focus will address the critical elements for success in the corporate environment, the knowledge and preparation necessary to facilitate your interviewing process, and the business fundamentals for those with entrepreneurial aspirations.

PSY 23090. Social Concerns Seminar: Youth, Risk and Resilience

(1 -0- 1) Brandenberger

This seminar—formerly known as Children and Poverty—focuses on concerns that affect the youth of our nation, especially poverty and violence. Additional topics include resilience and efforts to foster positive youth development, including educational leadership. A week-long immersion in New York City provides an opportunity to meet with community leaders and policy makers focused on youth concerns. Participants read relevant Catholic social teaching and draw from a variety of resources/texts in psychology. Open to all Notre Dame students. Standard letter grade employed.

PSY 23091. Sustainable Development II: Research in Clean Water Initiatives

(1 -0- 1)

This seminar is an extension of the fall 2009 Washington Seminar in Sustainable Development. The seminar will emphasize advanced study of clean water in conjunction with ongoing clean water initiatives through SAO, the Ford Program, and the Department of Engineering. In choosing the water issue, the CSC hopes to partner with student government’s Global Water Initiative. Students’ work will serve as a useful reference for the GWI, and will help the initiative to expand its efforts by offering a base of knowledge upon which it might anchor its current work and from which it can launch future efforts. Students will perform interdisciplinary literature reviews around “point of use” issues for consumption of clean water. The research will be supplemental for ongoing projects and will focus on interdisciplinary perspectives of a this particular aspect of clean water. The seminar has chosen this topic as a direct result of student interest in The Global Water Initiative (SAO’s 5-year plan to partner with a community organization to give students an opportunity to raise money for a just cause). The seminar leaders include both sustainable development leaders from the fall 2009 class, as well as the student co-leaders of Notre Dame’s Global Water Initiative. Steve Silliman (Engineering) current advises this group is very excited to partner with this seminar/CSC to move his research along. He is also working with Tony Polhen (Ford Program) to help coordinate his efforts in clean water. Tony has expressed interest in helping to oversee this seminar. Research will be conducted in interdisciplinary cohorts. Faculty experts will be asked to consult for 2 hours a month (no more than 6 hours total) on students research progress. Steve Silliman and students have

suggested interested faculty in sociology, peace studies, anthropology, economics, and political science. Seminar classes will take on a format of literature search report/refining. Students will present their progress to the class at regular meetings of the seminar. Immersion: The seminar will travel to the Clinton Global Initiative University Meeting in Miami, Florida. The CGI U Meeting was chosen because of its emphasis on global development issues, because of the opportunities it offers for interaction with some of the best and brightest students from across the nation, and because its schedule includes a variety of sessions that will address a wide array of student interests. Travel to a conference in general is important in that it offers students an intensive opportunity for discernment and for interaction with other student leaders, from a variety of backgrounds, who work on social justice issues at their universities. Also, the CGI U awards money to innovative projects and students will hope to draw funds for the completion of these water projects.

PSY 23094. Social Concern Seminar: Understanding Mental Illness

(1 -0- 1)

Prerequisite: PSY 30310

This course will expose students to the concepts of mental illness, available services, the National Alliance on Mental Illness (NAMI), and the impact of stigma. It will introduce and define the different major mental illnesses: schizophrenia, bipolar, major depression, anxiety disorders, and obsessive compulsive disorder. The genetic, biological, psychological, and environmental influences involved in the onset of mental illness will be addressed. The link between chemical imbalances, symptoms, and medications will also be covered as well as information regarding addictions/substance abuse and teen suicide. An exposure to a variety of social programs related to the treatment and support of persons with mental illness will be studied through experiential opportunities facilitated by the Center for Social Concerns.

PSY 23095. Lives in the balance: Youth, Violence, and Society

(1 -0- 1)

This seminar examines the world of youth impacted by violence. To develop an understanding of the roots and consequences of aggression and violence, a comparative study will be conducted between South Bend and Over-the-Rhine, an inner-city neighborhood in Cincinnati, Ohio. Early in the semester, participants will visit a South Bend school and meet with local leaders and organizations that work with youth. During fall break, participants will spend a week in Over-the-Rhine, visiting with youth organizations, government entities, and schools. Participants will examine the history of the neighborhood, current youth-related challenges, solutions being implemented. Participants will analyze challenges each community faces, and identify tools used in Over-the-Rhine that can be implemented to benefit youth in the South Bend community. Readings (in psychology & youth development) and written analyses will augment the direct learning experience. The course is built upon collaboration among the Center for Social Concerns, the Robinson Community Learning Center, and various University Departments. Apply Online: <http://socialconcerns.nd.edu/academic/fall/fall.shtml>

PSY 23096. Understanding Mental Illness

(1 -0- 1) Mick

In the United States alone, over 25 million people are affected with mental illness. Countless family members, friends and mental health professionals struggle to understand and help those diagnosed with these confusing and often debilitating diseases. Unless we know someone or struggle with similar issues ourselves, the majority of the rest of us know virtually nothing about the confusing “world” of mental illness. This seminar gives students the opportunity to learn about mental illness from the personal perspective of those most directly impacted by it: those living with it, family members, and health care providers. The goals of this seminar are to help students become more knowledgeable about these diseases and their early warning signs and to develop compassion for those who suffer from them.

PSY 23271. Autism

(3 -0- 3) Whitman

This seminar discusses topics related to developmental disabilities, with a special emphasis on pervasive developmental disorders and autism. Issues regarding their definition, etiology, and treatment are also discussed. (Must have access to own transportation.)

PSY 23272. Applied Behavioral Analysis

(3 -0- 3)

Prerequisite: PSY 23271 or PSY 43271

Applied behavior analysis is a field of inquiry that investigates the factors that influence human behavior and uses this knowledge to develop effective educational and therapeutic programs. This course will introduce the students to concepts, techniques, and methodology associated with this field. Students will observe ABA programs being used in home settings to teach children with autism and then have the opportunity to design and implement such programs with this same population. The course is especially recommended for students interested in developmental psychology, clinical psychology, and special education.

PSY 23852. Social Concerns Seminar: L'Arche Communities

(1 -0- 1)

This seminar centers around travel to a L'Arche community (e.g., Toronto, Canada) to share community life with developmentally challenged persons. Students draw from the philosophy of Jean Vanier, the works of theologian Henri Nouwen, and other spiritual writings to augment this participatory learning experience.

PSY 23855. Social Concerns Seminar: Take Ten

(1 -0- 1) Brandenberger

Take Ten is a research-based violence prevention program and curriculum designed at the Robinson Community Learning Center. Volunteers work on a weekly basis with schoolchildren of all grades to teach them the skills needed to resolve conflict peacefully. Take Ten's mission is to provide youth with positive alternatives to violence and build their capacity to make more informed choices when faced with conflict. Students participating in the Take Ten seminar will serve as Take Ten volunteers during the semester (February through April with training in January), being part of a team that works at a school in the area one time per week. Additionally, the readings and reflections will allow students to focus on understanding issues of youth and violence from various perspectives. Contact: Ellen Kyes at epaul@nd.edu. Approval required. Apply at Robinson Community Learning Center.

PSY 25270. Practicum in Developmental Disabilities

(3 -0- 3)

Prerequisite: PSY 23271 or PSY 43271

This practicum/seminar is the logical outgrowth of a long informal relationship that student volunteers have had with families in the Michiana community who have autistic and other special-needs children. The practicum aspect of the course will involve students going into a family home and working in a structured program with an autistic child for, on average, three times a week and a total of six to seven hours. In addition, students will meet in class once a week for discussion on a range of topics relating to autism, including issues regarding its definition, assessment, etiology, and treatment, as well as topics regarding the impact of autism on the family, community resources, and social policy. A number of classes will feature discussions led by parents of autistic children. This class is recommended particularly for students interested in child clinical psychology, education, developmental psychology, and social work.

PSY 25275. Sign Language

(3 -0- 3)

The American Sign Language class is designed to introduce basic vocabulary and simple sentence structure for conversational use. A cultural view is presented to examine traditions and values. A linguistic view is presented to introduce structure, syntax, and manual alphabet. Experiential activities, receptive and

expressive exercises, and fluency opportunities are incorporated into the format. This is an introductory class for students with no prior knowledge of American Sign Language.

PSY 26800. Directed Readings

(V -0- V)

Directed reading is carried out under the supervision of a faculty member. A typewritten report on the reading is required.

PSY 27800. Research Lab

(0 -V- V)

Independent research carried out under supervision of a faculty member. A typewritten report of a research literature or an experimental study is required.

PSY 30100. Experimental Psychology I: Statistics

(4 -0- 4) Cheng; Gibson; Zhang

An introduction to the analysis and evaluation of experimental data, with particular emphasis on measures of central tendency, variability, and covariability and their relationship to psychological theory and explanation.

PSY 30160. Experimental Psychology II: Methods

(4 -0- 4) Braungart-Rieker; Corning

Prerequisite: PSY 30100 or BAMG 20100

A continuation of Psychology 30100, with emphasis on the design and methods of execution of psychological research. Training in writing reports in professional format is also provided.

PSY 30200. Developmental Psychology

(3 -0- 3)

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

Major theories and research findings on social, emotional, and cognitive development are covered. Although emphasis is on the time from birth to early adulthood, some research on adulthood and the elderly is included. Attention is given to how different environments enhance or hinder healthy development.

PSY 30220. Adolescent Development

(3 -0- 3) Lapsley

Prerequisite: ALHN 13950

The second decade of life is a crucial developmental transition that poses significant physical, psychological and social challenges to young people; and which have implications for later psychosocial outcomes. This course explores the portrait of adolescence that is revealed by contemporary developmental science. We will examine adolescence in cultural and historical context and survey recent empirical literatures on some core topics, including pubertal maturation, the cognitive and social-personality development of teenagers, the struggle for self and identity, the influence of family, peers and schools on development, adolescent risk behavior and positive youth development, among other topics

PSY 30250. Cognitive Development

(3 -0- 3)

The focus of this course is on developmental changes in human cognition, such as perception, action, learning and memory, reasoning and problem solving, and language acquisition. The focus will be on early development (prenatal to 4–5 years) because this is the period of most dramatic change, although it will include some discussion of implications for later development. The goal of this course is to provide students with basic empirical facts of human cognitive development, as well as to ground them in broader theoretical issues, such as questions of what development means, and the central controversies in the study of cognitive development.

PSY 30253. How Children think: An Introduction to Cognitive Development

(3 -0- 3) Lany

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

How do infants and children perceive, remember, and learn about their world? This course will cover developmental changes in human cognition, such as perception, action, learning and memory, reasoning and problem solving, and language acquisition. The focus will be on early development (prenatal to 4–5 years) because this is the period of most dramatic change, although it will include some discussion of development during later childhood and adolescence. The goal of this course is to provide students with basic empirical facts of human cognitive development, as well as to ground them in broader theoretical issues, such as questions of what development means, and the central controversies in the study of cognitive development. An additional goal is to help students to be responsible consumers of psychology research.

PSY 30272. Neurodevelopmental Disorders

(3 -0- 3) Diehl

Prerequisite: PSY 10000 (may be taken concurrently) and PSY 20000 (may be taken concurrently) and PSY 20001 (may be taken concurrently)

The past two decades have seen a dramatic increase in the prevalence of neurodevelopmental disorders. This course will be a critical examination of the etiology, neurobiology, diagnosis, and treatment of developmental and learning disabilities. We will also investigate the impact of a developmental disability on the individual, family, community, and culture. Topics will include (but are not limited to) ADHD, Asperger syndrome, Autism, Down syndrome, Dyslexia, Fetal alcohol syndrome, Fragile X syndrome, PKU, and Willms syndrome.

PSY 30300. Psychology of Personality

(3 -0- 3) Watson

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

This course is a survey of the contemporary study of personality in the context of its growth as a field of psychology. The focus is on personality as an empirical science. The course introduces perspectives or approaches to studying personality as well as theories, historical background, and modern research. Additionally, key issues such as the conceptualization and measurement of personality variables, the stability and consistency of personality, and real world applications are addressed. The course provides the opportunity to broaden student's understanding of the science of personality and to think critically about the application of personality theory in everyday life. Readings are primarily taken from a text, but additional readings and class materials may be assigned.

PSY 30310. Abnormal Psychology

(3 -0- 3) Monroe

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

Defines the concept of abnormal or maladaptive behavior; reviews the principles involved in human development and adjustment and describes the common clinical syndromes, their causes, and treatments.

PSY 30314. Introduction to Clinical Psychology

(3 -0- 3) Haeffel

Prerequisite: PSY 10000 (may be taken concurrently) and PSY 20000 (may be taken concurrently) and PSY 20001 (may be taken concurrently)

This course provides an introduction to clinical psychology. The emphasis will be on clinical research and empirically-based practices. It will cover (a) research methods for studying clinical phenomena (b) key issues and controversies in the field, and (c) specific topics such as classification and diagnosis, assessment, prevention, and intervention.

PSY 30340. Multi-Cultural Psychology

(3 -0- 3)

The general purpose of this course is to examine and learn to talk about issues of culture and race in the United States from a psycho-social perspective. Culture and race are not synonyms. So, we will be examining some of the ways that each affects the quality of our psychological functioning. The goals of this course are to learn to recognize and appreciate culture in ourselves and others; to examine the different ways that cultural and racial socialization influence behavior; to consider how culture and race relate to various psychological constructs, and to understand the ways in which racism and ethnocentrism operates in everyday life. To accomplish these goals, we will use readings, group discussions, lectures, films, and each other to expanding our awareness of how culture and race operates in our everyday life. As a student in this class, you will be encouraged to share your ideas and life experiences.

PSY 30400. Cognitive Psychology

(3 -0- 3) Brockmole

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

A lecture course presenting a cognitive approach to higher processes such as memory, problem solving, learning, concept formation, and language.

PSY 30430. Learning and Memory

(3 -0- 3) Radvansky

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently) or PSY 13110

A survey of the theories and methods relating to basic processes in learning and memory from both biological and cognitive perspectives.

PSY 30440. Sensation and Perception

(3 -0- 3) Gibson

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

Includes a diverse range of topics, from sensory processes and perceptual development to sensory deprivation and visual illusions. Emphasis is on auditory and visual perception.

PSY 30500. Physiological Psychology

(3 -0- 3)

Prerequisite: PSY 10000 or PSY 20000 or PSY 20001

The course is designed to provide a broad overview of the neurobiological mechanisms underlying behavior, cognition, and affect. The course considers the functioning of the mature nervous system, how the nervous system changes across the life span and the effect these changes have on behavior, and the neurobiological foundation of various neurological and psychiatric disorders. The content of the course is covered in lecture, readings, and written assignments.

PSY 30501. Introduction to Biopsychology

(3 -0- 3) Wirth

Prerequisite: PSY 10000 (may be taken concurrently) or PSY 20000 (may be taken concurrently) or PSY 20001 (may be taken concurrently)

The brain gives rise to all thoughts, feelings, learning- much of what we study in the field of psychology. In this course, you will learn the basics of how the brain works. Topics covered will include: how neurons transmit signals; basic neuro-anatomy (functions of different parts of the brain); the neural basis of sensory processes, such as vision, hearing, smell and taste; movement and autonomic functions; motivations, such as hunger and thirst; emotions and stress; and cognitive functions such as learning, memory, and language. Examples and evidence will come from studies of brain-damaged human patients as well as animal neuroscience research. The evolution of the human brain and comparison to other species' brains will also be considered. *Prerequisites:* Introductory psychology. Some biology coursework will also be helpful, but not required.

PSY 30520. Introduction to Cognitive Neuroscience

(3 -0- 3)

An "Introduction to Cognitive Neuroscience" is a survey course that introduces students to the biological substrates underlying various forms of cognition in humans, with a specific focus on mental processes. We will explore how psychological and cognitive functions are produced by the brain. Cognitive neuroscience is a branch of both psychology and neuroscience, drawing from disciplines such as biological psychology (biopsychology), neuroscience, cognitive psychology, and neuropsychology. We will cover a broad range of topics, including learning and memory, perception, development and neural plasticity, cerebral lateralization and language, emotions and social cognition, stress, sleep and dreaming, and consciousness. No previous coursework in neuroscience is required, but at least some experience with biology or biopsychology is preferred.

PSY 30600. Social Psychology

(3 -0- 3) Venter

Prerequisite: PSY 10000 or PSY 20000 or PSY 20001

An introduction to the major theoretical orientations within the field of experimental social psychology and a survey of the research findings in selected areas such as attitude formation and change, affiliation, interpersonal attraction, and social cognition.

PSY 30633. Youth and Political Violence

(3 -0- 3) Taylor

This course will examine how youth are affected by political violence and war, with a focus on stress and coping in violent and post-war contexts. We will discuss major theories and recent research in developmental, social, and political psychology on these issues. The course will emphasize resilience processes, that is, identifying risk and protective factors that can explain why and how political conflict affects youth, with a focus on real-world application. Case studies and interdisciplinary readings from sociology, anthropology, literature, and political science will also be incorporated into the readings, lectures, class discussion, and writing assignments. Students will be encouraged to consult the existing empirical literature to suggest ways to (a) protect youth mental health on an individual level, and (b) decrease the potential for inter-group violence and promote constructive peacebuilding on a societal level.

PSY 30640. Educational Psychology

(3 -0- 3)

Although the goal of educational psychology is to understand and improve education in general, every classroom offers unique challenges relating to each student's individual differences. In this course, we will explore the three primary dimensions associated with the field of individual differences (i.e., cognition, affect, and motivation/volition) to determine how they collectively and uniquely contribute to a model of integrated learning. Can we design educational experiences that engage our minds, wills, and emotions? What types of classrooms encourage students to care about their subjects? These and other provocative questions will be addressed by examining a cross-section of the educational literature on motivation, cognition, and emotion.

PSY 31672. Practicum in Robotics

(3 -0- 3)

This course will allow students to work with the Nao humanoid robot platform. Students will learn about how to control the sensory and motor capabilities of the robot to produce specific sequences of robot behaviors and/or to allow the robot to respond to particular inputs from the external environment. Students will work with the instructor to identify the specific behaviors and response sequences to be created.

PSY 33325. Cognitive Neuroscience

(3 -0- 3)

The purpose of this course is to examine the neural bases of human cognition as well as the main theories and research findings in this relatively new interdisciplinary field. In particular, the course will focus on principles of brain organization, perception, attention, memory, and brain imaging techniques.

PSY 33691. Rethinking Crime and Justice: Explorations from the Inside Out

(3 -0- 3) Brandenberger

What are the causes and costs of criminal behavior? How are people and communities affected by incarceration? How can we make our criminal justice system as good as it can be for all stakeholders? This course brings together students from both sides of the prison wall to explore issues including why people commit crime, what prisons are for, realities of prison life and reentry, effects of victimization, and restorative justice perspectives. This course follows the Inside-Out model of prison exchange now well established across the United States. It provides an opportunity for “inside students” (at the Westville Correctional Facility) and “outside students” (from Notre Dame) to learn with and from each other and to break new ground together. Notre Dame students travel to Westville each week of the semester for dialogue with students at the facility, who have read the same relevant texts. Together they examine myths and realities related to crime and to punishment, explore the effects of criminal justice policy, and develop ideas for responding more effectively to crime in our communities. Students must apply for this Social Concerns Seminar at the Center for Social Concerns website: <http://centerforsocialconcerns.nd.edu>

PSY 37900. Research Lab Jr

(V -0- V)

Independent research carried out under supervision of a faculty member. A typewritten report of a research literature or an experimental study is required.

PSY 40120. Advanced Statistics

(3 -0- 3) Zhang

This course extends PSY 30100 in two respects. First, additional attention is given to the logic of inferential statistics. Special focus is placed on the purpose, strengths, and limitations of hypothesis testing, especially as it is used in psychological research. Second, this course considers statistical analysis of data from more complex data structures than typically covered in PSY 30100. The goal of this part of the course is to heighten students’ awareness of the variety of research questions that can be addressed through a wide range of designs and accompanying analyses. The orientation of the entire course focuses much less on the computational aspects of analyzing data than on the conceptual bases of what can be learned from different approaches to data analysis.

PSY 40282. Developmental Psychopathology

(3 -0- 3)

This course articulates principles for a lifespan perspective on the origins and development of individual patterns of adaption and maladaptation.

PSY 40305. Difficult Personalities

(3 -0- 3)

This course is about personality disorder (PD), a form of psychological disorder thought to develop from the interaction of persons’ genetic makeup and their childhood/adolescent experiences. The course will cover the different ways that PD is conceptualized and how research is changing these conceptualizations; the possible causes of PD; how PD is measured, diagnosed, and treated PD; and how PD relates to other kinds of psychopathology.

PSY 40306. Personality and Individual Differences

(3 -0- 3) Watson

This course surveys major theoretical and empirical issues in the contemporary research literature regarding personality traits and other important dimensions of individual differences (including intelligence). Covered topics typically include the consistency and temporal stability of behavior, the influence of heredity and environment in personality and intellectual development, the nature and organization of traits, accuracy and bias in person perception, and the role of personality in interpersonal attraction. We also examine how personality is related to a diverse range of outcomes, including occupational success and job satisfaction, happiness and life satisfaction, health and lifestyle variables, and various forms of psychopathology.

PSY 40655. Cognitive Development

(3 -0- 3)

This course provides an introduction to the central issues in the field of cognitive development. It will cover 1) general frameworks for studying cognitive development, 2) key questions in the field, and 3) specific topics such as conceptual development, memory development, language development, and the development of mathematical understanding. The primary focus will be on cognitive development from infancy to adolescence. Students will be expected to synthesize and evaluate material presented in lectures, readings, and class discussions.

PSY 40669. Anthropology of Childhood and Education

(3 -0- 3)

Concepts of human growth vary extraordinarily across time and space. When children become full-fledged persons, when they can reason, when or whether they should be independent from their parents, and how all this happens are variable and illuminating. Education—either formal or informal—reflects and also constitutes a society’s view of childhood. This course provides a (selective) cross-cultural survey of childhood and education, looking at stages from pregnancy and infancy to late adolescence. Students will devise and conduct projects of their own.

PSY 40675. Introduction to AI

(3 -0- 3) D’Mello

A broad overview of the field of Artificial Intelligence (AI), including its historical and philosophical foundations, classical and contemporary approaches, cognitive systems, and recent trends and applications. Topics include traditional AI techniques (e.g., searching, problem solving, knowledge representation and reasoning, planning, constraint satisfaction, decision making), probabilistic and network based approaches (e.g., Bayesian models, neural networks), computational models of cognition (e.g., models of perception, action, memory, cognitive architectures), and recent developments in natural language processing, speech recognition, robotics, human-computer interaction, machine learning, and computational emotions.

PSY 40676. Human Computer Interaction

(3 -0- 3) D’Mello

An in-depth coverage of the field of Human-Computer Interaction (HCI) including its history, goals, principles, methodologies, successes, failures, open problems, and emerging areas. Topics include the fundamental principles of HCI (e.g., consistency, compatibility, pictorial realism), models of the human (e.g., perception, attention, memory, learning), interaction modalities and paradigms (e.g., windowing systems, haptic interactions), best-practice design principles (e.g., user-centered design, universal design, rapid application development), techniques to evaluate interfaces and interactions (e.g., observational methods, think-aloud protocols, cognitive walkthroughs), and emerging topics in HCI (e.g., affective computing, augmented cognition, social computing, ubiquitous computing).

PSY 41280. Family Research Methods

(3 -0- 3)

The primary goal of this course is to provide you the opportunity to receive advanced training in family research methods by working closely with faculty, professional staff, graduate students, and advanced undergraduate students. You will learn about both a) the substantive areas of developmental psychology, family functioning, and the effects of family processing on children, and b) conducting research and various aspects of running a major research project concerning families and children. Our class periods and time outside of class will provide direct and hands-on experience with all phases of conducting major research projects on children and families, including topics such as marital conflict, parental depression, community violence and children, applied projects for educating parents about family processes based on research, and other topics. Our goals are that by the end of the course, you will: 1) Have advanced understanding of the methods and approaches used in research on families and children. 2) Have practical knowledge about the methods for conducting this research. 3) Be knowledgeable about the major theories that form the basis of this research. 4) Be knowledgeable

about the findings and empirical research on family relationships and children.
5) Be able to critique the literature and be able to identify possible directions for future research.

PSY 43217. Children and Poverty: Developmental Implications
(3 -0- 3)

Every fifth child in America faces hunger or poverty. This course examines the impacts of youth poverty and related risks from the perspectives of developmental and social psychology. Key topics include changing family patterns, violence and conflict resolution, moral development, resiliency, and educational inequalities/potentials. Central to the course will be an emphasis on children's developing cognitive perceptions of self in relation to society, and an examination of potential solutions, model programs, and relevant social policy. Readings will be drawn from a variety of sources and discussed in seminar format. Active student participation and service-learning engagement or community-based research are fundamental to the course. Students currently working with youth via student organizations or local entities are especially encouraged to apply.

PSY 43218. The Anthropology of Childhood and Education
(3 -0- 3)

Concepts of human growth vary extraordinarily across time and space. When children become full-fledged persons, when they can reason, when or whether they should be independent from their parents, and how all this happens are variable and illuminating. Education—either formal or informal—reflects and also constitutes a society's view of childhood. This course provides a (selective) cross-cultural survey of childhood and education, looking at stages from pregnancy and infancy to late adolescence. Students will devise and conduct projects of their own.

PSY 43220. Adolescent Development
(3 -0- 3) Gondoli

Prerequisite: PSY 10000 or PSY 20000 or PSY 20001 and PSY 30100 or BAMG 20100 and PSY 30160 (may be taken concurrently)

Focuses on adolescent development within various social contexts, including family, peer groups, and the workplace. Special emphasis on normative development at the transition from childhood to adolescence.

PSY 43247. Leadership, Ethics, and Social Responsibility
(3 -0- 3) Brandenberger

This course examines leadership and empowerment issues from multidisciplinary perspectives, focusing on the role of the leader within organizations that promote service, social action, or other forms of social responsibility. Alternative models of leadership are explored, with attention to value and moral implications.

PSY 43248. Identity, Social Ethics, and Psychology
(3 -0- 3)

This course represents a unique opportunity to explore how Developmental Psychology and Catholic Social Teaching might engage in a creative dialogue to better understand the potential impact of poverty, injustice, and oppression on human development. The first stages of the course will explore why identity and personhood are central concerns to both Psychology and Theology, as well as how each arrives at knowledge and understanding of these themes. From this base of understanding, we will explore contemporary social concerns in which identity and personhood are salient issues: migration, aging, and race relations. Course material will include empirical and theoretical documents from both disciplines, guest speakers, and structured "immersion" experiences in which students will be invited to meet and perhaps share meals and stories with individuals affected by these issues. Finally, students will be required to choose one of these topics for a community-based learning project in the South Bend area; for example, a student may elect to conduct a "life story interview" to understand how an individual's identity is affected by the experience of migration, racism, or ageism. For more information, please contact: mmontpet@nd.edu, vcarmona@nd.edu, or tbushlac@nd.edu.

PSY 43250. Cognitive Development
(3 -0- 3)

Major theories in cognitive development and data relevant to those theories are reviewed. Mechanisms that might account for observed developmental changes across the life span (e.g., processing speed) are discussed.

PSY 43251. Language Development
(3 -0- 3) Lany

This seminar will focus on research and theories addressing a fundamental scientific question: How do humans learn language? Readings and discussions will focus on contemporary research, as well as some classic studies, investigating how children learn about the sounds, meanings, and syntactic structures of their native language. The focus will be on mechanisms of development—not simply what infants and children learn at a given age, but how they learn, including hotly contested debates over this process. The primary focus will be the acquisition of a first language by typically-developing infants and children, but we will also examine factors relating to variability in this processes, such as socio-economic status and developmental disorders.

PSY 43254. Developing Minds
(3 -0- 3) Day

In this course, students will learn some of the ways cognition changes with age, experience, and education. Cognition in this course is defined broadly and includes, but is not limited to, basic processes such as memory, knowledge of subjects taught in school (e.g., reading and arithmetic), and thoughts about one's self as a learner (e.g., perceived self-competence). The age range covered is from birth to old age. Two fundamental questions addressed throughout the course are: What cognitive abilities do individuals of different ages bring to learning environments? And how do learning environments affect individuals' thinking?

PSY 43271. Autism
(3 -0- 3) Whitman

This seminar discusses topics related to developmental disabilities, with a special emphasis on pervasive developmental disorders and autism. Issues regarding their definition, etiology, and treatment are also discussed. (Must have access to own transportation.)

PSY 43272. Applied Behavioral Analysis
(3 -0- 3)

Prerequisite: PSY 23271 or PSY 43271

Applied behavior analysis is a field of inquiry that investigates the factors that influence human behavior and uses this knowledge to develop effective educational and therapeutic programs. This course will introduce the students to concepts, techniques, and methodology associated with this field. Students will observe ABA programs being used in home settings to teach children with autism and then have the opportunity to design and implement such programs with this same population. The course is especially recommended for students interested in developmental psychology, clinical psychology, and special education.

PSY 43273. Asperger Syndrome—The Short Life and Death of a Diagnosis
(3 -0- 3) Diehl

Prerequisite: PSY 30272 or PSY 23271 or PSY 25270 or PSY 43271

Asperger syndrome was first identified by a little-known Nazi doctor in 1944. It was rumored that much of his work was lost in an Allied bombing in 1944—but was it lost or just ignored? It was not until 1981, one year after his death, that his work became prominent. By 1995, Asperger syndrome was internationally recognized as a distinct syndrome. A community of individuals with the diagnosis soon embraced the label as an identity, and pop culture romanticized this "Geek syndrome." By 2013, however, Asperger syndrome will no longer exist. How did this happen? This seminar will be an exploration of the set of circumstances that led to end of the diagnosis, and the resulting social implications. We will touch on fundamental issues in multiple areas of psychology, but from the unique perspective of a single condition.

PSY 43282. Developmental Psychopathology

(3 -0- 3) Cummings

This course articulates principles for a lifespan perspective on the origins and development of individual patterns of adaption and maladaptation.

PSY 43288. Practicum in Child Maltreatment

(3 -0- 3) Valentino Diehl

This course is intended to expose students to the child welfare system and the effects of child maltreatment and foster care on child development. The seminar portion of the course will include training on mandated reporting, and the child welfare system, and discussion of current research on child maltreatment, foster care, child development, and developmental psychopathology. The practicum portion of the course is designed to give students hands on experience with children in custody of the Department of Child Services in South Bend. Each student in the practicum will be paired with a child who is currently placed in foster care because of substantiated child maltreatment. The student will serve as a mentor to this child, and will spend 1–2 hours with the child twice weekly in the child's foster home.

PSY 43290. Applied Behavioral Analysis

(3 -0- 3)

Applied behavior analysis is a field of inquiry that investigates the factors that influence human behavior and uses this knowledge to develop effective educational and therapeutic programs. This course will introduce the students to concepts, techniques, and methodology associated with this field. Students will observe ABA programs being used in home settings to teach children with autism and then have the opportunity to design and implement such programs with this same population. The course is especially recommended for students interested in developmental psychology, clinical psychology, and special education.

PSY 43311. Theories of Psychotherapy

(3 -0- 3)

Students will be introduced to the key research methods, empirical findings, and theories from the clinical/counseling psychology literature. Prospects for developing and testing new theories of psychotherapy will be discussed. Students will be encouraged to begin forming concepts for research projects and developing their own integrated theoretical approaches to treating clients.

PSY 43313. Science and Pseudoscience in Psychology

(3 -0- 3) Haeffel

Prerequisite: PSY 30314

This course emphasizes the use of critical thinking skills for distinguishing science from pseudoscience in psychology. Picking up where Introduction to Clinical Psychology (PSY 30314) left off, this course takes up the torch of Popper, Meehl, and Lakatos to cover topics such as: 1) controversial therapeutic, assessment and diagnostic techniques, 2) weak theories, and 3) myths from "pop" psychology and every day life.

PSY 43315. Seminar in Counseling Theories

(3 -0- 3) Kelly

This seminar will address the following questions: Does counseling work? If so, how does counseling help people reduce their symptoms of depression, anxiety, and other types of problems? We will discuss several of the key traditional and nontraditional theories of counseling and show how these theories are applied to clients' problems.

PSY 43317. Seminar on Evidence-Based Psychotherapy

(3 -0- 3) Ro

In this seminar, we will discuss about various psychotherapy approaches with a focus on evidence-based modalities. The course will cover a brief history/model of psychotherapy and psychotherapy research methodology, followed by general discussions on psychotherapeutic approaches within evidence-based treatment, such as Behavior Therapy, Cognitive-Behavior Therapy, and more recent "third wave" therapies (e.g., Dialectical Behavior Therapy, Behavior Activation, and Acceptance and Commitment Therapy).

PSY 43318. Stress, Disorder, and Disease

(3 -0- 3)

There is considerable scientific interest in the concept of stress and its implications for health and well-being. This seminar will cover 1) original articles on the concepts and definitions of stress; 2) original articles on methods for assessing life stress; and 3) the animal and human research literatures on stress effects on biological and psychological functioning. Particular attention will be paid to the implications of these ideas and literatures for understanding psychological disorders, especially major depression, as well as physical illnesses.

PSY 43331. Introduction to Counseling Skills

(3 -0- 3)

This course will examine the elements of professional helping relationships and various counseling process models. Students will have an opportunity to study and practice basic counseling techniques used in developing rapport and a therapeutic relationship and examine research relevant to clinical practice. Issues involving professional responsibility, development, and ethics will be discussed.

PSY 43334. Intervention Science

(3 -0- 3)

This course is designed to examine current questions and methods in intervention research with specific focus on cognitive behavior therapy and its variants. We will be approaching the field from several vantage points including 1) the methods needed to address questions regarding the evaluation of the efficacy and effectiveness of interventions; 2) the often uneasy alliance between science and practice, 3) the promise and challenge of technology transfer, that is the dissemination and implementation of "therapies that work" By the end of the term, students will have gained knowledge of the questions in intervention science, the methods used to address these questions and how these questions and methods may help to reduce the burden of major forms of psychopathology.

PSY 43344. Immigrant Families and Mental Health

(3 -0- 3) Park

This course examines major psychological topics relevant to immigrant families in the U.S. and factors influencing their mental health. Given that one out of five youths in the American public school system is a child of immigrants, it is critical to study this rapidly growing population especially for those interested in working with youths and their families. Broad areas to be covered include cultural adaptation processes (e.g., acculturation), biculturalism, identity development, family processes, academic achievement, and mental health as well as implications for culturally competent mental health treatment and service delivery.

PSY 43360. Health Psychology

(3 -0- 3)

Because behavior plays a significant role in people's health, psychology has emerged as an important contributor to the process of coping with disease, disease prevention, and health enhancement. This course is designed to be an overview of health psychology and behavioral medicine. Topics will include psychology and medicine, health psychology models, stress and health, adaptation to illness, psychological aspects of cancer, pain, coronary artery disease, rehabilitation, infectious disease, health promotion and disease prevention, and professional opportunities in health psychology. In addition, health care professionals in the community who are working in areas to be covered in the course will be making presentations to the class. There will be two exams that will cover reading and lecture material. In addition, there will be two short papers that will help integrate the readings, lectures, and information provided by the speakers. Finally, there will be a lengthy paper that will consist of a summary review and critique of research in a specific area of health psychology.

PSY 43362. Understanding Eating Disorders

(3 -0- 3) Corning

In this seminar, we will explore the etiology and treatment of eating disorders. We first will examine biological, psychosocial, and cultural risk factors for the development of the various eating disorders. We then will discuss the strengths and weaknesses of the current diagnostic classification of these disorders as well

as related pathologies. Finally, we will critically examine current prevention and treatment efforts, paying particular attention to their underlying theoretical assumptions and empirical evidence of their efficacy.

PSY 43364. Social Inequities in Mental Health and Health Outcomes

(3 -0- 3) Park

This seminar will examine the problem of mental health and health disparities in the U.S. and possible solutions for addressing such inequities. Specifically, the course will explore how race, poverty, and other social conditions have contributed to a greater burden of unmet mental health needs and physical illness among ethnic minorities and other underserved populations, primarily using the lens of psychological theory and empirical research. Strategies for addressing these disparities will also be discussed, including an emphasis on improving access to, and quality of, mental health services and psychological interventions for ethnic minorities and other underserved populations in the U.S.

PSY 43365. Sport Psychology

(3 -0- 3)

This course will focus on the application of psychological concepts and current research to the enhancement of performance in both sports and fitness activities. An emphasis will be placed on techniques and strategies that have been used effectively to maximize skill performance with an understanding that many of the real-life behaviors evident in sport are transferable to other performance endeavors. Topics include overview of the field, motivation, personality factors, self-concept, team development, leadership, psychological skills training, and exercise adherence. Students will produce a “handbook” targeted for specific population of performers which will apply the concepts learned throughout the semester.

PSY 43367. Coaching Youth Sports

(3 -0- 3) Howard

This course is ideal for anyone who might serve as a coach at any time in the future. Topics include coaching strategies, substitution strategies, designing practices, dealing with parents, and the like. Conducting actual practice sessions and discussing relevant movies are scheduled throughout the course. There are no tests as a final portfolio is the sole grading method. Books include Phil Jackson’s *Sacred Hoops* and Andy Hill and John Wooden’s *Be Quick But Don’t Hurry*.

PSY 43390. Applied Behavioral Analysis

(3 -0- 3)

Applied behavior analysis is a field of inquiry that investigates the factors that influence human behavior and uses this knowledge to develop effective educational and therapeutic programs. This course will introduce the students to concepts, techniques, and methodology associated with this field. Students will observe ABA programs being used in home settings to teach children with autism and then have the opportunity to design and implement such programs with this same population. The course is especially recommended for students interested in developmental psychology, clinical psychology, and special education.

PSY 43409. Advanced Topics in Cognitive Psychology

(3 -0- 3)

This is a survey-level course that will cover a diversity of topics in cognition including attention, perception, memory, language and categorization, focusing on uncovering common themes and underlying frameworks. Intended for advanced undergraduates and graduate students from across psychology and other related disciplines.

PSY 43434. Visual Memory

(3 -0- 3)

Every day you leave your dorm room and head out across campus to attend class, work out, meet with friends, and participate in club activities. On these walks, you may stop to look at new and interesting sculptures, hallway displays, buildings, and landscapes that catch your attention. You probably see many of the same people and say hello as you pass. If campus construction blocks your normal route, you can easily find a new one, perhaps one that you have never taken before. You

likely come home and tell your roommates about some of the events you witnessed on your walk. These experiences depend on your ability to store knowledge of your visual world in memory. Without such memory, you would be unable to recognize your friends and surroundings. You would be unable to notice changes in your environment. You would be unable to recount your own autobiographical experiences. In this course you will learn how memory for objects, scenes, faces, places, and emotion-inspiring events are created, how these memories are stored, and how we use visual memory to support our daily activities. In some sense, then, this course is about a walk through campus and students will become aware of the amazing, striking, and at times desperately limited nature of memory for our visually-based experiences.

PSY 43452. Attentional Capture

(3 -0- 3)

The notion that certain mental or physical events can capture attention has been one of the most enduring topics in the study of attention owing to the importance of understanding how goal-directed and stimulus-driven processes interact in perception and cognition. Despite the clear theoretical and applied importance of attentional capture, a broad survey of this field suggests that the term “capture” means different things to different researchers. This seminar will provide a sampling of the diversity of approaches, domains, and theoretical perspectives that currently exist in the study of the attentional capture. Together, these contributions should help evaluate the degree to which attentional capture represents a unitary construct that reflects fundamental mechanisms of the mind.

PSY 43455. Seminar: Psycholinguistics

(3 -0- 3) Eberhard

An interdisciplinary seminar with emphasis upon student participation covering topics such as linguistics, memory, and perception for language stimuli, child language, bilingualism, and social psychology of language.

PSY 43456. Pragmatics of Language Usage

(3 -0- 3)

This seminar will survey research and theory in pragmatics and psycholinguistics concerning the communicative functions of language. Topics will include Searle’s classification of speech acts, Grice’s Maxims and the conversational implicatures, Sperber and Wilson’s Relevance Theory, and Clark’s theory of Language-as-an-Action.

PSY 43458. Doing Things With Words

(3 -0- 3)

Flattery, cheating, self-expression, prayer, superiority, solidarity, distancing, play: all these and many more things may be done with language. This course looks at some of the ways humans do things with words. Topics include religious language; silence; politeness and sincerity; truth, deception, lying, and cheating; linguistic variety, identity, and stereotypes; moral evaluations made of language; and language used for power and solidarity.

PSY 43526. Developmental Cognitive Neuroscience: The Sleeping Brain

(3 -0- 3) Payne

This seminar will provide a broad introduction to the cognitive neuroscience of sleep. Topics covered will span human sleep disorders, sleep in various animals species (e.g., unihemispheric sleep in dolphins), learning and memory during sleep, sleep’s role in creativity and insight, plasticity in the sleeping cortex, sleep and consciousness, and dreaming. We will also examine neuroimaging, neurophysiological, and behavioral approaches to the study of sleep, discussing critical questions such as “what is sleep?” and, “why do we sleep?”

PSY 43531. Psychology and Medicine

(3 -0- 3) White

This course has two basic objectives. First, it examines from a lifespan and psychological perspective the factors that place individuals at different stages of life at risk for illness and assist them in maintaining their health. In addition, it addresses a variety of challenging psychological and social issues that physicians and other

healthcare professionals must face in the practice of medicine. The course covers a range of topics dealing with health issues related to different stages of human development (childhood, adolescence, and adulthood), disabled populations, culture and gender, stress, physician-patient interactions, death and dying, professional ethics, and social policies relating to health care. The course is primarily intended for students intending to enter medical school. Most classes will involve brief formal presentations by the instructors and invited guests, followed by discussion of assigned readings pertinent to the day's topic. In addition, students will be exposed, via a limited practicum, to a variety of medical settings.

PSY 43533. Topics in the Neurophysiology of Stress

(3 -0- 3)

Prerequisite: PSY 10000 or PSY 20000 or PSY 20001

In this seminar, you will learn about one of the major systems involved in the body's response to stress: the system which controls production of the stress hormone cortisol. In addition to the physiology of the stress response, this course will address what kinds of events provoke a stress response; when the stress response is adaptive vs. maladaptive; and how stress hormones affect the brain, and thus influence learning and memory. Additional topics covered may include: the effects of chronic stress; stress and reproduction; effects of early experience on stress responsiveness; stress and psychopathology; the role of neurosteroids (a class of hormones that act on neurons) in stress. Readings will include review articles and original research reports; one goal of this course will be for you to become proficient at reading and understanding scientific literature. *Prerequisites:* Introductory psychology. Introductory biology recommended. Physiological Psychology or concurrent enrollment in Introduction to Biopsychology recommended.

PSY 43535. Cultural Aspects of Clinical Medicine

(4 -0- 4)

This course focuses on social science approaches to sickness and healing. The medical encounter is examined from anthropological perspectives. The course emphasizes the difficulties traditional biomedicine has in addressing patients' expectations for care. Students serve an internship as patient ombudsman in a local hospital emergency room 4 hours per week. Students **MUST** have access to transportation to participate in the ER internships. *Students are required to sign a waiver, to present evidence of immunizations, and to receive a TB skin test.*

PSY 43625. Self: Philosophy and Psychology

(3 -0- 3)

Who are you? What are you? What is the self? Does it even exist in reality in an absolute sense? What is the nature of social reality and our relationship with it? Social psychology provides some insights into these questions and issues and can inform our thinking and understanding of our selves and our world. Although the broader theoretical and philosophical context for this seminar is social psychological, we will have the opportunity to read about these topics from a variety of sources—psychological, philosophical, and theological.

PSY 43641. Motivation and Academic Learning

(3 -0- 3)

Traditional studies of learning have focused almost exclusively on cognitive, or "cold," processes. Recent research on learning illustrates how "hot" processes also influence thinking and academic learning. In this course, we focus on how social, motivational, and emotional influences interact with cognitive processes to affect academic learning. Social influences will include students' social goals in school, friendships, and family dynamics. Motivational influences are explored through the study of major theories of achievement motivation, including attribution, self-efficacy, intrinsic motivation, "possible selves," and goal theories. Emotional factors such as coping mechanisms, test anxiety, and wellbeing also are discussed. In addition, we explore how development affects students' social, motivational, and emotional responses to learning. Child, adolescent, and adult models are discussed, and applications to educational child settings will be an integral part of the course.

PSY 43693. Healthy Lifestyles—Risky Business

(3 -0- 3)

This course considers a variety of topics related to living a happy/healthy life (e.g., marriage, money, faith, career, etc.). Each student will review the values they presently hold on these topics via autobiographical methods. Then each student will imaginatively project the path their life will likely take via teleographic techniques. Finally, the role of risky decisions (e.g., choice of mate, insurance, gambling, investments, etc.) in forming our life paths will be intensively studied via various models of risk management. Participation in class discussions will constitute 1/3 of class grade; an oral final will constitute another 1/3 of the grade; the final 1/3 of the grade will be based upon analysis of reaction papers (25 pages minimum) on the topics covered.

PSY 43696. Is There an Environmental Crisis?

(3 -0- 3) Howard

Whether one believes there is an environmental crisis or not, we should all be aware of the changes in our world (growing world populations, increased burning of hydrocarbons, etc.) that are hypothesized to produce threats to our ecosystems. Understanding why human actions might be producing global changes is a complex task. This course will concentrate on the roles that various disciplines (e.g., economics, materials science, biology, psychology, theology) might play in understanding and (perhaps) alleviating human-produced environmental changes.

PSY 43815. On Evil

(3 -0- 3)

Does evil exist? If it exists, what is it? If it exists, is suffering an example of evil? If it exists, does its existence pose an insuperable problem for Christian belief in God? Is there an adequate philosophical approach to understanding evil, or are all such approaches bound to fail? These and other questions often fall under what is called the "problem of evil." This course seeks to better understand what that problem might be, and what might be said about it in the context of orthodox Christian belief, primarily from a philosophical perspective, but also at points theological.

PSY 47809. Senior Thesis

(0 -3- 3)

The senior thesis requires a year-long investigation on an original topic of study under the tutelage and mentorship of a faculty member. It must result in a substantial written product that will be evaluated by the thesis advisor. Any senior psychology major may undertake a senior thesis provided that the student is in good academic standing and has secured the approval of a faculty mentor. Faculty members may consider other academic qualifications as a condition for supervising a thesis, such as GPA, performance in certain courses, experience in a research lab, relevant background experience, favorable letters of reference and compatible scholarly interests.

PSY 47900. Special Studies: Reading and Research

(V -0- V)

Independent research carried out under supervision of a faculty member. A typewritten report of a research literature or an experimental study is required.

PSY 47901. Special Studies—Attention: From Philosophical Analysis to Computer Algorithms

(3 -0- 3)

The nature of attention has been of interest to philosophy, psychology, neuroscience, biologically inspired computer vision, as well as to social science. In this tutorial course, various accounts of the nature of attention will be considered, with the central aim of implementing one of those accounts computationally in a final project, in such a way as to capture a chosen aspect of attention, such as the role of visual attention in multistable perception or in visual search.

PSY 48800. Senior Honors Thesis

(3 -0- 3)

These two seminars assist the senior major to propose, execute, and write an honors thesis. The first semester is devoted to the development and presentation of the proposal, and the second to its execution, write-up, and subsequent presentation.

Sociology**SOC 10002. Understanding Societies**

(3 -0- 3) Collett; Hachen; Langenkamp; C. Smith

What does it mean that humans are *social* creatures and how does participation in social life shape people's personal life experiences and outcomes? How and why do people together create and sustain cultures, groups, institutions, and organizations? And how do these form people's relationships, actions, and experiences? This course introduces students to the discipline of sociology as a way to better understand how personal behaviors and life outcomes are profoundly influenced by a variety of social structures, and how their actions in turn maintain and can transform those social structures. Course readings and discussions will focus on the experience of community in modern society, young adult culture, marriage and family, inequality and poverty, civil rights, and disruptive social movements fighting for social structural change—particularly in the United States. Along the way we will learn a bit about social research methods and philosophy of social science, both of which will help students be smarter thinkers and consumers of social science research findings. Students will, as a result of taking this course, better understand both the society and world in which they live and the character and outcomes of their own personal lives.

SOC 10033. Introduction to Social Problems

(3 -0- 3) Sikkink; Summers-Effler

Today's society is beset by many serious social problems, for example, crime and deviance, drug abuse and addiction, domestic violence, hunger and poverty, and racial/ethnic discrimination. How do we think about these problems in ways that lead to helpful solutions? In what ways does one's own social background and role in society affect his/her views of these problems? In this course, students will learn to take a sociological perspective not only in examining the causes, consequences, and solutions to some of society's most troubling social problems, but also in taking a critical look at their own perceptions of the problems.

SOC 10722. Introduction to Social Psychology

(3 -0- 3) Collett; Gunty; Price

The overarching goal of this class is to provide students with a working knowledge of social psychology and to stimulate an interest in ourselves, the world around us, and the connections between the two. This is a course about how we become who we are—how our personalities (or our selves) are shaped by others, the groups we belong to, the social structures around us, and our interactions as social beings. However, interaction is a process between entities, a two-way street. Hence, it is not only about how the world around us shapes who we are, but also a course about how we shape the groups that we belong to and the social structures around us. May not take SOC 20722—courses overlap.

SOC 13095. Sociology Honors Seminar

(3 -0- 3) Halton

Prerequisite: ALHN 13950

Today's consumer societies offer the promises of affluence, of convenience, of "the good life." Yet it is by no means clear that the massive technological advances and material gains in advanced industrial societies have contributed to a better way of life—many would say increased meaninglessness is the actual result. This course explores the ways in which consumption culture enhances the good life or hinders it through "the goods life."

SOC 13181. Social Science University Seminar

(3 -0- 3) Sikkink; Spillman; Berends; Christiano; Fishman; Hachen; Halton; We An introduction to the seminar method of instruction accentuating the organization and expression of arguments suggested by readings in sociology. Each of the seminars treats a particular sociological topic, such as family life, social problems, the urban crisis, poverty, etc.

SOC 20002. Understanding Societies

(3 -0- 3) Collett; Hachen; T.McDonnell; C.Smith

What does it mean that humans are *social* creatures and how does participation in social life shape people's personal life experiences and outcomes? How and why do people together create and sustain cultures, groups, institutions, and organizations? And how do these form people's relationships, actions, and experiences?

This course introduces students to the discipline of sociology as a way to better understand how personal behaviors and life outcomes are profoundly influenced by a variety of social structures, and how their actions in turn maintain and can transform those social structures. Course readings and discussions will focus on the experience of community in modern society, young adult culture, marriage and family, inequality and poverty, civil rights, and disruptive social movements fighting for social structural change—particularly in the United States. Along the way we will learn a bit about social research methods and philosophy of social science, both of which will help students be smarter thinkers and consumers of social science research findings. Students will, as a result of taking this course, better understand both the society and world in which they live and the character and outcomes of their own personal lives.

SOC 20033. Introduction to Social Problems

(3 -0- 3) Thomas

Today's society is beset by many serious social problems, for example, crime and deviance, drug abuse and addiction, domestic violence, hunger and poverty, and racial/ethnic discrimination. How do we think about these problems in ways that lead to helpful solutions? In what ways does one's own social background and role in society affect his/her views of these problems? In this course, students will learn to take a sociological perspective not only in examining the causes, consequences, and solutions to some of society's most troubling social problems, but also in taking a critical look at their own perceptions of the problems.

SOC 20100. Introduction to Cultural Sociology

(3 -0- 3) Lizardo

This class is an introduction to the way that sociologists study the cultural dimensions of the social world. Culture is here defined as all objects, ideas and practices that people attach some meaning to. We will survey contemporary sociological approaches to analyzing culture along the way tracing and discussing the way that culture and meanings are produced, disseminated, interpreted and used by social actors. We will investigate how cultural objects are produced in mass media industries, how social boundaries and social hierarchies (such as those based on gender, race and class) are created through the consolidation of cultural categories, and how social practices related to the consumption of cultural objects have become a central facet of life in modern societies.

SOC 20228. Social Inequality and American Education

(3 -0- 3) Carbonaro

Many have claimed that the American educational system is the "great equalizer among men." In other words, the educational system gives everyone a chance to prosper in American society regardless of their social origins. In this course, we will explore the validity of this claim. Do schools help make American society more equal by reducing the importance of class, race, and gender as sources of inequality, or do schools simply reinforce existing inequalities and reproduce pre-existing social relations? Topics covered in the course include: unequal resources among schools, sorting practices of students within schools, parents' role in determining student outcomes, the role of schooling in determining labor market outcomes for individuals, and the use of educational programs as a remedy for poverty.

SOC 20342. Marriage and the Family

(3 -0- 3) McClintock

The family is often agreed to be the primary and most fundamental of social institutions. It is within this institution that early socialization and care-giving usually take place, and therefore, many of our ideas about the world are closely tied to our families. This course will give students the opportunity to learn about the diverse forms the family has taken over time and across different groups. This knowledge will be useful in examining the ongoing debate about the place of the

family in social life. By taking a sociological approach to learning about the family and by gaining knowledge about national family trends and patterns in the U.S., this course will give students the theoretical and empirical tools for understanding how family life is linked to the social structure, to economic, cultural, and historical events and transitions, and to societal factors like race, class, and gender.

SOC 20410. Health, Medicine, and Society

(3 -0- 3) Faeges

This course is a comprehensive introduction to the sociology of health and of medicine. First we will examine how sociological variables affect people's health. Research is rapidly accumulating which shows that sociological variables have a huge impact on people's susceptibility to various illnesses, on their access to health care, and on their compliance with medical advice. Such variables include people's neighborhoods, occupations, and lifestyles; their social class, education, race, ethnicity, and gender—and the density of "social networks", whose importance for health was predicted by one of sociology's founders over 100 years ago. Second we will examine medicine, both the practice of medicine by individual health care professionals, viewed sociologically, and the operation of the increasingly large and bureaucratic medical institutions in which health care professionals must work. In addition, we will examine sociological issues that overlap "medicine", such as radically long shifts; the rapid increase in the proportion of female doctors; and increasing concern with work/family balance among practitioners. Third, we will examine health and medicine in relation to other dimensions of society, such as the modern economy, the media, law, the Internet, government and politics. Health and medicine are intrinsically social and they cannot be isolated from the effects of the rest of society, many of which run counter to strictly "medical" considerations. Finally, we will examine health and medicine globally. We will compare health and medicine in a number of societies to see and explain how they are similar and how they differ—for example, how different societies pay for medical care. And we will examine global trends with implications for health and medicine that require cooperation among societies, such as the way in which global air travel both increases the danger of global pandemics and makes possible "medical tourism."

SOC 20479. Introduction to Latinos in American Society

(3 -0- 3) Cardenas; Duarte

This course will examine the sociology of the Latino experience in the United States, including the historical, cultural and political foundations of Latino life. We will approach these topics comparatively, thus attention will be given to the various experiences of a multiplicity of Latino groups in the U.S.

SOC 20533. Responding to World Crisis

(3 -0- 3) Valenzuela

This course focuses on current issues in international affairs and what the U.S. policy response to them should be. The participants will be divided into groups specializing events and issues in each continent in the world, with an additional group focusing on the international economy. Each session of the seminar will hear the reports prepared by students in two of such (i.e., the Africa and the Asia groups, or the Europe and World Issues groups). The reports must be individually written, with the crisp style of policy briefs, on different countries or issues, and must include an assessment of the origins and nature of the problem or problems at hand, as well as recommendations regarding what the U.S. should do. The required reading for the seminar will be the *New York Times* (the printed version) on a daily basis. Students may go to Internet news services of the *New York Times* or other sources such as the *Economist* for additional background information on the situation they wish to write about.

SOC 20541. Sociology of War and Terror

(3 -0- 3) Faeges

This course offers a broad introduction to the sociology of wars, terror, and communal violence, including their causes, conduct, and consequences. We will consider the basic social forces which impel people to kill and to risk death in the name of their societies. Films and other videos will make up a major part of our source material—both for class preparation and in class use—as they are particularly apt for illustrating the nature and course of wars. We will mix lectures

and discussions of various topics (including the authenticity of “war movies”). We will survey the manifold characteristics of societies that contribute to and are affected by war and terror: politics; economics; religion; culture; demographics; the environment; gender; race, ethnicity, and nationalism; social movements; and social psychology. This course requires no background in sociology, but will introduce you to the sociological approach to explaining people’s behavior and to many basic sociological concepts and tools. Grades will be based on brief quizzes, participation, and a final exam. The course is open to students in any major who are interested in armed conflict in social life. It can be counted for the Arts & Letters social science requirement or as an elective.

SOC 20550. Development and Human Well-Being

(3 -0- 3) E. McDonnell

Development. People around the world clamor for more of it and oust government leaders for failing to achieve it, but what exactly is “development?” If development were sitting in front of you on the sidewalk, how would you know it, and what would it look like? In this course we will unpack the deceptively simple word “development” into different specific aspects, each with concrete outcomes for human well-being: education, health, political freedoms, material wealth/consumption, and happiness. We will look at how our understanding of the distribution of “development” among countries, and historically over time, changes when we view it through each of these different lenses. We will consider whether these different aspects of development tend to reinforce each other, and try to understand cases when they do not. We will conclude the course by looking at how “doing” development differs depending on which aspect of development is targeted.

SOC 20610. Sociology of Religion

(3 -0- 3) Smith

This course provides an introduction to the sociology of religion, an important field in the discipline of sociology. Religion is one of the most powerful forces of social cohesion, order, meaning, disruption, and change in human societies, both historically and today in the modern world. Sociology provides a particular disciplinary perspective and analytical tools and theories for describing, understanding, and explaining the nature and influence of religion in the world. Studying religion sociologically is also a great way to learn about the perspective, methods, theories, and interests of this social science discipline. The course will engage the following kinds of questions. What is religion? Why is religion so primordial and prevalent in human societies? What do different religions teach? Why are people religious or not religious? What causal role does religion play in human personal and social life? How does the sociological study of religion differ from a theological or psychological study of religion? Why and how do religious organizations grow and decline? How, for example, did an obscure, early Jesus Movement manage to become the largest religion in the world? How and why do people convert to a different religious faith or lose their faith entirely? Is modernity secularizing? What are the religious and spiritual lives of 18–23 year-old Americans today like? Why has the Islamist movement become so powerful in recent decades? What is happening today at the global level when it comes to religious movements and their social, cultural, political, and economic impacts?

SOC 20722. Introduction to Social Psychology

(3 -0- 3) Collett; Thomas

The overarching goal of this class is to provide students with a working knowledge of social psychology and to stimulate an interest in ourselves, the world around us, and the connections between the two. This is a course about how we become who we are—how our personalities (or our selves) are shaped by others, the groups we belong to, the social structures around us, and our interactions as social beings. However, interaction is a process between entities, a two-way street. Hence, it is not only about how the world around us shapes who we are, but also a course about how we shape the groups that we belong to and the social structures around us. May not take SOC 10722—courses overlap.

SOC 20732. Introduction to Criminology

(3 -0- 3) Thomas

As an introduction to the topic of criminology, this course examines crime as a social problem within American society. Particular attention is given to the nature and function of law in society, theoretical perspectives on crime, victimology, sources of crime data, the social meaning of criminological data and the various societal responses to crime. These topics are addressed through specialized readings, discussion, and analysis.

SOC 20810. Gender Roles and Violence

(3 -0- 3) Gunty

Much of the violence in contemporary society—whether it is domestic abuse, school shootings, gang warfare, video games, or inter-ethnic conflict—has something to do with gender. This course explores the connection between gender role socialization and the expression of conflict or aggression. Through readings, discussions, films, and projects, students will be encouraged to examine sex differences in violent behavior as the outcome of complex processes. We will try to understand those processes better and develop the ability to describe the causes and their effects.

SOC 20838. Social Inequality: The Social Construction of Difference and Inequality

(3 -0- 3) Collett

Many of us are aware of our own experiences of disadvantage (or perhaps privilege), but people are generally not aware of how structural arrangements in society result in systems of difference and inequality. Only occasionally do we question whether or not things are really black and white, right and wrong, true or false, and even less often do we contemplate the repercussions of such binary assumptions. This class will challenge taken-for-granted beliefs about race and ethnicity, social class, sex and gender, and sexuality. We will discuss how these socially constructed categories of difference are given significant meaning and how this process subsequently results in “real” differences in experiences, expectations, and achievements between groups of individuals.

SOC 23011. Selflessness and Selfishness

(3 -0- 3) Beyerlein

Why do some people but not others sacrifice their money, time, and well-being to help others and what are the consequences of sacrificing? These are not only classic and still core questions in the social sciences, but there continues to be much popular debate about them. In this course, students will learn how sociologists have approached and answered these important questions. We will focus on understanding different sociological theories about what motivates or constrains sacrificing for others and the consequences of sacrificing for helpers. Particular attention will be paid to how these theories compare with those in other social science disciplines. Additionally, this course will draw on empirical cases of sacrifice, such as blood donation, rescue efforts, and political activism, and expose students to a range of data and variety of methodologies that sociologists have employed to study sacrifice. These are the course’s primary goals and objectives.

SOC 30019. Sociology of Sport

(3 -0- 3) Welch

The primary objective of this course is to examine the nature of sport in American society and the modern world. A variety of topics will be covered, including sociological perspectives on the history of sport, the relationship between sports and the entertainment industry, problems in intercollegiate and professional sports, and other issues. The course should be particularly helpful for students who are interested in careers in athletic administration, sports journalism or broadcasting, coaching, higher education administration, sports and entertainment law, and other aligned fields.

SOC 30048. Latinos and the City

(3 -0- 3)

This course is a critical examination of urban life and how it affects and is affected by Latinos. We will explore the salient features of social structure, experience and transformation in the American metropolis as it relates to the past and growing

Latino population. This class will be geared toward viewing the city as simultaneously a social, cultural, and political economic phenomenon, with particular attention to the following concerns: 1) the city as a locus of ethnic, racial, gender and class relations, interactions and conflicts; 2) The growing urban population in Latin American and its effects on Latino immigration to the U.S.; 3) how Latinos have been affected by strategies of urban “revitalization” and the future of the “postmodern” city in the major metropolitan areas of the United States (i.e. Los Angeles, New York, Chicago and Miami).

SOC 30054. Cultural Aspects of Clinical Medicine

(4 -0- 4) Wolosin

This course focuses on social science approaches to sickness and healing. The medical encounter is examined from anthropological perspectives. The course emphasizes the difficulties traditional biomedicine has in addressing patients’ expectations for care. Students serve an internship as patient ombudsman in a local hospital emergency room 4 hours per week. Students MUST have access to transportation to participate in the ER internships. *Students are required to sign a waiver, to present evidence of immunizations, and to receive a TB skin test.*

SOC 30109. Sociology of Culture

(3 -0- 3) Lizardo

In this class we will examine cultural dimensions of important social processes, and we will survey contemporary sociological approaches to analyzing culture. Examples will include readings on home and work, social hierarchies, political culture, media and the arts, and social change.

SOC 30151. Popular Culture

(3 -0- 3) Lizardo

The first half of the course will introduce a variety of theoretical perspectives, presented as a historical overview of popular cultural studies, both in the United States and Britain. The theories to be considered include: mass culture theory, Marxism, the Frankfurt Schools (Critical Theory), Structuralism, Semiotics, Feminism, and Post-Modernism. During this first half of the course, students will be required to write a paper in which they analyze an aspect of popular culture utilizing one or more of the theoretical perspectives. The second half of the course is devoted to a historical analysis, using the perspectives already addressed, of the social impact and meaning systems of rock ‘n’roll music. The exegesis will begin with a study of African music, using recordings of chants and celebratory music, and will explore the music of American slaves, chain gangs, and spirituals, toward the goal of identifying elements exhibited by those genres that eventually evolved into rock’n’roll. Students will be required to write a research paper on some aspect, personality, group, or historical development of rock’n’roll. This course is not recommended for students who have taken SOC 451, as the content will overlap.

SOC 30505. Aid and Violence

(3 -0- 3) Fast

The principles of impartiality, neutrality, and independence have traditionally guided humanitarian actors working to provide life-saving assistance to those affected by violent conflict and war. However, in the wake of the end of the Cold War and the more recent wars in Iraq and Afghanistan, the politicization of humanitarian aid and the changing nature of violence have forced humanitarians to reevaluate some of the central assumptions of providing aid in the conflict of war and violence. Using a series of case studies, this course will examine the central debates and dilemmas of humanitarianism, especially in relation to the “relief-to-development” continuum, military-civilian interactions, safety and security issues, and the protection of war-affected populations. The course will be conducted in seminar format, with a strong emphasis on reading and discussion. Grades will be based on a series of written assignments.

SOC 30514. Social Movements

(3 -0- 3)

How is social change possible? This is one of the central questions for the study of social movements, as well as the organizing theme of this course. In this course we will consider how sociology has contributed to our understandings of social movements. We address questions about the forces that shape social movement

emergence and that affect their possibilities for impacting social change at local as well as national and global levels. While movements may have limited impact on specific policies, there are many other ways they can affect individuals as well as the larger cultural contexts. We therefore will also consider the effects of social movements and the organizations they generate on collective identities, networks, and larger public discourses and culture.

SOC 30567. Chile in Comparative Perspective

(3 -0- 3) Valenzuela

This course provides a detailed analysis of the development of the Chilean economy, society, and policy since independence from Spain in 1818, drawing selected comparisons with other national experiences. It then discusses the validity of theoretical statements on central questions in the social science literature by examining them in light of the Chilean case. The main issues to be examined are the reasons for the successes or failures of Third World development, the origins and breakdowns of democracies, the characteristics of authoritarian regimes, and processes of restoring democracies.

SOC 30581. Racism and Activism: From Civil Rights to Tea Parties

(3 -0- 3) McVeigh

Throughout much of American history, individuals have organized and acted collectively to advance interests based on a common racial or ethnic identity. In some instances, groups have organized in an attempt to overcome discrimination and to stake a claim to rights and privileges enjoyed by majority group members. In other cases, members of the majority group have organized to restrict opportunities for the minority and to protect an advantaged position. We will consider the causes and consequences of both progressive and conservative social movements—such as the civil rights movement, the Ku Klux Klan, and the contemporary Tea Party movement—giving particular attention to how theories of social movements help us to understand episodes of race-based collective action.

SOC 30600. Peace vs. Justice: What is justpeace?

(3 -0- 3) Springs

“Peace is the work of justice” —*Gaudium et spes* (cfr no. 78). Peace activists, scholars, philosophers, religious leaders have often agreed that you cannot have true peace without justice, nor true justice without peace. Peace without justice is “false peace,” justice without peace is “ugly justice.” In practice, however, peace and justice frequently appear to stand at odds with one another. Striving to see that “justice is served” can cause conflict and instability. Resolving conflict and achieving tranquil conditions often will require giving up the traditional idea that “each must receive his or her due” (justice). This class takes up a careful examination of what it means to say that justice and peace must be sought together (e.g. that “peace is the work of justice”). Is it possible to think in terms of— and to work for— “justpeace”? How might such a conception provide the orientation for peace studies and peace activism? In exploring this possibility, we will examine concrete cases where justice and peace appear to conflict. We will examine efforts to pursue peace by administering a legal understanding of justice (i.e., International Court of Human Rights on Sudan, and Criminal Tribunal on the Former Yugoslavia). In examining the differences between “positive peace” and “negative peace,” we will explore the ways that different conceptions of violence— “direct,” “structural,” and “cultural” forms— influence and inform what the conception of a “justpeace” can, and should, seek to accomplish, and the breadth of contexts to which it is applicable (including the United States). The course will conclude by applying the refined account of “justpeace” to the theory and practice of conflict transformation, and strategic peacebuilding more broadly.

SOC 30602. Jerusalem: Peace or Apocalypse?

(3 -0- 3) Omer

Jerusalem is a holy city for many religions. It is believed to represent heavenly eternal peace but is also the source of earthly and historical violence. What are the sources of this contested legacy? What are the prospects of building peace with justice in such a volatile context? We will relate our understanding of the complexities of Jerusalem to the analysis of other conflicts involving sacred spaces and narratives. This interdisciplinary course will explore the histories, theologies,

politics, and social realities of the city of Jerusalem. We will explore the interface between religion and politics by asking how Jerusalem fits into secular and religious Jewish Zionist ideologies as well as how Christian Zionists' conceptions of the end-time informs a commitment to maintaining Jewish political hegemony over the city. We will discuss the question of sacred spaces and how they relate to the cycles and transformation of violent conflicts: Are sacred spaces negotiable? Nonnegotiable? Do they have fixed or rather elastic boundaries? How do sacred religious spaces figure into secular national ideologies? What might be the role of trans- or supra-national religious networks in informing decisions concerning the divisibility or indivisibility of sacred spaces?

SOC 30651. God, Country, and Community: Religion and Public Life in America

(3 -0- 3) Sikkink

This course investigates how religion influences what Americans think about politics and how they are involved in public life, including political participation and volunteering and community service. We will examine, for example, how and why religion influences opinions on controversial social and political issues, such as abortion, expanding the welfare state, and school choice policy. At the organizational level, the course seeks to understand what religious congregations and schools are doing for their communities and how they are active in political life, such as mobilizing protest, inviting political speakers, talking about politics, or organizing voter registration drives. The analysis will pay close attention to religious tradition differences, including investigating whether and why conservative Protestants are more or less likely to give and volunteer in their communities than Catholics, mainline Protestants, or the nonreligious. By investigating what about religion leads to good works and active citizens, the course will shed light on the complex and changing relationship between religion and public life in the United States.

SOC 30672. Religion and Social Life

(3 -0- 3) Christiano

How does social life influence religion? How does religion influence society? What is religion's social significance in a complex society like ours? Is religion's significance declining? This course will consider these and other questions by exploring the great variety in social expressions of religion. The course examines the social bases of churches, sects, and cults, and it focuses on contemporary religion in the United States.

SOC 30675. Religion, Modernity, Secularization and Religious Persistence

(3 -0- 3) C. Smith

What is the fate of religion in modern societies? Is there something about modernity that is particularly corrosive of religion? Does modernity secularize? What does secularization mean? Where, how, and why does religion survive or thrive in the modern world? What social forces and influences explain different religious outcomes in modernity? Are there "multiple modernities" that have different effects on religious traditions? This course examines the most important works on religion in modernity to explore these questions so as to better understand outcomes of religious belief and practice in the contemporary world. (This is a sophomore-to-senior level course primarily for sociology majors and others with specifically related interests.)

SOC 30806. Race and Ethnicity

(3 -0- 3)

This course has three objectives. First, the course will help you to think critically about issues related to race and ethnicity in American society. These issues include the meaning of race and ethnicity; the extent of racial and ethnic inequality in the U.S., the nature of racism, discrimination, and racial stereotyping; the pros and cons of affirmative action; the development of racial identity; differences between assimilation, amalgamation, and multiculturalism; and social and individual change with respect to race relations. The second objective is to foster a dialogue between you and other students about racist and ethnocentric attitudes and

actions. The third objective is to encourage you to explore your own racial and ethnic identity and to understand how this identity reflects and shapes your life experiences.

SOC 30838. Poverty, Inequality, and Social Stratification

(3 -0- 3) Andrew

Social inequality is a prominent and persistent feature of modern society. Social stratification theory attempts to explain the causes of inequality and the reasons for its persistence. This course will address such questions as: Why are some people rich and some people poor? Why does inequality persist? Who gets ahead? Can men and women get the same jobs? Do different races have the same opportunities? Is inequality necessary? Potential topics include class structure in U.S. society, status attainment and occupational mobility, racial and ethnic stratification, gender stratification in the labor market, inner-city and rural poverty, the working poor, educational inequalities, welfare dependency, and homelessness.

SOC 30846. Today's Gender Roles

(3 -0- 3) Aldous

This course is concerned with current changes in male and female roles in the light of social science, primarily sociological evidence. Such issues as the source of male and female role differences, the range of roles open to women and men and the consequences of changing roles and institutions like paid work and the family are considered. The class format is primarily group discussions supplemented by some lectures presentations from visiting scholars.

SOC 30900. Foundations of Sociological Theory

(3 -0- 3) Faeges; Konieczny; Lizardo; Fishman

Sociological theory is the foundation of sociology. Students in this course will learn two things: first, what theorists do and why and, second, how to use fundamental theoretic concepts—such as exploitation and alienation, social structure and solidarity, bureaucracy and charisma—to analyze and explain contemporary society.

SOC 30902. Methods Sociological Research

(3 -0- 3) Gunty; Hachen; Williams

Prerequisite: SOC 30900

This course is designed to provide an overview of research methods in the social sciences. Topics covered include 1) hypothesis formulation and theory construction; 2) the measurement of sociological variables; and 3) data collection techniques—experimental, survey, and observational. At the end of the course, students should appreciate both the strengths and the limitations of sociological research methods.

SOC 30903. Statistics for Sociological Research

(3 -0- 3) Andrew; Sikkink

This course is designed to show students how to interpret and critically evaluate statistics commonly used to describe, predict, and evaluate in the social sciences, as well as many areas of the business and/or medical world. The focus is on a conceptual understanding of what the statistic does, means, and what assumptions are made from it. Hands-on experience in using data analysis is part of the course.

SOC 33001. Sociology, Self, and Catholic Social Tradition

(3 -0- 3) Weigert

What's Catholic about sociology? What's sociological about Catholic Social Tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

SOC 33090. Proseminar

(1 -0- 1) Power

This course provides an introductory overview of the sociology major and the opportunities students have within the Sociology Department and the Arts and

Letters College, as well as across the University. The course has a practical focus. Some classes are devoted to equipping students with knowledge and skills that will serve them as they progress through the major. Other classes focus on future plans, such as entering the work force, going on to graduate or professional school, and performing service after the baccalaureate. The idea of “career as vocation” is also explored. This course is for one credit, pass/fail, and is required of all sociology majors.

SOC 35000. Cross Cultural Leadership Internship Program

(3 -0- 3) Cardenas

This is a leadership internship for Cross-cultural/Urban studies working 8 weeks in Los Angeles, CA in a multicultural area with organizations dedicated to empowering local communities. Students will work with ILS to build partnerships with the agencies and people involved. Students will complete academic requirements including readings, reflection sessions, and a presentation of a synthesis paper at the end of the internship. Application and interview necessary for participation.

SOC 40001. Time and Society

(3 -0- 3) Faeges

Ever felt rushed to finish an assignment? A hit song of 1966 urged people to “slow down, you move too fast”, but since then the pace of life in America, where “time is money”, has accelerated and vacations are shorter. However, in many societies efficiency is disdained, life moves to the rhythms of nature, not the “Day-Timer”, and people seem to have all the time in the world. In short, attitudes towards and ways of dealing with time deeply shape people’s lives, and societies’ attitudes towards and ways of dealing with time vary greatly. “Social time” is the subject of this course, whose major topics include: how societies track time and use it to regulate and coordinate their members’ collective lives at work and play, at home and in public, in everyday life and on special occasions; how “ecological time” based on the sun and moon, stars and seasons, differs from contemporary America’s technologically-based “clock time”; how and why the pace of life varies between societies; how the timing of life-cycles varies between societies, for example, in the age at which individuals become adults, old enough to marry and have children—or drink alcohol.

SOC 40505. Globalization and Its Discontents: Ethical Perspectives on Economy, Conflict, and Human Values

(3 -0- 3) Springs

The past several decades have witnessed an economic revolution of unforeseen proportions and consequences. Some claim that these economic trends, and the political conditions from which they originate, fuel the flames of secularism, religious fanaticism and fundamentalism, severe forms of poverty and economic inequality, destroy the environment, and ultimately create situations of conflict and violence. Others claim that globalized markets put in place conditions that are necessary for peacebuilding. This course examines the rise and development of free market capitalism, the challenges it presents to identifying and transforming conflict and building peace, and the range of value-frameworks available for identifying, assessing and transforming conflict. Throughout we will explore the development of the ideas that underpin the rise of free market capitalism, value frameworks that challenge or compete with it, engaging specifically the issues of environment, multi-national corporations and reconceived concepts of “empire” and “globalization” that accompany them. We will explore answers to questions such as: Does global, free market capitalism constitute a new form of global colonialism? Do capitalist models of economy work everywhere in the world? If not, why not? What are options where it fails? Is it ethically relevant that 46 million people across six continents eat at McDonalds every day? Should it be? Is the global market economy inherently opposed to environmental concerns? Is free market capitalism a carrier of religious secularization? Do globalized markets create religious fundamentalists? Does free market capitalism help poor people? Are market forces impartial to gender, ethnicity and race? What are possible options for ethical analysis of de-regulated markets? In what ways can ethical orientations toward development and globalization create, exacerbate or assuage conflict; aid or hinder peacebuilding?

SOC 40604. Tolerating Intolerance: Religion, Secularization and Peace

(3 -0- 3) Springs

Toleration of religious differences is heralded today as a primary accomplishment of the modern liberal-democratic societies, and perhaps the best hope for transforming conflict and building peace in conflict zones across the globe. Where did this value come from and how did it evolve? How has it come to orient modern, liberal society, and mark the difference between liberal and illiberal societies? Is religious toleration an absolute good? What are its limits? In what ways might it assist or impede the pursuit of transitional and restorative justice, and peacebuilding? Is the basis of religious toleration the secularization of public life and politics? This class examines the concept of toleration, attending specifically to its application to current debates about the relation of religious belief and practice to politics and social movements in contemporary European contexts. We will examine the difference between free speech and hate speech, the controversies pertaining to religious freedom in contemporary France, Holland and Britain, as well as apparent stand-off between multiculturalism, secularization, human rights and group rights.

SOC 40606. Religion and Democracy in Comparative Perspective: Islam, Judaism, Christianity

(3 -0- 3) Omer

This course will first explore how Muslim, Christian and Jewish thinkers have theorized the question of democracy in various contexts like Iran, Israel and the U.S. and how they drew on the resources of their respective traditions in their effort to address issues such as minority rights and religious freedom. Of a special focus will be the tension between a support of democratic values and a general commitment to ethno-national political projects. Second, the course will interrogate the presuppositions underlying the conventional construal of this comparative discussion as one that asks whether Islam, Judaism or other traditions are compatible or incompatible with democracy.

SOC 40607. Religion, Civil Disobedience and Nonviolent Resistance

(3 -0- 3) Springs

This course explores the ways in which religious ethicists, political philosophers, social critics have employed conceptions of love and violence as resources for criticizing and resisting oppressive political conditions, and for radically transforming existing social arrangements. We begin by exploring the writings of Ralph Waldo Emerson and Henry David Thoreau concerning the moral status of civil disobedience in the context of the U.S. abolitionist struggle, with particular attention to the influence of the Bhagavad-Gita upon their thinking. We will examine the ways that both Thoreau’s writings and the Gita influenced Mahatma Gandhi on questions of non-violent civil disobedience, Gandhi’s exploration of the power of non-violence in light of the Sermon on the Mount, and his correspondence with the Russian novelist Leo Tolstoy. We will examine how this entire mosaic of influences came to inform Martin Luther King, Jr.’s work in the Civil Rights Movement in the U.S. during the 1960s. Other assessments of civil disobedience and non- or non-violent resistance include Dorothy Day and the Catholic Worker Movement and Malcolm X and the Nation of Islam in the United States. We will engage critical perspectives on these thinkers and ideas, such as George Orwell’s criticisms of Gandhi, Frantz Fanon’s claims that colonialism is an essentially violent phenomenon that requires an essentially violent response, arguments against pacifism on the basis of political realism by Max Weber and Reinhold Niebuhr. We conclude by brief examination of principled vs. practical pacifism in the work of John Howard Yoder, Stanley Hauerwas and Cornel West.

SOC 41800. Senior Thesis Workshop

(0 -1- 0) Power

This course is required of all students who are engaged in senior thesis projects. Students in this workshop course will meet on a semi-regular basis (approximately every other week) to discuss their works-in-progress, receive strategic input from invited faculty members about the “nuts and bolts” of sociological research, and gain guidance in proceeding through the two semesters in which they are

engaged in their thesis projects. Students will be assisted in formulating their research questions and hypotheses and in breaking down the research process into smaller, achievable steps; setting deadlines; communicating with directors; writing effectively, etc. This course is a co-requisite with SOC 48009, Sociology Honors Capstone Project. Students launching their senior theses within another senior seminar or research-based course are also required to enroll in this course. (This course may be repeated.) Department approval required.

SOC 43016. Visual Sociology: Exploring Society Photographically

(3 -0- 3)

This course will examine the uses of photography and film in sociology and will explore the impact of visual expression on society. This includes introductory work in documentary photography and film, gender advertising, ethnographic film, political cinema, muralism and social protest art. This is a sociology course and will emphasize the study of societal aspects of photography, film and artistic expression, rather than technique, without ignoring the relationship between the two aspects. We will NOT emphasize the technical/lab training in photography. This course, while broad in scope, will rely on content that is very heavily grounded on a social problem context as is found in the U.S., the American Southwest, Mexico, and Latin America. Homework and projects will include: 1) a short essay on documentary photography and the study of social problems and issues or photography assignments (black and white), print-slide work; and 2) other creative work.

SOC 43101. Telling About Society: Media, Representation, and the Sociology of Knowledge

(3 -0- 3) T. McDonnell

How do we see the world? How do these modes of representation determine our social reality? How can we use media to create social change? This rigorous seminar interrogates the lenses through which we see, and more importantly make, our world. We open with an interrogation of theories of media, representation, and the sociology of knowledge so as to develop a critical eye towards how these lenses shape our everyday reality. From there we discuss particular modes of representation: photography, ethnography, statistics, journalism, maps, and more. We consider the inherent biases within these ways of seeing, and debate the appropriate uses of these technologies. From this starting point, the course turns its eye to particular historical periods and phenomena: the Great Depression, Vietnam War, the era of HIV/AIDS, and the growing surveillance society. We compare across different media representations of each event to evaluate how different media tell very different kinds of stories about that moment. Ultimately, this class presses students to consider the capacities of these media for encouraging mobilization and change—to redesign the world. To work through these issues, students will engage in fieldwork on a local topic of their choosing. Their final project will consider how different media have shaped our knowledge of a local issue, and in response students will create a final multimedia campaign designed to alter people's "ways of seeing" that topic. In this project, students will persuade their audience using a variety of "lenses" to make their case: from ethnography to documentary film to radio journalism to new media and more.

SOC 43110. Sociology of Media, Technology, and Society

(3 -0- 3) Halton

From an ever-increasing proliferation of electronic devices and "enscreening" of daily life, to the increased reliance on automatic and non face-to-face interactions, to virtualizing leisure activities, media and technology have become central players in social relations. This seminar will explore the ways media, and technology more generally, are transforming contemporary society.

SOC 43113. Cultural Sociology

(3 -0- 3) Spillman

In this class we will examine cultural dimensions of important social processes, and we will survey contemporary sociological approaches to analyzing culture. Examples will include readings on home and work, social hierarchies, political culture, media and the arts, and social change.

SOC 43162. Aesthetics of Latino Art and Cultural Expression

(3 -0- 3) Cardenas

This course will analyze the philosophy and principles underlying the social and political aspects of Latino art. We will approach this by examining a range of topics, including Chicano and Puerto Rican poster art, muralism, Latina aesthetics, and border art. The readings will enable us to survey a number of important exhibitions of Latino art and to explore new possibilities for exhibition and representation. We will examine descriptive material and critical writings concerning issues pertaining to the representation and interpretation of Latino culture and art as well as how these questions surface in a national museum context.

SOC 43165. Art in Everyday Life

(3 -0- 3) T. McDonnell

When discussing "art," most people think of paintings housed in museums, winners of the Booker Prize, or Russian ballet. This rigorous, hands-on seminar is less interested in the so-called fine arts. We will bend, stretch, and stress our definitions of art by considering the aesthetics of our daily lives and the urban streetscapes around us. What are the politics of producing public sculpture and graffiti? How do we judge the power of protest posters? What ideologies underlie the practices of advertising? This seminar addresses a variety of perspectives on visual culture, from critical theory to contemporary cultural sociology. We will consider the autonomy and politics of art, examine the distinctions between high and popular culture, and consider what is at stake in the production and interpretation of these images. From there, we use these theories as a framework to examine a number of pieces of pop culture, and not so popular culture.

SOC 43171. Materializations in America

(3 -0- 3) Halton

Industrialization in the twentieth-century resulted in a megatechnic America problematically related to materialism and to earlier visions of the New World. The course will consider a variety of materializations of America.

SOC 43240. Research on School Effects

(3 -0- 3)

It might seem a truism that schools have powerful effects on student achievement. Yet beginning with the landmark Equality of Educational Opportunity study in 1966, social scientists have debated the role that schools play in the production of student achievement. Does it matter much, which school a student attends? Why are some schools chronically low performing, and what are the characteristics of more effective schools? Students should have completed coursework in methods and statistics for social research or equivalent coursework before enrolling in this course.

SOC 43377. Family, Gender and Employment

(3 -0- 3) McClintock

This course addresses the competing responsibilities of employment ("work") and family. It explores how work and family life interconnect and interfere with each other and the implications that this has for women, men, children, marriage, single/divorced parents, and employers. Topics include the work-family time crunch, gender and the division of labor, gender and parenting, and the changing nature of work. The class will also examine how family structure, gender, race, and social class affect the ability to achieve work-life balance. Special consideration will be given to the effect that work-family tension has on children, parenting, and parents' relationship quality. The focus is on the contemporary United States, but this course will also include historic and cross-national comparisons.

SOC 43402. Population Dynamics

(3 -0- 3) Williams

Demography, the science of population, is concerned with virtually everything that influences, or can be influenced by, population size, distribution, processes, structure, or characteristics. This course pays particular attention to the causes and consequences of population change. Changes in fertility, mortality, migration, technology, lifestyle, and culture have dramatically affected the United States and the other nations of the world. These changes have implications for a number of areas: hunger, the spread of illness and disease, environmental degradation, health

services, household formation, the labor force, marriage and divorce, care for the elderly, birth control, poverty, urbanization, business marketing strategies, and political power. An understanding of these is important as business, government, and individuals attempt to deal with the demands of the changing population.

SOC 43404. International Migration: Mexico and the United States II

(2 -0- 2) Bustamante

This course addresses relations between theory and methods for scientific research on international migration with emphasis on immigration to the U.S.; the objective is to prepare students to design research projects on this subject for theses and dissertations. The course will review basic questions on this subject and the methods through which these questions have been adequately or inadequately answered; the numbers, the impact, the nature, the structure, the process, the human experience, will be discussed in terms of the research methods commonly used to approach them.

SOC 43479. International Migration and Human Rights

(3 -0- 3) Bustamante

This course is an extension from the mini-course to a full term, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the Industrial Revolution to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States' migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United Nations' Commission of Human Rights on the relationship between migration and human rights are also covered.

SOC 43510. Governance and Africa

(3 -0- 3) E. McDonnell

In this course we will try to understand both the successes and failures of governance on the African continent. Why do some states provide reasonably peaceful political climates while others have been torn by decades of civil strife? What effect did the colonial past have on the governments we see today? Why have some states developed a reputation for reasonably effective governance while others are among the most corrupt governments on the planet? How have states dealt with varied health and educational challenges, like low literacy rates and high infant mortality? These are just a few of the questions we will address in this course. Each student will become an expert on one of the countries on the continent, and assignments are designed to help cultivate that expertise.

SOC 43524. Employment in a Changing Economy

(3 -0- 3) Hachen

How is employment changing? What distinguishes the new economy from the old economy? How do people find better jobs? What are employers looking for when the attempt to meet their labor needs? This course will attempt to answer these and other questions by contrasting the new and the old economy. In the old economy some people worked for the same employer their entire lives. Why did workers stay with the same firm? Why did employers want to retain their employees? In the new economy employers seem to want flexibility. Why do they want flexibility and how do they attempt to achieve it? What consequences does the quest for flexibility have for how people become employed?

SOC 43527. Social Network Analysis

(3 -0- 3) Thomas

Social network analysis is the study of connections. In this class we study individuals not as discrete entities, but instead look at how they are embedded in complex social networks. Rather than looking at individual attributes, we focus on the importance of social networks in influencing processes such as the development and use of power, the diffusion of collective action, the workings of exchange relationships, and the development and articulation of identity. We also consider how networks form, persist over time, and change.

SOC 43553. Building Democratic Institutions

(3 -0- 3) Valenzuela

Elements of democratic regimes emerged long before the regimes as such can be identified as being minimally in place. Beginning with a brief discussion of the essential features of democracies, the course examines how and why such institutions emerged, and the critical moments in which the actual transitions to the new democratic regimes occurred. The course focuses on democratizations that took place before the Second World War, and will examine key European and Latin American cases.

SOC 43558. Comparing European Societies

(3 -0- 3) Fishman

This course offers students a review of major patterns of difference, along with some similarities, among the 15 member states of the European Union. Despite the larger contrasts with the United States, and the pressures toward convergence generated by the process of European integration, European societies remain remarkably different from one another on a number of dimensions including: the overall level and form taken by employment and unemployment, systems of social protection and welfare state organization, demographic trends ranging from extremely low birth rates in most of southern Europe to significantly higher birth rates further north, the connections between urban and rural life, and the impact of education on inequalities. The role of institutions, cultures, national histories, and policies in accounting for this pattern of difference will be reviewed. The course will also examine the combinations of identities—national, regional, and European—found among citizens of Europe. Students will be encouraged to develop their expertise on at least one country while also doing comparative reading.

SOC 43563. Nationalism and Globalization

(3 -0- 3) Faeges

Nationalism divides humanity; globalization is pulling it together. Nationalism has been one of the most potent forces in the world over the past two centuries; globalization increasingly challenges the world of nation-states. In this course we will study the origins, nature, evolution, and interaction of these two fundamental social forces. The main assignment will be a research paper on a topic chosen by each student according to their particular interests within the broad scope of topics embraced by nationalism and globalization, allowing them to pursue an existing interest further or to explore a new area.

SOC 43578. Chile in Comparative Perspective Seminar

(3 -0- 3) Valenzuela

This course provides a detailed analysis of the development of the Chilean economy, society and polity since independence from Spain in 1818, drawing selected comparisons with other national experiences. It then discusses the validity of theoretical statements on central questions in the social science literature by examining them in light of the Chilean case. The main issues to be examined are the reasons for the successes or failures of Third World development, the origins and breakdowns of democracies, the characteristics of authoritarian regimes, and processes of redemocratization.

SOC 43590. Sociology of Economic Life

(3 -0- 3) Spillman

Economic actions like working, buying, selling, saving, and giving are a fundamental part of everyday life, and all spheres of society, from family to religion to politics, are interrelated with economy. Sociologists examine how social relationships from small networks to transnational linkages affect economic actions and their outcomes, and the ways cultural meanings and political strategies shape those social relationships. The goal of this class is to provide students with new perspectives on economic actions by reading recent sociological studies of topics like money, markets, work, businesses, industries, and consumer society.

SOC 43600. Society and Spirit

(3 -0- 3) Christiano

The purpose of this course is, in the setting of a small seminar, to engage students in close reading and broad discussion of sociological writings about religion by

classical theorists of the discipline. Works that may be nominated for treatment include such mainstays as *The Elementary Forms of the Religious Life* and other studies of religion by Emile Durkheim; *The Protestant Ethic and the Spirit of Capitalism* and *The Sociology of Religion* by Max Weber; portions of *The German Ideology* by Karl Marx and Friedrich Engels, as well as excerpts from Marx's *Capital*; *The Future of an Illusion* and *Civilization and Its Discontents* by Sigmund Freud; and various essays on religion by Georg Simmel. The course also will cover more recent works, both in the sociology of religion and in related fields, incorporating assumptions about and approaches to religion that can be traced to these pioneering authors.

SOC 43662. Religion and American Society

(3 -0- 3) Sikkink

The sociology of religion investigates the influence of the social environment on religion, and the role that religion continues to play in shaping contemporary society. This course will focus on the interaction of religion and contemporary American society through reading and discussion of major sociological works on American evangelicalism, mainline Protestantism, and Catholicism. The course will draw on classic sociological works on the relationship of religion and society to illuminate processes of religious identity formation and the influence of American religion on social behavior.

SOC 43691. Religion and Social Activism

(3 -0- 3) Beyerlein

This course mainly focuses on how religion acts as a double-edged sword for social change, promoting both radicalization and quiescence. Students will be exposed to the major topics, theories, and debates in the scholarly work on religion and social change as well as important empirical cases of collective action in which religion has been a force, such as the U.S. civil rights movement, U.S. central peace movement, East German revolution, and anti-abortion activism. In studying religion's impact on social change, we will pay particular attention to how different dimensions of religion shape social activism, the mechanisms through which religion mobilizes or demobilizes social activism, and whether—and if so, how—religious-based activism is distinct from its secular counterpart. Though most of the course examines the effect of religion on social activism, we will also reverse the causal arrow and consider how social activism affects religion and the processes involved in this influence. (Please note: During the semester, students will have the opportunity to engage in service-related projects, both locally and at least one non-local location, though doing so is not required.)

SOC 43713. Socialization and the Life Course

(3 -0- 3) Collett

Socialization is a fundamental concept in sociology. It is our discipline's contribution to the "nature-nurture" debate. Students will come away from this course with a deep appreciation for the countless ways in which external stimuli—society, culture, language, interaction with others—constantly molds, shapes, and influences everything from our beliefs about the world and ourselves to our actions and emotions. In short, this course focuses on how our social world affects us over the entire course of our lives, from the very moment we are born until we are no longer counted among the living.

SOC 43719. Self, Society and Environment

(3 -0- 3) Weigert

This course focuses on social psychological aspects of relationships between humans and the natural environment. Issues include how humans interact with different environments, symbolic transformations of environments, and competing accounts or claims concerning human-environment relationships. The course is framed in a sociology knowledge perspective and touches on alternative ways of envisioning and valuing individual and institutional perspectives on human-environment relationships with an eye toward implications for social change.

SOC 43730. Crime and Deviance in Ideological Perspective

(3 -0- 3)

Prerequisite: SOC 10002 or SOC 10033 or SOC 10722 or SOC 13181 or SOC 20002 or SOC 20033 or SOC 20228 or SOC 20342 or SOC 20722 or SOC 20732 or SOC 30672 or SOC 30900

This seminar course will examine selected issues (e.g., white collar crime, interpersonal violence, victimless crimes, etc.) in the study of crime and deviance (issues will change each time the course is offered) and compare responses made by those representing different schools of thought. We will critique the adequacy of these responses from a sociological viewpoint. *Prerequisite:* any SOC course except that you cannot take this course if you have already taken SOC 43732 Controversies and Crises in Modern Criminology because of overlap between the two courses.

SOC 43732. Controversies and Crises in Modern Criminology

(3 -0- 3) Welch

Prerequisite: SOC 30900 or SOC 30902 or SOC 10722 or SOC 10002 or SOC 10033 or SOC 20722 or SOC 20033 or SOC 20732

This upper-level seminar course will focus on important current issues and controversies (e.g., racial profiling, victimless crimes, cyber-crimes, etc.) that are central to the study of crime and deviance in modern society. Students will be required to discuss and analyze these issues from a variety of sociological perspectives. The issues that are studied may change each time the course is offered. Students cannot take this course (even sociology majors), if they have already taken SOC 43730, Crime and Deviance in Ideological Perspective, because of overlap between the two courses.

SOC 43839. Unequal America

(3 -0- 3) Carbonaro

Although America is the world's richest nation, it has the most unequal distribution of wealth and income in the industrialized world. In this course, we will examine why this is so. In particular, we will examine the following questions: What social forces create inequality in society? Is inequality inevitable? Is there such a thing as "social class"? Who gets ahead and why? Why is race/ethnicity and gender still related to social status, wealth, and income? Does America have a "ruling elite"? Who are "the poor" and what explains their poverty? Are there social policies that can create more equality in American society—and is that what Americans really want?

SOC 43901. Power and Identity in Modern Society

(3 -0- 3) Konieczny

In this seminar, students will explore various ways of thinking about the distribution and exercise of power in modern societies, and how power is related to identity and the self. We will read and discuss contemporary theoretical works and case studies which examine authority relations and their construction, and the interplay of power with economics, politics, religion and culture. This course should be of particular interest to sociology majors with interests in political sociology, gender, inequality, culture, and history. (Students who took SOC 23901 may not take this course because of content overlap.)

SOC 45000. Sociology Internship

(V -0- V) Power

This is an experiential course designed to give students some practical experience in the area of urban affairs, social welfare, education, health care, or business, in order to test their interest, complement their academic work, or acquire work experience preparatory to future careers. Students are placed in a community agency in the South Bend area and normally work eight hours per week as interns under the supervision of an experienced practitioner. Hours are flexible, usually set to accommodate the intern's availability and the needs of the host agency. While there are no prerequisites, preference is given to sociology majors, ESS minors, PSIM minors, and students who have had course work in an area related to social concerns. This is a graded course. In addition to field work, academic work includes reading scholarly works related to the field placement, periodic group meetings with the instructor and others in the course, periodic short reports, and a final paper. (For more information and/or an application, contact Ann

Power at Power.4@nd.edu.) The following is a list of agencies that have accepted interns. Students may also request placement in an agency they find on their own (subject to approval by the instructor): La Casa de Amistad; Near Northwest Neighborhood Inc.; Neighborhood Development Association; Safe Station (Youth Runaway Shelter); Salvation Army of St. Joseph County (Social Services); Sex Offense Services of St. Joseph County; Early Childhood Development Center; Good Shepherd Montessori School; Robinson Community Learning Center; Upward Bound; Washington High School; South Bend Center for Hospice & Palliative Care, St. Joseph County; Sr. Maura Brannick Health Center at Chapin Street; The CASIE Center (Child Abuse Services, Investigation & Education); Family Justice Center; Indiana Legal Services.

SOC 45900. Special Practicum in Journal Publishing

(V -0- V) Faeges

This course offers students the opportunity to learn professional journal publishing by working on the staff of *Sociological Voices*, the Sociology Department's own journal which publishes research by undergraduates. Students will learn and participate in all aspects of the journal, both editorial and administrative, which include: how we process papers submitted for possible publication, edit accepted articles, and prepare the journal for printing using Adobe's InDesign software. The course can be taken for 1–3 credit hours, with each credit requiring 2.5 hours of work/week (average). Students will have a large degree of flexibility in scheduling their hours. The specific work assigned will vary with the requirement of the journal. *Prerequisites:* recommendation by a member of the sociology faculty and approval of the instructor.

SOC 46000. Directed Readings

(V -0- V)

This course offers a student the chance to work closely with a member of the faculty on a topic that is not available through any of the regularly offered courses. This independent study course allows for the student, under the guidance of the faculty mentor, to draw up a reading list and study plan for in-depth reading throughout the semester. The student is responsible for periodic oral and/or written reports and at least one major paper. To qualify for this course, a student must have a GPA of at least 3.5 in Sociology. A formal application is required. Students should have a clear idea of the topic they want to pursue and the faculty member they have asked to direct them before requesting a copy of this form from the Director of Undergraduate Studies. This is a graded course, no exceptions. Department approval required. (Before department approval is given, the student must have the application signed by the faculty member, the DUS in Sociology, and an Assistant Dean in the A&L Undergraduate Studies office.)

SOC 48000. Directed Research in Sociology

(V -0- V)

This course offers students a chance to engage in hands-on research, either by working on a faculty member's research project or by pursuing one's own research question unrelated to a senior thesis project. By the end of this course, students should demonstrate a deepened sense of empiricism and methodological understanding. This is a graded course, and a formal application is required. (See the DUS for a copy.) Students engaged in a faculty member's research project should work out a study plan and evaluation process for assigning a final grade with the faculty member. Students engaged in their own research project should 1) submit their research questions, hypotheses, data source, and methodology to their faculty director at the time of application to the course, and 2) submit a written research report by the end of the semester, as part of the final evaluation process. Department approval required.

SOC 48002. Doing Sociology: A Quantitative Research Practicum for Seniors

(3 -0- 3) Sikink

Seniors, this is a research practicum which builds towards the completion of an original, quantitative sociology research project. Whatever your post-graduation plans, this is a great opportunity to do independent research and produce a tangible report which showcases your knowledge and skills. The format of the course will be much like a workshop. Within this framework, under the guidance

of the instructor, you will be able to draw upon your knowledge of research methods, statistics, and sociological theory to investigate a research question of your own choosing. Once you frame your question, you will choose a data set (from among a few large existing sets, one of which is the General Social Survey) and learn to extract a set of variables, do the appropriate analysis and interpretation, and produce a meaningful report on your investigation. Essentially, this is your opportunity to cap off your sociology major!

SOC 48009. Senior Thesis Capstone Project

(3 -0- 3)

Corequisite: SOC 41800

This is the Sociology Department's course for students who want to write a senior thesis. The senior thesis is a two-semester endeavor. All sociology majors are encouraged to consider capping off their studies in sociology by undertaking a senior thesis. Whether one is going on to graduate or professional school or immediately out into the work force, writing a thesis is a mark of competence, creativity, and independent thinking. In this course students work on independent research projects, under the guidance of individual faculty directors. Students may enroll in this course for two consecutive semesters (for a total of 6 credits), or they may begin their thesis research in another course (e.g., SOC 43904, SOC 48002, SOC 48701, or ALHN 48980) and then complete their projects through this course in the second semester. Students who want to complete a senior thesis must see the Director of Undergraduate Studies for an application and for advice on finding an appropriate faculty director for their thesis. (All honors track students are required to write a senior thesis and to enroll in this course for at least one semester.) Department approval required. *Co-requisite:* SOC 41800, Senior Thesis Workshop.

SOC 48601. Social and Religious Research

(V -V- V)

This course is especially designed for the Undergraduate Research Fellows at the Center for the Study of Religion and Society (CSRS). The primary goal of this course is to provide the Fellows with a scheduled time to meet regularly to learn, and to work through research questions and concerns, with a faculty member. These regular meetings will also provide time for the Fellows to develop as a cohort. The class meetings will focus on developing, conducting, writing, and presenting the research projects of the Fellows. Finally, the course will provide an orientation to, and basic professionalization in, the academic study of religion; debrief the Fellows on their experience in CSRS events; and work to obtain possibly needed additional research funding to conduct their own projects. The course is for 3 credits, to be earned over 2 semesters: 2-credits in the fall and 1-credit in the spring. This will allow Fellows more time in the fall semester to get acclimated to the CSRS as well as to their research projects. (This course is for CSRS Undergraduate Research Fellows only; an application is required. Department approval also required.)

Program in Science, Technology, and Values

STV 20105. Theories of Sexual Difference

(3 -0- 3)

An examination of the following questions: What kind of differences separate men and women? Are these differences natural or are they socially produced, and are these differences beneficial to us or are they limiting? What does equality mean for people characterized by such differences?

STV 20109. Knowledge and Mind

(3 -0- 3)

Corequisite: STV 27999

An introductory survey of a number of issues in the theory of knowledge and the philosophy of mind. Issues to be addressed include: What is knowledge? What is consciousness and what might a satisfactory explanation of consciousness look like? What is the “self” and how do we know it? What is perception and what, exactly, can we come to know by perception? What, if anything, can we know without relying on perception? Could we be wrong about everything we take ourselves to know?

STV 20110. Environmental Philosophy

(3 -0- 3)

Corequisite: STV 27999

A philosophically integrated examination of current environmental issues, drawing on familiar literature from ecology (Leopold), economics (Boulding), and ethics (Singer), as well as recent fiction (Tolkien, Herbert).

STV 20114. Introduction to the Philosophy of Biology

(3 -0- 3)

Corequisite: STV 27999

An examination of key concepts and controversies in contemporary biology. The meaning of gene, organism and environment and their interrelationships in the context of development, evolutionary theory, and ecology are closely considered.

STV 20116. Human Nature & New Technology

(3 -0- 3) Mayo

An examination of philosophical and ethical questions associated with the two most revolutionary technologies of the 21st century, the internet and biotechnology.

STV 20117. Philosophy of Science

(3 -0- 3)

A detailed consideration of the central methodological and epistemological questions bearing on science.

STV 20120. Alcohol and Drugs: Anthropology of Substance Use and Abuse

(3 -0- 3)

This class will cover biological, cultural and applied aspects of how anthropology approaches the diversity of substance use practices around the world, as well as resultant social problems and social reactions. The course will draw on both historical and ethnographic analyses to situate alcohol and drug use in the realm of human behavior and experience. Addiction as a concept will be critically analyzed from both biological and cultural perspectives.

STV 20125. Philosophy and Science Fiction

(3 -0- 3) Rea

The goal of this course is to introduce students to some central philosophical problems via reflection on classic and contemporary works of science fiction in conjunction with classic and contemporary texts in philosophy.

STV 20127. Science and Catholicism

(3 -0- 3) O'Callaghan

A historical and philosophical examination of the relations, if there are any, between science and religion with particular reference to the Catholic intellectual tradition. Through the use of historical materials the course will attempt to isolate and examine philosophical difficulties that might be thought to obtain between the claims made by Christian revelation and various scientific theories about features of the world. Emphasis will be placed upon distinctive ways in which the intellectual tradition of the Catholic church has faced the issues raised. Figures to be considered may include Augustine, Aquinas, Galileo, Bellarmine, Darwin, Huxley, Dawkins, Newman, Leroy, Zahm, LeMaitre, and Hawking, as well as others. Topics to be discussed are Language, Meaning, and Revelation, the Nature of Science, Theory, and Hypothesis, Evolution, the Big Bang, Soul and Body, Creation versus Making, Providence and Chance.

STV 20139. Minds, Brains, and Persons

(3 -0- 3)

This course will treat some central issues in the philosophy of mind, such as freedom of the will, personal identity, and the relationship between mind and body.

STV 20142. Architectural History II

(3 -0- 3) Doordan

This course continues the history survey, beginning with Renaissance and Baroque Europe and continuing to the 18th and 19th centuries in Europe and the United States. It extends to the Modern Movement as it affected countries as far-reaching as Japan and Australia.

STV 20154. Modern Physics and Moral Responsibility

(3 -0- 3)

This class examines such questions as: What are the moral responsibilities of the scientist? Should the scientist be held accountable for what might be done with the results of his or her scientific research? Does the scientist have any special role to play, as a citizen, in public debate about science policy? Should the scientist sometimes simply refuse to engage in some kinds of research because of moral concern about the consequences of research of that area? No special background in physics will be assumed.

STV 20160. Literature and Ecology

(3 -0- 3) Sitter

The course will study works of ecological imagination, primarily in contemporary literature but with some attention to classic earlier works. Reading non-fiction, fiction, and poetry, we will explore how ecological awareness figures in various kinds of literature, with a particular emphasis on late 20th- and 21st-century understandings of challenges to sustainability, such as diminishing resources, extinction of species, and climate change. We will attend to the heightened importance of voice, narrative, and metaphor in literary renderings of how to best understand our creative possibilities at what is arguably the “beginning of the most crucial decades in the history of the human species on earth.” Other topics concern how the relation of literature to science and the meanings of “nature” are changing, how to understand current environmental controversies more critically, and how to enter those discussions more thoughtfully. Readings will include novels by T.C. Boyle, Margaret Atwood, and Ruth Ozeki; non-fiction by Thoreau, Aldo Leopold, Annie Dillard, and Bill McKibben; and poems by Gary Snyder, Mary Oliver, Denise Levertov, A.R. Ammons, Wendell Berry, and Pattiann Rogers. Requirements include several one-page response papers, a more ambitious essay, a midterm examination, and a final examination. This course is primarily for non-majors; it can also satisfy one of the requirements of the minor in Sustainability Studies.

STV 20164. Science and Religion in Historical Perspective

(3 -0- 3)

The relationship between science and religion (especially Christianity) has attracted much attention recently. Historians have shown that this relationship has not been primarily a matter of conflict. It has been claimed that the relationship between

science and religion can be characterized by conflict, independence, dialog, and/or integration, for example. This course aims to survey some important events and themes in the relationship between science and Christianity.

STV 20179. Science and Theology

(3 -0- 3)

Both science and religion generate assertions that are held to provide true descriptions of the world and our place in it. Both science and theology subject these assertions to disciplined inquiry and testing within specific communities. In societies (like ours) in which both science and religion are vital forces, these processes of enquiry and testing overlap and interrelate in complicated ways, resulting sometimes in conflict and sometimes in mutual enrichment. This course will investigate these interrelations by means of three case studies: the Galileo affair, the conflict of evolution and creationism, and the ethical issues that arise from new genetic biotechnologies.

STV 20221. Biomedical Ethics

(3 -0- 3)

Corequisite: THEO 22637

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

STV 20225. Ethics of Technology

(3 -0- 3)

An examination of the role of technology in our lives and whether and in what ways technological innovations make us better or worse.

STV 20226. Ecology, Ethics & Economics

(3 -0- 3)

Corequisite: PHIL 22626

An examination, through literature and reasoned argument, of (a) social values behind the economic excesses that have led to our ecological crisis and (b) alternative values by which the crisis might be alleviated.

STV 20228. The Ethics of Emerging Weapons Technology

(3 -0- 3) Lee

This course explores the ethical challenges posed by the ongoing revolution in the technology of war. After learning about some general, philosophical approaches to ethical decision making, we will examine a wide range of new weapons technologies, from “smart” bombs, drones, and robots to em (electromagnetic) weapons, cyberwar, and bio-enhancement, asking the question whether the existing framework of Just War Theory and the Law of Armed Conflict (LOAC) are adequate for war as it will be fought in the 21st century.

STV 20245. Medical Ethics

(3 -0- 3) Solomon

Corequisite: STV 22245

An exploration from the point of view of ethical theory of a number of ethical problems in contemporary biomedicine. Topics discussed will include euthanasia, abortion, the allocation of scarce medical resources, truth telling in the doctor-patient relationship, the right to medical care and informed consent and human experimentation.

STV 20246. Medical Ethics

(3 -0- 3)

Corequisite: STV 27999

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

STV 20247. Environmental Ethics

(3 -0- 3)

Corequisite: STV 27999

This course is concerned with the relationship between human beings and the rest of the natural world, and critically examines various proposals that have been made about how we ought to treat plants, animals, ecosystems, future generations, and scarce natural resources.

STV 20249. Christian Ethics, Technology, and War

(3 -0- 3)

This course examines the theological resources which can be brought to bear on the ethical issues surrounding the use of emerging weapons technologies in war. Some of the emerging technologies that will be considered are Unmanned Aerial Vehicles (UAVs), robots with artificial intelligence, surveillance technologies, and the use of neuroscience technologies to enhance and/or alter the psychological, physical and emotional capabilities of the soldier on the battlefield. The course will begin by introducing students to the Christian just war tradition as a way of demonstrating how theology, law, ethics and war can be related. The course will then undertake a very brief overview of the history of weapons development in war and the Church's reaction to some of them (e.g. the crossbow, nuclear weapons). The course will then move on to examine particular emerging technologies. Students will be asked to consider how the specific technologies impact: 1) the moral agency of individual soldiers in relation to the operation of the technology itself; 2) the relationship of soldiers to fellow allied soldiers as well as enemy combatants; 3) the relationship of individual soldiers to military, social, and political institutions; 4) the relationship of the military to other social institutions, most notably political and economic institutions; and 5) the environment. Students will be asked to consider how the just war tradition may or may not be an adequate framework with regard to thinking through the ethical issues surrounding emerging weapons technologies. The course will conclude by asking students to consider what type of moral responsibility is required by non-military agencies or individuals with regard to their cooperation in the research, development, and funding of these weapons systems (e.g. banks, engineers, civilian corporations, lawyers, the church, the academy, etc.) Students will undertake a major group project and presentation at the end of the course in which the students will present a case study on the moral and ethical implications of a particular weapons system using the resources and material provided to them throughout the course.

STV 20263. Science Fiction and Literature

(3 -0- 3) Miller

Science fiction. Literature. We often think of these two categories as fundamentally separate, even if the occasional author seems to ‘cross over’ from one side to the other. But the main theme of this course will be that the best of modern science fiction takes up the same questions that great literature has always taken up. What does it mean to be human? What is our place in the universe? What do life and death mean—biologically, spiritually, or otherwise? In fact, science fiction seems better equipped to examine some of the newer problems human beings have had to face: for example, what comes next now that we have the power to change our environment irreversibly? This course is not a survey of science fiction, and we will instead read some of its major practitioners—H. G. Wells, H. P. Lovecraft, Frank Herbert, Isaac Asimov, and others—alongside more mainstream literary texts, including but not limited to Greek tragedy, Romantic lyric poetry, the postmodern novel, and the 20th-century ‘literary’ short story (Borges, Joyce, Calvino, Rushdie, etc.). As the course will also emphasize the major role science fiction has played in the new media of the last century, we will take some time to consider SF film (including Ridley Scott's *Blade Runner*), television (such as *The Twilight Zone*), and even rock opera.

STV 20282. Health Care Ethics Twenty-First Century

(3 -0- 3)

Corequisite: STV 27999

This course examines religious and moral questions raised in health care today. Basic concepts in bioethics will be introduced and a range of contemporary issues in bioethics will be treated, e.g., physician-assisted suicide and euthanasia, organ

donation, genetic testing and genetic therapies, and decisions in neonatology. Special emphasis will be given to the contribution of the Roman Catholic moral tradition to contemporary debates.

STV 20304. Energy and Society

(3 -0- 3) Aprahamian

A course developing the basic ideas of energy and power and their applications from a quantitative and qualitative viewpoint. The fossil fuels (coal, oil, natural gas) are studied together with their societal limitations (pollution, global warming, diminishing supply). Nuclear power is similarly studied in the context of the societal concerns that arise (radiation, reactor accidents, nuclear weapons proliferation, high-level waste disposal). The opportunities as well as the risks presented by alternative energy resources, in particular solar energy, wind, geothermal and hydropower, together with various aspects of energy conservation, are developed and discussed. This course is designed for the non-specialist.

STV 20306. Environmental Chemistry

(3 -0- 3) Maurice

Discussion of basic chemical processes occurring in the environment, particularly those relating to the impact of humanity's technological enterprise.

STV 20310. Health, Medicine and Society

(3 -0- 3) Faeges

This course is a comprehensive introduction to the sociology of health and of medicine. First we will examine how sociological variables affect people's health. Research is rapidly accumulating which shows that sociological variables have a huge impact on people's susceptibility to various illnesses, on their access to health care, and on their compliance with medical advice. Such variables include people's neighborhoods, occupations, and lifestyles; their social class, education, race, ethnicity, and gender—and the density of "social networks", whose importance for health was predicted by one of sociology's founders over 100 years ago. Second we will examine medicine, both the practice of medicine by individual health care professionals, viewed sociologically, and the operation of the increasingly large and bureaucratic medical institutions in which health care professionals must work. In addition, we will examine sociological issues that overlap "medicine", such as radically long shifts; the rapid increase in the proportion of female doctors; and increasing concern with work/family balance among practitioners. Third, we will examine health and medicine in relation to other dimensions of society, such as the modern economy, the media, law, the internet, government and politics. Health and medicine are intrinsically social and they cannot be isolated from the effects of the rest of society, many of which run counter to strictly "medical" considerations. Finally, we will examine health and medicine globally. We will compare health and medicine in a number of societies to see and explain how they are similar and how they differ—for example, how different societies pay for medical care. And we will examine global trends with implications for health and medicine that require cooperation among societies, such as the way in which global air travel both increases the danger of global pandemics and makes possible "medical tourism."

STV 20331. Introduction to Criminology

(3 -0- 3) Thomas

As an introduction to the topic of criminology, this course examines crime as a social problem within American society. Particular attention is given to the nature and function of law in society, theoretical perspectives on crime, victimology, sources of crime data, the social meaning of criminological data and the various societal responses to crime. These topics are addressed through specialized readings, discussion, and analysis.

STV 20411. Evolving Science Fictions

(3 -0- 3)

Corequisite: STV 27999

Science is something that our culture has almost complete faith in; we use its technological products almost every day, without thought, from the vehicles we drive to the medical treatment that we accept. But it is also something that we often feel uneasy about as well: science is often the harbinger of catastrophe (global warming) and often causes us to question our identity (cloning, embryonic

research). This course is designed to let us examine, among other things, the development of science's impressive cultural authority as well as the attendant cultural anxiety. We will begin in the early-nineteenth-century, and follow the development of science fiction into the early twenty-first century. However, we will not be limited to the science-fiction genre; we will examine a number of works and genres that incorporate scientific discourse. Our tentative reading list will include: Mary Shelley's *Frankenstein*, selections from the poetry of Alfred Tennyson, *The Strange Case of Dr. Jekyll and Mr. Hyde* by Robert Louis Stevenson, *War of the Worlds* by H.G. Wells, *Foundation* by Isaac Asimov, short stories by Arthur C. Clarke and Ray Bradbury, *Do Androids Dream of Electric Sheep?* by Phillip K. Dick, *The Left Hand of Darkness* by Ursula K. LeGuin, *Oryx and Crake* by Margaret Atwood, and *Never Let Me Go* by Kazuo Ishiguro. We will also read brief selections from scientists and thinkers such as Charles Darwin, Albert Einstein, and Stephen Hawking. Assignments will include two papers, a mid-term exam, and a final exam. Short, occasional reading quizzes will also be given.

STV 20413. Science in Fiction

(3 -0- 3)

Readings in literature that explore science. Designed for pre-professional students in the Colleges of Arts and Letters and of Science.

STV 20423. Scientific Images of Human

(3 -0- 3)

Corequisite: STV 27999

Attempts to "biologize" everything from religion and morality to love and friendship appear continuously in the popular and scientific media. Genes for traits as various as homosexuality and chocolate consumption are proposed. How should we revise our understanding of human nature in light of these claims? This course examines the tensions between our images of ourselves as human beings and the portraits that the sciences—especially biology—provide.

STV 20429. Are We Eating Good Food?

(3 -0- 3) Hicks

In the last few years, an increasing number of voices have answered the title question for this course with a resounding "no." In this course, we will develop conceptual tools from ethics, political philosophy, and philosophy of science to critically engage with both proponents and critics of several aspects of our contemporary food system. Possible topics will be picked based on student interest, and include but are not limited to vegetarianism, conventional vs. organic vs. "beyond organic" agriculture, transgenic or GMO crops, justice for food workers, scientific and public policy controversies over nutrition and health, food deserts, and "special interest" control of agricultural politics and economics. We will also be working on a service project with Purple Porch Co-op—a local food co-op—in order to understand how these issues appear in and impact the food system of the Michiana region.

STV 20431. Philosophy and Cosmology: A Revolution

(3 -0- 3) Bland

In the 17th century there was a revolution in our view of the cosmos and of our own place in it. Most vivid, perhaps was the change from believing that the Earth is at the center of everything to believing that the Earth is just one planet among many, orbiting the sun. This course will consider how and why these changes took place.

STV 20435. The Ethics of Energy Conservation

(3 -0- 3)

This is a joint theology and engineering course exploring the ethics of energy conservation by using the method of community-based learning. Students will begin by using the university campus as a "trial laboratory" for measuring energy efficiency and thinking creatively about possible energy conservation measures. We will then ask them to conduct a limited energy efficiency and conservation study for selected non-profit organizations in the South Bend community. This course will fulfill a number of civic learning goals, including: the cultivation of theological and scientific competence in environmental ethics; the identification of leadership skills necessary to address the concrete concerns facing non-profit organizations as

they strive to meet pressing human needs in an environmentally sound manner; and, formation of consciences sensitive to the social responsibility of caring for the environment.

STV 20461. Nuclear Warfare

(3 -0- 3)

Nuclear phenomena; nuclear fission and fusion. Nuclear weapons. Effects of blast, shock, thermal radiation, prompt and delayed nuclear radiation. Fire, fallout, ozone-layer depletion, electromagnetic pulse, “nuclear winter.” Medical consequences, physical damage, effects on the individual and on society. Defensive measures and their feasibility. Scenarios for war and peace, proliferation of nuclear weapons material, recent diplomatic history. U.S. Bishops’ Pastoral Letter. The course counts for science majors as a general elective credit.

STV 20556. Science, Technology, and Society

(3 -0- 3) Jurkowitz

Corequisite: STV 22556

This course introduces the interdisciplinary field of science and technology studies. Our concern will be with science and technology (including medicine) as social and historical, i.e., as human, phenomena. We shall examine the divergent roots of contemporary science and technology, and the similarities and (sometimes surprising) differences in their methods and goals. The central theme of the course will be the ways in which science and technology interact with other aspects of society, including the effects of technical and theoretical innovation in bringing about social change, and the social shaping of science and technology themselves by cultural, economic and political forces. Because science/society interactions so frequently lead to public controversy and conflict, we shall also explore what resources are available to mediate such conflicts in an avowedly democratic society.

STV 20629. Morality and Machines

(3 -0- 3) Arnold

Computers are an integral part of modern society. This course looks at several moral issues that arise from the use of computers and associated machines, for example, moral issues surrounding automation and computerization, information privacy and security, intellectual property, virtual worlds, and computer crime.

STV 22120. Philosophy and Science Fiction Discussion

(0 -0- 0)

Corequisite: STV 20125

Discussion section for PHIL 20620/STV 20125.

STV 27999. STV Minor Gateway Course

(0 -0- 0)

This course is used as a co-requisite for administrative purposes so that students in the Science, Technology, and Values minor program will be able to web register for other STV courses.

STV 30102. Foundations of Sociological Theory

(3 -0- 3)

Sociological theory is the foundation of sociology. Students in this course will learn two things: first, what theorists do and why and, second, how to use fundamental theoretic concepts—such as exploitation and alienation, social structure and solidarity, bureaucracy and charisma—to analyze and explain contemporary society.

STV 30107. American Intellectual History to 1870

(3 -0- 3) Turner

This lecture course will survey major developments in American thought from the first English contacts with North America to the mid nineteenth century. Emphasis will fall on ideas about religion, society, politics, and natural science and on the institutions and social contexts of intellectual life, with an eye towards understanding the roots of our own ways of thinking. Especially in the first weeks of the course, European backgrounds will also receive attention.

STV 30110. Health, Healing, and Culture

(3 -0- 3)

This course introduces the field of medical anthropology, which examines beliefs, practices, and experiences of illness, health, and healing from a cross-cultural perspective. This course will consider the ways in which medical anthropology has historically been influenced by debates within the discipline of anthropology, as well as by broader social and political movements. Particular emphasis will be placed on the importance of viewing biomedicine as one among many culturally constructed systems of medicine.

STV 30111. Environmental Sociology

(3 -0- 3)

This course will explore the relationship between human societies and the larger natural environment of which they are a part. The main focus of the course will be modern society, but we will also review the history of resource use, pollution, wilderness preservation, environmental movements, and other environmental developments. This course is mainly oriented towards a theoretical perspective and will cover different schools of thought to help students understand the ecological world that surrounds them. The course will be divided into four parts (the moral, the material, the ideal, and the practical).

STV 30112. Sociology of the Environment: Technology & Nature, Crises & Opportunities

(3 -0- 3)

You have heard the warnings about environmental catastrophe, and you have heard the counterclaims that there’s nothing to worry about. Maybe you don’t know who to believe, or maybe you don’t know what you can do. You don’t want to just turn off the electricity and park your car, but if we get this wrong, there is no “Planet B”—Earth is the only planet we’ve got! This course is a chance to take a rational look at the complex relationship between our highly technological society and the natural environment. It offers an introduction to and an overview of the sociology of the environment—including, of course, the subject of global warming, but also the many other ways in which society depends on and impacts nature and how environmental issues become social issues, both within societies, and between societies in our increasingly globalized world. We will use readings and films, lectures and discussions, to explore the issues, with grades based on quizzes and a final exam.

STV 30113. The Greek and Latin Origins of Medical Terminology

(3 -0- 3) Ladouceur

This course offers an introduction to the ancient Greek and Latin languages that enables students to decipher the arcane and often perplexing vocabulary of modern medicine. Basic linguistic concepts are explained, the manner in which medical terms are constructed from Greek and Latin roots is analyzed, and appropriate contextual material on ancient medicine is provided. This is a course of great practical value, not least for the attention it pays to human anatomy.

STV 30121. History of the Medical Science

(3 -0- 3) Hamlin

This course is an intellectual history of western medicine. It is intended to familiarize students with the multiple explanatory problems that occur in medicine and the most important approaches to them. Its focus will be much more on medical theory and knowledge than on medical practice and institutions. The course will begin with a review the Hippocratic and Galenic heritages and early modern appeals to chemical and physical explanations of disease and of health. A middle section will explore the 17th–18th century syntheses of Sydenham, Boerhaave, and Cullen, consider the difficult problem of nosology, and examine the empiricist critique in the clinics of early nineteenth-century Paris, including the conflict between ontological and physiological concepts of disease. The final section will examine several distinct trends in the nineteenth century: the impact of experimental physiology, the growth of clinical science, the emergence of epidemiology and tropical medicine, the rise of bacteriology, immunology, and virology; and the impact of new statistical methods. Reading assignments will be a mix of scholarly articles by medical historians and extracts from primary sources.

Requirements include critical reviews of primary sources, journal, quizzes, and final exam. There are no prerequisites for the course. While some familiarity with the human body and its ailments and vulnerabilities, and some comfort with modes of biological explanation will be helpful, the course is intended for persons with general interests.

STV 30126. Medicine and Public Health in U.S. History

(3 -0- 3)

This course examines health as a unifying concept in American history. It follows several themes: how class, race, and gender; as well as age; lifestyle; and place have manifested themselves in differential health experience; the ongoing conflict between personal liberty and the interests of the state, the remarkable diversity of American medical systems and their close relation to religious and social diversity; the place of medicine in Americanization campaigns; the changing political economy of American medicine; and finally, the emergence of health as the core concern of the American dream. In short, by the end of the course you should have a good understanding of the uniqueness of American medicine and its central place in America's history. You should have acquired an historical and critical context that will be of use in your own encounters with matters of health and medicine--as intelligent citizens and about issues of public health and questions of medical ethics, and as creative thinkers about more satisfactory modes of medical practice and health improvement and protection. The course will use three to five texts, and require exams, project, and presentation.

STV 30132. U.S. Environmental History

(3 -0- 3)

This course is an introduction to the new field of environmental history. While many people think "The Environment" suddenly became important with the first "Earth Day" in 1970 (or a few years earlier), environmental issues have in fact long been of central importance. In recent decades historians have begun actively to explore the past sensibilities of various groups toward their surroundings and fellow creatures. They have also increasingly paid attention to the ways environmental factors have affected history. This course will range widely, from world history to the story of a single river, from arguments about climate change to the significance of pink flamingos, and will survey a number of types of history including cultural, demographic, religious, and animal.

STV 30138. Science and Medicine in Ireland: 1600–1900

(3 -0- 3)

Corequisite: STV 27999

This course surveys the history of science and medicine in Ireland from the seventeenth to the nineteenth centuries. The course will consider the role of science and medicine in Irish social and political life and will offer a fresh dimension to the cultural and intellectual history of Ireland. Lectures will situate scientists and doctors within their historical contexts, showing how intellectual history intersects with political history. Topics will include science as an instrument of colonialism in Cromwellian Ireland, the scientific satires of Jonathan Swift, the role of the medical community during the Great Famine, women in Irish science, and the role of science in the Cultural Revival. Note that no scientific knowledge is assumed or required.

STV 30142. History of Ancient Medicine

(3 -0- 3)

This course traces the development of medicine in the ancient Mediterranean world, concentrating on the medical beliefs, theories, and practices of the Egyptians, Greeks, and Romans. The course emphasizes the value of studying written sources such as the Hippocratic treatises and the works of Galen with artistic evidence and human remains. A connection between ancient and modern medicine is made by considering two contrasting models of disease, the biomedical and the biopsychosocial, that figure as the focus of a contemporary debate on health care.

STV 30149. Environmental Philosophy

(3 -0- 3)

A philosophically integrated examination of current environmental issues drawing on familiar literature from ecology, economics and ethics, as well as recent fiction.

STV 30152. History of Western Medicine

(3 -0- 3)

This course introduces students to the history of western medicine from the pre-Socratics to penicillin; it concludes by applying that history to modern medical questions, including professional identities, emerging diseases, and genetic manipulations. Major themes/topics include changing disease concepts, medical education, medical practitioners, "scientific" medicine, therapeutics, hospitals, and the body; sub-themes include women and medicine, race and medicine, and the patient. Class periods will be divided between lectures and seminars, the latter relying largely on discussions of primary source readings. Students will be encouraged to explore their own particular interests in a research paper.

STV 30153. Madness and Us: A History of Psychiatry from the End of the Eighteenth Century Through the Present

(3 -0- 3)

Corequisite: STV 27999

The course is a thematic overview of the history of psychiatry from its inception at the end of the eighteenth century to the present day. It raises issues concerning: the nature of the Self and its relationship with social compulsion and state power; the connection between body and mind; the nature of disease and illness; the relations between the individual and the expert; the position of marginal groups (women, colonial subjects, homosexuals, etc.) vis-à-vis social norms and authority.

STV 30154. Gender and Science

(3 -0- 3)

An exploration of the ways in which science is gendered, starting with the ways in which women have been excluded from science, and moving through such issues as the invisibility and shabby treatment of women with the products of scientific research, the contributions of women to science and whether these are different in kind from the contributions of men, and the differential effects of science on men's and women's lives.

STV 30155. History of Photography from the 1830s to World War I

(3 -0- 3)

Corequisite: STV 27999

This class examines the evolution of photography from its earliest days to the birth of modernism. topics to be considered include the invention of the medium, the evolution of photography in the 1850s in France and in Victorian England, and travel photography. In the United States, attention will be paid to the photography of the Civil War, the Western exploratory expeditions, and the rise of the documentary mode. New acquisitions by the Snite Museum will compliment a brief survey of Asian and Latin American nineteenth-century photographs. Finally, the course will examine the international rise and fall of Pictorialism, and the beginnings of the snapshot. Regular visits to view original images from each period will take advantage of the Snite Museum's extensive holdings of photographs from the various periods studied.

STV 30161. History of Television

(3 -0- 3) Becker

Corequisite: STV 31161

This course analyzes the history of television, spanning from its roots in radio broadcasting to the latest developments in digital television. In assessing the many changes across this span, the course will cover such topics as why the American television industry developed as a commercial medium in contrast to most other national television industries; how television programming has both reflected and influenced cultural ideologies through the decades; and how historical patterns of television consumption have shifted due to new technologies and social changes. Through studying the historical development of television programs and assessing

the industrial, technological, and cultural systems out of which they emerged, the course will piece together the catalysts responsible for shaping this highly influential medium.

STV 30174. American Wilderness

(3 -0- 3)

How is a national park different from a national wilderness area, a city park, the lakes at Notre Dame, or your back yard? Why are some considered more wild than others, and why is wilderness such an attractive idea? Writers, historians, painters, photographers, and politicians have described American landscapes as wild to great effect, in concert with identities of gender, class, race, and nation. This class will explore how the idea of wilderness—and the places associated with that idea—have developed during the 19th and 20th centuries. We will examine how wilderness has supported the growth of a national identity but largely failed to recognize the diversity of the American people. Course themes include: 1) developing the wilderness idea; 2) national parks and the problem of wilderness; 3) wilderness experience and politics; and 4) wilderness narratives. Readings will range from Henry David Thoreau and John Muir to Edward Abbey and Jon Krakauer, and there will be a strong visual culture component. For their final project students will choose a wild place of their own to interpret.

STV 30175. Environmental History

(3 -0- 3)

This course is an introduction to the new field of environmental history. In recent decades, historians have begun to actively explore the past sensibilities of various groups toward the quality of their air, water, and land; the passionate discussions of philosophers, theologians, and social and natural scientists about resource use, the safety of the environment, and long-term prospects for humanity; and the customs, laws, and managerial systems that guided use of the environment. Historians have also increasingly paid attention to the ways environmental factors have affected the course of history: the effects of the distribution of water, wood, and minerals and of changes in climate or endemic disease. This course ranges widely in methodology from the history of ideas to paleoclimatology, geographically from the ancient Near East to modern America, topically from wood-cutting rights in medieval France to the rise of the organic farming movement and water-allocation laws in the 20th-century American West.

STV 30181. Science and Medicine in the Islamic World: 700-1500

(3 -0- 3)

This course traces the major trends in the history of Islamic science and medicine from the rise of Islam to the early modern period. By examining the conceptual developments in the practice of science, and its position within Islamic societies, it seeks to assess the merits of the various accounts for the inception, and subsequent fate, of the Islamic scientific enterprise. In particular, we will re-evaluate the standard periodization that posits a linear development of Islamic sciences starting with translation and assimilation of the Persian, Indian, and Greek scientific legacies; then, a period of original contributions; and, finally, the transmission of Islamic sciences to Europe.

STV 30186. History and Photography

(3 -0- 3)

Corequisite: STV 27999

Both history and photography were practices invented and developed in the nineteenth century, and they share a capacity to illuminate events in the past. Both history and photography can depict human suffering and point to political practices that might alleviate that suffering. Both must grapple with the nature of time. Both, in odd ways, transcend, but also cement, the finality of death. Both promise a form of truthfulness which they do not always achieve. Given these similarities, it is no wonder that so many writers have considered them together. Often however, when compared, the distinctive qualities of each come to the fore. By reading about photography and history and by looking at images, students in this course will explore the limits and possibilities of each modern pursuit.

STV 30188. History of Science and Race

(3 -0- 3)

The relationship between science and race has been going on a long time and is only getting more confusing. Science has been used in support of racial categorization; science has been used to tear down notions of race-based categories. Biology and anthropology specifically have been used to both support and refute racism. In this class, we will examine the diverse interactions between science and race from the 18th century to the present era of human genomics. We will look both at the scientific study of race and the impact of racial concepts on science, interactions that have given us Nazi medicine, eugenics, the Tuskegee airmen experiments, and modern day pharmaceutical trials in Africa. Throughout, we'll be looking at the personal stories of scientists from minority ethnic groups and questioning the racial demographics of science in the 20th and 21st centuries.

STV 30189. Philosophical Issues in Physics

(3 -0- 3) Bland

This course is intended for non-science students who desire to begin an examination of the origins of the modern laws of physics and for science students who wish to know the actual route to the discovery and the broader implications of the formal theories with which they are already familiar. The historical background to and philosophical questions associated with major laws of physics will be discussed, in large measure by examining directly relevant excerpts from the writings of some of the creators of seminal concepts and theories in physics. The latter part of the course will concentrate on historical and philosophical issues related to relativity and especially to quantum theory and its interpretation.

STV 30193. Global Environment: Capitalism, Colonialism, Culture

(3 -0- 3)

The global climate crisis is upon us, leading historians to ask how did we get to this point and what tools historical knowledge might provide for finding our way in the future. This course considers, first, the nature of "climate collapse" (as some term it) on a global scale. We then turn to the issue of what values and what modes of production and consumption have caused this dramatic transformation of our planet. Looking particularly to political and economic analyses of global history, we trace the effects of modern industrial development and colonialism. Food, water, and other basics of life are all at stake. Finally, we discuss possible responses to this crisis looking to a number of intellectual genealogies from left to right.

STV 30201. Introduction to Clinical Ethics

(3 -0- 3) Foster

The focus of the course will be an examination of the advances in medicine over the last 30 years that have challenged traditional values and ethical norms, and the institutional processes and procedures in place that facilitate decision-making in the health care setting. It will include a sketch of the most recent advances in the various fields of medicine, followed by an examination of the clinical and ethical questions they raise and how they have affected the physician-patient relationship. Note: This course counts as a general elective. Fall and spring.

STV 30225. People, Environment, Justice

(3 -0- 3) Smith

What is our environment? What is our role within our surroundings? How do our actions affect ecological landscapes, and people's livelihoods across the globe? How does our reliance of fossil fuels lead to catastrophes such as Hurricane Katrina? What—if anything—does it mean to be "green?" This course will address these and other questions through the use of critically applied anthropology. We will explore the interaction of local peoples and cultures with natural and man-made ecosystems. We will focus equally on traditional environmental knowledge held by small-scale communities as on the usage of the environment by the industrial world. This course will focus on theory and major environmental questions, problems, and possible solutions illustrated by various case studies from different parts of the world. Topics to be discussed include intellectual property rights, poverty and environmental health and justice, economic development, health and

emerging disease, and ethno- and eco-tourism. Through readings, films, discussions, and independent research students will be able to critically understand the complexity surrounding humans' place within the environment.

STV 30233. Theology and Engineering

(3 -0- 3)

A one-semester introduction to the feedback principles involved in making good choices and avoiding bad choices. Topics from feedback system theory are introduced as needed, and used to characterize such decision-making processes, to determine the challenges inherent in them, and to offer engineering experience toward robustly and optimally tracking good goals, while resisting disturbances and negative influences, all in the presence of sensitive or unknown parameters. Application of the ideas to systematic theology provides an interface with the University's theology/philosophy core requirements.

STV 30310. Global Sustainability

(3 -0- 3)

This course examines the growing need for addressing 'sustainability' as a parameter in the practice of engineering as well as in related disciplines. The course begins with an introduction of the origin of resources on earth and their fragile connection with life on earth both on the ecology and ultimately on the human population. The basic laws regulating the flow of energy and materials through ecosystems and the regulation of the distribution and abundance of organisms is reviewed. A model of the interaction between population, resources, and pollution is analyzed based on the World3 model proposed by Meadows, Randers and Meadows (*Limits to Growth*, 1972). The model predictions made in 1972 are compared with results compiled in 2002 (1). The model include analysis of the state of land, soils and food, water, forests, non-renewable resources, energy, and capital. Emphasis is placed in analyzing energy sustainability and assessment of current and potential future energy systems. This includes availability, extraction, conversion, and end-use to meet regional and global energy needs in the 21st century in a sustainable manner. Different renewable and conventional energy technologies will be discussed and their attributes described within a framework that aids the evaluation and analysis of energy technology systems in a global context. The effect of human activity on the environment with emphasis on climate change will be also analyzed. The World3 model will be used to discuss different scenarios of the state of the our planet based on population, industrial output, food, and population as well materials standards of living and human welfare and human footprint. The course closes with a discussion of what we can do as engineers and professionals to insure that growth is consistent with a sustainable future.

STV 30311. Introduction to the American Health Care System

(3 -0- 3) Navari

The course will begin with a short history of the American health care system and will be followed by a discussion of the major components of the system (patients, providers, payers), health insurance coverage, managed care programs, the movement for quality health care, physicians in the changing medical marketplace, health care expenditures, and academic medical centers.

STV 30319. Self, Society and Environment

(3 -0- 3)

This course focuses on social psychological aspects of relationships between humans and the natural environment. Issues include how humans interact with different environments, symbolic transformations of environments, and competing accounts or claims concerning human-environment relationships. The course is framed in a sociology knowledge perspective and touches on alternative ways of envisioning and valuing individual and institutional perspectives on human-environment relationships with an eye toward implications for social change.

STV 30342. Understanding Food and Agricultural Policy

(3 -0- 3) Doppke

This course introduces students to agro-food studies: the linked systems of agricultural production, food processing, distribution, and consumption. Market forces, technology, public policies, and increasingly, quasi-private systems of governance

structure agro-food systems. Our aim is to understand how these forces have together shaped what we call modern agriculture, and how to realistically evaluate criticisms against it.

STV 30343. Environmental Politics

(3 -0- 3)

The first half of the course provides an overview of major American environmental policies such as regulating land use and preservation, water, air, and endangered species. The second half of the course deals more directly with issues of policy formulation, implementation and enforcement.

STV 30353. Globalization in Africa

(3 -0- 3)

This course will explore contemporary globalization in Sub Saharan Africa and its effects on political change. Departing from the macro-perspective of Africa's marginalized role in the global economy, this course will focus on the ways that international forces and new technologies are affecting citizens and countries on the continent. Through country case studies and reviews of current events in Africa, the course will explore a diverse set of topics including technological change and development, immigration, art and culture, foreign aid, and China's role in Africa. The course will attempt to highlight the new opportunities for citizens as well as the challenges that remain for African countries in the globalized world.

STV 30363. Intl Environmental Politics

(3 -0- 3)

This course examines the responses of nations and international organizations to the environmental challenges of the present and future, including pollution, depletion of natural resources, and global warming.

STV 30382. Technology of War and Peace

(3 -0- 3)

This course surveys the impact of military technologies on world history. Topics include the rise of gunpowder weaponry and the fortification revolution in the early modern period, navalism, particularly in the 19th century, the role of military technologies in European colonial expansion, and the science-based military of the 20th century, leading up to the age of nuclear weapons. The course considers also military technologies as deterrents, and issues of war and peace as stimuli to technological development.

STV 30476. Place, Environment and Society in Australia and Melanesia

(3 -0- 3)

Aboriginal Australian and Melanesian approaches to place have long intrigued and puzzled outsiders, challenging commonly-held assumptions about the division between nature and culture or between human societies and their physical environments. This course introduces students to some of these exotic approaches to place and encourages them to see their own environment in a new way. It also considers how indigenous Melanesian and Australian conceptualizations of place are being transformed through engagement with a global capitalist economy and in the context of modern nation states. How do notions of place change when land becomes a commodity? How are shifting connections to place transformed into legal ownership? What happens when kin networks are divided by national boundaries? Students will read several ethnographic monographs that convey a holistic sense of social life in particular locales. Topics that may be of particular interest include mythic and ritual relationships to the land, connections between language, place, and cultural identity, the ways that modern states enforce geographic boundaries, legal battles for land rights, and the relationship between global environmentalism and indigenous people.

STV 30900. Foundations of Sociological Theory

(3 -0- 3) Konicieczny

Sociological theory is the foundation of sociology. Students in this course will learn two things: first, what theorists do and why and, second, how to use fundamental theoretic concepts—such as exploitation and alienation, social structure and solidarity, bureaucracy and charisma—to analyze and explain contemporary society.

STV 30902. Methods Sociological Research

(3 -0- 3) Gunty

Sociology 30902 is designed to provide an overview of research methods in the social sciences. Topics covered include (1) hypothesis formulation and theory construction; (2) the measurement of sociological variables; and (3) data collection techniques—experimental, survey, and observational. At the end of the course, students should appreciate both the strengths and the limitations of sociological research methods.

STV 30986. Photography as History

(3 -0- 3) Thomas

Photographs are so much a part of our lives that we often fail to wonder at them or think about how we use them. This course explores photography's alliance (and tension) with histories both personal and political. We begin by considering photography as a private medium, a treasury of personal memories and a mode of self-exploration. We look at family photographs and albums, trying to understand what we are doing when we collect these. As we will find, reading works such as Roland Barthes's *Camera Lucida*, the photography's value for us personally rests on ontological questions as to the nature of the medium and on its relationship with language and larger social forces. With this realization in mind, we then turn to reading about photography as a public medium, the political histories it tells and the historical interventions it tries to make. This second half of the course explores photography's relationship with the state. The central, guiding question is how photography is used to substantiate and create histories of individuals and of nations. Readings and images will circle the globe from France, Germany and America to India and Japan.

STV 33195. Technology and Social Change

(3 -0- 3)

This class examines how technology has often served as the catalyst for social change for hundreds (indeed, thousands) of years (and vice versa). The course will be divided into several sections, some of which will trace from a historical perspective the social impact of specific technologies. Other course sections will examine technology and social change in specific contexts (e.g., the medical and communication contexts). The first portion of the class will be devoted to some of the basic issues in our collective understanding of technology and social change. Issues such as de-skilling of workers, institutionalization of technology into society, and innovation will be examined, as will various approaches to understanding technology, such as the social construction of technology and technological determinism.

STV 33370. Economics of Science

(3 -0- 3)

This course describes the changing history of the organization and subsidy of scientific research, then surveys the different methods of economic theories and applied scientific process.

STV 33401. Animal Welfare and the Human-Animal Bond: Community Based Learning Seminar

(1 -0- 1) Whaley

Consider the fact that in six short years, one female dog and her offspring can give birth to 67,000 puppies. In seven years, one cat and her young can produce 420,000 kittens. Three to four million dogs and cats are euthanized each year. It is estimated that there are 60 million feral cats in the U.S. In a society that considers pets as part of their family, watches Animal Planet, and spends millions of dollars on pet products, it is imperative that we acknowledge and educate ourselves on the issues of over population of pet animals in our society. What is our responsibility to these animals, and how can we solve these pressing problems? The focus of

this course will be on animal behavior from an evolutionary perspective. The students will learn to recognize both desirable and undesirable behaviors in pet animals. They will learn how to use evolutionary behavior training methods to alter detrimental behaviors and reinforce those that are advantageous. This course will also cover animal welfare issues, and will intimately and meaningfully connect the state of humans, to that of animals. The students will carry out community research projects of their choice and will immerse themselves in an important issue and generate a product that can help the plight of animals (and therefore humans) in our community.

STV 40110. Visits to Bedlam

(3 -0- 3) Fox

Until visitation was restricted in 1770, London's Bethlem Hospital (popularly known as "Bedlam") attracted as many as 96,000 spectators per year who paid for the privilege of watching mental patients. Like the tigers in The Tower, these patients were not simply chained, but shown, put on exhibition. The cruelty of this practice and the fact that it was stopped both point to the eighteenth-century fascination with madness, with the irrational, with what Freud would call the "unheimlich," the "uncanny." Samuel Johnson's astronomer who comes to believe that he personally controls the weather, Laurence Sterne's mad Maria, piping for her lost lover, John Locke's man who believes himself made out of glass and who acts "reasonably" to avoid hard objects, or Jonathan Swift's modest proposer who concocts a cookbook to save the Irish nation all bear witness to this other side of the eighteenth century, the subject of this course. We will begin with selections from Cervantes' *Don Quixote* and some short readings in Locke and others who attempted to analyze madness. We will then move on to explorations of Samuel Johnson, Tobias Smollett, Laurence Sterne, and Jonathan Swift. Our major focus will be on Swift, with special attention to his poetry, *Gulliver's Travels*, and *A Tale of A Tub*. Swift, who was a Governor of Bethlem Hospital, left most of his money to fund the first mental hospital in Ireland, St. Patrick's, which is still there. As he later said, "He gave what little wealth he had, To build a house for fools and mad: And showed by one satiric touch, No nation wanted it so much." For the sake of comparison, we will conclude with several nineteenth century selections.

STV 40111. Molecular Revolution

(3 -0- 3) Benn Torres

Issues involving the use of genetic technology has become commonplace within our lives. Throughout this course, students will explore the various ways that genetic information is used and interpreted by scientists, media, and the public with the primary goal of illustrating different social meanings of scientific data. Topics that will be covered include pre-implantation genetic testing, prenatal genetic testing, personalized genetic medicine, genetics and identity, genetically modified foods, and consumer-driven genetic testing.

STV 40119. Monsters, Cyborgs, and Other Created Bodies

(3 -0- 3)

A critical analysis of monsters, cyborgs, and other "created bodies" in literature.

STV 40121. Human Diversity

(3 -0- 3)

Corequisite: STV 27999

Issues concerning the nature of human diversity (race, intelligence, sex, gender, etc.) are a continuing source of social and scientific debate. This course is designed to present the issues and methods used by physical anthropologists to study both the biological basis of human differences, as well as the ongoing process of human adaptation and evolution in response to climate, nutrition, and disease. Integration of the social, biological, and medical sciences will be employed to investigate modern human variation.

STV 40122. Methods in Medical Anthropology

(3 -0- 3)

Corequisite: STV 27999

This class will provide extensive classroom and hands-on training in research methods for medical anthropology. It will place slightly greater emphasis on qualitative methods, such as participant observation and interviewing, but will

provide an overview of quantitative methods (including building surveys and some basic statistical analysis). Students will learn by doing, conducting original research on contemporary health issues in the local community (such as HIV/AIDS and substance abuse).

STV 40125. Gender and Health

(3 -0- 3)

This course looks at the intersection of gender, health policy, and health care organization around the world. Some of the issues to be discussed include: medicalization of the female body; critical medical anthropology; the politics of reproduction; social production of illness and healing; politics, poverty, and health; national and international health and development policies.

STV 40126. Philosophy of Cognitive Science

(3 -0- 3)

Corequisite: STV 27999

In this course, we will explore three main topics: philosophical foundations of cognitive science, philosophical critiques of contemporary cognitive science, and the implications of cognitive research for traditional philosophical issues. The first part of the course will examine the ways in which certain philosophical theories about the mind provide support for the basic assumptions of cognitive science, while others have challenged these assumptions. In the second part we will look at specific ways empirical work in psychology is thought to be relevant to issues in philosophy of mind, epistemology, philosophy of science and other areas of philosophical inquiry. Questions to be addressed will include the following: Is it possible for a computer to be conscious? Are we born with certain kinds of knowledge? To what extent are humans rational creatures? What is the relevance of neuroscience to psychology, and vice versa?

STV 40130. Crime, Heredity, and Insanity in American History

(3 -0- 3) Przybyszewski

The 19th century witnessed a transformation in the understanding of the origins of criminal behavior in the United States. For many, a religious emphasis on humankind as sinful gave way to a belief in its inherent goodness. But if humans were naturally good, how could their evil actions be explained? Drawing on studies done here and abroad, American doctors, preachers, and lawyers debated whether environment, heredity, or free will determined the actions of the criminal. By the early 20th century, lawyers and doctors had largely succeeded in medicalizing criminality. Psychiatrists treated criminals as patients; judges invoked hereditary eugenics in sentencing criminals. Science, not sin, had apparently become the preferred mode of explanation for the origins of crime. But was this a better explanation than what had come before?

STV 40135. Philosophy of Science

(3 -0- 3)

A detailed consideration of the central methodological and epistemological questions bearing on science.

STV 40137. Philosophy of Mathematics

(3 -0- 3)

A survey of central issues in the philosophy of mathematics.

STV 40144. Religion and Science

(3 -0- 3)

An examination of the nature and limits of both scientific and religious knowledge, and a discussion of several cases in which science and religion seem to either challenge or support one another.

STV 40151. Psychology and Medicine

(3 -0- 3) White

This course has two basic objectives. First, it examines from a lifespan and psychological perspective the factors that place individuals at different stages of life at risk for illness and assist them in maintaining their health. In addition, it addresses a variety of challenging psychological and social issues that physicians and other healthcare professionals must face in the practice of medicine. The course covers

a range of topics dealing with health issues related to different stages of human development (childhood, adolescence, and adulthood), disabled populations, culture and gender, stress, physician-patient interactions, death and dying, professional ethics, and social policies relating to health care. The course is primarily intended for students intending to enter medical school. Most classes will involve brief formal presentations by the instructors and invited guests, followed by discussion of assigned readings pertinent to the day's topic. In addition, students will be exposed, through a limited practicum, to a variety of medical settings.

STV 40153. Visits to Bedlam

(3 -0- 3)

Until visitation was restricted in 1770, London's Bethlem Hospital (popularly known as "Bedlam") attracted as many as 96,000 spectators per year who paid for the privilege of watching mental patients. Like the tigers in The Tower, these patients were not simply chained, but shown, put on exhibition. The cruelty of this practice and the fact that it was stopped both point to the eighteenth-century fascination with madness, with the irrational, with what Freud would call the "unheimlich," the "uncanny." Samuel Johnson's astronomer who comes to believe that he personally controls the weather, Laurence Sterne's mad Maria, piping for her lost lover, John Locke's man who believes himself made out of glass and who acts "reasonably" to avoid hard objects, or Jonathan Swift's modest proposer who concocts a cookbook to save the Irish nation all bear witness to this other side of the eighteenth century, the subject of this course. We will begin with selections from Cervantes' *Don Quixote* and some short readings in Locke and others who attempted to analyze madness. We will then move on to explorations of Samuel Johnson, Tobias Smollett, Laurence Sterne, and Jonathan Swift. Our major focus will be on Swift, with special attention to his poetry, *Gulliver's Travels*, and *A Tale of A Tub*. Swift, who was a Governor of Bethlem Hospital, left most of his money to fund the first mental hospital in Ireland, St. Patrick's, which is still there. As he later said, "He gave what little wealth he had, To build a house for fools and mad: And showed by one satiric touch, No nation wanted it so much." For the sake of comparison, we will conclude with several nineteenth century selections.

STV 40154. Cultural Aspects of Clinical Medicine

(3 -1- 4) Wolosin

This course focuses on social science approaches to sickness and healing. The medical encounter is examined from anthropological perspectives. The course emphasizes the difficulties traditional biomedicine has in addressing patients' expectations for care. Students serve an internship as patient ombudsman in a local hospital emergency room 4 hours per week. Students MUST have access to transportation to participate in the ER internships. *Students are required to sign a waiver, to present evidence of immunizations, and to receive a TB skin test.*

STV 40156. Exploring Critical Topics in Science, Technology, and Society

(3 -0- 3)

This course explores important topics and methods in the history and philosophy of science (HPS), and in what has come to be called "science and technology studies" (STS). How do drawings, photographs, graphs, computer generated images, or more generally visual representations, display nature, present data, and express theoretical claims? What did it mean to be a scientist (or "natural philosopher") in the eighteenth century? How have the communities of scientists and of engineers changed over the past four centuries? How can we know what environmental changes will occur in the future, and, more generally, what role have models, mechanical, electrical, theoretical, as well as mechanical and computer simulations, played in scientific and technological investigations? How about today? Compared with the Science, Technology and Values survey (STV 20556), in this course we examine fewer topics in greater depth, so it is preferable to take STV 20556 prior to this course; however, it is not a prerequisite.

STV 40157. Philosophy of Biology

(3 -0- 3)

Corequisite: STV 27999

An examination of key concepts and controversies in contemporary biology. The meaning of gene, organism, and environment and their interrelationships in the context of development, evolutionary theory, and ecology are closely considered.

STV 40166. History of Modern Astronomy

(3 -0- 3)

The course traces the development of astronomy and cosmology from the late 17th century to the 1930s. Attention is given to the interactions of astronomy with other areas of science and with philosophical, religious, and social factors.

STV 40172. History of Chinese Medicine

(3 -0- 3) Murray

In light of the contemporary currency of certain Chinese practices in the field of alternative medicine, this course will explore the phenomenon of Chinese traditional medicine in both its historical and contemporary settings. The first unit, Medicine in Ancient China, will explore the earliest medical ideas of the Chinese and will demonstrate how the state's political unification gave rise to a correlative cosmology that not only included Heaven and Earth, but also human beings as integral elements of an organic cosmos. The second unit will explore the influences and contributions of Taoism (Daoism) and Buddhism to Chinese medicine and will explore what it meant to be both physicians and patients in late imperial China. The third unit will focus on medicine in contemporary China and will feature the experiences of Elisabeth Hsu, a student of Chinese medical anthropology who, as a part of her doctoral research, enrolled as a student in Yunnan Traditional Chinese Medical College between September 1988 and December 1989. We will conclude the course with a brief examination of the influence of Chinese medicine on the contemporary world.

STV 40187. Technology in History

(3 -0- 3)

A thematic survey of the history of technology, from the Neolithic discovery of agriculture to the information age. Topics include the chemistry and metallurgy of antiquity (high-tech ca. 1000 B.C.), technology in Christian theology; the power revolution of 1200; arms races from the 15th century onward; the marriage of art and science; the industrial, agricultural, transport and communications revolutions; the American system of manufactures; the evolution of the engineering profession; and modern efforts to plan the technological future. These topics form the basis for exploring the following themes: How does technology change? How did we get where we are—do we have the technology now that we must have, should have, or need to have? What guides technical creativity? How have social effects of technologies been assessed and dealt with? How have technologies fundamentally changed ordinary life and societal organization?

STV 40203. Theology of Medicine

(3 -0- 3)

An examination of moral problems in medicine in the context of key theological themes, e.g., creation, providence, the nature of Christian personhood, suffering and redemption, freedom and grace. Various normative problems will be explored, e.g., physician-assisted suicide, artificial reproduction, and access to health care.

STV 40216. Bio-Medical Ethics, Scientific Evidence and Public Health Risk

(3 -0- 3) Shrader-Frechette

An analysis of the ethical theories provided by contemporary philosophers to guide research and practice in biomedicine. The course will focus on analysis of contemporary public health problems created by environmental/technological pollution and will address classic cases of biomedical ethics problems. Students who are not pre-med, engineering, or science majors need the professor's permission to take this course.

STV 40230. Internet and Society

(3 -0- 3) Rose

This course will spend the semester studying the impact the World Wide Web has had on several key areas of our society, including communications, commerce, marketing, productivity, education, collaboration, and our sense of community. Through a combination of discussion, group presentation, guest lectures, and out of class research, students will be exposed to some of the profound effects this medium has had on our culture. In spite of the bursting of the dot come bubble, the Web has left all of the above mentioned areas substantially changed, many for the long term. The positive and negative forces brought on by this technology must be recognized, studied, and dealt with if we are to truly embrace the momentous opportunities brought about by the World Wide Web.

STV 40275. Ethical and Professional Issues in Computer Science and Engineering

(3 -0- 3)

Corequisite: STV 27999

This course seeks to develop a solid foundation for reasoning about the difficult ethical, professional, and social controversies that arise in the computing field. Emphasis is placed on identifying the appropriate legal and professional context and applying sound critical thinking skills in the analysis of a problem. The course relies heavily on analysis of real-life case studies, both historical and current. Topics covered include professional codes of ethics, privacy issues, freedom of speech issues, computer security, safety-critical systems, whistle-blowing scenarios, intellectual property issues in computing technology, and social transformation driven by computing technology.

STV 40301. Energy Technology and Policy

(3 -0- 3)

This three-credit course provides a comprehensive treatment of the role of energy in society and may be taken concurrently by engineering and non-engineering students. It proceeds along two parallel tracks, one dealing with the scientific/technical foundations of energy utilization and the other with its economic, political, environmental, and ethical implications. Scientific/technical issues will be treated at a level that is appropriate for non-engineers and at the same time beneficial to both engineers and non-engineers. The required background in mathematics is largely confined to high school algebra, with occasional use of elementary concepts from differential and integral calculus.

STV 40304. Sustainable Energy

(3 -0- 3)

Corequisite: STV 27999

The course provides a comprehensive treatment of the role of energy in society. After reviewing the benefits and problems associated with today's dependence on fossil fuels, attention is directed to the opportunities and challenges of transitioning to a sustainable energy future. Course content is developed along two essential and interrelated tracks, one scientific/technical and the other socio/economic/political.

STV 40319. Self, Society and Environment

(3 -0- 3) Weigert

This course introduces students to social psychological aspects of the natural environment. Issues considered include interacting with different environments, symbolic transformations of environments, competing accounts, and claims concerning environments. With an overview of basic information, these issues are discussed from the perspectives of individual self and sociocultural institutions. The course touches on alternative ways of envisioning, interacting, and valuing human-environment relations with an eye toward individual and collective change.

STV 40325. GLOBES: Humans Genes Envirmt

(3 -0- 3) Hollocher

Globally humans inhabit and alter landscapes creating anthropogenic ecologies impacting all resident organisms. The distribution and structuring of genomes, the movement and virulence of pathogens, and the patterns of coexistence of organisms are all interconnected at multiple levels. In this course we focus on

the dynamic transaction between organisms and environments at these multiple levels, with a specific consideration of impacts on health, interspecies interfaces, and population genetics. We will consider theoretical perspectives and specific examples from population genetics, ecology, evolutionary biology, anthropology, and political ecology to examine scenarios of interaction between humans, genes and the environment. Objectives: a) Understand the transactional nature of organism–environment interactions and the importance of collaboration in its study; b) Recognize the importance of considering disparate theoretical perspectives in understanding the patterns and processes of behavioral, genetic and cultural interactions in anthropogenic contexts; c) Gain the ability to construct scenarios and plans of approach to issues facing humans, genes and the environment integrating diverse disciplinary orientations.

STV 40347. Health Economics

(3 -0- 3)

The first segment of the course demonstrates how economics can be applied to the analysis of the health care sector. The second part focuses upon the pending policy debate of how we as a society will provide for the health care needs of the elderly.

STV 40360. Science and Environmental Policy in the United States

(3 -0- 3)

Corequisite: STV 27999

This class will meet in a seminar format. We'll examine the history of U.S. scientific and environmental policy from 1850 to the present day. Particular attention will be paid to what kinds of research are funded by the federal government in each period and how this reflects the changing concerns of the populace. We also examine the role of both the executive and legislative branches of government in supporting science and identify interest groups that have been influential in shaping science policy. Attending a conference on The Commerce and Politics of Science, being held at Notre Dame this fall, will be required of students in this course. This will introduce students to two central concerns: first, how do commercial and political interests shape scientific inquiry, knowledge, and practice, both now and in the past? Second, is it possible to say that one or another economic or political context is favorable or unfavorable to science or more likely or less likely to produce "good science"? The final portion of the course will be devoted to case studies in current scientific and environmental policy. Students will be required to research the development of a particular policy—stem cell research, the clean air act, the space station—and present to the class and analysis of both the history of the policy and an evaluation of its impact on public life.

STV 40401. The Future of Energy

(3 -0- 3)

This three-credit course provides a comprehensive treatment of the role of energy in society and may be taken concurrently by engineering and non-engineering students. It proceeds along two parallel tracks, one dealing with the scientific/technical foundations of energy utilization and the other with its economic, political, environmental, and ethical implications. Scientific/technical issues will be treated at a level that is appropriate for non-engineers and at the same time beneficial to both engineers and non-engineers. The required background in mathematics is largely confined to high school algebra, with occasional use of elementary concepts from differential and integral calculus.

STV 40402. Wireless Communications: The Technology and Impact of 24/7 Connectivity

(3 -0- 3)

This survey-style course offers an opportunity to gain a basic understanding of the technical, regulatory and business aspects of the wireless revolution and its impact on society. It is intended for both engineering and non-engineering students. The course will include such topics as the representation, transmission, and reception of information in electrical form, the physical properties of radio signals and other wireless media, the principles and challenges of sharing a common medium, and privacy and security issues, as well as the social and commercial implications of wireless communications.

STV 40403. Nanotechnology: Opportunities and Challenges

(3 -0- 3)

Corequisite: STV 27999

This course will provide a comprehensive introduction to the emerging fields of nano science and nano engineering, with an emphasis on the main ideas and concepts. Through directed readings and discussion, students will study the scientific underpinnings, and explore the societal impact and ethical implications of nanotechnology. They will also explore the potential for nanotechnology to impact a wealth of innovative applications across a vast array of fields including healthcare, environment, biotechnology, energy and food production, information technologies, and aerospace.

STV 40455. Water, Disease & Global Health

(3 -0- 3) Shrout

The main emphasis of the course will be to study the diseases important to both civilized societies and the third world. Basic principles of public health, epidemiology, infectious disease microbiology, and engineering application will be learned utilizing both local and global examples. Particular emphasis will be given to diseases transmitted by water. As a complement to environmental design classes, this class will focus upon the disease agents removed in properly designed municipal water and waste systems.

STV 40498. Energy & Climate

(3 -0- 3)

Corequisite: STV 27999

This course integrates the principles of physical sciences and engineering as they pertain to energy, its sources and uses and the impact of these on the environment. The great majority of energy used by society comes from fossil fuels. The consequences are that carbon dioxide levels in the atmosphere have been increasing and that readily available sources of oil have been depleted. Prospects for sustainable energy use will be discussed including an engineering cost/benefit analysis of different sources. A question that will be examined in particular detail, is the effect of energy use on climate change both now and in the future. To do this we will analyze the complex couplings and feedback mechanisms that operate between the geosphere, the biosphere, the atmosphere, and the hydrosphere as related to global climate change.

STV 40700. The Culture of Portable Media

(3 -0- 3) Collins

The most significant development in media culture within the past decade has not been a new wave in filmmaking or unprecedented developments in television programming. An ever-increasing percentage of the global population now has portable media devices where they can download their music, books, films, and videos into personal digital archives, and then take those libraries with them wherever they go. What are ramifications of this accessibility, and just as importantly, this "archivability"—from the form of the work itself, to who can speak as a cultural authority, to what pleasures are generated by the experience? How have these devices changed the production, circulation, and consumption of media in fundamental ways? How do we sort out the complicated interplay between technology, consumerism, and identity formation which is at the heart of digital culture?

STV 40853. Science, Faith and Reason

(3 -0- 3) Rasoulipour

The twentieth century, and particularly the second half of it, saw not only the increase in findings of natural science, but also the rise of claims that in certain areas scientific findings have supplanted traditional metaphysical reasoning. This amounts to the claim that in the debate between faith and reason the role of reason is taken by science. Faith, if it does not completely atrophy, is faith in science and not faith in God. The latest debates between faith and scientific reason, often of an extremely speculative turn, are new phases to old debates over the perennial question: Is the universe just there, or is there some explanation for its physical character, and for its very existence? In this course we will examine the literature of both classical Christian and classical Islamic theology and philosophy in order

to see how these traditions address the relationship between science, faith, and reason. The goal of the course is neither religious dialogue nor a comparison of the two traditions. Instead we will consider what resources both traditions offer intellectuals today who see science, religion and philosophy as partners in the quest to understand human existence and the natural world. No prior knowledge of Islam is needed in order to take this course. This course will be conducted with the help of extracts from original works of medieval and contemporary Christian and Muslim writers on some scientific topics (mathematics, medicine, chemistry, astronomy, physics, etc.) in addition to classical treatments of faith and reason (whether from Justin Martyr's *Dialogue with Trypho*, Tertullian's *The Prescriptions against the Heretics*, Ghazali's *Deliverance from Error*, and *The Incoherence of the Philosophers*, Aquinas' *Summa Theologica* or John Paul II's *Fides et Ratio* and the writings of Muslim "neo-Mutazilites").

STV 43101. Telling About Society: Media, Representation, and the Sociology of Knowledge

(3 -0- 3) McDonnell

How do we see the world? How do these modes of representation determine our social reality? How can we use media to create social change? This rigorous seminar interrogates the lenses through which we see, and more importantly make, our world. We open with an interrogation of theories of media, representation, and the sociology of knowledge so as to develop a critical eye towards how these lenses shape our everyday reality. From there we discuss particular modes of representation: photography, ethnography, statistics, journalism, maps, and more. We consider the inherent biases within these ways of seeing, and debate the appropriate uses of these technologies. From this starting point, the course turns its eye to particular historical periods and phenomena: the Great Depression, Vietnam War, the era of HIV/AIDS, and the growing surveillance society. We compare across different media representations of each event to evaluate how different media tell very different kinds of stories about that moment. Ultimately, this class presses students to consider the capacities of these media for encouraging mobilization and change—to redesign the world. To work through these issues, students will engage in fieldwork on a local topic of their choosing. Their final project will consider how different media have shaped our knowledge of a local issue, and in response students will create a final multimedia campaign designed to alter people's "ways of seeing" that topic. In this project, students will persuade their audience using a variety of "lenses" to make their case: from ethnography to documentary film to radio journalism to new media and more.

STV 43110. Sociology of Media, Technology and Society

(3 -0- 3) Halton

From an ever-increasing proliferation of electronic devices and "enscreening" of daily life, to the increased reliance on automatic and non face-to-face interactions, to virtualizing leisure activities, media and technology have become central players in social relations. This seminar will explore the ways media, and technology more generally, are transforming contemporary society.

STV 43111. The Life and Works of Darwin

(3 -0- 3)

Through Darwin's work and biographic material about Darwin, we examine his ideas as well as the social context in which these Ideas were developed.

STV 43113. Darwin, Philosophy & Religion

(3 -0- 3)

The year 2009 marks both the 200th anniversary of Darwin's birth and the 150th anniversary of the publication of his *On the Origin of Species*. The *Origin* has had a profound effect, not just on biology, but also on how we think about ourselves, about human nature in relationship to the natural world, and both of the latter in relationship to God. This class will begin by setting the philosophical and theological scene in the 19th century and then, against that backdrop, reading Darwin's own work (the *Origin* and excerpts from *Descent of Man*) and biographical material about Darwin's life. We will then embark on an exploration of the impact of Darwin's ideas, focusing on their theological and philosophical implications. This class will thereby provide a deeper understanding of the birth and context of Darwin's ideas and their on-going significance in the twenty-first Century. It

will include invited speakers and at least one field trip (to the Evolution exhibit at Chicago's Field Museum). Students will also be required to attend some of the sessions at the second of the two international conferences on evolution being presented by Notre Dame in cooperation with a consortium of Roman Pontifical Universities (Nov. 1–3). Beyond this, and faithful class participation, the course will entail several in-class presentations a midterm and a final paper.

STV 43114. The Scientific Self: Body and Soul in the 17th Century Europe

(3 -0- 3)

Taking the activities of the Royal Society of London and the "birth of modern science" as our focal point, this seminar examines the profound changes in our conception of self—of who and what we are, our place in the cosmos, and our relationship to that cosmos and to God—that took place in the seventeenth century.

STV 43131. Phil of the Human Sciences

(3 -0- 3)

An inquiry into the central forms of explanation employed in the social sciences: rational choice, intentional, functional, structural, and interpretive. One emphasis will be on understanding the ways in which these approaches conform to or differ from explanatory strategies in the natural sciences. A second emphasis will be on the microfoundations of social theory: What assumptions about human nature and social life are presupposed in adopting a particular explanatory strategy?

STV 43134. Addiction, Science and Values

(3 -0- 3)

Students will be introduced to topics in the ethics of care for the indigent; to alternative therapies for recovery and maintenance; and to current brain models of addiction. They will be placed as volunteers (for 14 weeks) with institutions serving indigent recovering addicts in St. Joseph and Elkhart counties.

STV 43142. Doing Science, Doing History: Practice, Pedagogy and the Laboratory in Nineteenth-Century Chemistry

(3 -0- 3)

This course is an introduction to the history of chemistry over the long-nineteenth century period bounded roughly by the French Revolution and World War One, and examines the roles of analysis, synthesis in the making of modern chemistry. We will use the case of chemistry to address a range of issues in the history of modern science. The course is primarily historical but we will examine the relationship between historical and philosophical approaches to some key events (beginning with the Chemical Revolution) and some central questions (e.g. What is the relationship between experiment and theory? How does collective research work?).

STV 43171. Hist & Con F. of Space/Time

(3 -0- 3)

Corequisite: STV 27999

An introduction to contemporary metaphysics and its relation to the philosophy of science. Three topics to be covered in depth are: special relativity, the debate over relative and absolute space, and Kant's views on space.

STV 43172. Autism

(3 -0- 3) Whitman

This seminar discusses topics related to developmental disabilities, with a special emphasis on pervasive developmental disorders and autism. Issues regarding their definition, etiology, and treatment are also discussed.

STV 43203. Joint Sem Phil/Theo: Darwin

(3 -0- 3) Ashley

Darwin's *On the Origin of Species* has had a profound effect, not just on biology, but also on how we think about ourselves, about human nature, religion, and morality. This class will begin by reading Darwin (the *Origin* and excerpts from *Descent of Man*), biographical material about Darwin's life, and some initial receptions of his work, particularly by Christian theologians. We will then embark

on an exploration of the impact of Darwin's ideas, focusing on their theological and philosophical implications for teleological accounts of natural history that are amenable to claims of providential oversight, the argument from design, the nature of morality, progress, and theodicy. This class will provide a deeper understanding of the birth and context of Darwin's ideas and their on-going significance in the twenty-first century. Requirements include in-class participation (including occasional presentations), two out-of-state field trips, a final paper, and several shorter writing assignments.

STV 43240. Moral Development

(3 -0- 3)

Students are challenged to think about the nature of moral development, learn how to examine and compare theories in moral development, develop critical thinking and have the opportunity to create a study of moral development. The course reflects on Catholic Social Teaching and its relation to moral identity and social action generally and in our own lives.

STV 43279. Joint Seminar: Phil/Theo

(3 -0- 3)

Corequisite: STV 27999

The topic of the Joint Seminar is determined each year by the assigned faculty members.

STV 43328. Politics and Science Policy

(3 -0- 3)

This class will meet in seminar format. We will examine the general process for science policymaking and emphasize the role played by politics in several specific science programs such as the space program and the Human Genome Project. The first part of the seminar will be devoted to an overview of science policy in the U.S., to provide students with a grounding in how science has generally been undertaken by the federal government up until World War II. We will also examine the role of both the executive and legislative branches of government in supporting science and identify interest groups that have been influential in shaping science policy. The final portion of the course will require students to undertake an actual exercise in budget allocation, based on budget figures for various science programs in the federal government. The readings for the class will consist of excerpts from several books about science policy and politics, federal budget documents, and potentially transcripts of Congressional committee hearings. Students will be evaluated on the basis of one essay exam, one presentation, a group project (the budget exercise) and one research paper. Class participation will also be evaluated toward the final grade.

STV 43372. Politics of Science

(3 -0- 3) Mirowski

This course examines the increasing politicization of science, and the escalation of the enrollment of science in political controversies over the past century. Starting out with brief characterizations of major political theories such as liberalism, communitarianism, republicanism and neoliberalism, we then turn to the origins of the conviction that science was inherently “apolitical” rooted in the 1930s–50s in the philosophy, sociology and history of science, and in popular culture. The purported alliance of science with democratic structures is considered. Political controversies over Nazi science, Soviet science, atomic war and Cold war science are surveyed, followed by more recent controversies over the so-called “Science Wars,” the treatment of expertise, Foucault, feminism, and actor-network theory. The economics of science movement is treated as a reaction to the above. We then turn from theory to description of modern incidents of the relationship of science to politics, beginning with surveys of the history of science policy, controversies over biotechnology, global warming, intellectual property, the pharmaceuticals industry, and attempts by international agencies and NGOs to regulate the international diffusion of science. Readings: Mark Brown, *Science in Democracy*; May & Susan Sell, *Intellectual Property Rights: a critical history*; Thomas McGarity and Wendy Wagner, *Bending Science*; Philip Mirowski, *ScienceMart*.

STV 43396. Environmental Justice

(3 -0- 3) Shrader-Frechette

This course will survey environmental impact assessment (EIA), ecological risk assessment (ERA), and human-health risk assessment (HHRA); ethical and methodological issues related to these techniques; then apply these techniques to contemporary assessments for which state and federal governments are seeking comments by scientists and citizens. The course is hands-on, will have no tests, but will be project-based, with students working on actual assessments that they choose (about 2,500 are done in U.S. each year). The goal will be to teach students EIA, ERA, and HHRA and how to evaluate draft analyses, particularly those used to site facilities or make environment-related decisions in which poor people, minorities, and other stakeholders are themselves unable to provide comments. Course will cover flaws in scientific method and flaws in ethics that typically appear in these assessments. Students who are not pre-med, engineering, or science majors need the professor's permission to take this course.

STV 43409. Evolutionary Psychology and the Sacred

(3 -0- 3)

Corequisite: STV 27999

Anthropologists and archeologists have long argued that religious rituals and sacrificial ceremonies addressing the most serious aspects of human life are prehistoric and antedate the development of spoken language, perhaps by hundreds of thousands of years. Today evolutionary psychologists look at evidence suggesting that the concept of the sacred arises naturally from the “functional architecture” of the evolved human mind. We take a critical look at the possibility of integrating those two currents of thought.

STV 43414. Abortion, Euthanasia, and Capital Punishment

(3 -0- 3)

This course involves an examination of recent philosophical work on abortion, euthanasia, and capital punishment. Though the focus is on the philosophical debates, some attention is given to relevant legal and public policy discussions.

STV 43470. Molecular Revolution

(3 -0- 3)

Corequisite: STV 27999

This course offers a historical and philosophical analysis of the origins and development of the molecular revolution in biology that broke into full public view in the early 1950s with dramatic discoveries of the molecular structure of DNA and the biophysical mechanism of the action potential in the nervous system. The course will approach this with an analysis of the development of the chemistry and physics of living materials from Lavoisier and the German biophysical school (Helmholtz), through the remarkable advances in physiology of the French school (Bernard) and the development of genetics. The course will terminate in the examination of molecular approaches in contemporary work in human genetics (the Human Genome Project).

STV 43496. Is There an Environmental Crisis?

(3 -0- 3)

Whether one believes there is an environmental crisis or not, we should all be aware of the changes in our world (growing world populations, increased burning of hydrocarbons, etc.) that are hypothesized to produce threats to our ecosystems. Understanding why human actions might be producing global changes is a complex task. This course will concentrate on the roles that various disciplines (e.g., economics, materials science, biology, psychology, theology) might play in understanding and (perhaps) alleviating human-produced environmental changes.

STV 43717. Forbidden Knowledge

(3 -0- 3) Kourany

Within the last 10 years historians of science such as Robert Proctor, Londa Schiebinger, Peter Galison, and Naomi Oreskes, have been promoting a new area of enquiry—Proctor calls it agnotology, the study of ignorance—which they suggest is of as much relevance to philosophers and social scientists and others as it is to historians. Indeed, the suggestion is that agnotology offers a new approach to the study of knowledge, an approach at least as complex and important as its

more established sister, epistemology. In this course we shall focus especially on socially constructed ignorance—the kind exemplified by governmental secrecy and censorship, or industry-engineered confusion (think of the tobacco industry or the pharmaceutical industry), or the ‘virtuous ignorance’ that would ensue if certain kinds of research (think of race- and gender-related cognitive differences research) were no longer supported. This will lead us to consider the kinds of freedom of research and other social structures that need to be in place to support the legitimate quest for knowledge, and thence to the recognition that agnotological/epistemological questions are also, ultimately, political questions.

STV 46197. Directed Readings—Human Dimensions

(1 -0- 1)

Directed readings in the 1st cluster—Human Dimensions of Science and Technology

STV 46397. Directed Readings—Public Policy

(3 -0- 3)

Directed readings in the 3rd Cluster—Science, Technology and Public Policy.

STV 46497. Directed Readings/Research

(V -0- V)

Independent research or readings taken under the supervision of an STV faculty member. An approved proposal for the research/readings will be filed with the STV office. (In order to receive STV credit, the student’s proposal will need to be approved by the faculty member supervising the student’s research/readings and by the director of the STV program.)

STV 50245. Bioethics

(2 -0- 2) Deane-Drummond

This course will focus on bioethics understood to include those aspects of ethics that are most relevant in the setting of global health issues. We will consider broader issues that impact on the delivery of health programs, such as climate change and sustainability, as well more specific ethical issues associated with implementation of health programs such as corruption and weak local governance. The course will consider a variety of theological and philosophical approaches to ethical dilemmas and include discussion about controversial issues such as those connected with reproductive health, development and HIV/AIDS. We will cover ethical issues associated with food production. We will also consider the application of new genetic technologies in global settings, including a critique of arguments for the use of GMOs in food production, genetic screening, genetic testing and what might be broadly termed genetic exploitation.

STV 50421. Architecture-Twentieth Century

(3 -0- 3) Doordan

This course is a survey of the significant themes, movements, buildings, and architects in 20th-century architecture. Rather than validate a single design ideology such as Modernism, Postmodernism, or Classicism, this account portrays the history of architecture as the manifestation-in design terms-of a continuing debate concerning what constitutes an appropriate architecture for this century. Topics include developments in building technologies, attempts to integrate political and architectural ideologies, the evolution of design theories, modern urbanism, and important building types in modern architecture such as factories, skyscrapers, and housing. Class format consists of lecture and discussion with assigned readings, one midterm exam, a final exam, and one written assignment.

STV 53421. Nature & the Built Environment

(3 -0- 3) Salden

This course explores the evolutionary roots of form and order in the built environment and the means to more sustainable approaches to design in architecture and urbanism. While grounded in scientific evidence, a broad perspective of humanism is emphasized, with discussions of how ideas, beliefs, experience, ideals and human nature affect actions and decisions by individuals and societies and thereby affect the form of the things they make.

STV 53451. American Towns and Cities

(3 -0- 3) Steil

This course addresses the nature and metrics of the American city and town and discusses historically essential qualities, as well as contemporary potentials for a sustainable urban quality. Though the class will explore a wide range of comparative studies of American precedents and some European examples, most of the practical exercises will be done either in South Bend or neighboring towns.

Poverty Studies

PS 10000. Introduction to Poverty Studies

(3 -0- 3)

The gateway course introduces students to academic research about the nature, causes, and consequences of poverty. Throughout, the readings and lectures reveal the collaboration across the various disciplines, enhances our understanding of what it means to be poor and of the array of interlocking problems that lead to poverty, and guides the formulation of policies to prevent and alleviate poverty. Equal emphasis is given to poor citizens of the United States and developing nations.

PS 20000. Introduction to Poverty Studies

(3 -0- 3) Warlick

The gateway course introduces students to academic research about the nature, causes, and consequences of poverty. Throughout, the readings and lectures reveal the collaboration across the various disciplines, enhances our understanding of what it means to be poor and of the array of interlocking problems that lead to poverty, and guides the formulation of policies to prevent and alleviate poverty. Equal emphasis is given to poor citizens of the United States and developing nations.

PS 30001. Experiential Learning: One-Credit Bundle

(1 -0- 1)

This is a required course for students choosing to satisfy the experiential learning requirement by satisfactorily completing three designated one-credit Center for Social Concerns seminars or three credits of approved internship(s). Enrollment usually occurs concurrent with the last credit or no later than the following semester. Students will complete a project or 5–7 page paper intended to show an integration of learning between their community engagement and a broader understanding of poverty.

PS 30002. Experiential Learning: Internship Graded Credit

(0 -0- V)

Students electing to fulfill the experiential learning requirement through internships in the community (Option B) may do so by enrolling in PS 30002. Students must complete 3 credits total, but may do so in one, two, or three separate internships with corresponding credit, enrolling in PS 30002 each semester they are participating in an internship, or in the fall semester if the internship takes place over the summer. Students will determine credit value with their internship advisor and a poverty studies director. For 3 credits, a student must complete 80 to 100 hours total during one semester or approximately 8 to 10 hours per week for 10 weeks, including time at the site and with the internship advisor. A 2-credit internship requires 50 to 70 total hours (or 5–7 hours for 10 weeks) and a 1-credit internship would involve 30 to 50 total hours (or 3–5 hours for 10 weeks). Students may arrange to intern for more or less than 10 weeks during the semester they are enrolled in PS 30002 and can adjust the weekly hours to correspond to the required total. After completing 3 credits of internship, students must then enroll in PS 30001 to complete a paper or project synthesizing and linking their learning to a broader understanding of poverty issues.

PS 33000. Contemporary Education Reform in America

(3 -0- 3)

This course examines the need for educational reform in the United States and the strategies being implemented to achieve reform. Emphasis will be given to the situation of low-income students in high poverty schools. In particular, recent studies of the impact of poverty on child development and its implications for learning will be reviewed to establish an understanding of the optimal school environment and pedagogies for teaching children from disadvantaged backgrounds. After a brief history of education reform in America, the course will scrutinize the current reform movement considering the appropriateness of its goals, identifying its major political players, and reviewing social science research about the effectiveness of reform strategies including curriculum reform, charter schools, and teacher accountability in reducing the achievement gap and raising student learning.

PS 33100. Healthcare and the Poor

(3 -0- 3) Betson

The relationship between health and poverty is complex and challenging. The inability of the poor to maintain adequate nutrition, shelter and have access to preventative medical care can contribute to their poor health status. But even if one isn't poor, one illness or hospitalization can test their ability to meet both their ability to meet the financial burden of their medical care as well as their other needs. In either case, individuals have to face difficult choices between their health and other material needs. This course examines the consequences of the health risks the poor face and the difficulties that they have in obtaining medical care whether they are uninsured, seek charitable care, or utilize public programs such as Medicaid. The course will also examine the impact of the Affordable Care Act that will require all individuals to have at least a minimal level of health care coverage.

PS 40000. Capstone Seminar

(3 -0- 3)

The Capstone Seminar will be topic-oriented drawing on literature from multiple disciplines. The students themselves will be from different majors and will share both the perspectives of their major disciplines as well as their varied experiences in the field thus ensuring that interdisciplinary nature of the inquiry. Experts with diverse perspectives and professional experiences will join the seminar as special guests.

PS 40001. Special Studies Capstone

(0 -0- 3)

Special studies with one of the minor's affiliated faculty. In this case the student will produce a product (manuscript, work or art, composition, poster board display of research results, etc.) that can be displayed, and will present this product to the members of the PSIM at a special colloquium held in the spring semester of each academic year.

Theology

THEO 10001. Foundations of Theology: Biblical/Historical

(3 -0- 3)

This first course in theology offers a critical study of the Bible and the early Catholic tradition. Following an introduction to the Old and New Testaments, students follow major post-biblical developments in Christian life and worship (e.g., liturgy, theology, doctrine, asceticism), emphasizing the first five centuries. For details on emphases of individual instructors, see the Department of Theology Course Description Booklet or the departmental website: www.nd.edu/~theo.

THEO 10002. Foundations of Theology: Biblical and Historical

(3 -0- 3)

This first course in theology offers a critical study of the Bible and the early Catholic tradition. Following an introduction to the Old and New Testaments, students follow major post-biblical developments in Christian life and worship (e.g., liturgy, theology, doctrine, asceticism), emphasizing the first five centuries. For details on emphases of individual instructors, see the Department of Theology Course Description Booklet or the departmental website: www.nd.edu/~theo.

THEO 12001. Discussion section for Foundations of Theology: Biblical/Historical

(0 -0- 0)

Corequisite: THEO 10001

This is the discussion section required for some sections of THEO 10001.

THEO 13002. Honors Foundations of Theology: Biblical and Historical

(3 -0- 3) Bradshaw; Groody; Kollman; VanderKam

This first course in theology offers a critical study of the Bible and the early Catholic tradition. Following an introduction to the Old and New Testaments, students follow major post-biblical developments in Christian life and worship (e.g., liturgy, theology, doctrine, asceticism), emphasizing the first five centuries. For details on emphases of individual instructors, see the Department of Theology Course Description Booklet or the departmental website: www.nd.edu/~theo.

THEO 13183. Theology University Seminar

(3 -0- 3)

This first course in theology offers a critical study of the Bible and the early Catholic tradition. Following an introduction to the Old and New Testaments, students follow major post-biblical developments in Christian life and worship (e.g., liturgy, theology, doctrine, asceticism), emphasizing the first five centuries. For details on emphases of individual instructors, see the Department of Theology Course Description Booklet or the departmental website: www.nd.edu/~theo.

THEO 20102. Gendering Christianity

(3 -0- 3) D'Angelo

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course is an introduction to feminist approaches to spiritual and philosophical traditions in the Christian West. Beginning from the pastoral and practical issues raised by gender assignments in the context of religious experience, it addresses major topics of theological thinking (such as sin, salvation, images of God, and Christology) relating historical development and contemporary feminist re-readings. The approach is both critical (i.e., analytical) and constructive; the primary focus is on Christian and post-Christian theological and literary texts, but some attention is given to other religious perspectives.

THEO 20103. The One Jesus and His Many Portraits: The Various Images of Jesus in the New Testament and Beyond

(3 -0- 3) Meier

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

This course explores the many different faith-portraits of Jesus painted by various books of the New Testament: e.g., from suffering servant abandoned by God

through high priest interceding with God to Godself. In each case, the course will ask how this particular portrait did or did not have an impact on subsequent Christian faith and what it may say to faith in Christ today. The course will combine a lecture format with discussions, readings, and reflections on the readings.

THEO 20104. Apocalyptic Visions

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
At the heart of the Christian faith lies the conviction that the imminent end of God's ongoing struggle with the powers of darkness in history has been revealed. This revelation shows us that we are all, wittingly or unwittingly, participants in a cosmic drama—a war between God and Satan, Christ and Antichrist, good and evil. This course explores apocalypticism in the biblical canon, as well as the interpretation and appropriation of this literature in the early, medieval, and modern periods of the history of Christianity. It begins and ends by reflecting on the prevalence of apocalypticism in the contemporary world. Throughout we will wrestle with the question of how we should reckon with this phenomenon today.

THEO 20106. Inspiration and Revelation

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
Christianity has at its core the idea that God is revealed to humanity. A concomitant of revelation is the notion of inspiration. Understandings of the concepts of both inspiration and revelation have informed the way Christians have understood their sacred text, the Bible. This course will examine the ideas of major Christian thinkers concerning the concepts of revelation and inspiration, highlighting particularly the role these concepts play in understanding Scripture and its relation to Christian tradition.

THEO 20109. How to Read Scripture: The Search for Meaning from Page to Person

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
All theological inquiry shares the conviction that God speaks to us through Sacred Scripture, but we as inquirers are often uncertain how to listen for his voice through the medium of text. We might agree that we should not read the Scriptures in the same way we read a textbook, a newspaper article, or a novel, but our academic study of theology may lead us to reductive modes of reading. Too often, we find ourselves scanning only for key points, questions likely to appear on the exam, or items relevant to our current research. This course aims to counter our reductive reading tendencies through both practical and historical explorations. For the practical component, students will be asked to experiment with various ways of reading Sacred Scripture (such as memorization, liturgical proclamation, repetitive recitation, lectio divina, etc.) and reflect on the presuppositions, purposes, efficacy, and consequences of these techniques. Our historical investigations, focused on the way in which Christians (and some of their non-Christian contemporaries) used sacred (or authoritative) literature in late antiquity, will be put to the service of exploring more general questions about reading. For example, does it matter where, when, and with whom we read? Which attributes are necessary in a qualified reader, and what makes one reading better than another? How can we apply texts written in the past to situations facing us in the present? What constitutes competence in or mastery of a text? Assessment will be based on regular response papers and a longer final paper in which students will combine descriptions of their own experiences with the evidence and arguments of earlier witnesses to propose a way in which an unconventional method of reading might be incorporated into modern undergraduate theological education.

THEO 20112. Bible, the Black Church and the Blues

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This course will build on the groundwork established in the Foundations of Theology course by providing exposure to three theological matrices that have had a decided impact on the development of Africana (i.e., African and African diasporan) identity and culture in the North American diaspora. The first is the symbolic universe of Africana biblical hermeneutics. The second is the black

church. The third is that uniquely African-American musical form known as blues. Students will be given an opportunity to explore: the cosmological, ontological, anthropological, soteriological, and Christological assertions animating each of these milieus; their historical and contemporary points of intersection; and the ways in which each has influenced the other. Particular attention will be directed toward understanding the history of reception, interpretation, and appropriation of the Christian Bible by peoples of African descent; the evolution of the black church and the distinctive contributions made by Africana Catholics to it; and the emergence of blues music, artists, and performance spaces as non-ecclesial loci of protest and crucibles in which Africana spiritualities of resistance have been and continue to be forged. Students will leave the course with a deeper appreciation of four issues, the implications of which are far reaching for those within the Catholic, Orthodox, and Protestant branches of the larger Christian family. The first is how culture and context shape the ways in which people read and appropriate sacred writings. The second is the impact that culture, memory, hermeneutics, and identity have on spirituality and ecclesiology. The third is the role that poetry and other art forms play as media for theological speculation and construction. The fourth is the pivotal impact that enculturation has on theology, pastoral care, ministry, and ecumenism. The class will also introduce students to those essential sources—both primary and secondary—methodologies, core questions, and debates foundational for a theological assessment of these universes of theological discourse. It will also expose them to three interdisciplinary subfields that span and inform the disciplines of theology and Africana studies: 1) the history of Africana biblical interpretation in North America; 2) black church studies; and 3) blues studies.

THEO 20201. God

(3 -0- 3) Daley

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

Corequisite: THEO 22201

The outstanding feature of human dignity, the Second Vatican Council reminds us, is that human beings have been called to communion with God. (“*Gaudium et Spes*19”) In encountering the divine Mystery through our experience in the world, especially through the teaching and worship of the Church, we are led to center our lives on faith in God, ultimate reality, and to find in that faith a meaning for human life, a cause to hope and an impulse to love. In this course, we will reflect on both the challenges and the blessings of this encounter with God as transcendent Mystery, and on how our experience of God is formed by the Church preaching of the risen Jesus. Beginning with the Bible presentation of the Mystery of God, we will read selections from Church Fathers, St. Anselm, St. Thomas Aquinas, 16th-century mystics, John Henry Newman, and several 20th-century authors; we will reflect on the modern phenomenon of atheism, and on what is actually involved in living faith in a living God.

THEO 20202. Why Jesus Was Crucified?

(3 -0- 3) Zachman

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002 Jesus repeatedly tells his disciples that he must go to Jerusalem to be condemned and crucified. “See, we are going up to Jerusalem, and the Son of Man will be handed over to the chief priests and the scribes, and they will condemn him to death; then they will hand him over to the Gentiles; they will mock him, and spit upon him, and flog him, and kill him” (Mark 10:33-34). Far from being seen as a catastrophe, Peter in his first sermon says that all this happened “according to the definite plan and foreknowledge of God” (Acts 2:23). The apostle Paul even makes the death of Jesus on the cross the decisive act of God on our behalf, revealing the love of God. “But God proves his love for us in that while we were yet sinners Christ died for us” (Romans 5:8). But why did this happen? Why was it the will of God that Jesus go to Jerusalem to be rejected, to suffer, and to die? How does the execution of Jesus on a cross by the Romans demonstrate or prove the love of God? These questions have occupied the thoughts of Christian theologians throughout the history of the tradition. In this course, we will explore the various ways in

which this question was explored by theologians such as Athanasius, Anselm, Luther, Pascal, Kierkegaard, Barth, and von Balthasar, in order to develop our own understanding of the meaning and significance of this event.

THEO 20203. Sin and Redemption

(3 -0- 3) O’Regan

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002 This course explores the biblical and theological accounts of sin and redemption. Focus will be on the variety of perspectives in the biblical and theological accounts with regard to the meaning of sin, its social and individual significance, and on the understanding of redemption, its worldly as well as other-worldly dimensions, and its scale, whether inclusive or relatively exclusive. An attempt will be made to distinguish the biblical and theological views from the views of other religions both past and present, and to engage modern criticism.

THEO 20205. Christian Hope: Confronting Last Things

(3 -0- 3) Daley

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002 As individuals and as a world society, we tend to focus our energies on building a happy and secure future for ourselves; yet in a real sense we live surrounded by death, threatened by the impermanence of our relationships and by the fragility of life on our planet. A sense of this threat provides much of the background for human greed and violence, but it is also the context for human hope. The heart of Christian faith is to hope for life in the face of death; it is to see a lasting value in our historical choices and loves, because Jesus is risen and because he promises us a share in his resurrection and his life. Christian hope can only be expressed in images, since what it refers to still lies in the realm of promise; yet the Christian believer can live from that hope now, can love in the freedom it affords, because the Holy Spirit has been given us by the risen Lord as “a foretaste of things to come” (Eph. 1. 14). Through faith enlivened by the Spirit, we find in our present reality signs of a life without end that is, in a mysterious way, already ours. This course will study the details of this Christian hope for the future in its origins, development, and implications. It will study “the last things”—death, judgment, purgation, heaven and hell—in both their individual and their social dimensions, as Christian theology has traditionally conceived them; and it will try to articulate an understanding of these objects of hope as they might best be integrated today into Christian thought and practice. In addition, it will consider the ways that a Christian sense of the finality of salvation colors and influences all the other aspects of the intelligent reflection on faith we call theology.

THEO 20206. U.S. Latino Spirituality

(3 -0- 3) Elizondo; Matovina

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

The purpose of this course is to introduce students to the dynamic origins, development and present status of the collective spirituality of the Latinos/as living in the USA. Emphasis will be placed on the Mexican Americans since they are not only the largest group but likewise the ones who have been living in the USA the longest. Drawing on history, cultural anthropology, Christian Theology and your own experience, this course will explore the roots and development of contemporary Latino Spirituality in the United States. As we explore in depth the spirituality of a people, this course will also help you discover and explore the roots and development of your own collective and personal spirituality.

THEO 20207. Veneration of the Saints, Especially the Mother of God, in the History of Christianity

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002 Debated as to its origins and controversial among some early modern and contemporary Christians, the long and complex tradition of devotion to the saints still flourishes in Catholicism and Orthodoxy. This course considers the beginnings of devotion to the saints in ancient Christianity, the origins of the cult of the Virgin Mary, and local transnational devotions in ancient and medieval Christianity and Byzantium. Shrines, pilgrimages, and relics with their associated commerce will receive attention, as will the reaction against such devotion in the 16th-century

West. The course will also examine selected modern scholarly examinations of sainthood and cults, as well as the contemporary ambivalence about traditional devotions (especially to the Mother of God), the relationship of devotion to the saint to the developing theological themes of the person of Christ and the church as communion of saints, and the appearance and canonization of new saints in Western and Eastern Christianity.

THEO 20208. Spirituality of the Christian East: Experience, Form, Expression

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
“Christianity is more than a theory about the universe, more than teachings written down on paper; it is a path along which we journey—in the deepest and richest sense, the way of life” (Kallistos Ware). This course will introduce the student to the Christian East and will focus on its spirituality as the expression of this “journey,” this “way of life.” The different experiences, forms, and expressions of this spirituality will be examined and discussed during the course, having the writings of the fathers of the Christian East as a basis, a foundation, and a springboard for further reflection.

THEO 20213. Following Jesus

(3 -0- 3) Daley

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Christian faith is a matter not just of ideas, but of discipleship: recognizing in Jesus the “anointed one” sent by God to fulfil the hopes of Israel, and trying to conform one’s desires and way of living to his. In this course, we will consider some of the major documents (beginning with the Gospels) in which Christians have reflected on who Jesus is, and on what his presence in our humanity promises us and demands from us, as a Church and as individuals. We will ask: what is the way of Jesus? what might it mean for us to walk on his way?

THEO 20214. Latino Theology and Christian Tradition

(3 -0- 3) Matovina

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course examines the emergence and development of Latino religion and theology in the United States. In particular, the course will explore how U.S. Latina and Latino theologians have articulated the meaning and implications for Christian living of core theological topics such as Christology, evangelization, social justice, and liturgy.

THEO 20215. Original Sin

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
The doctrine of Original Sin has been elaborated in Christian theology as a way of understanding the human experience of alienation from oneself and God: “For I do not do the good that I want, but the evil I do not want is what I do,” wrote Paul in his letter to the Romans. But more than just an explanation of why it’s hard to be good, original sin has been a metaphor central to Christian thinking on ultimate questions: Why did God become human? What is human nature? How are we saved, and from what? Why do the innocent suffer? This course will examine the biblical and extra-biblical sources of original sin, the elaboration of the concept, and its reception in the Christian West through the Reformation. Because this topic touches on issues of sexuality, embodiment, and gender, as well as the nature and causes of human suffering, we will spend the latter part of the course examining modern perspectives on original sin, especially among liberation and feminist theologians.

THEO 20216. Elements of Christian Doctrine

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course will offer a theological synthesis of basic Christian doctrine, using the articles of the Creed as the organizing principle. Readings will be drawn from a large variety of primary sources from the tradition, as well as from contemporary theologians and the first two sections (“pillars”) of the Catechism of the Catholic Church. This course is for those who desire an overall acquaintance with the

fundamental points of what the Church believes, confesses, and teaches, offered in a style which demonstrates the situation and context of these basic doctrines within theological conversation and debate.

THEO 20218. Christianity and the Political Order

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
What is the relationship between Christianity and political orders? How do particular understandings of the role of the political order from a Christian perspective bear on the way in which the obligations of citizenship are understood and carried out? Does Christianity necessitate or support an endorsement or rejection of any specific political structures? When Christians participate in the political realm, does this participation have any salvific significance? What sort of participation, if any, is required by Christian faith, and to what extent should the form of participation vary depending upon the particular regimes in which we find ourselves? This course aims to address these and related questions. The first section of the course will focus on key historical moments in the development of Christian reflection on these topics. Theologians treated will include selections from the early church fathers, Augustine, Aquinas, Luther, Calvin, and selections from Radical Reformation writers. The second section of the course will put these resources from the Christian tradition in conversation with modern and contemporary authors. The goal of the course is twofold: (1) For students to know and to understand the thought of key figures in the Christian tradition with regard to these questions, and (2) for students to develop the critical skills necessary to think about the relationship between their faith and their obligations as citizens of a contemporary liberal democracy. Requirements for the course will include: midterm, final, and several short essays.

THEO 20223. The Church We Believe In

(3 -0- 3) Gorski

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
From the New Testament on, the Christian community has turned repeatedly to the formulation and description of its identity, essence and constitutional elements. Specifying what is entailed in the claim of the creed—“I believe in the one, holy and Catholic Church”—has been especially necessary at certain crucial moments in the history of the Christian movement. Providing an introduction to the main themes and problems in ecclesiology (the doctrine about the Church), this course will examine the teachings of leading theologians in the Patristic and Medieval period (e.g., Augustine; Aquinas; Luther) and the determinations of the last two Vatican councils, largely concerned with such ecclesiological matters as the constitution of the church, the role of the papacy, infallibility, and the universal versus local churches.

THEO 20224. Christ and the Church in the Christian Tradition

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course offers students the opportunity to explore and reflect upon the relationship between Christ and the Church. The course readings, taken from Scripture, various Christian authors from different theological traditions, and recent official teachings of the Catholic Church, will allow students not only to understand historical developments in the conceptualization of this relationship, but also to learn how contemporary questions and interests shape current reflections on this topic.

THEO 20225. The Mystery of Christ

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Affirmation that Jesus of Nazareth is the Son of God stands at the center of the Christian faith, but what does this mean? A Christology, critical theological reflection on Jesus of Nazareth, attempts to offer a systematic account of Jesus Christ’s identity and import. This course will introduce students to Christology, examining theologians representative of diverse historical periods and theological approaches.

This chronological order will frame our focus on select Christological topics. The concern throughout will be how Christology seeks to better appreciate the mystery of Jesus Christ.

THEO 20226. Sin and the Incarnation

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
In this course we will examine how Christians understand Jesus to be the savior. In what manner did he offer salvation and from what? We will first examine in some depth how leading voices in the NT understand Jesus' role in salvation, particularly against the backdrop of the OT. From what was Jesus saving people and how did his healing ministry, his teachings, his death on the cross, the resurrection, and his status as exalted Lord address this problem? Next we will consider what theologians representative of discrete theological traditions have to say about our topic (Orthodox, Protestant, Roman Catholic). Finally, we will examine two contested issues: the redefinition of sin (and thus salvation) in liberation Christology and the claim that Jesus is a savior, and not the Savior.

THEO 20227. Pilgrimage

(3 -0- 3) Leyerle

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course will examine the literary record and lived experience of pilgrimage throughout Christian history by focusing on particular texts, persons and sites. To enrich our understanding of this phenomenon, we will deliberately adopt a variety of perspectives (archeological, sociological, anthropological, liturgical, and art historical). We will necessarily also consider relics and the cult of the saints.

THEO 20229. Christianity and Mission

(3 -0- 3) Kollman

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
The coming of Christianity to most of the world has overlapped with the political, economic, and social processes associated with the term colonialism. This course will seek to understand the history of that overlap, as well as the many theological issues raised, especially for Christians in Latin America, Asia, and Africa. Questions to be considered include: How has political domination, typified (though certainly not exhausted) by European colonialism, shaped Christian mission? What kinds of theological innovations emerged in the relation to colonialism, both among the colonizers and the colonized? How did colonialism create a context in which Christianity encountered other religious traditions? How does contemporary theology reflect a colonial legacy in this current apparently "post-colonial" moment? How do contemporary global political dynamics, sometimes described with reference to the notion of globalization, compare and contrast with the overt colonialisms of the past? How do contemporary theologians respond to the colonial legacy? Is there such a thing as "post-colonial" theology? Should there be such a thing? Students will write three 5-page papers and there will be a final exam.

THEO 20230. World Religions in Christian Perspective

(3 -0- 3) Sullivan

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
The course examines the foundations of several world religious traditions (e.g., Buddhism, Taoism, Hinduism). Focusing on key religious ideas and practices, it compares and contrasts them with one another and in relation to the Christian design for life worked out in Catholic experience and theological reflection. Students will acquire a sense of what it means to reflect in a disciplined way on world religions from a Christian theological perspective.

THEO 20231. From the Crucifixion to the Atonement

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
It is a central element of the Christian confession that in the passion and death of Jesus of Nazareth God has acted decisively in humanity's favor. In this course we will investigate this confession. There are three questions we will attempt to answer. First, how is it that the earliest Christians came to see in Jesus' crucifixion, this act of Roman capital punishment, the decisive moment in God's plan of

salvation? To help us answer this (hardly straightforward) question we will also attend to how other religious groups (esp. Gnostics and Muslims) offered alternative interpretations of Jesus' crucifixion that this event is saving has, in fact, been seriously doubted. Second, what are the various ways in which theologians, from the authors of the New Testament through today, have comprehended the saving significance of Jesus' cross, and what are the respective strengths and weaknesses of these theories? And finally, we will enter into two of the major debates surrounding our topic: how do people receive the salvation offered on the cross, and, whether, or to what extent, do the classic Christian accounts of atonement promote violence in our society? Along the way in our readings we will encounter theologians and literary figures that represent discrete theological traditions (Orthodox, Protestant, R. Catholic).

THEO 20232. On Conversion

(3 -0- 3) Daley

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
For all believing people, faith is a journey: a lifelong movement of growth in understanding of the divine Mystery in whose presence we live, and of commitment to serving God. Christian faith begins in Jesus' call to each person to follow him as a disciple; and while the general shape of that journey of companionship is modeled in the Gospels, it takes on very different concrete features in each particular life. In this course, we will reflect on the theological importance of conversion and spiritual growth for the life of faith, and will consider the stories of several well-known Christians (Augustine of Hippo, Francis of Assisi, Ignatius of Loyola, John Woolman, Dorothy Day, C. S. Lewis) that reveal the long-term implications of conversion to faith. We will also reflect on loss of faith as a kind of anti-conversion peculiar to modern culture.

THEO 20233. Called to Holiness: Sanctification in the Christian Tradition

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
"Be holy, as I am holy" (Lv 11: 45): God calls human persons, created in the divine image but damaged by sin, to become holy and so to share in the happiness of God's own life. What is holiness, and how does God call and sanctify human beings? What kind of personal transformation is required? And, how have Christians over the ages responded to God's call? This course will explore the Church's understanding of sanctification in its varied expressions from Scripture through patristic, medieval and Reformation periods, to Vatican II and post-conciliar papal teaching. Ways in which Christians have lived out the call to holiness will be examined (e.g., martyrdom, monasticism, ministry), while sanctification itself will be considered in relation to central aspects of Christian doctrine: the Trinity, Christ and his sacraments, theological anthropology, grace and justification, ecclesiology, and eschatology. A primary goal of the course is to offer students the opportunity to reflect in a theological way on God's call to sanctification in their own lives, in conversation with Scripture and the writings of holy men and women through the ages.

THEO 20234. Roads to God

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This course is, from the point of view of chronology, a sequel to the first course in theology. It covers major representatives of theological traditions from the sixth to the 17th centuries. Our focal point for the consideration of these theologies will be the question of human awareness of God. What is the character of it? How is it acquired? Is it appropriately called "knowledge" of God? If so, how is it related to faith? We will consult a variety of texts to assist in our reflection on these questions, including readings from Gregory the Great, Benedict, Bernard of Clairvaux, Anselm, Hildegard, Francis and Clare, Bonaventure, Aquinas, Dante, The Cloud of Unknowing, Julian of Norwich, Luther, Teresa of Avila, Pascal and others.

THEO 20235. The Afterlife and the End of the World

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
We mortals lack experience but seek knowledge of what lies beyond this life and this world. What will happen? When will it happen? What does it demand for the present? In the history of religions and within the Judeo-Christian tradition many answers have been given in many circumstances on many authorities. Tradition provides a broad framework within which claims compete, leaving each thinking recipient to form a hope for the future and a “bird’s-eye” view of the present. This course focuses on reading primary texts (in translation) from the ancient world and up through contemporary theology and culture. We will read each text in historical context with a view to significance for today.

THEO 20236. Mary Through the Ages

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
A study of the Blessed Virgin Mary, Mother of God, as her figure and role in the history of salvation emerge in Scripture and the Tradition of the Church. An examination of the Church’s understanding of Mary as expressed in sacred and historical text, theological reflection, liturgical expression, iconographic representation, magisterial pronouncement, and the life of devotion. The course will also consider the relationship of Mariology to other branches of theology, such as protology, christology, soteriology, ecclesiology, and eschatology, as well as the impact of the cultus of the Virgin Mary on western art, music, and literature.

THEO 20238. Holy Journeys: The History and Theology of Christian Pilgrimage

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
“We walk by faith and not sight.” From biblical texts such as Abraham’s migration, the Exodus and the “Road to Emmaus,” all the way up to Vatican II’s “pilgrim church” Christians have long viewed life as a journey this motif has compelled many faithful throughout the centuries to undertake actual voyages/pilgrimages which are seen as effective means to express devotion, do penance, grow in virtue and walk in the footsteps of Christ himself. This class will use pilgrimage as a lens through which to examine not only Christian history, but also theological topics including christology, eschatology, popular piety, interreligious relations and ecclesiology. We will begin the study of key biblical narratives which are foundational to latter Christian notions of pilgrimage and then considered a ways in which famous and not so famous pilgrims throughout time have viewed their personal pilgrimages as acts of faith.

THEO 20239. Encounters with the Sacred Word: The Bible in the Liturgy

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
If theology rests on the written Word of God (Dei Verbum 24), for Christians the primary site of encounter with the Sacred Word is not in the library, but in the worshipping Church. That is to say that in an important way Christian theology, and indeed tradition is founded upon the event of proclaiming and hearing the Scriptures in the context of worship. In this course we shall explore the theology and practice of the use of the Sacred Scriptures in Roman Catholic liturgy, by studying the historical roots (including patristic and medieval) of the practice known in contemporary liturgy. As with any human event, a number of simple questions may be posed of this encounter. What do we need in order to read the sacred Scriptures in Church? How do we read them? In what way is time of significance for the reading and the hearing of the sacred Word? Who is competent to read and to hear? Where is the Word to be read? And throughout the course we shall ask: what is the theological significance of this practice? The study of typology, the material culture of the sacred text, liturgical lectionaries and rubrics, homiletic practice, and sacramental theologies of the Word will lend us skills in answering these questions.

THEO 20242. Heaven, Hell, and Purgatory

(3 -0- 3) Young

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
If there is a life after death for human beings, what is it like? How does a person get there? reach one of the eternal destinations envisioned as punishments for our sins or reward for good deeds? Are they states of being, or actual places? If the latter, what do they look like, and who are the inhabitants? Early Judaism and two millennia of Christian tradition have developed a variety of sources to elaborate an answer to these questions. This course will consider how the tradition has proposed answers, and will look at various ways in which the answer has been elaborated. Materials for the course will draw from accounts of visionaries and mystics who ascended to Heaven (or descended to Hell) and reported what they saw, theologians who attempted to give comprehensive and consistent accounts of the paths to these places (or states), and Christian poets who metaphorically evoked Heaven and Hell to express the consequences of contemporary social or political conditions. The course will consider the development, primarily in Roman Catholicism, of the belief in doctrine of Purgatory and the debates about that belief. The contemporary reconsideration of Heaven, Hell and Purgatory, and the embarrassment about Hell will conclude the course.

THEO 20244. Monastic Way in History of Christianity

(3 -0- 3) Young

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
In the history of the eastern and western churches, male and female monastics have composed a long and elaborate tradition of their collective life based on the imitation of Christ. A selection of the written sources attesting to the variety of the forms of monastic life and prayer, and theology and mysticism will form the syllabus for this class. It will explore the modes of life of the solitary monastic as well as those of monastic communities, from earliest Christianity through the present, by reading works from and about this form of life. It will discuss, among other themes, those of discipline, the meaning of the body and its labor, penance, suffering, humility, study and learning, the love of human beings, the love of God, union with God and participation in the life of God within the limits that the monastic life imposes.

THEO 20245. Mary in the Catholic Tradition

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
A study of the Blessed Virgin Mary, Mother of God, as her figure and role in the history of salvation emerge in Scripture and the Tradition of the Church. An examination of the Church’s understanding of Mary as expressed in sacred and historical text, theological reflection, liturgical expression, iconographic representation, magisterial pronouncement, and the life of devotion. The course will also consider the relationship of Mariology to other branches of theology, such as protology, christology, soteriology, ecclesiology, and eschatology, as well as the impact of the cultus of the Virgin Mary on western art, music, and literature.

THEO 20246. From Bernard to Bernadette: The Dogma of the Immaculate Conception

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
In 2004 the Church observed the 150th anniversary of the promulgation by Pope Pius IX in *Ineffabilis Deus* of the dogma of the Immaculate Conception. On February 11, 2008, the Church observed the 150th anniversary of the apparition of our Lady in Lourdes, France. To Saint Bernadette, the “beautiful lady” declared, “I am the Immaculate Conception,” thus confirming the dogma promulgated shortly before by Pope Pius IX on December 8, 1854. This Marian dogma deserves serious study from multiple perspectives: its historical development as a contested belief, its relation to other dogmas (Original Sin, the Virgin Birth, Redemption, the Assumption), its liturgical expressions, its crucial link to the understanding of Christian marriage as a sacrament, its representations in visual art and poetry, its special significance for women, and its general importance to Christian anthropology, as well as its particular connection to Lourdes.

THEO 20249. The Eastern Churches: Theology and History

(3 -0- 3) Avvakumov

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

The course provides an overview of the variety of the Eastern rite Churches belonging to different cultural traditions of Eastern Europe and the Eastern Mediterranean world. The students will be introduced to the theological views and liturgical life of the Eastern rite Christians, i.e., Orthodox, Oriental and Eastern Catholic, and their fascinating history. In the second part of the course we shall explore the Byzantine rite Churches in more detail, and discuss the challenges their theology and history present to the Christian world at large. Special attention will be given to Slavic Christianity and especially Russian and Ukrainian religious history. Reflection on the diversity of Christian traditions will lead to important insights into theological topics of central importance for today such as theology of culture, ecclesiology, sacramental theology and theology of history.

THEO 20251. The Catholic Faith

(3 -0- 3) Cavadini

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course is a theological introduction to the basic teachings of the Catholic faith. The primary text is the Catechism of the Catholic Church. This will be supplemented by theological source readings from all periods. The emphasis will be on the coherence of the system of basic Catholic teaching as a whole. The argument is that the coherence is located in the love of God which lies at the heart of all Christian mysteries. "Love alone is credible" in the words of one famous theologian of the twentieth century and it is that love, and that credibility, that we will set ourselves the task of investigating.

THEO 20252. Communion of Saints

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

What do Christians mean when they profess to believe in the communion of saints? As a mystery of faith, the "communion of saints" has been variously interpreted. It points, at one level, to the Eucharist and to the Scriptures, the "holy things" that Christians share in common and that foster their oneness in Christ. It is closely related to the idea of the "mystical body" of Christ and thus to the Church as a community composed of many members. It evokes the unbroken, vital bond between Christians still in this earthly life and those who have preceded them into eternity and how that bond is expressed liturgically. Finally, it concerns the cult of the saints and the canonization process. In this course we study the communion of saints from these different perspectives.

THEO 20253. Dying to Live Forever: Christian Martyrdom from Jesus to 9/11

(3 -0- 3) Moss

Martyrdom has been centrally important to Christianity from the ancient world to contemporary debates about the category and its application. It is inextricable from questions about persecution and power, death and identity, suffering and truth. Through lectures and tutorial discussions of primary sources, this course examines the experiences, representations, reception, and place of martyrs across two thousand years of the history of Christianity with particular emphasis on the early church and the Reformation era. It analyzes the importance of martyrdom for the definition and development of Christian doctrine, ecclesiology, and devotion, and the influence of these in turn on attitudes about persecution, the imitation of Christ, and martyrdom itself.

THEO 20254. C.S. Lewis on Sin, Sanctification and Saints

(3 -0- 3) Fagerberg

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

What is the path for sanctification to the beatific vision? Using the fiction of C.S. Lewis for signposts on the path, this course will consider the doctrine of sin (*Screwtape Letters*), sanctification as cooperating with grace (*The Lion, the Witch & the Wardrobe, Perelandra*), and the final formation of saints (*The Great Divorce, The*

Last Battle). Other authors will be helpful in understanding Christian spirituality as a struggle to cultivate the virtues and overcome the passions: Augustine, Maximus Confessor, Sayings of the Desert Fathers, Dorothy Sayers, Joseph Pieper, and G.K. Chesterton.

THEO 20401. Church and Worship

(3 -0- 3) Driscoll

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

An analysis of the church as a community of believers and a social institution, and a study of church liturgy and sacraments. This course will center around three key areas, namely (1) Anthropology: As humans, why do we feel the need to express ourselves and our relationship to God through ritual activity? (2) Theology: What are the Christological and ecclesiological underpinnings for the sacraments? (3) History: What is the historical development of each of the seven sacraments? What has remained constant in spite of the historical mutations?

THEO 20404. Sacrament and Sacramental Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183

The Seven Sacraments are central to the life of the Church. The purpose of this course is to introduce students to theological understandings of the Sacraments in general. However, because the Sacraments are given and received in specific contexts, we will explore the theology of each Sacrament individually, in its liturgical practice, examining the ways in which the rites express the theology that the Church teaches. We will discuss the historical development of Sacramental Theology as well as contemporary perspectives, and students will also have the opportunity to address the Sacraments from an ecumenical perspective in written assignments.

THEO 20408. The Sacraments of the Church

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course will study all seven of the Church's sacraments. Special emphasis will be given to the notion of sacrament, the restored rite of Christian initiation of adults, and the centrality of the Eucharist in the life of the Church.

THEO 20410. Introduction to Liturgy

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183

The course will introduce students to liturgy as a sacred science. The course begins with a brief analysis of the present context of liturgical studies in the Church, then proceeds to an examination of the relationship between liturgy and ecclesiology. Attention will be paid to the historical development of Catholic liturgy, culminating in the liturgical movement of the twentieth century and the first papal encyclical on the liturgy, *Mediator Dei* by Pius XII (1947). The course then examines the Constitution on the Sacred Liturgy *Sacrosanctum concilium* (1963) and the post-Vatican II liturgical rites and texts for the celebration of the Eucharist. The course concludes with a consideration of the spiritual, cosmic and eschatological dimensions of the liturgy. Students are given the opportunity to study primary documents, both liturgical and magisterial, in good English translations, as well as helpful secondary literature. By the conclusion of the course, students will have demonstrated familiarity with the official rites and texts of the current Roman liturgy, the historical development of the Church's central act of worship, as well as its theological and spiritual foundation.

THEO 20411. The Mass of the Roman Rite

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

An examination of the Catholic Eucharist as celebrated according to the Roman rite. Students explore the earliest witnesses of the Eucharist in Scripture and Tradition, then trace the emergence and development of the eucharistic rite in Rome itself and in areas influenced by Rome. Attention is paid to the origins and formation of liturgical texts, and their compilation into various books; vestments and vessels; and the arrangement of church architecture over the centuries. The

course follows the Roman liturgy from the Eternal City (ca. 700) over the Alps into the Frankish realms and even into southern England in the early Middle Ages; then traces its reintroduction to the City in the eleventh and twelfth centuries, through the pontificate of Innocent III (1198-1216), and its reform after the Council of Trent. The course finally examines the Liturgical Movement of the twentieth century and developments after Vatican II. Due consideration is given to the role of Joseph Ratzinger-Pope Benedict XVI in the new liturgical movement with particular focus on his liturgical legislation (*Summorum pontificum*, 7-7-2007), the *ars celebrandi*, and “the hermeneutic of continuity.”

THEO 20412. Christian Initiation and Eucharist

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

The Rites of Christian Initiation (Baptism, Confirmation, and First Eucharist) and the Eucharistic Liturgy as the primary sacramental celebrations of and in the Church: their biblical and anthropological foundations, historical evolution, contemporary forms and pastoral effectiveness. Requirements will include 3-4 short papers and three unit exams.

THEO 20414. Saints in Art and Icons

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

A diachronic exploration of the lives and legends of the saints as depicted in art and iconography. Students will explore lives of the saints in select vitae as well as the most influential hagiographical collection of the Middle Ages, The Golden Legend of Dominican bishop James of Voragine. Due attention is paid to the arrangement of the sanctoral cycle, the compilation of calendars and martyrologies, and the theological underpinnings of classic iconography. Primary focus on identifying saints by iconographical attributes and conventions in both western and eastern iconography.

THEO 20415. Why Worship Together

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183

This course will study the principles of the nature of Christian liturgy using the documents of Vatican II, supplemented with sources from anthropology and sociology.

THEO 20416. Sacraments of Initiation

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

Throughout the Judeo-Christian tradition, human beings have found various ways to understand and express their relationships with the Divine. These expressions have taken the form of covenants, purity rituals, ritual meals and other ceremonies which make use of language and physical elements. Such ceremonies appeal to all five senses and are understood to ground the individual, both physically and spiritually, in community and in relationship to the Divine. Language and the physical elements combine to signify a spiritual change in relationship. Within the Christian tradition, these changes are marked by the sacraments of initiation (baptism, confirmation, eucharist). This course will examine the sacraments of initiation from their origins in ancient Jewish and Christian practice through their present day manifestations. Readings will be drawn from the Scriptures, contemporary and ancient ritual texts, the writings of figures such as Augustine, Thomas Aquinas, and Martin Luther, and the work of twentieth century theologians. Assignments and class discussions will engage themes of sin and grace, the significance of embodiment, and Christian identity.

THEO 20418. St. Joseph in Catholic Teaching, Devotion and Culture

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

The figure of Joseph of Nazareth, spouse of the Virgin Mary and foster-father of Jesus Christ, has emerged in increasingly high relief since the Middle Ages and particularly so in the nineteenth and twentieth centuries. The course begins with the scriptural treatment of St Joseph first in the infancy narratives and in occasional

references to him in the Gospels, then in regard to his typological antecedent, the patriarch Joseph, son of Jacob and viceroy of Egypt. After an examination of Joseph in early Christian apocrypha (Protevangelium of James, Gospel of Mary), students will consider his rehabilitation by various Church Fathers (Jerome) and medieval theologians (Bernard of Clairvaux, Bernardine of Siena) despite flawed portrayals in popular hagiography (The Golden Legend, religious dramas). The cultus of St Joseph and that of the Holy Family entered a vigorous phase with the Catholic Reformation (Teresa of Avila) and the establishment of the Church in North America (François de Laval). Attention will be paid to his patronage of various nations (e.g. Mexico, 1555; Canada, 1624) as well as that of the Catholic Church (1870). Special focus on the liturgical feasts and offices of St Joseph plus the devotional cult of St Joseph as it flourished not only under papal influence but also through the zeal of St André Bessette, CSC (1845-1937, canonized October 17, 2010), founder of the Oratory of St Joseph, Montreal, Canada and one of the most effective promoters of devotion to St Joseph. Papal teaching and legislation on St Joseph. Iconography of St Joseph. Theological implications of the increased liturgical and devotional prominence of St Joseph.

THEO 20419. Introduction to Sacramental Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183

In its historical dimension, theology is the history of ideas deeply interwoven with the history of institutions. This interrelationship becomes perfectly evident in the study of sacramental theology. Standard information in the Catechism about the sacraments, like: “There are seven sacraments”, “Baptism, Confirmation and Ordination cannot be reiterated”, “The Eucharist is a sacrament of Christian unity” etc., are the result of a long and sometimes difficult intellectual and institutional development, which left its impact on different facets of life and thought in Christian cultures—from logic and the philosophy of nature to the way society and human beings were understood. The development of sacramental theology and its impact on other spheres of life and thought throughout history will be the subject of this course.

THEO 20602. Catholic Morality and the Good Life

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

What is the good life? The answer to this question, subject of reflection for millennia, depends on how one understands the world, and the human person's place in the world. Catholic beliefs about God, creation, the human person, and Jesus Christ are the source of the Catholic vision of the good life. The purpose of this course is to explore different answers to the question of the good life, from both outside and within the Catholic tradition. Students will critically engage Biblical, theological, and philosophical texts, from before time of Christ to the present, which address the question of the good life. Students will be expected describe and charitably evaluate these various responses, with an eye toward enhancing their own response to the question of the good life. After this historical survey, the final third of the course will examine a few contested ethical issues in order to understand how competing visions of the good life play out in varying positions on difficult moral issues.

THEO 20605. Introduction to Catholic Moral Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course will be structured into three sections, addressing respectively, biblical foundations, fundamental topics, and selected contemporary ethical questions. The biblical section of the course will study some of the key ethical perspectives and teachings of the Scriptures, primarily the Gospels and the Pauline letters. This section will be followed by an introduction to several fundamental topics in moral theology including (1) the theology of grace; (2) the orientation of ethics toward the achievement of happiness; (3) the development of the moral and theological virtues as capacities that enable us to act well; (4) the relation between moral truth and authentic human freedom; (5) the natural law, and (6) the stages and analysis of moral action. The third section of the course will consider some contemporary ethical questions in the context of this biblical and systematic framework. The

course will draw primarily upon the classical Catholic tradition, as represented especially by St. Thomas Aquinas. We will also read selected sections of recent encyclical letters by Pope John Paul II including his “Veritatis Splendor (On the Splendor of the Truth), *Evangelium Vitae* (The Gospel of Life)” and “*Fides et Ratio* (On Faith and Reason).” Students will be expected to write a summary of a short reading for each class, write one five-page paper for each of the first two sections of the course, write a final 10-page paper applying what has been studied to a particular ethical question, and present a summary of this paper to the class.

THEO 20606. Theology of Marriage

(3 -0- 3) Odozor

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

This course seeks to introduce participants to the principal elements in the Catholic Tradition on marriage by examining the sources of this tradition in sacred scripture, the work of ancient Christian writers, the official teachings of the Church and recent theological reflection. The method employed in the course is thus historical, scriptural, and thematic. The readings selected for this course are intended to expose students to contemporary discussion in moral theology apropos of these issues, and provide them with the necessary theological tools to critically evaluate a wide variety of ethical positions dealing with marriage in the Catholic tradition.

THEO 20611. Relationships, Sexuality, and Christian Tradition

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course is an introduction to the traditions and methods of Christian ethics and Roman Catholic moral theology, especially as they are applied to human sexuality and sexual ethics. Following a brief introduction to current cultural contexts for considering human sexuality, we will compare several theoretical bases for sexual morality. We will also consider methods and theories of Christian sexual ethics. Finally, we will turn our attention to a number of contemporary issues, including marriage, extramarital sexuality, contraception, assisted reproduction, and homosexuality. The format of the course will be lecture and discussion. We will employ a number of cases and scenarios to prompt discussion and to exemplify methods and theories. Requirements include attendance at all class sessions, careful reading of the assigned texts, significant contributions in discussions, a five-page reflection paper, midterm and final exams, and a 10-page researched essay on an issue related to Christian sexual ethics. There may also be several one-page, ungraded essays assigned to promote thought and discussion on specific topics or questions.

THEO 20612. Catholic Faith and Practice

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course will explore the fundamental beliefs and characteristic practices of Catholicism. Special attention will be given to the inherent unity of this faith as a sacramental approach to reality, rooted in the central Christian belief in the triune God who is the source and goal of our lives. The distinctively Catholic beliefs and practices will thus be examined in light of the Catholic interpretation of basic Christian beliefs about God, humanity, sin, and redemption. Our emphasis on the unity of Catholic faith and its implications for our lives will provide a basis for further critical and careful thought about the meaning and truth of Catholicism, especially in comparison with alternative approaches to the value and purpose of human life. Students will be encouraged to develop a project in experiential learning as one of their major requirements for this course. Those who have recently completed the Urban Plunge or a similar program will have the opportunity to explore the Catholic tradition in light of and dialogue with the insights and questions their experience may have raised. This course may be of most interest to Roman Catholics, but is open to anyone willing to engage the Christian understanding of reality as developed in the Catholic tradition. Where practicable, major points of commonality with and difference from non-Catholic Christians will be examined.

THEO 20616. Theology, Ethics, and the Environment

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

What does it mean to *think and act* as a Christian in an age of environmental degradation and uncertainty? Although this may be a new query brought on by our current context, theologians have been reflecting upon the created order and the human place within that order for centuries. Focusing on the development of Roman Catholic thought while also drawing on Eastern Orthodox and Protestant sources, this course seeks to introduce students to primary texts in the Christian theological tradition from the patristic to the modern era and demonstrate their pertinence for addressing contemporary ecological problems. Students will gain an understanding of the central ecological issues of our day, develop a critical awareness of the assumptions and values of the mainstream environmental movement, and acquire the tools to think and act in ways that are creative, compassionate, and informed by centuries of theological reflection.

THEO 20617. Contemporary Issues in Christian Ethics

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

The purpose of this course is to introduce the student to the tradition and methods of Christian ethics, especially as they are applied to selected contemporary issues and several recurring moral questions in professional life. The course is divided into three sections; first, we will examine the moral life as it has been articulated in some classical and modern theories of ethics, and we will review particular methods and themes of Christian ethics. Second, we will study contemporary issues and Christian responses in the areas of bioethics, human sexuality, and social justice. In the third section of the course, we will discuss three issues in professional ethics—deception, informed consent, and social responsibility—and evaluate the contribution of the Christian ethical tradition in addressing these issues. Format: lecture and discussion. Requirements include a five-page reflection paper, a midterm examination, a 10-page reflection paper, and a final examination.

THEO 20618. Christian Understanding of Human Nature

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

What does it mean to be human? Christians believe that this question can be adequately answered only in the light of divine revelation. This course will begin with an exploration of the central beliefs that shape the Christian understanding of human nature: creation in the image of God; the fall and original sin; salvation in Christ. From there we will go on to compare and contrast the Christian understanding with those of several non-Christian scientists and philosophers. Finally we will consider the Christian understanding in relation to various contemporary issues, including feminism, the environment, addiction, and the transformation of culture inaugurated by television and the computer. Course content will consist mainly but not exclusively of lectures and readings from the course packet. Requirements: midterm and final examinations; quizzes; either one six-page paper or two shorter papers.

THEO 20619. Rich, Poor, and War

(3 -0- 3) Whitmore

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

This course examines the interrelationships between economic injustice and violence. It begins by investigating the gap between rich and poor both in the U.S. and worldwide. We also look at the history of Christian thought on wealth and poverty. We then address the ways in which economic disparity intersects with the problem of violence in both domestic (violence against women) and political realms (war and revolution). Next, we canvass Christian thought on the use of violence. This raises the question of whether Christianity itself contributes more to violence or to peace. Finally, we pose the question of whether forgiveness for violence is advisable or feasible.

THEO 20620. Corporate Conscience

(3 -0- 3) Clairmont

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
The development of a corporate conscience involves discernment and judgment by individuals and by the various small and large groups of which individuals are a part. This course will examine how Christian moral thought, especially as it is expressed in Catholic moral theology, impacts the business decisions of individuals and the possibility of applying Christian moral principles in a business environment. The course will alternate between the study of basic values, norms and principles in Catholic theology and the values, norms and principles internal to the business practices of accountancy, finance, marketing, corporate management and governance, and the accumulation and deployment of business information. The goal of the course will be to learn strategies for dealing with situations that ask us to reconcile apparently conflicting goods, potentially diverging professional, social and religious commitments, and to envision how business practices might contribute to advancing the common good. Requirements include a midterm and a final exam and the preparation and presentation of a case.

THEO 20621. Medical Ethics

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

THEO 20622. A Faith to Die For

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
An introduction to Catholic moral theology, with an accent on how Catholic belief and practice shape the Church's understanding of the moral life. Aspects of Catholic belief and practice to be covered include baptism, penance, reading scripture, preaching, prayer, the Eucharist, martyrdom, religious life, marriage, and mission. In the context of these beliefs and practices, several leading themes in Catholic moral theology will be explored (e.g., sanctification, the eternal and natural law, and virtues and vices), and several moral issues will be examined (e.g., abortion, suicide, capital punishment, economic justice, and war and peace). This course explores an understanding of the moral life in terms of participation in the life, death, and resurrection of Christ, but at the same time it avoids construals of the moral life that rest merely on pious exhortations ("Jesus says"), assertions of ecclesial authority ("the Church says"), or invocations of negative moral prohibitions ("thou shalt not"). Thus, the "faith" will be presented as a set of beliefs and practices that are disturbingly radical, demanding that Christians die to themselves, yet also deeply attractive, in that dying serves as a passageway to true life. As suggested by the title, a leading emphasis in the course is that only a faith worth dying for can forge a moral life that is truly worth living. Readings include selections from scripture, liturgical texts, theological and moral treatises, encyclicals, and the documents of Vatican II, plus Augustine's *Confessions*, Cantalamessa's *The Eucharist: Our Sanctification*, Graham Greene's *The Power and the Glory*, short stories of Flannery O'Connor, Dorothy Day's *The Long Loneliness*, and Helen Prejean's *Dead Man Walking*. Evaluation is based on a midterm, a final, several short papers, and interactive class participation.

THEO 20625. Discipleship: Loving Action for Justice

(3 -0- 3) Pfeil

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002
This course is designed for students who have completed a Summer Service Project Internship (SSLP or ISSLP) through the Center for Social Concerns. The main objective is to afford students the opportunity to combine social analysis with theological reflection. The course material will span a variety of ethical issues, including education, globalization, restorative justice, racial justice, power relations, environmental justice, and structural violence. These topics will be held in conversation with the Catholic social tradition. A major component of the course will entail the presentation and analysis of student-generated research emerging from the SSLP/ISSLP.

THEO 20626. Science and Theology

(3 -0- 3) Ashley

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Both science and religion generate assertions that are held to provide true descriptions of the world and our place in it. Both science and theology subject these assertions to disciplined inquiry and testing within specific communities. In societies (like ours) in which both science and religion are vital forces, the ways that this inquiry and testing happen overlap and interrelate in complicated ways, resulting at times in conflict and at times in mutual enrichment. This course will investigate these interrelations by means of careful study of two case-studies: the Galileo affair and conflicts over evolution in nineteenth- and twentieth-century America. Finally we will consider current issues in environmental theology and ethics.

THEO 20630. Health Care Ethics for the 21st Century

(3 -0- 3) Ryan

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course explores the importance of religious and moral values for the life and death choices we make, individually and as a society. Basic principles and methods of contemporary bioethics will be introduced, and a range of issues considered, e.g., medical research, physician assisted suicide, health care reform, new genetic technologies, responding to AIDS. Especially recommended for students planning on a career in medicine or science. Lecture/ discussion format. Requirements: short papers, midterm, final.

THEO 20633. Introduction to Christian Ethics

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
What are the moral implications of being a Christian? What responsibilities do Christians have in their personal conduct, family life, and in their relations to the larger world? What should a Christian community look like? This course will examine these questions through a survey of the sources, scope, and decision-making process involved in different approaches to Christian ethics. Equal stress will be placed on ethical theory and practical issues, from sexual ethics to social justice and war, from individual to global ethics. Students will have the opportunity to replace many traditional course requirements with a service-learning placement in one of several local service organizations. All students will engage in a semester-long writing project in which they research and reflect on one ethical issue in depth.

THEO 20635. The Ethics of Energy Conservation

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This is a joint theology and engineering course exploring the ethics of energy conservation by using the method of community-based learning. Students will begin by using the university campus as a "trial laboratory" for measuring energy efficiency and thinking creatively about possible energy conservation measures. We will then ask them to conduct a limited energy efficiency and conservation study for selected non-profit organizations in the South Bend community. This course will fulfill a number of civic learning goals, including: the cultivation of theological and scientific competence in environmental ethics; the identification of leadership skills necessary to address the concrete concerns facing non-profit organizations as they strive to meet pressing human needs in an environmentally sound manner; and, formation of consciences sensitive to the social responsibility of caring for the environment. Maximum enrollment: 20 students. By permission only.

THEO 20636. Catholic Social Thought: Globalization and Human Rights

(3 -0- 3) Ryan

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
The Roman Catholic Church has long been a champion of universal human rights. Today, the church and all who promote and defend the causes of justice within and between nations, must ask what it means to promote the dignity of all peoples in a global age. Is it possible to work for a global common good in a world of such pronounced religious, cultural, economic, and political differences? This course

will test the hope and the challenge of the Catholic Social Tradition's confidence in human rights by engaging current international debates over access to health care, the use of military force, international economics, and ecological responsibility. Students will be introduced to the core documents and principles of Catholic Social Thought, will learn the basic theological and philosophical concepts that underlie the defense of human rights, and will acquire the background to critically participate in current debates over the viability of human rights language. Lecture/Discussion format; 3 shorter papers; final exam.

THEO 20637. Biomedical Ethics

(3 -0- 3) McKenny

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

Corequisite: THEO 22637

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

THEO 20639. Conscience, Calling and Character

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002

This course is intended to be an introduction to Catholic moral theology customized for those discerning a career as a business professional. In the wake of ethics failures at a number of prominent corporations, business leaders have renewed their call for ethical behavior and have begun to establish criteria for hiring morally thoughtful employees and to institute ethics education in the workplace. In the first part of the course, we will examine Catholic theological ideas about conscience and how it functions in the process of making a moral decision. In the second part of the course, we will examine a selection of Catholic writings on the idea of vocation and calling, as well as the nature of human work, the relationship between workers and management, and the norms of justice that ought to govern these relations. Finally we will examine ideas about character and virtue to assess the challenges and opportunities for moral formation in a business context. Class format will combine analysis of theological texts and discussion of business cases. Course requirements include a midterm and final examination and a group project.

THEO 20640. Christian Ethics and Modern Society

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183

This course examines the various ways Christians respond to certain contemporary moral problems. Do Christians think about ethics differently than other well-meaning citizens? Are Christian virtues and principles fundamentally at odds with the ethos of liberal democracy oriented toward rights, equality, and freedom? What do Christian beliefs and moral concepts imply about issues related to feminism, racism, and pluralism? What is the relationship between religious convictions, morality, and law? Special emphasis on selected political and economic problems, homosexuality and marriage, capital punishment, the environment, war, and the role of religion in public life. The course is reading-intensive and requires active participation in discussions.

THEO 20641. Christian Anarchy

(3 -0- 3) Pfeil

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course will explore ethical and theological issues around the relationship of Christian ecclesial communities to the state, personalist approaches to issues of social justice, and theological and philosophical understandings of a needs-based political economy. Methodologically, it will proceed through an historical consideration of the development of thought on these issues in the Christian tradition, beginning with views of community and political authority in Scripture and the early Church and including the thought of Peter Kropotkin, Leo Tolstoy, Peter Maurin, Dorothy Day, Karl Barth, Jacques Ellul, and Vernard Eller, among others. Community-based learning, in the form of 20 hours of site work in the South Bend community over 10 weeks, is a requirement for this course.

THEO 20642. War, Peace, and Conscience

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course examines ancient, medieval, and modern understandings of the ethics of war primarily, but not exclusively, within Christian tradition. It comes in three parts. First, it surveys the emergence and development of the morality of war from ancient times (Jewish, Christian, and classical), through the medieval period (church canonists, Aquinas, the scholastics), and into the modern period (Grotius and later sources of international law). Second, it examines the nature of modern warfare by means of historical illustrations, including the Civil War, the so-called Indian Wars, World War I, World War II, the Vietnam War, and the Gulf War. Third, it takes up several cases with the aim of exploring the tension between traditional conceptions of just war theory and the practice of modern warfare, focusing on issues involved in the use of weapons of mass destruction, the "fog of war," wars of revolution, ethnic and religious conflict, and the continuing "war on terrorism." Texts include: Roland Bainton, "Christian Attitudes Toward War and Peace," Erich Maria Remarque, "All Quiet on the Western Front," John Hersey, "Hiroshima," Olson and Roberts, "My Lai: A Brief History with Documents," plus writings on the attacks of September 11. Requirements include a take-home test, several short papers, and a final exam.

THEO 20643. The Askesis of Nonviolence: Theology and Practice

(3 -0- 3) Pfeil

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002

or THEO 10002 or THEO 13002

This course will explore the theology and practice of nonviolence as a form of askesis, or spiritual discipline. The material will include readings from Scripture, the early Christian tradition, and Catholic social teaching. Religious sources outside the Christian tradition will include Gandhi, Thich Nhat Hanh, and Badshah Khan. This course will use the method of community-based learning and will require 20 hours of service at particular sites in the South Bend area.

THEO 20644. Justice, Human Rights, and the Catholic Social Tradition

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

The modern encyclical tradition of Catholic Social Teaching contains a wealth of reflection on the idea and practice of economic and social justice. This second course in theology will explore this tradition and will pay particular attention to the numerous and complex ways in which the ideas of justice and human rights have been construed in various official magisterial and theological documents. Through the lenses of justice and human rights, we will engage in close, careful readings of the official documents that constitute the Catholic Social Tradition. To gain a broader understanding of the tradition, we will explore themes such as natural law, the common good, and the dignity of the human person. A central focus of our inquiry will concern the ways in which the Catholic tradition attempts to reconcile individual rights with the promotion of the common good, and of political community. We will also explore the relationship of natural law to human rights. In the second half of the course, we will examine several practical questions that arise in conjunction with a consideration of the meanings of justice and of human rights.

THEO 20645. Justice, Human Rights, and Catholic Social Thought: Contemporary Issues

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

The modern encyclical tradition of Catholic Social Thought contains a wealth of reflection on the theory and practice of economic and social justice. This second course in theology will explore this tradition and will pay particular attention to the numerous and complex ways in which the ideas of justice and human rights have been construed in various official magisterial and theological documents. Through the lenses of justice and human rights, we will engage in close, careful readings of the official documents that constitute the Catholic Social Tradition. To gain a broader understanding of the tradition, we will explore themes such as

natural law, the common good, and the dignity of the human person. A central focus of our inquiry will concern the ways in which the Catholic tradition attempts to reconcile individual rights with the promotion of the common good, and of political community. We will also explore the relationship of natural law to human rights. Throughout the course, we will examine several practical questions that arise in conjunction with a consideration of the meanings of justice and of human rights.

THEO 20647. God and Mammon: Christianity's Encounter with Capitalism

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002
Since its emergence in the early modern period, capitalism has produced a material prosperity that had hitherto never been imagined, and now plays a dominant role in our society. Markets seem to be able to channel the self-interested actions of individuals toward the socially beneficial result of widespread prosperity. But that leads to something of a paradox. Capitalism emerged in the Christian culture of Europe, yet its power for creating growth rests on the self-interested material strivings of individuals which seems to be at odds with Christian wariness of greed and materialism. If Christ has warned us that we cannot serve both God and mammon, how are we to understand the success of mammon in a Christian culture? In this course, we will focus on the theological responses to capitalism when it first began to evolve from the medieval economy. After a short unit reviewing Biblical and Patristic teachings on economics, we will take up the medieval economy, and medieval theology about the economy with a particular emphasis on the thought of Thomas Aquinas. We will then trace the co-evolution of capitalism and theology up to the beginnings of the Industrial Revolution which ushered in a period of sustained economic growth which is unprecedented in human history. Along the way we will consider the thought of Martin Luther, John Calvin, John Locke, Bishop Butler, and Adam Smith. We will ask how these writers understood the relationship between material wealth and human happiness, the relationship between our duty to care for ourselves and our duty to care for others, and the relationship between earthly concerns about the economy and theological concern about God. The historical survey should provide us with tools for thinking about the place of economics in our lives from a Christian standpoint, and so we will conclude with an assessment of some modern Christian reflection on the economy.

THEO 20648. Fundamentals of Christian Ethics

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
The general aim of this course is to introduce undergraduates to the primary sources and fundamental concepts of Christian ethics. Our study will be structured around the Ten Commandments (Exodus 20:1-17) and the Beatitudes (Matthew 5:3-12). We will examine these teachings in light of the broader question of what it means to act well and flourish as a human creature and a child of God. We will study each of the commandments and beatitudes in turn, drawing upon a broad range of readings and commentaries from key thinkers throughout the Christian tradition. In both lecture and seminar format, we will attempt as a class to unpack and compare the different ways the commandments and beatitudes have been interpreted and lived out in daily life. The ultimate goal of the class is to facilitate a greater understanding of what it means to think about human action from a Christian theological perspective.

THEO 20649. Christian Ethics, Technology, and War

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course examines the theological resources which can be brought to bear on the ethical issues surrounding the use of emerging weapons technologies in war. Some of the emerging technologies that will be considered are Unmanned Aerial Vehicles (UAVs), robots with artificial intelligence, surveillance technologies, and the use of neuroscience technologies to enhance and/or alter the psychological, physical and emotional capabilities of the soldier on the battlefield. The course will begin by introducing students to the Christian just war tradition as a way of demonstrating how theology, law, ethics and war can be related. The course will then

undertake a very brief overview of the history of weapons development in war and the Church's reaction to some of them (e.g. the crossbow, nuclear weapons). The course will then move on to examine particular emerging technologies. Students will be asked to consider how the specific technologies impact: 1) the moral agency of individual soldiers in relation to the operation of the technology itself; 2) the relationship of soldiers to fellow allied soldiers as well as enemy combatants; 3) the relationship of individual soldiers to military, social, and political institutions; 4) the relationship of the military to other social institutions, most notably political and economic institutions; and 5) the environment. Students will be asked to consider how the just war tradition may or may not be an adequate framework with regard to thinking through the ethical issues surrounding emerging weapons technologies. The course will conclude by asking students to consider what type of moral responsibility is required by non-military agencies or individuals with regard to their cooperation in the research, development, and funding of these weapons systems (e.g. banks, engineers, civilian corporations, lawyers, the church, the academy, etc.). Students will undertake a major group project and presentation at the end of the course in which the students will present a case study on the moral and ethical implications of a particular weapons system using the resources and material provided to them throughout the course.

THEO 20650. Theology, Culture and Human Rights.

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
A significant development in modern Roman Catholic Social Teaching is the endorsement of the doctrine of universal human rights. This course explores the tensions and challenges that arise, both within and outside the Christian theological tradition, in articulating, promoting, and defending the discourse and practice of human rights within a globalized setting that is religiously, ethically, and culturally pluralistic. The first part of the course will be devoted to thematic issues such as the meaning of the Church and its mission, the diversity of religious and cultural practices and traditions, and the idea of a universal morality or natural law. The second part of the course will consider several practical issues that arise in relation to the practice of certain human rights, among these the issue of religious freedom, the rights of women and children, and the rights of ethno-cultural minorities.

THEO 20653. Synergoi: The Theological Ethics of Food Cooperatives

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This is a community-based learning course focusing on the inter-relationship of food, food security issues, the sacramentality of creation, liturgy, and the place of cooperatives in the Catholic social tradition. What does it mean for human beings to become *synergoi*, or co-operators with God's creative activity in their own local community and as responsible members of God's creation called to live sustainably? As a requirement of the course, students will work twenty hours in the local community on a neighborhood-based food co-op project, performing research of use to the local community. The course will be limited to twenty-five students and requires the permission of the instructor for registration.

THEO 20654. Christian Ethics and Immigration

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This course takes up the themes of welcoming the stranger and loving the neighbor to introduce students to the Christian tradition and its sources for ethical reflection: Scripture, tradition and experience. We will rely on immigration to the United States from Mexico as the primary though by no means exclusive test case to explore the theoretical and practical implications of our inquiry. The course's textbooks are the Bible and *Christians at the Border: Immigration, the Church, and the Bible* (2008) by M. Daniel Carroll. Students will also be required to read online resources, including the *Compendium of the Social Doctrine of the Church* (2004) and other church teachings. In four of our classes we will participate, along with students from universities across the U.S. in an e-study abroad session on migration through Catholic Relief Service's Global Solidarity Network. The final

course grade is based on class participation, participation in the e-study abroad activities, two quizzes, a midterm exam, a final exam, and a case analysis and presentation.

THEO 20657. The Ethics of War and Peace

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This course explores Christian understandings of the ethics of war and peace from the time of the early church to the present. Through this historical survey, we will seek to develop an account of various ethical positions on the use of force, particularly views rooted in pacifism and in the just war tradition. We will also consider how different theological convictions in the areas of Christology, ecclesiology, and eschatology (among others) have shaped Christian teaching on the nature of peace and the permissibility of using violence. Finally, we will investigate the ethical implications of several contemporary issues related to the ethics of war and peace such as war crimes, sanctions, humanitarian intervention, and terrorism.

THEO 20801. Theology, Disability, and Dependence

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This course explores theological understandings of and approaches to physical and mental disability. On the one hand, it explores ways in which an attentiveness to disability and those with disabilities might allow for richer and deeper theological reflection. At the same time, it explores ways in which theological concepts and insights might contribute to our understanding of disability. For this course students will be required to write several short reflections, a major paper, and take a midterm and final exam. The course will also include a practical component facilitated by the Center for Social Concerns.

THEO 20802. Prayer and Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
Although prayer and theology can be distinguished, and although they have become largely disconnected in the modern world, they nevertheless belong to the same search for an ever-deepening awareness and love of God. This course offers an introduction to several classical texts that are both prayerful and theological in order to shed light on this connection and to explore its significance. By engaging these texts, students will be able to consider important spiritual and intellectual developments in the history of Christianity, while reflecting on many of the central mysteries of the Christian faith. Representative figures of the patristic, medieval, reformation, and modern periods will be studied in survey fashion. The course requirements are as follows: prepare the readings for each class, write three short (2-3 page) essays, one longer (6-8 page) essay, and take two exams (midterm and final).

THEO 20803. God's Grace and Human Action

(3 -0- 3) Wawrykow

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
What are the respective roles of God and the human person in salvation? Are ideas of human freedom and of the value of human acts compatible with a belief in God as the source of grace and redemption? These and other questions about salvation have been hotly debated by Christian theologians throughout the centuries. This course analyzes the positions articulated by such figures as Augustine, Aquinas, Luther, and Calvin, and examines how they shaped the Catholic-Protestant debate about the role of good works, and of God, in salvation.

THEO 20805. Vatican II History and Consequences

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
The "Aggiornamento" or "bringing up to date" that occurred at the Second Vatican Council involved a quest for a deeper understanding of how the Gospel of Jesus Christ might speak more effectively to the modern world through the Catholic Church and sought to identify practical and pastoral ways of applying the Gospel not only to society-at-large but to the Church itself as well. This course provides a review of the theological history of the council, an exploration of the work of

the theologians and bishops at the council itself and in its documents, and the consequences of the Council in the life of the Church since 1965. There will be an optional service component for this class that attempts to apply some of the principles of the council by working in various forms of ministry in the local church.

THEO 20807. Catholicism

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
A comprehensive exposition of Catholic theology from a historical, doctrinal, and ecumenical perspective. The course addresses the following questions: the inter-relationships among faith, theology, and belief; the meaning of human existence (a multidisciplinary exploration); the problem of God (revelation, religious pluralism, providence, the Trinity, etc.); Jesus Christ (New Testament data, doctrinal development, contemporary views, including a discussion of Jesus' self-consciousness, sexuality, and sinlessness); the Church (New Testament data, history, Vatican II, mission, sacraments, authority, ministry, Mariology, etc.); and Christian existence (ethics, spirituality, eschatology). The course includes six (6) discussion sessions which meet every other week on Thursday afternoon or Friday, with attendance required.

THEO 20808. Fundamental Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Contemporary theologians hotly debate the nature, purpose, and possibility of fundamental theology. However individual theologians understand it, fundamental theology includes the method(s) of theology, conceptions of faith, relation, and religious experience, and the critique and defense of the rationality of normative Christian faith. This course will probe these central themes of fundamental theology.

THEO 20811. Jesus and Salvation

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
An exploration of the mystery of Jesus the Christ and the experience of salvation through examination of the life, ministry, death, and resurrection of Jesus (Part I); the development of classic Christian doctrine (Part II); and selected contemporary perspectives and questions (Part III).

THEO 20815. The Catholic Experience

(3 -0- 3) Cunningham *Prerequisite:* THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

This course has three quite specific aims: (1) to describe that form of the Christian tradition both in doctrine and practice which is called Catholic; (2) to argue that within the Catholic tradition there are different "ways" of being a Catholic; (3) to outline a general way of being a Christian within the Catholic tradition; we will call that "way" a "spirituality." Theology 20815 will meet weekly for a lecture followed by discussion groups. Attendance will be required. Each week a short reflection paper (two pages) will be readied for the discussion section. In addition, there will be an essay-style midterm and final.

THEO 20822. What Catholics Believe

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
A theological exploration of the basic content and practice of the Catholic faith. The focus is on the fundamentals that form the foundation of Catholicism and against which everything else is explained or judged. The aim of this course is not simply to educate students about Catholicism. Rather, it intends to facilitate their personal appropriation of the Catholic tradition: that is, to challenge and help them reason critically for themselves about the meaning and practical implications of their faith. Some of the questions students will ponder concern God, Jesus Christ, the church, Christian spirituality, and moral behavior. But since we raise these questions in an attempt to come to terms with the meaning of our own lives, we begin with the question of our own human existence: Who am I or who are we? The course is based on the conviction that all theological questions start with us as the ones who pose the questions in the first place. While the approach taken

will be one that appeals immediately to critical reason rather than to conversion of the mind and heart, the aim ultimately is to help students discern, respond to, and be transformed by the presence of God in their lives, and to work for the continuing renewal of the world in light of this discernment of God.

THEO 20825. World Religions and Catholicism in Dialogue

(3 -0- 3) Gorski

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

To explore Hinduism, Buddhism, Islam, and to examine the Christian theological appraisal of the other world religions. This course is a study in comparative theology and will enable students to gain a deeper understanding of Christianity by “passing over” into and experiencing as well as appraising the different major religious traditions of the world.

THEO 20828. Christianity and World Religions

(3 -0- 3) Malkovsky

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002 AND ALHN 13950

The purpose of this course is to introduce the student to the basic teachings and spiritualities of Hinduism, Buddhism, and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate Mystery, the overcoming of suffering, etc. We will also examine some traditional and contemporary Catholic and Protestant approaches to religious pluralism. Our own search to know how the truth and experience of other faiths is related to Christian faith will be guided by the insights of important Catholic contemplatives who have entered deeply in the spirituality of other traditions. By course's end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. Requirements: Short papers, midterm exam, and final exam.

THEO 20830. Regarding the Islamic Challenge to Christian Theology

(3 -0- 3) Reynolds

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

While many Christians have described Islam as a Christian heresy, many Muslims consider Christianity to be an Islamic heresy. Jesus, they maintain, was a Muslim prophet. Like Adam and Abraham before him, like Muhammad after him, he was sent to preach Islam. In this view Islam is the natural religion—eternal, universal, and unchanging. Other religions, including Christianity, arose only when people went astray. Therefore Muslims have long challenged the legitimacy of Christian doctrines that differ from Islam, including the Trinity, the incarnation, the cross, the new covenant and the church. In this course we will examine Islamic writings, from the Qur'an to contemporary texts, in which these doctrines are challenged. We will then examine the history of Christian responses to these challenges and consider, as theologians, how Christians might approach them today. Regarding the Islamic Challenge to Christian Theology” is the second of two required theology courses at Notre Dame (the “development” course). These two courses are directed towards a number of goals. First, they provide students with information about the Bible and Christian theology that in itself is important. Second, they form the basis of a Catholic community at Notre Dame where all students (whether or not they are practicing Catholics) have a common experience of texts and questions that might be discussed not only in class but while eating mashed potatoes in North Dining Hall. Third, theology itself is meant as a guiding light for all other classes. As with the great European universities (Paris, Bologna, Oxford, Cambridge etc.), Notre Dame was founded by the church to be a community where students are strengthened in their faith and morals, and therefore more able to see the truth in other fields, whether biology, music, or history. Like the first required course (Foundations), “Regarding the Islamic Challenge to Christian Theology” has the same goals. This is not an Islamic Studies course. It is a course which takes Islam's challenge to Christian teaching as the starting point for Christian theological reflection.

THEO 20831. Divine Providence and Human Suffering

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Christians profess belief in a God who, being both all-powerful and all-good, generously provides for human persons and lovingly wills their happiness and fulfillment. But how is this belief compatible with the human suffering observable, in innumerable forms, throughout the world? If such suffering is part of the divine plan, does that mean that it is in fact willed by God (which would seem to jeopardize divine benevolence)? Or if it is not included in God's plan for humanity, does that mean that the suffering that nevertheless occurs is somehow beyond the reach of divine power or concern (thus seeming to jeopardize either omnipotence or benevolence)? This course offers a systematic and historical understanding of the doctrine of divine providence, a doctrine which is essential to the Christian perception of the divine/human relationship. The course is systematic in that it will attend to the interconnections between this doctrine and various other aspects of the Christian belief system (e.g., creation, free will, sin, grace, redemption, prayer). It is historical in that it will include consideration of sources from across the full sweep of Christian history. Finally, the exploration of the variety and richness of the theological tradition on this topic will allow for reflection on the experiential and pastoral implications of Christian belief today.

THEO 20833. Jesus Christ and Hope

(3 -0- 3) Krieg

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Jesus Christ and Hope. This course critically elucidates the primary Christian truths concerning Jesus Christ. In particular, it inquires into the meaning of Jesus' proclamation of “God's kingdom” as well as into the significance of Jesus' suffering and death, resurrection, and “second coming.” The course draws on pertinent texts from the Bible, Christian tradition, church teachings, and contemporary writings. It requires two in-class tests, quizzes, class participation, and the final examination.

THEO 20835. The Church in the World

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course explores the nature and mission of the church with particular attention to how these are shaped by its engagement with the world. It looks at the church's on-going efforts to proclaim and preserve the good news of Jesus Christ while communicating it effectively in an ever-changing and increasingly diverse world. To this end, the class is divided into three units: Unit One surveys significant historical events which have helped form the Christian community's identity and the way it conveys its message, Unit Two studies the documents of Vatican II as a recent and essential expression of the church's mission and self-understanding and Unit Three examines the church's position on several contemporary issues such as interreligious dialogue, economic justice, birth control and scientific/technological developments as a way of considering current efforts to proclaim the gospel and speak meaningfully to a contemporary audience. This class includes weekly response papers, two tests, a final exam and a class presentation or paper.

THEO 20836. God, Human Beings and Salvation

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
At the heart of the Christian faith lies the conviction that sinful human beings are redeemed and saved through Jesus Christ who introduces them into a new and grace-filled relationship with God. While such a belief is universal to all Christians, the specific way in which redemption and salvation are understood has assumed varied expressions throughout the history of Christian thought. This course will explore Christian attempts to understand human salvation with particular focus on the notion of “justification”—the movement of a human person from a state of sin into a state of grace. Central to this exploration will be the study of how God and human beings both occupy meaningful roles in the process of justification and the attainment of eternal life. As they relate to this theme, the course will also engage topics including Christ's role as savior, faith, grace, merit, sin, free will, and

predestination. Surveying justification from a historical perspective, the course will offer students the opportunity to compare and evaluate diverse viewpoints using skills and vocabulary acquired during the semester.

THEO 20837. Art/Theological Imagination

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Art and the Theological Imagination: What role does art and creative expression play in the task of theology, the disciplined reflection on the content of faith? As Fr. Aidan Nichols points out, the Church's Tradition is never accessible in itself, in its pure form, but only via some concrete mediation, such as the liturgy, sacraments, and art and iconography. Art maintains our memory of divine revelation and energizes the human imagination for the divine. In this class, we will first consider the meaning and function of theological aesthetics, then take a historical tour of some of Christendom's most beautiful religious art to examine its relationship to doctrine. Along the way, we'll consider intersections between beauty and justice, between art and devotion, and between classical and modern religious art.

THEO 20838. Revelation and Inspiration

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
This course will pursue the topics of revelation and inspiration from both historical and theological perspectives, beginning with discussions in Scripture and moving forward.

THEO 20840. Essentials in Systematic Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
"In His goodness and wisdom God chose to reveal Himself and to make known to us the hidden purpose of His will by which through Christ, the Word made flesh, we might in the Holy Spirit have access to the Father and come to share in the divine. Through this revelation, therefore, the invisible God out of the abundance of His love speaks to us as friends and lives among us, so that He may invite and take us into fellowship with Himself. This plan of revelation is realized by deeds and words having an inner unity: the deeds wrought by God in the history of salvation manifest and confirm the teaching and realities signified by the words, while the words proclaim the deeds and clarify the mystery contained in them. By this revelation then, the deepest truth about God and the salvation of humankind shines out for our sake in Christ, who is both the mediator and the fullness of all revelation."—Vatican Council II, *Dei verbum*, 1. As Vatican Council II's decree on divine revelation suggests, God reveals God's self so that believers can access and share God's divine life. The fundamental task of Christian theology, therefore, is to articulate God's revelation in a clear and cogent fashion that promotes the salvation of all who believe and engage it. This course introduces students to vital topics in Christian thought while exploring the need for their systematic agreement as an essential aspect of coherent Christian discourse. To that end, it will 1) examine the topics of God, Jesus, salvation, and the church from varying theological viewpoints; 2) require students to analyze the content of theological arguments for their meaning and wider impact on Christian belief; and 3) train students with methodological and interpretive tools to construct theological arguments in oral and written forms. In these ways, the course offers students the opportunity to critically compare and evaluate diverse theological viewpoints using skills and vocabulary acquired during the semester. It aims to present theology as "faith seeking understanding"—a critical, analytic, and systematic discipline that probes and expositis God's revelation to humankind.

THEO 20841. The Redemptive Work of Christ

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002
The history of theology includes a large number of ways of explaining how Christ's death on the Cross brings about human redemption. We will learn about the most important theories of redemption through reading texts from the Patristic era, the

Middle Ages, the Reformation, and the Twentieth Century. Class requirements: informed class participation, frequent short writing assignments, two long papers, a midterm exam, and a cumulative final exam.

THEO 20842. Theology and Engineering

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13002 or THEO 13183
A one-semester introduction to the feedback principles involved in making good choices and avoiding bad choices. Topics from feedback system theory are introduced as needed, and used to characterize such decision-making processes, to determine the challenges inherent in them, and to offer engineering experience toward robustly and optimally tracking good goals, while resisting disturbances and negative influences, all in the presence of sensitive or unknown parameters. Application of the ideas to systematic theology provides an interface with the University's theology/philosophy core requirements.

THEO 20843. The Church and Empire

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002
The formation of Christians' communal identity, theological imagination, and social practices have always been worked out—whether implicitly or explicitly—in relation to empire. This course explores this complex theological and historical relationship between Church and empire with particular attention to the ways Christian communities have attempted to resist the onslaught of pre-modern and modern imperialism in order to preserve the integrity of various aspects of the gospel of Christ. In the process of this exploration we will attempt, as a class, to discern some general characteristics of a counter-imperial Catholic ethos or spirituality by paying close attention to the ways the Church has compromised, negotiated, or resisted empire concerning images of Jesus, the effects of baptism, the scope of Christ's Eucharistic presence, and the legitimate modes of evangelization at the Church's disposal.

THEO 20844. Christ and Human Experience

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002
It is a central element of the Christian tradition that knowledge of Christ leads men and women to a deeper understanding of themselves. This course will examine how theologians throughout the church's history have explored the mystery of Christ and the insights which this has inspired regarding the nature of human experience. The first half of the course will engage in a broad survey of the Christian tradition while the second half will concentrate on 20th century understandings of Christology and its implications for topics such as morality, social justice and political engagement.

THEO 20847. Christianity and the Challenge of Buddhism

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002
In 1997 Cardinal Ratzinger, now Pope Benedict XVI, made the controversial suggestion that in the future Buddhism, rather than Marxism, would be the principal challenge to the Church. He has also, of course, often and fully endorsed the declaration of the Second Vatican Council (*Nostra Aetate*) that the Church "rejects nothing that is true and holy" in other religions, including Buddhism. Against the background of these two judgments—which may seem, but really are not, mutually contradictory—this course will consider: —The fundamental differences between Christianity and Buddhism, both in matters of doctrine and in matters of spiritual and moral practice. —The reasons why—despite, or perhaps because of, those differences—Buddhism today attracts increasing interest in cultures once shaped chiefly by Christianity.

THEO 20848. Notre Dame Football to the Eastern Vigil: Religions, Rituals and the Body

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002
As a second theology course it will be grounded in a theology of incarnation, the body, and sacrament; and will look at the history of Christian theological

considerations of such. In order to highlight the particularity of the Christian views and practices, it will also look at the ways in which some other religions have dealt with the same issues (rites, spectacles, religious athletic pageants in the ancient world and in indigenous societies, the evaluation of embodiment, the discipline and efficacy of bodily practice).

THEO 20849. Love in Christian Theology

(3 -0- 3) Murphy

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

This course is about love in Christian theology. It considers the nature of love in Plato's *Symposium*, Augustine's Trinitarian theology and ecclesiology, Bernard of Clairvaux's interpretation of the Song of Songs, and Thérèse of Lisieux's *Story of a Soul*. The course considers modern presentations of eros and agape as opposed (Nygren) and as complementary (Martin D'Arcy). The course concludes by considering nuptial mysticism in Waugh's *Brideshead Revisited*, Wojtyła's *The Jeweler's Shop*, and in contemporary cinema.

THEO 20850. Women, Gender and Theology

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 10002 or THEO 13002

This course is an introduction to Christian attitudes toward women and reflections on gender throughout the Christian tradition.

THEO 20859. Exile, Exodus and Pilgrimage

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

Beginning with the notion of the Promised Land, Judaism and Christianity possess rich understandings of "sacred places." Thus, both theological insights and ritual practices can develop out of believers' relationships to particular places. This course focuses on spiritual practices and beliefs that arise due to departure from a sacred place (exile) on the one hand and travel toward it (pilgrimage) on the other. Through Biblical narratives, historical accounts, and spiritual texts we will examine the way exile and pilgrimage provide means for believers to seek the sacred, perform penance, prove their religious zeal, and share their faith. Moreover, we will explore how exile and pilgrimage have come to serve as metaphors for the spiritual journey. We will consult a variety of sources: ancient, medieval, and contemporary, ranging in origin from the Middle East to the edges of Western Europe. This course fulfills the second theology requirement.

THEO 20860. Faith and Reason

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

Nowadays thinkers from popes to professors to self-proclaimed apologists assume as their task to show how "faith and reason," "theology and philosophy," "religious belief and science," or some other such pair might be systematically connected. Perhaps the more pertinent question is how these binary groupings arose in the first place, that is, how "faith and reason" became systematically disconnected. This course examines that very question. It proceeds in four parts, with the bulk of the course being spent on the third part. First, a brief contemporary text provides orientation on the state of the question of "faith and reason." Second, selected texts from the Bible (Proverbs, Wisdom, Sirach, Romans, John), early Church (Justin Martyr, Augustine), and medieval period (Anselm, Aquinas) show the unity of what later thinkers will separate into "faith and reason." Third, early to late modern texts (Luther, Descartes, Kant, Nietzsche, Heidegger) indicate how "faith and reason" were systematically separated in the modern period. Fourth, late modern Catholic texts (Vatican I, Newman, Rahner, Benedict XVI) give a sense of how Catholics aim to heal the rift between faith and reason while critically assessing how this rift occurred. The course includes papers and a final examination.

THEO 20861. Religion and the Visual Arts, in Christianity and Buddhism

(3 -0- 3) Gimello

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 13002

A study of the ways in which religious ideas and values are conveyed in images as distinct from texts, focusing on major works of art (paintings, sculptures, architecture) from the Christian along with comparable with and equivalent works from the Buddhist tradition, and addressing especially the many arguments and tensions abounding in religion about the proper role of the visual arts in religion.

THEO 20862. The Church in History and Eternity

(3 -0- 3) Murphy

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course will discuss ways of linking the historical Church with the eschatological and eternal church. We will tackle the relationship between the sinfulness of the Church in time (focusing on the 20th century) and the impeccability which is claimed for the eternal Church. This will involve study of Marian symbols for the Church. We will consider the problematic of the relation between the Church and the human race as a whole from its earliest origins in the Old Testament. A basic question of the course will be "who is the church, in history and in eternity?" We will analyze the idea of the Church as the continuation of the Incarnation in Möhler, Caryll Houselander and Corpus Mysticum.

THEO 20882. Theology and the Visual Arts: The Ever-Changing Jesus

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

Regardless of what anyone may personally think or believe about him, Jesus of Nazareth has been the dominant figure in the history of Western culture for almost twenty centuries. His image dominates Western art; and it is not sameness, but kaleidoscopic variety, that is its most conspicuous feature. Indeed, for most of those twenty centuries there has been little or no concern to represent him as a first-century Jewish male living in Roman Palestine. Each successive epoch has "created" him anew in accordance with its own character: cosmic king, contemplative mystic, ethical hero, exemplary victim, counter-cultural revolutionary, etc. This course explores, in image and in word, what it was that each epoch found in Jesus and brought to its visual portrayal of him. If Christ is the "icon of the invisible God," as St. Paul says in Colossians 1:15, then the objective of this course is to have students start to see theologically, and to realize that seeing is a form of exegesis. Eye-training is essential. This course will suggest that image shapes belief and attitude, as well as being shaped by belief. It will also act as an historical survey of the visual presentation of selected religious themes.

THEO 20893. Experiencing God: Theology as Spirituality

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002

This course will serve as an introduction to the tradition of Christian theology through the lens of spirituality. Its foundational assumption is deeply embedded in that tradition: namely, that authentic doctrine, genuine spiritual experience, and right action in the world are inextricably bound up together. The course will examine several major spiritual pathways in the tradition, their sources, expressions, and viability for our contemporary context.

THEO 20894. The Christian Experience: Vocation and the Theological Imagination

(3 -0- 3) O'Malley

This course provides an entrée into the theological foundations of Christian vocation through considering the transformation of human experience by means of the theological imagination. That God calls is an objective fact of revelation. How human beings perceive and appropriate this call is an entirely different matter. Thus, this course considers both the central images of Christian salvation history from creation to eschatology, as well as how these images were appropriated in the lived experience of Christianity. This course is designed to assist Notre Dame undergraduates who are preparing to work as "Mentors-in-Faith" within Notre Dame Vision.

THEO 20895. Christianity and Judaism

(3 -0- 3) Walatka

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
God's covenant with the Jewish people is absolutely foundational for Christianity, and the contemporary Church has insisted that this covenant is irrevocable, remaining active for the Jewish people today. This course analyzes the relationship between Christianity and Judaism with particular focus on the theological and historical treatment of Jews and Judaism by Christians and within Christian theology. Throughout Judaism is engaged as "internal" to Christian self-understanding and "comparatively" as an ongoing, distinct religious tradition. After a brief overview of Judaism, this course proceeds historically from the time of Jesus and the "parting of the ways" to our contemporary situation. Central issues engaged include God's covenant with Israel, the development of a negative image of post-biblical Judaism within Christianity, the relationship between anti-Judaism and anti-semitism, hostility and violence towards Jews, and moments of fruitful interaction. The final third of the course engages significant positive developments in Catholic teaching and practices since Vatican II (1965) and engages several attempts to (re-)interpret the Jewish-Christian relationship from a variety of Jewish and Christian perspectives.

THEO 20896. The Apocalyptic Imagination

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
Eschatology, the study of "last things," considers death, resurrection, judgment, and the end of history, topics that relate to our ultimate hopes. This course treats Christian views of time and history as they developed throughout the centuries, with special attention to a particular eschatology called apocalyptic. We will engage in a close reading of 1) biblical texts marked by an apocalyptic imagination, 2) texts by early, medieval, and early modern Christian authors that illustrate the increasing complexity of Christian apocalyptic, and 3) a contemporary Catholic text, arguing for an eschatological imagination that transforms apocalyptic. The course will include short writing assignments and two examinations, a midterm and a final.

THEO 20897. Divine Signs and Images along the Christian Way

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 13183 or THEO 10002 or THEO 13002
This course looks at the place of the divine image in the Christian life. Major stops along the road include: theological anthropology, christology, redemption, sanctification, and eschatology. While the reading of scripture will be a major component of the course, voices from various Christian writers throughout history will serve as guides for the journey. Selections will be read from such authors as: Irenaeus, Augustine, Thomas Aquinas, and Pope Benedict XVI. Historical artwork and images will be used throughout lectures to illustrate key points. There will be an emphasis on learning to think through the questions presented in this course through regular, short journal entries, creating a blog to help everyone to study for the exams. Other course requirements include: a midterm, a short (8pp.) reflection paper examining imagery in one Basilica service from Holy Week, and a final.

THEO 22201. God—Discussion Section

(0 -0- 0)

Corequisite: THEO 20201

Weekly discussion groups for THEO 20201, "God."

THEO 22637. Biomedical Ethics Discussion

(0 -1- 0)

Prerequisite: THEO 20637 (may be taken concurrently) or STV 2221 (may be taken concurrently)

A discussion of ethical problems in the medical profession in light of natural law and Christian moral principles.

THEO 30001. Intensive Elementary Hebrew

(3 -0- 3)

This six-week intensive language course will be devoted to learning the grammar of biblical Hebrew. Throughout the course we will focus on developing reading

and comprehension skills in biblical Hebrew through the study of biblical texts. In addition, students will learn how to use reference grammars, concordances, and apparatus to the *Biblia Hebraica*. The course encourages students to think about the grammatical forms and their implications for biblical interpretation.

THEO 30004. Introduction to Christian Latin Texts

(3 -0- 3)

(Recommended for students with advanced Latin skills). This class surveys the development of Christian Latin language and literature from their origins through Late Antiquity and the early Middle Ages. It introduces students to the various important linguistic, stylistic and literary influences that contributed to Christian Latin poetry and prose. Students will also be introduced to the varieties of Christian Latin texts and the bibliographical and research skills needed to pursue research into these texts. All along we will be concerned to improve our abilities to read and understand the Latin of the tradition that stretches from the first translations of scripture to the treatises of Jerome and Augustine. The survey of Medieval Latin language and literature in the spring semester follows and builds upon this course.

THEO 30011. Know Your Catholic Faith: Mary

(1 -0- 1) Matovina

This course will examine Mary in the Christian Tradition, particularly the primary teachings about Mary in Roman Catholicism and the implications of those teachings for contemporary Christian faith. The course is part of the Know Your Catholic Faith series offered through the Department of Theology and as such will examine all pertinent texts on Mary from the *Catechism of the Catholic Church*. Does not fulfill the 2nd theology university requirement.

THEO 30012. Know Your Catholic Faith: Eucharist

(1 -0- 1) O'Malley

This course will examine the Eucharist as the source and summit of the Christian life. That is, the Eucharist is a mystery to be believed, celebrated, and lived. The primary reading for the course is Benedict XVI's *Sacramentum caritatis*, as well as selected passages from *The Catechism of the Catholic Church*.

THEO 30014. Know Your Catholic Faith: The Mass

(1 -0- 1)

Each one-credit course in the Know Your Catholic Faith Series will reflect on a central feature of the Catholic faith, so that students come away with a clear idea of what the Church holds on these topics as well as a basic theological and personal understanding of them. This course focuses on the Catholic Mass, and will begin with a theology derived from the structure of the ritual, then choose additional areas of discussion: e.g., historical origins, ecumenical questions, liturgical symbolism in the Mass, roles of priest and laity, sacrificial & sacramental dimensions, etc.

THEO 30015. Know Your Catholic Faith: Ignation Spirit

(1 -0- 1) Daley

This course, which will be conducted in the intensive "retreat" style on a single weekend, invites students to learn first-hand about the distinctive approach to contemplative prayer aimed at conversion of life and practical decisions for discipleship that is classically embodied in St. Ignatius Loyola's Spiritual Exercises. After an introductory lecture on the theology of Christian prayer and the distinctive role of Ignatius in Christian spirituality, students will participate in lectures and presentations on the text and structure of the exercises, and will then be asked to pray through the various meditations and considerations Ignatius offers, in a brief but concentrated way. As background to the course, students will be expected to have read the section on prayer in the catechism of the Catholic Church and Ignatius of Loyola's autobiography.

THEO 30017. Catechist Formation

(1 -0- 1)

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
The one-credit course is offered for students who are enrolled in the catechist program through campus ministry. Students sign up to serve as catechists in local parishes and take this course to prepare them for their ministry. The goals of the class are: (1) to offer an overview of catechetical documents and directives in the church; (2) to explore lesson planning and curriculum for religious education; and (3) to share practical applications for creative teaching and classroom management.

THEO 30018. ND: Vocation Initiative

(3 -0- 3)

This course is meant to prepare the undergraduate resident counselors—known as “mentors-in-faith”—of the ND Vision high school summer retreat program. This preparation includes developing small group facilitation skills, acquiring the necessary theological understandings upon which the program is built, and building community. The culminating project of the course is a short Christian witness on one of approximately six themes that incorporates one’s own life experience as well as one’s faith-based reflections.

THEO 30019. ND: Vocation Initiative Music

(2 -0- 2)

The NDVI: music class is for the student music leaders for the Notre Dame Vocation Initiative. Training in this choir begins at the start of the spring semester (each January); the choir meets once every week throughout the spring semester. The initial responsibilities lie with learning all the choral music, mass settings, responsorial psalms, canticles, and service music that accompanies the week-long NDVI gatherings in the summer. Most of this repertoire is written for four-part harmony; each student must be thoroughly competent in his or her respective voice part. Additionally, the choir is the core group for the various (three) scriptural skit presentations that take place weekly. This work is further complemented by the choir members taking part in small group discussions with the high-school campers, as time allows.

THEO 30020. A Theological Exploration of Vocation

(1 -0- 1)

The purpose of this course is to foster a sense of vocation among our students, inviting them to become more aware of how they can live their whole lives as a response to a call from God. We hope to help young men and women realize, through their own faith experience, that the reality of Christian “vocation” invites each of them in some particular way to live as committed disciples of Christ in a challenging world. Through the decisions that they make every day as young adults they explore their own vocation. In order to achieve these stated goals, we will study the lives of 50 saints, holy men and women who responded to the call to follow Christ in their lives. Encyclical letters, Church doctrine, and other resources on vocation will be used to demonstrate what vocation means in the Catholic tradition.

THEO 30021. Liturgical Choir

(V -0- V) McShane

Study, rehearsal, and performance of sacred choral music of high quality from plainchant through music composed in the 21st century. Membership in the 65-voice SATB ensemble is by audition and limited to undergraduate and graduate students. The choir sings each Sunday at the 10:00 a. m. Solemn Mass at the Basilica of the Sacred Heart, for Sunday evening vespers, and at special University liturgies and concerts throughout the year.

THEO 30022. Women’s Liturgical Choir

(V -0- V) Bayless

The University of Notre Dame Women’s Liturgical Choir, under the direction of Andrew McShane, is a group of approximately 60 women who lead the liturgical music for the Saturday 5 p.m. Vigil Mass in the Basilica of the Sacred Heart. The Women’s Liturgical Choir is also heard at Sunday Vespers, weddings, Junior Parent’s Weekend, Advent lessons, and carols and other special University liturgies. Each spring semester, the choir tours within the United States, and at the end of

the academic year presents a concert of sacred music at the Basilica of the Sacred Heart. The repertoire of the Women’s Liturgical Choir includes chant, renaissance polyphony, and music from the 18th through 20th centuries. Rehearsals are held on Monday and Wednesday evenings from 5 to 6:30 p.m. and on Saturday’s from 4 to 5 p.m. in Room 329 of the Coleman-Morse Center. If you are a female student, staff, or faculty member from the Notre Dame, St. Mary’s or Holy Cross family and are interested in joining the choir, please contact Andrew McShane at 1-7800 or e-mail mcshane.1@nd.edu.

THEO 30023. Folk Choir

(V -0- V) Warner

Work with the folk choir, which continues to build the repertoire for Catholic school use. Class meets for seven weeks. (Second summer elective)

THEO 30024. Know Your Catholic Faith: Sin and Forgiveness

(1 -0- 1) Anderson

This course will examine what the Bible has to teach us about the nature of human sin (original and otherwise) and how God’s merciful nature time and again overwhelms it. It should provide a good window in the penitential disciplines of Lent and the joy of Easter. Class sessions will be devoted to a discussion of classic Biblical texts that have dealt with this theme (such as the book of Jonah and the story of the Prodigal Son) and how the Christian tradition has understood them.

THEO 30025. Facilitating Growth in Faith

(1 -0- 1) Delorenzo

“Facilitating Growth in Faith” serves as a practicum allowing the Mentors in Faith from the NDVision Summer Program to reflect theologically on their catechetical ministry with high school students during each of four, one-week sessions. As such, this course will complete the educational objectives begun in Theology 30018. As a field education integrative seminar, this course will include interactive lectures, small group discussion sessions, and case study work on topics having to do with mentoring others in their personal and communal growth in faith and in their awareness of how to live their Christian vocations. Related theological topics include Christological and pneumatological perspectives on discipleship, grace, conversion, evil and human suffering, prayer, living the sacramental/liturgical life of the Church, becoming the Body of Christ, discerning the presence and action of God in our lives, and giving witness to faith in service and justice.

THEO 30026. Know Your Catholic Faith: Resurrection

(1 -0- 1)

This course offers a brief theological introduction to the doctrine of the resurrection, based on the Catechism of the Catholic Church and expanded theologically by readings from traditional and contemporary writers.

THEO 30027. Know Your Catholic Faith: God

(1 -0- 1)

Faith is the sense of God as real—as the most real reality there is, a reality more immediate to us than anything else that confronts us in everyday experience. Yet God is also veiled to faith: not a problem, but a Mystery—a reality which is intrinsically beyond our ability to fit into the limited forms of words and ideas. To believe in God is a kind of knowing: a personal knowledge which gradually grows in us, and which involves, at the same time, trust, gratitude and love. In this brief course, we will reflect together on some texts that have shaped the Church’s sense of God: passages from the Old and New Testament; an oration of St. Gregory of Nazianus; St. Anselm’s Prosligion; two questions from St. Thomas Aquinas’s Summa Theologiae; a section from C.S. Lewis’s Mere Christianity; and some writings on God by Pope Benedict XVI. Our purpose will be to develop a deeper sense of the God “in whom we live and move and have our being” (Acts 17.28), to whom we pray, in whose life and blessing we share.

THEO 30028. Know Your Catholic Faith: God is Love

(1 -0- 1)

For five Sundays during Lent we will consider closely the first encyclical Deus Caritas Es (“God is Love”) by Pope Benedict XVI. The class will meet on the Sunday evenings of Lent from 6:00 to 7:00 followed by participation at Sunday

Vespers in the basilica. Attendance at all sessions and a weekly short reflection paper will be required in order to gain the one credit. Copies of the encyclical are available in the Theology Office (131 Malloy Hall). The course will be taught by Professor Lawrence S. Cunningham and Father John Jenkins, CSC.

THEO 30029. Know Your Catholic Faith: Saints

(1 -0- 1) Cunningham

Those taking the one credit course on the saints have three requirements to earn the credit; they are (1) To read Lawrence Cunningham's "A Brief History of Saints" (Blackwell); (2) Write a three to five page reflection paper on it; (3) Attend all the lectures of the Conference on the Saints beginning with the special lecture on Friday afternoon given by Professor Cunningham. That lecture will treat both the history and theology of saints in the Catholic Tradition.

THEO 30030. Know Your Catholic Faith: Creation

(1 -0- 1)

The doctrine of creation is one of the most central doctrines of the Christian tradition: "it concerns the very foundations of human and Christian life, for it makes explicit the response of the Christian faith to the basic question that people of all times have asked themselves, 'Where do we come from?' 'Where are we going?'" (CCC #282). This course offers a brief theological introduction to the doctrine of creation, based on the Catechism of the Catholic Church and expanded theologically by readings from traditional and contemporary writers. This course is part of the Know Your Catholic Faith series of one-credit courses.

THEO 30031. Knowing the God Who Calls

(3 -0- 3)

This course is designed to assist Notre Dame undergraduates who are preparing to work as "Mentors in Faith" within Notre Dame Vision. The course addresses fundamental theological themes necessary for them to serve as peer mentors for high school students exploring their vocation to Christian discipleship. Participants in the course will thus examine topics related to a theology of vocation: the call to intimacy with the Triune God; the call to follow Jesus Christ; the call to lifelong conversion animated by the Holy Spirit; the call to communion and mission in the church; the call to prayer and sacrament; the call to right relationship; and the call to service and justice.

THEO 30033. Know Your Catholic Faith: Papacy

(1 -0- 1) Heintz

A lively look at the history and theology of the See of Rome and its occupants. Learn more about this intriguing and central element of Catholic life and self-understanding.

THEO 30034. Know Your Catholic Faith: Christian Mysticism

(1 -0- 1) Betz

This course is offered as an introduction to the Christian mystical tradition from its roots in the first century to the present. Though it has many popular (and sometimes misleading) connotations, in the Christian tradition the word "mysticism" means experiential knowledge of God (*cognitio Dei experimentalis*) a kind of knowledge that typically has certain methods, proceeds in certain stages and, according to the testimony of many saints, culminates in something called "union" with God. We will begin by looking at the basis of Christian mysticism in the Old and New Testaments and then consider various examples of mysticism in the Christian East (e.g., Gregory Palamas) and the Christian West (e.g., Teresa of Avila), concluding with a discussion of mysticism in the Church today.

THEO 30035. Know Your Catholic Faith: Catholicism, The Movie

(1 -0- 1) Murphy

The course will follow Robert Barron's DVE series, "Catholicism." We will watch the entire series and each episode will be followed by a discussion. Required reading is the "Catechism of the Catholic Church."

THEO 30036. Know Your Catholic Faith: The Church in Asia

(1 -0- 1) Gimello; Malkovsky

This Know Your Catholic Faith Course gives students a chance to learn about the Church in Asia.

THEO 30203. Christianity in the Middle East

(3 -0- 3) Amar

This course will examine the origins and development of Christianity in the Middle East where Semitic language and culture molded the indigenous "Oriental" churches of the region. Topics include: Semitic-Christian spirituality, Christianity in India and China, the impact of Islam on the Middle East Christianity, the modern diaspora: Europe and the Americas. Drawing on native accounts, and the latest archaeological evidence, we will piece together the largely untold story of Christianity in the Middle East.

THEO 30206. The Catholic Reformation

(3 -0- 3)

Corequisite: HIST 32353

This course will examine some of the main historical realities, theological developments, and traditions of spirituality within Roman Catholicism c. 1450-c. 1700, the period of Catholic reform both before and after the emergence of the Protestant Reformation. The class format will be two lectures plus one discussion-based tutorial section per week, the latter based on the reading of primary sources in translation. Major topics to be discussed include the character of the late medieval Church and reforming efforts within it (e.g. the Observantine movement, Christian humanism); Roman Catholic response to the Protestant Reformation, including the Roman Inquisition; the revival of existing and emergence of new religious orders (especially the Society of Jesus); the Council of Trent and its implementation among the clergy and laity; Catholic missionary activity in Asia and the Americas; post-Tridentine Catholic art and scholarship; the relationship between the Church and European states in the 16th and 17th centuries; Jansenism; and the flowering of Catholic spirituality in the 17th century.

THEO 30209. Canon and Literature of Islam

(3 -0- 3)

This course is an introduction to the religious literature of the Arab-Islamic world. Emphasis is on works from the classical and medieval periods of Islam, roughly from the 7th to the 14th century of the Common Era. We will read selections from the Qur'an (the sacred scripture of Islam), the Hadith literature (sayings attributed to the prophet Muhammad), the biography of the Prophet, commentaries on the Qur'an, historical and philosophical texts, and mystical poetry. All texts will be read in English translation. No prior knowledge of Islam and its civilization is assumed, although helpful.

THEO 30211. Philosophy of Judaism

(3 -0- 3)

The most obvious goal of this course is to examine the philosophy of Judaism professed by the great American Rabbi, teacher and activist Abraham Joshua Heschel (1909–1972). In order to facilitate comprehension of Heschel's philosophical rendering of Judaism we will also study Rabbi Leo Trepp's *The History Of The Jewish Experience* (history, customs, beliefs) on alternative class days.

THEO 30212. Women and American Catholicism

(3 -0- 3)

This course is a survey of the history of American Catholic women from the colonial period to the present. Through a combination of lectures, reading and discussion, we will explore the following themes and topics: the role of religious belief and practice in shaping Catholics; understanding of gender differences; the experience of women in religious communities and in family life; women's involvement in education and social reform; ethnic and racial diversity among Catholic women; devotional life; the development of feminist theology, and the emergence of the "new feminism" as articulated by Pope John Paul II. We will seek to understand how Catholic women, both lay and religious, contributed

to the development of Church and nation, and examine how encounters with the broader American society have shaped Catholic women's relationship to the institutional church over the last three centuries.

THEO 30214. Chinese Ways of Thought

(3 -0- 3)

This is a special topics class on religion, philosophy, and the intellectual history of China that introduces the student to the world view and life experience of Chinese as they have been drawn from local traditions, as well as worship and sacrifice to heroes, and the cult of the dead. Through a close reading of primary texts in translation, it also surveys China's grand philosophical legacy of Daoism, Buddhism, "Confucianism," and "Neo-Confucianism" and the later religious accommodation of Christianity and Islam.

THEO 30220. The Reformation

(3 -0- 3)

Corequisite: HIST 32352

A narrative history of Christianity in Western Europe from c. 1500-c. 1650, which takes an international and comparative perspective, including Catholicism, Protestantism, and radical Protestantism. Topics covered include Christianity on the eve of the Reformation, Christian humanism, Luther and the German Reformation, the Peasants' War and Anabaptism, the English Reformation, Calvin and Calvinism, Catholic Reform and the Council of Trent, the French Wars of Religion, confessionalization, the Thirty Years War, and the English Revolution. Major themes include matters of religious content (doctrinal positions and devotional sensibilities), the relationship between different Christian groups and political regimes, the impact of religious changes across the population, and the definitive emergence of Christian pluralism. Lectures plus discussion.

THEO 30221. Islam and Muslim/Christian Dialog

(3 -0- 3)

The course is designed to introduce students to medieval Muslim perspectives of the Christian "other" and how these resonate in contemporary relations between Muslims and Christians. It will focus on Muslim-Christian relations in the modern/post-modern period, with particular attention to contexts of conflict and the potential for dialogue, solidarity and interreligious peacebuilding.

THEO 30224. Buddhism in China: Middle Path in the Middle Kingdom

(3 -0- 3)

Buddhism is the only one of the major religions traditionally regarded as Chinese that did not originate in China. China is arguably the Asian civilization in which Buddhism underwent its most extensive development and its most thoroughgoing transformations. This course is designed to be a thematic and historical overview of the development of Buddhist thought and practice in China with special emphasis on the process of mutual influence by which Buddhism, without ceasing to be Buddhist, became also a Chinese religion while China, without abandoning its indigenous religious heritage, became also a Buddhist culture. As such the course will serve a threefold purpose: it will introduce students to fundamental Buddhist beliefs and values as they took shape in China; it will acquaint them with essential elements of Chinese civilization attributable to Buddhism's presence; and it will provide an opportunity to study what may well be world history's most remarkable instance of successful cross-cultural religious communication. Students who are interested in this course and are not majors, please contact the department for permission.

THEO 30225. History of Catholicism and Catholics in the U.S.

(3 -0- 3)

Corequisite: HIST 32615

This course is a survey of the history of Roman Catholicism in the United States from colonial times to the present. We will consider, among others, the following topics: immigrant and ethnic Catholicism, women in the Church, Catholic social reform, devotional and parish life, and the relationship between Catholicism and American democracy.

THEO 30450. Music in the African Religious Experience

(3 -0- 3)

This course will explore the role of music in African religious traditions.

THEO 30605. Life, Death, and Morality

(1 -0- 1)

The purpose of this course is to introduce the student to three contemporary moral issues centered on the beginning and end of human life: assisted reproduction, end-of-life discernment, and abortion. We will study and discuss the contributions of Catholic Church teaching and moral theology to the consideration of these issues. The course will be a lecture-and-discussion format on two consecutive evenings.

THEO 30653. Politics and Conscience

(3 -0- 3) Keys

Against a backdrop of large-scale society, mass movements, and technological bureaucracy, the invocation of "conscience" recalls the individual human person as a meaningful actor in the political sphere. But what is conscience, and what are its rights and responsibilities? What is it about conscience that ought to command governmental respect? Are there limits to its autonomy? What role should conscience play in questions of war and peace, law-abidingness and civil disobedience, citizenship and political leadership? And how does the notion of conscience relate to concepts of natural law and natural rights, rationality and prudence, religion and toleration? This course engages such questions through readings from the Catholic intellectual tradition (Augustine, Thomas Aquinas, Thomas More, Francisco de Vitoria, Desiderius Erasmus, John Henry Newman, Karol Wojty'a/John Paul II, and Joseph Ratzinger/Benedict XVI) and other writers of the history of ethical-political thought (Cicero, Seneca, John Locke, Mahatma Gandhi, Jan Pato'ka, and Alexandr Solzhenitsyn). We consider also various contemporary reflections on conscience expressed in films, essays, letters, plays, short stories, speeches, and declarations, beginning with Martin Luther King, Jr.'s "Letter from a Birmingham Jail" and Vaclav Havel's speech "Politics and Conscience." This class serves as both the capstone course for the interdisciplinary minor Philosophy in the Catholic Tradition and an upper-level elective for Political Science majors and Peace Studies minors. Its format combines lecture and seminar-style discussion.

THEO 30654. Catholicism and Politics

(3 -0- 3) Philpott

Catholicism and Politics poses the question, both simple and complex: How ought Catholics to think about the political order and political issues within it? The first part of the course will survey major responses to this question drawn from Church history: the early church, the medieval church, and the modern church. The second part applies these models to contemporary issues ranging among war, intervention, globalization, abortion, the death penalty, religious freedom, gender issues, and economic development. The course culminates in "Vatican III," where teams of students, representing church factions, gather to discover church teachings on selected controversial political issues.

THEO 30655. On Human Dignity

(1 -0- 1) Cavadini

This course will examine the theological presuppositions of the concept of human dignity, based principally on the documents of the Second Vatican Council, encyclicals of Popes John Paul II and Benedict XVI, the Compendium of Catholic Social Teaching, and associated theological literature. The course also will consider insights from philosophy, political science and other disciplines as they bear on the theological understanding and clarification of the concept of human dignity.

THEO 30802. God, Philosophy, and Universities: Aquinas, Arnald, Newman

(3 -0- 3)

Enquiry and teaching in Catholic universities have aimed at understanding how the universe—physical, animal, and human—is ordered to God. One task of philosophy in the Catholic tradition has been to show how the various secular disciplines both contribute to such understanding and remain incomplete without theology. This course examines the question of how this task is to be carried out.

THEO 30808. Islam: Religion and Culture

(3 -0- 3)

This course will discuss the rise of Islam in the Arabian peninsula in the 7th century and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the core beliefs and institutions of Islam, with particular emphasis on religious and political thought from the Middle Ages through our own time. All readings are in English; no prerequisite.

THEO 30809. God, Philosophy, and Universities

(3 -0- 3)

Enquiry and teaching in Catholic universities have aimed at understanding how the universe physical, animal, and human is ordered to God. One task of philosophy in the Catholic tradition has been to show how the various secular disciplines both contribute to such understanding and remain incomplete without theology. This course examines the question of how this task is to be carried out.

THEO 30813. Gender, Suffering, and Selfhood

(3 -0- 3)

Suffering is one of the most pervasive realities of human experience, and it can be argued that women often suffer in ways that are unique to and informed by their gender and sex. Designed for students of gender studies and theology, this course examines the intersection of gender, suffering, and selfhood with an emphasis on the ways in which suffering has played a role in religious traditions—and in the Christian tradition in particular—in problematizing or promoting the self-understanding and self-formation of women. We will engage authors both “inside” and “outside” the Christian tradition, and while the primary focus will be on contemporary debates and interpretations of the class themes, some attention will be given to earlier periods in history. The challenge of the course will be to learn to assess critically and understand constructively the various means by which the gender- and religion-inflected experiences of asceticism, ritual sacrifice, pain, self-denial, etc. have influenced the selfhood of women.

THEO 30814. Ideas That Shape Catholic Education

(3 -0- 3)

Catholic elementary and secondary schools contribute to the common good of civic society while advancing the evangelical mission of the Catholic Church. This course focuses on the historical successes of Catholic schools in the United States of America, surveys current research, and analyzes trends in theology, history, and philosophy that have shaped the current structure of the Catholic school system. Requirements include a field-based experience in a local Catholic school.

THEO 30815. Faces of the Saints

(1 -0- 1)

In this class you will see a number of films made across the span of five decades by filmmakers from four different countries about individuals who live a profoundly spiritual life. Students in this class will be expected to see four of the six films (tickets to be submitted with paper) and write an extended essay (8-10 pages) comparing at least two of them as visualizations of spirituality. Your paper should zero in on how these films try to express in visual terms what is normally thought of as invisible, namely the intensity of spiritual existence. As photographic art, films bring a high degree of realism but how do they put into images that which transcends everyday reality?

THEO 30817. Buddhist Meditation Traditions

(3 -0- 3) Gimello

Relying chiefly on English translations of primary, mostly east Asian canonical sources, this course will examine varieties of Buddhist meditation practice while posing theoretical questions about the nature of meditation as a form of religious life; its ethical implications; its relations with other elements of Buddhism like doctrine, ritual, art institutions; etc.—all considered against the background of theological and philosophical concern with the role of contemplative experience in the religious life.

THEO 30818. Catholic Church for Medellín to Aparecida: An Evangelizing Option for the Poor

(3 -0- 3)

Medellin (1968) was the first General Conference of the Latin American Bishops after the Second Vatican Council. Medellín was a strong step forward in clarifying the role of the Latin Church. This course will explore the following question: Did Aparecida (the fifth General Conference) in Brazil 2007, rekindle the vision of Medellín?

THEO 30819. Buddhism in Practice

(3 -0- 3) Gimello

An Introduction to Buddhism in East Asia (principally China, but also Japan, Korea, & Vietnam) with emphasis less on what Buddhists think or believe and more on what they actually do in their public as well as their private lives—e.g., the rituals they perform; their disciplines of self-cultivation; the institutions they establish; the ethical, political, and economic decisions they make; etc.

THEO 30820. Theological Themes in Recent Mexican Film

(1 -0- 1)

This course explores the relationship between “films and faith” by looking at theological and religious themes in the work of four prominent, Catholic filmmakers from Mexico. Students will be expected to see all four films and the panel presentation, and to submit a journal taking up the issues that each movie presents. There will be a brief introductory meeting before the films, and the time and place of the introductory meeting is to be announced soon.

THEO 30860. Latin American Art and Architecture: 1491-1821

(3 -0- 3)

This course introduces the student to the rich visual and religious culture of the peoples of Latin America at the arrival of the Europeans and thereafter. The course deals with Mexico and the Andean region from 1491-1821 and the encounter of Aztecs and Incas with Christian artistic culture, and vice versa. Attention will be paid to the indigenous art forms on the eve of the Spanish invasion, the cooperative work of natives and clergy in the construction and decoration of churches, and in the development of a hybrid multicultural, multiracial society. Late medieval, Renaissance and Baroque art forms, as reinterpreted in the Spanish-speaking Americas, are the focus. Questions of religious syncretism and conscious enculturation through the arts are raised. Issues of colonialism, race, gender and class will also be dealt with in the context of the visual religious cultures of the Latin American past and present. A reading knowledge of Spanish would be helpful but is not required.

THEO 33500. Responding to God's Call: The Sacramental Life

(1 -0- 1)

This course will attend to the sacramental shape and content of vocational discernment within the ecclesial context. Students will be invited to deepen their theological understanding of vocation through exploring and participating in the Church's sacramental life. As part of the “Responding to God's Call” series, this course will combine lectures and spiritual reflections with large and small group discussions, as well as communal and individual prayer. The staff of the Notre Dame Vision program will facilitate this course in collaboration with the Department of Theology. Does not fulfill the 2nd theology university requirement. Contact Person for the Theology Dept.: Leonard DeLorenzo (ldeloren@nd.edu)

THEO 33501. Responding to God's Call: Tensions in Vocational Discernment

(1 -0- 1) DeLorenzo

This course will attend to the unavoidable tensions involved in vocational discernment, while recognizing the relationship between these tensions and certain paradoxes of the Christian faith that underlie them. Particular topics treated in the course will include human desire and passions, God's will and human freedom, participation in multiple communities, and the responsibility to both openness and commitment in discernment. As part of the “Responding to God's Call” series, this course will combine lectures and spiritual reflections with large and

small group discussions, as well as communal and individual prayer. The staff of the Notre Dame Vision program will facilitate this course in collaboration with the Department of Theology.

THEO 33502. Responding to God's Call: Spiritualities of the Saints

(1 -0- 1) Delorenzo

A saint provides a vision of a life lived with God as well as a model for how to live this life. In this course, we will look at specific saints to see the ways in which their lives bear witness to the love of God, while also considering the spiritual practices and pathways that these saints offer to the life of the Church. As part of the "Responding to God's Call" series, this course will combine theological study with large and small group discussions, as well as communal and individual prayer. The series as a whole seeks to provide theological, spiritual, and communal resources for ongoing discernment. The staff of the Notre Dame Vision program will facilitate this course in collaboration with the Department of Theology.

THEO 33601. Identity, Social Ethics, and Psychology

(3 -0- 3)

This course represents a unique opportunity to explore how Developmental Psychology and Catholic Social Teaching might engage in a creative dialogue to better understand the potential impact of poverty, injustice, and oppression on human development. The first stages of the course will explore why identity and personhood are central concerns to both Psychology and Theology, as well as how each arrives at knowledge and understanding of these themes. From this base of understanding, we will explore contemporary social concerns in which identity and personhood are salient issues: migration, aging, and race relations. Course material will include empirical and theoretical documents from both disciplines, guest speakers, and structured "immersion" experiences in which students will be invited to meet and perhaps share meals and stories with individuals affected by these issues. Finally, students will be required to choose one of these topics for a community-based learning project in the South Bend area; for example, a student may elect to conduct a "life story interview" to understand how an individual's identity is affected by the experience of migration, racism, or ageism. For more information, please contact: mmontpet@nd.edu, vcarmona@nd.edu, or tbushlac@nd.edu.

THEO 33802. Faith and the African American Experience

(1 -0- 1) Page

This course will introduce students to the African American faith experience, with particular attention being given to the historical development of spiritualities of liberation in the American Diaspora. Guest lecturers and seminar leaders will offer "perspectives" on this rich and heterogeneous tradition from several vantage points within the humanities, social sciences, and theological disciplines. In addition to a course pack of selected readings, the PBS series, "This Far by Faith: African American Spiritual Journey", and its companion volume will constitute the required "texts" for the course.

THEO 33858. Social Concerns Seminar: International Issues

(1 -0- 1) Tomas Morgan

This course revolves around international experiential learning opportunities, examining the culture, community, and life of the people encountered, including the poor. Students participate in preparation and follow-up sessions.

THEO 33931. Summer Service Learning: Microfinance and Social Venturing

(1 -0- 1) Shappell

Corequisite: BAUG 30229

Students who are completing their junior year in the Mendoza College of Business are eligible for this course. After classroom sessions in the spring semester, students work for 8-10 weeks of the summer with social enterprise organizations, for-profit or not-for-profit organizations that attend to a financial, social and/or environmental bottom line. Students use their business skills to promote economic development initiatives, assist with feasibility or business planning for a new social enterprise, or guide future growth of an ongoing initiative through capacity

building and other strategic activities. The experiential learning is complimented with readings from Catholic social thought. Course requirements include classroom sessions in April, reading and writing assignments during the summer, classroom discussions and a presentation in the fall semester.

THEO 33933. Summer Service Learning: Latino Leadership Intern Program

(3 -0- 3) McDowell; Pfeil

This is a leadership internship for Hispanic studies working 10-12 weeks in a Hispanic/Latino area with organizations dedicated to empowering local communities. Students will complete the requirements of THEO 33931 and work with the Center for Social Concerns to build partnerships with the agencies and people involved.

THEO 33935. Seminar: Service Learning Internship: Contemporary Issues

(3 -0- 3) Shappell; Pfeil

This internship is for students interested in learning more about how the Catholic social teachings are addressed in the work of a church organization, such as the Catholic Campaign for Human Development.

THEO 33936. Confronting Social Issues: SSPs

(3 -0- 3) Shappell; Pfeil

Immersion: Eight week summer service-learning placements. This three-credit course of the Summer Service Learning Program takes place before, during, and after student participation in the eight consecutive week summer immersion sponsored by the Center for Social Concerns and the Notre Dame Alumni Association. The goal of the course is to reflect on the meaning and dynamics of Christian service, compassion and Catholic social teaching through experiential learning, reading, writing and discussions. Writing assignments include journal assignments and a final paper. The course is completed during the first five weeks of fall semester and is graded Satisfactory or Unsatisfactory. Acceptance is based on the student's application and interview. Contact the Center for Social Concerns for more information.

THEO 33937. Confronting Social Issues: THEO

(3 -0- 3) Shappell; Pfeil

This three-credit service-learning course takes place before, during, and after student participation in eight-week "Summer Service Projects" sponsored by the Center for Social Concerns. The goals of the course are to reflect on the meaning and dynamics of Christian service, compassion and Catholic social teaching through readings and writing, along with discussion and reflection with site supervisors and alumni, and scheduled group discussions upon return to campus. Writing assignments include a journal, reflection paper of six to eight pages and responses to study questions related to the course packet. This course is completed during the first five weeks of fall semester. Acceptance is based on the student's application and interview. Contact the Center for Social Concerns for more information.

THEO 33938. Summer Service Learning: Confronting Social Issues: International

(3 -0- 3) Morgan; Kollman

This course and internship is synonymous with the Center for Social Concerns International Summer Service Learning Program (ISSLP). The course seeks to challenge students who have domestic service-learning experiences to encounter international realities, and to provide them the opportunity to work with persons and grass roots groups working to address the needs of the poor internationally. The learning goals of the course are to gain and understanding of the multidimensionality of poverty in the developing world; analyze root causes, and identify strategies for social development (poverty alleviation); to gain an understanding of international social issues in light of Catholic social teaching; and to strengthen cross-cultural competencies. Academic requirements include a journal, reading and writing assignments during the summer months, a re-entry weekend retreat, four re-entry classes meeting on Thursdays 6:30—7:45 p.m. in September and October, and a final paper/project.

THEO 33939. Smr Srv Lrn: NYSP

(V -0- V)

The National Youth Sports Program runs for six weeks on the Notre Dame campus. Students work with low-income children from the South Bend area in educational enrichment and recreation. Same requirements as THEO 360.

THEO 33950. Social Concerns Seminar: Appalachia

(1 -0- 1) Toms Smedley

This seminar involves experiential learning during the semester break. The course is centered on a service-learning immersion in the region of Appalachia and provides preparation for and follow-up to that experience. Students may focus on particular themes (e.g., rural health care, environmental issues) at various sites while learning about the region and rural issues.

THEO 33951. Social Concerns Seminar: Sustainable Development

(1 -0- 1) Toms Smedley

This course centers on a trip to Washington, DC, over semester break, during which time students analyze a significant social issue through contact with various agencies, government offices, and church organizations. Students participate in preparation and follow-up sessions. Themes (e.g., Educational Reform, Violence in America) vary each year.

THEO 33952. Social Concerns Seminar: Topics in Social Change

(1 -0- 1) Mick

This seminar allows students to participate in an experiential opportunity designed to examine contemporary social problems. Emphasis will be placed on understanding issues/conflicts from the perspective of the various participants. Preparation and follow-up sessions are tailored to the specific opportunity.

THEO 33953. Sustainable Development II: Research in Clean Water Initiatives

(1 -0- 1)

Seminar Description: This seminar is an extension of the fall 2009 Washington Seminar in Sustainable Development. The seminar will emphasize advanced study of clean water in conjunction with ongoing clean water initiatives through SAO, the Ford Program, and the Department of Engineering. In choosing the water issue, the CSC hopes to partner with student government's Global Water Initiative. Students' work will serve as a useful reference for the GWI, and will help the initiative to expand its efforts by offering a base of knowledge upon which it might anchor its current work and from which it can launch future efforts. Students will perform interdisciplinary literature reviews around "point of use" issues for consumption of clean water. The research will be supplemental for ongoing projects and will focus on interdisciplinary perspectives of a this particular aspect of clean water. The seminar has chosen this topic as a direct result of student interest in The Global Water Initiative (SAO's 5 year plan to partner with a community organization to give students an opportunity to raise money for a just cause). The Seminar leaders include both sustainable development leaders from the fall 2009 class, as well as the student co-leaders of Notre Dame's Global Water Initiative. Steve Silliman (Engineering) current advises this group is very excited to partner with this seminar/CSC to move his research along. He is also working with Tony Polhen (Ford Program) to help coordinate his efforts in clean water. Tony has expressed interest in helping to oversee this seminar. Research will be conducted in interdisciplinary cohorts. Faculty experts will be asked to consult for 2 hours a month (no more than 6 hours total) on students research progress. Steve Silliman and students have suggested interested faculty in sociology, peace studies, anthropology, economics, and political science. Seminar classes will take on a format of literature search report/refining. Student

THEO 33954. Social Concerns Seminar: Leadership Through Solidarity

(1 -0- 1)

The Leadership through Solidarity Seminar seeks to cultivate an understanding of leadership through the lens of Catholic Social Teaching. This seminar includes an experiential learning component as undergraduate students practice relationship

building through prayer and service with the South Bend Catholic Worker community. The principles of solidarity and the common good are explored through faith sharing, service learning, and fellowship at the Worker and in the classroom.

THEO 33956. Social Concerns Seminar: Field Education

(1 -0- 1)

A directed field education experience in theology, augmented by readings and dialogue with faculty and others. Area of focus and placement determined by student interest and initiative, in collaboration with the Center for Social Concerns. Site placements may involve service-learning or related work (at, for example, La Casa De Amistad, the Center for the Homeless, or other site where the Center has placed a community-based learning coordinator). A learning agreement will outline specific learning tasks and requirements.

THEO 33957. Conscience in the Crossfire: Ethics and the Environment

(1 -0- 1)

Where do you stand on the issues and candidates during this election season? How do you make a judgment in regards to voting and participating in American society? This one-credit course will explore issues central to the 2008 elections, with a focus on how citizens, in particular those who bring a faith perspective, may address social concerns in their voting and political participation. The goals of the course are: (1) To address the process of the formation of conscience in political contexts; (2) To explore issues, in an interdisciplinary context, relevant to the current national elections; (3) To explore creating the conditions for peace, justice and the common good.

THEO 33959. Social Concerns Seminar: Latino Community Organizing Against Violence

(1 -0- 1) Mick

The Latino Community Organizing Against Violence Seminar will examine current efforts among community activists and organizations in favor of violence prevention and intervention. As an active participant, you will be invited to explore the rich cultural heritage of Chicago during a five-day immersion. From the perspectives of the violence prevention and intervention initiatives that you will gain, you will be encouraged to reflect on the challenges and opportunities that go hand in hand with cultural diversity as it is experienced in Chicago and South Bend. In particular, we will explore cultural diversity from the standpoint of the dynamic of immigration and integration that the Latino population—especially its teenagers and young adults—is living through. The seminar is a one-credit hour course graded "S" or "U."

THEO 33960. Social Concerns Seminar: Mexico Service-Learning Project

(1 -0- 1)

This seminar involves three weeks of service-learning in Oaxaca, Mexico. It is designed to expose students to the reality of Latin America through inter-cultural exchange, shared work experience, and faith reflection. Students examine the social, cultural, and international forces operative in the region through discussion, relevant readings, and written reflection.

THEO 33961. Social Concerns Seminar: Discernment

(1 -0- 1) Hebbeler

The Discernment Seminar provides senior-level undergraduate students an opportunity to reflect on their Notre Dame experience and consider postgraduate plans with one another through small-group discussion. Each session is structured to assist the students' exploration and articulation of their respective vocations through a variety of means, including narrative theology, spiritual direction, literature, and the arts.

THEO 33962. Social Concerns Seminar: Gospel of Life

(1 -0- 1) Toms Smedley

The Gospel of Life Seminar provides opportunities to read, reflect, and be of service on a variety of life issues through service and experiential learning. Exploration begins in orientation classes where students will become familiar

with the issues through reading Church documents such as *The Gospel Of Life* and through meeting people of the South Bend and Notre Dame communities that work on pro-life issues. During the week of service and experiential learning in Washington DC over fall break, the seminar participants will learn from Church and government leaders, various agencies, and individuals. The follow-up classes facilitate analysis and synthesis of insights gained during the week in Washington, DC.

THEO 33963. Church and Social Action: Urban Plunge

(1 -0- 1) Purcell

This course centers around a 48-hour immersion (colloquially known as the Urban Plunge) in an urban setting during the winter break (prior to return to campus). The course includes a preparation workshop in the fall semester, readings, two reflection papers, and follow-up educational meetings.

THEO 33964. Social Concerns Seminar: Education

(1 -0- 1)

This seminar focuses on the educational and outreach endeavors of St. John Vianney Catholic Parish in Goodyear, Arizona, and builds upon Notre Dame's relationships with the Congregation of Holy Cross. Participants are hosted by parish families and spend several days in the classroom with a mentor teacher. Participants also visit organizations in Phoenix doing outreach to people who are homeless and to pregnant women.

THEO 33965. Social Concerns Seminar: Organizing Power and Hope

(1 -0- 1) Mick

This seminar focuses on diverse church, school, leadership, and community-organizing initiatives to improve life in Chicago neighborhoods. Participants will be challenged to examine perceptions of power, service and social action.

THEO 33966. Social Concerns Seminar: Border Issues

(1 -0- 1)

The seminar examines immigration and related issues that exist between the United States and Mexico. Participants travel to El Paso, Texas and Ciudad Juarez, Mexico to meet with refugees, Border Patrol, parish organizations, and families who live in "squatter" villages. Participants also analyze and discuss policy issues. The immersion is in partnership with Annunciation House.

THEO 33967. Social Concerns Seminar: Migrant Experiences

(1 -0- 1) Toms Smedley

This seminar offers a unique immersion into the lives of migrant farm workers in Florida during the spring harvest. Students pick tomatoes in the fields (donating their wages), live with migrant families, assist church and social agencies that serve migrants, and meet with community leaders, never again to take food for granted.

THEO 33968. Social Concerns Seminar: L'Arche Communities

(1 -0- 1) Toms Smedley

This seminar centers around travel to a L'Arche community (e.g., Toronto, Canada) to share community life with developmentally challenged persons. Students draw from the philosophy of Jean Vanier, the works of theologian Henri Nouwen, and other spiritual writings to augment this participatory learning experience.

THEO 33969. Social Concerns Seminar: Hispanic Ministry

(1 -0- 1)

This seminar gives participants the opportunity to experience the Church's option for the poor through an immersion into the spirituality, culture, and economy of the rural, Southern California valley community of Coachella. Students work with the members of the Congregation of Holy Cross who are in ministry there.

THEO 33970. Social Concerns Seminar: International Issues

(1 -0- 1) Tomas Morgan

This seminar serves as the required orientation course for all THEO 33938: International Service-learning Program participants. It will provide students with

an introduction to international issues in developing countries through the lens of Catholic social tradition, guidance in independent country/area study, preparation and tools for cross-cultural service, opportunities for theological reflection, logistical information necessary for international programs and travel, and general support within the context of a community of colleagues. Other students doing summer internships in developing countries may take the seminar with permission from the instructor.

THEO 33975. Poverty and Development in Chile

(1 -0- 1) Cahill Kelly

THEO 33975/CSC 33975 (1.0 credit) serves as the required orientation course for all students who will participate in the Approaches to Poverty and Development course offered through the Universidad Alberto Hurtado in Santiago, Chile as part of the Santiago study abroad program. The course will provide students with information regarding many of the themes and topics that will be explored further in the UAH course. This one-credit preparatory course will provide the necessary information to facilitate a richer and more meaningful experience while in Chile. Students must first be accepted into the Santiago semester abroad program through the Office of International Studies before being able to apply for this course.

THEO 33979. Song, Caritas, and Social Justice: The Celebration Choir

(1.5 -0- 1)

This course allows students to integrate their faith and theology with community service/experiential learning through participation in sacred music outreach with the Notre Dame Celebration Choir under the auspices of Campus Ministry. A course goal is for students to experience the joys of service through performance of sacred music with a variety of community members, and to reflect on acts of Christian service and faith through readings from church documents, from social action theory, and on sacred music, discussing in depth such works as Pope Benedict XVI's "Deus Caritas est" encyclical letter. Requirements include participation in weekly rehearsals, occasional weekend field service projects, keeping a journal, and a short semester-end reflective paper. To enroll, contact Choir Director Karen Schneider-Kirner (karen.kirner@nd.edu) by December 1st. A brief personal interview/audition with the director should take place before December 10th.

THEO 33981. Leadership Training in Social Concerns Seminars

(1 -0- 1) Toms Smedley

This course will serve to prepare fall seminar and site leaders for immersion experiences over fall break. The overall goal of the course is to improve leadership skills, facilitate communal learning across seminars, and uniformly prepare leaders for the specific aspects of CSC seminars. The seminar will hold approx. 4-6 large classes around leadership theory, personal leadership style, mission of the CSC and service paradigms, as well as group facilitation and theological reflection. The format for the class will be a 30 minute training session, then small groups for particular seminar application or peer input. Unique features: Each class will begin with a low cost meal, allowing leaders to budget, prepare and consider meals in solidarity with the groups they will be traveling to serve. The immersion portion of this seminar is the student's participation as a seminar leader.

THEO 33995. Global Health Seminar

(1 -0- 1) Toms Smedley

The Center for Social Concerns, in collaboration with the Nuestros Pequeños Hermanos Holy Family Surgery Center and St. Mary's College will offer a weeklong seminar near Tegucigalpa, Honduras. During the weeklong course, students will gain exposure and insight into the medical care delivery and health conditions in rural Honduras. Students will observe orthopedic surgery. The health of populations will be considered in a global context, emphasizing health problems that transcend national borders or have a global political and economic impact. Students will examine the work of major international agencies such as the World Health Organization (WHO), United Nations Children's Fund (UNICEF), Millennium Development Goals, and the World Food Programme (WFP), World

Bank, and the IMF. They will also explore the work of the Church and the role of Catholic Social Teaching to address global health and the complex social forces that affect it.

THEO 33996. Social Concerns Seminar: U.S. Healthcare: Policy and Poverty Seminar

(1 -0- 1)

This seminar invites examine strengths and weaknesses of our health care system, explore the possibilities for the future of American health care, and ask how modifications might help create the society we hope to become and improve the common good. A survey of our current system will include an evaluation of: employer based healthcare, causes and consequences of being uninsured, public safety nets, under served populations, and the factors affecting the cost and reformation of healthcare. Course is not repeatable. Apply on-line through the CSC.

THEO 40001. Seminar: Advanced Syriac

(3 -0- 3)

Syriac is a form of Aramaic that was the literary language of Jews and pagans in western Asia before becoming the common dialect of Aramaic-speaking Christians in the region. Christianity had its matrix in Judaism, and early literature in Syriac preserves the only surviving sustained evidence of the distinctive character of Aramaic-speaking Christianity that is largely unhellenized and that reflects the linguistic and cultural milieu of first-century Palestine. Because of the shared literary culture of Judaism and early Syriac Christianity, examination of the intertextuality of early Syriac literature reveals a deep acquaintance with the thought and culture of Late Second Temple Judaism and the intertestamental period. A full appreciation for the dependence of Syriac literature upon Jewish literary and intellectual models requires an interdisciplinary focus that takes into account a full range of issues; among the most important are hermeneutical questions related to Jewish and Christian interpretations of scripture. Participants in the seminar will investigate a range of questions based on the following: 1) In what sense may particular texts be called Christian (Jewish, Manichaean, Gnostic)? 2) What evidence is there for intertextuality, i.e. to what extent can texts be shown to occupy the space between? Judaism and Christianity? 3) From what social and cultural milieu did the texts emerge? 4) What evidence do the texts retain of possible oral or non-literary origins? 5) In what sense are the texts literary? Do peculiarities of language, diction, or genre in any way distinguish the texts? Can the texts be shown to be typical of the time and circumstances from which they emerged? 6) How are the texts to be read? Is it enough to evaluate them as historical documents, relating them to the historical circumstances in which they were generated, and the literary culture to which they originally belonged? These questions will be based on a deep reading of Syriac texts

THEO 40002. Elementary Hebrew I

(3 -0- 3) Winitzer

This is a two-semester introductory course in biblical Hebrew; under normal circumstances, the student must complete the first to enroll in the second. The fall semester will be devoted to learning the grammar of biblical Hebrew. The spring semester will be divided into two parts. For the first six weeks we will finish and review the grammar. In the remaining part of the course we will read and translate texts from the Hebrew Bible, Qumran, and Rabbinic literature. The course will focus on developing reading and comprehension skills in biblical Hebrew through the study of biblical texts. In addition, students will learn how to use reference grammars, concordances, and apparatus to the *Biblica Hebraica*. The course encourages students to think about the grammatical forms and their implications for biblical interpretation.

THEO 40003. Elementary Hebrew II

(3 -0- 3)

Prerequisite: THEO 40002

This is the second of a two-semester introductory course in Biblical Hebrew; under normal circumstances, the student must complete the first in order to enroll in the second. In addition to the completion of Lambdin's elementary grammar, students are introduced to some (modified) Biblical texts.

THEO 40101. Introduction to the Old Testament

(3 -0- 3)

This course will offer students an introductory-level survey of the books of the Hebrew Bible, with emphasis placed on the holistic (i.e., theological, literary, and social-scientific) study of the history, literature, and religion of ancient Israel. The implications of selected texts in Christian and Jewish theological discourse will also be explored. Required course components include the major divisions of the Hebrew Bible (Pentateuch, Prophets, and Writings), and writing spans the following research-related genres (case studies, article reviews, journal, and critical notes). Fall only.

THEO 40104. Historical Jesus

(3 -0- 3) Meier

The purpose of this course (a lecture course supplemented by readings and discussion) is to introduce the student to the major historical and exegetical problems involved in the quest for the historical Jesus, especially as pursued today in the so-called Third Quest. The course will move from initial definitions and concepts, through questions of sources and criteria, to consideration of major sayings and deeds of Jesus that may reasonably be considered historical. As time allows, major areas to be treated will include Jesus' relation to John the Baptist, Jesus' proclamation of the kingdom as future yet present, his realization of the kingdom through deeds of power (miracles) and table fellowship, the various levels or circles of followers (the crowds, the disciples, the Twelve), various competing groups (Pharisees, Sadducees), his teaching in relation to the Mosaic Law, the enigma (riddle-speech) of his parables, self-designation, final days, passion, and death. Obviously, it is more desirable that students be allowed time for discussion and questions than that all these topics be covered.

THEO 40105. Women and Christian Origins

(3 -0- 3) D'Angelo

The course is a survey of the New Testament and other literature from its context from a feminist perspective. It will delineate patterns of gender in the theology and structure of these works, attempt to retrieve the participation of women in the movements behind them, and consider the impact of the texts and their contexts in gender relations, sexual politics and arrangements of race and class in the 21st century. Participation, three short or one short and one longer paper.

THEO 40107. Introduction to Rabbinic Literature

(3 -0- 3)

The course will serve as an introduction to the critical study of Mishna, Tosefta, Midrash, and Talmud and will focus on the place of study within the various Rabbinic approaches. Some comparison will be made with Christian and Greco-Roman thinking on the subject.

THEO 40108. New Testament Introduction

(3 -0- 3) D'Angelo

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002

A presentation of all the major approaches important for the understanding and study of the literature of the canonical New Testament in its historical, social and literary context. Emphasis on the various methodologies which have been applied to the study of the New Testament, including historical criticism, form criticism, redaction criticism, source criticism, narrative criticism, rhetorical criticism, and social science criticism. Recent developments in the quest for the historical Jesus will be discussed, as will recent attempts to reconstruct the life and teachings of Paul. Important church documents on the Bible will be read, including, "De providentissimus Deus" (1893), "Divino Afflante Spiritu" (1943), "Instruction Concerning the Historical Truth of the Gospels" (1964), "Dei Verbum" (1965), and "The Interpretation of the Bible in the Church" (1995).

THEO 40109. Prayer and Worship in the Early Church

(3 -0- 3)

Yes, people actually do pray and worship. So all start with some experiential knowledge. But what do we do when we pray? How many types of prayer might we pray? Why pray? Hence we must necessarily turn to the experts to learn all of this, experts in this case being social scientists who have studied "communication"

theory. In addition, student will be reading the great classical prayers in the New Testament and the Early Church, both learning to read them critically and becoming acquainted with the remarkable body of prayers that are our heritage. Next, what is worship? Again, we turn to social sciences for suggestions. Christ worship, of course, was juxtaposed to temple worship in just about every area. Students will examine major New Testament documents where this is demonstrated, such as the Gospel of John and Hebrews. It is hoped that your worship on Sunday will be that much richer.

THEO 40110. Book of Genesis: Literary Artistry and Theological Meaning

(3 -0- 3) Anderson

The book of Genesis is arguably the most commented upon book in the Old Testament. Nearly all of the theological themes most dear to the Bible are the subject of considerable narrative elaboration: Creation, fall, redemption, and election. This course will consider how the various stories in Genesis raise the profoundest of questions and what sort of answers it has provided the theological reader. The focus of the course will be on a close reading of the entirety of the book with the goal of mastering the whole.

THEO 40111. Fourth Gospel

(1 -0- 1)

The Gospel of John offers one of the most exciting and beautiful visions of Christian life in the New Testament, not only for its own time but for disciples of all generations. However, because it is so different from the Synoptic Gospels it is often a mystery to readers who are intimidated by its highly developed theology and mystical spirituality. This one-week course is intended to introduce students to the Gospel's history, literary characteristics, theology, and spirituality so that they can handle it competently in ministry as well as use it fruitfully to nourish their own spiritual life. We will concentrate on the material in the Gospel on discipleship, community, mission/ministry using primarily the narratives of encounters between Jesus and disciples.

THEO 40112. Wisdom Literature and the Psalms

(3 -0- 3) VanderKam

The course offers a survey of the scriptural wisdom books (Proverbs, Job, Ecclesiastes, Sirach, Wisdom) and the Book of Psalms. The wisdom works will be studied in their historical contexts and their central themes will be explored; the major forms of the psalms and their settings will be studied. There will be a midterm and final exam and a paper.

THEO 40113. Introduction to Old Testament/Hebrew Bible

(3 -0- 3)

Purpose of this course is to familiarize students with the basic contents of the Old Testament. Though often neglected by contemporary Christians it is worth noting that the Old Testament was the Bible for the first two centuries of the Church's existence. As such, the Old Testament has played a major role in all aspects of theological reflection. As would be expected, this course will address basic questions concerning historical and literary setting. But special emphasis will be placed on: (1) the reception of the text as sacred scripture within the Christian tradition; (2) how the Old Testament is to be understood in light of the New and vice versa; and (3) the relationship between Jewish and Christian readings of this book.

THEO 40115. Introduction to Rabbinic Literature

(3 -0- 3) Novick

The literature of Rabbinic Judaism, which emerged roughly at the same time as Christianity and developed in dialogue with it, is rich and various. We survey the major works in this corpus, with particular attention to the following issues: the role of the Hebrew Bible in rabbinic literature; theologies of rabbinic law; Temple and Torah as competing conceptual foci; border figures (gentiles, women, apostates, etc.); and study and worship in the synagogue. The course is open to undergraduates and M.A. students. Undergraduate course requirements include a midterm, a final, and a short paper. No Hebrew or Aramaic required, but students with facility in these languages will be provided with source material in the original.

THEO 40116. Hope in God: The Spiritual Horizon of the Hebrew Bible/Old Testament

(3 -0- 3) Novick

One of the central foci of biblical piety is the worshiper's orientation toward the future. In distress, both the individual and the nation are to put their hope in God, and neither to lose their hope in God nor to put their hope in someone or something else. In this class we examine the dynamics of hope and its alternatives in the Hebrew Bible/Old Testament, and the foundation that this discourse of hope provides for the notions of restoration and resurrection in the Second Temple period and in early Christianity and rabbinic Judaism. Readings include large parts of Job, Lamentations, and Psalms.

THEO 40117. Introduction to Judaism

(3 -0- 3) Novick

This course surveys the major practices and beliefs of Judaism. Our focus is on Judaism as a religious tradition, one that links its adherents across time even as it changes in response to new circumstances. We begin by examining the foundational religious categories that crystallized in antiquity, such as the commandments and Torah study. We then turn to transformative developments in later periods, among them the flourishing of philosophy and mysticism in medieval Judaism, religious reform movements in the 19th and 20th centuries, the Holocaust, and Zionism.

THEO 40121. The Biblical Theology of Pope Benedict XVI

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 20001 or THEO 13183 or THEO 20002
In his Erasmus Lecture of 1988, Joseph Cardinal Ratzinger addressed "the ambivalence inherent in biblical exegetical methodology for almost a hundred years" and called on scholars to allow "the Bible to be itself." Elevated to the papacy on April 19, 2005, Benedict XVI has continued to give attention to hermeneutical issues, most recently in his two-volume treatment of Jesus of Nazareth. In this course, we will orient ourselves within the history of biblical scholarship, so that we can understand the conversation to which the Pope is contributing. We will then explore the biblical theology of Pope Benedict XVI, focusing on his interpretation of the Gospel accounts of the life, death, and resurrection of Jesus Christ. Finally, we will explore the impact of the Pope's writings, looking both at the reception of his work by scholars and at the opportunities created for ecumenical dialogue.

THEO 40201. The Christian Theological Tradition I

(3 -0- 3)

A survey of Christian theology from the end of the New Testament period to the eve of Reformation. Through the close reading of primary texts, the course focuses on Christology of such influential thinkers such as Origen, Athanasius, Augustine, Anselm, and Aquinas. How do these thinkers understand the person and work of Jesus Christ? What are the Christological problems that they tried to resolve? How do the different Christologies of these thinkers reflect their differing conceptions of the purpose and method of "theology?" Some attention will also be given to non-theological representations of Christ. How does the art of the early and medieval periods manifest changes in the understanding of the significance of Jesus. This course is obligatory for all first and supplementary majors but is open to others who have completed the University requirements of theology and who wish to gain a greater fluency in the history of Christian thought. Fall only.

THEO 40202. The Christian Theological Tradition II

(3 -0- 3) Betz O'Regan

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
The course will examine the development of the Christian tradition from the time of the Reformation to the present, with special attention to the confessional division of the western Christian tradition during the Reformation, and the responses that post-Reformation Christian traditions make to the secularization of Western culture. The objective of this course is to develop an ecumenical understanding of contemporary Christian traditions. Class time each week will consist of two lectures and one student-led discussion. Evaluation will be based on discussion, four short papers, and a final exam. Spring only.

THEO 40206. Reformation Theology: Topics

(3 -0- 3) Zachman

An examination of the development of Christian thought from the Council of Constance in 1415 to the First Vatican Council in 1869-70, with special attention given to the impact of the Reformation and the Enlightenment on the formation of Christian theology.

THEO 40207. Christ, Spirit, and Transformation History

(3 -0- 3)

This course will look at the relationships between embracing an authentic Christian spirituality and working to transform society and history. We start from the observation that while “spirituality” is currently very popular in the United States, it is often extremely individualistic and presented as a haven or oasis in which to escape a harsh world. The thesis of this course is that this is an impoverishment or distortion of authentic Christian spirituality. To investigate this we will begin by looking at how spirituality is presented in the Bible, with particular attention to its relationship to conversion and evangelization, as expressed in and through people’s involvement in their particular cultures and histories. Then we look at certain important figures in the development of a spirituality that is transformative of history, including (among others) Bartolome de las Casas and Henri Nouwen. Finally, we look at recent texts from the magisterium, beginning with texts of Vatican II and proceeding through select papal writings (“Pacem in Terris, Evangelii Nuntiandi”), and concluding with an analysis of John Paul II’s insistence on the transformation of history as an integral part of a “new evangelization” of culture. Requirements: Two papers and a class presentation

THEO 40208. Monastic Way in the History of Christianity

(3 -0- 3) Young

Although often hidden from view, even hidden from view in the church, the monastic way is one of the oldest expressions of Christian devotion to God and neighbor, usually pursued alone communally. The purpose of this course is to explore how Christian men and women have lived this life, from earliest Christianity to the present. To that end, we will read the writings of monks of eastern and western Christianity, paying close attention to monastic voices from antiquity (such as Anthony, Evagrius, Basil, and Benedict), medieval Christianity (e.g. Ailred of Rievaulx, Bernard of Clairvaux, Hildegard of Bingen, as well as Gregory Palamas and Theodore the Studite) up to the present day (Seraphim of Sarov, Thomas Merton, Mother Maria Skobtsova). The primary format of the class will be discussion, aided by the composition of short essays throughout the course.

THEO 40209. Topics in Medieval Theology: Sacraments

(3 -0- 3)

An examination of the development of Christian thought from the Council of Constance in 1415 to the First Vatican Council in 1869-70, with special attention given to the impact of the Reformation and the Enlightenment on the formation of Christian theology.

THEO 40211. St. Anselm’s Philosophy/Theology

(3 -0- 3) Flint

An examination of the major philosophical and theological writings of St. Anselm. His “Monologian, Proslogian,” and Cur Deus Homo” will be of central concern, but several lesser-known texts will also be read. Topics discussed in these writings include arguments for the existence of God, the divine nature, the Trinity, the Incarnation, freedom (and its compatibility with divine foreknowledge), and truth.

THEO 40215. Miracles

(3 -0- 3) Cavadini

What is a miracle? Can miracles happen? What is their significance? The course will approach these questions using a variety of paradigms, including philosophical, theological, and sociological. We will consider a variety of texts and issues, including the Bible, classical exegeses of biblical miracle stories (in Origen, Augustine, and Gregory the Great) as well their counterparts in modern scholarship, philosophical debates about the status of the miraculous, and recent studies of communities where miraculous events are alleged to have occurred. We

will also consider the canonical process for the investigation of alleged miracles, as well as literary treatments of the theme. We will ask, finally, What is the religious significance of wonder?

THEO 40217. Jews and Christians Through History

(3 -0- 3)

In the closing days of the II Vatican Council “Nostra Aetate (Declaration on Non-Christian Religions)” reversed a negative attitude of the Catholic Church toward Judaism and the Jewish people. This remarkable change promoted “dialogue” with Jews, and positive changes in the ways in which Judaism was presented in Liturgy and Catechesis. Reactions from the Jewish communities were diverse: from rejection to welcoming. This course will explore a number of issues which emerge from the history of Christian thought and theology: How did a negative image of Judaism develop within Christianity? In what ways did these unfavorable teachings contribute toward violence against the Jews? What is the relationship between Christian anti-Jewish teachings and Anti-Semitism? Is there any correspondence to Christian hostility within Judaism? In what ways have Jewish authors reacted to Christian tradition? We shall also want to construct a more positive theology for the future. How can Jews and Christians develop religious responses to modernity? In what senses can a study of Judaism by Christians, or Christianity by Jews, help either community to understand itself better? How can Christians and Jews develop a theology of “the other” that is not triumphalist, but empathic?

THEO 40219. Mary in the Christian Tradition

(3 -0- 3) Daley

The good news of Christianity is first of all about Jesus, the risen Lord, and so about us, as his brothers and sisters—about our future, our world, the church we constitute. Still, Christian preaching and art have repeatedly singled out Mary, the mother of Jesus, as an object for contemplation and loving, personal attachment, and Christian theology has repeatedly focused on her as a symbol for speculation and a subject of debate. So Mariology, although in itself a secondary area in Christian thought, is central to any study Christian religion through the centuries, as well as a rich testing-ground for the implications of Christian belief concerning the person of Christ, the nature and future of the church, the reality of sin and redemption, and the importance of male and female images in our experience of and response to God’s love. This course will survey the most important moments in the development of the church’s understanding of and feeling for Mary’s role in the mystery of our salvation, beginning with the New Testament and ending with our own time.

THEO 40220. Missionary Encounters

(3 -0- 3) Kollman

This course will study the missionary activity of the church. After a brief look at mission and evangelization in the New Testament and the early church, we will then explore several important moments of missionary contact in the Americas, Africa, and Asia in the modern (post-Columbian) period. The course will conclude with a look at contemporary missionary practice and theory.

THEO 40225. Post Holocaust in Theology and Literature

(3 -0- 3)

Between 1933 and 1945, the actions of the Nazi government transformed the map of the world politically, aesthetically, and theologically. The ability of the Nazis to gather the cooperation of German citizens and the citizens of other occupied countries to implement their policies against the Jews has raised questions about the claims that European civilization is based on Christianity. How could barbarism flourish in Germany, the land of poets and thinkers? Both Christians and Jews, for common and different reasons, look upon the Holocaust as an abyss, a dark night of the soul. During this semester we shall attempt to move from horrified silence to insight into the possible frameworks for constructing theology “after the abyss.” We shall also read literary works that attempt to describe the indescribable. Both literature and theology written after the Holocaust present the paradox of how to comprehend the incomprehensible. No single theologian or faith community has the answer to the problems raised by the Holocaust. No author writing in German, English, Yiddish, French, or Hebrew can describe the

horrors and fully transmit the fullness of the atrocity. However, we shall attempt to read, evaluate, and-for some of us-appropriate what theologians, poets, and storytellers have written.

THEO 40226. Christianity in Africa

(3 -0- 3) Kollman

Few places on earth exhibit the dynamism of contemporary Christianity like Africa. Such dynamism creates new challenges and opportunities for the Catholic Church and other ecclesial bodies, and also shapes African life more generally. Through novels, historical studies, and present-day reflections from a variety of perspectives this course will explore Christianity in Africa, beginning with the early Church but with heightened attention to the more recent growth of Christianity on the continent. It will also examine Christianity's interactions with Islam and forms of African ways of being religious that predated Christianity and Islam, many of which have ongoing vitality. Attention will also be paid to African Christian theology, carried out formally and informally, as well as the implications of the spread of African Christianity for world Christianity.

THEO 40231. Christian Spirituality and Social Justice

(3 -0- 3) Groody

This course will explore the challenge of Christian discipleship in the context of our globalized world. Rooting our reflection on the reality of poverty in our national and international context, we will do a faith reality of that reality through a thorough inquiry into pertinent biblical, patristic, liturgical, systematic and spiritual tradition. We will also look at how this spirit has been embodied in recent decades, as well as how it has emerged both within Catholic Social teaching and non-Christian religions.

THEO 40232. Latino Films: Culture, God, Redemption

(3 -0- 3) Elizondo; Matovina

The course will view great films from Latin America and Latino USA and discern what culture is portrayed, the presence or absence of God within the film and how is redemption expressed in the film. Since some of the films will not have sub-titles, a working knowledge of spoken Spanish will be helpful but is not a requirement.

THEO 40234. Thomas Aquinas and the Pursuit of Wisdom

(3 -0- 3) Wawrykow

This course offers an orientation to the theology of Thomas Aquinas through his account of "wisdom", which in Thomas refers to the contemplation of divine things and the ordering of all else in that light. The theme of "wisdom" threads its way through the entire range of Thomas's theology, and attention to "wisdom" will make clear many of Thomas's most important convictions-about the nature of the theological enterprise; the interrelated doctrines of God and of Christ; and, the specific character of Christian discipleship.

THEO 40237. Heaven, Hell, and Purgatory

(3 -0- 3) Young

If there is a life after death for human beings, what is it like? How does a person get there? Reach one of the eternal destinations envisioned as punishment for sins or reward for good deeds? Are they states of being, or actual places? If the latter, what do they look like, and who are the inhabitants? Early Judaism and the two millennia of Christian tradition have developed a variety of sources to elaborate an answer to these questions. This course will consider how the tradition has proposed answers, and will look at various ways in which the answer has been elaborated. Materials for the course will draw from accounts of visionaries and mystics who ascended to Heaven (or descended to Hell) and reported what they saw, theologians who attempted to give comprehensive and consistent accounts of the paths to these places (or states), and Christian poets who metaphorically evoked Heaven and Hell to express the consequences of contemporary social or political conditions. The course will consider the development, primarily in Roman Catholicism, of the belief in and doctrine of Purgatory and the debates about that belief. The contemporary reconsideration of Heaven, Hell, and Purgatory "and the embarrassment about Hell " will conclude the course.

THEO 40238. Transfiguration in the Fiction of C.S. Lewis

(3 -0- 3) Fagerberg

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
This course will look at a theme that runs throughout the works of C. S. Lewis: theosis. Christianity's ultimate end is the deification of a person. In Lewis' fiction there is a strong theme of the transfiguration of matter and the human being, and the moral/ascetical prerequisite leading up to it. This course will first use some secondary theological sources to unpack theosis in light of the Christian doctrines of creation, sin, Trinity, and Christology, and then it will turn to Lewis himself—first to his non-fiction (Mere Christianity, Abolition of Man, Weight of Glory essays), but our main time will be spent in his fiction (Narnia, Screwtape Letters, Great Divorce, The Pilgrim's Regress, Til We Have Faces).

THEO 40239. Globalization, Spirituality and Justice

(3 -0- 3) Groody

This course will explore what it means to be Christian in the context of this new era of globalization. It is a time of new opportunities and unprecedented potential, but it brings with it new perils and greater social, political, and economic turmoil than ever before. In particular, we will explore the meaning of Christian discipleship in a time when half the world lives on less than two dollars a day and two thirds live in abject poverty. After grounding our discussion of socio-economic research, we will then do a theological reading of globalization, and then a global reading of theology. In particular, we will explore the meaning of Christian faith today as we draw from the deep wells of scripture, early Christian sources, Catholic social teaching, major world religions, liturgy, and contemporary theological reflection, icons of justice, mysticism, and spirituality as we explore what it means to be Christian in a time of titanic change.

THEO 40240. Moses Maimonides

(3 -0- 3)

A careful reading of Maimonides philosophical classic "A Guide for the Perplexed." Close attention will be paid to its influence on Aquinas.

THEO 40243. The Long Quest: from the Buddha to the Prophet Muhammed

(3 -0- 3) Sullivan

One of a sequence serving the history of religion, this course covers select cases from early Hinduism, Buddhism, the Greek Mysteries, Judaism, Christianity, and Islam. Course requirements include quizzes on readings, class presentations, brief papers, and mid-term and final exam. Students who are interested in this course and are not majors, please contact the department for permission.

THEO 40244. Jewish/Christian Dialogue: Germany/Holocaust

(3 -0- 3)

From the second half of the nineteenth century to the rise of the Nazi state there was an intense exchange between Jews and Christians about their relationship. Tolerance and the promise of citizenship led to unprecedented formulations of Jewish identity. The question of "German-ness" and Judaism [/Deutschtum und Judentum/] raised issues about the character of German society itself. In this course we shall concentrate on Jewish and Christian authors who addressed these topics. During the final weeks of the course we shall read from Christian authors who wrote after the Holocaust and, in the wake of the II Vatican Council, brought the Catholic Church into conversation with the question of what elements of Christianity could address the horrors that the immediate past. Readings will be in English, but students who have the ability will be encouraged [and assisted] by the instructor to read select essays in German.

THEO 40245. Augustine

(3 -0- 3) Cavadini

Augustine is arguably the single most influential theologian in the West. There is in almost every Western theologian some strain that is Augustinian, and many of the disputes in Western Christendom can be regarded as arguments pitting one strain of Augustinian tradition against another. The study of Augustine, therefore, is essential for an understanding of most subsequent Christian theology. This

course attempts to introduce students to the study of Augustine in an attempt to gauge the specific and distinctive character of his theology over a broad range of issues. Special attention will be given to the development of Augustine's thought. The class hopes to be useful to students who approach Augustine from a variety of perspectives and interests, and as such will have a strongly textual, rather than thematic, principle of organization, emphasizing the reading of whole works rather than excerpts topically arranged. Although this is an advanced introduction, the course is suitable for those with little exposure to Augustine.

THEO 40246. Political Theology from Antiquity to Today

(3 -0- 3)

This course studies the history of political theology. Starting with the "theology of the state" in the Greek and Roman empires, it examines the thought of Augustine, Dante, Machiavelli, DeMaistre, Rosmini, Maritain, Guardini, Metz, Habermas, and Pope Benedict XVI (Joseph Ratzinger). It gives particular attention to the relationship between church and state in Europe. For example, it considers religious issues related to the Constitution of the European Union (EU) and also to the possible inclusion of Turkey in the EU. The course grade is based on four short summary papers, class participation, a mid-term examination, and a final examination. For further information, see Prof. Robert Krieg.

THEO 40248. The Book of Job through the Ages

(3 -0- 3)

Job—sufferer, saint, rebel, prophet and wise man—is one of the most impressive figures in the entire Bible. Regarding its literary form, its interpretation and theology, the book of Job is among the most difficult texts within the Hebrew Scriptures. Nevertheless, it inspired a wealth of Christian and Jewish interpretation from the earliest Church Fathers to the present time. This course will study famous interpretations of the story and the book of Job from the Patristic times to the 20th century. On the one hand it will look at exegetical commentaries such as Gregory the Great, Thomas Aquinas, Calvin, Maimonides. On the other hand, it will look at the figure of Job in modern theological writings and literature, from Kierkegaard, to Barth, to Gutierrez. Particular attention will be paid to such important theological topics as divine justice and innocent suffering, providence and revelation. The course will also look at the method of biblical exegesis in each of these authors.

THEO 40250. Saints in Art and Icons

(3 -0- 3)

A diachronic exploration of the lives and legends of the saints as depicted in art and iconography. Students will explore lives of the saints in select vitae as well as the most influential hagiographical collection of the Middle Ages, The Golden Legend of Dominican bishop James of Voragine. Due attention is paid to the arrangement of the sanctoral cycle, the compilation of calendars and martyrologies, and the theological underpinnings of classic iconography. Primary focus on identifying saints by iconographical attributes and conventions in both western and eastern iconography.

THEO 40251. Prayer and Mysticism

(3 -0- 3)

Prayer, for religious people, is the central activity in which faith becomes the personal focus of consciousness; mysticism usually means a type of prayer, or prayerful relationship to God, that leads the believer beyond the normal boundaries of consciousness and unites him or her to God in a way that transcends the limits of the self. In this course, we will reflect on representative works on prayer and mysticism from the whole history of Christian thought, from Origen, Gregory of Nyssa, and Dionysius the Areopagite in the early Church, through Gregory Palamas, Julian of Norwich and The Cloud of Unknowing in the Middle Ages, to Teresa of Avila and John of the Cross in the early modern period, and more recently to Therese of Lisieux, Pierre Teilhard de Chardin, and Hans Urs von Balthasar. We will be asking how the discipline and the grace of prayer transforms the human heart and mind, allowing it to experience personally the presence of God who is beyond understanding, but who has experienced our own limitations in Christ and through him has taught us how to pray.

THEO 40253. Stein, Weil, Arendt

(3 -0- 3) Astell

Three Women Thinkers of the Early Twentieth Century: Stein, Weil, Arendt Like Sylvie Courtine-Denany's "Three Women in Dark Times: Edith Stein, Simone Weil, and Hannah Arendt" (Cornell UP, 2000), this course groups together three extraordinary Jewish women philosophers of the World War II period. All three studied under noted male philosophers-Husserl, Alain, and Heidegger, respectively-and they developed their original insights on empathy (Stein), decreation and affliction (Weil), and "natality" (Arendt) partly as a response to their teachers. Their intellectual quests in the shadow of the Holocaust led them to take up theological questions, studying St. Thomas Aquinas and Dionysius the Areopagite (Stein), St. Augustine (Arendt), and Pascal (Weil). The answers they gave to God and others testify to the heroism and brilliance of their spiritual searches for truth.

THEO 40255. Medieval Negative Theology

(3 -0- 3)

The course will begin by examining the historical background in ancient and later ancient philosophy (Plato, the Neopythagoreans, the Neoplatonists) of the theological and philosophical method which later became known as "negative theology." Having extracted a kind of definition from the historical survey, we will look at four major figures of the early Christian and medieval periods in greater detail, reading selected works or parts of works in English translation but also paying attention to the original Latin (or Greek). The authors and works will be: 1. Pseudo-Dionysius the Areopagite (On Divine Names, On Mystical Theology, On the Celestial Hierarchy), 2. Iohannes Scottus Eriugena (Periphyseon, books I-III), 3. Meister Eckhart (Parisian Questions, selections from biblical commentaries, selected German and Latin sermons), 4. Nicholas of Cusa (On Learned Ignorance, books I-II, On the Vision of God). The last part of the course will consist of a brief survey of the many other medieval writers who used the negative method, and also some notes on its influence in the Renaissance and later times. Knowledge of Latin will be useful but not necessary for the course. Written requirement: one final paper of ca. 20 pp.

THEO 40256. Introduction to the Early Church

(3 -0- 3)

This course offers a basic introduction to the theology and life of the early Church from the second to the fifth centuries. Special emphasis is given to the development of doctrine, the development of a spiritual theology, and the shape of the lives of Christians both ordinary and extraordinary.

THEO 40257. Three Twelfth-Century Cistercians

(3 -0- 3)

Contemporaries of one another, Bernard of Clairvaux (1090–1153), William of St. Thierry (1085–1148), and Aelred of Rievaulx (1110–1167) each contributed with passion and genius to the great twelfth-century Cistercian reform of Benedictine spirituality. They did so in complementary ways, reflecting their unique temperaments, backgrounds, geographic surroundings, mystical experiences, and missions. In this course we will read the principle writings of each, comparing and contrasting their approaches to the central Cistercian themes of self-knowledge, charity, and reform (personal and communal). Emphasis will be placed on their common engagement with Augustinian theology and their novel insights into its richness as a mystical way.

THEO 40272. World Christianity

(3 -0- 3)

In a recent review of Martin Marty's *The Christian World: A Global History* (2008), Philip Jenkins concluded with this line: "Let me then offer a modest proposal for the creation of a non-Eurocentric humanities curriculum that is at once global, diverse, polycentric, multicultural and multiracial, one that incidentally tells the story of the wretched of the earth in terms of their deepest aspirations, and in their own voices. Let us study Christianity." Jenkins' proposal, dripping with irony designed to tweak not a few noses, captures one of the most important historical realities of the past several decades: the enormous growth of Christianity in places

outside the global North and West, into the South and East. This course explores the contours and implications of Christianity as a global reality. It will examine some of the rich explosion of scholarship that is now pouring forth on the recent and remarkable world-wide expansion of Christianity, while also putting such growth in a larger historical and theological perspective. The course readings will draw from fiction, theology, history, and the social sciences. After sampling major general interpretations (by scholars like Mark Noll, Andrew Walls, and Lamin Sanneh), readings will concentrate on Africa and Asia (perhaps either eastern or southern Asia), which are regions of startling change over the last century as well as places for which scholarship is burgeoning. Some of the course readings come from the standpoint of missionary activity, but more reflect new expressions of indigenous faith. Studies of Protestant, Catholic, and independent movements are included; readings come from a wide variety of Catholic, Protestant, and secular perspectives. Student responsibilities will include seminar-style participation, occasional short responses to readings, 3 shorter (5–6 page) papers, and a final exam.

THEO 40275. The Catholic Church and the Reformation

(3 -0- 3)

Formation and re-formation together constitute a perpetual movement in the life of the church and all Christian thought. It is no surprise, then, that Catholic thinkers and the church itself sought to form and reform basic expressions of Christian doctrine and life during the historical period known as the Reformation. No period saw a broader range of theological topics addressed so intensely. This course on the Catholic Reformation, 1450–1650, will survey developments in Catholic thought and dogma beginning with the reforming work of Lateran Council V and continuing through the decrees and implementation of the Council of Trent in the period sometimes called the Counter-Reformation. The course will 1) provide an introduction and overview to the historical period known as the Reformation with specific focus on Catholic thinkers and doctrine; 2) present diverse examples of theological arguments and explore the development of Catholic doctrine on five major topics 3) require students to practice critical interpretation and evaluation of theological texts in oral and written forms; and 4) explore the practical implications of these doctrines in Catholic culture and piety. To these ends, the course will focus on five major themes: ecclesiology/authority, grace/justification, sacraments, scriptural hermeneutics, and Catholic spirituality. Students will read, analyze, and discuss primary texts, and they will write comparative papers which examine and evaluate material covered in class. Surveying the Catholic Reformation from varied perspectives, the course offers students the opportunity to critically compare and evaluate diverse theological viewpoints using skills and vocabulary acquired during the semester.

THEO 40276. Religious Life and Religious Perfection in Medieval Theology

(3 -0- 3)

The scriptural witness of Jesus and his followers constitutes the primary model of Christian life. Indeed, to be a Christian is, in some sense, to be a disciple of Jesus. It is no surprise, then, that the history of Christian doctrine and spirituality focuses on the nature and content of the apostolic life as paradigmatic for human action and growth in Christian perfection. These themes are taken up and enlarged in medieval Christian thought in vital ways. This course, *Medieval Theology and the Apostolic Life*, will explore practical and theological attempts to practice an apostolic life as a mean for Christian perfection in 13th Century Christian thought. It will focus on the origin and development of Franciscan and Dominican life as a distinctive, mendicant attempt to undertake the apostolic life. To that end, the course will first consider the early biographies and writings related to the founders of the orders, and it will then turn to the theology of Bonaventure and Thomas Aquinas as mature expositions of the Christian life and its apostolic dimensions. As it proceeds, the course will also consider other contemporary apostolic movements for the similarities and differences to mendicant movements. Moreover, the course will also engage ways in which mendicant theology further informed Christian piety and art during high and late middle ages. The course will 1) provide an introduction and overview to the development of the mendicant orders in the 13th century; 2) present diverse examples of theological arguments and explore the theological development of mendicant theology, including

defenses of mendicant life against outside attacks; 3) require students to practice critical interpretation and evaluation of theological texts in oral and written forms; and 4) explore the practical implications of these doctrines in Catholic culture and piety. Students will read, analyze, and discuss primary texts, and they will complete regular writing assignments which examine and evaluate material covered in class as well as a final seminar paper. Surveying medieval treatments of the apostolic life, the course offers students the opportunity to critically compare and evaluate diverse theological viewpoints using skills and vocabulary acquired during the semester.

THEO 40277. Early Christian Jerusalem

(3 -0- 3)

How did Christians appropriate and create traditions about the holy land and city of Jerusalem? Early Christianity, emphasizing its otherworldly and international mission, contained differing opinions about the importance of these places. This course explores various early Christian traditions about Jerusalem and the land of Israel—their holiness for Christians as the land of promise, the site of the ministry and passion of Jesus, and, from the third to the seventh centuries, a center for pilgrims and monastic establishments. It also considers the role of the bishops of Jerusalem in theological controversy, imperial largesse and building programs and the ongoing importance of Jerusalem for ancient Judaism. The course also explores the adjustments among religious communities invested in the city and the land during the first centuries after the arrival of Islam.

THEO 40278. Russian Religious Thought

(3 -0- 3)

This course provides an overview of Russian religious thought from the 18th, 19th and 20th centuries. Students will be introduced to its main personalities, topics and ideas, discussed against the background of the general religious history of Russians, with its wide, and often neglected, variety of denominations and spiritual movements—Orthodox, Old-Believing, Sectarian, Catholic and Protestant. Special attention will be given to the role that religious thinkers and theologians from the Ukraine played in the intellectual history of the Russian Empire. The main part of the course will be based on readings and discussions of excerpts from the works of religious thinkers from the 19th and the 20th centuries in translation, such as Aleksey Khomyakov, Ivan Gagarin, Vladimir Solovyov, Leo Tolstoy, Pavel Florensky, Sergey Bulgakov, George Florovsky, Nicolay Berdyaev, and others.

THEO 40279. Theology and Film

(3 -0- 3)

This course is about the theological interpretation of film. It will examine a number of films, from the secular to the explicitly religious, with a view to considering how to examine film and the medium of film from a Christian theological perspective. The course will pay special but not sole attention to the films of Andrej Wadja, Majid Majidii and Clint Eastwood.

THEO 40280. God and the Problem of Human Suffering

(3 -0- 3) Zachman

This course will examine theological responses to the problem of human suffering, in light of three major biblical paradigms regarding suffering. We will begin with the problem of innocent suffering in light of the Book of Job, and will examine the theology of Dorothee Soelle and Gustavo Gutierrez in light of this issue. We will then turn to the relation of suffering to prayer as expressed in the psalms of lament, and will examine the theology of John Calvin and Kathryn Greene-McCreight to see how each interpret these psalms in a way to foster prayer even when suffering attempts to silence it. We will conclude with the consideration of voluntary suffering in the life of discipleship, and will examine the writings of Julian of Norwich and Soren Kierkegaard, in order to see how they understand the experience of voluntary suffering in light of the love of God in Christ. The goal of the course is two-fold: first, to understand the ways Christians have thought about God and the problem of human suffering in its various dimensions; and second, to develop our own understanding of this question. In light of the first goal, students will be asked to write three comparative papers on the authors in each of the three

sections of the course. In light of the second objective, students will be asked to write a final paper in which they give their own answer to the question of God and the problem of human suffering.

THEO 40281. Spiritual Masters of Early Christianity

(3 -0- 3) Young

An examination, through primary sources and selected interpretive studies, of the lives and works of ten accomplished male and female guides to the life of prayer and contemplation. The class will study their social contexts, sources and disciples as well as their formation in communal worship. Requirements: attentive reading and note-taking on each author, with notes submitted bi-weekly; one paper; one in-class presentation.

THEO 40282. The Sacramental Mystery of Medieval Theology: West and East

(3 -0- 3) Avvakumov

The course will provide an overview of the history of sacramental theology in the Middle Ages, on the basis of the reading of primary texts. We shall start from St. Augustine's ideas on the sacraments and follow the formation of the a systematic treatise on the sacraments in the Early Scholasticism of the 12th century. Special attention will be given to the most important theologians of the High Scholastic period, such as Thomas Aquinas, Bonaventure, and Duns Scotus. The students will also be introduced to the main personalities of the Byzantine theological interpretation of the liturgy, ritual and mysteries of the church, in particular Nicolaos Cabasilas and Symeon of Thessalonike.

THEO 40283. Philosophical Women Theologians: Edith Stein and Simone Weil

(3 -0- 3) Astell

This course pairs two extraordinary Jewish women philosophers of the World War II period who died during the period of Nazi persecution—Stein (1891–1942) in Auschwitz, and Weil (1901-1943) in England. Both studied under (and with) noted male philosophers—Husserl, Heidegger, Scheler, Von Hildebrand, and Alain, among others—and they developed their original insights on empathy and education (Stein), decreation and affliction (Weil) partly in response to their teachers. Both women struggled with their Jewish identity—Weil exemplifying an unconventional Christian Platonism and mysticism, Stein becoming a Catholic nun and canonized saint. Both wrote (auto)biographies. Literary and artistic criticism, meditations on mystical writings and experiences, and creative expressions (poetry and plays), as well as important essays on politics, philosophy, and theology belong to their fertile writings. Their lives and letters have inspired, in turn, the creative expressions of others: novels, plays, and poetry. Their intellectual quests in the shadow of the Holocaust led them to take up theological questions, studying St. Thomas Aquinas, Dionysius the Areopagite, St. John of the Cross (Stein), St. Francis, Bernanos, Marx, and Pascal (Weil). The answers they gave to God and others testify to the heroism and brilliance of their spiritual searches for truth and help to explain their continuing influence within the Church.

THEO 40284. Storming Heaven: Christianity in the Reformation Era

(3 -0- 3) Gregory

A narrative history of Christianity in Western Europe from ca. 1500–ca. 1650, which takes an international and comparative perspective, including Catholicism, Protestantism, and radical Protestantism. Topics covered include Christianity on the eve of the Reformation, Christian humanism, Luther and the German Reformation, the Peasants' War and Anabaptism, the English Reformation, Calvin and Calvinism, Catholic Reform and the Council of Trent, the French Wars of Religion, confessionalization, the Thirty Years War, and the English Revolution. Major themes include matters of religious content (doctrinal positions and devotional sensibilities), the relationship between different Christian groups and political regimes, the impact of religious changes across the population, and the definitive emergence of Christian pluralism. Lectures plus discussion.

THEO 40285. World History of 20th century Christianity

(3 -0- 3) Noll

A survey of the dramatic changes that have recently altered the face of Christianity in the world. For Catholics, Protestants, Eastern Orthodox, and the rapidly growing number of “independent” churches, the last century witnessed changes on a scale not seen since the first centuries of Christian history. The long-time Christian heartlands of Europe and North America have undergone unprecedented secularization. The once-missionary regions of Africa, Asia, and Latin America have developed larger communities of active believers than now exist in “the Christian West.” All over the world, Christian interactions with war (and peace), poverty (and affluence), disease (and health) have multiplied with increasing complexity. The course concentrates on Asia, Africa, and Latin America, with developments in Europe and North America in the background. Throughout, a primary aim is to link Christian events with major international developments like the world wars, the Cold War, economic globalization, and colonization-decolonization.

THEO 40286. The Qur'an and Its Relation to the Bible

(3 -0- 3) Reynolds

To Muslims the Qur'an is the uncreated, eternal Word of God. As Jesus Christ is to Christians, the Qur'an to Muslims is the fullest expression of God's mercy and concern for humanity. It is both the source of complete spiritual wisdom and the constitution for a more perfect society. In the present course we will encounter this revered text with the following goals: To examine the history of the Qur'an's composition and reception; to explore the major themes of the Qur'an; to discuss new theories on and debates over the Qur'an, and, finally, to research the Qur'an's statements on issues of contemporary interest, especially sex, politics and war. Students who are interested in this course and are not majors, please contact the department for permission.

THEO 40307. Sacraments

(3 -0- 3)

This course introduces students to the concept and nature of “sacrament” and to the historical, liturgical, and theological development of the seven sacraments. The sacraments are studied “in general” as well as “in particular.” Primary emphasis is given to the sacraments of initiation (baptism, confirmation/chrisimation, and Eucharist), with due consideration of the sacraments of healing (penance, anointing of the sick) and of Church service/governance (matrimony, holy orders). Attention likewise is given to other rites with sacramental dimensions (religious profession, commendation of the dying, funeral and burial ceremonies, various blessings of persons, places, and things).

THEO 40401. Christian Initiation and Eucharist

(3 -0- 3) Bradshaw

The Rites of Christian Initiation (baptism, confirmation, and first eucharist) and the eucharistic liturgy as the primary sacramental celebrations of and in the Church: their biblical and anthropological foundations, historical and theological evolution, and contemporary forms and celebration in a variety of churches. Requirements will include short papers and exams.

THEO 40402. Feasts and Seasons

(3 -0- 3) Johnson

The Church measures time and lives not by the civic calendar but according to its own cycle of feasts and seasons. This course will explore the origins, evolution, and theological meaning of the central feasts and seasons of what is called the liturgical or Church year: the original Christian feast of Sunday; Advent, Christmas, and Epiphany; Lent, Easter, and Pentecost; and with some attention to the feasts of the saints. What do we celebrate on such occasions and how might we celebrate these feasts and seasons “fully,” “consciously,” and “actively?” Of special interest to those who work with the liturgical year in a variety of ways and for all who seek to understand the way in which the Church expresses itself theologically by means of a particular calendar, as well as for theology majors and interested graduate students in theology.

THEO 40403. The Catholic Sacraments

(3 -0- 3)

“Lumen Gentium” says that in the Church, “the life of Christ is poured into the believers who, through the sacraments, are united in a hidden and real way to Christ who suffered and was glorified” (7). This course will look at the seven sacraments of the Catholic Church as the means whereby Christians are mystically united to the life of Christ. Although we will use a historical framework to organize our material, the main focus of attention will be on the theological dimensions of each sacrament. This will give us the opportunity both to examine particular questions that conditioned the development of current sacramental theology, and the content of each rite as it exists today. Some attention will be paid to the nature of sacramental symbol in general, but the course’s primary focus is on the sacraments as liturgical rites by which Christian life is celebrated.

THEO 40404. Liturgical Theology in the Roman Mass

(3 -0- 3) Fagerberg

The principle of “lex orandi statuat lex credendi” means that the law of worship establishes the law of belief. This course will accordingly work from practice to doctrine: in order to do what we do at liturgy, what must we believe theologically? The Church’s liturgical reality is unpacked by its teachings, so the course will consider traditional Catholic doctrines (Trinity, Christology, ecclesiology, anthropology, eschatology, sin, salvation) as they break surface in the Mass.

THEO 40405. Mary and the Saints in Liturgy, Doctrine, and Life

(3 -0- 3) Johnson

This course explores the evolution and theology of Mary and the saints in their liturgical and doctrinal expressions in an attempt to discern, evaluate, and articulate their proper place within Christian liturgy, doctrine, and life today in relationship to the central mediatorial role of Christ. Issues of popular piety, “models of holiness,” and ecumenical division, dialogue, convergence, feminist critique, and liturgical renewal will also be examined. Requirements include several short papers/seminar-style presentations, and a research paper.

THEO 40406. Catholic Liturgy in 20th Century

(3 -0- 3)

A study of the liturgical movement in the twentieth century. Attention is paid to contributions of liturgical theologians (e.g. Guardini, Casel, Bouyer) and magisterial documents (papal, conciliar, curial) both before and after Vatican Council II (1962–65).

THEO 40407. Catholic Devotions from the Middle Ages to Modernity

(3 -0- 3)

Catholic spirituality has been enriched by countless devotions and pious practices which can be traced as far back as the Middle Ages and indeed even much earlier. Many derive from the sacred liturgy and lead practitioners to a deeper understanding and appreciation of liturgical prayer. Various devotional objects and rites actually have been appropriated officially as sacramentals of the Church, enjoying their own liturgical blessings and rituals of enrollment or application. Others remain vital expressions of paraliturgical prayer and popular piety. This course examines particular forms of prayer and piety endorsed by the Church (Rosary, First Fridays, novenas, scapulars, medals, renowned statues, pilgrimage sites) from the Middle Ages until the present age. The course will also pay due attention to the religious orders, congregations, and movements that gave rise to or promoted specific devotions.

THEO 40415. Getting Medieval

(3 -0- 3)

This course is listed in the Music Department, with a 600 number as well so it can be listed in the Medieval Institute, and in the Department of Theology. Napster would never have been sued in the Middle Ages. Rather the culture embraced song, singing, and the free transmission of music in as many ways as possible. Music that was transmitted survived! This course is about how music was recorded, changing modes of transmission, and the interactions between the performer, the notator, the poet/dramatist and the scholar. How did media shape the messages of music?

We begin in around 800, when a new technology slowly began to transform cultures of song in the West, to around 1400, when a system for recording music was fully developed that has been primary until the twentieth century. In the first half of the course, we study manuscripts and musical repertory from before, during and after the monumental changes of the Carolingian period. Students will sharpen their quills and prepare transcriptions for us to use; expertise in a variety of subjects will be well-received, from composition and music theory, to music performance, to Latin studies, history, and liturgics. A class project at mid-term will involve the reconstruction of a medieval Vespers service from the manuscripts we have been studying, singing antiphons by the nun Hildegard of Bingen, and working with manuscripts from the Rhineland, including one source that is the closest extant to Hildegard’s own monastery as well as those prepared in her scriptorium. The second half of the course will focus on rhythm, music and poetry, and dramatic and narrative structures, ending with the performance of a liturgical drama, the scale of which will depend upon the numbers of students in the course, and their proclivities. We will examine dramatic musical works in their ritual contexts, from the Christmas cycle, to the Beauvais Play of Daniel, to saints’ plays, to a range of Easter dramas. There will be an emphasis on the great “Fleury Playbook,” the Circumcision office from Beauvais, and a satirical review from the 14th century, the *Roman de Fauvel*, starring a donkey who represents the seven deadly sins. All these musical works will be studied from original manuscripts. The course is open to graduate and professional students, as well as to undergraduates, and work will be geared to particular interests and abilities. The inter-disciplinary nature of the subject precludes prerequisites; all are welcome. The instructor’s textbook on medieval music (WWNorton, 2011) will be given a test-drive in this course.

THEO 40602. Foundations of Moral Theology

(3 -0- 3)

As John Mahoney noted in his “The Making of Moral Theology” the term “moral theology” (“Theologia Moralis”) refers to a distinctive science thematically separate from all of the other branches of theology but of relatively recent vintage. It has only been in use since the Thomist renaissance at the end of the 16th century, in the wake of the Council of Trent. Even so, the systematic consideration of Christian morality or ethics is both much older than this and has a wider scope than this recent Roman Catholic inflection. It is the purpose of this course to investigate the development of Roman Catholic moral theology against its wider historical horizon. This course is an introduction to the study of the basic elements of Roman Catholic moral experience and understanding as well as the criteria of Christian moral judgment and action, including the data of moral knowledge, theories of the ultimate end of human nature, ontic and epistemic aspects of sin, moral agency, the conscience, theories and methods for moral decision making, and the three dominant forms that moral theological thinking has taken in the history of the Roman Catholic Church (aretological, deontological, and consequentialist). This study will be accomplished, historically, through a series of readings from major Roman Catholic moral theologians/ethicists (and their influences) including: pre-Christian philosophical sources, ancient medieval, modern, and contemporary approaches to Christian moral theology/ethics and their philosophical influences. The culmination of this study will be a close reading of John Paul II’s “Veritatis Splendor” with the previous readings as its backdrop.

THEO 40603. Theology of Medicine

(3 -0- 3) Ryan

An examination of moral problems in medicine in the context of key theological themes, e.g., creation, providence, the nature of Christian personhood, suffering and redemption, freedom and grace. Various normative problems will be explored, e.g., physician-assisted suicide, artificial reproduction, and access to health care.

THEO 40604. Christian Ethics and Contemporary Culture: God and Morality

(3 -0- 3)

This course examines major themes in recent Christian ethics in light of the broad moral context of modern Western societies. The course focuses on themes such as moral order, virtue, and the problem of Christian community in a post-Christian

era. Authors include Oliver O'Donovan, Jean Porter, Lisa Cahill, John Howard Yoder, John Courtney Murray, John-Paul II, Richard Rorty, and Charles Taylor. No prior work in Christian ethics is assumed.

THEO 40607. Catholic Social Teaching

(3 -0- 3)

This course will have three components: 1) The close reading of classic texts of the Catholic social tradition, particularly but not exclusively the papal and conciliar documents from Pope Leo XIII's "Rerum Novarum" to John Paul II's "Centesimus Annus." Other texts will include source documents (e.g., writings by Thomas Aquinas and Augustine) and contemporary appropriations (e.g., writings by liberation theologians and neo-conservatives). Requirement: Short papers of critical analysis and responses, intensive class participation; 2) Immersion in professional context. Each student will find a placement in a location similar to that student's anticipated profession. The student is to observe, interview, and to the extent possible participate in the life of the setting. For instance, the students can observe a law or architectural firm or a medical practice. The director and the executive committee will develop a list of placements or the student can seek one out on her own, which must then be approved by the director. Requirement: keep an ongoing journal as a "pastoral ethnography" of the setting (an interpretation of the practice in the setting in light of the Catholic social tradition); 3) Final project: each student is to articulate or construct a setting in his or her anticipated profession in light of the Catholic social tradition (e.g., imagine and construct what a law firm/health clinic/ad agency would look like if it practiced in light of the Catholic social tradition). The pedagogical goals and means of this course requires that it be a seminar (no more than 15 students).

THEO 40608. Introduction to Christian Ethics

(3 -0- 3) Odozor

Faith in Jesus Christ as Lord and savior has practical implications for the way believers construe the world, organize their lives and engage with the world. In this course, students will be introduced to the basic elements in Christian moral thinking and decision making. We will look at nature of ethics in general and of Christian ethics in particular. We will cover questions related to the specificity of Christian ethics, Jesus and moral thinking, the human (Christian) person as moral agent, and the different methods employed in making ethical decisions. This course is therefore a foundational course which is meant to prepare students for further studies in moral theology and ethics or for life as responsible Christian men and women who are reasonably well equipped to face up to the implications of their faith for life in the world.

THEO 40609. Love and Sex in the Christian Tradition

(3 -0- 3) Porter

Christian reflections on sexuality comprise one of the richest yet most controversial aspects of the Christian moral tradition. In this course, we will examine Christian sexual ethics from a variety of perspectives through a study of historical and contemporary writings. Topics to be considered include Christian perspectives on marriage and family, the ethics of sex within and outside of marriage, contraception, divorce and remarriage, and homosexuality. Course requirements will include four or five short papers and a final examination.

THEO 40612. Catholic Radicalism

(3 -0- 3)

This course traces the emergence and development of Catholic Radicalism in the United States from the early 20th century to the present. Special attention will be placed on the Catholic Worker Movement. Readings will include texts by and about Dorothy Day, Peter Maurin, Virgil Michel, Paul Hanly Furfey, Gordon Zahn, Thomas Merton, and Daniel Berrigan, as well as some recent theologians. Issues to be taken up in the course include the relation between theology and social theory, nature and the supernatural, the nature of the modern state, capitalism and socialism, and the challenges facing Catholic Radicalism in the beginning of the 21st century.

THEO 40613. Catholic Social Teaching

(3 -0- 3)

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and appropriation of these documents. We will examine papal, conciliar, and episcopal texts from "Rerum Novarum" (1891) up to the present time, identifying operative principles, tracing central theological, ethical, and ecclesial concerns, and locating each document in its proper historical context.

THEO 40614. Ethics, Law and International Conflict

(3 -0- 3)

The terrorist attacks of 9/11 and the war in Iraq have contributed to a dramatic reexamination of moral and legal norms governing the role of military force in international affairs. This course provides an introduction to legal and moral perspectives on issues of war and peace, with special attention to Catholic social teaching. Topics include the UN framework for collective security, collective enforcement, and peacekeeping; terrorism, aggression and self-defense; intervention on behalf of self-determination and human rights; norms governing the conduct of war; accountability for war crimes; and approaches to arms control and disarmament. These topics are discussed with special attention to their application in combating global terrorism, the interventions in Iraq and Afghanistan, the wars in the Balkans, and other recent conflicts.

THEO 40615. Comparative Rel. Ethics

(3 -0- 3) Clairmont

Is religion necessary to live a moral life? If so, are all religions basically the same when it comes to the moral norms contained in them? If not, how do we account for the differences among religious values, norms and principles? How do religions justify their distinctive moral claims in the face of alternative proposals? Can we study the ethical thought of a religious tradition that is different from our own in a responsible manner and, if so, how should we proceed? This course will take up these and other related questions through an examination of classic and contemporary Christian and Buddhist texts in dialogue with recent theoretical options for the comparative study of religious ethics. We will begin with an assessment of the importance and distinctive quality of religious voices in moral debate and then look at some of the ways that contemporary scholars have approached the investigation and assessment of similarities and differences in moral world views. The middle portion of the course will focus on a careful reading of selected Christian and Buddhist texts that offer visions of the moral life. The course will end with a comparative consideration of certain Buddhist and Christian positions in ecological ethics.

THEO 40616. U.S. Catholic Social Ethics

(3 -0- 3)

This course will study the emergence and development of the Americanist Tradition in Catholic Social Theory from the late-nineteenth century to the present. The leading emphases will be on the theoretical paradigms that have shaped the discourse of what has since become the field of "Catholic Social Ethics," with a focus on Catholic political theory. Texts will be read genealogically in an effort to discover how the central terms and categories in Catholic social theory in the United States have shifted over time and how they have remained the same. Authors to be studied include John A. Ryan, Maritain, Yves Simon, John Courtney Murray, Bryan Hehir, George Weigel, Michael and Kenneth Himes, Robert George, and David Hollenbach, and others. By virtue of the topic, special attention will be paid to the writings of John Courtney Murray and the strengths and weaknesses of the so-called "Murray Project." Themes to be examined include nature and grace, faith and reason, church-state relations, the nature of law, the character of the modern state, the problem of religious pluralism and freedom. Requirements include the weekly readings, preparing weekly seminar papers during the first half of the course, and presenting a well-researched paper(s) to the seminar during the second half of the course. In addition, students will be asked to produce a final essay that analyzes the strengths and weaknesses of the Americanist tradition in Catholic social ethics.

THEO 40617. Mysticism and Morality

(3 -0- 3) Clairmont

Is mysticism (variously described as the presence of God, a direct experience of God, a consciousness of God, or pure love of God) the culmination of the moral life or its true beginning? To what extent should our moral decisions be guided by our personal experiences of the divine? Given the frequent appeals that thoughtful Christians make to the judgments of conscience, how if at all can we distinguish between the true voice of God in the human heart and self-consoling delusion? Are those who claim to have had, and write sweetly about, an “experience” of God real guides to be trusted by the Christian community or are they dangerous spiritual individualists who threaten the coherent moral witness of the Church? How, if at all, are we to reconcile the teachings of Christian mystical writers with the sacramental life of the Church and the cultivation of Christian virtue? Is a life of intense asceticism, or even an explicitly Christian faith, necessary for mystical knowledge? We will examine these and other questions in the four parts of the course: (1) Maps of the Soul (through a comparison of Augustine’s *Confessions* and Teresa of Avila’s *Interior Castle*), (2) Reasons of the Soul (through a comparison of Bonaventure’s *Journey of the Mind into God* and Marguerite Porete’s *Mirror of Simple Souls*), (3) Loves of the Soul (through a comparison of Catherine of Siena’s “Dialogue” and Ignatius of Loyola’s *Spiritual Exercises*), and (4) Questions of the Soul (through a comparison of Simone Weil’s “Waiting for God” and “The Dark Night of the Soul” by John of the Cross). Course requirements include two class presentations and a final paper comparing two of the authors examined during the semester.

THEO 40618. Veritatis Splendor: Context, Content, Conversation

(3 -0- 3) Odozor

In 1993, Pope John Paul II issued the encyclical, “Veritatis Splendor,” which in his words was the first papal attempt “to set forth in detail the fundamental elements of Christian moral teaching.” This encyclical is thus much more than a magisterial effort to correct the work of some “dissenting” theologians. As the Pope himself puts it, his intention is to treat “more fully and more deeply the issues regarding the very foundations of moral theology” in the Catholic tradition. In this course we will study the issues raised by this encyclical. And, with the encyclical as a guide, we will study some of the historical sources and origins of Catholic moral theology, the enduring insights of the Catholic moral tradition, the contested questions in this tradition, the internal (i.e., within the Church) and external dialogue partners and contributors to “Veritatis Splendor.” It is hoped that students should at the end be able to answer the question about the nature and aim of Catholic moral theology as theology and as ethics.

THEO 40619. American Catholicism: History, Theology, Social Thought

(3 -0- 3)

This course traces the history of Catholicism in the United States from colonial times to the present. Particular attention is placed on the ways Catholics have conceived of the relation between the Church and nation, and how these conceptions shape the discourse of Catholic moral theology and social ethics. Historical figures to be examined include John England, Orestes Brownson, Isaac Hecker, John Ireland, James Gibbons, Edward McGlynn, John Ryan, and John Courtney Murray. We will also peruse the writings of recent figures such as Charles Curran, Rosemary Radford Ruether, Germaine Grisez, Mario Cuomo, Richard John Neuhaus, George Weigel, Robert George, and Margaret Farley. A central theme in this course is the role of Catholics in U.S. politics, and in this context several issues are explored, including contraception, abortion, nuclear weapons, economic justice, the death penalty, and gay marriage. Toward the end of the semester, the course focuses at the liberal/conservative divide that is sure to deepen as Catholics look toward the 2008 national elections. It concludes by exploring a way beyond this division by pursuing what some Catholic scholars have called “Evangelical Catholicism.”

THEO 40620. Virtue and Sin in the Christian Tradition

(3 -0- 3)

Ideals of virtue and condemnations of vice and sin have long been central to the Christian ethical tradition. Yet these seemingly basic ideas have proven to be surprisingly controversial. What does it mean to live a virtuous life—is it a matter of good dispositions, or do our actions make a real difference to our moral status? Can we identify some kinds of sinful actions in advance, or do these judgments depend on the individual’s intentions and the circumstances of the action? How should we understand specific ideals of virtue and “negative ideals” of vice—for example, does Christian love always imply a readiness to sacrifice one’s own interests and desires? Approached in this way, the topics of virtue and sin offer a vantage point from which to explore central questions in theological ethics, and to think about the implications that our ideals have on our day to day lives and our relations to others. We will explore these and related issues by reading and discussing a range of literature, focusing especially on recent work on theological ethics and the virtues. Course requirements will include student presentations, a midterm and final, or final paper.

THEO 40622. Evangelization

(3 -0- 3) Connors

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
This seminar will seek to sketch the parameters of Catholic theology and praxis of “spreading the Good News.” Beginning from Scriptural foundations and a brief look at the history of Christian mission, we will examine recent important developments, including the following: Vatican II (especially *Dei Verbum*, *Ad Gentes*, *Nostra Aetate* and *Gaudium et Spes*); Paul VI, *Evangelii Nuntiandi*; John Paul II and the “New Evangelization;” Benedict XVI, *Verbum Domini* (2010). Special attention will be given to issues of enculturation and the relationship between evangelization and interreligious dialogue. Students will also have the opportunity to study various contemporary programmatic approaches of their choosing. Texts will include: Bevens & Schroeder, *Constants in Context: A Theology of Mission for Today* (2004); and A. Shorter, *Toward a Theology of Inculturation* (1988).

THEO 40623. Theology, Ethics, and Culture

(3 -0- 3) Clairmont

As a people with “good news” to bring to “all the nations,” Christians have always been engaged in thinking about how the Gospel relates to the world’s complex and diverse cultures. Yet Christians have maintained that the Gospel also has the power to critique and reform cultures even though, in various ways, the Church itself and its canonical texts were formed within and influenced by ancient philosophical and religious cultures. This class will investigate recent attempts by Catholic and Protestant theologians to provide theological descriptions and critiques of culture while remaining sensitive to the true and necessary gifts that cultural diversity brings to the Church. After a short introduction to contemporary cultural studies, we will read one of the classic texts in Christian theology that charts different models for how to think about the moral significance of theological engagements with culture in H. Richard Niebuhr’s *Christ and Culture*. We will then investigate the theme of Christ and culture in work of Pope Benedict XVI, Aylward Shorter, Laurenti Magesa, Diana Hayes and Dwight Hopkins. We will pay special attention to the increased importance of the phenomenon of enculturation in recent Catholic theology and on the question of the relationship between love and justice in recent Christian ethics.

THEO 40804. Christian Autobiography

(3 -0- 3)

This course examines three major yet very different attempts at Christian autobiography: St. Augustine’s “Confessions,” St. Teresa of Avila’s “Life,” and John Henry Newman’s “Apologia Pro Vita Sua.” Throughout, we will attend to three demands: a close reading of the texts themselves, including their narrative and rhetorical structures; a sense of how the self is imagined by the three writers; and an awareness of the authors’ religious contexts.

THEO 40805. Christian Anthropology

(3 -0- 3)

This course will explore contemporary perspectives on how Christians understand human life in light of the life, death, and resurrection of Jesus. The theological anthropology of *Gaudium et spes* (The Pastoral Constitution on the Church in the Modern World) supplemented by the theological anthropology of Karl Rahner will serve as the foundation for an exploration of the mystery of being human in an evolutionary world. In addition, each section of the course will include other theological perspectives which focus more directly on the reality of human suffering in its personal, interpersonal, and social dimensions and the relationship between human persons and the rest of creation. Questions to be considered in the course include: What does it mean to be a human person? Do we have a vocation and destiny? How is human life related to the rest of creation? What is human freedom? What is the impact of sin on human freedom and on the rest of the cosmos? What does it mean to be called to communion with God and with all of creation? In what sense can human life be called a sacrament? In a world of increasing violence, suffering, and ecological devastation, how can Christians understand what it means to be created in the image of God, impacted by original sin but also redeemed, called to divinization, and promised a future that includes resurrection of the body and a new creation?

THEO 40808. Major Roman Catholic Thinkers: John Henry Newman

(3 -0- 3) O'Regan

This course offers an expansive treatment of the work of Cardinal John Henry Newman, arguably the foremost Catholic thinker of the nineteenth century. While it will not ignore Newman's wonderful homilies, in the main it will concentrate on texts such as the *Apologia*, *The Development of Doctrine*, *Oxford University Sermons*, and *Grammar of Assent*, all of which have assumed classic status.

THEO 40810. Feminist and Multicultural Theologies

(3 -0- 3) Hilker

An exploration of how the voices of women have helped to reshape theological discourse and to bring to light new dimensions of the living Christian tradition. Using writings of feminist, womanist, Latina, *mujerista*, Asian, and "Third World" theologians, the course will focus on the significance of gender and social location in understanding the nature and sources of theology, theological anthropology, Christology/soteriology, the mystery of God, and women's spirituality.

THEO 40811. Religion and Autobiography

(3 -0- 3) Dunne

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
A course on the spiritual journey of the individual person, drawing on diaries and autobiographies. The first half is on the story of the life in terms of feeling and imagination and insight and choice, and the second half is on the story of the person in terms of the life project, the boundary situations of life, and conversion of the mind, of heart, and of soul. Readings: Saint Augustine, "Confessions;" Martin Buber, "The Way of Men;" Carolina Maria de Jesus, "Child of the Dark;" John Dunne, "Reasons of the Heart" and "Search for God in Time and Memory;" Etty Hillesum, "An Interrupted Life;" C.G. Jung, "Memories, Dreams, Reflections;" Rainer Maria Rilke, "Letters to a Young Poet" and "Reading the Gospel." Writings: a spiritual diary (not handed in), a term paper, and a midterm take-home and a final take-home exam.

THEO 40813. Death and Rebirth

(3 -0- 3) Dunne

A course on the spiritual journey through the ages: the figure Gilgamesh (the human quest of eternal life), the figure of Socrates (the sense of a deeper life that lives through death), the figure of Jesus (the I and thou with God in Christianity; how this leads to an understanding of death and resurrection, or Incarnation and Trinity), Dante and the spiritual journey (the Christian sense of a life that lives on both sides of death), Kierkegaard and the eternal self (the Christian encounter

with the modern sense of selfhood), and a concluding vision (the experience of the presence of God). Requirements include a midterm and a final exam (take home exams) and a personal essay.

THEO 40816. Philosophy and Theology of the Body

(3 -0- 3)

Pope John Paul II's theology of the body constitutes a thoroughgoing effort to develop an account of human sexuality and love and of the "redemption of the body" in the context of an integral vision of the human person. This vision is based on his philosophical personalism together with a phenomenological analysis of the Genesis account of the human being as *imago Dei*. The first half of the course addresses first the original condition of human beings according to the Creator's intention and then concupiscence as the effect of original sin. The second half of the course addresses the sacramentality of marriage and the ethos of Christian marriage in the light of the redemption of the body. The principal text for the course will be John Paul II, *Man and Woman He Created Them: A Theology of the Body*, (Pauline Books & Media, 2006). Besides this we will read sections from Karol Wojtyla, *Love and Responsibility* (Ignatius Press, 1993), his Encyclical *Veritatis Splendor*, and Apostolic Letter *Mulieris Dignitatem*, as well as Pope Paul VI's Encyclical "Humanae Vitae." Course requirements include two 7-page papers and a final exam. Students will be expected to participate actively in class discussions.

THEO 40819. Islam and Muslim-Christian Dialogue

(3 -0- 3) Reynolds

This course has a two-fold aim. It not only provides an introduction to the world of Islam but also attempts a comparison and evaluation of Islamic and Christian theological themes from both a systematic and historical perspective. Topics such as the nature of God and the process and content of divine revelation; the person and function of Muhammad and Jesus and exemplars of faith; the role and nature of sacred scripture and tradition; the place and nature of piety and practice in everyday life; the way that each religion sees itself in relation to other faiths; changes that each tradition has undergone in the modern period—these and other topics will be treated with the intention of deeper understanding and appreciation of the other.

THEO 40822. Educating in Faith: Catechesis in Catholic Schools

(3 -0- 3) Poorman

This course is designed to assist current or prospective teachers of religion/theology at the junior-high and high school levels in the catechesis of adolescents in Catholic schools. The course is also helpful for those anticipating a career in pastoral, and most especially catechetical, ministry with adolescents and young adults. The course is open to Theology students at the undergraduate and graduate levels and to Notre Dame undergraduates with minors in Education, Schooling, and Society. Within class sessions designed to be highly dialogical, interactive, and prayerful, participants explore both theological and practical/pedagogical dimensions of the process of catechesis. Required readings are drawn from the "National Directory for Catechesis," the "General Directory for Catechesis," and "The Catechism of the Catholic Church," as well as from the works of theologians and educational theorists who have contributed significant responses to the two central questions addressed in this course: "What is Catechesis?" and "How Do We Engage in Catechesis in the Context of Catholic Schools?" During this course, participants explore all of the central tasks that constitute the holistic process of catechesis as delineated in the general and national Catholic catechetical directories and other catechetical documents and as adapted for use in Catholic schools: communicating knowledge of the mystery of God's self-revelation; fostering maturity of faith and moral development; sharing and celebrating faith by forming Christian communities of prayerful people; promoting Christian service and social justice; and witnessing to faith through pedagogy and by the example of authentic spiritual lives. Participants are required to read all assigned selections from the course packet, as well as from the "National Directory for Catechesis." Participants also actively contribute to class sessions. (Presence in class is mandatory; one excused absence is allowed for illness; participation is factored into the final grade.) Participants also synthesize within the following assignments what they have learned from both readings and class sessions: 1) in-class group work on

pedagogical strategies; 2) short written assignments and oral reports; 3) a mid-term examination; 4) a personal mission statement for the student as catechist (2–3 pages); 5) an integrative essay (10–12 pages) answering the question, “What does it mean to educate in faith?”.

THEO 40823. Religion and Literature

(3 -0- 3)

This course has as its essential context the crisis of authority of discourse in the modern period subsequent to literature gaining independence from Christianity. It focuses specifically on the three main postures literature strikes vis-à-vis confessional forms of Christianity no longer thought to have cultural capital. (1) The antithetical posture. Here Christianity is viewed in exclusively negative terms as repressive, authoritarian, and obscurantist, the very opposite of a true humanism that is literature’s vocation. Readings include Voltaire and French existentialism. (2) The retrievalist posture. This posture is fundamentally nostalgic. The loss of Christianity’s cultural authority is mourned, and literature is seen as an illegitimate substitute. Readings will include Dostoyevsky, T.S. Eliot, and Flannery O’Connor. (3) The parasitic posture. Here Christianity is criticized but not totally dismissed. Portions of it are savable, especially select elements of the New Testament that emphasize human being’s creative capacities. Readings include Coleridge, Shelley, and Emerson.

THEO 40824. Hindu and Christian Interaction

(3 -0- 3) Malkovsky

This course will provide a survey of the main events, human figures and theological models which have characterized Hindu-Christian interaction, especially since the beginning of the 19th century, a period that marks a turning-point in Hinduism’s understanding of itself. We shall attempt to determine how each of the two religions has undergone transformation in its theology and spirituality, either through the enrichment or through the challenge which the other tradition has presented. Theologically we shall examine such issues as revelation and history, divine grace and human freedom, personhood of the deity, Hindu and Christian views of Christ, theistic and non-dualistic metaphysics.

THEO 40825. God, Philosophy, and Politics

(3 -0- 3)

This is the capstone seminar for the interdisciplinary Minor in Philosophy in the Catholic Tradition. It is normally open only to undergraduates registered for that minor. The central concern is to understand the various ways in which Catholic philosophers have brought theology to bear on the study of politics and vice versa. Authors studied include Augustine, Aquinas, Robert Dahl, and Maritain.

THEO 40826. Comparative Theology

(3 -0- 3) Malkovsky

The purpose of this course is to introduce you to some important recent literature in comparative theology. We will attempt to evaluate the possible significance of theological ideas and religious experiences from Hinduism, Buddhism and Islam for Christian thinking on God, Christology, grace and eschatology. Requirements: Class presentations and two research papers.

THEO 40827. Comparative Spiritualities

(3 -0- 3)

This course provides a first introduction to some of the more influential spiritualities practiced by Hindus, Buddhists, Muslims, and Eastern Orthodox Christians down through the ages and seeks to determine their significance for contemporary Roman Catholic spiritual praxis and theology. In order to properly understand the practices of Hindu yoga and bhakti, of Buddhist vipassana and Zen, of Muslim salat/namaz and Sufism, of the Eastern Orthodox Jesus Prayer/Hesychasm and the accompanying place of human effort in asceticism and morality, it will be necessary to examine underlying convictions about the nature of the human person and the supreme reality, of divine presence and grace, as well as the declared ultimate goal of spiritual endeavor, whether it be expressed more in terms of a communion of love or of enlightened higher consciousness. During the semester we will not

only study important spiritual texts of other religions, but we will also practice meditation, visit a local mosque for Friday prayers and sermon, and be instructed by expert guest speakers who represent religious traditions other than our own.

THEO 40829. Spirituality in the Ignatian Tradition

(3 -0- 3)

The book of the “Spiritual Exercises” of St. Ignatius of Loyola will be the primary focus of the course. Particular concern will be given to their origin and composition, the division into weeks and dynamics of grace and choice that are at the core of this tradition. Attention will also be given to the rules for discernment and the way that this tradition is especially a path for Christian discipleship in the world.

THEO 40831. Chesterton and Catholicism

(3 -0- 3) Fagerberg

G. K. Chesterton was a man with many sides, but this course will confine itself to only one, and that is his theological front. About his conversion to Catholicism he wrote to a friend, “As you may possibly guess, I want to consider my position about the biggest thing of all, whether I am to be inside it or outside it.” We will consider his position by reading primary works in theology that led up to and followed his decision, among them “Orthodoxy, The Everlasting Man,” biographies of St. Thomas and St. Francis, “The Thing,” and “What’s Wrong with the World.” In these we will follow his own advice that “To become a Catholic is not to leave off thinking, but to learn how to think. It is so in exactly the same sense in which to recover from palsy is not to leave off moving but to learn how to move.”

THEO 40832. Approaches to Black Theology

(3 -0- 3)

This is an introductory course to theology from African American perspective. The course will not only open students to Roman Catholic (intellectual) theological traditions but also to the diversity of approaches in theology within which Black theology is located. The dialectical engagement of Black theology, the methodological and interpretative shifts that account for its emergence and ongoing development, are rooted in Black history and tradition (African and African American). The course has an added pastoral dimension—the preparation for and enhancement of ministry in the Roman Catholic Church to peoples of African descent.

THEO 40833. Modern Spiritual Writers

(3 -0- 3)

This course will consider some early modern and modern Christian writers who were, in one way or another, prophetic figures who wrote “from the margins.” We will begin with the American Quaker, John Woolman, and then read Soren Kierkegaard’s “Fear and Trembling;” the anonymous Russian Orthodox author of “The Way of a Pilgrim;” Simone Weil’s “Waiting for God;” and selected writings of both Dorothy Day and Thomas Merton. Students will write frequent short papers; offer in class presentations; and write one longer paper on a text not discussed in class. Because the course will be writing intensive no in class examinations will be given. Final grade will be computed based on class participation and the quality of writing.

THEO 40834. The Holy Land

(3 -0- 3)

This course will investigate the manner in which Christians and Muslims through the centuries have understood the religious dimension of Palestine, and of Jerusalem in particular. In the first section of the course we will analyze classical religious texts, including: the New Testament prophecies of Jerusalem’s destruction; the narratives surrounding Saint Helen’s recovery of the true Cross and sacred relics; the traditions of Muhammad’s night journey to Jerusalem, and Muslim narratives on the conquest of Palestine and the construction of the Dome of the Rock. In the second section of the course we will turn to the memories and visions of individual believers, such as the descriptions of medieval Muslim geographers, the travelogues of European Christian pilgrims, the writings of Eastern Orthodox monks of the Palestinian desert, and the popular religious pamphlets and web sites of the Muslim and Christian faithful today.

THEO 40835. Darwin, Philosophy and Religion

(3 -0- 3)

The year 2009 marks both the 200th anniversary of Darwin's birth and the 150th anniversary of the publication of his *On the Origin of Species*. The *Origin* has had a profound effect, not just on biology, but also on how we think about ourselves, about human nature in relationship to the natural world, and both of the latter in relationship to God. This class will begin by setting the philosophical and theological scene in the 19th century and then, against that backdrop, reading Darwin's own work (the *Origin* and excerpts from *Descent of Man*) and biographical material about Darwin's life. We will then embark on an exploration of the impact of Darwin's ideas, focusing on their theological and philosophical implications. This class will thereby provide a deeper understanding of the birth and context of Darwin's ideas and their on-going significance in the twenty-first Century. It will include invited speakers and at least one field trip (to the Evolution exhibit at Chicago's Field Museum). Students will also be required to attend some of the sessions at the second of the two international conferences on evolution being presented by Notre Dame in cooperation with a consortium of Roman Pontifical Universities (Nov. 1–3). Beyond this, and faithful class participation, the course will entail several in-class presentations a midterm and a final paper.

THEO 40836. Hermeneutics, Deconstruction and Medieval Thought

(3 -0- 3)

The aims of this course are both methodological and historical. The methodological part will consist of an introduction to hermeneutics (in a broad sense) as theorized and/or practiced in certain areas of modern continental philosophy. After a brief look at the crucial innovations of Husserl, we shall study carefully chosen extracts (in English translation) of Heidegger: *Being and Time* and *What is Called Thinking*, Gadamer: *Truth and Method*, and Derrida: *Of Grammatology*, *Writing and Difference*, *Dissemination* in order to illuminate the different (even opposing) ways in which the idea of "hermeneutics" can develop. This general discussion will be combined with specific consideration of the themes of allegory and negativity. The historical part of the course will concentrate on late ancient, patristic, and early medieval readings (Origen: *On First Principles*, Augustine: *On Christian Teaching*, *Literal Interpretation of Genesis*, Proclus: *Commentary on Plato's Timaeus*). Here, we shall attempt to advance our comprehension of ancient literature by 1. looking for parallels with modern hermeneutic techniques, 2. applying the modern techniques in test cases. The course is intended to be relatively open-ended, i.e., students will be expected to think about the way in which these discussions are internally coherent and also relate to their own areas of interest (which may be elsewhere in philosophy, theology, or literature (Latin or vernacular)). Requirement: one final essay of ca. 20 pp.

THEO 40837. Meaning, Vulnerability and Human Existence

(3 -0- 3)

This course explores the contribution that the coming together of theological and literary reflection can make to our understanding of the nature of meaning. Focusing on the work of Augustine, Aquinas, Dante, Primo Levi, Dostoevsky and Shakespeare, students will address questions such as 'What is it we are doing when speaking, reading, using language?', 'How do the intellect and the imagination work in relation to literary texts?', 'How might all this relate to our ways of thinking about God, human nature, and the relationship between them?' Such questions will be addressed, in particular, through reflection on how the texts studied invite us to think about the nature of love, forgiveness, vulnerability and creativity.

THEO 40838. Mystery of God

(3 -0- 3)

The general aim of the course is to introduce the student to the Catholic tradition of reflection on the triune God who always remains mysterious even in, or precisely in, his revelation in history and in our lives. The pedagogic aim is familiarity with the tradition that is the church's common possession. (Spring.)

THEO 40840. How to Be An A/Theist

(3 -0- 3)

Much has been made in recent years of the so-called "new atheists." Books by Richard Dawkins, Christopher Hitchens and others in their misguidedly enthusiastic cohort have been celebrated and vilified by both atheists and theists. This course is designed to familiarize students with some of the most compelling critiques of Christian theism as well as the various ways theologians have responded to and appropriated these critiques. The first half of the course concerns debates surrounding the nature of God and the relationship between faith and reason that began within Christianity and were taken up and transformed by philosophers in the 18th and 19th century. The second part of the course will look at the rich a/theological discussion that resulted from these philosophical revolutions and continues, Dawkins notwithstanding, today. In familiarizing themselves with this a/theological tradition, students will hopefully come to see that the question of the existence of God and its relation to religious belief is more complicated than the "new atheists" realize.

THEO 40842. Shiism and Catholicism

(3 -0- 3)

Most Western discussions of Islamic matters or the Arab world tend to focus, often implicitly, on Sunnism. This is perhaps to be expected, since the overwhelming majority of the world's 1.5 billion Muslims are Sunnis. Shias number from 150 million to 200 million people, or 10 to 15 percent of the total. In the Islamic heartland, from Lebanon to Pakistan, however, there are roughly as many Shias as there are Sunnis, and around the economically and geostrategically sensitive rim of the Persian Gulf, Shias constitute 80 percent of the population. The divide between Shiism and Sunnism is the most important in Islam. The two sects parted ways early in Muslim history, and each views itself as the original orthodoxy. Their split somewhat parallels the Protestant-Catholic difference in Western Christianity. This new course offers a panoramic survey of the Shia Islam and its commonalities with Catholicism. The course will be divided into three sections. The first part of the course, will deal with the history and origins of Shiism from its birth in the Arabian peninsula in the seventh century. We will look at the history of the early Islam and the most important events which split the two major Islamic traditions. In the second unit, the Shia doctrines, practices, political leadership and movements, gender, social relations and cultural norms will be explored. The last portion of the course will focus on the similarities and common grounds between Si-ism and Catholicism in which we will hopefully uncover the roots that remain deeply entangled and intertwined in the histories and philosophies of Christians and Muslims.

THEO 40848. Notre Dame Football to the Easter Vigil: Religion, Rituals and the Body

(3 -0- 3)

This seminar will be grounded in a theology of incarnation, the body, and sacrament; and will look at the history of Christian theological considerations of such. In order to highlight the particularity of the Christian views and practices, it will also look at the ways in which some other religions have dealt with the same issues (rites, spectacles, religious athletic pageants in the ancient world and in indigenous societies, the evaluation of embodiment, the discipline and efficacy of bodily practice).

THEO 40850. The Theology of Benedict XVI

(3 -0- 3)

The aim of the course to give an overview of the theology of Pope Benedict XVI, as this expressed both in his encyclicals and other recent writings, but also in his theological reflection as Joseph Cardinal Ratzinger. The course has essentially three foci. Roughly equal treatment means that each topic will receive a week of treatment. The first of the three foci concentrates on the Papal encyclicals *God is Love*, *Charity in Truth*, *Saved in Hope*. The second of the three foci looks at the work of the present Pope as instructional and catechetical. Here we will concentrate on *Jesus of Nazareth*, *God's Word*, and *Ten Commandments for the Environment*. The third and last of our three foci concerns the Pope as a public intellectual, specifically as intervening in the public square to provide a sense of what the church

has at stake in the modern world, what it can and must do in terms of dialogue, what it must do in terms of identity and continuing to be a witness. Among the texts that we will read are Truth and Tolerance, The Regensburg Lecture, and Values in a Time of Upheaval. Requirements include involvement in discussion, and either two eight page papers or one 15 page paper.

THEO 40851. Religion and the Visual Arts, Christian and Buddhist

(3 -0- 3)

An exploration of the role of the “icons” or sacred images in Buddhism and Christianity, and of the controversies in both traditions regarding their legitimacy and value. This course has a largely philosophical and/or “theological” agenda. It aims toward a “theory” of the holy image broad and supple enough to be usefully employed in the study of both traditions. It is designed also to provide the opportunity to assess both Buddhist and Christian conceptions of the religious sensorium (i.e., assessments offered by both traditions of the salvific value of “the eye” relative to that of “the ear,” of the “image” versus the “word,” of vision versus discourse, of the aesthetic dimension of spirituality, etc.) It would proceed by way of careful, comparative analysis of a few major examples of Buddhist and Christian art (e.g., Dunhuang murals of the Parinirvana or “Death of the Buddha” and Grunewald’s “Isenheim Altarpiece,” the Shingon “Womb Mandala” and van Eyck’s “Adoration of the Mystic Lamb,” Suger’s Abbey Church of St. Denis and Narāṣ Today or “Great Eastern Temple,” etc.). These examples would be considered against the background of both traditional and modern writings on the relations between religion and the arts (John of Damascus, Asanga, Erwin Panofsky, Jean-Luc Marion, et al.).

THEO 40853. Science, Faith, and Reason

(3 -0- 3) Rasoulipour

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
The twentieth century, and particularly the second half of it, saw not only the increase in findings of natural science, but also the rise of claims that in certain areas scientific findings have supplanted traditional metaphysical reasoning. This amounts to the claim that in the debate between faith and reason the role of reason is taken by science. Faith, if it does not completely atrophy, is faith in science and not faith in God. The latest debates between faith and scientific reason, often of an extremely speculative turn, are new phases to old debates over the perennial question: Is the universe just there, or is there some explanation for its physical character, and for its very existence? In this course we will examine the literature of both classical Christian and classical Islamic theology and philosophy in order to see how these traditions address the relationship between science, faith, and reason. The goal of the course is neither religious dialogue nor a comparison of the two traditions. Instead we will consider what resources both traditions offer intellectuals today who see science, religion and philosophy as partners in the quest to understand human existence and the natural world. No prior knowledge of Islam is needed in order to take this course. This course will be conducted with the help of extracts from original works of medieval and contemporary Christian and Muslim writers on some scientific topics (mathematics, medicine, chemistry, astronomy, physics, etc.) in addition to classical treatments of faith and reason (whether from Justin Martyr’s Dialogue with Trypho, Tertullian’s The Prescriptions against the Heretics, Ghazali’s Deliverance from Error, and The Incoherence of the Philosophers, Aquinas’ Summa Theologica or John Paul II’s Fides et Ratio and the writings of Muslim “neo-Mutazilites”).

THEO 40854. Aquinas and Scotus: Rival Catholic Thinkers

(3 -0- 3) Cross

This course will cover some of the key points in the philosophical and theological thought of Thomas Aquinas and Duns Scotus, focusing on ways in which their systems contrast with each other on many significant issues. Topics to be discussed will include philosophical ones (some or all of the following: universals and individuation; identity and distinction; essence and existence; univocity and analogy; body and soul; cognitive theory; the freedom of the will; the grounding of the moral law; the existence and nature of God) and theological ones (some or all of

the following: Trinity; Christology [hypostatic union and Christocentrism]; grace; sacraments). The texts will be studied in English, when necessary in translations provided by the instructor.

THEO 40855. Spirituality and Discipleship

(3 -0- 3) Cunningham

Jesus calls himself “The Way” but there are many ways to follow the Way. This course will explore the notion of Christian discipleship by examining some classical texts in the Christian tradition including Thomas a Kempis, Saint Teresa of Avila, Saint Francis de Sales as well as some modern authors like Saint Therese of Lisieux, Dietrich Bonhoeffer, Thomas Merton, C.S. Lewis, and Gustavo Gutierrez. The course will be reading intensive with a number of short papers. We will begin with an examination of the New Testament understanding of discipleship by a consideration of the Gospel of Mark.

THEO 40856. Chile: Church and State 1960–2011

(3 -0- 3) Pelton

During the last fifty years the Republic of Chile has undergone rapid changes both in Church and State. From the politically conservative to a Socialist revolution to a military take over, and finally back to democracy. In view of these developments how might one predict the future of this exciting country?

THEO 40857. The Church after Vatican II

(3 -0- 3) Walatka

Prerequisite: THEO 10001 or THEO 10002 or THEO 13183 or THEO 20001 or THEO 20002 or THEO 13002

October 11, 2012 marks the 50th anniversary of the opening of the Vatican II. Almost every aspect of Catholic life and theology has been impacted in some way by the work of this council—even though there are ongoing debates about what exactly this impact should be. This course will introduce students to the event and documents of Vatican II and will explore several lines of development that grow out of the council, including liturgy, leadership and ministry, social justice, and the Church’s relationship with other religions. Optional as part of this course is a fall-break trip to Jerusalem which explores Jewish-Christian relations after Vatican II. This trip is offered as an additional 1-credit course at the Israel-Jerusalem campus (THEO 44857) and has limited spots.

THEO 41202. Christian Tradition II: German Discussion

(1 -0- 1)

This is an optional discussion group conducted in German which is associated with Theo 40244, “Jewish/Christian Dialogue: Germany/Holocaust.”

THEO 41244. Jewish/Christian Dialogue: Germany/Holocaust

(0 -1- 0)

This is an optional discussion group conducted in German which is associated with THEO 40244, “Jewish/Christian Dialogue: Germany/Holocaust.”

THEO 42286. LAC Arabic Discussion for “The Quran and Its Relation to the Bible”

(1 -0- 1)

Students who have completed at least three semesters (or the equivalent) of Arabic are eligible to sign up for an additional single credit discussion section as part of the Languages across the Curriculum (LAC) initiative in the College of Arts and Letters. Choosing this option means that students prepare the reading and a translation of selected portion of the Arabic Qur’anic text (this semester we will work on Sura 2) and attend each week the Qur’an Circle. The LAC section in Arabic associated with this course will be graded on a pass/fail basis and credited to the student’s transcript.

THEO 43001. Proseminar

(1 -0- 1)

Prerequisite: THEO 10001 or THEO 13183 or THEO 20001 or THEO 20002
This course gives an introduction to the study of theology. In particular, it provides: [1] an overview of theology and its disciplines / areas of specialization, [2] bibliographies of primary and secondary sources for theological research, and [3]

information about internships and career opportunities for theology majors. The course meets once each week for 50 minutes throughout the semester. Students are expected to attend every class. Two short papers are required at the end of the semester. Required of all Theology majors.

THEO 43250. Early Christian Latin Texts

(3 -0- 3)

A close reading of Latin Patristic Texts with attention not only to grammar and syntax but also to their historical context and theological significance.

THEO 46001. Directed Readings

(V -0- V)

This course consists of research and writing on an approved subject under the direction of a faculty member.

THEO 46002. Directed Readings

(V -0- V)

This course consists of research and writing on an approved subject under the direction of a faculty member.

THEO 48001. Undergraduate Research

(V -0- V)

Varies with instructor. Variable credit.

THEO 48002. Ph/Th Thesis Writing

(V -0- V)

Under the direction of a faculty member, students define a topic, undertake independent research, and write a thesis. This course is largely for the joint THEO-PHIL major who chooses to write the senior thesis in theology. It may be used in other special circumstances.

THEO 48005. Honors Research

(1 -0- 1)

Students who are accepted to the theology honors program research their topics during fall semester under the direction of a faculty advisor.

THEO 48006. Honors Colloquium

(1 -0- 1)

Students who are accepted to the theology honors program meet as a group in colloquium during fall semester, led by a faculty member.

Catholic Social Tradition

CST 20103. One Jesus and His Many Portraits

(3 -1- 3) Meier

This course explores the many different faith-portraits of Jesus painted by various books of the New Testament: e.g., from suffering servant abandoned by God through high priest interceding with God to Godself. In each case, the course will ask how this particular portrait did or did not have an impact on subsequent Christian faith and what it may say to faith in Christ today. The course will combine a lecture format with discussions, readings, and reflections on the readings.

CST 20206. U.S. Latino Spirituality

(3 -0- 3) Elizondo

U.S. Latino spirituality is one of the youngest spiritualities among the great spiritual traditions of humanity. The course will explore the indigenous, African, and European origins of U.S. Latino spirituality through the devotions, practices, feasts, and rituals of the people.

CST 20501. Globalization and Social Movements

(3 -0- 3)

In what ways does an increasingly global political, economic and cultural system impact our lives? Has globalization led to increased peace and justice, or to new types of conflict and inequality? How has globalization affected national and transnational social movements? This course examines the ways in which changes in the global economic and political system affect politics within countries. First, we will briefly review the broader research literature on the sociology of social movements. Readings will cover a range of different movements, such as those working to protect the environment, advocating for economic justice, addressing social problems such as extreme poverty and public health, and fighting for the rights of women and working people. Then, we will look at how globalization has affected social movements. This course is particularly applicable to students majoring in business, political science, economics, peace studies, anthropology, sociology, and any foreign language. Students planning to study abroad may also be interested.

CST 20502. Poverty and the Bishop's Pastoral Letter

(1 -0- 1)

This class is designed to rewrite the poverty section of Chapter 3 in the Bishops' 1986 letter, "Economic Justice for All." There will be hearings with groups of economists, theologians, community activists, et al. The idea is to simulate the process the bishops went through in writing the original document and to update the material in light of changes in the economy over the past 19 years. Each student will prepare a paper (8-10 pages) that rewrites the poverty section.

CST 20503. Catholic Social Tradition, Notre Dame, and Poverty in South Bend

(1 -0- 1)

Catholic social teaching highlights the problems of poverty and the gap between rich and poor. This course will invite speakers from both the Notre Dame and South bend communities to address the issue of the wealth of Notre Dame and the poverty present in South Bend. What is the relationship between the two communities and their relative wealth or poverty?

CST 20505. Markets and Morals

(1 -0- 1)

This class is designed to investigate questions such as: Do markets need ethical standards? Do markets make us moral? Should a market for transplant organs be allowed? What should we think about sweatshops?

CST 20602. Medical Ethics

(3 -0- 3) Solomon

Corequisite: PHIL 22602

An exploration from the point of view of ethical theory of a number of ethical problems in contemporary biomedicine. Topics discussed will include euthanasia,

abortion, the allocation of scarce medical resources, truth-telling in the doctor-patient relationship, the right to medical care and informed consent, and human experimentation.

CST 20605. Introduction to Catholic Moral Theology

(3 -0- 3)

This course will be structured into three sections, addressing respectively, biblical foundations, fundamental topics, and selected contemporary ethical questions. The biblical section of the course will study some of the key ethical perspectives and teachings of the Scriptures, primarily the Gospels and the Pauline letters. This section will be followed by an introduction to several fundamental topics in moral theology including (1) the theology of grace; (2) the orientation of ethics toward the achievement of happiness; (3) the development of the moral and theological virtues as capacities that enable us to act well; (4) the relation between moral truth and authentic human freedom; (5) the natural law, and (6) the stages and analysis of moral action. The third section of the course will consider some contemporary ethical questions in the context of this biblical and systematic framework. The course will draw primarily upon the classical Catholic tradition, as represented especially by St. Thomas Aquinas. We will also read selected sections of recent encyclical letters by Pope John Paul II including his *Veritatis Splendor (On the Splendor of the Truth)*, *Evangelium Vitae (The Gospel of Life)* and *Fides et Ratio (On Faith and Reason)*. Students will be expected to write a summary of a short reading for each class, write one five-page paper for each of the first two sections of the course, write a final 10-page paper applying what has been studied to a particular ethical question, and present a summary of this paper to the class.

CST 20619. Rich, Poor, and War

(3 -0- 3) Whitmore

This course examines the interrelationships between economic injustice and violence. It begins by investigating the gap between rich and poor both in the U.S. and worldwide. We also look at the history of Christian thought on wealth and poverty. We then address the ways in which economic disparity intersects with the problem of violence in both domestic (violence against women) and political realms (war and revolution). Next, we canvass Christian thought on the use of violence. This raises the question of whether Christianity itself contributes more to violence or to peace. Finally, we pose the question of whether forgiveness for violence is advisable or feasible.

CST 20625. Discipleship: Loving Action

(3 -0- 3) Pfeil

This course is for students returning from summer service internships or other service experiences who desire an extended opportunity for reflection and analysis. Some of the major themes to be discussed are: Christian compassion, discipleship, and Catholic social teaching. The course culminates with a comprehensive research project on a theological question or issue that emerges from the summer and/or other service experiences and is explored with other academic disciplines. More information about the course format, the experiential learning method and the process of evaluation is explained in the Learning Agreement and Application, available at the Center for Social Concerns.

CST 20642. War, Peace, and Conscience

(3 -0- 3)

This course examines ancient, medieval, and modern understandings of the ethics of war primarily, but not exclusively, within Christian tradition. It comes in three parts. First, it surveys the emergence and development of the morality of war from ancient times (Jewish, Christian, and classical), through the medieval period (church canonists, Aquinas, the scholastics), and into the modern period (Grotius and later sources of international law). Second, it examines the nature of modern warfare by means of historical illustrations, including the Civil War, the so-called Indian Wars, World War I, World War II, the Vietnam War, and the Gulf War. Third, it takes up several cases with the aim of exploring the tension between traditional conceptions of just war theory and the practice of modern warfare, focusing on issues involved in the use of weapons of mass destruction, the “fog of war,” wars of revolution, ethnic and religious conflict, and the continuing “war on terrorism.”

Texts include: Roland Bainton, *Christian Attitudes Toward War and Peace*; Erich Maria Remarque, *All Quiet on the Western Front*; John Hersey, *Hiroshima*; Olson and Roberts, *My Lai: A Brief History with Documents*; plus writings on the attacks of September 11. Requirements include a take-home test, several short papers, and a final exam.

CST 20643. The Askesis of Nonviolence

(3 -0- 3) Pfeil

This course will explore the theology and practice of nonviolence as a form of askesis, or spiritual discipline. The material will include readings from Scripture, the early Christian tradition, and Catholic social teaching. Religious sources outside the Christian tradition will include Gandhi, Thich Nhat Hanh, and Badshah Khan. This course will use the method of community-based learning and will require 20 hours of service at particular sites in the South Bend area.

CST 20654. Christian Ethics and Immigration

(3 -0- 3)

This course takes up the themes of welcoming the stranger and loving the neighbor to introduce students to the Christian tradition and its sources for ethical reflection: Scripture, tradition and experience. We will rely on immigration to the United States from Mexico as the primary though by no means exclusive test case to explore the theoretical and practical implications of our inquiry. The course's textbooks are the Bible and *Christians at the Border: Immigration, the Church, and the Bible* (2008) by M. Daniel Carroll. Students will also be required to read online resources, including the *Compendium of the Social Doctrine of the Church* (2004) and other church teachings. In four of our classes we will participate, along with students from universities across the U.S. in an e-study abroad session on migration through Catholic Relief Service's Global Solidarity Network. The final course grade is based on class participation, participation in the e-study abroad activities, two quizzes, a midterm exam, a final exam, and a case analysis and presentation.

CST 20828. Christianity and World Religions

(3 -0- 3) Malkovsky

The purpose of this course is to introduce the student to the basic teachings and spiritualities of Hinduism, Buddhism, and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate Mystery, the overcoming of suffering, etc. We will also examine some traditional and contemporary Catholic and Protestant approaches to religious pluralism. Our own search to know how the truth and experience of other faiths is related to Christian faith will be guided by the insights of important Catholic contemplatives who have entered deeply in the spirituality of other traditions. By course's end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. Requirements: short papers, midterm exam, and final exam.

CST 20830. Reg. Islamic Challenge to Christianity

(3 -0- 3)

While many Christians have described Islam as a Christian heresy, many Muslims consider Christianity to be an Islamic heresy. Jesus, they maintain, was a Muslim prophet. Like Adam and Abraham before him, like Muhammad after him, he was sent to preach Islam. In this view Islam is the natural religion—eternal, universal, and unchanging. Other religions, including Christianity, arose only when people went astray. Therefore Muslims have long challenged the legitimacy of Christian doctrines that differ from Islam, including the Trinity, the incarnation, the cross, the new covenant and the church. In this course we will examine Islamic writings, from the Qur'an to contemporary texts, in which these doctrines are challenged. We will then examine the history of Christian responses to these challenges and consider, as theologians, how Christians might approach them today.

CST 20835. The Church in the World

(3 -1- 3)

This course explores the nature and mission of the church with particular attention to how these are shaped by its engagement with the world. It looks at the church's

on-going efforts to proclaim and preserve the good news of Jesus Christ while communicating it effectively in an ever-changing and increasingly diverse world. To this end, the class is divided into three units: Unit One surveys significant historical events which have helped form the Christian community's identity and the way it conveys its message, Unit Two studies the documents of Vatican II as a recent and essential expression of the church's mission and self-understanding and Unit Three examines the church's position on several contemporary issues such as interreligious dialogue, economic justice, birth control and scientific/technological developments as a way of considering current efforts to proclaim the gospel and speak meaningfully to a contemporary audience. This class includes weekly response papers, two tests, a final exam and a class presentation or paper.

CST 23450. Labor Colloquium: Labor and the Dignity of Work
(1 -0- 1)

This colloquia will examine the understanding of the role of labor in the Catholic Social Tradition. Areas explored will include the history of labor in the U.S., the development of Catholic social teaching documents on labor, and the policies and economic practices developed in regard to labor. Labor leaders from the community will also present on the strengths and weaknesses of labor today. Students will be required to present an oral history on the role of labor in northern Indiana.

CST 23451. Sustainability Through the Catholic Social Tradition
(1 -0- 1)

This one-credit colloquia will examine the understanding of sustainability and the care of creation in the Catholic Social Tradition. There will be an examination of how we fulfill God's call to practice sustainability in an age when we have the capacity to alter creation significantly. This course will also discuss sustainability in a way that respects and protects God's creation, and provides for the common good, as well as for economic and social progress based on justice. Areas explored will include the practice of sustainability on campus, in the community, and in the developing world. Leaders in sustainability practices will be invited as guest lecturers. Students will be required to research and present a project that would assist with increasing sustainability.

CST 23453. Catholic Social Tradition and East Africa
(1 -0- 1) Whitmore

The Great Lakes Region of East Africa—Uganda, Kenya, Tanzania, Rwanda, Burundi, and the Democratic Republic of Congo—has been a site of both armed conflict and extreme poverty as well as post-conflict reconciliation and economic development. The aim of this course is to investigate and assess these elements of life in East Africa in light of Catholic social teaching.

CST 23454. Interfaith Perspectives of Justice
(1 -0- 1) Purcell

This one-credit colloquia will examine different faith traditions understanding of justice in comparison to the Catholic Social Tradition. We will explore the Abrahamic faiths, Judaism, Christianity and Islam's views of the common good and perspectives on love of God and neighbor, dealing with the poor and stewardship of God's creation. An experiential component of visiting other houses of worship will be included as part of this session, as well as guest lecturers. Students will be required to interview a person of non-Catholic faith, preferably non-Christian, and present on how their perspective compares and contrasts with Catholic Social Tradition.

CST 30164. Catholics in America
(3 -0- 3)

Since 1850 Roman Catholics have constituted the single largest religious denomination in the United States. This course explores what the presence of Catholics has meant for the American experience, focusing on themes of church/state separation, religion and politics, education, and social reform. We will also examine how the American context has transformed the practice of Catholicism, with attention to ethnicity, gender, region, race and class as variables that have shaped the American Catholic experience. Assigned readings range from excerpts of anti-Catholic publications to first-hand accounts written by American Catholics from the colonial period to the present. In addition we will study the representation of

Catholics in American film, themes of Catholic fiction, material culture relating to Catholic devotional life and the sacraments, and the shifting position of American Catholics in the universal Roman Catholic Church.

CST 30203. On War
(3 -0- 3)

This course is about the causes and conduct of war. As regards causes, the focus is on evaluating the strengths and weaknesses of the most prominent explanations for the outbreak of major war, including balance of power, regime type (democracy/autocracy), civil/military relations, and the personality traits of individual leaders. As regards conduct, the emphasis is on considering the effect of broad political, social, and economic factors (nationalism, democratization, industrialization, military professionalization) on how wars are and have been fought. Particular historical emphasis is placed on the causes and conduct of great power wars (especially the two World Wars), although other wars will be discussed.

CST 30241. NGOs in International Relations
(3 -0- 3)

Examines the role of non-governmental organizations in world affairs.

CST 30266. Political Economy of Globalization
(3 -0- 3)

Addresses the dynamics of the phenomenon of globalization.

CST 30505. Social Entrepreneurship
(3 -0- 3) Paulsen

Social Entrepreneurship (formerly MicroVenturing I) explores the innovative concepts, practices and strategies associated with building, sustaining, and replicating social impact organizations in less developed countries (LDCs) and here in the United States. Many dynamic organizations are aspiring to a "double" or "triple bottom line"—beneficial human impact, environmental sustainability, and profitability. This course exposes students to a new and growing trend in leadership, venture creation, product design, and service delivery which uses the basic entrepreneurial template to transform the landscape of both for-profit and not-for-profit ventures. In addition, students will analyze various social enterprise business models, including microfinance, microenterprise development, bottom of the pyramid, etc., and will devise strategies and tactics to improve the efficacy of these ventures, as well as engage in research seeking to advance the field of social enterprise at Notre Dame.

CST 30654. Catholicism and Politics
(3 -0- 3)

This course poses the question, both simple and complex: How ought Catholics to think about the political order and political issues within it? The first part of the course will survey major responses to this question drawn from Church history: the early church, the medieval church, and the modern church. The second part applies these models to contemporary issues ranging among war, intervention, globalization, abortion, the death penalty, religious freedom, gender issues, and economic development. The course culminates in "Vatican III," where teams of students, representing church factions, gather to discover church teachings on selected controversial political issues.

CST 30672. Religion and Social Life
(3 -0- 3) Christiano

How society influences religion and how religion influences society.

CST 30675. Religion, Modernity, Secularization and Religious Persistence
(3 -0- 3)

What is the fate of religion in modern societies? Is there something about modernity that is particularly corrosive of religion? Does modernity secularize? What does secularization mean? Where, how, and why does religion survive or thrive in the modern world? What social forces and influences explain different religious outcomes in modernity? Are there "multiple modernities" that have different effects on religious traditions? This course examines the most important works

on religion in modernity to explore these questions so as to better understand outcomes of religious belief and practice in the contemporary world. (This is a sophomore-to-senior level course primarily for Soc majors and others with specifically related interests.)

CST 30718. Catholicism and Politics

(3 -0- 3) Philpott

Catholicism and Politics poses the question, both simple and complex: How ought Catholics to think about the political order and political issues within it? The first part of the course will survey major responses to this question drawn from Church history: the early church, the medieval church, and the modern church. The second part applies these models to contemporary issues ranging among war, intervention, globalization, abortion, the death penalty, religious freedom, gender issues, and economic development. The course culminates in “The Council of Notre Dame,” where teams of students, representing church factions, gather to discover church teachings on selected controversial political issues.

CST 30809. God, Philosophy, and Universities

(3 -0- 3)

Enquiry and teaching in Catholic universities have aimed at understanding how the universe—physical, animal, and human—is ordered to God. One task of philosophy in the Catholic tradition has been to show how the various secular disciplines both contribute to such understanding and remain incomplete without theology. This course examines the question of how this task is to be carried out.

CST 33001. Catholic Social Teaching

(3 -0- 3) Whitmore

This seminar will introduce students to the key texts that make up Catholic social teaching. Students will read one document each week and ask how the document’s ideas relate to our own present lives and planned futures. The course concludes with asking what would our anticipated professional vocations look like if informed by Catholic social teaching. For instance, what would a law firm or health clinic look like if they were formed by ideas such as the common good and the option for the poor.

CST 33100. Dorothy Day and the Catholic Worker Movement

(1 -0- 1)

This course examines the life and writings of Dorothy Day, the co-founder and spiritual guide of the Catholic Worker Movement. The course is seminar in style. Readings will include Day’s autobiography, *The Long Loneliness*, and selections from her other writings.

CST 33301. Sociology, Self, and Catholic Social Tradition

(3 -0- 3)

What’s Catholic about sociology? What’s sociological about Catholic Social Tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

CST 33800. Global Health

(0 -0- 1)

This one-credit course introduces topics and methods in the ethics of global health. We will examine questions such as the relationship between health and persistent poverty (especially in the developing world), the effect of international economic systems on access to care, the role of the environment in health promotion, the impact of political conflict on health and health care delivery, and the effectiveness of transnational partnerships for the promotion of health-related initiatives. Course requirements include conscientious participation and a short paper (7-10 pages).

CST 33933. Summer Service Learning: Hispanic

(3 -0- 3) Shappell

This is a leadership internship for Hispanic studies working 10-2 weeks in a Hispanic/Latino area with organizations dedicated to empowering local communities. Students will complete the requirements of THEO 33931 and work with the Center for Social Concerns to build partnerships with the agencies and people involved.

CST 33936. Summer Service Learning: Confronting Social Issues

(3 -0- 3) Shappell

Immersion: Eight week summer service-learning placements This three-credit course of the Summer Service Learning Program takes place before, during, and after student participation in the eight consecutive week summer immersion sponsored by the Center for Social Concerns and the Notre Dame Alumni Association. The goal of the course is to reflect on the meaning and dynamics of Christian service, compassion and Catholic social teaching through experiential learning, reading, writing and discussions. Writing assignments include journal assignments and a final paper. The course is completed during the first five weeks of fall semester and is graded Satisfactory or Unsatisfactory. Acceptance is based on the student’s application and interview. Contact the Center for Social Concerns for more information.

CST 33937. Rethinking Crime and Justice: Explorations from the Inside Out

(3 -0- 3)

What are the causes and costs of criminal behavior? How are people and communities affected by incarceration? How can we make our criminal justice system as good as it can be for all stakeholders? This course brings together students from both sides of the prison wall to explore issues including why people commit crime, what prisons are for, realities of prison life and reentry, effects of victimization, and restorative justice perspectives. This course follows the Inside-Out model of prison exchange now well established across the United States. It provides an opportunity for “inside students” (at the Westville Correctional Facility) and “outside students” (from Notre Dame) to learn with and from each other and to break new ground together. Notre Dame students travel to Westville each week of the semester for dialogue with students at the facility, who have read the same relevant texts. Together they examine myths and realities related to crime and to punishment, explore the effects of criminal justice policy, and develop ideas for responding more effectively to crime in our communities. Students must apply for this Social Concerns Seminar at the Center for Social Concerns website: <http://socialconcerns.nd.edu/academic/fall/Inside-Out.shtml>

CST 33938. Summer Service Learning: International

(3 -0- 3) Tomas Morgan

This three-credit course provides students the opportunity to encounter international realities through work with poor and marginalized people. Same academic requirements as THEO 33936 with the addition of area/country-specific readings and meetings.

CST 33950. Social Concerns Seminar: Appalachia

(1 -0- 1) Toms Smedley

This seminar involves experiential learning during the semester break. The course is centered on a service-learning immersion in the region of Appalachia and provides preparation for and follow-up to that experience. Students may focus on particular themes (e.g., rural health care, environmental issues) at various sites while learning about the region and rural issues.

CST 33951. Social Concerns Seminar: U.S. Healthcare Policy and Poverty

(1 -0- 1) Toms Smedley

This course centers on a trip to Washington, DC, over fall break, during which time students analyze a significant social issue through contact with various

agencies, government offices, and church organizations. Students participate in preparation and follow-up sessions. Themes (e.g., Educational Reform, Violence in America) vary each year.

CST 33954. Social Concerns Seminar: Leadership Through Solidarity

(1 -0- 1)

The Leadership through Solidarity Seminar seeks to cultivate an understanding of leadership through the lens of Catholic Social Teaching. This seminar includes an experiential learning component as undergraduate students practice relationship building through prayer and service with the South Bend Catholic Worker community. The principles of solidarity and the common good are explored through faith sharing, service learning, and fellowship at the Worker and in the classroom.

CST 33963. Social Concerns Seminar: The Church and Social Action

(1 -0- 1) Purcell

This course centers around a 48-hour immersion (colloquially known as the Urban Plunge) in an urban setting during the winter break (prior to return to campus). The course includes a preparation workshop in the fall semester, readings, two reflection papers, and follow-up educational meetings.

CST 33965. Social Concerns Seminar: Organizing Power and Hope

(1 -0- 1) Mick

This seminar focuses on diverse church, school, leadership, and community-organizing initiatives to improve life in Chicago neighborhoods. Participants will be challenged to examine perceptions of power, service and social action.

CST 33966. Social Concerns Seminar: Border Issues

(1 -0- 1)

The seminar examines immigration and related issues that exist between the United States and Mexico. Participants travel to El Paso, Texas and Ciudad Juarez, Mexico to meet with refugees, Border Patrol, parish organizations, and families who live in “squatter” villages. Participants also analyze and discuss policy issues. The immersion is in partnership with Annunciation House.

CST 33967. Social Concerns Seminar: Migrant Experience

(1 -0- 1) Toms Smedley

This seminar offers a unique immersion into the lives of migrant farm workers in Florida during the spring harvest. Students pick tomatoes in the fields (donating their wages), live with migrant families, assist church and social agencies that serve migrants, and meet with community leaders, never again to take food for granted.

CST 33968. Social Concerns Seminar: L'Arche Community

(1 -0- 1) Toms Smedley

This seminar centers around travel to a L'Arche community (e.g., Toronto, Canada) to share community life with developmentally challenged persons. Students draw from the philosophy of Jean Vanier, the works of theologian Henri Nouwen, and other spiritual writings to augment this participatory learning experience.

CST 33970. Social Concerns Seminar: International Issues

(1 -0- 1) Tomas Morgan

This seminar serves as the required orientation course for all THEO 33938: International Service-learning Program participants. It will provide students with an introduction to international issues in developing countries through the lens of Catholic social tradition, guidance in independent country/area study, preparation and tools for cross-cultural service, opportunities for theological reflection, logistical information necessary for international programs and travel, and general support within the context of a community of colleagues. Other students doing summer internships in developing countries may take the seminar with permission from the instructor.

CST 33993. Ethical Leaders in Service

(1 -0- 1)

This community-based learning course will examine in an interdisciplinary process various modes of ethics and its implementation within community engagement. Among the areas explored will be personal, professional, sexual and global ethics. The students will work with vulnerable populations in the South Bend region through local non-profit partnerships to see how ethical decision making is lived out. Among the evaluation will be journaling and oral presentations on the experiences with the local non-profits.

CST 40001. Catholic Social Teaching

(3 -0- 3) Pfeil

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and appropriation of these documents. We will examine papal, conciliar, and episcopal texts from *Rerum novarum* (1891) up to the present time, identifying operative principles, tracing central theological, ethical, and ecclesial concerns, and locating each document in its proper historical context.

CST 43479. International Migration and Human Rights

(3 -0- 3) Bustamante

This course is an extension from the “minicourse” to a full term offered by Professor Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the “industrial revolution” to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United National Commission of Human Rights on the relationship between migration and human rights are also covered.

CST 43651. Religion, Modernity and Globalization

(3 -0- 3)

What is the role of religion in the modern world? Does modernity have a corrosive influence on religion? Is religion able to persist in the face of modern developments? Can modernity serve as a source of religious renewal or revitalization? Does religion itself contribute to the project of modernity? And how are we to understand the very notions of “modernity” and “secularization,” particularly in the context of globalization? This course examines such questions which have been the focus of important and ongoing debates for the past century. Course readings will examine the treatment of religion in classical social thought; post-war theories of modernization and secularization; recent debates about the “post-secular” age; the thesis of “multiple modernities”; religious responses to modernity and globalization (including Papal encyclicals); and key empirical studies in recent decades that have fueled debates on these topics. The course will also consider how comparative cultural research on globalization contributes to our understanding of the relationship between religion and modernity.

CST 43662. Religion and American Society

(3 -0- 3)

The sociology of religion investigates the influence of the social environment on religion, and the role that religion continues to play in shaping contemporary society. This course will focus on the interaction of religion and contemporary American society through reading and discussion of major sociological works on American evangelicalism, mainline Protestantism, and Catholicism. The course will draw on classic sociological works on the relationship of religion and society to illuminate processes of religious identity formation and the influence of American religion on social behavior.

CST 43719. Self, Society, and Environment

(3 -0- 3) Weigert

This course focuses on social psychological aspects of relationships between humans and the natural environment. Issues include how humans interact with

different environments, symbolic transformations of environments, and competing accounts or claims concerning human-environment relationships. The course is framed in a sociology knowledge perspectives and touches on alternative ways of envisioning and valuing individual and institutional perspectives on human-environment relationships with an eye toward implications for social change.

CST 45100. CST Internship

(0 -3- 3)

This course is set up on an individual basis to provide students the opportunity to reflect upon internship experiences in light of Catholic social teaching. Readings and requirements will be set up on an individual basis.

CST 46100. Directed Readings

(3 -0- 3)

This course will be set up on an individual basis and allows students to pursue individual interests in the Catholic social tradition. Topics might include, for instance, poverty and policy, medical ethics, and so forth.

CST 47100. Special Studies

(0 -3- 3)

Research and writing on an approved subject under the direction of a faculty member.

CST 48001. Catholic Social Tradition Senior Capstone

(3 -0- 3)

This course fulfills the capstone requirement for CST minors. The requirement is a capstone paper relating CST to a topic worked out by the professor and the student.

Religion and Literature

RLT 20205. Staging the Religious: Shakespeare and His Contemporaries

(3 -0- 3)

How do we imagine religious experience? What happens when religion becomes an image, either visually, dramatically, or on the page? In this course, we will approach this question through the plays of William Shakespeare and a handful of his contemporaries, focusing on English Renaissance playwrights whose works “stage” the cultural tensions and competing religious claims of Protestants, Catholics, Jews, Muslims, and atheists, not to mention the supernatural (ghosts, witches, devils, etc.). While we will explore a handful of themes in relation to these works—faith and the will, religious outcasts, and violence and justice—we will spend most of our time asking how the presentation of these religious themes in dramatic form and on the stage affects their meaning. We will do so by way of comparison, both comparing Shakespeare’s plays with the frequently under-read works of Christopher Marlowe and Ben Jonson, as well as setting their images of religious experience against the Bible, Renaissance painting (e.g., Bosch, Bruegel, Caravaggio, and Rembrandt), and contemporary film versions of the plays.

RLT 20206. Religious Imagination in American Literature

(3 -0- 3)

A consideration of the ways in which selected American writers and works are informed and illuminated—formally and in their ideas and preoccupations—by religious traditions, ideas, and concerns. Readings will be selected from the following: Melville, *Billy Budd, Sailor*; or *Moby-Dick*; Stowe, *Uncle Tom’s Cabin*; DeVries, *The Blood of the Lamb*; Hemingway, *The Old Man and the Sea*; Dickinson, *Final Harvest*; Hurston, *Their Eyes Were Watching God*; Steinbeck, *The Grapes of Wrath*; Hawthorne, *Selected Tales and Sketches*; O’Connor, *Everything That Rises Must Converge*; Maclean, *A River Runs Through It*; Eliot, *Four Quartets*; Agee, *A Death in the Family*; Updike, *Pigeon Feathers*; Salinger, *Franny and Zooey*.

RLT 20207. God and Evil in Modern Literature

(3 -0- 3)

A study of selected modern writers whose concern with God and evil, faith and despair, and the reality and significance of suffering animates their writings.

RLT 20208. Music of the Catholic Rite

(3 -0- 3)

A study of the music composed for the Mass, the Office hours (primarily Vespers), and the Requiem Mass from the Middle Ages to the present day. The musical repertoire of each era is examined both from a purely musical standpoint and in light of the reactions of various popes, from John XXIII through Pius X, to the sacred music of their day. Documents on sacred music issued after Vatican II also are examined in relation to postconciliar church music for both the choir and the congregation.

RLT 20210. Philosophical Reflections on Christian Belief

(3 -0- 3)

In this course we will take a careful look at some of the hard philosophical problems raised by several important Christian doctrines. For example, Christians believe that there is exactly one God but three divine Persons (Father, Son, and Holy Spirit). We believe that the second Person of the Trinity became a man, that this man—Jesus of Nazareth—suffered and died for our sins so that we might be restored to fellowship with God, that he was raised from the dead on the third day after his crucifixion, and that all Christians will one day undergo a similar bodily resurrection. Many of us also believe that God is sovereign and that in some sense nothing happens apart from his will, but also that we are free creatures who often do things that run directly contrary to the expressed will of God. Each of these doctrines, however, poses serious philosophical difficulties. The goal of this course is to try to get clear about what exactly these problems are and to explore some of the ways in which philosophers and theologians have attempted to solve them.

RLT 20212. Reading the Qur'an

(3 -0- 3)

To Muslims the Qur'an is the uncreated, eternal Word of God. As Jesus Christ is to Christians, the Qur'an to Muslims is the fullest expression of God's mercy and concern for humanity. It is both the source of complete spiritual wisdom and the constitution for a more perfect society. In the present course we will encounter this revered text with the following goals: To examine the history of the Qur'an's composition and reception; to explore the major themes of the Qur'an; to discuss new theories on and debates over the Qur'an, and, finally, to research the Qur'an's statements on issues of contemporary interest, especially sex, politics and war.

RLT 20214. Pilgrimage

(3 -0- 3)

This course will examine the literary record and lived experience of pilgrimage throughout Christian history by focusing on particular texts, persons and sites. To enrich our understanding of this phenomenon, we will deliberately adopt a variety of perspectives (archeological, sociological, anthropological, liturgical, and art historical). We will necessarily also consider relics and the cult of the saints.

RLT 20216. One Jesus and His Many Portraits

(3 -0- 3)

This course explores the many different faith-portraits of Jesus painted by various books of the New Testament: e.g., from suffering servant abandoned by God through high priest interceding with God to Godself. In each case, the course will ask how this particular portrait did or did not have an impact on subsequent Christian faith and what it may say to faith in Christ today. The course will combine a lecture format with discussions, readings, and reflections on the readings.

RLT 26448. The Greeks and their Gods

(3 -0- 3)

An introduction to the varied and unique religious beliefs and practices of the ancient Greeks. With the aid of anthropological and comparative material on religion from other cultures and societies, the course stresses the intersection of religious conventions with politics, gender, and class in the Greek city-states, and gives special attention to the religious life of the best documented Greek community of all, ancient Athens.

RLT 30222. The Greeks and Their Gods

(3 -0- 3)

An introduction to the varied and unique religious beliefs and practices of the ancient Greeks. With the aid of anthropological and comparative material on religion from other cultures and societies, the course stresses the intersection of religious conventions with politics, gender, and class in the Greek city-states, and gives special attention to the religious life of the best documented Greek community of all, ancient Athens.

RLT 30226. Islam and Modernity

(3 -0- 3)

Islam and its compatibility with modernity is a much-debated issue in the contemporary period. The course will address this timely topic and discuss the most important "hot-button" issues involved: political Islam, democracy, pluralism, rights of women, and secularism. The historical contexts in which these issues have been debated will also receive attention. What internal resources exist within Islamic thought which are being drawn upon by modernists to make a strong case for an essential compatibility between Islam, modernity, and democracy, for example? Is democracy (or Islam, for that matter) a monolithic concept? Students will be expected to actively take part in discussions centered around such questions, the assigned readings, and class lectures. Prior exposure to at least one class on Islam or the Middle East is strongly recommended.

RLT 30228. Russia Confronts the East

(3 -0- 3)

This course will explore the prominent place the Caucasus and the Islamic East hold in the Russian literary imagination. We will take a broad view of the topic, ranging from medieval epic to modern film, from prose to poetry, and from

literature's "greatest hits" to the justly and unjustly forgotten. Throughout, we will seek to understand the uses of the East in Russian culture as a whole and in individual literary works in particular, the role it plays in the formation of a Russian national identity, and the literary resources the East provides to Russian authors. Readings will include works by Pushkin, Lermontov, and Tolstoy, among others, as well as contemporary journalism on the war in Chechnya. Class format will be lecture/discussion, and grades will be based on class participation and regular writing assignments.

RLT 30232. Pagans/Preachers/Passions

(3 -0- 3)

How did Christianity go from Mediterranean cult to world religion? How did the scattered tribes of ancient Europe become a world civilization? This course will examine the growth of Christianity in Late Antiquity and the Middle Ages, concentrating particularly on the men and women who actively pursued its expansion—the missionaries. A combination of lectures and discussions of primary sources will consider the conversion of the Roman Empire, the beginnings of missions on the fringes of the Roman world, the growth of an early medieval missionary movement, and the changes in approaches to non-Christians that came with contact with the Islamic and Mongol worlds and the rise of the papacy and new religious orders in the later Middle Ages.

RLT 30234. Religious and Social Movements in Latin America

(3 -0- 3)

The purpose of this course is to give students an understanding of the role religion has played in Latin American history from the colonial period to the present. We will focus specifically on how religion mediates relations between culturally-distinct peoples during points of encounter and the role it plays in social movements. Religion in Latin America served paradoxically as a means of and justification for "conquest" but also at times as a foundation for "subordinate" people's resistance to domination. We will examine this dynamic as it evolved in successive efforts by outsiders to impose control over people of indigenous and African descent. The course will focus on Spanish proselytization and its results during the colonial period, millenarian movements by people of indigenous and African descent during the nineteenth century, and American Catholic and Protestant mission endeavors and their outcomes in the twentieth century.

RLT 30301. Ancient and Medieval Political Theory

(3 -0- 3)

What is the meaning of justice and why should we care about it? Can politics ever perfectly establish justice? Which forms of government are best for human beings to live under, and why? What is the political relevance of religion and philosophy, family and ethnicity, war and peace, nature and freedom, law and right? What are the qualities of a good citizen and political leader? How should relations among diverse political communities be conducted? This course introduces students to theoretical reflection on these and related questions through the study of some of the great works of ancient and medieval political thought. Readings will include writings of authors such as Thucydides, Plato, Aristotle, Cicero, Augustine, Farabi, Maimonides, and Aquinas.

RLT 40201. Survey: Greek Art/Architecture

(3 -0- 3)

Open to all students. This course analyzes and traces the development of Greek architecture, painting, and sculpture in the historical period from the 8th through 2nd century BC, with some consideration of prehistoric Greek forebears of the Mycenaean Age. Particular emphasis is placed upon monumental art, its historical and cultural contexts, and how it reflects changing attitudes toward the gods, human achievement, and the relationship between the divine and the human.

RLT 40206. Dante

(3 -0- 3)

A study of *The Divine Comedy*, in translation with facing Italian text, with special attention to the history of ideas, the nature of mimesis and allegory, and Dante's sacramental vision of life. We will also consider the influence of Augustine's *Confessions* on Dante's imagination and experience and read selections from the

Fioretti, or *Little Flowers of St. Francis*, and from such later figures as Teresa of Avila as well as modern writers—including T.S. Eliot—for whom Dante constitutes a powerful presence. Readings: *Inferno*, *Purgatorio*, and *Paradiso*, trans. John D. Sinclair (Oxford); St. Augustine, *Confessions*.

RLT 40209. Religion and Social Life

(3 -0- 3)

How does social life influence religion? How does religion influence society? What is religion's social significance in a complex society like ours? Is religion's significance declining? This course will consider these and other questions by exploring the great variety in social expressions of religion. The course examines the social bases of churches, sects, and cults, and it focuses on contemporary religion in the United States.

RLT 40211. Islam: Religion and Culture

(3 -0- 3)

This course will discuss the rise of Islam in the Arabian peninsula in the seventh century of the Common Era and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the life of the Prophet Muhammad, the Qur'an and its role in worship and society, early Islamic history, community formation, law and religious practices, theology, mysticism, and literature. Emphasis will be on the core beliefs and institutions of Islam and on its religious and political thought from its formative period until our own time. The latter part of the course will deal with resurgent trends within Islam, both in their reformist and extremist forms, and contemporary Muslim engagements with modernity. We will also discuss the spread of Islam to the West and increasing attention focused on 'political Islam' or 'Islamism' today. All readings are in English translation.

RLT 40215. Religion, Myth and Magic

(3 -0- 3)

The study of religious beliefs and practices in tribal and peasant societies emphasizing myths, ritual, symbolism, and magic as ways of explaining man's place in the universe. Concepts of purity and pollution, the sacred and the profane, and types of ritual specialists and their relation to social structure will also be examined.

RLT 40217. Dante and Aquinas

(3 -0- 3)

An introduction to the thought of two great medieval figures, Aquinas and Dante.

RLT 40218. Chinese Ways of Thought

(3 -0- 3)

This is a special topics class on religion, philosophy, and the intellectual history of China that introduces the student to the world view and life experience of Chinese as they have been drawn from local traditions, as well as worship and sacrifice to heroes, and the cult of the dead. Through a close reading of primary texts in translation, it also surveys China's grand philosophical legacy of Daoism, Buddhism, "Confucianism," and "Neo-Confucianism" and the later religious accommodation of Christianity and Islam.

RLT 40219. The Romans and Their Gods

(3 -0- 3)

An introduction to the way in which the Romans conceived of, worshipped, and communicated with the myriad gods of their pantheon. The course focuses first on conventional religious rituals and their cultural meaning, and secondly on the success of Roman polytheism in adapting to changing historical and social conditions. Particular attention is paid to the so-called "Mystery Religions," including Christianity, and their relationship to conventional forms of Roman religious behavior.

RLT 40220. Religion and Literature

(3 -0- 3)

An analysis of the reciprocal relations between literature and religion.

RLT 40226. Canon and Literature of Islam

(3 -0- 3)

This course is an introduction to the religious literature of the Arab-Islamic world. Emphasis is on works from the classical and medieval periods of Islam, roughly from the 7th to the 14th century of the common era. We will read selections from the Qur'an (the sacred scripture of Islam), the Hadith literature (sayings attributed to the prophet Muhammed), the biography of the Prophet, commentaries on the Qur'an, historical and philosophical texts, and mystical poetry. All texts will be read in English translation. No prior knowledge of Islam and its civilization is assumed, although helpful.

RLT 40231. Greek Literature and Culture

(2.5 -0- 3)

This course surveys the leading works of ancient Greek literature and examines the cultural contexts in which they were written, received, and transmitted. Students read poetry and prose from many genres, and sample works from a thousand years of extraordinary literary creativity. Among the authors introduced are Homer, Sappho, Aeschylus, Herodotus, Aristophanes, Plato, Theocritus, Plutarch, Lucian, and Longus. Special attention is paid to the formal structures of Greek literary works, the cultural issues they raise, and the lasting value of Greek literature to the modern age. The course prepares students for more advanced work in classical literature and culture. Offered biennially.

RLT 40239. Late Antique and Early Christian Art

(3 -0- 3)

Art in late antiquity has traditionally been characterized as an art in decline, but this judgment is relative, relying on standards formulated for art of other periods. Challenging this assumption, we will examine the distinct and powerful transformations within the visual culture of the period between the third and the eighth centuries A.D. This period witnesses the mutation of the institutions of the Roman Empire into those of the Christian Byzantine Empire. The fundamental change in religious identity that was the basis for this development had a direct impact upon the visual material that survives from this period, such that the eighth century witnesses extensive and elaborate debates about the status and value of religious art in Jewish, Moslem, Byzantine, and Carolingian society. This course will examine the underlying conditions that made images so central to cultural identity at this period.

RLT 40240. Post Holocaust Literature and Theology

(3 -0- 3)

Between 1933 and 1945, the actions of the Nazi government transformed the map of the world politically, aesthetically, and theologically. The ability of the Nazis to gather the cooperation of German citizens and the citizens of other occupied countries to implement their policies against the Jews has raised questions about the claims that European civilization is based on Christianity. How could barbarism flourish in Germany, the land of poets and thinkers? Both Christians and Jews, for common and different reasons, look upon the Holocaust as an abyss, a dark night of the soul. During this semester we shall attempt to move from horrified silence to insight into the possible frameworks for constructing theology "after the abyss." We shall also read literary works that attempt to describe the indescribable. Both literature and theology written after the Holocaust present the paradox of how to comprehend the incomprehensible. No single theologian or faith community has the answer to the problems raised by the Holocaust. No author writing in German, English, Yiddish, French, or Hebrew can describe the horrors and fully transmit the fullness of the atrocity. However, we shall attempt to read, evaluate, and—for some of us—appropriate what theologians, poets, and storytellers have written.

RLT 40241. Between Religion and Literature: Meaning, Vulnerability and the Human Existence

(3 -0- 3)

This course explores the contribution that the coming together of theological and literary reflection can make to our understanding of the nature of meaning. Focusing on the work of Augustine, Aquinas, Dante, Primo Levi, Dostoevsky and

Shakespeare, students will address questions such as ‘What is it we are doing when speaking, reading, using language?’, ‘How do the intellect and the imagination work in relation to literary texts?’, ‘How might all this relate to our ways of thinking about God, human nature, and the relationship between them?’ Such questions will be addressed, in particular, through reflection on how the texts studied invite us to think about the nature of love, forgiveness, vulnerability and creativity.

RLT 40242. Dante II

(3 -0- 3)

Corequisite: ROIT 42116

Dante I and Dante II are an in-depth study, over two semesters, of the entire *Comedy*, in its historical, philosophical and literary context, with selected readings from the minor works (e.g., *Vita Nuova*, *Convivio*, *De vulgari eloquentia*). Dante I focuses on the *Inferno* and the minor works; Dante II focuses on the *Purgatorio* and *Paradiso*. Lectures and discussion in English; the text will be read in the original with facing-page translation. Students may take one semester or both, in either order.

RLT 40248. Religion and Politics in Comparative Perspective

(3 -0- 3)

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America and South America). The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others. Students will write two short reflection papers that demonstrate familiarity with the readings, one during the first half of the semester and one during the second half of the semester. There will be a “short” mid-semester exam and, a final research paper due at the end of the semester.

RLT 40258. Jesus in America

(3 -0- 3)

While many modern Americans share a faith in Jesus as Messiah, Son of God, and Redeemer, they have also portrayed him as everything from a socialist to a Ku Klux Klansman, a polygamist to a black woman, an advertising executive to a Buddha-to-be. In the kaleidoscope of opinions about Jesus we can find the very essence, character, and vitality not only of American Christianity, but of American values and beliefs more broadly speaking. In this course we will study depictions and representations of Jesus in American culture, primarily in the twentieth century, using a variety of texts, including canonical sources, films, novels, visual art, music, scholarly criticism, and popular culture. In addition to readings, film viewings, and a group project, this senior seminar will culminate in a major research paper that will be developed throughout the semester, with extensive comments from other students and the professor.

RLT 40260. Anthropology of Christianity

(3 -0- 3)

This course considers Christianity as a topic of anthropological study. Our goal is to explore the vast diversity of ways Christianity has been articulated and experienced through time and within different cultures, even as we seek out some of the fundamental tenants, themes, and continuities that have characterized its emergence as a global religious system, faith, and practice. Among the variations of Christianity to be studied are first century churches in the Mediterranean region, early churches in Africa and South America, contemporary Catholic and mainline Protestant churches, and the rapidly growing evangelical, charismatic, and Pentecostal movements. In addition to the historical and cross-cultural framework embedded within the course, topics to be considered include: definitions and theories of religion; the question of conversion in Christianity; Christianity, colonialism, and capitalism; religious syncretism and enculturation; gender and women's experience within Christianity; and contemporary Christianity and the twin trends of fundamentalism and secularization. In addition to reading and

participating in our in-class seminar, each student will conduct an ethnographic research project that explores some facet of Christian experience in the Notre Dame area and relates it to broader trends in America and beyond.

RLT 40262. Rome, Christians, and Early Europe

(3 -0- 3)

The course studies continuity and discontinuity in the Mediterranean world during a formative period, the transition from Roman Empire to early medieval European kingdoms. Christianity played a vital role during this transformation, but not the only one. Beginning with a review of Roman institutions, law, culture and religion, we will observe the changes they underwent between c. 150 CE and c.750 CE. At this latter point in time, some people were still thinking of themselves as living within the Roman empire, even though the local potentate was a non-Roman king. Also, Roman law had become Christian law, and Latin was beginning to generate the languages now collectively described as ‘Romance’. On the fringes of Europe, in England and Ireland, meanwhile, missionaries shared with their converts not just Christianity but also the Latin language and Latin literature along with certain Roman concepts of culture and political organization.

RLT 40264. Historical Jesus

(3 -0- 3)

The purpose of this course (a lecture course supplemented by readings and discussion) is to introduce the student to the major historical and exegetical problems involved in the quest for the historical Jesus, especially as pursued today in the so-called Third Quest. The course will move from initial definitions and concepts, through questions of sources and criteria, to consideration of major sayings and deeds of Jesus that may reasonably be considered historical. As time allows, major areas to be treated will include Jesus' relation to John the Baptist, Jesus' proclamation of the kingdom as future yet present, his realization of the kingdom through deeds of power (miracles) and table fellowship, the various levels or circles of followers (the crowds, the disciples, the Twelve), various competing groups (Pharisees, Sadducees), his teaching in relation to the Mosaic Law, the enigma (riddle-speech) of his parables, self-designation, final days, passion, and death. Obviously, it is more desirable that students be allowed time for discussion and questions than that all these topics be covered.

RLT 40266. The Monastic Way in the History of Christianity

(3 -0- 3)

Although often hidden from view, even hidden from view in the church, the monastic way is one of the oldest expressions of Christian devotion to God and neighbor, usually pursued alone communally. The purpose of this course is to explore how Christian men and women have lived this life, from earliest Christianity to the present. To that end, we will read the writings of monks of eastern and western Christianity, paying close attention to monastic voices from antiquity (such as Anthony, Evagrius, Basil, and Benedict), medieval Christianity (e.g. Ailred of Rievaulx, Bernard of Clairvaux, Hildegard of Bingen, as well as Gregory Palamas and Theodore the Studite) up to the present day (Seraphim of Sarov, Thomas Merton, Mother Maria Skobtsova). The primary format of the class will be discussion, aided by the composition of short essays throughout the course.

RLT 40268. Mary in the Christian Tradition

(3 -0- 3)

The good news of Christianity is first of all about Jesus, the risen Lord, and so about us, as his brothers and sisters—about our future, our world, the church we constitute. Still, Christian preaching and art have repeatedly singled out Mary, the mother of Jesus, as an object for contemplation and loving, personal attachment, and Christian theology has repeatedly focused on her as a symbol for speculation and a subject of debate. So Mariology, although in itself a secondary area in Christian thought, is central to any study of Christian religion through the centuries, as well as a rich testing-ground for the implications of Christian belief concerning the person of Christ, the nature and future of the church, the reality of sin and redemption, and the importance of male and female images in our experience of and response to God's love. This course will survey the most important moments

in the development of the church's understanding of and feeling for Mary's role in the mystery of our salvation, beginning with the New Testament and ending with our own time.

RLT 40270. The Book of Genesis

(3 -0- 3)

The book of Genesis is arguably the most commented upon book in the Old Testament. Nearly all of the theological themes most dear to the Bible are the subject of considerable narrative elaboration: Creation, fall, redemption, and election. This course will consider how the various stories in Genesis raise the profoundest of questions and what sort of answers it has provided the theological reader. The focus of the course will be on a close reading of the entirety of the book with the goal of mastering the whole.

RLT 40272. Transfiguration in the Fiction of C.S. Lewis

(3 -0- 3)

This course will look at a theme that runs throughout the works of C.S. Lewis: theosis. Christianity's ultimate end is the deification of a person. In Lewis' fiction there is a strong theme of the transfiguration of matter and the human being, and the moral/ascetical prerequisite leading up to it. This course will first use some secondary theological sources to unpack theosis in light of the Christian doctrines of creation, sin, Trinity, and Christology, and then it will turn to Lewis himself—first to his non-fiction (*Mere Christianity*, *Abolition of Man*, *Weight of Glory* essays), but our main time will be spent in his fiction (*Narnia*, *Screwtape Letters*, *Great Divorce*, *The Pilgrim's Regress*, *Til We Have Faces*).

RLT 40274. Religion and Autobiography

(3 -0- 3)

A course on the spiritual journey of the individual person, drawing on diaries and autobiographies. The first half is on the story of the life in terms of feeling and imagination and insight and choice, and the second half is on the story of the person in terms of the life project, the boundary situations of life, and conversion of the mind, of heart, and of soul. Readings: Saint Augustine, *Confessions*; Martin Buber, *The Way of Zen*; Carolina Maria de Jesus, *Child of the Dark*; John Dunne, *Reasons of the Heart and Search for God in Time and Memory*; Etty Hillesum, *An Interrupted Life*; C.G. Jung, *Memories, Dreams, Reflections*; Rainer Maria Rilke, *Letters To A Young Poet and Reading the Gospel*. Writings: a spiritual diary (not handed in), a term paper, and a midterm take-home and a final take-home exam.

RLT 40278. Phenomenology and Theology

(2.5 -0- 3)

In recent years French phenomenologists have sought to develop new phenomenologies of Christianity. This seminar examines the attempts of three such thinkers: Michel Henry, Jean-Luc Marion, and Jean-Louis Chretien. Can God properly be called "Life?" Of what use is the distinction between the icon and the idol? How far can the model of call and response go in either phenomenology or theology? These are the questions that will mainly interest us.

RLT 40280. Christian Autobiography

(3 -0- 3)

This course examines three major yet very different attempts at Christian autobiography: St. Augustine's *Confessions*, St. Teresa of Avila's *Life*, and John Henry Newman's *Apologia pro vita sua*. Throughout, we will attend to three demands: a close reading of the texts themselves, including their narrative and rhetorical structures; a sense of how the self is imagined by the three writers; and an awareness of the authors' religious contexts.

RLT 40352. Plato Christianus

(3 -0- 3)

This course is designed as an introduction to the philosophy of Plato, the "Platonism" (i.e., Middle Platonism, Neoplatonism) of antiquity, the transformation of Platonism by the Greek and Latin Church Fathers, and the medieval and Renaissance traditions derived from the above. In the first half of the semester, we shall survey the tradition as a whole and deal with a variety of general questions. However, particular attention will be given to two fundamental hermeneutic

criteria employed by the followers of this tradition: namely, "radical selectivity" and "philosophical allegorization." In the second half of the semester, two specific texts which have arguably set the pattern for the Latin and Greek intellectual traditions respectively will be studied in more detail: Augustine's *On the City of God* and the works of pseudo-Dionysius the Areopagite. The course is intended to be accessible to students without knowledge of Latin or Greek. Requirement: one final paper of ca. 20 pp.

RLT 40354. Twelfth-Century Poetry and Philosophy

(3 -0- 3)

This course will aim to provide a close reading of Bernard Silvestris's *Cosmographia* and Alan of Lille's *De Planctu Naturae* against the background of early twelfth-century philosophical thought and grammatical-rhetorical theory. Although it will be initially necessary to cover the philological and historical ground with some care, the course will also attempt to explore in a more speculative and creative manner the question of the kind of relation between philosophy and literature in general that works like the *Cosmographia* and *De Planctu* suggest. As stimuli to such reflections, we shall pause to examine in some detail such textual phenomena as the philosophical allegory, the hermeneutical and metaphysical implications of number, the notion of self-reflexivity, and the negative symbol. The course is intended to be accessible to students without skill in Latin (although the latter would, obviously, be an advantage). Requirement: one final paper of ca. 20 pp.

RLT 40400. Religion and Literature

(3 -0- 3)

Prerequisite: THEO 10001 or THEO 20001 or THEO 24805 or THEO 13183
This course has as its essential context the crisis of authority of discourse in the modern period subsequent to literature gaining independence from Christianity. It focuses specifically on the three main postures literature strikes vis-à-vis confessional forms of Christianity no longer thought to have cultural capital. (1) The antithetical posture. Here Christianity is viewed in exclusively negative terms as repressive, authoritarian, and obscurantist, the very opposite of a true humanism that is literature's vocation. Readings include Voltaire and French existentialism. (2) The retrievalist posture. This posture is fundamentally nostalgic. The loss of Christianity's cultural authority is mourned, and literature is seen as an illegitimate substitute. Readings will include Dostoyevsky, T.S. Eliot, and Flannery O'Connor. (3) The parasitic posture. Here Christianity is criticized but not totally dismissed. Portions of it are savable, especially select elements of the New Testament that emphasize human being's creative capacities. Readings include Coleridge, Shelley, and Emerson.

RLT 40823. Death and Rebirth

(3 -0- 3)

A course on the spiritual journey through the ages: the figure Gilgamesh (the human quest of eternal life), the figure of Socrates (the sense of a deeper life that lives through death), the figure of Jesus (the I and thou with God in Christianity; how this leads to an understanding of death and resurrection, or Incarnation and Trinity), Dante and the spiritual journey (the Christian sense of a life that lives on both sides of death), Kierkegaard and the eternal self (the Christian encounter with the modern sense of selfhood), and a concluding vision (the experience of the presence of God). Requirements include a midterm and a final exam (take-home exams) and a personal essay.

RLT 48500. Religion and Literature Thesis

(3 -0- 3)

RLT concentrates only. The thesis is required for all students taking a minor in religion and literature. Students should approach Prof. Kevin Hart to determine a topic and to find an advisor.

Mendoza College of Business

Accountancy

ACCT 20100. Accountancy I

(3 -0- 3)

An introduction to financial accounting and the accounting profession, with an emphasis on the decision-usefulness of accounting information. The course stresses the relation of accounting to economic activity, organizing information for decision-making, the resource acquisition decision, the uses of cash and noncash resources, the accounting for selling and manufacturing activities, and the information needs of multiple owners, lenders and equity holders. A prerequisite of all accountancy and finance courses. Ordinarily taken by business sophomores in the fall. Also offered to nonbusiness students. Recommended University elective.

ACCT 20200. Accountancy II

(3 -0- 3)

Prerequisite: ACCT 20100 or BAUG 20001

A continuation of the introduction to accounting, with an emphasis on the use of accounting information and analysis for management decision and control. The purpose of the course is the learning of accounting techniques such as budget preparation, cost-volume-profit analysis, variable costing, contribution margins, relevant costing, performance evaluation of business units, transfer pricing and responsibility accounting for the planning, decision making and management control inside an organization. To complete a general knowledge of accounting and its usefulness in financial reporting and control the course also includes an introduction to auditing, attestation, corporate governance and the impact of Sarbanes Oxley Act on business organizations, plus an introduction to U.S. taxation for individuals and corporations.

ACCT 30100. Corporate Financial Reporting

(3 -0- 3)

Prerequisite: ACCT 20200 and FIN 20150

This one-semester course is designed for finance majors and others who wish to develop an advanced knowledge of financial reporting in the corporate environment. The course covers financial statement preparation and analyses with a focus on understanding financial accounting information from a user perspective. Note: finance majors wishing to sit for the CPA exam, pursue a master's degree in accountancy, or take additional upper level accounting courses must enroll in ACCT 30110 and acct 30120 instead.

ACCT 30110. Accounting Measurement and Disclosure I

(3 -0- 3)

Prerequisite: ACCT 20200 and FIN 20150

This course deals with the accounting process used to measure and report economic events. The primary goals are to understand the role financial reporting plays in providing decision useful information, to understand the economics underlying business transactions and to learn the Generally Accepted Accounting Principles (GAAP) that set the reporting and disclosure requirements for those transactions, to evaluate the efficacy of GAAP, and to understand the motivations that lead managers to select one accounting principle over another.

ACCT 30120. Accounting Measurement and Disclosure II

(3 -0- 3)

Prerequisite: ACCT 30110

Continues the study of financial accounting. Topics include accounting for income taxes, leases, stock-based compensation, pension plans, and equity investments including passive investments, equity method investments, and consolidated reporting for majority-owned operations. Contractual and economic issues,

contemporary developments, and financial disclosures are integral parts of each topical discussion. The course is designed to strengthen the technical, communication, and critical thinking skills required to succeed in accounting-related careers.

ACCT 30210. Strategic Cost Management

(3 -0- 3)

Prerequisite: ACCT 20200

This course is the second in a two-course, six-credit-hour sequence that addresses cost and management accounting. The first course, Accounting and Accountancy II (ACCT 20200), introduces managerial concepts and how to use them for classifying and measuring costs, planning, and decision-making. ACCT 30210 builds on and reinforces concepts from the introductory course with applications in accounting and strategic cost management settings. The course is designed to help students become discriminating producers and users of strategic cost accounting information for decision-making. The course demonstrates how cost management analysts can add value to their organizations by providing recommendations to improve profitability of products, services, customers, and value streams. The course also focuses on measuring causes or drivers of costs, and making recommendations about capacity, quality, and time.

ACCT 30280. Decision Processes in Accounting

(3 -0- 3)

Prerequisite: ACCT 20200 and BAMG 20100 and (MGT 20600 or MGT 24600)

This course builds on the statistical and spreadsheet foundation established in prerequisite courses by examining applications in accounting decision-making settings. To further problem-solving skills, Microsoft Excel and other add-ins are used to formulate and solve problems. The course is intended to enhance students' abilities to identify relevant information, to structure decision models, and to find optimal solutions involving uncertainty, risk, and multiple objectives.

ACCT 30750. Ethics in Accounting

(1 -0- 1)

Prerequisite: BAET 20300

This course examines a range of ethical issues associated with the major areas of accounting including auditing, tax and managerial / financial accounting. Furthermore, the ethical theories that underpin decision making in accounting are applied, as well as the dimensions of professionalism in the field. A combination of case analyses, issue paper, exam, and classroom discussion are used to evaluate students' learning.

ACCT 40510. Audit and Assurance Services

(3 -0- 3)

Prerequisite: ACCT 30110

The study of an independent accountant's assurance, attestation, and audit services. Topics include evidence, risk, standards, control, reports, liability, and ethics. This class is intended for seniors.

ACCT 40610. Federal Taxation

(3 -0- 3)

Prerequisite: ACCT 20200

This course is intended to help students acquire a broad perspective of taxation that is relevant for current as well as future tax regimes. The basic federal income tax provisions applicable to individuals, sole proprietorships, corporations, and small business firms are covered in this course, which emphasizes their rationale and significance in business and investment decision making. The course is an integrated blend of tax law, tax planning, tax research, accounting, economics, and finance.

ACCT 40660. Tax Assistance Program

(2 -0- 2)

Prerequisite: ACCT 40610

Preparation of federal and state income tax returns for low-income individuals.

ACCT 40670. Tax Assistance Program

(2 -0- 2)

Prerequisite: ACCT 40660

Preparation of federal and state income tax returns for low-income individuals.

ACCT 40710. Business Law: Property and Negotiable Instruments

(3 -0- 3)

Prerequisite: BALW 20150

This course involves the application of the following legal topics to business situations: organization structures and entity selection, secured transactions and creditor rights, commercial paper/negotiable instruments, real and personal property, real estate, and a general overview of estate and trust law. Highly recommended for students planning to sit for the CPA exam.

ACCT 40790. Accounting and Reporting for Not-for-Profit Organizations

(3 -0- 3)

Prerequisite: ACCT 20100

Fund-accounting concepts for nonprofit institutions: current, capital outlay, debt retirement, trust and agency, enterprise, special assessment funds, general fixed asset and general bond-indebtedness group concepts for governmental units.

The application of the fund accounting concepts as applied to hospitals, colleges, universities, and health care organizations.

ACCT 40810. International Accounting

(3 -0- 3)

Prerequisite: ACCT 20200

The purpose of this course is to introduce the student to accounting issues and tools relevant for a business engaged in international operations. The course is centered on accounting aspects of a U.S. firm doing business abroad. In the process, U.S. accounting and reporting features are compared and contrasted against those of other countries. Topics covered in the course include the study of international financial reporting standards (IFRS) and their comparison to U.S. GAAP, foreign currency transactions and hedging, translation of foreign currency financial statements, taxation of foreign earned income for U.S. expatriates and U.S. corporations, international transfer prices, performance evaluation of foreign business units, international auditing, corporate governance and the U.S. Foreign Corrupt Practices Act.

Business (Nondepartmental)**BA 20202. The Business of Energy**

(3 -0- 3) Frecka

Prerequisite: ENER 20101

The course focuses on issues and challenges faced by business entities comprising the largest and most important segment of our economy—energy. Large, integrated oil and gas producers will be highlighted as well as power generators and transmission companies (primarily regulated oil and gas utilities) and producers of alternative fuels. Energy efficiency and related smart grid initiatives will be explored. The course is a requirement for students choosing the Energy minor.

BA 30310. Junior Research Challenge: Foresight in Business and Society

(3 -0- 3)

Prerequisite: BAMG 20100 and (FIN 20100 or FIN 20150) and (MARK 20100 or MARK 24100) and (MGT 20200 or MGT 24200)

The Foresight course challenges students to engage in the process of identifying and evaluating major issues and trends impacting society in the future and exploring potential business implications that can drive sustainable innovation. The course is designed to facilitate three core thinking skills (critical, systems and creative) within a framework of foresight tools and methods for assessing change, forecasting future scenarios and analyzing implications of future change. Students apply these thinking skills and the foresight framework in a semester-long team project on a topic of their choice to develop insights on emerging opportunities and provide recommendations on how business can positively influence future change and create resilient strategies to enable success in an uncertain future.

BACM 30400. Business Speaking

(1.5 -0- 1.5)

More information is being passed orally in business than ever before. This course can help students improve their speaking skills and overcome their fear of giving a speech. The eight-week course explores the communication process and shows how success in business is related to one's ability to integrate speaking skills with communication strategy and theory. Students will learn to research, write, organize, and present business briefings, informative speeches, and persuasive talks using PowerPoint technology. Students will learn to confront and overcome their fears about speaking in public.

BACM 30420. Business Writing

(1.5 -0- 1.5)

Only a fraction of a manager's communication time and effort is spent on writing, but without question, the most important issues in business end up on paper. This eight-week course will help you to improve your writing, as well as your critical thinking skills. We look at a range of expression issues related to language use, style, tone, grammar, punctuation, and organization. Students will learn to make decisions about document preparation, including format, layout, and design. Students also will develop an understanding of the ethical dimensions of business writing. One cannot become a better writer overnight, but this course can begin the process.

BACM 30490. Persuasion

(1.5 -0- 1.5)

Recognizing the power of persuasion, this course offers students insight into the factors that affect our ability to change the beliefs, attitudes, and behaviors of others. The course explores theories of social influence and guides students in the application of those theories to situations in the modern business environment. Given the power of persuasion, the course especially addresses the importance of ethical persuasion.

BACM 30500. Conflict Management

(1.5 -0- 1.5)

Conflict is a central feature of human behavior on interpersonal, organizational, societal, and international levels. In this course, we explore the psychology of

disputes, the nature and sources of conflict, and the ways in which conflict and human emotion can disrupt or make business organizations dysfunctional. As we examine the nature of conflict, we'll explore behavioral responses and theoretical approaches to it, and offer a wide range of alternatives to working through conflict. This course is highly practical and will offer students an opportunity to apply current research findings as they interactively participate in conflict resolutions.

BACM 30520. Intercultural Communication

(1.5 -0- 1.5) Tuleja

Whether you are operating a global business or working within a highly diverse American workplace, effective intercultural communication skills are critical. Going well beyond a look at customs, you will dig deeply into the concepts and research that help explain why "culture by culture" we function the way we do. We will analyze intercultural case situations to see these theories at work. Along with developing a self awareness of our individual communication behavior, we will explore ways to become more effective intercultural communicators. Along with expanding those skills, we will examine the challenging ethical issues sometimes raised in intercultural communication.

BACM 30620. Corporate Sustainability Reporting

(1.5 -0- 1.5) Collins

Corporate sustainability reports give organizations the opportunity to inform stakeholders about the environmental, social, and economic impacts of their operations. This course introduces students to this important, emerging area of corporate communications. Students will learn how companies analyze and engage internal and external stakeholders for their reports, test the materiality of various issues, and determine indicator items to be monitored and reported. Students will discuss the motivations of various stakeholder groups and how sustainability reports are used by investors, NGOs, and consumers. Students will analyze, evaluate, and provide feedback to select companies on their report.

BAET 20300. Introduction to Business Ethics

(1 -0- 1)

This course is designed to give the student an introduction to the central questions and fundamental character of ethics and morality. The course is focused on a discussion of ethical theories that can help to guide students' problem solving in ethical situations they will encounter in business. Ethical dilemmas faced by business people will be integrated into the class for purposes of discussion and analysis.

BAET 30300. Giving Voice To Values

(1 -0- 1)

Prerequisite: BAET 20300

Organizational behavior and individual decision making are fascinating lenses through which to explore business ethics. The Giving Voice to Values (GVV) course allows students the opportunity to develop a "toolkit" of specific steps toward ethical decision making and personal response to ethical challenges. Building on the BAET 20300 course, the GVV elective explores the "post decision-making" stage. Thus, after one determines the right course of action, how does he/she act on it within a given context? The course will explore case studies, readings, media and "scripts"—through individual and role-playing exercises, students will practice ethical decision making. Students will design their own scenarios and plans to teach ethical action. We will study reasoning and address common rationalizations for poor decision making. The course also includes the study of individuals who've contributed to society—what were their specific choices and actions? What were their paths to leadership? Includes a focus on relevant applications—entry level positions after graduation, job and other experiences students have already encountered or will soon encounter, and other practical contexts.

BAET 30301. Marketing Ethics

(1 -0- 1)

Prerequisite: BAET 20300

This course focuses on issues relating to ethics in marketing such as advertising, selling, distribution channels, product safety, and other emerging themes. It builds upon concepts learned in Introduction to Business Ethics. Students will use cases

to analyze ethical problems in the area of marketing, applying and integrating the knowledge obtained from marketing courses. The course also features readings drawn from the business press that highlight other ethical situations faced by marketing managers.

BAET 30400. Managing and Millennials: Promise and Purpose

(1 -0- 1) McManus Warnell

Prerequisite: BAET 20300 (may be taken concurrently)

The course will explore opportunities and challenges of engaging millennials, defined as students who have graduated high school since 2000, in the business professions. The course focuses on exploring differences by generational cohort, their impact on organizational culture, and strategies to effectively work within multigenerational cultures, with an emphasis on skill-building for millennials. Topics include perceptions of millennials in business; social media/privacy/the ethics of technology; issues such as the ethics of loyalty – to self, to firm, to profession – and how these conceptions have changed; and effectively working within multigenerational cultures. We will explore our own strengths and opportunities in this context. The course is experiential and discussion-based.

BAET 30510. United Nations Global Compact

(1 -0- 1)

Prerequisite: BAET 20300

In today's interconnected global economy, there is a growing realization that we must restore public trust in business. Integrating environmental, social, and governance issues into corporate management is the overriding purpose of the United Nations Global Compact and its ten principles. This is the heart of the corporate sustainability movement. The objectives of this course are as follows: 1) To introduce the student to the United Nations Global Compact and why its focus on human rights, labor rights, environmental issues, and corruption is so attractive to the many stakeholders of business; 2) To develop the ability to think clearly about how one integrates environmental, social, and governance issues into corporate management; 3) To develop a sensitivity to the moral and ethical values that enable companies to restore public trust in business; 4) To understand how a number of companies are implementing the principles of the Global Compact by examining case studies; 5) To examine and understand the changing role of business in society.

BAET 30512. Religion, Spirituality and Work: A New Synthesis

(1 -0- 1)

Prerequisite: BAET 20300

The idea that people of religious faith ought to bring their religious values into the workplace, and that these values ought to influence the quality of life and important decisions in business, is the premise of this course. Yet what is a good business leader and how does he or she contribute to the common good? How is spirituality rooted in religion and can it be dissociated from it? What does it mean to say that business is a vocation? What is the Christian understanding of work? What are potential areas of tension in the business world for a person consciously living a spirituality of work? These and other questions are the focus of this course.

BAET 30520. Topics in Sustainable Business

(1 -0- 1)

Prerequisite: BAET 20300

The course will provide an introduction to relevant terms and concepts in the areas of social and environmental sustainability. The course will enhance awareness of corporate sustainability and ESG (environment, social and governance) concepts, explore the role of stakeholders in business decisions, and allow students to learn from best practices in these areas, featuring top companies including GE Corporation, PricewaterhouseCoopers, and others. Other relevant initiatives will be included, for example, interacting with the newly-appointed University of Notre Dame Sustainability Director. Concepts to be examined include core sustainability terms such as dematerialization and relocalization, along with a close look at companies who have successfully incorporated such approaches. Frameworks and metrics of sustainability will be a focus of the course to allow an

understanding of the importance of practical application of sustainability goals. The course runs concurrent with the MBA-level course in sustainability; shared speakers and opportunities for cross-cultivation may be possible.

BAET 30530. Ethics and Compliance Programs

(1 -0- 1)

Prerequisite: BAET 20300

1) Develop fundamental knowledge of ethics and compliance programs to facilitate future interaction with such programs, whether as an employee, manager, executive, director, partner (or other principal); auditor or consultant; member of an ethics and compliance function; or shareholder, regulator or other external stakeholder. 2) Complement and enhance ethical awareness developed during BAET20300: Introduction to Business Ethics course, e.g., by gaining exposure to additional “real-world” legal and ethical issues commonly encountered in the corporate setting. (Note that the goal of this course is to build upon, and not duplicate the introductory course.) 3) Develop an understanding of how ethics and compliance programs contribute to the individual, organization and society. In addition to these subject-matter-specific goals, this course also seeks to develop students’ skills in the following more-general areas: critical thinking and problem solving, oral and written communication, and research.

BAET 40300. Business Ethics Field Project

(1 -0- 1)

Prerequisite: BAET 20300

Use the skills of business to make a difference! Share your talents with a local organization! The course operates from the recognition that the business sector offers tremendous potential to impact social issues. Students apply their skills through projects with local agencies, supervisors, and clients by volunteering with a not-for-profit organization of their choice during the 10 weeks of the class. Integration of ethical theory will be discussed as we examine the ethical dimensions of social issues. Case studies will be incorporated; theory informs analysis of the cases and offers an opportunity to consider issues witnessed at volunteer sites, including poverty, discrimination, homelessness, lack of access to societal resources and other issues. Discussion will allow exploration of the role of business in these social challenges. The course allows for macro- (readings, cases and theoretical discussions) and micro- (direct interaction with agency staff and clients) level experience. The class meets weekly for lecture and discussion. Service hours are completed on the student’s own time according to a schedule established with the instructor and site contact. Social/micro enterprise and sustainability projects are options, along with traditional nonprofit projects. If you’re already engaged with volunteer work, you may be able to apply that work to the course!

BAET 40540. The Business of Sustainability

(1.5 -0- 1.5) Glavas

The main goal of the course is to explore how to create extraordinary business value through sustainability and social responsibility. The primary topics covered are 1) the what—current and future trends; 2) the when—conditions under which business value can be created; and 3) the how—understanding how to integrate into strategy, daily practices, and the entire value chain. This course does not go into the why due to time constraints and it is assumed that all attending are interested in the topic. The methodology of the course is highly experiential and interactive. Students will be provided with resources for further learning.

BALW 20150. Business Law: Contracts and Agency

(3 -0- 3)

This course examines the background of the legal process and the judicial system, torts, contracts and the Uniform Commercial Code and agency law. Required for all BA students.

BAMG 20100. Statistics in Business

(3 -0- 3)

Prerequisite: MATH 10260 or MATH 10360 or MATH 10460 or MATH 10560 or MATH 10860

Descriptive and inferential statistical techniques in analysis of data, statistical inference and decision-making. Study includes central tendency, probability, hypothesis testing, analysis of variance, regression and correlation.

BAMG 20150. Statistical Inference in Business

(3 -0- 3)

Prerequisite: ACMS 10145

This course focuses on using data to make sound inferences about a population based on sample data, especially in business contexts. More specifically, students will learn how to make inferences using test statistics and confidence intervals in contexts of multiple groups and/or multiple variables, with multiple regression and related methods heavily emphasized. Throughout the course, issues of sampling variability, research design, causality, and the assumptions and limitations of the methods are discussed. Students will supplement their conceptual understanding of the material using statistics software.

BAMG 20500. Entrepreneurial Insights

(1 -0- 1)

This is an interdisciplinary course in which students are introduced to entrepreneurship through a series of weekly lectures offered by guests with in-depth experience across a broad spectrum of industries. Topics vary, but typically include: innovation, opportunity recognition and evaluation, product design and development, technology commercialization, capitalization and funding, legal issues, intellectual property, sales, marketing, social entrepreneurship, and economic development. All students are welcome to enroll. There are no prerequisites. Grading is based upon attendance, modest reading assignments, and online assessments.

BAMG 30460. International Management

(3 -0- 3)

International business is conducted with and through people from various cultural backgrounds. Cultural differences, if not understood and bridged, can be significant barriers to the implementation and success of a business venture. We’ll learn how to conduct business across borders and cultures by focusing on the cultural, political, economic and legal environments in which multinational corporations (MNCs) operate.

BAMG 30505. Social Entrepreneurship

(3 -0- 3)

Social Entrepreneurship explores the innovative concepts, practices and strategies associated with building, sustaining, and replicating social impact organizations in less developed countries (LDCs) and here in the United States. Many dynamic organizations are aspiring to a double or triple bottom line—beneficial human impact, environmental sustainability, and profitability. This course exposes students to a new and growing trend in leadership, venture creation, product design, and service delivery which uses the basic entrepreneurial template to transform the landscape of both for-profit and not-for-profit ventures. In addition, students will analyze various social enterprise business models, including microfinance, micro-enterprise development, bottom of the pyramid, etc., and will devise strategies and tactics to improve the efficacy of these ventures, as well as engage in research seeking to advance the field of social enterprise at Notre Dame.

BAMG 30506. Microventure Consulting

(3 -0- 3)

Prerequisite: BAMG 30505 or BAUG 30505 or IIPS 30924 or CST 30505
Microventure Consulting melds social and microentrepreneurial theory, techniques and tools with practical application through service learning. The course provides a practicum experience focused on the creation of marketing, financial and/or operational plans, culminating in a strategic analysis and/or business plan.

The course also covers issues relating to community, regional, and international economic development; business modeling, including on-line business models; domestic and international microfinance; and business law.

BAMG 30520. Funding New Ventures

(1.5 -0- 1.5) Moore

Prerequisite: (MGTE 30500 or BAMG 30500) and ACCT 20200 and BAMG 20100 and FIN 20150 and MARK 20100 and MGT 20200 and MGT 20600
Every new venture needs money and other resources to begin operation. The best source of money depends upon the nature of your idea and its stage of development. We'll learn when it is best to go to your family and friends and when it is best to go to banks, angel investors, venture capitalists or other funding groups. Of course, you'll need to know how to position your proposal, how to perform venture valuation and a bit about the theory of entrepreneurial finance. When you finish this course you'll know who to approach to "show you the money" for your deal!

BAMG 30540. Entrepreneurship in Developing Countries

(1.5 -0- 1.5)

A prerequisite for internships in foreign countries, this course provides insight into variations on business launch and operation in different global contexts, and includes discussion of global and national support agencies, market feasibility and cultural issues. Students participate in a practicum in which they provide consultative service to a startup or NGO in a less developed country during the summer months. In addition to broad, general content common to all internships, students also receive personalized briefings on specific country guidelines to facilitate their adjustment.

BAMG 30700. Introduction to Process Analytics

(1.5 -0- 1.5)

Prerequisite: BAMG 20100

Businesses compete based on the efficiency and effectiveness of delivering an experience, service, or good to their customers. This class provides a foundation for evaluating and analyzing business processes in order to make them more efficient and effective. Students will understand the problems and issues confronting operations managers. Furthermore, they will also learn language, concepts, insights, and tools to deal with these issues in order to gain competitive advantage through process analytics. The concepts and tools presented in this class can be applied to the service or manufacturing sector, to for-profit or not-for-profit organizations and all disciplines within a business.

BAMG 30900. Strategic Management

(1.5 -0- 1.5)

Prerequisite: (MGT 20200 or MGT 24200) and (MARK 20100 or MARK 24100) and (FIN 20100 or FIN 24100 or FIN 20150) and BAMG 20100 and MGT 20600

Strategic management deals with the organization, management, and strategic positioning of the firm so as to gain long-term competitive advantage. Up until this time, most of your business education has emphasized a specialized, functional perspective of business situations (e.g., marketing, human resources, accounting, finance, operations management). In this course, we integrate these acquired skills by taking the perspective of a general manager (or, equivalently, a management consultant). General managers are responsible for setting the goals, objectives, and strategies of the organizations they lead as well as the implementation and execution of such plans. To do this, managers must be capable of understanding and utilizing the knowledge from each of the organization's functional areas to develop a cohesive and effective competitive strategy. In addition, they must be able to analyze competitive situations within industries in order to understand the sources of the firm's competitive advantage. In today's business environment, whether you are a new hire, consultant, or the CEO, you must be capable of thinking strategically.

BAMG 40580. Family Business Strategy

(1.5 -0- 1.5)

This course focuses on the unique challenges of family-owned, family-controlled businesses, which graduates may very likely work in or consult to during their career. Learning how successful family businesses survive generation after generation can give a person an edge in consulting, governing or managing in a family-owned business whether or not the business is owned by that person's family. Between 80–90 percent of businesses in the United States and Latin America are family-owned and family-controlled. Over 80 percent of businesses in Europe and Asia remain family-owned and family controlled. It is very likely that an individual may work with or consult to a family-owned, family-controlled business at some time in his or her career. Approximately 67 percent of family-owned businesses do not survive beyond the founding generation under the control of the founding family and about 12 percent make it to the third generation. Leadership succession, estate planning, governance, strategy—all are major concerns for family-owned businesses. Students whose families own businesses will find this course especially useful in preparing them for the opportunities and challenges associated with being an actual or potential shareholder, director or manager in their family's enterprise.

BAUG 20001. Accountancy I

(3 -0- 3)

An introduction to the techniques of accounting and the accounting profession, with an emphasis on the decision-usefulness of accounting information. The course stresses the relation of accounting to economic activity, organizing information for decision making, the resource acquisition decision, the uses of cash and noncash resources, the accounting for selling and manufacturing activities, and the information needs of multiple owners, lenders and equity holders. A prerequisite of all accountancy and finance courses. Recommended University elective.

BAUG 20002. Accountancy II

(3 -0- 3)

Prerequisite: ACCT 20100 or BAUG 20001

A continuation of the introduction to accounting, with an emphasis on the decision-usefulness of accounting information. An analysis of the tools used for evaluation of financial and operating performance. The use of budgets and accounting systems for centralized decision making, decentralized decision making, participative budgeting, monitoring and control, and intrafirm contracts. Introduction to not-for-profit entities, attestation, and taxation.

BAUG 20005. Corporate Financial Management

(3 -0- 3)

Prerequisite: ACCT 20100 or BAUG 20001

The course provides a general introduction to finance principles. Students learn financial goals, valuation theory, risk and return concepts, financial statement analysis, and techniques for managing current and fixed assets and capital structure. Personal investing and financial institutions also are discussed.

BAUG 20500. Entrepreneurial Insights

(1 -0- 1)

Entrepreneurial Insights is an interdisciplinary course in which students are introduced to entrepreneurship through a series of weekly lectures offered by guests with in-depth experience across a broad spectrum of industries. Topics vary, but typically include: innovation, opportunity recognition and evaluation, product design and development, technology commercialization, capitalization and funding, legal issues, intellectual property, sales, marketing, social entrepreneurship, and economic development. All students are welcome to enroll. There are no prerequisites. Grading is based upon attendance, modest reading assignments, and online assessments.

BAUG 25000. Internship I

(1 -0- 1)

Internship credit for undergraduate students in the Mendoza College of Business who have secured an internship that relates directly to their major area of study. Requirements to receive this credit include submitting an application for credit

before the internship begins, then submitting appropriate evaluations immediately following the internship. Per evaluation from the employer, students must complete the internship successfully to receive credit. Credit is granted by permission only and may not be repeated. Note: Credit for BAUG 25000 does not apply towards graduation credits in the Mendoza College of Business.

BAUG 30000. Career Planning Strategies and Tactics

(1 -0- 1)

This course is designed to provide students with the tools to manage their career throughout their working lifetime. It begins with career discernment and clarifying goals, continues with implementing job search strategies and tactics, and finally, outlines the transition from student to young professional. Our research at the Career Center has highlighted the need for Notre Dame students to improve in a number of areas critical to job search success. This course is designed not only to address the planning process necessary to start the job search, but also incorporates specific assistance in such areas as resume writing, interview preparation, interview skills, and other tactics. The course will meet once per week for the entire semester. Students will be evaluated on a satisfactory/unsatisfactory basis.

BAUG 30100. The Global Commons and Planet Earth

(2 -0- 2)

This course is an introduction to the Global Commons; those sets of shared resources upon which we depend for life. This not only includes the sky, oceans, and forests, but also cultural resources such as the Internet, language, and our genetic code. In addition to the private and public sectors, the commons offers ways of co-governance and co-production that support responsible stewardship of the planet. The course will scan the history of the commons, the enclosure movement, where commons have succeeded and where they have not, and examine how the framework of the commons can provide a much needed vision for planetary sustainability. Special features: 1) working in teams to develop in-depth presentations on an aspect of the commons; 2) interaction via teleconference with experts and activists who are working in the area of the global commons

BAUG 30209. Boardroom Insights: A Senior Executive Speaker Series

(1 -0- 1)

Corporate leaders and senior executives reflect on critical issues, concerns and experiences, sharing their insights in a mix of lecture and discussion sessions designed to stimulate ideas and provide an opportunity for dialog. Topics will vary from speaker to speaker, ranging across the spectrum of business to expose students to the opportunities and challenges inherent in today's global business environment. Speakers will select ideas they feel are relevant and valuable to students' development as they prepare for a professional career.

BAUG 30210. 10-Years-Hence Lecture Series

(1 -0- 1)

This course will explore issues, ideas, and trends likely to affect business and society over the next decade. A series of lectures on selected days throughout the semester will feature a wide range of experts on economics, science, public policy, futurism and work, natural resources, and more. No examinations or graded assignments. Students must attend all lectures; no unexcused absences.

BAUG 30211. Fraud As Portrayed In Cinema

(1 -0- 1)

This course involves viewing films to explore the many dimensions of fraud including who commits fraud and why, the cost of fraud, and tools of fraud prevention and control. Typical films include *The Crooked E*, *How to Steal \$500 Million*, *The Insider*, *The Informant*, and *The Smartest Guys in the Room*. Assignments include background readings, class discussion, and written critiques.

BAUG 30229. Business Perspectives and Economic Development (2 -0- 2)

Prerequisite: THEO 33931 (may be taken concurrently) or CSC 33931 (may be taken concurrently)

By permission only; contact the Gigot Center for Entrepreneurship to register. Junior or senior standing required. This course is an experiential- and service-learning opportunity offered in partnership with the Center for Social Concerns to spend up to ten weeks in the field with a micro or social enterprise partner, including ACCION USA, the Aspen Institute, or other similar partner. Students will be required to participate in pre-field orientations, engage in readings relevant to the field of social/micro enterprise, document their experiences via reflection and analysis, as well as participate in an academic analysis/presentation following the field work. Course credit does not count toward an individual's graduation requirements.

BAUG 30505. Social Entrepreneurship

(3 -0- 3)

Social Entrepreneurship explores the innovative concepts, practices and strategies associated with building, sustaining, and replicating social impact organizations in less developed countries (LDCs) and here in the United States. Many dynamic organizations are aspiring to a double or triple bottom line—beneficial human impact, environmental sustainability, and profitability. This course exposes students to a new and growing trend in leadership, venture creation, product design, and service delivery which uses the basic entrepreneurial template to transform the landscape of both for-profit and not-for-profit ventures. In addition, students will analyze various social enterprise business models, including microfinance, micro-enterprise development, bottom of the pyramid, etc., and will devise strategies and tactics to improve the efficacy of these ventures, as well as engage in research seeking to advance the field of social enterprise at Notre Dame.

BAUG 30506. Microventure Consulting

(3 -0- 3)

Prerequisite: BAMG 30505 or BAUG 30505 or IIPS 30924 or CST 30505

Microventure Consulting melds social and microentrepreneurial theory, techniques and tools with practical application through service learning. The course provides a practicum experience focused on the creation of marketing, financial and/or operational plans, culminating in a strategic analysis and/or business plan. The course also covers issues relating to community, regional, and international economic development; business modeling, including on-line business models; domestic and international microfinance; and business law.

BAUG 30700. Real Estate Fundamentals

(3 -0- 3)

(Note: This course does not count as a finance major elective.) This course provides an introduction to the principles and practices of real estate. Topics to be covered shall include land use patterns and regulation, real estate finance, valuation, real estate law, brokerage and transfers, urban economics, and real estate development.

BAUG 35500. Internship Practicum

(0 -0- 1)

Internship credit for undergraduate students in the Mendoza College of Business who have secured an internship that relates directly to their major area of study. Requirements to receive this credit include submitting an application for credit before the internship begins, then submitting appropriate evaluations immediately following the internship. Per evaluation from the employer, students must complete the internship successfully to receive credit. Credit is granted by permission only and may not be repeated. Note: Credit for BAUG 35500 does apply towards graduation credits in the Mendoza College of Business. BAUG 35500 Internship Practicum credits do count towards degree-seeking credits in the Mendoza College of Business.

Finance

FIN 20150. Corporate Financial Management

(3 -0- 3)

Prerequisite: ACCT 20100 or BAUG 20001

This course is required for finance majors and a grade of “C” or higher is a prerequisite for continuing in the finance major. The course provides an in-depth and quantitative examination of the principles of financial decision-making. Students learn the concept of value maximization, mathematics of finance, valuation of financial securities, capital investment evaluation, the estimation of required rates of return, and the theory of capital structure.

FIN 30210. Managerial Economics

(3 -0- 3)

Prerequisite: (ECON 10010 or ECON 10011 or ECON 10020 or ECON 20010 or ECON 20011) and BAMG 20100

This course provides a coordination of economic theory and managerial practice. Topics covered include: consumer demand, production functions, cost behavior, output determination, and pricing within various market structures.

FIN 30220. Macroeconomic Analysis

(3 -0- 3)

Prerequisite: (ECON 10010 or ECON 10011 or ECON 10020 or ECON 20010 or ECON 20011) and BAMG 20100

The course addresses topics including the goals of economic policy, national income accounting, theory of income determination and the determination and behavior of economic aggregates, such as total output and the price level.

FIN 30400. Advanced Corporate Finance

(3 -0- 3)

Prerequisite: FIN 20150 and BAMG 20100

This course provides a sound conceptual framework within which a wide variety of corporate financial decisions can be evaluated. The course builds upon and extends the topics in FIN 20150. Topics covered include corporate governance, financial statement analysis, security valuation, capital structure theory, dividend policy, security issuance, and advanced capital budgeting.

FIN 30600. Investment Theory

(3 -0- 3)

Prerequisite: FIN 20150 and BAMG 20100

This is an advanced course covering investment theory, financial markets, and financial instruments. The topics of security analysis, and options and futures are also introduced.

FIN 30700. Real Estate Fundamentals

(3 -0- 3)

Prerequisite: FIN 20150

(*Note: This course does not count as a Finance major elective.*) This is an introduction to the principles and practices of real estate. Topics covered include land use patterns and regulation, real estate finance, valuation, real estate law, brokerage and transfers, urban economics, and real estate development.

FIN 30710. Land Conservation Financing

(1 -0- 1)

This course introduces the land conservation movement in the U.S. and covers the public and private financial mechanisms available to protect environmentally sensitive land and green space. Topics include such alternative public financing mechanisms as traditional tax-subsidized programs, ballot initiatives, and finance programs, and private financing mechanisms such as use of tax crediting programs to attract low cost private capital. Public/private partnerships and sophisticated new development methods such as small growth and conservation development will be discussed.

FIN 30720. Real Estate Development Process

(3 -0- 2)

This is a first course in real estate development, designed to expose students to the practice of development from project inception to completion and subsequent real estate asset management. Course objectives include: 1) developing familiarity with institutional features of the real estate industry (legal and regulatory processes, real estate markets, financial markets, etc.); 2) exploring the practical problems of real estate development; and 3) exposing students to professionals from the development industry. The course will be taught jointly by Notre Dame faculty and real estate practitioners.

FIN 40230. Business Forecasting and Data Mining

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This course develops the tools forecasters use to generate and evaluate forecasting models for both the economy and the firm. In addition to classical forecasting tools, the course also uses data mining and extremely large data sets for prediction. The student will make extensive use of commercial software in applying these tools to real-world situations.

FIN 40320. Management of Financial Institutions

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and ACCT 30100

This course examines the theory and practice of financial firms and the markets in which they operate. It analyzes the role of various financial intermediaries in the transfer of funds between economic units. Management issues and problem-solving techniques are emphasized through the use of case studies.

FIN 40410. Mergers and Acquisitions

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

The objective of this course is to understand various aspects of the corporate acquisition market, including sources of acquisition synergies, valuation and pricing of acquisition targets, takeover defenses, the roles of management incentives and compensation, financing methods, the roles of insider and institutional shareholders, and regulations and taxes.

FIN 40450. Corporate Risk Management

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This course examines why risk management is important for non-financial firms, how they can measure their risk exposures, and alternative approaches for hedging or insuring against identified risks. It provides an in-depth analysis of strategies and financial instruments available for managing commodity price risk, currency risk, interest rate risk, and credit risk.

FIN 40480. Corporate Governance

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This course studies the major issues and problems involved in corporate governance from the point of view of an investor. Emphasis is on evaluating proposed solutions to these problems. Topics such as external political and legal influences, and internal executive compensation and monitoring of executive behavior will be discussed.

FIN 40490. Real Option Analysis

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

This course provides a framework for understanding and evaluating the inherent flexibility in corporate investment opportunities. Students will gain sufficient mastery of the quantitative techniques to be able to apply the real options framework to real-world cases such as evaluating early-stage pharmaceutical R&D investments, multi-stage business roll-out strategies, optimal development of mining or drilling ventures, decisions about when to optimally abandon a failing business, and more.

FIN 40500. International Finance

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

This course is an overview of the issues that corporations and financial institutions face when operating in international markets. It addresses the international financial environment and examines several factors that influence the determination of exchange rates. It defines the foreign exchange risk exposure that corporations may face and examines possible risk management solutions, with a focus on the use of derivative markets such as options, swaps, and futures. Finally, it examines investment related issues within an international setting. Case studies may be used to emphasize issues and problem solving techniques.

FIN 40520. Global Portfolio Management

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This is an advanced investments course that will elaborate on the basic principles discussed in introductory finance courses with a focus on multi-asset portfolio management in a global context. The topics covered will include: Institutional investors and the "Endowment Model", global asset allocation, public equities, hedge funds, emerging markets, private equity, real estate, commodities, fixed income, risk management and portfolio measurement and evaluation. An important feature of this course will be guest lecturers from a number of world renowned investors.

FIN 40610. Security Analysis

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

The objective of this course is to develop a detailed understanding of the tools used by market professionals and corporate managers to analyze the value of companies and stocks. The central theme of the course will be the pricing of equity securities using discounted cash flow and relative valuation techniques. After completing this course, students should be able to identify and interpret the key value drivers for a firm or industry, develop quantitative models for firm and equity valuation based on DCF and multiples, and present firm and equity valuation analyses in a professional manner.

FIN 40620. Trading and Markets

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This course examines the general nature of organized trading by examining how bid and offer prices are determined, how market rules evolve, and what markets should be built. While markets for products and services are discussed, the focus is on the trading of financial securities. Existing centralized equity exchanges face competition from new alternative trading systems made possible by today's information technology. This course also examines the impact and implications of this dynamic.

FIN 40630. Options and Futures

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

This course examines various options and futures markets, providing rigorous training to prepare students for employment with firms where derivatives are either of primary importance (e.g., banks, trading firms) or secondary importance (e.g., corporations having interest rate or foreign exchange exposure that requires hedging.) Topics include fundamental pricing relations and models, trading strategies, and risk management. The emphasis is on financial derivatives for which the underlying assets are stocks, bonds, or foreign exchange.

FIN 40640. Applied Investment Management

(6 -0- 6)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

This course will provide an opportunity for students to blend the theory of investments with the practical demands of investment management. The course objectives include an understanding of the process of establishing a portfolio, gaining knowledge of the mechanics of trading, current theories of market microstructure, principles of equity, bond valuation and technical analysis, and the role of derivatives. Student will actively manage this portfolio throughout the semester.

FIN 40650. Advanced Derivatives and Risk Management

(2 -0- 2)

Prerequisite: FIN 40630 (may be taken concurrently) or FIN 44630

This course provides rigorous applied training to prepare students for employment with firms where derivatives are either of primary importance (e.g., banks, trading firms) or secondary importance (e.g., corporations that hedge either interest-rate risk or foreign exchange-rate exposure). Specific topics include swaps, interest-rate forwards and options, advanced derivative strategies, financial risk management techniques, and organizational risk management.

FIN 40660. Fixed Income Investment Strategies

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This course studies the U.S. and global bond markets. The focus is on traditional and evolving bond instruments, including those with embedded options. We will consider bond valuation techniques, the term structure of interest rates and the analysis of bonds with embedded options. Bond portfolio management strategies and performance benchmarks are also studied.

FIN 40670. Advanced Investment Strategies

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

This course introduces students to advanced topics in investment. The building blocks of the course include portfolio theory and factor models, active quantitative investment strategies based on time-series and cross-sectional return predictability, market frictions (transaction costs, liquidity, short-sale constraints, tax, etc.) and major institutional players. Special topics change from one year to another to reflect recent trends and practices in the industry.

FIN 40690. Behavioral Finance

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

This course provides an understanding of the behavioral biases that individuals exhibit and the effects of these biases on financial markets. Standard finance theory assumes that individuals such as investors or financial managers are rational expected utility maximizers. Behavioral finance argues that some investors are not fully rational and arbitrageurs have limits to how aggressively they can trade. A number of stock market anomalies will be presented and analyzed.

FIN 40710. Real Estate Valuation and Investment

(3 -0- 3)

Prerequisite: (ACCT 30100 or (ACCT 30110 and ACCT 30120)) and (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600

The course considers methods of real estate valuation with emphasis on income property valuation and single property investment analysis. Topics will include market comparable and discounted case flow methods of valuation, financial leverage, taxes, corporate real estate investment, performance measures, pro forma construction, and software (Argus); and the role of real estate in mixed asset portfolios. Techniques of market analysis may be considered.

FIN 40720. Real Estate Capital Markets

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

This course analyzes primary and secondary real estate capital markets. Included are fundamental features, investment characteristics, and underwriting of commercial and residential mortgages. The economics and mathematics of alternative loan structures is considered. Additionally, construction debt, sub-debt, alternative lending (land/bridge/hard asset loans), private and public equity markets, and real estate securitization markets are covered. The basic structure and mathematics of private equity funds and joint ventures is addressed.

FIN 40820. Mathematical Methods in Financial Economics

(3 -0- 3)

Prerequisite: (FIN 30210 or FIN 34210 or ECON 30010 or ECON 34010) and (FIN 30220 or FIN 34220 or ECON 30020 or ECON 34020) and FIN 30400 and FIN 30600 and (ACCT 30100 or (ACCT 30110 and ACCT 30120))

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time will be discussed. The pricing of derivative securities in both discrete and continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

FIN 40850. Credit and Liquidity Crisis of 2008: Lessons Learned

(2 -0- 2)

This course will take a close look at the myriad factors that contributed to the collapse of the financial markets in September, 2008 and how various leaders reacted in an attempt to save the global economy and prevent another Great Depression. We will study and critique the key players (Paulson, Bernanke, Cox, Dimon, Fuld, Mack, Blankfein) and entities (Bear Stearns, Lehman, AIG, Morgan Stanley, Goldman Sachs, major U.S. commercial banks, the U.S. Treasury, the Federal Reserve, the SEC, the ratings agencies) involved in the melt-down of the financial markets. This course will focus on who acted ethically and who behaved unethically before and during the crisis. What behaviors contributed to this calamity and how best to "regulate" (legislatively and morally) the financial services industry in the future in order to minimize the possibility of repeating this catastrophe will also be a key topic of this course.

FIN 40860. Topics in Finance

(1.5 -0- 1.5)

This course will consider a variety of current topics in finance.

FIN 46012. Directed Readings in Contemporary Investments

(3 -0- 3)

The purpose of this directed reading course is to provide the student with an appreciation of the professionals and techniques that have shaped the world of investing into the multifaceted industry that it is today. Through both the readings and response papers you should develop an understanding of the investing principles that will prove useful throughout your career in finance.

Management

MGT 20200. Principles of Management

(3 -0- 3)

A study of the management process, including planning, organizing, staffing, directing, and controlling. Emphasis is placed on executive leadership, organizational behavior, and management theory.

MGT 20600. IT Management Applications

(3 -0- 3)

This course will provide an introduction to the world of Information Technology Management. Students will attain a general understanding of opportunities and challenges in IT management. This understanding will be achieved through online research and discussion of IT management issues and business processes as well as hands-on use of common IT application tools. Microsoft Excel will be used to structure and solve general business problems, analyze what-if scenarios and solve complex business optimization problems, while Microsoft Access will be used to introduce students to database concepts and structure. In addition, students will research and use an online website development tool in order to create a personal website. The capstone project for the course will involve working with team members to integrate acquired knowledge of IT applications in order to solve a complex business problem.

MGT 30220. Management Communication

(1.5 -0- 1.5)

A principal challenge for every manager is to determine what sorts of arguments others will find persuasive. Communication is at the heart of what business is about: writing, speaking, and listening are skills that will permit you to succeed. We'll use case studies to examine authentic business problems and we'll offer coaching, feedback, and peer review to develop the skills that executives, customers, employees, shareholders, the press, and the public find so valuable in a professional manager.

MGT 30660. Strategic IT Applications

(1.5 -0- 1.5)

Prerequisite: MGT 20600

While Amazon and Dell used the Internet to create new retailing business models, that same technology was instrumental in destroying the business models of the telephone and music industries. What caused the difference? We'll examine how to use IT for competitive advantage in a digital economy. We'll explore how IT improves problem solving, productivity, quality, customer service, and process reengineering. We'll also examine how to apply current technologies in innovative ways to impact an organization's bottom line.

MGT 40420. Innovation and Design

(3 -0- 3)

Prerequisite: MGT 20200

Innovation is about creating new ideas that have a positive impact. It requires thinking differently about the world around us. We'll discuss the key principles and the innovation processes that lead to breakthroughs and the practices that make them work. We'll learn about design and design thinking in ways that can be used to solve big problems in a human centered way.

MGT 40490. Business Problem Solving

(3 -0- 3)

Prerequisite: MGT 20200 and MGT 20600 and MGT 30220

Just days before Christmas in 1999, Toysrus.com realized that it was not going to be able to fulfill tens of thousands of toy orders that it had promised would arrive before Christmas—even though the inventory was on the shelf. Two days before Christmas, top management decided to issue “We’re Sorry” emails to everyone whose package was not shipped. Is this the business decision you would have made? This class will help develop your “corporate street smarts” to leverage your

creative and problem solving skills. Through hands-on techniques and exercises you'll learn how to ask the right questions, gather the right data, and use it to improve your judgment and make better decisions.

MGT 40700. Project Management

(1.5 -0- 1.5)

Prerequisite: (MGT 20200 and MGT 20600) and BAMG 30700

Whether you become a high-profile real estate developer, an investment banker, or an entrepreneur, in any career you'll need some project management skills to get your job done. Everyone tries to get projects finished on time and under budget, but many critical business projects fail anyway. We'll learn the steps associated with successful project management, examine some optimization techniques, learn how to use the software tools that enhance productivity, and discuss how to avoid the implementation pitfalls that cause good people doing good projects to fail.

MGT 40750. Quantitative Decision Modeling

(1.5 -0- 1.5)

Prerequisite: MGT 20600 and BAMG 20100

Whether it is picking an investment portfolio, moving goods through a supply chain, staffing a customer support center, or deciding how many reservations an airline or hotel should take, business decisions involve substantial quantitative analysis. We'll learn how spreadsheets (using them with powerful add-ins) can help solve these sorts of problems. In particular, we'll learn how the techniques of simulation and optimization can help make a variety of businesses more competitive. Only a basic familiarity with spreadsheets is assumed.

MGTC 30300. Management Competencies

(3 -0- 3)

Prerequisite: MGT 20200 and BAMG 20100

Some people find joy and fulfillment in their work while others find it unpleasant and barely tolerable. While many people merely speculate on the factors that affect our work lives, we'll explore solid evidence concerning the key factors that have been found to influence employee attitudes, motivation, and performance. You'll build awareness of interpersonal dynamics, and gain insights into how to manage the behavior of others more effectively.

MGTC 30450. Human Resource Issues in High-Performance Organizations

(3 -0- 3)

Prerequisite: MGT 20200 and BAMG 20100

Whether you are working for a Fortune 100 company, a dot-com startup, or something in between, it has become increasingly clear that “the people make the place”. We'll learn how organizations acquire, develop, and maintain high-performing employees. We'll examine HR systems from a managerial point of view to help you become informed consumers of practices that affect the quality of life in an organization. This should help you manage your own career and provide useful skills as you progress beyond your initial job placement.

MGTC 30460. International Management

(3 -0- 3)

Prerequisite: MGT 20200

International business is conducted with and through people from various cultural backgrounds. Cultural differences, if not understood and bridged, can be significant barriers to the implementation and success of a business venture. We'll learn how to conduct business across borders and cultures by focusing on the cultural, political, economic and legal environments in which multinational corporations (MNCs) operate.

MGTC 40410. Leadership and Motivation

(3 -0- 3)

Prerequisite: MGT 20200

What is leadership? Which types of leadership are more effective? How do you get entire business units, and the people in them, motivated to do what needs to

be done? Can leadership make a difference? We'll ask and answer these questions while seeking to understand the process by which a person who holds responsibility is able to facilitate unit performance.

MGTE 30500. Introduction to Entrepreneurship

(3 -0- 3)

This course serves both as the foundational course for Entrepreneurship majors, and an overview of entrepreneurship fundamentals for non-business majors. Students are introduced to competing definitions of entrepreneurship, its history and role in free market enterprise as an engine of economic growth, wealth creation, and improvement of the human condition; entrepreneurial personality traits and skill sets, and the mechanics of bringing a new product or service to market, including innovation and ideation, technology “push” and market “pull,” disruptive business models, and the elements of feasibility analyses and venture plans. No prerequisites.

MGTE 30510. Entrepreneurship: Go to Market

(1.5 -0- 1.5)

Prerequisite: MGTE 30500 or MGTE 34500 or BAUG 10000 or BAMG 30500
Alright, now you have an idea and have developed a business plan. What do you do next to start your business? We'll learn the first steps you take that will lead to a successful launch rather than frustration and failure. When you finish the course you'll better understand how to start and grow your business and retain your competitive edge and advantage.

MGTE 30520. Funding New Ventures

(1.5 -0- 1.5)

Prerequisite: MGTE 30500 or MGTE 34500 and BAMG 30500 and BAUG 30500
Every new venture needs money and other resources to begin operation. The best source of money depends upon the nature of your idea and its stage of development. We'll learn when it is best to go to your family and friends and when it is best to go to banks, angel investors, venture capitalists or other funding groups. Of course, you'll need to know how to position your proposal, how to perform venture valuation and a bit about the theory of entrepreneurial finance. When you finish this course you'll know who to approach to “show you the money” for your deal!

MGTE 40590. Entrepreneurship and Business Planning

(3 -0- 3)

Prerequisite: (MGTE 30510 or BAMG 30510) and (MGTE 30520 or BAMG 30520)
This capstone course takes students through the entire business plan preparation process, including innovation and ideation, competitive market analysis, preparation of pro forma financial statements, a complete written business plan, and presentation. Students are strongly encouraged to enter their plans in the annual McCloskey Business Plan Competition. *Prerequisites:* MGTE 30500 and MGTE 30540.

MGTI 30610. Application Development

(3 -0- 3)

Prerequisite: MGT 20600

While most of us use computers as part of our daily lives, very few of us know how the computer programs we use actually work. Using object-oriented event-driven programming, we'll build and use programs that allow the computer to perform functions you design. Your VBA (Visual Basic for Applications) programming skills will help you develop expertise as the go-to person for programming solutions, especially within Excel and other MS Office applications, and will transfer easily to many other programming languages including programming for the Internet.

MGTI 30620. Business Intelligence

(3 -0- 3)

The unprecedented availability of data and information is allowing companies to rely on facts rather than intuition to drive their business decisions. Companies like

Netflix investigate the rental preferences of customers to recommend movie titles, eHarmony uses statistics to determine the factors that make people compatible and UPS analyzes usage data to predict customer turnover. We'll study the tools and techniques these companies and others use to make better and faster decisions, and we'll learn about how methods such as data mining can be used to extract knowledge from data.

MGTI 30630. Systems Analysis and Design

(3 -0- 3)

Prerequisite: MGT 20600

Each day, organizations like Wal-Mart analyze hundreds of millions of transactions to increase efficiency and better serve their customers. We'll use market-leading Oracle Enterprise Database software to store and analyze large datasets just like Wal-Mart does. In addition, you'll serve as an IT consultant and build a real-world application for a client organization. In this role, you'll experience the entire system analysis process, including problem definition & analysis, design processes, testing, and implementation.

MGTI 30640. Networking and Security

(3 -0- 3)

Prerequisite: MGT 20600

Is it possible to make information more accessible and more secure at the same time? Because this is a problem most organizations now face, the Bureau of Labor Statistics recently named Network Systems and Data Communication Analyst as the fastest-growing job for the period ending 2014. We will learn about the technologies used in local and wide area networks, with a strong emphasis on network security. We'll make this come alive by building a small, fully-functional, routed network and complete exercises that will teach you techniques for securing data networks in a modern business environment.

MGTI 40612. Android Application Development

(3 -0- 3)

Prerequisite: MGT 30610 or MGTI 30610

The advent of mobile computing in recent years has transformed the way we communicate, work, and play. Devices like smartphones and tablets not only provide exciting new ways for developers to bring their visions to life, but they have spawned an entirely new ecosystem of application development, publishing, and marketing. As these compact computers increase in processing power and expand their feature sets to include not just touch control but motion sensors, cameras, GPS, and more, opportunities for creative and disruptive application development only increase. Commanding a significant percentage of mobile device adoption and embracing an openness that facilitates learning and discovery, the Android operating system is an ideal platform for exploring this exciting new environment. In this class, you will learn the skills necessary to develop, debug, and publish Android applications: we will start with a crash course in Java, the foundation for all Android development, then dive into the vast possibilities provided by the Android framework and related APIs. The class will culminate in a project where you will create, design, and implement a complete Android app—ready, if you choose, to unleash upon the world.

MGTI 40620. Advanced Topics in IT Management

(1.5 -0- 1.5) Matta

Prerequisite: MGT 30660

This course will introduce students to some of the leading edge topics in IT Management. These will include but not be limited to Data Analytics and Business Intelligence, Enterprise Information Management (ERP, CRM and SCM), Web Channel Solutions, Mobile Computing Business Applications, Virtual Computing, and Privacy & Security. Outside speakers will be used to present real life applications on these topics. Cases will be used to highlight managerial issues, implications and concerns. Students will also be required to research each topic and present their findings to the guests and instructor.

MGTI 40630. Advanced Database Topics

(1.5 -0- 1.5) Miller

Prerequisite: MGTI 30630

This course will include the following advanced topics in database management systems: Entity-relationship modeling of a complex business environment based on close to real-life business environment, from initial business requirements to the business model; exploration of complex existing database and reverse engineering an ER model using state-of-the-art ER diagramming tool; advanced forms of normalization including Boyce Codd Normal Form (BCNF) and de-normalized structures used to improve reporting performance including data warehousing examples; database performance and indexing including both B-tree and bitmap indexes; introduction to triggers and pl/sql programming; user creation and database security including privileges, grants and roles; advanced Web applications including JavaScript libraries and Web services (Google mashups, integration with external services).

MGTI 40660. Building Web Applications

(3 -0- 3)

Prerequisite: MGT 20600

In this class, you will learn both the technologies and the tools you need to build modern and secure Web applications. On the client side, you will learn to layout and style your pages with Cascading Style Sheets (CSS) and HTML. You will learn to add interactivity with JavaScript using the jQuery framework. On the server side, you will learn both Procedural as well as Object Oriented Programming with ColdFusion (CFML) and how to use both SQL and Object Relational Mapping (ORM) to interact with a relational database. You will become familiar with the Model-View-Controller design pattern for architecting your applications. Along the way, you will be using many industry standard tools to build your applications including the Eclipse IDE and Dreamweaver for coding, and Subversion for source control.

Marketing**MARK 20100. Principles of Marketing**

(3 -0- 3)

Prerequisite: ECON 10010 or ECON 10011 or ECON 10015 or ECON 10020 or ECON 13181 or ECON 20010 or ECON 20011 or ECON 20015 or ECON 20020

A study of markets, institutions, and the environment in which business firms operate with attention to the effect these facets, forces, and issues have on the firm's overall marketing strategy.

MARK 30100. Consumer Organizational Buyer Behavior

(3 -0- 3)

Prerequisite: MARK 20100

An investigation of the decision-making process of consumer and organizational buyers. The course considers the social, cultural, psychological, and economic dimensions of behavior as they apply to the acquisition of goods and services.

MARK 30120. Marketing Research

(3 -0- 3)

Prerequisite: MARK 20100

Required for all marketing majors. A study of the application of scientific method to the definition and solution of marketing problems with attention to research design, sampling theory, methods of data collection and the use of statistical techniques in the data analysis.

MARK 30130. Marketing Analytics

(3 -0- 3) Gilbride

Prerequisite: MARK 20100

Marketing is an increasingly analytical profession driven by the availability of data and analytical techniques to improve decision making. This undergraduate course will introduce decision models that rely on financial data, other marketing metrics including web based key performance indicators, as well as statistical analyses. This course seeks to integrate the various analytical techniques taught in the business school within a marketing context. This course is appropriate for individuals considering careers in brand management, product management, retail management, marketing research, or consulting.

MARK 30500. Advertising and Promotion

(3 -0- 3)

Prerequisite: MARK 20100

Increasingly, business firms approach advertising and promotion from an integrated marketing communications perspective which recognizes the importance of coordinating the various promotional mix elements to develop more effective marketing programs. In this course, the roles of advertising, consumer and trade promotions, sponsorships, branded entertainment and viral marketing will be examined within this broader framework. Emphasis will be placed on developing the key concepts and theories of marketing communications as well as the analytic skills needed to apply these concepts to managerial decision making. Although there will be much discussion about communication theory, the primary focus will be on the problems and tasks involved in the management of marketing communications. Ethical and regulatory issues related to unfairness and deception will also be examined.

MARK 30650. Professional Selling in Business to Business Markets

(3 -0- 3)

Prerequisite: MARK 20100

A study of the role of the salesperson and the function of sales management in creating close and productive buyer-seller relationships in the business-to-business domain. Emphases in the course are placed on trends affecting the sales person's role, the effects of the internal and external environment on the selling function, and the value of the salesperson to the firm and society.

MARK 30900. Marketing and Sustainability

(3 -0- 3) Mish

Prerequisite: MARK 20100

This course examines business sustainability from a marketing perspective. Drawing on news media, documentary films, websites, guest speakers, and a variety of written materials, students will investigate a specific industry, compare approaches to influencing consumer behavior, analyze corporate sustainability reports, apply marketing and sustainability concepts to business case scenarios, and develop a personal sustainability philosophy statement. This is a highly interactive seminar-style course involving cross-disciplinary teams; it meets requirements for the MCOB marketing major as well as the ND sustainability minor and science-business major.

MARK 40100. Strategic Marketing

(3 -0- 3)

Prerequisite: MARK 30100 AND MARK 20100 AND MARK 30120 or MARK 34100 or MARK 30650 or MARK 40400 or MARK 43500 or MARK 30400 or MARK 30500 or MARK 43900 or MARK 34600 or MARK 40300 or MARK 46005 or MARK 46602 or MARK 46603

The development and implementation of marketing programs, including determining the marketing mission within the context of environmental factors and organizational resources. Working in teams, students develop comprehensive business plans and compete in a computer-based market simulation.

MARK 40300. International Marketing

(3 -0- 3) Sredl

Prerequisite: MARK 20100

This course addresses the cultural dimensions of the globalization of markets, organizations, and consumer behavior. The objective is to develop managerial skills for success in an international setting. Topics to be covered include management of cross-cultural organizations, cross-cultural consumer behavior, cross-cultural market research, intercultural marketing strategy, and marketing communication across borders. Students will execute a group project directed to a selected region of the world.

MARK 40400. Building Great Brands

(3 -0- 3)

Prerequisite: MARK 20100

A review of the brands making the biggest impact in our lives today and why. Why they are strong, how they got that way and what it takes to keep them there. Why some brands are merely good and why some brands become great. Included too will be the “what if’s”: not only brands that tried and failed but a look at the differences inherent in competing brands within the same industry—some strong, some weak—and the strategic choices that yielded their success (or lack of it). The course will involve case studies and analysis, with guest lectures from some of the country’s top brand stewards. The goal is to give students a solid framework for understanding the thinking brought to bear in virtually every consumer business in America.

MARK 40550. Public Relations

(3 -0- 3)

Prerequisite: MARK 20100

This course will provide students with a thorough understanding of the history, role, functions, techniques, and practices of the multi-dimensional field of public relations. Students will gain an understanding of public relations in corporate, trade, non-profit, education, government, and other organizations; examine and analyze real world public relations cases; learn the research, planning, communication, and evaluation process of public relations; and prepare news releases, advisories, speeches, and other relevant materials.

MARK 40650. Marketing Planning for Growth

(3 -0- 3) Weber

Prerequisite: MARK 20100

The marketing planning process learned in this course can itself serve as a unique and important differentiator for helping your company to capture new business.

The process emphasized and learned in this course will be especially beneficial for anyone who envisions being responsible for top line revenue growth. This is especially relevant for anyone aspiring to positions where career success will be heavily dependent upon one’s proven abilities to bring in profitable new business on a regular basis. Thus, this course will be especially valuable for aspiring high level division, sector, regional or national marketing executives, aspiring chief marketing officers, aspiring partners in consulting, financial, accounting or legal firms, and aspiring entrepreneurs. Success in all of these careers will be largely dependent upon one’s proven ability to bring in substantial, profitable new business on a regular basis as a so-called “rainmaker.” Students in this course will learn proven, sound theoretical, yet practical processes for doing just that.

MARK 41100. Strategic Marketing Lab

(0 -0- 0)

Prerequisite: MARK 30100 AND MARK 30110 AND MARK 30120*Corequisite:* MARK 40100

Lab for MARK 40100. The development and implementation of marketing programs, including determining the marketing mission within the context of environmental factors and organizational resources. Working in teams, students develop comprehensive business plans and compete in a computer-based market simulation.

MARK 43700. Product Innovation

(3 -0- 3)

Prerequisite: MARK 20100

Introduces students to some important activities and perspectives that can enhance innovativeness and improve the ability to influence and forecast the adoption and diffusion of innovations. These include: the application of techniques for understanding user needs; the use of creative problem solving techniques in idea generation; the application of scenario analysis; and the selection of appropriate organizational and marketing strategies and tactics in overcoming resistance to innovation.

MARK 43900. Exploring the Frontiers of Marketing Thought

(3 -0- 3)

These seminars are devoted to selected areas of marketing and related disciplines. Each participant is expected to explore the chosen topic(s) determined by the participants and the teaching staff. Department approval required.

College of Engineering

Aerospace and Mechanical Engineering

AME 20211. Introduction to Aeronautics

(3 -0- 3)

Prerequisite: (MATH 10560 or MATH 10860) and PHYS 10310

Corequisite: AME 20214

An introduction to the fundamental concepts in fluid mechanics, the science of flight, the atmosphere, and airplane aerodynamics. Applications of the principles of mechanics to aircraft flight performance, stability, control, and design. Fall.

AME 20213. Measurements and Data Analysis

(4 -0- 4)

Prerequisite: AME 20211 (may be taken concurrently) or AME 20212 (may be taken concurrently)

Corequisite: AME 21213

Introduction to experimental methods used in aerospace and mechanical engineering, including basic instrumentation, data acquisition, and data analysis techniques. Embedded microprocessors may be used for data acquisition and/or control. Fall and spring.

AME 20214. Introduction to Engineering Computing

(1 -0- 1)

Prerequisite: EG 10112

Introduction to the UNIX operating system and the Fortran programming language with applications to engineering computing. Fall.

AME 20221. Mechanics I

(3 -0- 3)

Prerequisite: (EG 10111 or EG 10112) and ((MATH 10560 or MATH 10860) and PHYS 10310)

Introduction to systems of forces and couples, vector mechanics. Equilibrium of rigid bodies. Internal forces and moments, trusses and beams, distributed loads, and properties of areas. Friction and virtual work. Kinematics and kinetics of particle motion. Systems of particles. Fall.

AME 20222. Mechanics II

(3 -0- 3)

Prerequisite: MATH 20550 and AME 20221 and AME 20214

Introduction to Newtonian dynamics. Kinematics and kinetics (energy, linear, and angular momenta) of particles, systems of particles, and rigid bodies. Spring.

AME 20231. Thermodynamics

(3 -0- 3)

Prerequisite: MATH 20550

Basic concepts of thermodynamics. The First Law of Thermodynamics. Work, heat, properties of substances and state equations. The Second Law of Thermodynamics. Applications to engineering systems. Spring.

AME 20241. Solid Mechanics

(4 -0- 4)

Prerequisite: AME 20221 or CE 20150 or MATH 20550

Corequisite: AME 21241, AME 22241

Introduction to the concepts of stress and strain, material properties, deflections of bars under axial, torsional, and bending loads, statically indeterminate problems, and stress transformations, including related experimental laboratory exercises. Spring.

AME 30314. Differential Equations, Vibrations, and Control I

(3 -0- 3)

Prerequisite: MATH 20580

First of a two-course sequence that introduces methods of differential-equation solution together with common engineering applications in vibration analysis and controls. Includes second-order, linear differential equations, feedback control, single-degree of freedom vibrations, numerical solutions to systems of ordinary differential equations, and partial differential equations. Fall.

AME 30315. Differential Equations, Vibrations, and Control II

(3 -0- 3)

Prerequisite: AME 30314 or AME 34314

Systems of nth-order differential equations, multiple-degree of freedom vibrations, linear feedback, s-plane controls analysis, and frequency response analysis. Spring.

AME 30331. Fluid Mechanics

(3 -0- 3)

Prerequisite: AME 20222 and (AME 20231 or AME 24231) and (MATH 20580 or MATH 20610)

A basic course in fluid mechanics. Topics include: mathematics of fluids, Euler N. S. Bernoulli's equation, control volumes, differential analysis, dimensional analysis and dynamic similarity, aerodynamics, boundary layers, and turbulence. Fall.

AME 30332. Compressible Aerodynamics

(3 -0- 3)

Prerequisite: AME 30031 or AME 30331 or AME 34331 or CE 34330 or AME 30033

An intermediate course of the study of the dynamics and thermodynamics of compressible flow for both internal and external geometries, including boundary layer effects. Applications of compressible flow principles to propulsive nozzles, flight simulation facilities, and supersonic airfoil problems. Spring.

AME 30333. Theoretical and Experimental Aerodynamics

(4 -0- 4)

Prerequisite: AME 20213 and AME 30331

Theoretical and applied aerodynamics, airfoil theory, lifting line theory, boundary layer theory, blade element theory, use and operation of a subsonic wind tunnel for aerodynamic measurements.

AME 30334. Heat Transfer

(3 -0- 3)

Prerequisite: AME 30031 or AME 30331 or CE 34330 or AME 34331 or AME 30033

Corequisite: AME 31334

An introductory course covering three modes of heat transfer; steady and unsteady conduction, elementary boundary layer analysis for laminar and turbulent convection and the basic theory of radiation. Spring.

AME 30341. Aerospace Structures

(3 -0- 3)

Prerequisite: AME 20241

A study of basic principles and methods for structural analysis of lightweight structures with emphasis on aerospace applications. An introduction to load analysis of aircraft, materials, fatigue, stress/deformation analysis of thin-walled structures, and aeroelasticity. Fall.

AME 30361. Computer-Aided Design and Manufacturing

(3 -0- 3)

Introduce the concepts of computer-aided design and manufacturing (CAD/ CAM) using contemporary solid modeling software. Subjects include; feature

based solid, assembly and mechanism design, dimensioning and detailed drawings for documentation, and tool path generation for computer-aided manufacturing. Fall and Spring.

AME 30362. Design Methodology

(3 -0- 3)

Prerequisite: AME 20212 or AME 30361 (may be taken concurrently)

Modeling and analysis of mechanical systems. Automated design decision process, introduction to statistical methods, material engineering, requirements definition, and product specifications. Fall.

AME 30363. Design of Machine Elements

(3 -0- 3)

Prerequisite: AME 20241

Corequisite: AME 32363

Static and fatigue failure theories. Theory, design, and selection of gearing, power transmitting shafts, rolling element bearings, journal bearings, fasteners, springs, brakes, and clutches. Spring.

AME 30381. Orbital and Space Dynamics

(3 -0- 3)

Prerequisite: AME 20222

The one-and two-body problems; geometrical elements and time dependence. Orbital determination. Linear orbits and regularization. Orbital transfer. The n-body problem; various forms of the three-body problem, including the circular restricted case, its "equilibrium" solutions and their stability. Spring.

AME 32341. Aerospace Structures Recitation

(0 -0- 0)

Corequisite: AME 30341

Recitation session for AME 30341, Aerospace Structures

AME 36099. Directed Readings

(V -0- V)

Individual or small group study under the director of a faculty member in an undergraduate subject not currently covered by any University course. As needed.

AME 40423. Mechanisms and Machines

(3 -0- 3)

Prerequisite: AME 20222 and MATH 20580 or MATH 20610

Corequisite: AME 42423

The analysis and synthesis of planar, spherical, and spatial mechanisms. Topics include: vectors, complex numbers, and the analysis of planar mechanisms, design of cams, gear tooth geometry, and the analysis of transmissions, synthesis of planar mechanisms, direction cosine matrices, and the analysis of spherical mechanisms, homogeneous transformations, and the analysis of spatial mechanisms. Fall.

AME 40431. Gas Turbines and Propulsion

(3 -0- 3)

Prerequisite: AME 30331 or CE 34200 or AME 34331

The mechanics and thermodynamics of gas turbines and air-breathing propulsion devices. The mechanics of various space propulsion systems are also presented, including an introduction to rocket propulsion. Fall.

AME 40451. Aerospace Dynamics

(3 -0- 3)

Prerequisite: AME 20222 and AME 30315

Mechanics and equations of motion, aerodynamics forces, airplane motions, longitudinal and lateral. Introduction to autopilot design. Fall.

AME 40461. Flight Mechanics and Introduction to Design

(3 -0- 3)

Prerequisite: AME 20211 and (AME 30331 or CE 34330 or AME 34331)

The fundamentals of flight performance are developed. Primary emphasis will be on examining how configuration design parameters affect aircraft performance. Students are introduced to aircraft preliminary design methodology. Fall.

AME 40462. Aerospace Design

(4 -0- 4)

Prerequisite: AME 40461

Corequisite: AME 41462

Team-design project with application to an aerospace system development. Includes topics in all associated technologies, design methodology, standards, and engineering ethics. Spring.

AME 40463. Senior Design Project

(3 -0- 4)

Corequisite: AME 41463

A course that provides a comprehensive team-oriented, project-based design of a selected mechanical system or process. Projects involve design specification development, engineering design, documentation, and prototype fabrication. Projects are assessed by industrial reviewers. Fall and Spring.

AME 40510. Introduction to Numerical Methods

(3 -0- 3)

Prerequisite: AME 30314

Undergraduate level—interpolation, differentiation, integration, initial value and boundary value problems for ordinary differential equations; solution methods for parabolic, hyperbolic, and elliptic partial differential equations; applications to classical and current research problems in engineering and science.

AME 48491. Undergraduate Research

(V -0- V)

A research project at the undergraduate level under the supervision of a faculty member.

AME 50532. Computational Fluid Dynamics

(3 -0- 3)

Prerequisite: AME 30331 or AME 34331 or AME 30332

An introduction to the fundamentals of computational aerodynamics/fluid mechanics. Numerical techniques are developed and applied to the solution of several practical fluid mechanics and aeronautics problems. Fall.

AME 50535. Energy Systems

(3 -0- 3)

Prerequisite: AME 30331 and AME 30334

this course will cover the mechanical engineering aspects of energy systems. Topics will include the fluid mechanics and heat transfer aspects of pumps, compressors, turbines, heat exchangers, boilers, condensers, as well as alternative energy sources. Fall.

AME 50541. Finite Element Methods for Structural Analysis

(3 -0- 3)

Prerequisite: AME 20241

An introduction to the finite element method with applications to problems in structural analysis. Basics of linear and non-linear finite element formulation and programming, applications to bars, beams, and simple continuum problems, use of commercially available codes with advanced input/output capabilities. Fall.

AME 50542. Engineering Analysis of Manufacturing Processes

(3 -0- 3)

Prerequisite: AME 20241

A senior elective course dealing with the application of engineering analysis to casting, forming, machining and joining processes as well as other advanced manufacturing processes. Fall.

AME 50551. Introduction to Robotics

(3 -0- 3)

Prerequisite: AME 30314 or AME 34314

Kinematics of 2-D and 3-D robots; statics and dynamics; design considerations; actuators; sensors; and control fundamentals. Project assignments are used to demonstrate the fundamentals of robotics. Spring.

AME 50561. Reliability Engineering

(3 -0- 3)

An introduction to fundamental concepts in reliability analysis that includes statistical concepts, data and data distributions, reliability analysis of data, quality concepts including Taguchi methods, analysis of maintained systems, human failure interaction and fault tree analysis. Fall.

AME 50571. Structural Aspects of Biomaterials

(3 -0- 3)

Prerequisite: AME 20241 and (CBE 30361 or CBE 34361)

Structure and mechanical functions of load bearing tissues and their replacements. Natural and synthetic load-bearing biomaterials for clinical applications are reviewed. Biocompatibility and host response to structural implants are examined. Quantitative treatment of biomechanical issues related to design of biomaterial replacements for structural function. Material selection for reconstructive surgery is addressed. Directions in tissue engineering are presented. Spring.

AME 50650. Applied Nonlinear Analysis and Controls

(3 -0- 3)

This is a one semester course that surveys topics from nonlinear analysis with emphasis on applications to controls. Topics include nonlinear phenomena, describing functions, linearization, nonlinear stability, Lyapunov stability, Lyapunov control functions, adaptive control, stability of nonautonomous systems, boundedness, center manifold theory, bifurcations, feedback linearization and hybrid systems. Fall.

AME 50652. Intermediate Controls

(3 -0- 3)

Prerequisite: AME 30315

The application of techniques such as the phase-plane method, Lyapunov method, vector-format method, the z-transform method, and statistical methods to the design of control systems. Fall.

AME 53631. Molecular Thermodynamics

(3 -0- 3)

A study of thermodynamics and applied physical chemistry, using generalized methods to solve chemical engineering problems. Spring.

AME 57560. Baja Design

(3 -0- 3)

The course will involve the design of a Baja off-road vehicle

Chemical and Biomolecular Engineering**CBE 20255. Introduction to Chemical Engineering Analysis**

(3 -0- 3) Kantor

Prerequisite: (MATH 10560 or MATH 10460 or MATH 10860) and (CHEM 10122 or CHEM 10172 or CHEM 10182) and PHYS 10310*Corequisite:* CBE 22255

This is a foundation course in which the students learn to apply the concepts of material and energy balances to problems involving chemical processes, biological systems and environmental phenomena. Within this context, they learn problem-solving techniques and acquire a working knowledge of phase equilibria, physical properties, and computer applications.

CBE 20256. Chemical Engineering Thermodynamics

(4 -0- 4)

Prerequisite: CBE 20255

The course provides an introduction to modern applied thermodynamics, with a focus on aspects relevant to chemical engineers. It begins with a review of the first law energy balance, followed by the development of the second law entropy balance. Thermodynamic constitutive equations for gases and liquids are developed from a molecular-level perspective, followed by applications involving thermodynamic cycles and energy conversion. The second half of the course concerns stability, thermodynamics of mixtures, and phase and chemical equilibrium.

CBE 20258. Computer Methods in Chemical Engineering

(3 -0- 3) Goodrich

Prerequisite: CBE 20255

Algorithms for solving algebraic (e.g., Gaussian Elimination, PLU decomposition, etc.) and differential equations (e.g., Runge-Kutta, Shooting methods) are derived and implemented using Matlab. Statistics and error analysis constitute a significant part of the course.

CBE 20260. Chemical Engineering Thermodynamics I

(3 -0- 3) McCready

The course provides an introduction to modern applied thermodynamics, with a focus on aspects relevant to chemical engineers. It begins with the first law energy balance, followed by the development of the second law entropy balance. Thermodynamic constitutive equations for gases and liquids are developed from a molecular-level perspective, followed by applications involving thermodynamic cycles and energy conversion.

CBE 20290. Career Choices for Engineers

(1 -0- 1) Flynn

A seminar series featuring selected speakers who are employed or consult with high tech business enterprises of both national and global involvement. The presentations and open symposium format will emphasize business ethics, competitive pressures, people skills, and most importantly, career opportunities for engineering graduates.

CBE 22255. Introduction to Chemical Engineering Tutorial

(1 -0- 0)

Corequisite: CBE 20255

Tutorial for Introduction to Chemical Engineering.

CBE 22260. Chemical Engineering Thermodynamics I Tutorial

(0 -0- 0)

Tutorial for Chemical Engineering Thermodynamics I

CBE 30310. Global Sustainability

(3 -0- 3)

This course examines the growing need for addressing sustainability as a parameter in the practice of engineering as well as in related disciplines. The course begins with an introduction of the origin of resources on earth and their fragile connection with life on earth both on the ecology and ultimately on the human

population. The basic laws regulating the flow of energy and materials through ecosystems and the regulation of the distribution and abundance of organisms is reviewed. A model of the interaction between population, resources, and pollution is analyzed based on the World3 model proposed by Meadows, Randers and Meadows (*Limits to Growth*, 1972). The model predictions made in 1972 are compared with results compiled in 2002 (1). The model include analysis of the state of land, soils and food, water, forests, non-renewable resources, energy, and capital. Emphasis is placed in analyzing energy sustainability and assessment of current and potential future energy systems. This includes availability, extraction, conversion, and end-use to meet regional and global energy needs in the 21st century in a sustainable manner. Different renewable and conventional energy technologies will be discussed and their attributes described within a framework that aids the evaluation and analysis of energy technology systems in a global context. The effect of human activity on the environment with emphasis on climate change will be also analyzed. The World3 model will be used to discuss different scenarios of the state of the our planet based on population, industrial output, food, and population as well materials standards of living and human welfare and human footprint. The course closes with a discussion of what we can do as engineers and professionals to insure that growth is consistent with a sustainable future.

CBE 30338. Chemical Process Control

(3 -0- 3) Kantor

While the idealization of chemical processes is that they are operated at steady-state, they are in fact usually dynamic (unsteady state). Process feed compositions may change slightly, ambient conditions may change, pipe leaks may develop, steam pressures may vary, etc. There are any number of such disturbances that may cause the process to deviate from its desired steady-state. In some cases, such deviations may be catastrophic, in other cases a severe loss of product quality may be caused. Thus process control devices are installed that detect deviations from the desired steady-state and attempt to correct them. In this course, students will be introduced to the analysis of chemical process dynamics, and to the design and analysis of process control systems.

CBE 30355. Transport Phenomena I

(3 -0- 3) Leighton

Basic conservation principles of energy, mass, and momentum are used to derive the integral and differential forms of the transport equations. These equations are used to solve fluid flow problems of both fundamental and practical interest.

CBE 30356. Transport Phenomena II

(3 -0- 3) Hill

Corequisite: CBE 32356

Integral and differential transport equations are applied to the solution of heat and mass transfer problems of interest to chemical engineers.

CBE 30357. Biotransport

(3 -0- 3) McCready

This course is an introduction to momentum transport with applications to biological and medical systems. It will serve as a replacement for CBE 30355 for interested students.

CBE 30361. Science of Engineering Materials

(3 -0- 3) McGinn

Prerequisite: CHEM 10114 or CHEM 10116 or CHEM 10118 or CHEM 10121

This is an introductory course that examines the relationship between the structure, processing, and properties of engineering materials. Common engineering materials, including steel, concrete, ceramics, and polymers are discussed. Mechanical, chemical, electrical, and magnetic properties of various materials are examined. The process dependence of microstructural development and defects levels are described.

CBE 30363. Materials Science and Engineering of Polymers

(3 -0- 3) Guo

This course focuses on the principal materials fields that are satisfied by polymeric materials. The topics covered by this course are to provide a polymer science and

engineering background to engineering students, emphasizing the interrelationship between chemistry, microstructure, thermodynamics, properties and performance, as well as engineering applications of a number of advanced polymeric materials. These topics include a general introduction to polymers, basic characteristics of the major classes of polymerization reactions, mechanical and thermal properties of polymers, polymer thermodynamics, techniques for characterizing the chemical and physical properties of polymers, and engineering and processing of polymers in the context of modern, real-world applications.

CBE 30367. Chemical Engineering Thermodynamics II

(3 -0- 3) Brennecke

Prerequisite: CBE 20260

Corequisite: CBE 32367

Principles of phase and chemical equilibria are defined and used in the solution of chemical engineering problems drawn from the traditional process industries, biological systems, materials processing, pharmaceutical manufacturing and other industries.

CBE 30385. Introduction to Bioengineering

(3 -0- 3) Zartman

The fundamental principles of mass, energy, charge and momentum conservation are introduced in the form of algebraic and differential conservation equations.

These are applied to engineering problems drawn from human health and other biological systems.

CBE 31358. Chemical Engineering Laboratory I

(1 -4- 3)

Chemical engineering laboratory courses are comprised of experiments that cover most of the major subject areas of chemical engineering. The rationale for combining all of the topics into two separate courses, as opposed to distributing them into the different lecture courses, is to provide a focused learning experience emphasizing experimental techniques to observe fundamental behavior, understanding of the phenomena in terms of the appropriate theory and experience at technical report writing. Formal and informal oral presentation skills are also an important part of the courses.

CBE 32338. Chemical Process Control Tutorial

(1 -0- 0)

Tutorial for Chemical Process Control.

CBE 32355. Transport Phenomena I Tutorial

(1 -0- 0)

Tutorial for Transport Phenomena I

CBE 32356. Transport Phenomena II Tutorial

(0 -1- 0)

Corequisite: CBE 30356

Tutorial for Transport Phenomena II.

CBE 32367. Chemical Engineering Thermodynamics II Tutorial

(0 -0- 0)

Corequisite: CBE 30367

Tutorial for Chemical Engineering Thermodynamics CBE 30367

CBE 37393. CBE Special Studies—Cambridge

(3 -0- 3)

A surprisingly large number of products manufactured by the chemical and allied industries are in the form of particulate solids. Most chemical engineers will find themselves working with particles at some point in their professional life, and certainly in their domestic setting. Knowledge of particulate behavior is therefore necessary, and arguably a key attribute for those working in or at the boundaries of the discipline, where many of the materials encountered involve particulate phases. These lectures will focus on granular materials (as opposed to colloids) and introduce engineering models for particulate behavior, with the occasional diversion into the underlying physics or chemistry to show where things come

from. The aim of this course includes introducing the physical principles involved in the areas of particulate characterization and testing, interparticle forces, statics and dynamics of dense phase particle operations, and some key particulate manufacturing processes

CBE 40411. Chemical Engineering Undergraduate Seminar

(3 -0- 1) McCready

Discussions of current events from a chemical engineers prospective.

CBE 40435. Electrochemical Energy Conversion and Storage

(3 -0- 3) McGinn

Fuel cells and batteries directly convert chemical energy to direct-current electrical energy via electrochemical reactions. Such electrochemical conversion and storage of energy is an attractive alternative energy option for transportation and stationary applications. This course offers a comprehensive look at the electrochemical nature of energy conversion and storage in fuel cells and batteries, the engineering requirements that must be fulfilled for their efficient operation and the technology of their construction.

CBE 40439. Simulation and Optimization

(3 -0- 3)

This course will provide an overview of the computational methodologies used for chemical process simulation and optimization. Topics will include: 1) how to formulate process models; 2) how to solve process models (linear and nonlinear equation solving, etc.); and 3) how to optimize using process models (linear and nonlinear programming, global optimization, etc.).

CBE 40443. Separation Processes

(3 -0- 3) Phillip

This course demonstrates the application of the principles of phase equilibria, transport processes, and chemical kinetics to the design and characterization of stagewise and continuous separation processes. Both graphical and rigorous numerical techniques are used, and the general procedures applicable to different specific processes are emphasized. Example problems are drawn from the petroleum, chemical, food, biochemical, and electronic materials processing industries. The AspenONE software package is used.

CBE 40445. Chemical Reaction Engineering

(3 -0- 3) Hicks

The basic concepts of chemical rate processes are applied to the theory of the design and operation of the various types of commercial reactors for both noncatalytic and catalytic reactions. Topics covered include mole balances, rate laws and stoichiometry, collection and analysis of rate data, multiple reactions, isothermal and nonisothermal reactor design, catalysis and catalytic reactors.

CBE 40448. Chemical Process Design

(3 -0- 3) Stadtherr

This course represents a capstone in the chemical engineering curriculum. In this course students will have the opportunity to apply the basic concepts learned in previous courses to the design and analysis of a chemical processing system. This will be done primarily through the design project. Supporting material to be covered in lectures includes the following: computer-aided design (process simulation), economic analysis, process safety, flowsheet synthesis (conceptual design), and decision-making analysis (optimization). The AspenONE software package is used.

CBE 40450. Non-Equilibrium Electrokinetics of Artificial and Biological Nanoporous Membranes

(3 -0- 3) Chang

Nonequilibrium ion transport features in an ion selective membrane such as rectification, hysteresis and oscillations, are scrutinized at a fundamental level to understand related physiological phenomena and to develop new biosensing and separation technologies.

CBE 40456. Polymer Engineering

(3 -0- 3) Hill

A course for seniors and graduate students in science and engineering who are interested in applications of engineering to polymer science and technology. Topics include polymerization reactions and the structure, properties, processing, and production of polymers. (Every year)

CBE 40461. Structure of Solids

(3 -0- 3)

This class seeks to provide students with an understanding of the structure of solids, primarily as found in metals, alloys, and ceramics applied in technological applications. The structure of crystalline solids on the atomic level as well as the microstructural level will be discussed. Imperfections in the arrangements of atoms will be described, especially as regards their impact on properties. The study of structure through X-ray diffraction will be a recurring theme. A sequence of powder diffraction laboratory experiments (four to five class periods) also will be included.

CBE 40464. Principles of Materials Selection

(3 -0- 3)

Case study based course focuses on systematically selecting the appropriate material (metal, ceramic, polymer, or composite), its method of processing and fabrication, and all associated costs to achieve an optimized choice for a given shape. The student will learn to use a powerful computer search and database system (Cambridge Engineering Selector) to rapidly achieve an optimized materials selection for a wide variety of mechanical designs.

CBE 40465. Colloid and Surface

(3 -0- 3)

This course will discuss experimental and theoretical techniques for understanding intermolecular forces.

CBE 40472. Modeling—Ecology and Environment

(3 -0- 3) Stadtherr

This course covers various topics pertaining to the Earth's ecological and biogeochemical systems and the effects of disturbances or imbalances, particularly those caused by human/industrial activities. Based on fundamentals incorporated in such subject areas as chemical reaction engineering, process dynamics, and transport phenomena, the principal topics center on population and ecosystem dynamics, and on the Earth's natural and altered environments. Examples and applications are drawn from such subjects as the endangerment or extinction of species, biogeochemical cycles, greenhouse gases and global warming, ozone pollution in the troposphere and depletion in the stratosphere, pollutant dispersion, and acid rain. The course makes extensive use of methods of mathematical modeling, nonlinear dynamics, and computer simulations. In major course assignments, students work in small groups on modeling/simulation projects.

CBE 40477. Nanoscience and Technology

(3 -0- 3) Bohn

Prerequisite: CHEM 30321 or CHEM 30324

This course focuses on the unique scientific phenomena that accrue to matter with characteristic nanometer-scale dimensions and on the technologies which can be constructed from them. Special optical, electronic, magnetic, fluidic, structural and dynamic properties characteristic of nanostructures will be addressed.

CBE 40478. Advanced Process Dynamics and Control

(3 -0- 3)

This course provides an introduction to advanced techniques for process modeling and control with application to chemical, biochemical, and biomedical systems. Topics include model development, identification, optimal and predictive control, passivity, and robustness to model errors. The course will make extensive use of modeling and simulation tools. Students will complete a semester project on a topic of their choosing. A prior course in control or dynamics is strongly encouraged.

CBE 40479. Introduction to Cellular and Tissue Engineering

(3 -0- 3) Zartman

This course is divided into two parts. The first half will cover principles of cell and developmental biology that guide current approaches in tissue engineering and regenerative medicine. An emphasis will be placed on the computational and quantitative analysis of biological processes such as cell-cell signaling and morphogenesis. The second half covers techniques involved in cultivating cells for applications in recombinant protein production as well as the design of bioartificial organs and regenerative therapeutics. Optimization techniques for culture medium development will also be covered.

CBE 40481. Biomedical Engineering Transport Phenomena

(3 -0- 3)

This course brings together fundamental engineering and life science principles, and provides a focused coverage of key concepts in biomedical engineering transport phenomena. The emphasis is on chemical and physical transport processes with applications toward the development of drug delivery systems, artificial organs, bioartificial organs, and tissue engineering.

CBE 40483. Topics in Biomolecular Engineering

(3 -0- 3) Bilgicer

The objective of this class, intended for both upper level undergraduate and graduate students, is to illustrate the emerging field of bioengineering which fuses molecular life sciences with engineering. The students will gain a fundamental understanding in the principles of how biological systems function, and learn about the innovative approaches that engineers take for diagnosis, treatment, and prevention of diseases, design of novel materials, devices, and processes, and in enhancing environmental health. Topics will include: biological systems, cell functions, molecular scale (what is nano?), molecular interactions & multivalency, synthetic molecules, molecular biology, fermentation, cell culture, & combinatorial methods, protein purification, bioinformatics, biotechnology, biomedical engineering, drug delivery, biosensors.

CBE 40485. Biological Thermodynamics

(3 -0- 3)

This course expands traditional thermodynamics to include biological systems.

CBE 40489. Engineering Applications of Medical Physiology

(3 -0- 3) Leighton

Principles of human physiology are defined and are examined along with engineering principles, such as thermodynamics, chemical kinetics and transport phenomena, to provide a foundation for the understanding and development of biomedical technology.

CBE 40498. Energy and Climate

(3 -0- 3) Brennecke

This course integrates the principles of physical sciences and engineering as they pertain to energy, its sources and uses and the impact of these on the environment. The great majority of energy used by society comes from fossil fuels. The consequences are that carbon dioxide levels in the atmosphere have been increasing and that readily available sources of oil have been depleted. Prospects for sustainable energy use will be discussed including an engineering cost/benefit analysis of different sources. A question that will be examined in particular detail, is the effect of energy use on climate change both now and in the future. To do this we will analyze the complex couplings and feedback mechanisms that operate between the geosphere, the biosphere, the atmosphere, and the hydrosphere as related to global climate change.

CBE 40557. Structured Fluids

(3 -0- 3) Zhu

The course will give a review, from a molecular approach, of liquids containing polymers, surfactants, or colloidal particles. The lectures will focus on the simple underlying concepts in structured fluid phenomena and demonstrate them using some up-to-date applications in current soft (nano or bio) materials and biomolecular engineering. The course will start with a brief discussion of building

blocks, such as macromolecules, colloids, lipids, water and etc, in structured fluids and the mesoscopic forces that occur between them. It will then discuss some aspects associated with them, including phase (or specifically, conformational) transition, liquid crystallinity, diffusion, self-assembly. These principles will be then applied to the behaviors of polymers, biomacromolecules, charged polyions, and lipid membranes. Finally, modern experimental techniques to characterize such structured fluids will be explored.

CBE 40576. Applied Optimization for Process Operations

(3 -0- 3)

The purpose of this course is to introduce students to computational methods for the optimization of process operations. Applications include blending, scheduling, process synthesis, and planning problems. Students taking this course will learn the basic categories of optimization problems (unconstrained, linear programming, convex programming, integer and mixed integer programming, and elements of stochastic programming), how these problems typically arise in practice, and how to solve such problems with the computation tools currently used in industrial practice. A major focus of the course is on applications and problem solving. Students will learn how to recognize and formulate optimization problems in a wide range of contexts, including design, operations, and finance, and how to generate solutions to those problems.

CBE 40667. Mass Transfer in Membrane Systems

(3 -0- 3) Phillip

Membranes separations, which are gaining increased attention because of their ability to avoid the thermodynamic limitations associated with heat use, offer an alternative to thermally-driven separations. Membranes are also central to many of the functions of biology. Regardless, of where a membrane is found, an understanding of the mass transfer process that transports materials across the membrane is essential to understanding the membrane function. This course will cover a variety of mass transfer mechanisms and the theories developed to describe them (e.g., diffusion-solubility, hindered flow through pores, and facilitated transport). The relevance of these theories to the operation of reverse osmosis, ultrafiltration, nanofiltration, dialysis, and gas separations systems will also be examined in this course.

CBE 41362. Laboratory Technology in Materials Science

(0 -3- 2)

This course is intended for junior chemical engineering majors who are participating in the materials certificate program. The goal of the course is to introduce students to instrumentation they will likely use in the course of their senior thesis research. Laboratory sequences last from two to four weeks. A laboratory report is written for each lab as per instructions from each professor.

CBE 41459. Chemical Engineering Laboratory II

(1 -4- 3)

Chemical engineering laboratory courses are composed of experiments that cover most of the major subject areas of chemical engineering. The rationale for combining all of the topics into two separate courses, as opposed to distributing them into the different lecture courses, is to provide a focused learning experience emphasizing experimental techniques to observe fundamental behavior, understanding of the phenomena in terms of the appropriate theory and experience at technical report writing. Formal and informal oral presentation skills are also an important part of the courses.

CBE 41910. Biomolecular Engineering Lab

(0 -4- 3)

In this course students will be exposed to modern laboratory methods in bioengineering and experimental design. Students will be expected to develop and execute laboratory protocols, write laboratory reports, and present orally their findings.

CBE 45449. Internship Experience

(0 -0- V)

Intended to facilitate interactions between Notre Dame and industry by allowing students to get credit for internship experience.

CBE 45490. Internship Experience

(0 -0- V)

Intended to facilitate interactions between Notre Dame and industry by allowing students to get credit for internship experience.

CBE 46497. Directed Readings

(V -0- V)

Course requires the student to explore various readings chosen by the professor.

CBE 48888. Summer Undergraduate Research

(0 -0- 0)

This is a zero-credit course for visiting students engaged in research with a faculty member during the summer session. This course is taken as an indication of the student's status on campus and is meant to allow the registered student to use the University facilities as the Summer Session permits

CBE 48901. Undergraduate Research

(V -0- V)

A graded research project at the undergraduate level under the supervision of a faculty member. A substantial written document describing the research project, results, and conclusions is required.

CBE 48902. Advanced UG Research

(0 -12- 3)

Prerequisite: CBE 48901

This course is intended for students with previous research experience and requires at least one credit of 48901 as a prerequisite. It requires a written final report. This course will count as a technical or engineering elective.

CBE 48903. Undergraduate Thesis

(0 -12- 2)

Prerequisite: CBE 48901

This course requires a written thesis document that is defended to a committee of faculty. At least one credit of 48901 research is a prerequisite, although several semesters are recommended. This course will count in place of a chemical engineering elective.

CBE 48904. Undergraduate Thesis

(0 -12- 2)

Prerequisite: CBE 48903

This course requires a written thesis document that is defended to a committee of faculty. At least one credit of 48901 research is a prerequisite, although several semesters are recommended. This course will count in place of a chemical engineering elective. This course is a continuation of undergraduate thesis.

CBE 50361. Science of Engineering Materials

(3 -0- 3) McGinn

This is an introductory course that examines the relationship between the structure, processing, and properties of engineering materials. Common engineering materials, including steel, concrete, ceramics, and polymers are discussed. Mechanical, chemical, electrical, and magnetic properties of various materials are examined. The process dependence of microstructural development and defects levels are described.

ENER 20202. The Business of Energy

(3 -0- 3) Frecka

The course focuses on issues and challenges faced by business entities comprising the largest and most important segment of our economy—energy. Large, integrated oil and gas producers will be highlighted as well as power generators and transmission companies (primarily regulated oil and gas utilities) and producers of alternative fuels. Energy efficiency and related smart grid initiatives will be explored. The course is a requirement for students choosing the Energy Studies minor.

Civil and Environmental Engineering and Earth Sciences

CE 20130. Methods of Civil Engineering Analysis

(3 -0- 3) Kerr

Corequisite: CE 21130

A rigorous introduction to the tools used in civil engineering. This will include computer programming, exposure to circuits and sensors, surveying/GPS, and use of commercial software packages. These tools and their use will be introduced through a project-oriented pedagogy and strong hands-on experience. Fall.

CE 20140. Methods of Civil Engineering Analysis II

(2 -0- 2) Kerr

The second course in a two-sequence course involving an introduction to the tools used in civil engineering. This second semester will focus on computer based technologies. Basic programming constructs will be applied to classic problems in civil engineering using MATLAB. An introduction to commercial software packages will also be included.

CE 20150. Statics

(3 -0- 3) Kirkner

Prerequisite: (EG 10111 or EG 10112) and MATH 10560 and PHYS 10310

Introduction to systems of forces and couples; vector mechanics. Equilibrium of rigid bodies. Internal forces and moments, trusses and beams, distributed loads and properties of areas. Friction and virtual work. Kinematics and kinetics of particle motion. Systems of particles. Fall.

CE 20230. Engineering Programming

(1 -0- 1)

Introduction to programming for engineers. This course will cover the fundamentals of programming in C and MATLAB, including basic structures, algorithm development, and implementation and debugging of programs. Assignments will illustrate the advantages of each programming environment. An emphasis will be placed on team-based learning; some assignments will require students to work together to write community programs.

CE 20500. Engineering Geology

(3 -0- 3) Simonetti

A study of physical geology and geologic processes relevant to engineering. Emphasis is on origin and distribution of natural hazards (earthquakes, volcanoes, floods, winds, mass wasting) as they impact built infrastructure, and chemical and physical processes impacting contaminant transport in water. Distribution of natural hazards is considered in the context of plate tectonics theory. Spring.

CE 20600. Introduction to CAD

(2 -0- 2)

Computer-based technologies will be introduced in order for students to have the ability to apply engineering concepts using modern engineering tools. This course will focus on computer-based technologies used in civil engineering applications, such as AutoCAD, Civil 3D, and GIS.

CE 21130. Methods/Civil Engineering Analysis Lab

(0 -1- 0)

Corequisite: CE 20130

The concurrent laboratory portion of CE 20130. Fall.

CE 23600. Challenges and Innovations in Civil and Environmental Engineering

(1 -0- 0.5) Westerink

This course will focus on examining large scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 6–10 lectures per semester presented by senior project

engineers, university faculty and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a 1 hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered: Each spring and fall semester.

CE 23601. Challenges and Innovation in Civil and Environmental Engineering Seminar

(0 -0- 0) Kerr

This course will focus on examining large scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 12 lectures per semester presented by senior project engineers, university faculty and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a 1 hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered: Each spring and fall semester.

CE 25600. Civil Engineering Service Projects

(V -0- V)

Civil Engineering Service Projects (CESP) partners students with community organizations to put their engineering skills into service. Currently the community partner is Bridges2Prosperity, a nonprofit organization providing pedestrian bridges to communities worldwide who lack such basic infrastructure. Under the banner of the NDSeed program, six to seven students will be accepted each academic year for this course and will supervise all aspects of bridge design and construction, including fundraising and international study via site surveys over fall break and construction in May following the spring semester. To join this course in the fall of any academic year, students must apply and be accepted to NDSeed in the prior spring semester. Students are expected to participate in the course for a full academic year, through bridge construction in May. The project is also affiliated with the Center for Social Concerns International Summer Service Learning Program (ISSLP) and has additional curricular requirements through ISSLP. See www.nd.edu/~ndseed for more information.

CE 30125. Computational Methods

(3 -0- 3) Westerink

Fundamentals of numerical methods and development of programming techniques to solve problems in civil and environmental engineering. This course requires significant computer use via a scientific program language such as Matlab and/or FORTRAN. Standard topics in numerical linear algebra, interpolation, discrete differentiation, discrete integration, and approximate solutions to ordinary differential equations are treated in a context-based approach. Applications are drawn from hydrology, environmental modeling, geotechnical engineering, modeling of material behavior, and structural analysis. Fall.

CE 30150. Dynamics and Modeling

(3 -0- 3)

Prerequisite: CE 30200

Course provides a primer on structural dynamics for single- and multi-degree-of-freedom systems with application to building systems, as well as an introduction to modeling of building systems within commercial software packages.

CE 30160. Civil Engineering Materials

(3 -0- 4) Kerr

Corequisite: CE 31160

A study of mechanical properties of civil engineering materials and how they relate to the atomic, microscopic, and macroscopic structure. Weekly laboratories are used to study materials such as steel, concrete, wood, and bituminous materials. Spring.

CE 30200. Introduction to Structural Engineering

(3 -0- 3) Tafflanidis

Prerequisite: AME 20241

Introduction to structural engineering; analysis of statically determinate structures; deflection analysis; analysis of indeterminate structures using classical and matrix methods; introduction to analysis software, structural design concepts and codes and standards. Fall.

CE 30210. Structural Analysis

(3 -0- 3) Khandelwal

Prerequisite: CE 30200 or CE 34200

The fundamentals of matrix methods of analysis. Application to trusses and rigid frames. Introduction to the use of commercial analysis software. Advanced topics of analysis: plastic analysis, introduction to structural dynamics. The first course in the structures track. Spring.

CE 30230. Engineering Programming

(1 -0- 1)

Introduction to programming for engineers. This course will cover the fundamentals of programming in C and MATLAB, including basic structures, algorithm development, and implementation and debugging of programs. Assignments will illustrate the advantages of each programming environment. An emphasis will be placed on team-based learning; some assignments will require students to work together to write community programs.

CE 30300. Introduction to Environmental Engineering

(3 -0- 3)

An introduction to the fundamental concepts of material balances and reactions occurring in reactors. These concepts bind together topics in water supply, wastewater treatment, air pollution control, and management of solid and hazardous wastes. The course describes how a holistic approach, not a fragmented single-pollutant or single-medium, is required to solve environmental problems. Decisions made by environmental engineers require a consideration of environmental ethics, a unifying topic of this course. The first course in the environmental track. Fall.

CE 30320. Water Chemistry and Treatment

(3 -0- 3)

Prerequisite: CE 30300

An introduction to water treatment design, including discussion of basic aquatic chemistry, water quality, environmental policy, and current issues and problems in the industry. The first course in the environmental track. Spring.

CE 30455. Environmental Hydrology

(3 -0- 3)

An introduction to the hydrologic cycle and review of the main processes. This includes precipitation, evaporation and transpiration, runoff, infiltration and a brief introduction to ground water. Some concepts and tools commonly used by water resource managers will also be discussed. Transport of pollutants will be introduced. Finally, biological elements of the water cycle will be introduced. Laboratory techniques complement lecture topics.

CE 30460. Fluid Mechanics

(3 -0- 3) Bolster

Prerequisite: AME 20241 and MATH 30650

A basic course in fluid mechanics.

CE 30510. Geotechnical Engineering

(3 -1- 4) Spence

Prerequisite: AME 20241

Corequisite: CE 31510

The objective of this course is to introduce and familiarize the student with the fundamentals of soil mechanics, including behavior of soils in compression and shear, and the principles of geotechnical engineering through lectures and laboratory experiments. Spring.

CE 31160. Materials Laboratory

(0 -2- 0)

Corequisite: CE 30160

The concurrent laboratory portion of CE 30160. Spring.

CE 31300. Introduction to Environmental Engineering Laboratory

(0 -1- 1)

The laboratory component of the Introduction to Environmental Engineering course. Fall.

CE 31510. Geotechnical Engineering Lab

(0 -1- 0)

Corequisite: CE 30510

The concurrent laboratory portion of CE 30500. Spring.

CE 33600. Challenges and Innovations in Civil and Environmental Engineering

(1 -0- 0.5) Westerink

This course will focus on examining large scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 6–10 lectures per semester presented by senior project engineers, university faculty and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a 1 hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered: each spring and fall semester.

CE 33601. Challenges and Innovations in Civil and Environmental Engineering Seminar

(0 -0- 0) Kerr

This course will focus on examining large scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 12 lectures per semester presented by senior project engineers, university faculty and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a 1 hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered: each spring and fall semester

CE 35600. Civil Engineering Service Projects

(V -0- V)

Civil Engineering Service Projects (CESP) partners students with community organizations to put their engineering skills into service. Currently the community partner is Bridges2Prosperity, a nonprofit organization providing pedestrian bridges to communities worldwide who lack such basic infrastructure. Under the banner of the NDSeed program, six to seven students will be accepted each academic year for this course and will supervise all aspects of bridge design and construction, including fundraising and international study via site surveys over fall break and construction in May following the spring semester. To join this course in the fall of any academic year, students must apply and be accepted to NDSeed in the prior spring semester. Students are expected to participate in the course for a full academic year, through bridge construction in May. The project is also affiliated with the Center for Social Concerns International Summer Service Learning Program (ISSLP) and has additional curricular requirements through ISSLP. See www.nd.edu/~ndseed for more information.

CE 40010. Scientific Manuscript Writing and Editing

(1 -0- 1)

In this course, students will learn writing and editing skills needed for successful preparation of scientific manuscripts. Instruction will cover both editing and

writing techniques for scientific papers, with particular focus on grammar, layout format options, presentation of logic, scientific content, and referencing approaches. Students will write a series of 3–4 page papers, and the first round of editing of each paper will be conducted by a fellow student, with the instructor offering assessment of both the writing and the editing that was done. Class discussions will center on common difficulties faced by students in their writing and editing approaches using examples from the written assignments in the course.

CE 40140. Stochastic System Analysis

(3 -0- 3)

This course focuses on a probabilistic treatment of uncertainty in modeling a system's behavior and its excitation. We start by setting the foundations of probability as an information-based measure; this leads to a rigorous meaning for the probability of a model for a system. We then focus on new approximate analytical and stochastic simulation tools for robust system analysis, design (optimization) and Bayesian system identification, that have been developed over the last decade or two. The topics covered include: Monte Carlo and advanced Markov Chain stochastic simulation techniques, analytical approximations to stochastic integrals, Bayesian model class selection, topics on stochastic programming, and Bayesian sequential estimation of system states and model parameters.

CE 40230. Engineering Programming

(1 -0- 1)

Introduction to programming for engineers. This course will cover the fundamentals of programming in C and MATLAB, including basic structures, algorithm development, and implementation and debugging of programs. Assignments will illustrate the advantages of each programming environment. An emphasis will be placed on team-based learning; some assignments will require students to work together to write community programs.

CE 40240. Structural Systems

(3 -0- 3) Kijewski-Correa

Prerequisite: CE 30210

Overview of common structural systems used in design, with specific focus on the hierarchy of lateral load resisting systems. Course will also highlight innovative structural systems for high rise buildings, collapse mechanisms, and concepts of serviceability and habitability. Codes and commercial software common to practice will be heavily utilized.

CE 40250. Analysis of Wobbly Structures: An Introduction to Structural Dynamics

(3 -0- 3)

Prerequisite: (CE 30200 or CE 34200) and CE 30210

Introduction to dynamics of civil infrastructure; dynamics of single and multiple degree-of-freedom systems and distributed/continuous systems; dynamic analysis of structural systems; introduction to wind, waves and earthquake dynamic load effects; treatment of dynamic effects in building codes.

CE 40260. Advanced Structural Analysis I

(3 -0- 3) Khandelwal

Prerequisite: CE 30210; instructor permission required

Single-step and multi-step algorithms for hyperbolic problems, stability of solution and Eigen-value problems; nonlinear models for 1-D structural elements; bifurcation and stability in nonlinear problems; numerical methods for nonlinear problems, multi-scale issues in structural engineering and application of high-performance computing to structural engineering problems.

CE 40270. Reinforced Concrete Design

(3 -1- 4) Kurama

Prerequisite: CE 30200 or CE 34200

Mechanics and behavior of reinforced concrete members and structures. Design of reinforced concrete members and structures, including continuous beams, slabs, columns, and frames. Strength and serviceability considerations for design.

Building codes and specifications for reinforced concrete design. Includes a semester-long project on the design of a five-story, five-bay reinforced concrete frame building. The second or third course in the structures track.

CE 40275. Prestressed Concrete Design

(3 -0- 3)

Prerequisite: CE 40270

Mechanics of prestressed concrete structural members. Design of prestressed concrete structural members and simple systems. Strength and serviceability considerations.

CE 40276. Advanced Topics in Reinforced Concrete

(3 -0- 3) Kurama

Prerequisite: CE 40270; instructor permission required

This course studies the behavior of reinforced concrete structures during earthquakes. Seismic design and detailing of RC structures. Nonlinear-inelastic modeling and analysis of RC structures. Seismic evaluation and retrofit of existing structures.

CE 40280. Structural Steel Design

(3 -1- 4) Thrall

Prerequisite: CE 30160 and (CE 20150 or AME 20221) and AME 20241 and (CE 30200 or CE 34200)

Design of structural steel members/systems using basic fundamentals of mechanics, principles of steel behavior at element and system level. Course integrates current codes/standards and commercial software into semester-long project, providing for direct application of concepts to the design of a mid-rise structural steel residential/commercial building. The second or third course in the structures track.

CE 40285. Bridge Engineering

(3 -0- 3) Thrall

Overview of bridge engineering, focusing on behavior, analysis, and design. Course will highlight standard forms for highway and long-span bridges, including girder, truss, arch, suspension, and cable-stay bridges. Fundamental techniques for analysis and design will be emphasized (e.g. influence lines, graphic states) and current design code will be introduced.

CE 40290. Design of Structures to Resist Natural Hazards

(3 -0- 3) Kareem

Prerequisite: CE 40250 and CE 30210

Natural hazards and associated load effects on structures. Analysis of damage caused by wind storms, earthquakes and ocean waves. Design provisions to resist damage resulting from natural hazards.

CE 40320. Environmental and Aquatic Chemistry

(3 -0- 3) Maurice

This course begins with a) an overview of the formation and general chemical characteristics of the Earth and b) an introduction to the natural global physical and chemical cycles. There will be major sections on the Earth's atmosphere, hydrosphere and lithosphere. The major chemical processes within each of these compartments and chemical aspects of associated modern-day environmental problems will be reviewed. Special sections on energy and the environment and the chemistry of global climate will be included.

CE 40335. Environmental Surfaces and Interfaces

(3 -0- 3)

The objectives include the introduction of the physiochemical principles to understand environmental surfaces and interfaces and the application of these principles in search for the solutions of environmental problems. The course will be a combination of lectures and laboratories.

CE 40340. Waste Treatment

(3 -0- 4) Nerenberg

Prerequisite: CE 30300 and CE 40450

A study of the theory, design, and operation of facilities both for industrial and municipal treatment and disposal. Design of municipal wastewater treatment systems is emphasized. A significant project design component is included with a tutorial section. The third course in the environmental track. Spring.

CE 40341. Biological Process Design

(3 -0- 3)

A study of the theory, design, and operation of facilities both for industrial and municipal treatment and disposal. Design of municipal wastewater treatment systems is emphasized. A significant project design component is included with a tutorial section. Fall.

CE 40345. Environmental Nanomaterials and Nanotechnology

(3 -0- 3) Na

The objective of this course is to introduce to students the fundamental physicochemical principles that are used to design and fabricate engineering nanomaterials, understand the formation of natural nanomaterials, and predict their transport, transformation, and toxicity in the environment. Using examples, this course will cover the major groups of environmental nanomaterials currently in R&D and application, including nanoclusters, nanoparticles, nanotubes, nanowires, nanosheets, and 3-D hierarchical nanostructures. This course will also introduce the modern techniques for nanomaterial characterization with laboratory experiments using atomic force microscopy (AFM).

CE 40350. Environmental Microbiology

(3 -0- 3) Shrout

Fundamentals of microbiology applied to environmental systems and treatment processes. Emphasis will be placed on kinetics and energetics of microorganisms, fate of environmental pollutants, biotechnology applications, and laboratory techniques used to cultivate organisms and analyze biological systems. Spring.

CE 40355. Water, Disease, and Global Health

(3 -0- 3) Shrout

Prerequisite: CHEM 10122 or BIOS 10161

The main emphasis of the course will be to study the diseases important to both civilized societies and the third world. Basic principles of public health, epidemiology, infectious disease microbiology, and engineering application will be learned utilizing both local and global examples. Particular emphasis will be given to diseases transmitted by water. As a complement to environmental design classes, this class will focus upon the disease agents removed in properly designed municipal water and waste systems.

CE 40410. Advanced Fluid Dynamics

(3 -0- 3)

Prerequisite: CE 30460

This course is designed to provide an in-depth understanding of fundamental principals and concepts of fluid mechanics for beginning graduate students and upper level undergraduate students. It will be a useful precursor to advance courses in turbulence, environmental fluid mechanics, stability theory, waves, oceanography and meteorology.

CE 40411. Environmental Fluid Dynamics

(3 -0- 3)

This course will apply the fundamentals of fluid dynamics, especially those from stratified and rotating flows, to understand motions in atmosphere and oceans. Experience with an undergraduate level fluid mechanics course is preferred.

CE 40415. Waves and Instabilities in Environmental Flows

(2 -0- 2)

Prerequisite: PSY 30314

This course will deal with basic features and dynamics of waves and instabilities found in natural (oceanic and atmospheric) flows. The course will cover surface, internal, inertia-gravity, shallow water and planetary waves as well as basic instabilities of stratified and rotating flows.

CE 40420. Reactive Transport

(3 -0- 3)

This course examines the advection, diffusion, and reaction processes of materials moving in the atmosphere, surface water systems, and groundwater systems. Particle-based as well as continuum-based approaches are examined.

CE 40430. Fundamentals of Turbulence Theory

(3 -0- 3)

This course deals with basic forms of turbulent motions, such as isotropic and homogenous turbulence and mathematical treatment of such motions based on fundamental equations of fluid motion. It will introduce tools for analysis of turbulent motions, such as phenomenological, similarity, spectral and statistical methods. Applications to environmental and engineering flow situations will also be described.

CE 40450. Hydraulics

(3 -0- 3) Kennedy

Prerequisite: AME 30031 or AME 30331 or AME 34331 or CE 34330 or CE 30460 or CE 34330

Theory, analysis and design of pipe flow, sewer flow, open channel flow, and reservoirs and pumping facilities for water distribution and wastewater collection. Student team design of water distribution and sewer collection systems is emphasized. Fall.

CE 40460. Groundwater Hydrology

(3 -0- 4) Bolster

Lectures and laboratory cover the fundamentals of flow and transport in porous media. Methods of analysis for development of groundwater resources. Fall.

CE 40565. Atmospheric Boundary Layers

(3 -0- 3)

Prerequisite: CE 30460 or CE 34460

This course deals with the fundamental flow and turbulence processes of the atmospheric boundary layer (ABL), which is the atmospheric layer affected by the presence of ground surface. The topics to be covered include the structure of ABL, dynamical processes within and mathematical descriptions of these processes. Of particular interest will be heat, mass (pollutant) and moisture transfer as well as the response of ABL to diurnal solar variation. Some predictive tools for this layer will also be discussed.

CE 40610. Construction Management

(3 -0- 3) Schlagel

Engineering aspects of planning, economics, practices, and equipment usage in construction of civil engineering projects. Use of critical path construction schedules. Offered as needed.

CE 40620. Transportation Engineering

(3 -0- 3)

The planning, design, operation, safety, and economics of transportation systems. Spring.

CE 40701. Principles of Practice

(1 -0- 1)

An integrated, multi-disciplinary civil engineering design experience. The course will include a review of the civil engineering design process, professional considerations and preliminary design aspects.

CD 40702. Senior Design

(3 -0- 3)

The second semester of an integrated civil engineering design experience. Student teams will work closely with industry professionals and faculty who act as consultants on a real-world design project to facilitate the student's understanding of the students' proposed final designs. This semester will culminate in a final design project including a report, drawings, and presentation.

CE 43600. Challenges and Innovations in Civil and Environmental Engineering

(1 -0- 0.5) Westerink

This course will focus on examining large scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 6–10 lectures per semester presented by senior project engineers, university faculty and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a 1 hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered: each spring and fall semester.

CE 43601. Challenges and Innovation in Civil and Environmental Engineering Seminar

(0 -0- 0) Kerr

This course will focus on examining large scale civil and environmental engineering problems, the technological challenges encountered, and the resulting innovative solutions. The emphasis will be on the engineering systems and will include problems in structural, ocean, hydraulic, groundwater, soils and environmental engineering. Course format: 12 lectures per semester presented by senior project engineers, university faculty and researchers who are leaders in the field. Each lecture will be 75 minutes and consist of a 1 hour presentation with 15 minutes for discussion and questions. The lectures will be targeted to tie the problems discussed to concepts emphasized in the current curriculum. Course offered: each spring and fall semester.

CE 45600. Civil Engineering Service Projects

(V -0- V)

Civil Engineering Service Projects (CESP) partners students with community organizations to put their engineering skills into service. Currently the community partner is Bridges2Prosperity, a nonprofit organization providing pedestrian bridges to communities worldwide who lack such basic infrastructure. Under the banner of the NDSeed program, six to seven students will be accepted each academic year for this course and will supervise all aspects of bridge design and construction, including fundraising and international study via site surveys over fall break and construction in May following the spring semester. To join this course in the fall of any academic year, students must apply and be accepted to NDSeed in the prior spring semester. Students are expected to participate in the course for a full academic year, through bridge construction in May. The project is also affiliated with the Center for Social Concerns International Summer Service Learning Program (ISSLP) and has additional curricular requirements through ISSLP. See www.nd.edu/~ndseed for more information.

CE 46700. Big Beam Contest

(1 -0- V)

Students taking this course will compete in the national Big Beam Contest organized by the Precast/Prestressed Concrete Institute (PPCI). The students will work in teams and together with a local precast/prestressed concrete producer to design and construct a precast concrete test beam. The specimens will be tested in the Structural Systems Laboratory at Notre Dame. Each team will prepare a report to be submitted to the PPCI to enter the competition. The course will emphasize the practical engineering and fabrication aspects of precast concrete, as well as fundamental concepts in structural engineering.

CE 47347. Physiochemical Treatment of Organics

(3 -0- 3)

An investigation of the physicochemical treatment processes for treatment of organic contaminants

CE 47600. Special Studies

(V -V- V)

Individual or small group study under the direction of a faculty member in an undergraduate subject not concurrently covered by any University course.

CE 48600. Undergraduate Research

(V -0- V)

A research project at the undergraduate level under the supervision of a faculty member.

ENVG 10110. Physical Geology

(3 -2- 4) Neal

Corequisite: ENVG 11110

An introduction to the Earth, its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, geophysics, environmental geology, and planetology. Lecture and laboratory meetings.

ENVG 11110. Physical Geology Laboratory

(0 -1- 0)

Corequisite: ENVG 10110

This is the laboratory portion of ENVG 10110.

ENVG 10250. Earth, Air, Water and Energy

(3 -0- 3)

This course focuses upon the elements of the environment that society depends on for survival and standard of living. The interaction of these elements can promote or mitigate environmental change and the student is challenged to think on a local, regional, and global framework when considering perturbations to natural systems. This course will be team taught by faculty experts in each area highlighted in the course title.

ENVG 20110. Physical Geology

(3 -2- 4) Neal

Corequisite: ENVG 21110

An introduction to the Earth, its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, geophysics, environmental geology, and planetology. Lecture and laboratory meetings.

ENVG 20111. Planet Earth

(3 -0- 3)

An introduction to the Earth, its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, geophysics, environmental geology, and planetology.

ENVG 20120. Historical Geology

(3 -2- 4)

Prerequisite: ENVG 20110 or SC 20110 or SC 10110

Corequisite: ENVG 21120

This course introduces the student to the concept of geologic time, absolute and relative age-dating, Earth processes and features through time, and the major features of evolution and distribution of fossils. Lecture and laboratory meetings. One-day field trip is required.

ENVG 20200. Mineralogy and Optical Mineralogy

(3 -2- 4) Burns

Prerequisite: CHEM 10122 and ENVG 20110

Crystallography and mineral optics: physical and chemical mineralogy—its application to mineral identification in hand-specimen and using the petrographic microscope.

ENVG 20240. Igneous and Metamorphic Petrology

(3 -0- 3) Neal

Prerequisite: (ENVG 20110 or ENVG 10110 or SC 20110) and ENVG 20200

Corequisite: ENVG 21240

Origin and identification of igneous and metamorphic rocks within a plate tectonic framework. Geochemistry and petrography are used to investigate mineral equilibria, magma generation and crystallization, pressure and temperatures of deformation, and the interior of the Earth.

ENVG 20300. Global Change, Water and Energy

(3 -0- 3)

This course examines the topic of global environmental change and the mechanisms by which global change occurs. Analysis will include the relationships between physical and ecological changes on Earth, and our current understanding of how climate evolves under natural and human influences. Topics covered include the global energy balance, structure and circulation of the atmosphere and oceans, climate variability, and implications of climate change for natural and human systems. Spring.

ENVG 21110. Physical Geology Laboratory

(0 -1- 0)

Corequisite: ENVG 20110

This is the laboratory portion of ENVG 20110.

ENVG 21111. Planet Earth Lab

(0 -1- 1)

Laboratory component of Planet Earth course.

ENVG 21120. Historical Geology Laboratory

(0 -1- 0)

Corequisite: ENVG 20120

This is the laboratory portion of ENVG 20120.

ENVG 21240. Igneous and Metamorphic Petrology Laboratory

(0 -1- 1)

Prerequisite: (ENVG 10110 or ENVG 20110 or SC 20110) and ENVG 20200

Corequisite: ENVG 20240

Lab component for ENVG 20240

ENVG 30230. Sedimentation and Stratigraphy

(3 -2- 4) Simonetti

Prerequisite: ENVG 20200

Sedimentary environments from a physical, biological and tectonic perspective are explored, along with processes such as lithification. Identification of sedimentary rocks and the interpretation of the succession of layered rocks in North America are emphasized.

ENVG 30240. Petrology of Earth Materials

(3 -1- 4)

Origin and identification of igneous and metamorphic rocks within a plate tectonic framework. Geochemistry and petrography are used to investigate mineral equilibria, magma generation and crystallization, pressure and temperatures of deformation, and the interior of the Earth.

ENVG 30300. Surficial Processes and Surficial Hydrology

(2 -3- 3) Simonetti

Prerequisite: ENVG 20200 or GEOS 20201

A quantitative study of natural chemical and physical processes (e.g., weathering, flooding, wind) that produce both erosional and depositional landforms. Their effects on human structures and developments are explored. One-day field trip is required.

ENVG 30320. Introduction to Soil Science

(2 -1- 3)

This course serves as an introduction to soil science, and explores the chemical, biological, and physical properties of soil systems. Lecture topics include: parent material and soil development; classification and mapping; soil mineralogy; soil/water interactions; ion exchange; soil microbiology; and soil organic matter. Fundamental principles from these lecture topics are then applied to contemporary issues in agriculture and mining, and their resulting influences on biogeochemical cycling, water quality, and remediation. The laboratory component will provide the student with a hands-on introduction to methods of soil classification and analysis.

ENVG 30400. Structural Geology and Rock Mechanics

(3 -3- 3) Simonetti

Prerequisite: ENVG 20200

Shapes and fabric of deformed rocks, physical properties of rocks, processes and mechanisms of deformation with associated stresses and strains, and regional and global structural events. Weekend field trip is required.

ENVG 30410. Dynamic Earth

(3 -0- 3)

This course focuses on the study of the fundamentals of Earth processes that help explain the formation of the ambient landscape and natural hazards, and their impact on man-made structures. The plate tectonic framework of a dynamic Earth is central to the discussion, as it relates to the global occurrence of earthquakes and seismicity, and responsible for the structural geological elements and deformation of the Earth's crust.

ENVG 31400. Structural Geology and Rock Mechanics

(0 -1- 1)

Lab component for ENVG 30400

ENVG 40230. Environmental and Aquatic Chemistry

(3 -0- 3) Maurice

This course begins with a) an overview of the formation and general chemical characteristics of the Earth and b) an introduction to the natural global physical and chemical cycles. There will be major sections on the Earth's atmosphere, hydrosphere and lithosphere. The major chemical processes within each of these compartments and chemical aspects of associated modern-day environmental problems will be reviewed. Special sections on energy and the environment and the chemistry of global climate will be included.

ENVG 40300. Geochemistry

(3 -0- 3) Fein

Prerequisite: CHEM 10121 and CHEM 10122 and MATH 10550 and MATH 10560

An introduction to the use of chemical thermodynamics and chemical kinetics in modeling geochemical processes. Special emphasis is placed on water-rock interactions of environmental interest.

ENVG 40310. Environmental Impact of Resource Utilization

(3 -0- 3)

Prerequisite: ENVG 20110 and ENVG 40300

The environmental effects of utilizing natural resources are examined from their extraction, refining, to use. Pivotal in this course is environmental impact

assessment and rehabilitation/remediation technologies. A number of case studies will be examined to highlight the environmental impact of using the Earth's natural resources and how such impacts can be mitigated.

ENVG 40340. Water-Rock Interactions

(3 -0- 3) Maurice

Prerequisite: CE 40320

Fundamental properties of mineral surfaces and of the mineral-water interface. Methods of surface and interface analysis. The electric double layer. Interface reactions including adsorption, mineral growth and dissolution, photoredox phenomena, and controls on bacterial adhesion.

ENVG 40360. Geomicrobiology

(3 -0- 3) Fein

Prerequisite: ENVG 40300

This course explores current research involving the interaction between microbes and geologic systems, focusing on the ability of microbes to affect mass transport in fluid-rock systems. Readings concentrate on laboratory, field, and modeling studies of environmental and/or geologic interest.

ENVG 40390. Physical Volcanology

(2—2)

This course is an introduction to volcanoes, and includes the links between volcanoes and their tectonic and geophysical setting, the types of volcanic edifices, classic eruption styles and deposits, volcanoes and their eruption products as landforms, and comparisons to planetary volcanism. Class will meet once a week for an hour in the fall for reading and discussion (1 credit) then have a week long field trip to Hawaii just before the start of the spring semester (1 credit), and would have a research paper due spring semester (1 credit).

ENVG 40410. Geophysics

(2 -1- 3)

Prerequisite: PHYS 10320

Physics of the solid Earth: seismic wave, gravity, resistivity and electromagnetic methods of probing the structure of the Earth. Applications to environmental concerns as well as to groundwater, mineral and petroleum exploration are discussed.

ENVG 40480. Chemistry of Lanthanides and Actinides

(3 -0- 3) Albrecht-Schmitt

This course will cover a wide variety of topics involving the chemistry of the f-block elements. Topics will include periodic trends, aqueous and environmental geochemistry, solid-state chemistry, and physical properties. The course will begin with a brief history of the discovery of these elements. The fundamental knowledge gained early in this course will be applied to the critical problems of nuclear energy production and waste remediation. This will be a primary literature-based course.

ENVG 40810. Geographic Information Systems (GIS)

(2 -2- 4)

This course provides both the theory and practical tools to display, analyze, and manipulate geographic data through the concepts of thematic layers and spatial objects. Lectures provide the background theory and introduction to display and analysis tools. In the labs, students will develop their own projects using geographic data in both raster and vector form.

ENVG 45200. Field Trip

(0 -2- 1)

Prerequisite: ENVG 10110 or ENVG 20110 or SC 20110 or CE 20500 or ENVG 10100

Field trip during the fall/spring vacation; emphasis on regional field geology and field relationships. Classic localities are studied in order to demonstrate geological concepts.

ENVG 45300. Fall Geology Field Trip

(1 -0- 1)

Field trip to the Upper Peninsula of Michigan during fall break; emphasis on understanding the regional geology before, during, and after the formation of Proterozoic banded iron formations and the Marquette Mineral District. A wide range of sedimentary, metamorphic, and igneous rock types and geologic structures are studied, and the trip includes a structural geology field exercise. Prior to the trip, there will be lectures on the regional geology, and each student will prepare a presentation on one aspect of the geology that is seen in the field.

ENVG 47600. Special Studies

(0 -V- V)

The course requires permission of the chair of the Department of Civil Engineering and Geological Sciences and the individual instructor. Research of literature on a specific geoscience topic. Preparation of reports and presentations.

ENVG 48600. Undergraduate Research

(0 -V- V)

This course requires permission of the chair of the Department of Civil Engineering and Geological Sciences. Three to 15 hours each week, arranged individually for each student.

ENVG 57498. Planetary Geology

(3 -0- 3)

This course will examine the solar system bodies and solar system formation, and compare and contrast geologic processes and resulting and forms on the terrestrial (solid surface) planets. Typical processes discussed include volcanism, impact cratering, tectonics, hydrology, polar processes, and implications for life. There are no formal prerequisites, but a calculus and an earth sciences course are recommended.

Computer Science and Engineering**CSE 20110. Discrete Mathematics**

(3 -0- 3) Milenkovic

Introduction to mathematical techniques fundamental to computer engineering and computer science. Topics: mathematical logic, induction, set theory, relations, functions, recursion, recurrence relations, introduction to asymptotic analysis, algebraic structures, graphs, and machine computation.

CSE 20211. Fundamentals of Computing I

(3 -1- 4) Thain

Corequisite: CSE 21211

This is the first part of a two-course introduction-to-computing sequence, intended primarily for computer science and computer engineering majors. It introduces fundamental concepts and principles of computer science, from formulating a problem and analyzing it conceptually, to designing, implementing, and testing a program on a computer. Using data and procedural abstractions as basic design principles for programs, students learn to define basic data structures, such as lists and trees, and to apply various algorithms for operating on them. The course also introduces object-oriented and parallel programming methods.

CSE 20212. Fundamentals of Computing II

(3 -1- 4) Emrich

Prerequisite: CSE 20211*Corequisite:* CSE 21212

This is the second part of a two-course introduction-to-computing sequence, intended primarily for computer science and computer engineering majors. This course introduces concepts and techniques for developing large software systems. The object-oriented model of design and programming is presented using a modern programming language such as Java or C++. Topics covered include modularity, specification, data abstraction, classes and objects, genericness, inheritance, subtyping, design patterns, testing, concurrency, object persistency, and databases.

CSE 20221. Logic Design and Sequential Circuits

(3 -3- 4) Brockman

Corequisite: CSE 21221

Boolean algebra and switching circuits, Karnaugh maps, design of combinational and of sequential logic networks, and sequential machines.

CSE 20232. C/C++ Programming

(3 -0- 3) Bualuan; Riek

Prerequisite: (EG 10111 or EG 10112) and MATH 10550

Top-down analysis and structured programming. Basic analysis of algorithms, algorithm development, implementation and debugging and testing of programs will also be emphasized. Students will write several programs in the C++ language to learn the concepts taught and to acquire experience in solving problems using the UNIX operating system.

CSE 20600. CSE Service Projects

(V -0- V) Brenner; Freeland; Madey; Kennedy

Engineering projects in community service.

CSE 21211. Fund of Computing I Lab

(0 -2- 0)

Corequisite: CSE 20211

Lab for Fundamentals of Computing I.

CSE 21212. Fundamentals of Computing II Lab

(0 -2- 0)

Corequisite: CSE 20212

Lab Fundamentals of Computing II.

CSE 21221. Logic Design Laboratory

(0 -0- 0)

Corequisite: CSE 20221
Lab for Logic Design.**CSE 30125. Computational Methods**

(3 -0- 3) Westerink

Fundamentals of numerical methods and development of programming techniques to solve problems in civil and environmental engineering. This course requires significant computer use via a scientific program language such as Matlab and/or FORTRAN. Standard topics in numerical linear algebra, interpolation, discrete differentiation, discrete integration, and approximate solutions to ordinary differential equations are treated in a context-based approach. Applications are drawn from hydrology, environmental modeling, geotechnical engineering, modeling of material behavior, and structural analysis. Fall.

CSE 30151. Theory of Computing

(3 -0- 3) Blanton

The theory of automata and formal languages is developed along with applications. Various classes of automata, formal languages, and the relations between these classes are studied. Restricted models of computation; finite automata and pushdown automata; grammars and their relations to automata; parsing; turing machines; limits of computation: undecidable problems, the classes of P and NP.

CSE 30189. Basic Unix for Engineers

(1 -0- 1.5) Freeland

This course will cover basic UNIX/Linux, as well as make files, shell scripting, etc.

CSE 30246. Database Concepts

(3 -0- 3) Bualuan

Effective techniques in managing, retrieving and updating information from a database system. Focusing primarily on relational databases, the course presents the entity-relationship model, query processing, and normalization. Topics such as relational calculus and algebra, integrity constraints, distributed databases, and data security will also be discussed. A final project will consist of the design and the implementation of a database system with a Web interface.

CSE 30264. Computer Networks

(3 -0- 3) Freeland

This course introduces students to fundamental topics on the principles, design, implementation, and performance of computer networks. Topics include: Internet protocols, congestion control, switching and routing, mobile IP and ad-hoc networks, network security, the end-to-end arguments and peer-to-peer systems.

CSE 30321. Computer Architecture I

(3 -3- 4) Niemier

Prerequisite: CSE 20212 or CSE 20232 or CSE 20221
Corequisite: CSE 31321

Introduction to basic architectural concepts that are present in current scalar machines, together with an introduction to assembly language programming, computer arithmetic, and performance evaluation. Commercial computer-aided-design software is used to deepen the student's understanding of the top-down processor design methodology. MIPS-based assembly language will be used.

CSE 30331. Data Structures

(3 -0- 3) Izaguirre

Prerequisite: CSE 20232 or CSE 20212

Fundamental techniques in the design and analysis of non-numerical algorithms and their data structures. Elementary data structures such as lists, stacks, queues; more advanced ones such as priority queues and search trees. Design techniques such as divide-and-conquer. Sorting and searching and graph algorithms.

CSE 30332. Programming Paradigms

(3 -0- 3) Izaguirre; Flynn

Programming language overview: imperative and functional languages; logic programming. Scripting languages and tools. Development environments. Multilanguage interfacing. Case studies. Comprehensive programming practice using several languages.

CSE 30341. Operating System Principles

(3 -0- 3) Poellabauer

Prerequisite: CSE 30321 or CSE 34321

Introduction to all aspects of modern operating systems. Topics include process structure and synchronization, interprocess communication, memory management, file systems, security, I/O, and distributed files systems.

CSE 30600. CSE Service Projects

(V -0- V) Brenner; Freeland; Madey; Kennedy

Engineering projects in community service.

CSE 31321. Computer Architecture I Lab.

(0 -0- 0)

Corequisite: CSE 30321

Lab for Computer Architecture I.

CSE 31322. Computer Architecture II Lab

(0 -0- 0)

Corequisite: CSE 30322

Lab for Computer Architecture II.

CSE 40113. Design/Analysis of Algorithms

(3 -0- 3) Chen

Prerequisite: CSE 30331 or CSE 34331

Techniques for designing efficient computer algorithms and for analyzing computational costs of algorithms. Common design strategies such as dynamic programming, divide-and-conquer, and Greedy methods. Problem-solving approaches such as sorting, searching, and selection; lower bounds; data structures; algorithms for graph problems; geometric problems; and other selected problems. Computationally intractable problems (NP-completeness).

CSE 40151. Automated Identity Technology Using Iris Texture

(1.5 -0- 1.5) Bowyer

Can the texture pattern of the iris be used to create a reliable, unique identifier for each person on planet Earth? This course explores the technology of iris biometrics in depth: the underlying conceptual theory; image acquisition, image segmentation, texture analysis, matching of texture representations, identity management systems, and a selection of current research issues. The course includes readings from the literature, short writing assignments, and practical experience with current commercial iris biometric technology.

CSE 40152. Automated Identity Technology Using Face Recognition

(1.5 -0- 1.5) Bowyer; Flynn

This course will deal with technologies and algorithms for recognizing persons from face images. Topics include approaches using 2-D images, 3-D shape, and video.

CSE 40166. Computer Graphics

(3 -0- 3) Flynn

Graphics display devices. Two- and three-dimensional geometry: transformations and projections. Raster graphics algorithms; primitive rendering; 3-D modeling; scene description. Graphics software standards. Software projects.

CSE 40175. Ethical and Professional Issues

(3 -0- 3) Bowyer; Freeland

This course seeks to develop a solid foundation for reasoning about the difficult ethical, professional, and social controversies that arise in the computing field.

Emphasis is placed on identifying the appropriate legal and professional context and applying sound critical thinking skills to a problem. Topics covered include relevant professional codes of ethics, encryption/privacy/surveillance, freedom of speech, “cracking” of computer systems, development of safety-critical software, whistleblowing, and intellectual property. This course relies heavily on case study of real incidents, both historical and current.

CSE 40232. Software Engineering

(3 -0- 3) Santelices; McMillan

Prerequisite: CSE 30331 or CSE 34331

Software engineering is an engineering discipline that is concerned with all aspects of producing high-quality, cost-effective, and maintainable software systems. This course provides an introduction to the most important tasks of a software engineer: requirements engineering, software design, implementation and testing, documentation, and project management. A medium-scale design project combined with individual assignments complement the lectures.

CSE 40239. Simulation and Modeling

(3 -0- 3) Madey

Prerequisite: MATH 30530

Computer techniques for simulating the behavior of physical, biological, engineering, and social systems, including both natural and artificial systems. Applications include scientific enquiry, engineering design, manufacturing planning, training, entertainment, and games. Topics include animation, visualization, and graphical analysis of results.

CSE 40243. Compilers

(3 -0- 3) Thain

Prerequisite: CSE 30331 or CSE 34331

An introduction to the fundamental techniques and tools used in compiler construction. Topics include high-level language specification via context-free grammars; lexical analysis; parsing techniques such as top-down, bottom-up, and LR parsing; run-time environments; and code generation.

CSE 40244. Introduction to Systems Administration

(3 -0- 3) Freeland

Prerequisite: CSE 30341

An introduction to the concepts and practices of computer system administration, including software management, system device management, system security, management of system services, disaster planning, and disaster recovery.

CSE 40258. Network Management

(3 -0- 3) Freeland

An introduction to the concepts and practices of computer network management, including network installation, monitoring, and troubleshooting.

CSE 40322. Computer Architecture II

(4 -0- 4) Niemier

Detailed study of processor design, hardwired and microprogrammed control, pipelining, memory organization, I/O and bus protocols, parallel processors. The course makes extensive use of commercial computer-aided-design tools and culminates with a major project of designing and simulating a complete microprocessor.

CSE 40333. Mobile Application Development

(1 -6- 3) Flynn; Poellabauer

This course will provide comprehensive project experience in development of mobile applications on two software platforms: iPhone OS and Android. Students will receive intensive tutorial introductions to each platform, covering hardware capabilities and limitations, the development environment, and the communications infrastructure available on campus to support networking. A few programming exercises will be assigned so that students can demonstrate basic development proficiency. The remainder of the course will be devoted to project work. Students will then develop project concepts. These concepts, along with others supplied by the instructors and other interested parties, will be assessed by teams of three students and one concept per team will be chosen for development. Development

activity will include generation of design documentation, including specifications, UI mockups, state diagrams for execution and communications, presentations, and reports at various stages. During the development phase, teams will meet at least weekly with the instructors and with stakeholders acting as simulated “venture capitalists” funding the work. These meetings will involve a briefing of project status as well as demonstrations, interactions, etc. Each of these interactions will be graded. At the end of the semester, student projects will be evaluated by a jury and a suitable prize will be awarded to the project judged best in quality.

CSE 40416. System Interface Design

(3 -0- 3) Striegel

This course will focus on the interface to computing systems, in particular with respect to multi-sensory input/output through direct experience in laboratory and project activities. Specific interfaces to be covered include traditional graphical user interface (GUI) design, visualization via specialized controls (network graphs, virtual worlds), multimedia (audio, video), and sensory input/output (motion capture, multi-touch, etc.). Further topics include exploration of the effects of scaling/networking on responsiveness, exposure to multiple design choices (web, framework, native), and exposure to multiple contemporary programming languages.

CSE 40422. Computer System Design

(3 -0- 3) Striegel

Prerequisite: CSE 30322

Integrated hardware and software development, construction, and testing of digital systems by design teams to meet specifications subject to technical, economic, and environmental constraints.

CSE 40424. Human Computer Interaction

(3 -0- 3) D’Mello

An in-depth coverage of the field of human-computer interaction (HCI) including its history, goals, principles, methodologies, successes, failures, open problems, and emerging areas. Topics include the fundamental principles of HCI (e.g., consistency, compatibility, pictorial realism), models of the human (perception, attention, memory, learning), interaction modalities and paradigms (windowing systems, haptic interactions), best-practice design principles (user-centered design, universal design, rapid application development), techniques to evaluate interfaces and interactions (observational methods, think-aloud protocols, cognitive walkthroughs), and emerging topics in HCI (affective computing, augmented cognition, social computing, ubiquitous computing).

CSE 40435. Low Power Computing

(3 -0- 3) Hu

This course introduces students to both fundamental approaches and cutting-edge research results in low power computing from a variety of areas including hardware, software, compilers, and operating systems. Representative research papers in these areas will be studied in depth. The course will culminate with an end-of-semester project for students to investigate a low-power design approach in an area of his/her choice.

CSE 40462. VLSI Circuit Design

(3 -0- 3) Kogge

Prerequisite: CSE 20221 or EE 20242

CMOS devices and circuits, scaling and design rules, floor planning, data and control flow, synchronization and timing. Individual design projects.

CSE 40463. Real Time Systems

(3 -0- 3) Poellabauer

This course introduces students to fundamental topics in the theory and application of real-time systems. Topics covered include basic concepts such as predictability, worst-case execution time analysis, fault tolerance, real-time communication and synchronization, and advanced topics such as real-time operating systems, embedded computing, real-time CORBA and Java, and power management. The course will be project-oriented and the students have the opportunity

to analyze the deficiencies of general-purpose operating systems for the use in real-time and embedded systems and they will implement and experiment with real-time extensions to an operating system kernel.

CSE 40472. Program Analysis, Testing, and Evolution

(3 -0- 3) Santelices

This course introduces students to program analysis and its applications. Program analysis techniques are widely used for automated software-engineering tasks such as testing, verification, debugging, change analysis (evolution), comprehension, reverse engineering, and optimization. Today, these tasks are more important than ever as software systems grow in size and complexity and society becomes more dependent on their reliable functioning. This course consists of lectures, research discussions, and projects. Topics include: graph representations of program code, data and control dependence, program slicing, regression testing, test generation, model checking, semi-automated debugging, and change-impact analysis.

CSE 40532. Bioinformatics Computing

(3 -0- 3) Emrich

Subject matter changes depending on students' needs. Prospective topics include specific diseases (e.g., Malaria, dengue), molecular genetics of vectors, bioinformatics, and others. (On demand).

CSE 40543. Algorithms for Biological Networks

(3 -0- 3) Milenkovic

The course will cover basic biological concepts behind biological networks, fundamental graph theoretic algorithms, computational complexity and challenges in network analysis, existing post-genomic approaches for analyzing, modeling, and comparing biological networks, and applications of these approaches to understanding biological function, disease, and evolution.

CSE 40547. Computing at the Nanoscale

(3 -0- 3) Niemier

The purpose of this course will not just be to teach students how different emerging technologies compute and what applications they are best suited for. Rather, the course will be based in fundamental (yet understandable!) device physics and will work to show students interested in design what roles they can play in helping an emerging technology to evolve (i.e. studies similar to the work proposed here). However, work in design will only be meaningful if it is grounded in the experimental state of the art. Thus, a discussion of relevant device physics will always precede any work in design.

CSE 40567. Computer Security

(3 -0- 3) Striegel; Freeland

This course is a survey of topics in realm of computer security. This course will introduce the students to many contemporary topics in computer security ranging from PKIs (public key infrastructures) to cyber-warfare to security ethics. Students will learn fundamental concepts of security that can be applied to many; traditional aspects of computer programming and computer systems design. The course will culminate in a research project where the student will have an opportunity to more fully investigate a topic related to the course.

CSE 40600. CSE Service Projects

(V -0- V) Madey

Engineering Projects in Community Service.

CSE 40613. Introduction to E-Technology

(3 -0- 3) Madey

Introduction to concepts, theories, and techniques of Internet and WWW programming. The goal of this course is to prepare the student to design and develop Web-based applications, e-commerce applications, e-science applications, and Internet-based services. Students will be expected to design a large system (course project) requiring integration with other student projects.

CSE 40622. Cryptography

(3 -0- 3) Blanton

Concepts and principles of cryptography and data security. Topics covered include: principles of secrecy systems starting from classical ciphers such as Caesar and Vigenere; secret key encryption standards (DES, AES); public key encryption (RSA, ElGamal); information and number theory; hash functions; digital signatures; authentication; key exchange protocols and key certification; network centric protocols.

CSE 40625. Machine Learning

(3 -0- 3) Chawla

Prerequisite: CSE 40647 or CSE 60647 or CSE 40171 or CSE 60171

This course on machine learning will give an overview of many concepts, learning theory, techniques, and algorithms in machine learning, such as in reinforcement learning, supervised learning, unsupervised and semi-supervised learning, genetic algorithms, including advanced methods such as sequential learning, active learning, support vector machines, graphical and relational models. The course will give the student the basic ideas and intuition behind modern machine learning methods as well as a bit more formal understanding of how, why, and when they work. The course will also include discussions on some of the recent applications, and the interface with computer vision, systems, bioinformatics, and architecture. The course will have a strong focus on project and assignments, with emphasis on writing implementations of learning algorithms.

CSE 40633. Advanced Mobile Application Development

(3 -0- 3) Flynn; Poellabauer

Prerequisite: CSE 40333

Application-directed mobile programming, including database-backed mobile applications and API mashups. Development of apps for nonprofit and for-profit mobile programming challenge competitions.

CSE 40647. Data Mining and Pattern Recognition

(3 -0- 3) Chawla

Data mining uses methods from multiple fields including but not limited to: machine learning, pattern recognition, databases, probability and statistics, information theory and visualization. The focus of this course will primarily be the machine learning component, with relevant inclusions and references from probability, statistics, pattern recognition, and information theory. The course will give students an opportunity to implement and experiment with some of the concepts, and also apply them to the real world data sets. It will also touch upon some of the advances in related fields such as web mining, intrusion detection, bioinformatics, etc. In addition, we will discuss the role of data mining in the society.

CSE 40655. Technical Concepts of Visual Effects

(3 -0- 3) Bualuan

This class seeks to introduce students to some basic concepts of computer-generated imagery as it is used in the field of visual effects, and to delve into some of the technical underpinnings of the field. While some focus will rely on artistic critique and evaluation, most of the emphasis of the class will be placed on understanding fundamental concepts of 3-D modeling, texturing, lighting, rendering, and compositing. Those who excel in the visual effects industry are those who have both a strong aesthetic sense coupled with a solid understanding of what the software being used is doing "under the hood." This class, therefore, will seek to stress both aspects of the industry. From a methodology standpoint, the class will consist of lectures, several projects that will be worked on both in-class and out of class, an on-site photo shoot, and extensive open discussion. The nature of the material combined with the fact that this is the first execution of the class will mean that a significant degree of flexibility will need to be incorporated into the class structure.

CSE 40721. Advanced Architecture

(3 -0- 3) Niemier

Prerequisite: CSE 30321 or CSE 30322

This course discusses the fundamentals of a modern processor architecture. It begins with an abbreviated discussion of pipelining before continuing with topics

such as out-of-order execution and register renaming. Case studies of modern processors and the limits of superscalar architectures are considered. How the above fit in with a memory hierarchy (for single and multi-node machines) is also discussed. The class concludes with a study of multi-core architectures, problems associated with interconnect, thread extraction and other issues that are associated with and will affect state-of-the-art processing.

CSE 40746. Advanced Database Projects

(3 -0- 3) Bualuan

Prerequisite: CSE 30246

Advanced topics in database concepts; the course's main goal is a major final project, where groups will compete for prizes and awards.

CSE 40771. Distributed Systems

(3 -0- 3) Thain

A distributed system is a collection of independent machines that work together on a common problem. Distributed systems have been both interesting and difficult to build because their components may be autonomous and highly failure-prone. The primary material for this course will be a series of papers describing both working distributed systems and theoretical results. Topics may include distributed file and storage systems, batch computing, peer-to-peer computing, grid computing, process migration, fault tolerance, security, time and ordering, and distributed agreement. Students will undertake a course project that involves building and evaluating a distributed system. Grading will be based on discussion, exams, and the course project.

CSE 40774. Graduate Networks

(3 -0- 3) Striegel

This course will survey advanced networking topics, specifically the mechanics regarding scaling, connectivity, and performance in the core of the Internet. Topics to be covered include inter/intra-domain routing, TCP fundamentals, quality of service (QoS), content distribution, and network calculus. Students will be expected to create protocol parsers using the language of their choice, use/modify an appropriate network simulator and/or emulator, and complete a research project over the course of the semester.

CSE 40814. Mobile Computing

(3 -0- 3) Poellabauer

This course looks at the intersection between mobile computing, mobile telephony, and wireless networking, addressing the unique network protocol challenges and opportunities presented in these fields. While some of the more important physical layer properties of radio communications will be touched, the focus will be on network protocols above the physical layer, particularly media access control, transport protocols, and routing. The course will be project-oriented, giving students an opportunity to work with state-of-the-art mobile computing technology, including cell phone programming, location-aware systems using GPS, and emerging network protocols and applications.

CSE 40815. Wireless Sensor Networks

(3 -0- 3) Poellabauer

Prerequisite: CSE 30341 or CSE 30264

This course surveys the field of wireless sensor networks, including sensor node architectures, operating systems, wireless communication, and sensor applications. Students will also undertake a design and programming project, where they will develop sensor applications using state-of-the-art sensor nodes and handheld devices. The course is intended for graduate students at all levels and advanced undergraduate students.

CSE 40816. Pervasive Health

(3 -0- 3) Poellabauer

The current healthcare system faces numerous challenges such as large cost, lack of preventive care, massive increases in chronic disease conditions and age-related illnesses, widespread obesity, poor adherence to medical regimens, and shortage of healthcare professionals. The concept of pervasive healthcare promises to provide care to anyone, at anytime, and anywhere, while increasing the coverage,

quality, and efficiency of healthcare. This course studies how mobile and wireless technologies can be used to implement this vision of future healthcare. Topics include prevention techniques, continuous health monitoring, wireless and mobile technologies and standards for medical devices, personalized healthcare, body area networks, implantable devices, smartphone-based healthcare solutions, intelligent emergency management systems, pervasive healthcare data access, personal and electronic medical record systems, mobile telemedicine, context-awareness, and case studies of pervasive solutions for various health conditions and challenges.

CSE 40817. Healthcare Analytics: A Data-Driven Approach

(3 -0- 3) Chawla

Healthcare is facing a digital revolution from data collection to its application decision making. The Affordable Care Act has a major provision for electronic health records or EHR (first regulation will be effective Oct. 1, 2012). The EHR will not only reduce the paperwork and administrative effort, but it will also lead to a reduction in costs, reduction in errors, improved and standardized data, and the meaningful use of such data will improve the quality of care (preventative medicine). With the availability of the digitized data comes the opportunity of novel large scale analytics towards prospective healthcare—a personalized assessment of one's health, along with a sundry of recommended lifestyle changes. Meaningful use of the electronic health care data is to not only take a giant leap towards personalized and prospective health care, but also reduce the healthcare costs by designing a better disease management strategy, leading to lifestyle adjustments and pre-emptive measures. Personalized medicine integrates genetic, genomic, and clinical information to predict a person's likelihood of developing a disease, its onset course, and potential treatment plans. The course will bring together the intersection of medicine and computational thinking for the grand challenge problems in healthcare. It will focus on aspects of information technology or informatics in EHR (design and development, current practices, standards and terminology), integration with genetic/genomic data, relevant concepts of data mining and analytics (including visualization) for evidence based medicine, prospective healthcare and personalized medicine, social networks for health, and privacy and ethics. The course will also feature talks from leaders in healthcare sector. The course will have a strong focus on case studies and project. The students will have the opportunities to work on real data-driven problems for healthcare

CSE 40822. Cloud Computing

(3 -0- 3) Brenner; Jarek

This course introduces fundamentals and applications of cloud computing intended primarily for computer science and computer engineering majors. Core concepts of virtualization, cloud infrastructure components, and cloud services will be covered. Specific areas of discussion include virtual machine performance, cloud management interfaces, network and storage infrastructure, IaaS, PaaS, SaaS, QoS, cloud security, and hybrid cloud models. Students will have the opportunity to apply their understanding of cloud infrastructure in practice through course projects with access to both campus and commercial cloud services.

CSE 40827. Ubiquitous Computing

(3 -0- 3) Poellabauer

The primary objective of this course is to provide an introduction to the concept of ubiquitous (or pervasive) computing, with an emphasis on the systems challenges in building environments that provide "ambient intelligence". Topics covered will include design issues for ubiquitous computing, wireless communication infrastructures, mobile and urban sensing scenarios, security and privacy issues, user interfaces, resource management, and application areas. Students are expected to read a number of papers in these areas, prepare a presentation on a topic of their choice, and execute a term project that will allow them to apply the learned concepts in real-world applications.

CSE 40833. Introduction to Parallel Algorithms and Programming

(3 -0- 3) Emrich

This course will provide a comprehensive introduction to parallel algorithms and parallel programming. Emphasis will be on both algorithmic techniques and parallel programming using MPI. Topics covered will be: models of parallel

computation, performance measures, basic parallel constructs and communication primitives, and parallel algorithms for selected problems including sorting, matrix, tree and graph problems. Programming assignments will be done on a 22-node partition of a campus computing cluster.

CSE 40843. Assistive Robotics

(3 -0- 3)

The course will be an introduction to useful topics in robotics and soft computing. The emphasis of the material covered is on the tools and approaches which can be used to implement a “robotic brain” (high level control). The course seeks to equip students who have some exposure to programming with the capability to convert robotic sensing and actuation into resources for assistive robotics.

CSE 40884. Complex Networks—Interdisciplinary Science

(3 -0- 3) Milenkovic

Networks (or graphs) have been used to model many real-world phenomena in various research domains, e.g., Internet, Facebook, disease spread, drug target interactions, interactions between proteins in a cell, etc. The course will introduce students to different types of real-world networks, including biological, ecological, chemical, social, technological, information, transportation, and financial networks. The study of these systems involves researchers from many different disciplines, such as computer science, physics, biology, mathematics, engineering, and sociology, which has led to formation of many interdisciplinary fields such as computational and systems biology, medical informatics, systems pharmacology, chemical graph theory, computational sociology, etc. The complexity of networks has become the central issue in their characterization, modeling and understanding. Because of the increasing growth of real-world network data there is a need to use mathematical techniques from various scientific disciplines, e.g., graph theory, machine learning, and information theory, in order to analyze the networks more adequately and gain deeper insights into their underlying function. The course will explore current approaches for network analysis in the interdisciplinary field of complex networks. Some of the vibrant research questions that will be studied include network inference, network characterization, network modeling and evolution, community structure (i.e., cluster) identification, network comparison, network integration, and network visualization.

CSE 40943. Autonomous Mobile Robots

(3 -0- 3) Riek

Prerequisite: CSE 20211 and CSE 20212

This course introduces the fundamentals of autonomous mobile robots. We will explore robot locomotion, sensing, perception, localization, mapping, and planning. Because robotics is an inherently physical science, students will have the opportunity to practice concepts learned in class on robots during weekly laboratory assignments.

CSE 46101. Directed Readings

(3 -0- 3)

This course consists of directed readings in Computer Science Engineering.

CSE 47900. Special Studies

(V -0- V) *Prerequisite:* CSE 20212

Individual or small group study under the direction of a CSE faculty member in an undergraduate subject not currently covered by any University course.

CSE 48901. Undergraduate Research

(V -0- V)

A research project at the undergraduate level under the supervision of a CSE faculty member.

Electrical Engineering

EE 20222. Introduction to Electrical Engineering and Embedded Systems

(4 -0- 4) Schafer

Prerequisite: PHYS 10320 (may be taken concurrently) and (AME 30314 or AME 34314 or MATH 30650)

Corequisite: EE 21222

An introduction to Electrical Engineering featuring microcontroller based C programming of embedded systems. The course includes basic concepts of electrical circuits and electronic devices including operational amplifiers and transistors. Labs feature microcontroller C programming for an embedded control environment, with emphasis on interfacing microcontrollers to a variety of sensor and actuators.

EE 20224. Introduction to Electrical Engineering

(3 -3- 4) Huang

Prerequisite: MATH 10560

Corequisite: EE 21224

A project-oriented introduction to electrical engineering principles in which long-term projects are used to introduce such topics as node and loop circuit analysis, network theorems, first-order circuits, operational amplifiers, communications, systems theory, microprocessor interfacing techniques, and computer programming. Fall.

EE 20234. Electric Circuits

(3 -0- 3) Minero

Prerequisite: (EE 20224 or EE 24224 or EE 20222) and PHYS 10320

Analysis of first, second, and higher order circuits, including natural response, forced response, phasor concepts, AC methods, frequency response, and Laplace transform techniques.

EE 20242. Electronics I

(3 -3- 4) Fay

Prerequisite: EE 20224 or EE 24224 or EE 20222

Corequisite: EE 21242

Introduction to electronic circuits and systems. Basic diode and transistor circuits and the associated DC bias analysis and low-frequency AC small signal analysis. Voltage and feedback amplifiers. Logic and analog circuits utilizing discrete solid-state devices. Spring.

EE 21222. Introduction to Electrical Engineering and Embedded Systems Lab

(0 -2- 0)

Corequisite: EE 20222

An introduction to electrical engineering featuring microcontroller based C programming of embedded systems. The course includes basic concepts of electrical circuits and electronic devices including operational amplifiers and transistors. Labs feature microcontroller C programming for an embedded control environment, with emphasis on interfacing microcontrollers to a variety of sensor and actuators.

EE 21224. Introduction to Electrical Engineering Lab

(0 -0- 0)

Corequisite: EE 20224

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

EE 30342. Electronics II

(3 -3- 4) Porod

Prerequisite: EE 20242*Corequisite:* EE 31342

Fundamentals of transistor integrated circuit design, including frequency response, feedback, stability, and frequency compensation with application to operational amplifiers, phase-locked loops, and AM/FM transmission and reception. Includes laboratory. Spring.

EE 30344. Signals and Systems I

(3 -0- 3) Fuja

Prerequisite: EE 20234 and MATH 20580*Corequisite:* EE 32344

Behavior of linear systems in both time-and transform-domain representations; convolution integrals and summations, Fourier series signal expansions, Fourier and Laplace transform analysis of linear systems; discrete time Fourier transforms. Fall.

EE 30347. Semiconductors I: Fundamentals

(3 -0- 3) Seabaugh

Prerequisite: PHYS 10320*Corequisite:* EE 32347

An introduction to solid-state electronic devices, presenting the basis of semiconductor materials, conduction processes in solids, and other physical phenomena fundamental to the understanding of transistors, optoelectronic devices, and silicon integrated circuit technology. Fall.

EE 30348. Electromagnetic Fields and Waves I: Fundamentals

(3 -0- 3) Howard

Prerequisite: MATH 20550 and PHYS 10320*Corequisite:* EE 32348

A basic course in electromagnetic field theory, using Maxwell's equations as the central theme. Vector analysis is employed extensively. Fall.

EE 30354. Signals and Systems II

(3 -0- 3) Antsaklis

Prerequisite: EE 30344 or EE 34344

Linear systems analysis with emphasis on discrete time case; sampling theory, discrete Fourier transform, Z-transform, applications in signal processing, communications, and control. Spring.

EE 30357. Semiconductors II (Devices)

(3 -0- 3) Xing

Prerequisite: EE 30347*Corequisite:* EE 32357

Applications of transport phenomena in semiconductors to explain the terminal behavior of a variety of modern electronic devices such as bipolar junction transistors, MOS structures, and field effect transistors. Spring.

EE 30358. Electromagnetic Fields and Waves II: Applications

(3 -0- 3) Jena

Prerequisite: EE 30348 or EE 34348

Propagation of traveling waves along transmission lines: transient waves, steady-state sinusoidal time and space variations. Wave equations for unbounded media and in wave guides. Spring.

EE 30363. Random Phenomena in Electrical Engineering

(3 -0- 3) Stevenson

Prerequisite: MATH 20580

An introduction to probability, random variables and random processes as encountered in information processing systems. Analysis and estimation of stochastic signals and noise in linear systems.

EE 30372. Electric Machinery and Power Systems

(3 -0- 3) Sauer

Prerequisite: EE 20234 and PHYS 10320

Introduction to electric power systems and electro-mechanical energy conversion, including generators, transformers, three-phase circuits, AC and DC motors, transmission lines, power flow, and fault analysis. Spring.

EE 31342. Electronics II Lab

(0 -0- 0)

Corequisite: EE 30342

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

EE 32344. Signals and Systems I Recitation

(0 -0- 0)

Corequisite: EE 30344

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

EE 32347. Semiconductors I: Recitation

(0 -0- 0)

Corequisite: EE 30347

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

EE 32348. Electromagnetic Fields and Waves I Recitation

(0 -0- 0)

Corequisite: EE 30348

Recitation designed to help engineering students with their problem solving skills in a smaller group setting.

EE 32354. Signals and Systems II Recitation

(0 -0- 0)

Corequisite: EE 30354

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

EE 32357. Semiconductors II Recitation

(0 -0- 0)

Corequisite: EE 30357

Recitation designed to help engineering students with their problem-solving skills in a smaller group setting.

EE 40432. Introduction to Systems Biology

(V -0- V) Timp

Prerequisite: CHEM 10122 and MATH 20580

The goal of this course is to highlight elementary design principles of biological systems. Many of the underlying principles that govern the biochemical interactions within a cell can be related to networks consisting of basic building-block circuits with multiple inputs/output, feedback and feedforward etc. This course draws on control theory and simple biology to provide a mathematical framework to understand these biological networks. The course is intended for advanced undergraduates or graduate students.

EE 40442. Power Electronics

(3 -0- 3) Lemmon

Prerequisite: EE 20242 and (EE 30344 or EE 34344)

An introduction to electronic systems for power conversion, including rectifiers, inverters and DC-DC converters. PSPICE employed for simulation.

EE 40446. I C Fabrication

(2 -6- 4) Snider

Corequisite: EE 41446

This course introduces the student to the principles of integrated circuit fabrication. Photolithography, impurity deposition and redistribution, metal deposition and definition, and other topics. Students will fabricate a 5000 transistor CMOS LSI circuit. Fall.

EE 40447. Alternative Energy Devices and Materials

(3 -0- 3) Wistey

Prerequisite: PHYS 20330

This course is for upper level undergraduates and early graduate students interested in the scientific challenges of alternative energy generation, storage, and efficient use. The course will cover photovoltaic and solar power in depth, with additional coverage of fuel cells, hydrogen, energy storage, wind power, modern nuclear power, thermoelectrics, geothermal, and more. Upon completion of this course, students should be able to analyze important devices and predict the power output under various conditions, compare their strengths and weaknesses, plan a sustainable power grid, and describe the technical, economic, and political challenges to making each of these alternative energies successful.

EE 40448. Electrical Energy Extraction

(3 -0- 3)

This course will teach the physics and engineering of devices which convert Lorentz or Newtonian forces into electromagnetic waves or electrical charge. Students will improve their understanding of the laws of electromagnetism and physical principles behind generators, solar cells, and a myriad of new devices under development to extract energy from electromagnetic waves, heat, vibrations and human activity. This course aims to provide a quantitative understanding of the efficiency of these devices and the limitations imposed by nature on energy extraction. Electromagnetic laws, materials physics, and circuit theory will be introduced to enable the analysis and design of these devices, toward a complete description of the conversion of forces to charges and current.

EE 40453. Communication Systems

(3 -0- 3) Laneman

Prerequisite: EE 30354*Corequisite:* EE 41453

An introduction to the generation, transmission, and detection of information-bearing signals. Analog and digital modulation techniques including AM, FM, PSK, QAM, and PCM. Time and frequency division multiplexing. Fall.

EE 40455. Control Systems

(3 -3- 4) Lin

Prerequisite: EE 30354 or EE 34354*Corequisite:* EE 41455

Design of linear feedback control systems by state-variable methods and by classical root locus, Nyquist, Bode and Routh-Hurwitz methods. Fall.

EE 40458. Microwave Circuit Design and Measurements Laboratory

(2 -3- 3) Fay

Prerequisite: EE 30348 or EE 34348*Corequisite:* EE 41458

This course is an introduction to microwave circuit design and analysis techniques, with particular emphasis on applications for modern microwave communication and sensing systems. An integrated laboratory experience provides exposure to fundamental measurement techniques for device and circuit characterization at microwave frequencies. Students will develop an enhanced understanding of circuit design and analysis principles as applied to modern microwave circuits, as well as become familiar with design techniques for both hand analysis and computer-aided design. An appreciation for basic measurement techniques for characterization of microwave devices, circuits, and systems through laboratory experiments will also be developed. Fall.

EE 40462. VLSI Circuit Design

(3 -0- 3) Kogge

Prerequisite: CSE 20221 and EE 20242

CMOS devices and circuits, scaling and design rules, floor planning, data and control flow, synchronization, and timing. Individual design projects.

EE 40468. Photonics

(2 -3- 3) Hall

Corequisite: EE 41468

A hands-on overview of the important role of photons alongside electrons in modern electrical engineering. Photonics technologies studied include lasers, optical fibers, integrated optics, optical signal processing, holography, optoelectronic devices, and optical modulators. A survey of the properties of light, its interactions with matter, and techniques for generating, guiding, modulating, and detecting coherent laser light. Spring.

EE 40471. Digital Signal Processing

(3 -0- 3) Haenggi

Prerequisite: EE 30354) and (EE 30363 or MATH 30440 or MATH 30530

An introduction to the theory and application of digital information processing: analog/digital and digital/analog conversion, transform domain representation of discrete-time signals and systems, Z-transform, signal flow graphs, discrete Fourier transform, fast Fourier transforms, frequency analysis, filter design, filter structures, Wiener filter, finite-precision effects, applications in communications, and the analysis and synthesis of audio and image data. Spring.

EE 40472. Electrical and Hybrid Vehicles

(3 -0- 3) Bauer

Prerequisite: EE 20234 and PHYS 10320

The course is an introduction to modern electric and hybrid-electric vehicles. It covers basic aspects of batteries, electric motors, powertrain systems, and the vehicle-road system. Emphasis will be placed on energy and power flows in electric and hybrid-electric vehicle systems. Optimization of energy usage for given driving cycles will also be addressed in some detail. Some of the commercially available power management schemes will be introduced and potential alternatives will be explored.

EE 41430. Senior Design I

(1 -6- 3)

The first part of a year-long senior design project. In this part, students will choose a project, develop the paper design, plan the implementation, and purchase necessary materials. Fall.

EE 41440. Senior Design II

(0 -9- 3)

Prerequisite: EE 41430

The second part of a year-long senior design project. In this part, students implement, test and document their senior project. Spring.

EE 41446. IC Fabrication Laboratory

(0 -0- 0)

Corequisite: EE 40446

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

EE 41453. Communications Systems Lab

(0 -2- 1)

Corequisite: EE 40453

This is a senior elective laboratory course covering practical aspects of modern analog and digital communication systems. Objectives for the course include: surveying characteristics and models of communication channels and transceiver circuits; developing standard system block diagrams, performance metrics, and

component algorithms; reinforcing practical aspects through laboratory exercises using software-defined radio; enabling deeper exploration through self-study and collaboration.

EE 41455. Control Systems Laboratory

(0 -0- 0)

Corequisite: EE 40455

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

EE 41458. Microwave Circuit Design and Measurement Lab

(0 -0- 0)

Corequisite: EE 40458

This course supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

EE 41468. Photonics Lab

(0 -0- 0)

Corequisite: EE 40468

This lab supplements the materials presented in the lecture setting and gives students the opportunity to reinforce their learning through hands-on experiments and through demonstrations in a laboratory environment.

EE 47012. Audio Technology

(3 -0- 3)

This course examines scientific and engineering principles at work behind audio technology and sound phenomena. Will explore acoustics, microphone & speaker characteristics, equalization, Fourier Transforms, digital formats, recording, synthesizers and more.

EE 47013. Microwave and THz Circuits, Components and Systems

(3 -0- 3)

Prerequisite: EE 40458

In this class we explore the theory, design and analysis of microwave/THz passive and active circuits, components and systems. The theory and techniques covered in this class can be applied to high speed circuits with operation frequencies up to terahertz (THz) region. Topics include transmission line theory, advanced EM theorems and principles (e.g. image theory, the equivalence principle), typical waveguides (e.g. microstrip, CPW, rectangular metal waveguide), microwave network analysis, passive circuits and components (couplers, resonators, filters), antennas, active circuits and systems (detectors, mixers, receivers, amplifiers and oscillators), and finally an overview of millimeter-wave and THz techniques (multipliers, transceivers and quasi-optical techniques).

EE 47014. Multimedia Signals and Systems

(3 -0- 3)

Prerequisite: EE 30344

This course will examine multimedia signals and design of systems for the capture, storage, transmission and reproduction of such signals. Signals of particular interest will include, audio and visual signals. The course will examine both the theoretical underpinnings of the representations and processing techniques along with common signal standards such as MP3, JPEG and MPEG.

EE 47039. Introduction to Quantum Computing

(3 -0- 3)

Prerequisite: MATH 20580 or MATH 20610

This course will introduce the matrix form of quantum mechanics and discuss the concepts underlying the theory of quantum information. Some of the important algorithms will be discussed, as well as physical systems that have been suggested for quantum computing.

EE 47498. Special Studies

(V -V- V)

Individual or small group study under the direction of a faculty member in an undergraduate subject not concurrently covered by any University course.

EE 48499. Undergraduate Research

(V -V- V)

A research project at the undergraduate level under the supervision of a faculty member.

EE 48999. Undergraduate Research Experience

(0 -0- 0)

This is a zero-credit course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. No course work is required.

Engineering (Nondepartmental)

EG 00100. Introduction to Engineering

(3 -3- 0) Bualuan

A noncredit course for high school students who have completed the junior year. A survey of the courses of study and career paths in aerospace, chemical, civil, computer, electrical, and mechanical engineering. An introduction to problem solving and computer programming through group projects. Trips to tour local and nearby industries, as examples of various engineering environments, are included. Offered in the first three weeks of the Summer Session.

EG 00155. Introduction to Engineering Program Counselors

(5 -5- 0) Bualuan

Introduction to Engineering summer program for high school juniors.

EG 00200. Introduction to Engineering

(3 -3- 0) Bualuan

The same course content as EG 00100. Offered in the second three weeks of the summer session.

EG 00300. Introduction to Engineering

(5 -0- 0)

Special Lab for select EG00100/00200 students.

EG 10111. Introduction to Engineering Systems I

(3 -0- 3) Brockman

Corequisite: EG 11111

The first of a two-part sequence intended to introduce engineering to first-year intents and to establish a foundation for their studies in any of the engineering disciplines. Team-oriented design projects are used to provide a multidisciplinary view of engineering systems and to present the engineering method. Structured programming is introduced, and computing skills are developed for engineering analysis, synthesis, and technical communication. Fall.

EG 10112. Introduction to Engineering Systems II

(3 -0- 3) Goodrich Lent

Prerequisite: EG 10111 and MATH 10550 (may be taken concurrently)

Corequisite: EG 11112

The second of a two-course sequence intended to continue the introduction of first-year intents to the engineering disciplines. Multidisciplinary projects are used to illustrate the application of engineering modeling, analysis, and design principles to solve a variety of practical problems. The projects are intended to span areas of interest in all departments of the College of Engineering. Structured programming and software skills are further developed. Spring.

EG 11111. Introduction to Engineering Systems I—Learning Center

(0 -0- 0)

Corequisite: EG 10111

Learning center section for Introduction to Engineering Systems I Course.

EG 11112. Introduction to Engineering Systems II—Learning Center

(0 -0- 0)

Corequisite: EG 10112

Learning center section associated with Introduction to Engineering Systems II course.

EG 40401. Energy Technology and Policy

(3 -0- 3) Incropera

This three-credit course provides a comprehensive treatment of the role of energy in society and may be taken concurrently by engineering and non-engineering students. It proceeds along two parallel tracks, one dealing with the scientific/technical foundations of energy utilization and the other with its economic, political, environmental, and ethical implications. Scientific/technical issues will be treated

at a level that is appropriate for non-engineers and at the same time beneficial to both engineers and non-engineers. The required background in mathematics is largely confined to high school algebra, with occasional use of elementary concepts from differential and integral calculus.

EG 40421. Integrated Engineering and Business Fundamentals

(3 -0- 3) Alworth

The course is designed to improve the effectiveness of engineers working in corporations by teaching how and why businesses operate. Subjects covered include business financial reporting, business plans, the development processes, project management, the supply chain, and a history of quality topics. Numerous guest speakers are utilized to give the students exposure to successful business executives and reinforce the business processes covered in class. Fall.

EG 40422. Advanced Integrated Engineering and Business Topics

(3 -0- 3) Brauer

Prerequisite: EG 40421 or EG 44421

The second course in the sequence integrates the elements taught in the fundamentals course. Subjects covered include a team-oriented Web-based business simulation exercise, management, effective communications, and a review of leading-edge trends in modern corporations. Spring.

EG 48888. NDNano Undergraduate Research (NURF)

(0 -0- 0)

NDNano research under the direction of the NDNano Center faculty member.

EG 48999. Research Experience for Undergraduates

(0 -0- 0)

This is a zero-credit, ungraded course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. Registration requires a brief description of the research or project to be pursued and the permission of the director of the Summer Session. This course is taken as an indication of the student's status on campus and is meant to allow the registered student to use the University facilities as the Summer Session permits. No course work is required.

College of Science

Applied and Computational Math and Statistics

ACMS 10140. Elements of Statistics

(3 -0- 3)

This course is intended for those students who may or may not plan to use statistics in their chosen careers, but wish nevertheless to become informed and astute consumers. Topics include statistical decision-making, sampling, data representation, random variables, elementary probability, conditional probabilities, independence, and Bayes' rule. The methodology will focus on a hands-on approach. Concepts and terminology will be introduced only after thorough exposure to situations that necessitate the concepts and terms. Care will be exercised to select a variety of situations from the many fields where statistics are used in modern society. Examples will be taken from biology and medicine (e.g. drug testing, wild animal counts), the social sciences, psychology, and economics. This course counts only as general elective credit for students in the College of Science.

ACMS 10141. Statistical Reasoning in Politics

(3 -0- 3) Huebner

Essential concepts of statistical reasoning are explored through the analysis of politics, elections, and media. Topics covered include data exploration, measures of variability, inference, correlation, and linear regression. Real datasets are used to illustrate many concepts, and concepts are introduced by references to actual events. Calculations will be conducted in Microsoft Excel and/or with a graphing calculator.

ACMS 10145. Statistics for Business and Economics I

(3 -0- 3) Huebner

A conceptual introduction to the science of data for students of business and economics. Descriptive statistics: graphical methods, measures of central tendency, spread, and association. Basic probability theory and probability models for random variables. Introduction to statistical inference: confidence intervals and hypothesis tests. Many examples will be based on real, current business and economics datasets. Calculations will be illustrated in Microsoft Excel.

ACMS 10150. Elements of Statistics II

(3 -0- 3)

Prerequisite: ACMS 10140 or MATH 10140

The goal of this course is to give students an introduction to a variety of the most commonly-used statistical tools. A hands-on approach with real data gathered from many disciplines will be followed. Topics include inferences based on two samples, analysis of variance, simple linear regression, categorical data analysis, and non-parametric statistics. This course counts only as general elective credit for students in the College of Science.

ACMS 20210. Scientific Computing

(3 -0- 3)

Prerequisite: MATH 20580 (may be taken concurrently) or MATH 20610 (may be taken concurrently) or ACMS 20580 (may be taken concurrently) or ACMS 20610 (may be taken concurrently)

An introduction to solving mathematical problems using computer programming in high-level languages such as C.

ACMS 20340. Statistics for Life Sciences

(3 -0- 3)

Prerequisite: MATH 10360 or MATH 10460 or MATH 10560

An introduction to the principles of statistical inference following a brief introduction to probability theory. This course does not count as a science or mathematics

elective for mathematics majors. NOTE: Students may not take more than one of ACMS 20340, BIOS 40411 and MATH 20340. Not open to students who have taken MATH 30540.

ACMS 20550. Introduction to Applied Mathematics Methods I

(3 -1- 3.5)

Prerequisite: MATH 10560 or MATH 10860

Corequisite: ACMS 22550

An introduction to the methods of applied mathematics. Topics include: basic linear algebra, partial derivatives, Taylor and power series in multiple variables, Lagrange multipliers, multiple integrals, gradient and line integrals, Green's theorem, Stokes theorem and divergence, Fourier series and transforms, introduction to ordinary differential equations. Applications to real-world problems in science, engineering, the social sciences and business will be emphasized in this course and ACMS 20750. Computational methods will be taught. Credit is not given for both ACMS 20550 and PHYS 20451.

ACMS 20620. Applied Linear Algebra

(3 -0- 3)

Prerequisite: ACMS 20210 (may be taken concurrently)

The objective of this class is to impart the fundamental knowledge in linear algebra and computational linear algebra that are needed to solve matrix algebra problems in application areas. Appropriate software packages will be used.

ACMS 20750. Introduction to Applied Mathematical Methods II

(3.5 -1- 3.5)

Prerequisite: ACMS 20550 or PHYS 20451

Corequisite: ACMS 22750

The fundamental methods of applied mathematics are continued in this course. Topics include: variational calculus, special functions, series solutions of ordinary differential equations (ODE), orthogonal functions in the solution of ODE, basic partial differential equations and modeling heat flow, vibrating string, and steady-state temperature. Topics in complex function theory include contour integrals, Laurent series and residue calculus, and conformal mapping. The course concludes with a basic introduction to probability and statistics. Credit is not given for both ACMS 20750 and PHYS 20452.

ACMS 22550. Introduction to Applied Mathematics Methods I Tutorial

(0 -0- 0)

Corequisite: ACMS 20550

Tutorial for Introduction to Applied Mathematics Methods I

ACMS 22750. Introduction to Applied Mathematics Methods II Tutorial

(0 -1- 0)

Corequisite: ACMS 20750

Tutorial for Introduction to Applied Mathematics Methods II.

ACMS 30440. Probability and Statistics

(3 -0- 3)

An introduction to the theory of probability and statistics, with applications to the computer sciences and engineering. Topics include discrete and continuous random variables, joint probability distributions, the central limit theorem, point and interval estimation and hypothesis testing.

ACMS 30530. Introduction to Probability

(3 -0- 3)

Prerequisite: MATH 20550 or ACMS 20550 or MATH 20850

An introduction to the theory of probability, with applications to the physical sciences and engineering. Topics include discrete and continuous random variables, conditional probability and independent events, generating functions, special discrete and continuous random variables, laws of large numbers and the central limit theorem. The course emphasizes computations with the standard distributions of probability theory and classical applications of them.

ACMS 30540. Mathematical Statistics

(3 -0- 3)

Prerequisite: ACMS 30530 or MATH 30530

An introduction to mathematical statistics. Topics include distributions involved in random sampling, estimators and their properties, confidence intervals, hypothesis testing including the goodness-of-fit test and contingency tables, the general linear model and analysis of variance.

ACMS 30600. Statistical Methods & Data Analysis I

(3 -0- 3)

Prerequisite: ACMS 30440 or ACMS 30530 or MATH 30530

Introduction to statistical methods with an emphasis on analysis of data. Estimation of central values. Parametric and nonparametric hypothesis tests. Categorical data analysis. Simple and multiple regression. Introduction to time series. The SOA has approved this course for VEE credit in Applied Statistics.

ACMS 30610. Introduction to Financial Mathematics

(3 -0- 3)

Prerequisite: ACMS 20550 or ACMS 20620 or ACMS 20750 or ACMS 30530 and MATH 30610

The course serves as a preparation for first actuarial exam in financial mathematics, known as Exam FM or Exam 2. The first part of the course deals with pricing of fixed income securities, such as bonds and annuities. The second part of the course can serve as an introduction to derivative securities such as options and futures. Although the amount of material for both parts is almost the same, Exam FM devotes usually about 2/3 of its questions to Part 1. Therefore, about 2/3 of the course is devoted to Part 1. Topics covered: interest rates, annuities, loans and bonds, forwards, options, hedging, and swaps.

ACMS 40212. Advanced Scientific Computing

(3 -0- 3)

This course covers fundamental material necessary for using high performance computing in science and engineering. There is a special emphasis on algorithm development, computer implementation, and the application of these methods to specific problems in science and engineering.

ACMS 40390. Numerical Analysis

(3 -0- 3)

Prerequisite: MATH 20750 or MATH 20860 or MATH 30650 or ACMS 20750 or PHYS 20452

An introduction to the numerical solution of ordinary and partial differential equations. Topics include the finite difference method, projection methods, cubic splines, interpolation, numerical integration methods, analysis of numerical errors, numerical linear algebra and eigenvalue problems, and continuation methods.

ACMS 40395. Numerical Linear Algebra

(3 -0- 3) Zhang

Prerequisite: (MATH 20610 or ACMS 20620) and (ACMS 40390 or MATH 40390)

The course will cover numerical linear algebra algorithms which are useful for solving problems in science and engineering. Algorithm design, analysis and computer implementation will be discussed.

ACMS 40410. Algorithms and Applied Combinatorics

(3 -0- 3)

Prerequisite: (ACMS 20620 or MATH 20610) and ACMS 20210 and ACMS 20750 and (ACMS 30530 or MATH 30530) and (ACMS 40390 or MATH 40390)

The course will cover the major algorithms of applied mathematics (and in particular numerical algorithms) and the combinatorics related to the algorithms. This includes the basic theory of partitions, combinations, posets and lattices, generating functions, enumeration and coloring problems, graph theory (including spectral theory and network flow), parallel solution of systems of polynomial equations, random numbers, sorting algorithms, pattern matching, fast Fourier transform and fast Poisson solvers, simulated annealing, and basics of dynamic programming and linear programming.

ACMS 40570. Mathematical Methods in Financial Economics

(3 -0- 3)

Prerequisite: (MATH 30530 and MATH 20750) or (MATH 30650 and MATH 30750) or MATH 30850 or FIN 30600 or FIN 70670

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time, will be discussed. The pricing of derivative securities in continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

ACMS 40630. Nonlinear Dynamical Systems

(3 -0- 3)

Theory of nonlinear dynamical systems has applications to a wide variety of fields, from physics, biology, and chemistry, to engineering, economics, and medicine. This is one of its most exciting aspects—that it brings researchers from many disciplines together with a common language. A dynamical system consists of an abstract phase space or state space, whose coordinates describe the dynamical state at any instant; and a dynamical rule which specifies the immediate future trend of all state variables, given only the present values of those same state variables. Dynamical systems are “deterministic” if there is a unique consequent to every state, and “stochastic” or “random” if there is more than one consequent chosen from some probability distribution. A dynamical system can have discrete or continuous time. The discrete case is defined by a map and the continuous case is defined by a “flow.” Nonlinear dynamical systems have been shown to exhibit surprising and complex effects that would never be anticipated by a scientist trained only in linear techniques. Prominent examples of these include bifurcation, chaos, and solitons. This course will be self-contained.

ACMS 40730. Mathematical/Comp Modeling

(3 -0- 3)

Prerequisite: MATH 20750 or MATH 30650 or ACMS 20750

Introductory course on applied mathematics and computational modeling with emphasis on modeling of biological problems in terms of differential equations and stochastic dynamical systems. Students will be working in groups on several projects and will present them in class in the end of the course.

ACMS 40750. Partial Differential Equations

(3 -0- 3)

Prerequisite: MATH 20750 or MATH 30650 or MATH 30850 or ACMS 20750

An introduction to partial differential equations. Topics include Fourier series, solutions of boundary value problems for the heat equation, wave equation and Laplace's equation, Fourier transforms, and applications to solving heat, wave and Laplace's equations in unbounded domains.

ACMS 40842. Time Series Analysis

(3 -0- 3)

Prerequisite: ACMS 30540 or ACMS 30600

This is an introductory and applied course in time series analysis. Popular time series models and computational techniques for model estimation, diagnostic and

forecasting will be discussed. Although the book focuses on financial data sets, other data sets, such as climate data, earthquake data and biological data, will also be included and discussed within the same theoretical framework.

ACMS 40852. Statistical Methods in the Biological and Health Sciences

(3 -0- 3)

Prerequisite: ACMS 30540 or ACMS 30600

This course surveys the statistical methods used in biological and biomedical research. Topics include study designs commonly used in health research including case-control, cross-sectional, prospective and retrospective studies; statistical analysis of different types of data arising from biological and health research including categorical data analysis, count data analysis, survival analysis, linear mixed models, lab data, and diagnostic tests. Design and analysis of clinical trials, relative risk assessment, statistical power and sample size calculations will also be covered by the class. Additional topics of introduction to statistical genetics and bioinformatics might also be covered.

ACMS 40860. Statistical Methods in Molecular Biology

(3 -0- 3)

Prerequisite: ACMS 30600

This is an introductory and applied course in statistical genetics and bioinformatics. Problems and statistical techniques in various fields of genetics, genomics and bioinformatics will be discussed. Since knowledge in these areas is evolving rapidly, novel and prevailing methods, such as next generation sequencing data analysis and network models, will also be introduced. Moreover, guest lectures may be given by visiting speakers.

ACMS 40870. Statistical Methods in Social Sciences

(3 -0- 3)

Prerequisite: ACMS 30600

This is an introductory and applied course in the statistical methods used in social science research.

ACMS 40880. Statistical Methods in Pattern Recognition and Prediction

(3 -0- 3)

Prerequisite: ACMS 30600

Statistical theories and computational techniques for extracting information from large data sets, and building and testing predictive models.

ACMS 40890. Statistical Methods for Financial Risk Management

(3 -0- 3)

Prerequisite: ACMS 30600 or ACMS 30540

This course is an introduction to some of the models and statistical methodology used in the practice of managing market risk for portfolios of financial assets. Throughout the course, the emphasis will be on the so-called loss distribution approach, a mapping from the individual asset returns to portfolio losses. Methodology presented will include both univariate and multivariate statistical modeling, Monte Carlo simulation, and statistical inference. This course will make heavy use of the R statistical computing environment.

ACMS 40900. Topics in Applied and Computational Mathematics and Methods

(3 -0- 3)

This course will include the study of topics related to the instructor's research interests in applied and computational mathematics and methods.

ACMS 46800. Directed Readings

(V -0- V)

Readings not covered in the curriculum which relate to the student's area of interest.

ACMS 48498. Undergraduate Research

(V -0- V)

Research in collaboration with members of the faculty. Evaluation of performance will be accomplished through regular discussions with the faculty member in charge of the course.

ACMS 50051. Numerical PDE Techniques for Scientists and Engineers

(3 -0- 3)

Prerequisite: MATH 20670 or MATH 20750 or MATH 20860 or MATH 30650 or PHYS 20452

Partial Differential Equations (PDEs) are ubiquitous in science and engineering and are usually discussed in classes as analytic solutions for specialized cases. This course will teach the students the basic methods for their numerical solution. The course starts with an overview of PDEs, then moves on to discuss finite difference approximations. Hyperbolic systems are introduced by the scalar advection and scalar non-linear conservation laws, followed by the Riemann problem for hyperbolic systems and approximate Riemann solvers. Multidimensional schemes for non-linear hyperbolic systems are then presented. Elliptic and parabolic systems and their solution methodologies are then discussed including Krylov subspace methods and Multigrid methods. The course explains the theory underlying the numerical solution of PDEs and also provides hands-on experience with computer codes. A recommended prerequisite for this course is programming courses or a programming background.

ACMS 50052. Numerical PDE Techniques for Scientists and Engineers II

(3 -0- 3)

Partial Differential Equations (PDEs) are ubiquitous in science and engineering and are usually discussed in courses as analytic solutions for specialized cases. In PHYS 50051, students saw an overview of PDEs and were taught basic methods for their solution. Emphasis was on the theory underlying the numerical solution of PDEs and providing hands-on experience with computer codes. For background, students were expected to have some computer literacy at the level of familiarity with the Linux operating system and Fortran. The text was the first half of a book in development, written by the instructor. This second course will cover the second half of the text, with topics ranging from stiff source terms in hyperbolic PDEs to multigrid methods and Krylov subspace methods for elliptic and parabolic PDEs and adaptive mesh refinement. Interested advanced undergraduates and graduate students from applied mathematics, engineering, and the sciences may take the second course without having taken the first one.

ACMS 50550. Functional Analysis

(3 -0- 3)

This one semester course will cover selected topics in Functional Analysis. The theory will be built on Banach and Hilbert spaces and will be applied to selected examples from application including Laplace equations, heat equations, and wave equations. Tools and methods such as fixed point theorems, Dirichlet principle, Semi-group, etc. will be covered in the course.

ACMS 50730. Mathematical and Computational Modeling in Biology and Physics

(3 -0- 3)

Introductory course on applied mathematics and computational modeling with emphasis on modeling of biological problems in terms of differential equations and stochastic dynamical systems. Students will be working in groups on several projects and will present them in class in the end of the course.

Biological Sciences

BIOS 10098. Introductory Biology

(3 -3- 4)

Students receiving a 5 on the Biology AP I examination or an IB grade of 7, receive credit fully equivalent to BIOS 10161 + 11161 and BIOS 10162 + 11162, i.e., the first year sequence of Biological Sciences I and II with laboratories designed for science majors. For those students who choose not to waive AP or IB credit, BIOS 10098 and 10099 combined will be accepted as a prerequisite for all upper-level biology courses where BIOS 10161 and/or BIOS 10162 are the prerequisites. Students intending to apply to medical or other professional schools where AP science credit is not accepted, or where two semesters of general biology with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, BIOS 10098/10099 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of either BIOS 10161/11161 + 10162/11162 or BIOS 20201/21201 + 20202/21202 as determined by the requirements of their respective majors.

BIOS 10099. Introductory Biology II

(3 -3- 4)

Students receiving a 5 on the Biology AP examination or an IB grade of 7, receive credit fully equivalent to BIOS 10161 + 11161 and BIOS 10162 + 11162, i.e., the first year sequence of Biological Sciences I and II with laboratories designed for science majors. For those students who choose not to waive AP or IB credit, BIOS 10098 and 10099 combined will be accepted as a prerequisite for all upper-level biology courses where BIOS 10161 and/or BIOS 10162 are the prerequisites. Students intending to apply to medical or other professional schools where AP science credit is not accepted, or where two semesters of general biology with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, BIOS 10098/10099 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of either BIOS 10161/11161 + 10162/11162 or BIOS 20201/21201 + 20202/21202 as determined by the requirements of their respective majors. Please see printed section of this bulletin (page 125) for a general statement pertaining to Biology Survey Courses.

BIOS 10101. Human Genetics, Evolution, and Society

(3 -0- 3)

This course will address fundamental biological principles using the two cornerstones of modern biology: genetics and evolution. Elementary chemistry, cell theory, reproduction, and development will also be covered. The emphasis, however, will be on human genetics and will include such topics as the cause and effects of genetic abnormalities, the genetic basis of intelligence and skin color, genes and cancer, and elementary population genetics. The state of “genetic engineering” research, the recombinant DNA controversy (including the implications of this kind of research on society and the individual) will be presented. Fall and spring.

BIOS 10106. Common Human Diseases

(3 -0- 3) Streit

The goal of this course is to introduce students to diseases that may afflict them, their parents, and/or their children, as well as other health problems common to the Tropics. It will provide the student with the information necessary to understand the biology of the disease process. Fall. This course counts as general elective credit only for students in the College of Science.

BIOS 10107. Ecology and Environmental Issues

(3 -0- 3) Olsen

Emphasis will be placed upon today's ecological and environmental problems and the possible effect they may have upon the future evolution of life on Earth. Topics will generally include an overview of the theory of evolution and a discussion of ecological principles as observed at the population, community, and ecosystem levels. The influence of cultural and political factors will also be discussed. Each

academic year, one or more sections will be offered; some may be individually subtitled, allowing for one-time presentation of specific topics within the context of “environment and evolution” in addition to multiple-semester presentations of a specific topic (e.g., Evolutionary Ecology, Freshwater and Society, Environmental Issues and Solutions). Summer. This course counts as general elective credit only for students in the College of Science.

BIOS 10108. Revolutions in Biology

(5 -0- 3) Hager

The goal of this course is to teach six basic tenets of biology, the historical context for each discovery, the scientific and technical advances made, and their ethical implications. The topics will include genetics and evolution, cell biology and biochemistry, the germ theory, and ecology. A term paper is required. Summer.

BIOS 10114. Avian Biology

(3 -0- 3) Klug

This course is an overview of the general principles of biology with an emphasis on birds. Lecture topics include the origin and evolution, anatomy and physiology, life history and behavior, and ecology and conservation of birds.

BIOS 10115. Microbes and Man

(3 -0- 3) Vaughan

The course will provide a survey of relationships between man and microorganisms. General information about microbial physiology, biochemistry, and ecology will support more detailed discussions of interesting topics in food, medical, and applied microbial biology. Included will be subjects of general and historical interest, as well as current newsworthy topics. The student should get a better understanding of the role of microorganisms in disease, the production of common foods, relevant environmental issues, and biotechnology. This course counts as general elective credit only for students in the College of Science.

BIOS 10119. Evolution and Society

(3 -0- 3) Filchak

Evolution is the cornerstone of modern biological sciences. This course will highlight evolution as well as ecology and environmental biology. Emphasis will be placed on the evolution of animal behavior including human behavior. Sexual selection and its role in shaping many forms of life on Earth will be extensively covered. Formerly taught as BIOS 10107 during fall and spring semesters. Does not count as science credit for College of Science majors.

BIOS 10161. Biological Sciences I

(3 -0- 3) O'Tousa

Corequisite: BIOS 11161

This is a two-semester course with three lectures and one three-hour laboratory a week for first-year students contemplating a career in biology, medicine, or related areas of life science. The first semester presents a description of biologically important molecules and then proceeds to cell structure, energy metabolism, and classical and modern genetics. The topics presented in the second semester in the context of modern evolutionary theory include biological diversity, ecology, and organismal physiology. BIOS 10161 and 10162 are not typical survey courses; they go into greater depth, especially in modern molecular biology. When followed by BIOS 20241 and BIOS 20250, they will provide biology and biochemistry majors, including premedical intents, with a thorough in-depth overview of basic concepts of modern biology.

BIOS 10162. Biological Sciences II

(3 -0- 3) Boyd; Tank

Prerequisite: BIOS 10161

Corequisite: BIOS 11162

This is the second semester of a two-semester course for first year students contemplating a career in biology, medicine, or related areas of life science. The topics presented in the second semester in the context of modern evolutionary theory include biological diversity, ecology, and organismal physiology.

BIOS 10191. Molecular Genetic Technology

(3 -0- 3) O'Tousa

Open to non-science honors students only. Not available to students who have previously taken BIOS 10101 or BIOS 11110. The objectives of the course are to have students learn the basics of cell division and Mendelian genetics and then explore the relatively new field of DNA technologies such as gene cloning, genetic testing, biotechnology, and cancer genetic analysis. This course also has a service-learning component in which students will work at the Logan Center in South Bend, Fall. This course counts as general elective credit only for students in the College of Science.

BIOS 11161. Biological Sciences I—Lab

(0 -1- 1) Olsen

Corequisite: BIOS 10161

The laboratory sessions are an integral part of the lecture courses, which will complement the lectures. The lab sessions will also offer the student direct experience in using the scientific method and simultaneously introduce numerous biological and analytical techniques. In addition, students learn to present their findings during the course of the two semesters of laboratory as they would for a journal article or a scientific meeting (seminar and poster presentations).

BIOS 11162. Biological Sciences II—Lab

(1 -0- 1) Olsen

Corequisite: BIOS 10162

The laboratory sessions are an integral part of the lecture courses, which will complement the lectures. The lab sessions will also offer the student direct experience in using the scientific method and simultaneously introduce numerous biological and analytical techniques. In addition, students learn to present their findings during the course of the two semesters of laboratory as they would for a journal article or a scientific meeting (seminar and poster presentations).

BIOS 20201. General Biology A

(3 -0- 3) Fraser

Prerequisite: CHEM 10122 or CHEM 10172 or CHEM 10182

Introduction to living organisms with emphasis on biological processes and principles. BIOS 20201 introduces biology to the student at the cellular level, covering such topics as important biological molecules, energy metabolism, and classical and modern genetics. BIOS 20201 and 20202, along with their concomitant laboratories (BIOS 21201 and 20202) constitute a traditional two-semester introduction to biology. This sequence covers more topics, but in less depth, than the former BIOS 155-156 or BIOS 10161-10162 and is designed to provide students with the necessary background for subsequent advanced biology courses and to help them prepare for MCATS. A prerequisite is a full year of college chemistry. In addition, organic chemistry is to be taken concurrently.

BIOS 20202. General Biology B

(3 -0- 3) Duman; Hellenthal

Prerequisite: BIOS 20201 and (CHEM 10122 or CHEM 10171 or CHEM 10181)

Introduction to living organisms with emphasis on biological processes and principles, and goes beyond the cellular level, with an emphasis on organismic physiology, evolution, diversity, and ecology. BIOS 20201 and 20202, along with their concomitant laboratories (BIOS 21201 and 21202) constitute a traditional two-semester introduction to biology. This sequence covers more topics, but in less depth, than BIOS 10161 and 10162 and is designed to provide students with the necessary background for subsequent advanced biology courses and to help them prepare for MCATS. A prerequisite is a full year of college chemistry. In addition, organic chemistry is to be taken concurrently.

BIOS 20241. Molecular Cellular Biology

(3 -0- 3) Vaughan

Prerequisite: (CHEM 10172 or CHEM 10182) and BIOS 20250

This course is restricted to biological science and majors only. This course explores the fundamental structural and functional basis of cell biology, with specific emphasis on molecular mechanisms that regulate cellular activities involved in

ion and solute transport, organelle biogenesis, protein trafficking and vesicular transport, intracellular communication and signaling, cell cycle growth control regulation, and cytomechanics. The lecture portion of the course is dedicated to exposing students to the protein machinery driving cell functions, while the laboratory complements lecture by providing a combination of experiments and opportunities for independent project-based investigation focused on elucidating basic cell function. Spring.

BIOS 20250. Classical and Molecular Genetics

(4 -0- 4) Hyde

Prerequisite: BIOS 10161 or BIOS 20201

This course is restricted to biological science majors only. The course exposes students to classical and molecular genetics and demonstrates how these two approaches can combine to examine complex problems. The lecture is strongly weighted toward teaching students to solve genetic and molecular biological problems. Classical genetic principles are introduced first. Students are then presented with the techniques to examine underlying genetic principles through problem solving. Basic principles and techniques of molecular biology are next presented, and students learn how to apply these techniques to explore genetic problems. The laboratory gives the students hands-on experience in a number of genetic and molecular techniques and demonstrates how these procedures are combined to produce a cohesive genetic picture. Experiments begin with classical genetic analysis of a mutation, progress to isolating the mutant gene by PCR and standard cloning techniques, followed by DNA sequencing the genomic fragments to determine the nature of the genetic defect. Immunolocalization of the protein in mutant and wild-type flies brings the molecular work back to the organism, providing a full-circle study of the genetic mutation under study. At the end of the lab, students are ready for the independent study projects conducted in the laboratory for BIOS 20241, Molecular Cell Biology. Fall.

BIOS 20303. Fundamentals of Genetics

(3 -0- 3) Besansky; Severson

Prerequisite: BIOS 10161 or BIOS 20201

An elementary course dealing with the principles of variation and inheritance in plants and animals, with special reference to humans. Designed primarily for junior preprofessional students. Spring.

BIOS 21201. General Biology A Laboratory

(0 -3- 1) Lewis

Prerequisite: BIOS 20201 (may be taken concurrently)

Materials covered in laboratory parallel the lecture material for the most part.

BIOS 21202. General Biology B Laboratory

(1 -0- 1) Lewis

Prerequisite: BIOS 20202 (may be taken concurrently)*Corequisite:* BIOS 20202

Materials covered in laboratory parallel the lecture material for the most part.

BIOS 21250. Classical and Molecular Genetics Laboratory

(0 -3- 1)

Prerequisite: BIOS 20250 (may be taken concurrently)

In this laboratory course, students will characterize mutations that cause retinal degeneration in the fruit fly, *Drosophila Melanogaster*; in a series of related experiments comprising a semester-long study. The labs will be broken into two major sections, starting with the genetic characterization of a mutation, followed by the molecular characterization of the altered gene causing that mutation. This directed research project will be presented in two drafts of a complex research paper. Some work outside the four-hour lab period will be required. Fall.

BIOS 21303. Fundamental Genetics Laboratory

(0 -3- 1) Besansky; Severson

Prerequisite: BIOS 20303 (may be taken concurrently)

Laboratory provides experience in genetic experimentation and analysis. Either BIOS 21250 or 31303 is required for biology majors, optional for others. Spring.

BIOS 27241. Molecular Cell Biology Laboratory

(0 -V- 2) Whaley

Prerequisite: BIOS 20241 (may be taken concurrently)

This cell biology laboratory, reserved exclusively for BIOS majors, is an investigative, project-based laboratory designed to expose students to a bona fide research experience involving the development and application of critical thinking skills to solve complex research problems. Working in groups of four to six, students will devote themselves to tackling self-chosen research projects reviewed and approved by course instructors. The culmination of the laboratory experience ends when students formally prepare and present their findings in a poster-style scientific meeting. Spring.

BIOS 28498. Introduction to Undergraduate Research

(0 -V- V) Whaley

Introduction to research procedures including basic laboratory methods, design of effective experiments, use of controls and statistics to generate valid data, ethical concerns relevant to reporting research data, literature searches, and delivery of effective research presentations.

BIOS 30301. Embryology

(3 -0- 3) Kolberg

Prerequisite: BIOS 10161 and BIOS 10162) or (BIOS 20201 and BIOS 20202

Overview of the embryology and histology of the developing organism with an emphasis on the clinical aspects. Content similar to BIOS 30342.

BIOS 30305. Evolution

(3 -0- 3) Pfrender

Prerequisite: BIOS 10162 or BIOS 20202

The mechanisms and processes involved in the production of life as we know it today, as well as a discussion on the impact current events may have upon life in the future.

BIOS 30307. Advanced Perspectives on Human Evolution

(3 -0- 3)

Prerequisite: BIOS 10162 or BIOS 20202 or ANTH 30101

This course takes an in-depth integrative approach to issues in human evolution. Beginning with an overview of current innovation and discourse in evolutionary theory we will move on to tackle various topical issues related to human evolutionary history and its relevance to being human today. Focal points of discussion will include; in-depth analyses of fossil hominin species and their ecologies, a detailed assessment of nonhuman primate behavior as used in modeling the patterns and contexts of human behavior, a review and analyses of current debate surrounding the origin of modern humans, and current topics in the field of human evolution and paleoanthropological theory. Students will be required to produce a focused research paper and be involved in course presentations and discussions. Readings will be drawn from relevant fields including biology, anthropology, ecology and occasionally, philosophy.

BIOS 30310. The History of Life

(3 -0- 3) Feder

Prerequisite: BIOS 10162 or BIOS 20202

This course explores the origin, history, and systematics of life on Earth, starting from hypotheses examining life's origin(s) and including current thinking concerning the systematic relationships of organisms and the evolution of humans. The class will be taught primarily from a macroevolutionary perspective. BIOS 30310 therefore represents the complement to BIOS 30305 (Evolution), which concentrates on processes generating gene frequency changes within populations (i.e., microevolution). Fall.

BIOS 30312. General Ecology

(3 -0- 3) Hellman; McLachlan; Tank

Prerequisite: BIOS 10162 or BIOS 20202

The study of populations and communities of organisms and their interrelations with the environment. Fall and spring.

BIOS 30315. Tropical Medicine and Public Health

(2 -0- 2) Milord

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202)

This course gives an overview of tropical diseases and how they affect the populations throughout the world while emphasizing the more important ones, particularly affecting the American region. In addition to a clinical description of the diseases, it will present them from a public health perspective, with all the efforts made at countries level and globally to control, eliminate or eradicate them. A brief history and introduction of public health will precede the diseases presentation. Students will be asked to present on selected topics of interest.

BIOS 30325. Plant Science

(3 -0- 3)

Prerequisite: BIOS 20241 or BIOS 30341 (may be taken concurrently) and (BIOS 20250 or BIOS 20303) and (BIOS 10161 or BIOS 10162 or BIOS 20201 or BIOS 20202)

This course for biology majors provides a more detailed examination of plant development, biochemistry, genetics, and ecology than presented in the general and cell biology courses. Specific topics include energy capture and biosynthesis strategies, plant biochemistry, nitrogen fixation, defense mechanisms, plant diversity, plant reproductive strategies, plant genetics, grassland and forest ecology, plant domestication, the ecological impact of plant domestication, and forest management policy. Fall.

BIOS 30338. Neurobiology

(3 -0- 3) Syed

Prerequisite: (BIOS 10161 and BIOS 10162) or (BIOS 10161 and BIOS 20202) or (BIOS 20201 and BIOS 20202) or (BIOS 20201 and BIOS 10162) and (BIOS 20241 or BIOS 30341) and (BIOS 30344 or BIOS 30421 or BIOS 34344)

Neuroscience is a relatively new field. It consists of several quite separate disciplines, for example, neuroanatomy, which studies the structure of neural tissue; neurophysiology, which investigates individual nerve cell properties; neurochemistry, which is concerned with the substances found in brain tissue; and cognitive neuroscience, which deals with higher brain function. This course will discuss all of these issues. Topics will include nerve cell function (i.e., electric and chemical synapses, neurotransmitters, and neural control of locomotion), and cognition (i.e., perception, learning, and memory). By the end of the course, students will be expected to understand our current knowledge of how the brain controls our actions and behaviors.

BIOS 30341. Cellular Biology

(3 -0- 3) Hager; D'Souza-Schorey

Prerequisite: (BIOS 10161 or BIOS 20201) and ((CHEM 20223 or CHEM 20235) or CHEM 10172 or CHEM 10182)

Designed primarily for junior preprofessional students. Structural and functional aspects of the biology of cells are addressed. Fall and spring.

BIOS 30342. Developmental Biology

(3 -0- 3) Hinchcliffe

Prerequisite: (BIOS 20250 or BIOS 20303) and (BIOS 20241 or BIOS 30341)

Development of plants, animals, and microorganisms studied at the molecular, cellular, and organismic levels.

BIOS 30344. Vertebrate (Human) Physiology

(3 -0- 3) Boyd; Duffield

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202) and (CHEM 10122 or CHEM 10172 or CHEM 10182 or CHEM 20283)

Physiological functions and processes at the level of organs and organ systems, oriented primarily toward humans. Designed primarily for junior preprofessional students. Fall and spring.

BIOS 30401. Principles of Microbiology

(3 -0- 3) Kulpa

Prerequisite: (CHEM 10122 or CHEM 10172 or CHEM 10182) and (BIOS 10161 or BIOS 10162 or BIOS 20201 or BIOS 20202)

An introduction to microbial life, including structure and function of bacteria. Characterization and classification of microorganisms are considered and include their ecology, growth and death, metabolism, physiology, genetics and antigenic analysis. The impact of microorganisms on human health is discussed through representative pathogenic bacteria. Fall.

BIOS 30404. Vertebrate Biology

(3 -0- 3) Filchak

Prerequisite: BIOS 10162 or BIOS 20202

A study of systematic relationships, evolution, and life histories of living and extinct vertebrates, and the physiology and behavior of living vertebrates. Fall.

BIOS 30406. General Entomology

(3 -0- 3) Hellenenthal

Prerequisite: BIOS 10162 or BIOS 20202*Corequisite:* BIOS 31406

A study of the morphology, life histories, and systematic relationships of insects, with emphasis on medical and agricultural aspects. Alternating fall semesters.

BIOS 30407. Animal Behavior

(3 -0- 3) Archie

Prerequisite: BIOS 10162 or BIOS 20202

A consideration of individual and social behavior patterns, with emphasis on organization and adaptive significance. Neural, endocrine, genetic, and environmental factors modifying behavior will be examined. Spring.

BIOS 30408. Arthropods and Human Disease

(3 -0- 3) Collins

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202)

Emphasis on physiology, genetics, and relationships of arthropods as agents and vectors of disease. Spring.

BIOS 30418. Medical Molecular Genetics

(3 -0- 3) Champion

Prerequisite: ((BIOS 10161 and BIOS 10162) or (BIOS 20201 and BIOS 20202)) and (BIOS 20250 or BIOS 24250 or BIOS 20303 or BIOS 24303) and (CHEM 20273 or CHEM 20283 or CHEM 40420)

The course will introduce the tools of modern molecular biology and explore their applications at the frontiers of biological research. Advanced topics may include molecular medicine, biotechnology, development, evolution, and neurobiology. Fall.

BIOS 30420. Aquatic Ecology

(3 -0- 4) Jones

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202)*Corequisite:* BIOS 31420

A study of the structure and function of aquatic systems with emphasis on the behavioral, physiological and morphological adaptations generated by the physical and chemical characteristics of various aquatic habitats. Fall.

BIOS 30421. Integrative Comparative Physiology

(4 -0- 4) Duman; Johnson

Prerequisite: BIOS 20241 and BIOS 20250

Designed primarily for students in the biology or biochemistry majors sequences. This course is designed to be taken either as an introductory animal physiology course for students without formal training in physiology beyond general biology or as a second physiology course for students who have already taken BIOS 30344. General physiological principles are introduced, and the course is designed around the classical organ/system approach to physiology but with stress on comparative and evolutionary relationships. Emphasis is placed on the integrated nature of the various physiological systems and on the relationships of the physiology of the

organism to its environment (physiological ecology) as well as to the lower levels of biological hierarchy (biochemistry, cell, and molecular biology). Special emphasis is placed on adaptations to environmental extremes. This course has four lectures per week. Spring.

BIOS 30422. Marine Biology

(3 -0- 3) Miglietta

Prerequisite: BIOS 10162 or BIOS 20202

Examination of the organisms of the ocean and the interrelationships with the physical, geological and chemical factors of their environment.

BIOS 30423. Genomics: Sequence to Organism

(3 -0- 3) Ferdig

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202) and (BIOS 20250 or BIOS 20303)

This course will introduce the methods of genome science and explore their applications in biological research and their impact on biological thinking. Topics will include how genomes are studied, how they function, and how they evolve. The importance of comparative and functional genomics in identifying mechanisms of human diseases will be highlighted. Spring.

BIOS 30424. Tumor Cell Biology

(3 -0- 3) Schafer

This course is designed for junior and senior level undergraduate students interested in the biology of cancer. It will focus on understanding how normal cells become tumor cells and the specific molecular and cellular properties of tumor cells that are important for cancer progression. The course will also introduce the student to the field of cancer research through the critical examination of primary literature.

BIOS 30455. Medical Microbiology

(3 -0- 3) Lee

Prerequisite: BIOS 20241 or BIOS 24241 or BIOS 30341 or BIOS 34341

This course provides an overview of basic principles in infectious disease caused by major microbial pathogens. Through lectures and discussion of assigned reading material, the course examines current and classical topics in the field of host-pathogen relationships with an emphasis on the interplay between pathogen strategies and the host response. Students will be expected to give group presentations on topics relevant to medical microbiology and participate in regular class discussions.

BIOS 30475. Laboratory Animal Science

(2 -0- 2) Stewart

Prerequisite: (BIOS 20201 and BIOS 20202) or (BIOS 10161 and BIOS 10162)

An introduction to laboratory animal science, focusing on federally mandated regulations, animal rights/animal welfare controversies, general care and use of animals in a full-compliance program, and common methodologies used in animal-based research. Enrollment is by consent of instructor only and limited to junior or senior undergraduate pre-veterinary students, or biology majors whose graduate career program will require animal use, or graduate students whose research requires animal use at Notre Dame. Spring.

BIOS 31312. General Ecology Laboratory

(0 -1- 1) Chaloner

Prerequisite: BIOS 30312 (may be taken concurrently)

General ecology laboratory is to be taken concurrently with the general ecology lecture. Students may not take lecture alone or laboratory alone.

BIOS 31341. Cell Biology Laboratory

(0 -3- 1) Veselik

Prerequisite: BIOS 20241 or BIOS 30341 (may be taken concurrently) or BIOS 24241 or BIOS 34341

This laboratory course exposes students to a variety of techniques in modern cell biology. Students will get hands-on experience in working with cultured cell lines, including sterile technique, media preparation, and passaging of cells. Individual

experiments will include assessment of cell growth and apoptosis, examination of subcellular structure using fluorescent microscopy, separation and analysis of nucleic acids and proteins, enzyme assays, and measurement of cell cycle by flow cytometry. It provides an excellent introduction to the approaches routinely used in analysis of cells and their functions. Fall.

BIOS 31401. Principles of Microbiology Lab

(0 -3- 1) Kulpa

Prerequisite: BIOS 30401 (may be taken concurrently) and (BIOS 10162 or BIOS 20202 or BIOS 30401)

Laboratory exercises consider basic techniques in microbiology, such as sterile procedures and microbial metabolism. Fall.

BIOS 31406. General Entomology Laboratory

(0 -3- 1) Hellenthal

Prerequisite: BIOS 30406 (may be taken concurrently)

Corequisite: BIOS 30406

The laboratory introduces students to insect morphology, systematics, and techniques used in the study of insects. Offered concurrently with lecture.

BIOS 31408. Medical and Veterinary Entomology Laboratory

(0 -3- 1) Collins

Prerequisite: BIOS 30408 (may be taken concurrently)

The laboratory introduces students to the variety of arthropods that vector disease agents or otherwise affect the lives of humans and other vertebrate animals. Offered concurrently with lecture.

BIOS 31420. Aquatic Ecology Laboratory

(0 -3- 0) Hellenthal

Prerequisite: BIOS 30420 (may be taken concurrently)

Corequisite: BIOS 30420

Aquatic ecology laboratory is to be taken concurrently with the aquatic ecology lecture. Students may not take lecture alone or laboratory alone.

BIOS 31421. Integrative Comparative Physiology Laboratory

(0 -3- 1)

Prerequisite: BIOS 30421 (may be taken concurrently)

Laboratory provides experience with experimentation and analysis of physiological concepts at the organismal, cellular, and molecular levels. Spring.

BIOS 31672. Evolutionary Mechanisms Laboratory

(0 -3- 1)

An examination of evolutionary mechanisms from the experimental approach in a laboratory situation. Previously offered as BIOS 37672.

BIOS 35501. Introduction to UNDERC

(1 -0- 1) Belovsky

Open only to students previously accepted into the UNDERC program.

BIOS 35502. Practicum in Environmental Field Biology East

(3 -3- 6) Belovsky

Practical training in aquatic and environmental biology through lecture and field experience at the University's environmental research facility located in northern Wisconsin and the upper peninsula of Michigan. Course includes an independent research project.

BIOS 35503. Practicum in Environmental Biology West

(V -V- 6) Belovsky

Prerequisite: BIOS 35502

This course is designed to give the student advanced practical laboratory experience in ecological studies in the grasslands and mountains of western Montana on the Flathead Indian Reservation. The nine week learning experience consists of one week modules on grassland ecology, montane ecology, wildlife ecology, and human ecology focusing on ancestral Native American lifeways, and each student conducts an independent research project over the remaining five weeks.

BIOS 35504. Practicum in Environmental Field Biology III

(3 -0- 6) Belovsky

Opportunity to take field classes and conduct an independent research project in University of Puerto Rico programs at the El Verde (rain forest) or Mayaquez (marine) field stations. Participation in this program required students to have first taken the Practicum in Environmental Field Biology "UNDERC East" (BIOS 35502)

BIOS 35505. Practicum in Field Environmental Biology IV: Coral Reef Ecology

(0 -2- 2) Gerrish

Prerequisite: BIOS 30422 or BIOS 35502

This course will consist of a 15-day trip (from late December to mid January) to Belize to study the Pan-American coral reef habitat and upon returning, weekly seminar meetings for the first four weeks of spring semester to discuss primary literature and compose a final paper relating to field projects from the off-campus trip. Students must have a valid passport; other requirements for international travel as set by the University must be followed.

BIOS 37361. Special Studies

(V -0- V)

This variable credit course may be used to provide a special study experience for one student or a small group of students, or, with the permission of the associate dean of the College of Science, as a means to temporarily introduce a new BIOS course(s) prior to its/their receiving full approval and assignment of a unique course number and title.

BIOS 37491. Teaching Practicum in the Life Sciences

(0 -0- 0) Grimstad

Same as BIOS 37495 except that students who are registered for this section are paid as undergraduate teaching assistants; this section is not graded and no academic credit is given.

BIOS 37492. Teaching Practicum in the Life Sciences

(0 -- V) Grimstad

Similar to BIOS 37493 except that this is an S/U-graded zero credit section.

BIOS 37493. Teaching Practicum in the Life Sciences

(V -0- V) Grimstad

Same as BIOS 37495 except that this is a s/u variable credit section; 2.0 maximum credits allowed.

BIOS 37494. Teach Practicum/Life Sciences

(V -0- V) Grimstad

Same as BIOS 37495 except that this is a letter-graded variable credit section; 2.0 maximum credits allowed

BIOS 37495. Teaching Practicum in Life Sciences

(2 -0- 2) Grimstad

This course gives the advanced student an opportunity to gain direct experience in teaching. Students are assigned regular teaching duties in certain laboratory courses and must be prepared to accept responsibility. Note: Most states will not accept this in lieu of practice teaching in an education department. Students must clear lab assignments with each section's practicum coordinator. Fall and spring.

BIOS 37671. Special Studies

(V -V- V) Grimstad

Special topics in the field of interest for individual or small groups of undergraduate students or for one-time introduction of new course materials will be covered. Spring. Repeatable course.

BIOS 37672. Special Studies

(V -V- V) Grimstad

Special topics in the field of interest for individual or small groups of undergraduate students or for the one-time introduction of new course materials will be covered. Spring. Repeatable course.

BIOS 38499. Molecular and Cellular Biology Research and Design Laboratory

(0 -2- 2) Veselik

Prerequisite: (BIOS 10161 or BIOS 20201) and (CHEM 10172 or CHEM 10182 or CHEM 20223 or two semesters of general biology with labs and two semesters of general chemistry with labs or one semester of general chemistry with lab and one semester of organic chemistry with lab for non-Notre Dame science students.) This course is for science majors only and counts as science credit. It satisfies one of the 6 required laboratory courses for BIOS majors at Notre Dame. This special laboratory course exposes students to a variety of techniques in modern cell biology while participating in an undergraduate research project. Students will get hands-on experience in working with cultured cell lines, including sterile technique, media preparation, and passaging of cells. Individual experiments will include assessment of cell growth and apoptosis, examination of subcellular structure using fluorescent microscopy, separation and analysis of nucleic acids and proteins, enzyme assays, and measurement of cell cycle by flow cytometry. Students will gain experience with reviewing scientific literature, data presentation, statistical analysis, data interpretation, and ethical concerns relevant to reporting research data. Additional outside work in terms of literature review, writing of reports, papers and preparing oral presentations will be necessary.

BIOS 40320. Aquatic Conservation: Global Freshwaters, Science and Policy

(3 -0- 3) Lodge

Prerequisite: (BIOS 10161 and BIOS 10162) or (BIOS 20201 and BIOS 20202) and (BIOS 30312 or BIOS 30420)

This course is designed for advanced undergraduates with a background in ecology and/or environmental science. The first primary goal will be to read, discuss, and write about the main on-going global environmental changes that affect the global water cycle, including regional water quality and water availability. The second primary goal will be to have students examine how the current scientific understanding of these issues has or has not been incorporated into regional, national and international policy, including policies on water rights. Guest lecturers will be broadly drawn from the research, legal and NGO fields. There will be a textbook, supplemented by readings from the primary literature and other sources. Fall or spring.

BIOS 40339. Human Gross Anatomy

(3 -0- 3) Ravosa

Prerequisite: (BIOS 10161 and BIOS 11161 and BIOS 10162 and BIOS 11162) or (BIOS 20201 and BIOS 21201 and BIOS 20202 and BIOS 21202)

The course will consist of a description of human gross anatomy. The content will be organized as a regional approach to gross human anatomy with descriptions of the back, thorax, abdomen, pelvis and perineum, lower limb, upper limb, and head and neck. Within each region, subtopics will include bones, ligaments, muscles, vasculature, lymphatics, peripheral nervous system, and regional viscera. The content emphasis will be basic human anatomy although there will be a moderate amount of clinical anatomy.

BIOS 40340. Human Anatomy

(3 -0- 4) Ravosa

Corequisite: BIOS 41340

The course will consist of a description of human gross anatomy. The content will be organized as a regional approach to gross human anatomy with descriptions of the back, thorax, abdomen, pelvis and perineum, lower limb, upper limb, and head and neck. Within each region, subtopics will include bones, ligaments, muscles, vasculature, lymphatics, peripheral nervous system, and regional viscera. The content emphasis will be basic human anatomy although there will be a moderate amount of clinical anatomy. The required laboratory portion of the

course will consist of regional dissection of partially dissected human cadavers, as well as identification of structures of previously dissected human cadavers. The course should serve as a foundation for students planning future human anatomy studies and/or an independent elective. Spring.

BIOS 40342. Advanced Developmental Biology

(3 -0- 3) Schulz

Prerequisite: (BIOS 10162 or BIOS 20202) and (BIOS 20250 or BIOS 20303) and (BIOS 20241 or BIOS 30341) and (BIOS 30344 or BIOS 34344) and BIOS 30342

Development of plants, animals, and microorganisms studied at the molecular, cellular, and organismic levels. BIOS 40342 is taught at a higher level in contrast to BIOS 30342. Spring.

BIOS 40411. Biostatistics

(V -0- 4) Lamberti

Prerequisite: (BIOS 10162 or BIOS 20202) and (MATH 10360 or MATH 10560 or MATH 10860 or MATH 10460)

Corequisite: BIOS 42411

Basic principles of statistical analysis and their application to biological problems, including statistical inference, analysis of variance, regression, non-parametric approaches, and introduction to statistical computing. This course's lab is a tutorial; it does not fulfill the laboratory elective requirement (after 1993). Students may not take both BIOS 40411 and MATH 20340. Spring.

BIOS 40412. Introduction to Systems Biology

(3 -0- 3) Timp

Prerequisite: (MATH 10360 or MATH 10460 or MATH 10560 or MATH 10860) and (BIOS 20250 or BIOS 20303) and (CHEM 10122 or CHEM 10172 or CHEM 10182)

The goal of this course is to highlight elementary design principles of biological systems. Many of the underlying principles that govern the biochemical interactions within a cell can be related to networks consisting of basic building-block circuits with multiple inputs/output, feedback and feedforward etc. This course draws on control theory and simple biology to provide a mathematical framework to understand these biological networks. The course is intended for advanced undergraduates or graduate students.

BIOS 40414. The Biology of Stem Cells and the Emerging Field of Regenerative Medicine

(3 -0- 3) Wingert

Prerequisite: BIOS 20241 or BIOS 24241 or BIOS 30341

This course will examine the biology of stem cells and explore their uses and applications of stem cells.

BIOS 40415. Medical and Veterinary Parasitology

(3 -0- 3) Morales

Prerequisite: (BIOS 10161 and BIOS 10162) or (BIOS 10161 and BIOS 20202) or (BIOS 20201 and BIOS 20202) or (BIOS 20201 and BIOS 10162) and (BIOS 20250 or BIOS 20303) and (BIOS 20241 or BIOS 30341)

The animal parasites of humans and related hosts are reviewed. The pathology caused by these parasites, epidemiology, life cycles, prophylactic and therapeutic control are considered. Spring.

BIOS 40416. Virology

(3 -0- 3) Fraser

Prerequisite: (BIOS 20250 or BIOS 20303) and (BIOS 20241 or BIOS 30341) and (BIOS 21250 or BIOS 21303) and (BIOS 31341 or BIOS 27241)

A study of viruses as primitive biological entities and as disease-inducing agents in humans and other animals: characteristics of viruses and virus infections; molecular aspects of virus replication; methods for diagnosis and prevention of infections; artificial use of viruses. Spring.

BIOS 40417. Human Musculoskeletal Anatomy

(3 -0- 3)

Prerequisite: (BIOS 10161 or BIOS 10162) and (BIOS 20201 or BIOS 20202)
An introduction to basic anatomical principles relating to bones and muscles and to the normal anatomical and biochemical aspects of the human musculoskeletal system. Fall.

BIOS 40419. Immunology

(3 -0- 3) McDowell

Prerequisite: (BIOS 10162 or BIOS 20202) and (BIOS 20250 or BIOS 20303) and (BIOS 20241 or BIOS 30341)

An introductory course emphasizing the cells and tissues of the immune system and the nature and function of antigens and antibodies. A survey is presented of immune capabilities of humans and animals, immune diseases, immunodeficiency states, transplantation of organs, and the influence of nutrition on the immune system. Fall.

BIOS 40421. Integrative Comparative Physiology

(4 -0- 4)

Prerequisite: BIOS 20250 and BIOS 20241

Designed primarily for students in the biology or biochemistry majors sequences. This course is designed to be taken either as an introductory animal physiology course for students without formal training in physiology beyond general biology or as a second physiology course for students who have already taken BIOS 30344. General physiological principles are introduced, and the course is designed around the classical organ/system approach to physiology but with stress on comparative and evolutionary relationships. Emphasis is placed on the integrated nature of the various physiological systems and on the relationships of the physiology of the organism to its environment (physiological ecology) as well as to the lower levels of biological hierarchy (biochemistry, cell, and molecular biology). Special emphasis is placed on adaptations to environmental extremes. This course has four lectures per week. Spring.

BIOS 40424. Tumor Cell Biology

(3 -0- 3)

Prerequisite: (BIOS 10161 and BIOS 10162) or (BIOS 20201 and BIOS 20202) and (BIOS 20250 or BIOS 20303) and (BIOS 20241 or BIOS 30341)

Overview of the cancer development process at the cellular and molecular level, including regulatory networks involved in growth control and tissue organization and an introduction to animal, cell, and molecular techniques for studying progression, treatment, and prevention of cancer. Spring.

BIOS 40425. Mammalogy

(3 -0- 4) Cramer

Prerequisite: BIOS 10162 or BIOS 20202

Corequisite: BIOS 41425

This course will explore the rich taxonomic diversity of mammals, and investigate mammalian physiology, ecology, and behavior. Students will use a general text for foundation and implement their learning experience with primary literature.

BIOS 40427. The Epidemiology and Ecology of Infectious Diseases

(3 -0- 3) Ridenhour

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202)

This course provides an introduction to epidemiology and disease ecology; topics covered include historical perspectives on disease, tracking of disease, spread of disease, and disease mitigation.

BIOS 40428. Practical Public Health Microbiology

(1.5 -1.5 3)

Prerequisite: BIOS 30401 or BIOS 40415 or BIOS 40435 or BIOS 30455

This course provides an exposure to a number of microbiological principles and techniques in public health using case studies to illustrate their application. The

course is composed of lecture and laboratory and will provide fundamentals for public health aspects of microbiology including epidemiology, water quality, food microbiology, and basic techniques in handling and identifying microorganisms.

BIOS 40435. Cellular and Molecular Basis of Human Disease

(3 -0- 3) Schorey

Prerequisite: (BIOS 20241 or BIOS 30341) and (BIOS 30344 or BIOS 30421 or BIOS 34344)

This course will explore the cellular and molecular mechanisms underlying various human diseases. Following an introduction to principles of disease, lectures will focus on recent advances in cellular and molecular aspects of immune responses and inflammation, pathogenic mechanisms and tumor cell biology (including abnormal growth regulation, invasion and metastasis). Specific examples of human diseases will be utilized to illustrate the concepts of disease-related gene products, the use of experimental animal models and the development of novel therapeutic strategies.

BIOS 40440. A.I.D.S.

(3 -0- 3) Fraser

Prerequisite: (BIOS 10161 and BIOS 10162) or (BIOS 20201 and BIOS 20202) or (BIOS 10161 and BIOS 20202) or (BIOS 20201 and BIOS 10162)) and (BIOS 20241 or BIOS 24241 or BIOS 30341) and (BIOS 27241 or BIOS 31341) and (BIOS 20250 or BIOS 20303) and (BIOS 21250 or BIOS 21303))

This course will explore the phenomenon of AIDS, including characteristics of the worldwide AIDS pandemic, the virus (HIV) itself, the immune system and HIV, methods of diagnosis, prevention, treatment, and basic epidemiology as it relates to AIDS. This is an advanced course in infectious diseases designed for premedical majors and other interested students. Laboratory experience in genetics and cell biology is required Fall.

BIOS 40450. Developing Health Networks in Rare and Neglected Diseases

(3 -0- 3) Haldar

Prerequisite: (BIOS 10161 or BIOS 20201) and (BIOS 10162 or BIOS 20202)

A main purpose of this course is to engage upper level undergraduate and graduate students in clinical research in rare and neglected diseases. The focus for each semester is on neglected/infectious diseases with emphasis on worldwide eradication strategies. A major goal is to have Notre Dame students work on a clinical research project in class on some rare and/or neglected disease of major importance. A second important goal of this course is to develop an analogous model(s) for other neglected/infectious diseases. We hope this class will also help the students become advocates for these diseases. The course is also tied to a clinical-translational seminar series to enable students to meet with leading international experts who work in neglected diseases. The class is intended for juniors and seniors.

BIOS 40522. GLOBES: Global Linkages of Biology, the Environment, and Society

(3 -0- 3)

The GLOBES (Global Linkages of Biology, the Environment, and Society) series of courses offered each semester reflect various areas of life science relevant to multiple disciplines. Students should expect to have a different topic offered every semester under the GLOBES heading. The course is repeatable since potentially every semester the topics vary. Cross listed with BIOS 60522.

BIOS 40562. Aquatic Insects

(3 -3- 4)

Prerequisite: (BIOS 30312 or BIOS 30420) and BIOS 41562 (may be taken concurrently)

The taxonomy and ecology of insects having aquatic stages in their life cycles.

BIOS 40573. Topics in Ecology

(3 -0- 3)

Prerequisite: BIOS 30312 or BIOS 30420

Subject matter changes depending on students' needs. Prospective subjects include systems analysis in ecology or biogeography. (On demand)

BIOS 41340. Human Anatomy Laboratory

(0 -2- 0) O'Malley

Corequisite: BIOS 40340

This laboratory consists of regional dissection of partially dissected human cadavers, as well as identification of structures of previously dissected human cadavers. The course should serve as a foundation for students planning future human anatomy studies and/or an independent elective. Spring.

BIOS 41344. Vertebrate (Human) Physiology Laboratory

(0 -3- 1)

Prerequisite: (BIOS 30344 or BIOS 30421) or BIOS 34344 or BIOS 40421

Laboratory experience in physiology. Ideally, this laboratory is taken *after* students have completed the BIOS 30344 lecture. Fall.

BIOS 41415. Medical and Veterinary Parasitology Laboratory

(0 -3- 1) Robichaud

Prerequisite: BIOS 40415 (may be taken concurrently)

The laboratory introduces students to the microscopic world of parasites. Extensive microscope work is needed. Spring, on demand.

BIOS 41417. Anatomy Laboratory

(0 -3- 1) O'Malley

Prerequisite: (BIOS 10161 and BIOS 10162) or (BIOS 20201 and BIOS 20202)*Corequisite:* BIOS 40417

This lab is available by special arrangement with the instructor and is designed primarily for physical therapy intents. The focus is on musculoskeletal anatomy and should NOT be considered a substitute for a general anatomy laboratory.

BIOS 41421. Integrative Comparative Physiology Lab

(0 -1- 1) Duman; Johnson

Laboratory provides experience with experimentation and analysis of physiological concepts at the organismal, cellular, and molecular levels. Spring.

BIOS 41425. Mammalogy Laboratory

(0 -3- 0) Cramer

Corequisite: BIOS 40425

In conjunction with Mammalogy lecture, this course will provide a hands-on experience in the study of mammals, including how to capture and identify mammals, some unique aspects of mammalian physiology, and use of the scientific method to understand mammalian ecology and behavior.

BIOS 41475. Laboratory Animal Science Laboratory

(2 -0- 2) Stewart

Prerequisite: BIOS 30475

This course focuses on experimental techniques and methodologies in both laboratory and clinical settings. Students will divide their laboratory time between hands-on work in the animal facility and clinical experience in area veterinary clinics when possible. Enrollment is by consent of instructor only and limited to senior undergraduate pre-veterinary students, or senior biology majors whose graduate research program will require animal use at Notre Dame. Every student will be required to keep a complete notebook and develop a semester journal project or case study. Fall.

BIOS 41562. Aquatic Insects Laboratory

(0 -3- 0) Hellenthal

Corequisite: BIOS 40562

The taxonomy and ecology of insects having aquatic stages in their life cycles. (Spring; on demand)

BIOS 42411. Biostatistics Tutorial

(0 -1- 0) Chaloner; Lamberti

Corequisite: BIOS 40411

The biostatistics tutorial is to be taken concurrently with the lecture. Students may not take lecture alone or the tutorial alone.

BIOS 45999. Summer Research Internship

(0 -V- V)

Summer research internship experience in biological or environmental sciences.

BIOS 46490. Biological Sciences Honors Research Seminar

(1 -0- 1)

One or more seminars in a select discipline(s) will be offered every semester and is required of all participating in the biological sciences research honors program. The purpose of these disciplinary groups is to create a small learning community where students and practicing scientists can connect. The seminar learning goals are to support and develop each student's independence, scientific communication skills, critical review skills, and understanding of their research in the context of the larger field. As appropriate, the groups will meet as a whole to foster interdisciplinary habits of mind and skills. The seminar will have the added benefit of helping students prepare for graduate applications and fellowships.

BIOS 46497. Directed Readings

(0 -0- V) Grimstad

This course provides the opportunity for independent study through readings on specific topics in biological science. Readings are chosen with the advice of the supervising instructor. Students may not register for more than three credits per semester; only two credits per semester may be counted as BIOS elective credits by majors. Offered all semesters.

BIOS 48498. Undergraduate Research

(0 -0- V)

Research in collaboration with members of the faculty. Evaluation of performance will be accomplished through regular discussions with the faculty member in charge of the course. Enrollment must be completed before the end of the first week each semester. Students may not register for more than three credits per semester; only two credits per semester may be counted as BIOS elective credits by majors. Offered all semesters.

BIOS 48999. Research Experience for Undergraduates

(0 -0- 0)

This is a zero-credit course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. Registration requires a brief description of the research or project to be pursued and the permission of the director of the Summer Session. This course is taken as an indication of the student's status on campus and is meant to allow the registered student to use the University facilities as the Summer Session permits. No course work is required.

BIOS 50544. Environmental Justice

(3 -0- 3) Shrader-Frechette

This course will survey environmental impact assessment (EIA), ecological risk assessment (ERA), and human-health risk assessment (HHRA); ethical and methodological issues related to these techniques; then apply these techniques to contemporary assessments for which state and federal governments are seeking comments by scientists and citizens. This course does not count as BIOS or science credit for College of Science majors. It is a PHIL course and will satisfy the second PHIL requirement on change of cross-list or count as general elective credit only.

BIOS 50545. Bio-Medical Ethics, Scientific Evidence and Public Health Risk

(3 -0- 3) Shrader-Frechette

The course will survey ethical and scientific issues associated with current public health problems such as pollution-induced cancers, occupational injury and death, and inadequate emphasis on disease prevention, nutrition, and environmental

health. This course does not count as science credit for College of Science undergraduate majors. Cross-listed with PHIL 43708. This course counts as a general elective credit only for students in the College of Science.

GH 40440. A.I.D.S.

(3 -0- 3)

This course will explore the phenomenon of AIDS, including characteristics of the worldwide AIDS pandemic, the virus (HIV) itself, the immune system and HIV, methods of diagnosis, prevention, treatment, and basic epidemiology as it relates to AIDS. This is an advanced course in infectious diseases designed for premedical majors and other interested students. Laboratory experience in genetics and cell biology is required Fall.

GH 46497. Directed Readings in Global Health

(V -V- V)

This course is used to address specific interests of students or gaps in their training.

GH 50545. Bio-Medical Ethics, Scientific Evidence and Public Health Risk

(3 -0- 3) Shrader-Frechette

The course will survey ethical and scientific issues associated with current public health problems such as pollution-induced cancers, occupational injury and death, and inadequate emphasis on disease prevention, nutrition, and environmental health.

SUS 20010. Sustainability: Principles and Practices

(3 -0- 3) Hellmann

This interdisciplinary course explores the challenges of environmental sustainability (often defined as “meeting the needs of the present without compromising the ability of future generations to meet their own needs”) in cultural, social, historical, ethical, technical, and aesthetic dimensions. Taught jointly by professors from the natural sciences, humanities, engineering, and social sciences, the course aims to instill broad, integrative and critical thinking about contemporary global environmental problems whose solutions will depend on multidisciplinary approaches. This gateway course to the minor in Sustainability Studies is open to all students; no prerequisites in science or engineering are required for enrollment. Requirements include mid-term and final examinations, short written responses to readings, and a final reflection paper.

Chemistry and Biochemistry

CHEM 08999. Research Experience for High School Students

(0 -0- 0)

This is a zero-credit course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. Registration requires a brief description of the research or project to be pursued and the permission of the director of the Summer Session. No course work is required.

CHEM 10101. Foundations of Chemistry

(3 -0- 3)

This course covers forms, properties, and separation of matter; atomic structure and periodicity; nuclear chemistry; chemical bonding and structure; reactivity with applications to acid-base and oxidation-reduction reactions; and chemistry of carbon and living systems. This course is not open to students who have taken the equivalent of CHEM 10171 or 10181.

CHEM 10102. Chemistry, Environment, and Energy

(3 -0- 3)

Chemistry of the atmosphere, hydrosphere, and lithosphere; agricultural chemistry and pesticides; food and drugs; hazardous and solid wastes; and recycling. Fossil fuels; nuclear, solar, geothermal, and other types of energy. This course is not open to students who have taken the equivalent of CHEM 10171 or 10181.

CHEM 10104. Forensic Chemistry

(2 -3- 3)

This three-credit course introduces non-science majors to aspects of chemistry and biochemistry as applied to law enforcement. Topics include legal and scientific standards of proof, biometrics, drug detection, crime scene investigation, case studies and guest speakers. Students do several lab experiments using modern analytical instrumentation.

CHEM 10109. Themes in Chemistry

(3 -0- 3)

Explore the world of chemistry through the work of some of the most important scientists of the past hundred years. By examining case studies based on a single theme, develop the background necessary to understand why these experiments and theories captured the imagination of contemporaries and provided lasting impact and relevance. Understand how subsequent generations of scientists built on these ideas and were able to expand the subject.

CHEM 10122. General Chemistry: Fundamental Principles and Biological Processes

(3 -0- 3)

Prerequisite: CHEM 10171 or CHEM 10181

This one-semester course (taught in spring semester) completes two semester chemistry sequence for most engineering students. Fundamental principles of chemistry are woven into key themes of modern biology, including protein structure and function, gene structure and manipulation, and the basics of biotechnology. Emphasis is placed on common themes rather than biological details, and examples are drawn from biological systems of interest to engineers.

CHEM 10171. Introduction to Chemical Principles

(4 -0- 4)

Corequisite: CHEM 11171, CHEM 12171

This one-semester course, offered in the fall, provides a thorough grounding in the fundamental principles governing chemical structure and reactivity. It is accompanied by laboratory work and by a tutorial section. Topics to be discussed include the quantum mechanical structure of atoms, models of chemical bonding, chemical equilibrium, acidity and basicity, and thermochemistry and thermodynamics. Recommended for students in the College of Engineering, College of Science, and for all pre-professional students.

CHEM 10172. Organic Structure and Reactivity

(4 -0- 4)

Prerequisite: CHEM 10171 or CHEM 10181*Corequisite:* CHEM 11172, CHEM 12172

This class, generally taught in the spring, is the first semester of a two-semester organic chemistry sequence intended for students in biological sciences and pre-professional studies. It is accompanied by laboratory work and by a tutorial section. The course provides a solid foundation in organic structure and bonding, spectroscopy, and Lewis acid/base reactions. These concepts are then applied to understand substitution and elimination reactions with a focus on mechanism and factors governing selectivity. A section of this course, taught in the fall semester, is intended for chemical engineering students.

CHEM 10181. Introduction to Chemical Principles

(4 -0- 4)

Corequisite: CHEM 11181, CHEM 12181

This course provides a thorough grounding in the fundamental principles governing chemical structure and reactivity. Topics to be discussed include the quantum mechanical structure of atoms, models of chemical bonding, chemical equilibrium, acidity and basicity, and thermochemistry and thermodynamics. Recommended for students with a special interest in the subject, especially those intending to major in chemistry or biochemistry. Lectures will be supplemented with a weekly tutorial session.

CHEM 10182. Organic Structure and Mechanism

(4 -0- 4)

Prerequisite: CHEM 10171 or CHEM 10181*Corequisite:* CHEM 11182, CHEM 12182

Basic principles of organic chemistry, including fundamental aspects of organic and biological structures and bonding, stereochemistry, the effect of structure on physical and chemical properties, and applications of spectroscopic methods to assign structures. A detailed analysis of organic chemical reactivity, including reactive intermediates and mechanistic principles. Introductory applications of reactions in synthesis. Intended primarily for chemistry and biochemistry majors. Lectures will be supplemented with a weekly tutorial session.

CHEM 11171. Introduction to Chemical Principles Laboratory

(0 -3- 0)

Corequisite: CHEM 10171, CHEM 12171

This lab involves experimental work to accompany CHEM 10171 lecture.

CHEM 11172. Organic Structure and Reactivity Laboratory

(0 -3- 0)

Corequisite: CHEM 10172

Experimental work to accompany CHEM 10172.

CHEM 11181. Introduction to Chemical Principles Laboratory

(0 -3- 0)

Corequisite: CHEM 10181, CHEM 12181

A laboratory to accompany CHEM 10181 that will stress quantitative measurements.

CHEM 11182. Organic Structure and Mechanism Laboratory

(0 -3- 0)

Corequisite: CHEM 10182

A laboratory to accompany CHEM 10182 that will emphasize fundamental organic techniques.

CHEM 12171. Introduction to Chemical Principles Tutorial

(1 -0- 0)

Corequisite: CHEM 10171, CHEM 11171

Tutorial section to accompany CHEM 10171.

CHEM 12172. Structure and Reactivity tutorial

(1 -0- 0)

Corequisite: CHEM 10172, CHEM 11172

Tutorial section to accompany CHEM 10172.

CHEM 12181. Introduction to Chemical Principles Tutorial

(1 -0- 0)

Corequisite: CHEM 10181, CHEM 11181

Tutorial that accompanies CHEM 10181.

CHEM 12182. Organic Structure and Mechanism—Tutorial

(1 -0- 0)

Corequisite: CHEM 10182

Tutorial that accompanies CHEM 10182.

CHEM 13171. Chemistry Adjunct Seminar

(1 -0- 1)

This is a one-credit course taught in tandem with the chemistry lecture. The aims of this course are to provide students with the tools to become independent learners and to build a community of learners through demonstrating and discussing effective study habits and university-level study skills. Topics include preparing for class/lab, getting the most out of a lecture, how to read a science text book, concept cards and concept mapping, talk-throughs, test preparation, successful study groups, and self-analysis and monitoring one's learning. Students who complete this course should be able to exercise active study strategies, have increased confidence in how to approach their studies for upper-level courses, and grow in their abilities to think critically, analyze concepts, synthesize information, propose and test hypotheses, and problem solve.

CHEM 13172. Chemistry Adjunct Seminar

(1 -0- 1)

This is a one-credit course taught in tandem with the chemistry lecture. The aims of this course are to provide students with the tools to become independent learners and to build a community of learners through demonstrating and discussing effective study habits and university-level study skills. Topics include preparing for class/lab, getting the most out of a lecture, how to read a science text book, concept cards and concept mapping, talk-throughs, test preparation, successful study groups, and self-analysis and monitoring one's learning. Students who complete this course should be able to exercise active study strategies, have increased confidence in how to approach their studies for upper-level courses, and grow in their abilities to think critically, analyze concepts, synthesize information, propose and test hypotheses, and problem solve.

CHEM 20204. Environmental Chemistry

(3 -0- 3)

Discussion of basic chemical processes occurring in the environment, particularly those relating to the impact of humanity's technological enterprise.

CHEM 20262. Mathematical Methods for the Chemical Sciences

(3 -0- 3)

Prerequisite: MATH 10560

This course provides chemistry and biochemistry majors with mathematical background, chemical context, and problem-solving methods for problems that involve differential equations, linear algebra, and probability and statistics.

CHEM 20273. Organic Reactions and Applications

(3 -0- 3)

Prerequisite: CHEM 10172 or CHEM 10182

A second semester covering the basic principles of organic chemistry, including structure, bonding, physical and chemical properties, reactive intermediates, and reaction mechanisms. Additional emphasis on applications of reactions in synthesis and relationships to biochemical systems and other associated areas of current interest. Intended primarily for pre-professional and biological science majors. This course is generally taken in the fall semester with the laboratory CHEM 21273. A section is offered in the spring semester for chemical engineering students.

CHEM 20274. Chemistry across the Periodic Table

(3 -0- 3)

Prerequisite: CHEM 20273 or CHEM 20283

Chemistry course which completes the 2-year chemistry sequence for students in the College of Science, Chemical Engineers, and pre-professional students. Extends principles of chemistry with an in-depth look at the periodic table and an emphasis on bioinorganic chemistry. Topics include: bonding across the periodic table, chemistry of the s- and p-block elements, d-block elements and coordination chemistry, and kinetics, catalysis, and redox/electrochemistry with applications to biological systems. This course is generally taken in the spring semester with the laboratory CHEM 21274.

CHEM 20283. Organic Reactions and Applications

(3 -0- 3)

Prerequisite: CHEM 10182*Corequisite:* CHEM 21283

A second semester covering the basic principles of organic chemistry, including structures, bonding, physical and chemical properties, reactive intermediates, and reaction mechanisms. Additional emphasis on applications of reactions in synthesis and relationships to biochemical systems and other associated areas of current interest. Intended primarily for chemistry and biochemistry majors.

CHEM 20284. Chemistry Across the Periodic Table

(3 -0- 3)

Prerequisite: CHEM 20273 or CHEM 20283*Corequisite:* CHEM 21284

This course will extend general principles of chemistry with an in-depth view of the rest of the periodic table. Topics covered include: bonding across the periodic table, chemistry of the s- and p-blocks, d-block and coordination chemistry, as well as chemical reactivity, kinetics, catalysis, and redox/electrochemistry.

CHEM 21273. Organic Reactions and Applications Laboratory

(0 -3- 1)

Prerequisite: CHEM 11172 or CHEM 11182

Experiments to accompany CHEM 20273

CHEM 21274. Chemistry Across the Periodic Table Laboratory

(0 -3- 1)

Prerequisite: CHEM 11172 or CHEM 11182

Experiments to accompany CHEM 20274.

CHEM 21283. Organic Reactions and Applications Laboratory

(0 -3- 1)

Corequisite: CHEM 20283

A laboratory to accompany CHEM 20283 that will emphasize organic techniques and synthesis.

CHEM 21284. Chemistry Across the Periodic Table Laboratory

(0 -3- 1)

Corequisite: CHEM 20284

A laboratory to accompany CHEM 20284 emphasizing inorganic synthesis and studies of chemical reactivity.

CHEM 23201. Chemistry Seminar

(1 -0- 1)

To be taken fall semester of the sophomore year. Introduction to the communication of scientific knowledge.

CHEM 23202. Chemistry Seminar

(1 -0- 1)

Prerequisite: CHEM 23201

To be taken either semester of the sophomore through senior years. Introduction to the communication of scientific knowledge.

CHEM 23203. Chemistry Seminar

(1 -0- 1)

Prerequisite: CHEM 23201

To be taken either semester of the sophomore through senior years. Introduction to the communication of scientific knowledge.

CHEM 23212. Biochemistry Seminar

(1 -0- 0)

A zero-credit seminar course offered in the fall term for sophomore biochemistry majors only. The seminar seeks to acquaint the biochemistry majors with 1) the biochemistry faculty members; 2) the types of research programs in biochemistry that are being carried out in the department; and 3) some general biochemistry concepts. Each meeting will be conducted by a different member of the biochemistry faculty.

CHEM 30321. Physical Chemistry I

(3 -0- 3)

Prerequisite: CHEM 20262 and (PHYS 10320 or PHYS 30220)

A rigorous course in the fundamentals of physical chemistry, including chemical thermodynamics, kinetics, quantum mechanics, and the elements of atomic and molecular structure.

CHEM 30322. Physical Chemistry II

(3 -0- 3)

Prerequisite: CHEM 30321

For science majors only. Second semester of Physical Chemistry. A rigorous course in the fundamentals of physical chemistry, including chemical thermodynamics, kinetics, quantum mechanics, and the elements of atomic and molecular structure.

CHEM 30324. Physical Chemistry for Engineers

(3 -0- 3)

Prerequisite: CHEM 10171 or CHEM 10181 and PHYS 10320

A course in the fundamentals of physical chemistry, emphasizing theoretical and experimental aspects of reaction kinetics, an introduction to quantum theory and a critical appreciation of the nature of the chemical bond. The course also explores how spectroscopic techniques allow us to gain insight into the structure and properties of molecules.

CHEM 30331. Chemistry in Service of the Community

(1 -0- 1)

Prerequisite: CHEM 30333 (may be taken concurrently)

Addressing the problem of lead contamination in the community, students will visit area homes and collect paint, dust, and soil samples. After analyzing these samples in CHEM 31333, students will help homeowners reduce the health risks associated with exposing young children to lead.

CHEM 30333. Analytical Chemistry I

(3 -0- 3)

Prerequisite: CHEM 10182 or CHEM 10172*Corequisite:* CHEM 31333

Introduction to the principles, theory, and applications of analytical chemistry. Course covers modern methods for separation of mixtures, quantitative and qualitative analysis and trace analysis.

CHEM 30337. Physical Chemistry for the Life Sciences

(3 -0- 3)

Prerequisite: CHEM 20274 or CHEM 20284

Introduction to the fundamental principles of physical chemistry with application to modern biological problems. Emphases will include classical and statistical thermodynamics and a survey of biological spectroscopy.

CHEM 30341. Fundamentals of Biochemistry

(3 -0- 3)

Prerequisite: CHEM 20273 or CHEM 20283*Corequisite:* CHEM 31341

This course is offered for undergraduate biochemistry majors and is generally taken in the junior year. The course covers the basic chemical and physical principles of the primary biomolecules: protein, carbohydrates, lipids and nucleic acids. The structures and properties of these molecules and their relevance to biological processes will be integrated.

CHEM 30342. Intermediary Metabolism

(3 -0- 3)

Prerequisite: CHEM 30341

This course is offered for undergraduate biochemistry majors. The course is a study of the major metabolic processes involving energy storage and utilization, emphasizing the relationships between biomolecular structure and metabolic function. Throughput, regulation, and integration of pathways are presented.

CHEM 31322. Physical Chemistry Laboratory

(0 -6- 2)

Prerequisite: CHEM 30321*Corequisite:* CHEM 30322

A course in the experimental aspects of physical chemistry using modern techniques of measurement. The laboratory includes thermodynamic, kinetic measurements, spectroscopic measurements, and measurements in reaction dynamics.

CHEM 31333. Analytical Chemistry Laboratory

(0 -3- 1)

Prerequisite: CHEM 30333 (may be taken concurrently)*Corequisite:* CHEM 30333

A laboratory course in the techniques of analytical chemistry.

CHEM 31341. Fundamentals of Biochemistry Laboratory

(0 -6- 2)

Corequisite: CHEM 30341

This course is designed to let students explore some of the techniques that are utilized in characterizing proteins, lipids, carbohydrates and nucleic acids. It exposes students to modern biochemical and instrumental methods for elucidating the structural and functional properties of these important types of molecules. Biochemistry majors only.

CHEM 40420. Principles of Biochemistry

(3 -0- 3)

Prerequisite: CHEM 20273 or CHEM 20283

A general treatment of the various areas of modern biochemistry including protein structure and function, bioenergetics, molecular basis of genetic and developmental processes, cellular mechanisms and intermediary metabolism.

CHEM 40434. Physical Methods of Chemistry

(3 -0- 3)

Prerequisite: CHEM 20274 or CHEM 20284

A course in molecular structure examined through the theory and interpretation of spectra. The focus is on infrared spectroscopy, mass spectrometry, nuclear magnetic resonance spectroscopy, and X-ray crystallography, with exposure to other techniques such as two-dimensional NMR, Raman spectroscopy, optical spectroscopy, and electron spin resonance. Spring

CHEM 40436. Instrumental Methods of Analysis

(3 -0- 3)

Prerequisite: CHEM 20274 or CHEM 20284

This course provides an understanding of how instrumentation used in the laboratory works. Modern science relies on advanced instrumentation to detect and analyze chemical compounds. In this class, instrument design is broken down

into fundamental components, such as signal filtering, detection, and analysis. The origins of different chemical signals as well as the strengths and limitations of different techniques are discussed.

CHEM 40443. Inorganic Chemistry

(3 -0- 3)

Prerequisite: CHEM 20284 or CHEM 20274) and (CHEM 30324 or CHEM 30322

Group Theory, Molecular Orbital Theory, structure, and spectroscopy are used as vehicles for the examination of inorganic, organometallic, and solid state chemistry.

CHEM 40477. Nanoscience and Technology

(3 -0- 3)

Prerequisite: CHEM 30324 or CHEM 30321

This course focuses on the unique scientific phenomena that accrue to matter with characteristic nanometer-scale dimensions and on the technologies which can be constructed from them. Special nanostructures will be addressed.

CHEM 40480. Chemistry of Lanthanides and Actinides

(3 -0- 3)

Prerequisite: CHEM 30324 or CHEM 30321

This course will cover a wide variety of topics involving the chemistry of the f-block elements. Topics will include periodic trends, aqueous and environmental chemistry, solid-state chemistry, and physical properties. The course will begin with a brief history of the discovery of these elements. The fundamental knowledge gained early in the course will be applied to the critical problems of nuclear energy production and waste remediation. This will be a primary literature-based course.

CHEM 41443. Advanced Inorganic Chemistry Laboratory

(0 -6- 2)

Prerequisite: CHEM 40443 (may be taken concurrently)

The preparation of main group inorganic, coordination and organometallic compounds, including air-sensitive manipulations and the use of vacuum-line techniques. Characterization of inorganic compounds by spectroscopic and electrochemical methods.

CHEM 46497. Directed Readings

(V -0- V)

In-depth study of topics not covered or only briefly covered in other courses. Readings, problems and reports.

CHEM 48498. Undergraduate Research

(0 V- V)

Research in collaboration with members of the faculty. A written progress report must be submitted each semester, and all participating students must make an oral presentation of their work in the spring semester of senior year.

CHEM 48500. Research Thesis in Chemistry and Biochemistry

(0 -0- 1)

A course in scientific writing to produce a thesis that describes work undertaken in the course of an undergraduate research project. Through written drafts of a thesis that are critiqued by the thesis director, skills in organizing and presenting scientific data, scientific literacy, and writing are enhanced.

CHEM 48888. Summer Undergraduate Research

(0 -0- 0)

This is a zero-credit course for visiting and Notre Dame students engaged in research with a faculty member during the Summer Session. This course is taken as an indication of the student's status on campus and is meant to allow the registered student to use the University facilities as the Summer Session permits.

CHEM 50520. Principles of Biochemistry

(3 -0- 3)

This is a new graduate offering, which is essentially the same course as CHEM 40420 but for graduate credit. Description follows: An introduction to the field of biochemistry, including the structure and function of biomolecules, bioenergetics, and the molecular basis of cellular mechanisms including genetics, signaling, and metabolism. Intended for graduate students with no prior biochemistry course experience.

CHEM 50531. Molecular Biology I

(3 -0- 3)

The first of a two-semester sequence that provides an introduction to molecular biology, molecular genetics, and nucleic acid biochemistry. Topics include: physical chemistry of nucleic acids, bacterial genetics, principles of cloning, DNA replication and recombination, prokaryotic and eukaryotic transcription, and RNA processing and translation. Listed also as BIOS 60531. (Fall)

CHEM 50532. Molecular Biology II

(3 -0- 3)

Prerequisite: BIOS 60531 or CHEM 50531

The second semester of the sequence. Lecture topics include: yeast genetics and molecular biology; retroviruses and transposable elements; transgenic mice; and special topics covering cell cycle regulation, oncogenes, development in *Drosophila*, signal transduction, and cloning of human disease genes. Listed also as BIOS 60532. (Spring)

CHEM 51172. Organic Structure and Reactivity Laboratory

(0 -3- 1)

This is a new crosslist lab section to accompany the existing CHEM 11172. The lab course description is the same for both CHEM 11172 and 51172; however, this crosslist section does not include the co-requirement of CHEM 10172 lecture as it is for students who have already taken CHEM 10172, or its equivalent.

Preprofessional Studies**SCPP 23100. Interdisciplinary Science Seminar**

(1 -0- 1) Gursky

This course objective for this seminar is to provide an opportunity for students to interact with community leaders and top interdisciplinary faculty members throughout the University who will describe how their research or work impacts biomedical research. Students typically do not have much interaction with faculty outside their home department. They may not be aware that many faculty members from diverse departments such as physics, math, and engineering are making important advancements in the biomedical field. This seminar would expose the students to different career opportunities, provide them with the opportunity for faculty interactions they would otherwise not have, and give them a better understanding of the most current and significant advances in the field. For interdisciplinary science students in particular, a broader understanding of the biomedical field is helpful in interviews for professional schools.

SCPP 30300. Introduction to Clinical Ethics

(3 -0- 3) Foster

The focus of the course will be an examination of the advances in medicine over the last 30 years that have challenged traditional values and ethical norms, and the institutional processes and procedures in place that facilitate decision-making in the health care setting. It will include a sketch of the most recent advances in the various fields of medicine, followed by an examination of the clinical and ethical questions they raise and how they have affected the physician-patient relationship. Note: This course counts as a general elective. Fall and spring.

SCPP 30311. Introduction to the American Health Care System

(3 -0- 3) Navari

The course will begin with a short history of the American health care system and will be followed by a discussion of the major components of the system (patients, providers, payers), health insurance coverage, managed care programs, the movement for quality health care, physicians in the changing medical marketplace, health care expenditures, and academic medical centers. This course counts as a general elective. Fall.

SCPP 30320. Film and the Physician—Portrayals of Medicine in Film and the Arts

(3 -0- 3) Fromm

This course will examine the representation of medicine in film, still art and texts. The point of view will be to examine the interdisciplinary arts, primarily film plus secondary readings of literary texts, with the goal of broadening the understanding of the lives of patients, families and providers for future health care professionals, particularly physicians. The goal is to heighten the awareness of the world surrounding medical encounters and encourage an open minded approach to people in medical need. Based on Cinemeducation training in medical schools and residency programs, topics examined include delivering bad news, end of life issues, medical malpractice, family dynamics, professionalism, cultural diversity, gender issues, grief, balance of professional and personal life and medical errors. Film clips will be introduced and reviewed with specific discussion points. Strong emphasis will be placed on group discussion, with four short papers, one discussion lead and a final paper.

SCPP 30401. Medical Counseling Skills and Patient-Centered Medicine

(3 -0- 3) Vachon

This course is designed to provide an overview and introductory practical training in medical counseling skills and patient-centered medicine. It is designed specifically for undergraduates interested in careers in medicine, but can also be helpful for students aspiring to other helping professions. This course will provide a theoretical and evidence-based foundation in compassionate care and communication skills for patient care. Emphasis will be placed on clear and professional communication across a wide range of patient care situations. This 3-credit hour

class with limited enrollment will provide opportunities to practice these skills through practical classroom training, outside assignments, and an introduction to the field of Caring Science as it applies to the medical professions.

SCPP 30405. Compassionate Care and the Medical Professions
(3 -0- 3) Vachon

This course is designed to provide the theoretical and practical foundation to providing compassionate care in the medical professions. It will provide an introduction to the field of Caring Science and provide the behavioral and attitudinal components to providing effective patient care as well as teaching how practitioners can be balanced in providing patient care. Topics include Caring Science theory, clinician burnout, compassion fatigue, maintaining caring in the encounter with suffering, and physician self-care. While designed specifically for the future medical professional, the course is open as enrollment allows to students in allied helping professions. Class material will include research from medical, psychological, caring science, business, and spiritual sources.

SCPP 30406. Spiritualities of Caring in the Helping Professions
(3 -0- 3)

This course is designed to explore how helping professionals rely on a spirituality of caring in order to help them maintain their compassion in their work. In the continual encounter with human suffering, those who dedicate themselves to helping others must find ways of responding to this suffering that allow them not to become demoralized, emotionally detached and burned out as well as to provide them with the energy and meaning for the work of compassion. An overall model for a spirituality/philosophy of caring will be presented and then explored as it is exemplified in various spiritual and philosophical traditions. The course will be an opportunity to investigate how helping professionals articulate and cultivate their spirituality of caring in various types of work and how this promotes healing in those they try to help.

SCPP 40001. Preparing for Health Professions

(1 -0- 1) Foster

This course will prepare students to apply to health professions graduate programs. Topics covered will include how to write a personal statement, framing your experiences, preparing for interviews and specifics about the centralized applications. We will also have panel discussions regarding the balance of personal and professional life, the meaning of professionalism, hot topics in healthcare and a look at the way medicine is portrayed in the arts. Satisfactory performance will require completion of Concourse quizzes, written reflections in the form of questionnaires, written organization of experiences and a draft of the personal statement. This course should be taken the semester preceding application.

SCPP 46397. Directed Readings

(V -0- V)

Permission required. Readings focus on learning how patients, families, and healthcare professionals experience illness and healing, how the stories that patients tell become the basis for diagnosis and therapeutic response, what it's like to go through medical training and grow in identity as a physician, and the nature of the doctor-patient relationship and how it is changing. Fall and spring. Note: This course counts as a general elective.

Science (Nondepartmental)

SC 10100. Environmental Geosciences

(3 -0- 3)

Prerequisite: CHEM 10113 or CHEM 10115 or CHEM 10117 or CHEM 10121 or CHEM 10125 or CHEM 10126 or CHEM 10171 or CHEM 10171

This course introduces the student to Earth processes and focuses on how these processes affect people, and how people affect these processes. The course explores the interactions between Earth's biosphere, geosphere, atmosphere, and hydrosphere, with the objective of demonstrating how our physical environment is controlled by geological, biological, and human forces. SC 10100 and SC 20100 are the same course.

SC 10101. The Cosmos, the Earth, and the Genome

(3 -0- 3)

An introduction to the evolution of our universe, from the Big Bang to the human genome. The course will cover major concepts of cosmology, earth science, and evolutionary biology. Emphasis will be placed on not only our current understanding of those fields, but also on how our understanding itself has evolved over time. If taken by science or engineering students, this course counts as general elective credit.

SC 20100. Environmental Geosciences

(3 -0- 3)

Prerequisite: CHEM 10113 or CHEM 10115 or CHEM 10117 or CHEM 10125 or CHEM 10126 or CHEM 10171

This course introduces the student to Earth processes and focuses on how these processes affect people, and how people affect these processes. The course explores the interactions between Earth's biosphere, geosphere, atmosphere, and hydrosphere, with the objective of demonstrating how our physical environment is controlled by geological, biological, and human forces.

SC 20110. Physical Geology (Lecture and Laboratory)

(3 -0- 4) Neal

Corequisite: SC 21110

An introduction to the Earth and its processes, composition, evolution, and structure. The course introduces the student to mineralogy, petrology, structural geology, oceanography, surficial processes, and environmental geology. Lecture and laboratory meetings.

SC 20120. Historical Geology (Lecture and Laboratory)

(3 -0- 4)

Prerequisite: GEOS 20110 or SC 20110

Corequisite: SC 21120

This course introduces the student to the concept of geologic time, absolute and relative age-dating, Earth processes and features through time, and the major features of evolution and distribution of fossils. Lecture and laboratory meetings. A one-day field trip is required.

SC 20200. Mineralogy and Optical Mineralogy

(4 -0- 4) Burns

Prerequisite: CHEM 10118 or SC 20110 or ENVG 10110 or CHEM 10171

Crystallography and mineral optics: physical and chemical mineralogy-its application to mineral identification in hand-specimen and using the petrographic microscope.

SC 21110. Physical Geology Laboratory

(0 -2- 0)

Corequisite: SC 20110

The laboratory portion of ENVG/SC 20110.

SC 21120. Historical Geology Laboratory

(0 -2- 0)

Corequisite: SC 20120

This is the laboratory portion of ENVG/SC 20120.

SC 30001. Introduction to the Fundamentals of Bioinformatics

(V -0- V) Sepeta

Bioinformatics is the study of the biological and health sciences with the aid of computers. In particular bioinformatics refers to the analysis of genomes—animal, plant, bacterial, and viral—using software and the Internet. A main impetus for bioinformatics is the recently completed human genome project. Additionally the sequencing of the genome of the mosquito *Anopheles gambiae* by Notre Dame researchers is also a significant event for bioinformatics. Bioinformatics is quickly becoming fundamentally important for understanding diseases and drug development. In this one credit hour basic introduction to bioinformatics, students will search biological databases, compare nucleotide and amino acid sequences, look at protein structure, and more generally ask biological questions with computers.

SC 30230. Sedimentation and Stratigraphy

(4 -0- 4) Simonetti

Prerequisite: ENVG 20200 or SC 20200

Sedimentary environments from a physical, biological, and tectonic perspective are explored, along with processes such as lithification. Identification of sedimentary rocks; and interpretation of the succession of layered rocks in North America are emphasized.

SC 40300. Geochemistry

(3 -0- 3) Fein

An introduction to the use of chemical thermodynamics and chemical kinetics in modeling geochemical processes. Special emphasis is placed on water-rock interactions of environmental interest.

SC 40491. Current Topics in Environmental Science

(3 -0- 3) Grimstad

Taught by the director of the ES major. Environmental sciences first and second majors only. The course will be divided into various modules taught by experts on campus. The modules will include environmental law, risk assessment, environmental ethics, advancements in environmental and ecological science, current topics of national interest in environmental science, and others. This course is required of all first majors and recommended of all second majors. Fall.

SC 40500. Scientific Entrepreneurship

(2 -0- 2) Crawford

This course focuses on innovation and entrepreneurship of embryonic ideas and scientific breakthroughs and how to move them from the laboratory to the marketplace—from invention to venture. All entrepreneurial case studies will be focused on science-based and high-technology examples, such as nano-science, energy science, drug discovery, medical diagnostics, sophisticated algorithms, green technology, etc. The class is project-based, where students will develop a high technology business plan based on discoveries and inventions of Notre Dame science faculty. Students will have the flexibility to choose from a variety of topics for their final projects in biology, biochemistry, chemistry, mathematics, physics, or medicine. Individual or team projects are possible depending on preference. Does not count as science credit for majors in the College of Science.

SC 40510. Science and Values

(1 -0- 1) Deane-Drummond

Scientific practice is informed by values, but those values are often left unarticulated or hidden. While the focus will be on contemporary science, some reference may be made to historical examples in order to illustrate the points raised. This course will probe some of the core values undergirding current scientific practices. It will examine the role of wonder in scientific practice and its philosophical and religious implications. What is the relationship between science and society? Has science lost its connection with wisdom? We will consider questions relating to trust and accountability in science, using concrete examples. Controversial societal

and religious issues connected with, for example, climate change, nanotechnology and other new technologies will be discussed. This course does not count as science credit.

SC 40600. Scientific Communication

(4 -0- 3) Chaloner

The objective of this course is to develop scientific writing and presentation skills. Students will learn how scientific writing differs from other forms of writing, and what is required to publish in a peer-reviewed journal. Students will be trained to generate effective oral and poster presentations for professional scientific meetings. Students are required to have research experience. Students will use data from their research project to generate a research paper, oral presentation, poster, and general interest article. This course will focus on the writing style used for research in the biological sciences.

SC 41171. Instrumentation and Science Education

(0 -1- 1)

Prerequisite: (CHEM 10171 or CHEM 10181) and (CHEM 11171 or CHEM 11181 or CHEM 121 or CHEM 121L)

Students will gain laboratory and troubleshooting skills by testing donated laboratory instrumentation and developing a high school level science experiment utilizing the instrumentation. Students will be mentored by the faculty member and will be contributing to the ND LIGHTS (Laboratory Instrumentation Giving Hope To Students) donation program. ND LIGHTS acquires upgraded/retired instruments from ND laboratories and donates them to resource-limited schools. The program includes the key component of training high school science teacher recipients on how to use the instrument within the context of an experiment that can be incorporated into his/her curriculum. Students participating in this course will learn to test and write protocols for the donated scientific instrumentation, search scientific literature to determine an appropriate experiment for the laboratory instrument, and perform the experiment. Students will be expected to write a report summarizing their work at the end of the semester.

SC 43350. Introduction to Hospice and Palliative Care

(1 -0- 1) Vachon

This one-credit satisfactory/unsatisfactory course is designed to provide undergraduate preprofessional students with an introductory understanding of palliative and hospice care. It is designed specifically for undergraduates interested in careers in medicine, but can also be useful to student aspiring to other helping professions. This course will provide students with an in-depth understanding of what is palliative and hospice care focusing on how this care is given in the current healthcare system and an introduction to how this care is given in practice. Students will also be given an introduction in compassionate interpersonal communication skills that are needed in caring for people who are in need of palliative care and for people who are dying.

SC 46490. Directed Readings

(V -0- V)

Study of topics not covered or only briefly covered in other courses. Readings, problems and reports.

SC 48100. Research Experience for Undergraduates

(V -V- V)

Times and inclusive dates variable depending on specific program elected by the student. Permission required.

SC 48101. Undergraduate Research

(V -0- V)

Times and inclusive dates variable depending on specific program elected by the student. Permission required.

SC 53310. Scientific and Medical Leadership

(1 -0- 1) Crawford

The College of Science's course on scientific and medical leadership provides a forum for discussions related to the qualities of successful scientists and physicians

in research, academia, administration, government labs, foundations, case studies, large corporations and small start-ups. It is a unique opportunity for students to focus on some relevant topics facing contemporary scientists and physicians. This course counts as general elective. No pre-requisites. Open to all graduate and undergraduate students. Requirements: attendance and one 3–5 page paper reflecting on one of the topics presented. S/U grade.

SC 53320. Diversity, Culture, Religion in Science

(1 -0- 1)

This course will introduce students to the role of cultural and religious diversity in science, its importance in an era of globalization, and the interesting questions that it raises. We want our students to be thought leaders in these discussions as they develop. We will recruit top speakers to talk about science and culture, religion and diversity from a sophisticated and scientific level—how these issues have shaped their careers, and how the issues are shaping the world of the future. The course will conclude with a talk on science and religion that demonstrates the vital connections of all these areas and brings them together to prepare our students for that world. S/U grade. General elective credit only.

SC 53340. Ethics in Science

(1 -0- 1)

The College of Science's Ethics course provides a forum for discussions related to the responsible conduct of research and complements department sponsored activities, informal training and mentorship obtained in individual research labs. It is a unique opportunity for students to focus on some relevant topics facing scientists today. Requirements: attendance and one 3–5 page paper reflecting on one of the topics presented. S/U grade.

Mathematics

MATH 10110. Principles of Finite Mathematics

(3 -0- 3) Kroeger

For students in arts and letters. For first-year students who lack the necessary background for MATH 10120. (Students who take this course cannot take MATH 10120.) Topics include the fundamental principles of counting systematically, probability, statistics, linear programming, optimization problems, game theory and mathematical finance, population problems, and coding information. There is a wealth of applications of these topics to contemporary social, economic, and political issues appealing to liberal arts students. Also, these topics broaden a student's mathematical horizon in an interesting direction not covered by calculus, which deals mostly with continuous models.

MATH 10120. Finite Mathematics

(3 -0- 3) Pilkington

For students in arts and letters or as an elective for students in business administration. Topics include the fundamental principles of counting systematically, probability, statistics, linear programming, optimization problems, game theory, and mathematical finance. Other topics that may be covered include population problems, difference equations and modeling, and coding information. There is a wealth of applications of these topics to contemporary social, economic, and political issues appealing to liberal arts students. Also, these topics broaden a student's mathematical horizon in an interesting direction not covered by calculus, which deals mostly with continuous models.

MATH 10130. Beginning Logic

(3 -0- 3) Hill

For students in arts and letters. Provide the students with some formal tools for analyzing arguments. By writing proofs in a formal system, students see the importance of stating the basic premises in an argument and giving intermediate steps that lead to the conclusion. They learn strategies for thinking up proofs. They see that proof checking is, in principle, something that a machine could do. Students learn truth tables and see an effective procedure that they could apply to any argument stated in propositional logic, to determine whether the conclusion follows logically from the premises. There is nothing like truth tables for predicate logic. Students get to experience doing what mathematicians do, trying to determine whether a particular conclusion follows from some premises by searching simultaneously for a proof or a counterexample. Writing papers gives students an opportunity to explore other topics in logic of their interest.

MATH 10240. Principles of Calculus

(3 -0- 3)

For students in arts and letters. Note: Credit is not given for both this course and any other calculus course. A terminal course introducing the principles of calculus. Topics include basic properties of functions, derivatives and integrals, with interesting real-life applications throughout. This course is not intended to prepare students for more advanced work in calculus.

MATH 10250. Elements of Calculus I

(3 -0- 3)

For students in arts and letters, architecture, or business. A study of basic calculus as part of a liberal education. It emphasizes conceptual learning and stresses the connections between mathematics and modern society. Topics include functions, limits, derivatives, and an introduction to integral, with interesting real-life applications throughout. Students are familiarized with the many different interpretations of the derivative as a rate of change, and the integral as a total rate of change. This enables them to learn and practice modeling in a variety of situations from economics the social and the life sciences.

MATH 10260. Elements of Calculus II for Business

(3 -0- 3) Himonas

Prerequisite: MATH 10250 or MATH 10350 or MATH 10550 or MATH 10850
Credit is not given for both MATH 10280 and either of the following courses: MATH 10260 and MATH 10360. For students in business. An introduction to mathematical concepts, techniques, and ideas that are useful in understanding and solving problems that arise in economics and business. Most mathematical concepts are introduced through interesting business problems. Furthermore, by using available computer technology, real-life problems, that may lead to non-trivial computations and graphics are considered. Topics include integration, differential equations, Taylor polynomial approximations, unconstrained and constrained optimization for functions of several variables, probability and statistics, with interesting real-life applications throughout.

MATH 10270. Mathematics in Architecture: Mathematical Excursions to the World's Great Buildings

(3 -0- 3) Hahn

Prerequisite: MATH 10250 or MATH 10550 or MATH 10850

This is a second mathematics course for Arts and Letters and Architecture students. As the Roman architect Vitruvius pointed out 2000 years ago, architecture is a broad enterprise bringing together virtually all the elements of the human experience: spirituality, intelligence and creativity, economics, politics and sociology, as well as aesthetics, structural engineering, and mathematics. The agenda of this course has a focus on the last three: aesthetics, structural aspects, and related mathematics. The architecture of the world's great historic buildings will be the environment in which the narrative of this course is developed. The aesthetic and structural properties of these structures will be described following a chronological line. Whenever the opportunity presents itself, this discussion will be informed by basic modern mathematics (such as geometry, trigonometry, and calculus). While the mathematical comments about the buildings considered are standard by today's criteria, they would (for the most part) have been beyond the reach of the architects who built them.

MATH 10350. Calculus A

(3 -1- 4)

Corequisite: MATH 12350

This is the first course of the two-semester calculus sequence for life science and social science majors. Calculus A emphasizes the process of problem solving and application of calculus to the natural sciences, and requires students to think deeper about the concepts covered. Students will acquire basic skills needed for a quantitative approach to scientific problems. The course introduces the mathematics needed to study change in a quantity. Topics include functions, limits, continuity, rate of change of functions, integrals, graphing and their applications.

MATH 10360. Calculus B

(3 -1- 4) Lim

Prerequisite: MATH 10350 or MATH 10550 or MATH 10850*Corequisite:* MATH 12360

This is the second course of the two-semester calculus sequence for Life and Social science majors. Calculus B emphasizes the process of problem solving and application of calculus to the natural sciences, and requires students to think deeper about the concepts covered. Students will acquire basic skills needed for quantitative approach to scientific problems. The course introduces the mathematics needed to study change in a quantity. Topics include integration techniques, application of integrals to physics, geometry and ecology, solution of differential equations and their applications, and Taylor series.

MATH 10450. Honors Mathematics I

(4 -0- 4) Dyer; Xavier

Corequisite: MATH 12450

This is a course that studies elementary calculus, as well as the necessary geometry, trigonometry and coordinate geometry, from within its "historical flow". The flow is historical, but the emphasis is on doing the mathematics in a pedagogically effective way. This means that the material is developed from within the relevant

context: that of the contributions of Greek thinkers, Copernicus, Galileo, Kepler, Descartes, Newton and Leibniz. But, it also means that the notation is modern and that the material is selected so as to cover the basics of the subject. Calculus is developed by fusing essential insights of both Leibniz and Newton together into a complete "short calculus". This starts from scratch, is free of most theoretical "baggage", and concentrates on the intuitive grasp of the basic elements. What will have emerged is a basic mathematics course that is surrounded by the important scientific concerns of the times.

MATH 10460. Honors Mathematics II

(4 -0- 4) Hahn

Prerequisite: MATH 10450*Corequisite:* MATH 12460

The course starts with the central aspects of Newton's *Principia Mathematica*, arguably, along with *Darwin's Origin of Species*, the most influential book of science ever written. The course pursues Newton's study of centripetal force and, following his thoughts, develops the fundamental equations of planetary motion. Calculus is present, but it is hidden within Newton's geometric approach. A quick overview of conventional differential calculus follows next as preparation for a detailed look at polar coordinates, polar functions, and polar calculus. The course concludes with the application of polar calculus to planetary motion. This modern elementary look at Newton's account provides the students with a paradigmatic example of an application of mathematics to the study of the physical universe.

MATH 10550. Calculus I

(3 -1- 4)

Corequisite: MATH 12550

For students in science and engineering. Topics include sets, functions, limits, continuity, derivatives, integrals, and applications. Also covered are transcendental functions and their inverses, infinite sequences and series, parameterized curves in the plane, and polar coordinates.

MATH 10560. Calculus II

(3 -1- 4) Mendes Snow

Prerequisite: MATH 10550 or MATH 10850*Corequisite:* MATH 12560

For students in science and engineering. Topics include sets, functions, limits, continuity, derivatives, integrals, and applications. Also covered are transcendental functions and their inverses, infinite sequences and series, parameterized curves in the plane, and polar coordinates.

MATH 10850. Honors Calculus I

(4 -0- 4) Snow

Corequisite: MATH 12850

Required of honors mathematics majors. A rigorous course in differential and integral calculus of one variable. Topics include an axiomatic formulation of the real numbers, mathematical induction, infima and suprema, functions, continuity, derivatives, integrals, infinite sequences and series, transcendental functions and their inverses, and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 10860. Honors Calculus II

(4 -0- 4) Gekhtman

Prerequisite: MATH 10850*Corequisite:* MATH 12860

Required of honors mathematics majors. A rigorous course in differential and integral calculus of one variable. Topics include an axiomatic formulation of the real numbers, mathematical induction, infima and suprema, functions, continuity, derivatives, integrals, infinite sequences and series, transcendental functions and their inverses, and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 12350. Calculus A Tutorial

(0 -1- 0)

Corequisite: MATH 10350

Tutorial for the first course of the two-semester calculus sequence for life science and social science majors. Calculus A emphasizes the process of problem solving and application of calculus to the natural sciences, and requires students to think deeper about the concepts covered. Students will acquire basic skills needed for a quantitative approach to scientific problems. The course introduces the mathematics needed to study change in a quantity. Topics include functions, limits, continuity, rate of change of functions, integrals, graphing and their applications.

MATH 12360. Calculus B Tutorial

(0 -1- 0)

Corequisite: MATH 10360

Tutorial for the second course of the two-semester calculus sequence for Life and Social science majors. Calculus B emphasizes the process of problem solving and application of calculus to the natural sciences, and requires students to think deeper about the concepts covered. Students will acquire basic skills needed for a quantitative approach to scientific problems. The course introduces the mathematics needed to study change in a quantity. Topics include integration techniques, application of integrals to physics, geometry and ecology, solution of differential equations and their applications, and Taylor series.

MATH 12450. Honors Mathematics Tutorial

(0 -1- 0)

Corequisite: MATH 10450

Perfecting problem-solving skills in smaller group settings.

MATH 12460. Honors Mathematics II Tutorial

(0 -1- 0)

Corequisite: MATH 10460

Perfecting problem-solving skills in smaller group settings.

MATH 12550. Calculus I Tutorial

(0 -1- 0)

Corequisite: MATH 10550

Perfecting problem-solving skills in smaller group settings.

MATH 12560. Calculus II Tutorial

(0 -1- 0)

Corequisite: MATH 10560

Perfecting problem-solving skills in smaller group settings.

MATH 12850. Honors Calculus I Tutorial

(0 -1- 0)

Corequisite: MATH 10850

Perfecting problem-solving skills in smaller group settings.

MATH 12860. Honors Calculus II Tutorial

(0 -1- 0)

Corequisite: MATH 10860

Perfecting problem-solving skills in smaller group settings.

MATH 13150. First Year Math Seminar

(3 -0- 3) Evens

The goal of this new course is to give students a panoramic view of mathematics by considering a variety of topics displaying its enormous power and beauty. It aspires to present the first year students with an opportunity to participate in the excitement of discovering ideas of their own by practicing the mathematical way of thinking. This topical course will be rich, in content and context. It will stress the connections between mathematics and modern society by considering a wide variety of problems ranging from environmental and economic issues to social and political situations that can be modeled and solved by mathematical means.

Also by giving appropriate assignments and projects, it will allow students to make contributions in areas of their interest and expertise. “The Magic of Numbers” is the first theme of this seminar course.

MATH 20480. Intro to Dyn Sys for Scientist

(3 -0- 3) Lim

Prerequisite: MATH 10260 or MATH 10360 or MATH 10560

This is a one-semester course introducing students to linear algebra and ordinary differential equations by way of their scientific usage. The course serves as a gateway to more advanced mathematical methods that are commonly used in contemporary scientific studies and their literature. Students will learn how to take a mathematical approach to various scientific problems, solve the resulting equations, and interpret the mathematical solution in the original context. There will be course projects and some usage of computing software. Topics include matrix algebra, eigenvalues and eigenvectors, vector-valued functions, linear and non-linear systems of differential equations, and phase portraits. The scientific topics include age-structured population growth, the Richardson’s theory of war, and infectious disease modeling.

MATH 20550. Calculus III

(3 -1- 3.5)

Prerequisite: MATH 10560 or MATH 10860*Corequisite:* MATH 22550

A comprehensive treatment of differential and integral calculus of several variables. Topics include space curves, surfaces, functions of several variables, partial derivatives, multiple integrals, line integrals, surface integrals, Stokes theorem, and applications.

MATH 20570. Mathematical Methods in Physics I

(3 -0- 3.5) Caprio

Prerequisite: MATH 10560 or MATH 10860*Corequisite:* MATH 22570

A study of methods of mathematical physics. Topics include matrices, linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. Weekly tutorial sessions. Cross-listed with PHYS 20451 (271).

MATH 20580. Introduction to Linear Algebra and Differential Equations

(3 -1- 3.5) Misiolek; Taylor

Prerequisite: MATH 20550*Corequisite:* MATH 22580

An introduction to linear algebra and to first- and second-order differential equations. Topics include elementary matrices, LU factorization, QR factorization, the matrix of a linear transformation, change of basis, eigenvalues and eigenvectors, solving first-order differential equations and second-order linear differential equations, and initial value problems. This course is part of a two-course sequence that continues with Math 30650 (325). Credit is not given for both Math 20580 (228) and Math 20610 (221).

MATH 20610. Linear Algebra

(3 -0- 3) Mendes

Open to all students. An introduction to vector spaces, matrices, linear transformations, inner products, determinants and eigenvalues. Emphasis is given to careful mathematical definitions and understanding the basic theorems of the subject. Credit is not given for both MATH 20610 (221) and MATH 20580 (228).

MATH 20630. Introduction to Mathematical Reasoning

(3 -0- 3) Hall

This course serves as a transition to upper-level math courses. The general subject is numbers of all sorts—integers, rationals, reals, etc. The main point will be to treat everything the way a mathematician would. That is, we will give precise definitions of the objects we consider and careful statements of the assertions we make about

them. And, most importantly, we will justify our assertions by giving mathematical proofs. Topics covered include basic language of sets, common methods of proof, integers, factorization, modular arithmetic, rational numbers, completeness, real numbers, cardinality, limits, and continuity.

MATH 20670. Mathematical Methods in Physics II

(3 -0- 3.5) Caprio

Corequisite: MATH 22670

A study of methods of mathematical physics. Topics include linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. Weekly tutorial sessions.

MATH 20750. Ordinary Differential Equations

(3 -1- 3.5) Stanton

Prerequisite: MATH 20610

Corequisite: MATH 22750

An introduction to differential equations. Topics include first-order equations, n -th order linear equations, power series methods, systems of first order linear equations, non-linear systems and stability. Credit is not given for both MATH 20750 (230) and MATH 30650 (325).

MATH 20810. Honors Algebra I

(3 -0- 3) Starchenko

A comprehensive treatment of vector spaces, linear transformations, inner products, determinants, eigenvalues, tensor and exterior algebras, spectral decompositions of finite-dimensional symmetric operators, and canonical forms of matrices. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 20820. Honors Algebra II

(3 -0- 3) Diller

Prerequisite: MATH 20810

A comprehensive treatment of vector spaces, linear transformations, inner products, determinants, eigenvalues, tensor and exterior algebras, spectral decompositions of finite-dimensional symmetric operators, and canonical forms of matrices. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 20850. Honors Calculus III

(4 -0- 4) Connolly

Prerequisite: MATH 10860

Corequisite: MATH 22850

Required of honors mathematics majors. A rigorous course in differential and integral calculus of several variables. Topics include functions of several variables, the inverse function theorem, partial derivatives, multiple integrals, line integrals, surface integrals, Stokes' theorem, an introduction to ordinary differential equations and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 20860. Honors Calculus IV

(4 -0- 4) Connolly

Prerequisite: MATH 20850

Corequisite: MATH 22860

Required of honors mathematics majors. A rigorous course in differential and integral calculus of several variables. Topics include functions of several variables, the inverse function theorem, partial derivatives, multiple integrals, line integrals, surface integrals, Stokes' theorem, an introduction to ordinary differential equations and applications. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 22550. Calculus III Tutorial

(0 -3- 0)

Corequisite: MATH 20550

Perfecting problem-solving skills in smaller group settings.

MATH 22570. Mathematical Methods in Physics I Tutorial

(0 -1- 0)

Corequisite: MATH 20570

Perfecting problem-solving skills in smaller group settings.

MATH 22580. Linear Algebra and Differential Equations Tutorial

(0 -1- 0)

Corequisite: MATH 20580

Perfecting problem-solving skills in smaller group settings.

MATH 22670. Mathematical Methods in Physics II Tutorial

(0 -0- 0)

Corequisite: MATH 20670

Required tutorial for MATH 20670.

MATH 22750. Ordinary Differential Equations Tutorial

(0 -1- 0)

Corequisite: MATH 20750

Perfecting problem-solving skills in smaller group settings.

MATH 22850. Honor Calculus III Tutorial

(0 -1- 0)

Corequisite: MATH 20850

Perfecting problem-solving skills in smaller group settings.

MATH 22860. Honors Calculus IV Tutorial

(0 -1- 0)

Corequisite: MATH 20860

Perfecting problem-solving skills in smaller group settings.

MATH 30210. Introduction to Operations Research

(3 -0- 3) Faybusovich

Prerequisite: MATH 20580 or MATH 20610 or MATH 20750 or MATH 20810

An introduction to linear programming, duality theory, simplex algorithm, the transportation problem, network analysis, dynamic programming and game theory.

MATH 30530. Introduction to Probability

(3 -0- 3) Galvin

Prerequisite: MATH 20850 or MATH 20550

An introduction to the theory of probability, with applications to the physical sciences and engineering. Topics include discrete and continuous random variables, conditional probability and independent events, generating functions, special discrete and continuous random variables, laws of large numbers and the central limit theorem. The course emphasizes computations with the standard distributions of probability theory and classical applications of them.

MATH 30540. Mathematical Statistics

(3 -0- 3) Delaney

Prerequisite: MATH 30530

An introduction to mathematical statistics. Topics include distributions involved in random sampling, estimators and their properties, confidence intervals, hypothesis testing including the goodness-of-fit test and contingency tables, the general linear model and analysis of variance.

MATH 30610. Introduction to Financial Mathematics

(3 -0- 3) Faybusovich

Prerequisite: MATH 30530 and (MATH 20610 or MATH 20550)

The course serves as a preparation for first actuarial exam in financial mathematics, known as Exam FM or Exam 2. The first part of the course deals with pricing of fixed income securities, such as bonds and annuities. The second part of the course can serve as an introduction to derivative securities such as options and futures. Although the amount of material for both parts is almost the same, exam

FM devotes usually about 2/3 of its questions to Part 1. Therefore, about 2/3 of the course is devoted to Part 1. Topics covered: interest rates, annuities, loans and bonds, forwards, options, hedging, and swaps

MATH 30650. Differential Equations

(3 -0- 3) Hall; Xavier

Prerequisite: MATH 20580

A second course in differential equations. Topics include higher order linear equations, numerical methods, Laplace transforms, linear systems, non-linear systems and stability, and an introduction to partial differential equations and Fourier series. Credit is not given for both MATH 20750 (230) and MATH 30650 (325).

MATH 30710. Algebra

(3 -0- 3)

Prerequisite: MATH 20630 or MATH 20610

An introduction to groups, rings and fields. Topics include permutations, divisibility, modular arithmetic, cryptography, cyclic and dihedral groups, Lagrange's theorem, homomorphisms, ideals, integral and Euclidean domains, extension fields.

MATH 30750. Real Analysis

(3 -0- 3) Han

Prerequisite: MATH 20630

A rigorous treatment of differential and integral calculus. Topics include a review of sequences and continuity, differentiability, Taylor's theorem, integration, the fundamental theorem of Calculus, pointwise and uniform convergence, and power series. Additional topics are likely and will depend on the instructor. Emphasis throughout will be on careful mathematical definitions and thorough understanding of basic results.

MATH 30810. Honors Algebra III

(3 -0- 3)

Prerequisite: MATH 20820

A comprehensive treatment of groups, polynomials, rings, homomorphisms, isomorphism theorems, field theory, and Galois theory. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 30820. Honors Algebra IV

(3 -0- 3) Polini

Prerequisite: MATH 30810

Required of honors mathematics majors. A comprehensive treatment of groups, polynomials, rings, homomorphisms, isomorphism theorems, field theory, and Galois theory. The course stresses careful mathematical definitions and emphasizes the proofs of the standard theorems of the subject.

MATH 30850. Honors Analysis I

(3 -0- 3) Szekelyhidi

Prerequisite: MATH 20860

Required of honors mathematics majors. An advanced course in mathematical analysis in one and several variables. Topics include an axiomatic formulation of the real and complex number systems, compactness, connectedness, metric spaces, limits, continuity, infinite sequences and series, differentiation, the Riemann-Stieltjes integral, the Stone-Weierstrass theorem, the implicit function theorem, differential forms, partitions of unity, simplexes and chains, and Stokes' theorem.

MATH 30860. Honors Analysis II

(3 -0- 3) Hall

Prerequisite: MATH 30850

Required of honors mathematics majors. An advanced course in mathematical analysis in one and several variables. Topics include an axiomatic formulation of the real and complex number systems, compactness, connectedness, metric spaces, limits, continuity, infinite sequences and series, differentiation, the Riemann-Stieltjes integral, the Stone-Weierstrass theorem, the implicit function theorem, differential forms, partitions of unity, simplexes and chains, and Stokes' theorem.

MATH 40210. Basic Combinatorics

(3 -0- 3) Galvin

An introduction to the theory of combinatorics. Topics include permutations, multinomial coefficients, the theory of enumerative combinatorics, pairing problems, recurrence relations, the inclusion-exclusion principle, graph theory, algebraic coding theory and symbolic dynamics.

MATH 40390. Numerical Analysis

(3 -0- 3) Xu

Prerequisite: MATH 20750 or MATH 20860 or MATH 30650

An introduction to the numerical solution of ordinary and partial differential equations. Topics include the finite difference method, projection methods, cubic splines, interpolation, numerical integration methods, analysis of numerical errors, numerical linear algebra and eigenvalue problems, and continuation methods.

MATH 40480. Complex Variables

(3 -0- 3)

Prerequisite: MATH 20550 or MATH 20850

An introduction to the theory of functions of one complex variable. Topics include analytic functions, Cauchy integral theorems, power series, Laurent series, poles and residues, applications of conformal mapping, and Schwarz-Christoffel transformations.

MATH 40510. Intro to Algebraic Geometry

(3 -0- 3) Migliore

Prerequisite: MATH 30710 or MATH 30810

Algebraic Geometry is the study of systems of polynomial equations and their vanishing loci. It has important components that lie in the realm of geometry, of algebra and of computation (among others) and countless applications. This course tries to give a flavor of these different aspects of the field and how they fit together. Indeed, much of the fascination of this subject comes from the myriad ways in which arguments squarely in one realm give surprising consequences that fall squarely in a different realm.

MATH 40520. Theory of Numbers

(3 -0- 3)

Prerequisite: MATH 30705 or MATH 20820 or MATH 30710

An introduction to elementary number theory. Topics include the Euclidean algorithm, congruencies, primitive roots and indices, quadratic residues, quadratic reciprocity, distribution of primes, and Waring's problem.

MATH 40570. Mathematical Methods in Financial Economics

(3 -0- 3) Himonas

Prerequisite: MATH 30530 and (MATH 20750 or MATH 30650) and (MATH 30750 or MATH 30850) or (FIN 30600) or (FIN 70670)

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time, will be discussed. The pricing of derivative securities in continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

MATH 40710. Computability and Logic

(3 -0- 3)

Prerequisite: MATH 10560 or MATH 10860

An introduction to formal notions of computability. Topics include finite automata, regular languages and expressions, pushdown automata, context-free grammars and languages, Turing machines, primitive recursive and λ -recursive functions, Church's Thesis, and absolutely unsolvable problems.

MATH 40720. Topics in Algebra

(3 -0- 3)

Prerequisite: MATH 30710 and MATH 20820

The notion of symmetry is familiar from art and architecture. Possibly less familiar is the basic role played by symmetry in parts of mathematics and science. This

arises through the notion of group actions, which allow groups to be regarded as precise measures of symmetry of various structures. This course will provide an introduction to the mathematical usefulness of these ideas through their application to the study of concrete examples. It will investigate symmetry of geometric objects, combinatorial applications of symmetry to counting and classifying patterns, finite groups of rotations of 3-space, symmetry of algebraic structures such as groups and fields, wallpaper and frieze patterns, and free groups and group actions on trees. If time permits, we may discuss finite reflection groups and illustrate more general notions of symmetry described by groupoids.

MATH 40730. Mathematical and Computational Modeling in Biology and Physics

(3 -0- 3) Alber

Prerequisite: MATH 20750 or MATH 30650 or ACMS 20750

Introductory course on applied mathematics and computational modeling with emphasis on modeling of biological problems in terms of differential equations and stochastic dynamical systems. Students will be working in groups on several projects and will present them in class in the end of the course.

MATH 40740. Topology

(3 -0- 3) Khan

Prerequisite: MATH 20630

An introduction to topology. Topics include the theory of surfaces, knot theory, and the theory of metric spaces.

MATH 40750. Partial Differential Equations

(3 -0- 3)

Prerequisite: MATH 20750 or MATH 20820 or MATH 30650

An introduction to partial differential equations. Topics include Fourier series, solutions of boundary value problems for the heat equation, wave equation and Laplace's equation, Fourier transforms, and applications to solving heat, wave and Laplace's equations in unbounded domains.

MATH 40760. Differential Geometry

(3 -0- 3) Smyth

Prerequisite: MATH 20750 or MATH 20860 or MATH 30650

An introduction to differential geometry. Topics include analysis of curves and surfaces in space, the first and second fundamental forms of surfaces, torsion, curvature and the Gauss-Bonnet theorem.

MATH 40910. Topics in Mathematical Logic

(3 -0- 3)

Prerequisite: MATH 30710 or MATH 30810

An introduction to mathematical logic and Gödel's Incompleteness Theorem. The course will include topics from model theory, computability, and set theory, as time permits.

MATH 40960. Topics in Geometry or Topology

(3 -0- 3)

Prerequisite: MATH 20630 or MATH 10860

This course covers topics in geometry and topology.

MATH 43900. Problem Solving in Mathematics

(0 -0- 1)

The main goal of this course is to develop problem solving strategies in mathematics.

MATH 46800. Directed Readings

(V -0- V)

Consent of director of undergraduate studies in mathematics is required.

MATH 48800. Undergraduate Research

(V -0- V)

This course offers students the opportunity to study and do research on a topic of their interest with faculty members of Mathematics department. It is a variable credit hour course, with a maximum of 4 credits per semester, arranged individually for each student. This is a repeatable for credit course.

MATH 48844. Special Topics

(V -0- V)

This topical course is intended for students attending international study programs. It is a variable credit hour course, with a maximum of 4 credits per semester, arranged individually for each student. It is a repeatable for credit course.

MATH 48900. Thesis

(V -0- V)

Seniors in the mathematics program have the option of writing a senior thesis on a more advanced subject than is provided in the normal undergraduate courses. A program of readings on the topic must be begun with a faculty advisor by the spring semester of the junior year.

MATH 50510. Computer Programming/ Problem Solving

(3 -0- 3)

An introduction to solving mathematical problems using computer programming in high-level languages such as C.

MATH 50570. Mathematical Methods in Financial Economics

(3 -0- 3) Himonas

Prerequisite: (MATH 30530 and (MATH 20750 or MATH 30650) and (MATH 30750 or MATH 30850)) or (FIN 30600) or (FIN 70670)

An introduction to financial economic problems using mathematical methods, including the portfolio decision of an investor and the determination of the equilibrium price of stocks in both discrete and continuous time, will be discussed. The pricing of derivative securities in continuous time including various stock and interest rate options will also be included. Projects reflecting students' interests and background are an integral part of this course.

MATH 50730. Mathematical and Computational Modeling in Biology and Physics

(3 -0- 3)

Introductory course on applied mathematics and computational modeling with emphasis on modeling of biological problems in terms of differential equations and stochastic dynamical systems. Students will be working in groups on several projects and will present them in class in the end of the course.

MATH 50760. Special topics in Differentiable Manifolds and Lie Groups

(3 -0- 3)

This course introduces students to Differentiable Manifolds and Lie Groups. Topics include: Smooth Manifolds and Smooth Maps. Submanifolds. Lie Groups. The Tangent Space of a Manifold at a point. The Inverse Function Theorem. Sard's Theorem and the Whitney Embedding Theorem. The Tangent Bundle. The Lie Algebra of a Lie Group. Vector Bundles. The Orthogonal and Unitary groups. Grassmannians as manifolds. Cobordism and the theorem of R. Thom.

MATH 50780. Special Topics—Seminar for Undergraduate Mathematical Research

(3 -0- 3) Connolly

This course permits students to pursue a special topic in advanced mathematics. It is offered as a part of SUMR (the Seminar for Undergraduate Mathematical Research). The consent of the Director of Undergraduate Studies in Mathematics is required.

MATH 56800. Directed Readings

(V -0- V)

Readings not covered in the curriculum that relate to the student's area of interest.

Physics

PHYS 08699. Directed Research: Particle Physics

(V -0- V)

Directed research course for high school students combining coverage of topics in particle physics with participation in experimental research in ongoing experiments conducted by particle physics faculty. Students maintain a research logbook and submit a written research summary at the conclusion of the research period.

PHYS 08798. Directed Research in Nuclear Astrophysics

(V -0- V)

Directed research course for high school students combining coverage of topics in nuclear astrophysics with participation in experimental research in ongoing experiments conducted by nuclear astrophysics faculty. Students maintain a research logbook and submit a written research summary at the conclusion of the research period.

PHYS 10033. Earth Focus

(3 -0- 3) Rettig

This course will begin with a history of the “origin” of the Universe. We will develop a picture of how, when and where the elements that compose our universe and in particular, the planets (and Earth), were created and how they got to the present state that allows life to exist on the Earth. The course will describe our unique place in nature. The goal will be to discuss how human activities (the production of the greenhouse gases) may/or may not be contributing to an increase in average global temperatures. Notre Dame students will be faced with numerous environmental issues throughout their lives and this course will provide a basis for intelligent and knowledgeable decisions in the future. The course will include a discussion of the sustainability of our energy situation as well as a discussion of alternative technologies that might be implemented in the future.

PHYS 10052. Concepts of Energy and the Environment

(3 -0- 3)

A course developing the basic ideas of energy and power and their applications. The fossil fuels are considered together with their limitations, particularly as related to global warming, pollution, and their nonrenewable character. The advantages and disadvantages of nuclear power are studied and compared with alternative energy sources such as solar energy, wind, and geothermal and hydroelectric power. Various aspects of energy storage and energy conservation are also considered. This course is designed for the non-specialist. It is open to first-year students only.

PHYS 10062. Science Literacy

(3 -0- 3)

A course that provides the tools for a basic understanding of scientific developments and their potential consequences. Developments in many areas of science will be discussed, including biology, chemistry, physics, astronomy, engineering, and computer science, with the view that basic physical laws serving as a common thread among them. Topics covered include the mechanisms of scientific discovery, the impact of scientific discoveries on society, science and ethics, and the tools of contemporary science. The course focuses on concepts rather than formulas and concentrates primarily on examples taken from current scientific developments. If taken by science or engineering students, this course counts as a general elective.

PHYS 10091. Principles of Physics I

(3 -0-3)

This course is the AP-credit equivalent of PHYS 10111. PHYS 10111 is a prerequisite to PHYS 10222. A course intended for students who desire a grounding in all the major principles of physics but who plan to major in some area other than science or engineering. The ability to apply these principles to the solution of problems is a major goal of the course. The following topics are normally included; kinematics and dynamics of a particle, work, energy, momentum, harmonic motion, gravitation, and circular orbits; wave motion, interference, standing waves, the Doppler effect; and temperature, heat, first law of thermodynamics,

and kinetic theory of gases. Additional material will be at the discretion of the instructor. The division between PHYS 10111 and 10222 will depend on the order of presentation.

PHYS 10092. Principles of Physics II

(3 -0-3)

This course is the AP-credit equivalent of PHYS 10222. PHYS 10111 is a prerequisite to PHYS 10222. A course intended for students who desire a grounding in all the major principles of physics but who plan to major in some area other than science or engineering. The ability to apply these principles to the solution of problems is a major goal of the course. The following topics are normally included; electric charge, Coulomb's law, electric field and potential, current, resistance, and DC circuits; magnetic force, and electromagnetic induction; the nature of light, the spectrum; photons, photoelectric effect, Compton scattering, de Broglie waves, energy levels, X-rays; nuclei and radioactivity; and special relativity. Additional material will be at the discretion of the instructor. The division between PHYS 10111 and 10222 will depend on the order of presentation.

PHYS 10093. General Physics I

(4 -0-4)

This course is the AP-credit equivalent of PHYS 10310. The first course in a two-semester sequence in general physics. Topics include the kinematics and mechanics of a particle; work, energy and momentum, and associated conservation laws; rotation, torque and angular momentum; oscillations and wave motions. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only. Weekly tutorial sessions. Students intending to seek a major where AP science credit is not accepted, or where two semesters of general physics with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, PHYS 10093/10094 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of PHYS 10310/11310 + 10320/11320 as determined by the requirements of their respective majors.

PHYS 10094. General Physics II

(4 -0-4)

This course is the AP-credit equivalent of PHYS 10320. The second course in a two-semester sequence in general physics. Topics include electrostatics, electric current, and circuits; magnetism, electromagnetic induction, and waves; and geometrical optics. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only. Weekly tutorial sessions. Students intending to seek a major where AP science credit is not accepted, or where two semesters of general physics with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, PHYS10093/10094 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of PHYS 10310/11310 + 10320/11320 as determined by the requirements of their respective majors.

PHYS 10095. Physics I

(4 -0-4)

This course is the AP-credit equivalent of PHYS 30210. It requires demonstrated knowledge of the basic principles of mechanics, fluid mechanics, thermal physics, wave motion, and sound. Primarily for students in the life sciences. Laboratory meetings each week. Students intending to apply to medical or other professional schools where AP science credit is not accepted, or where two semesters of general physics with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, PHYS 10095/10096 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of either PHYS 30210/31210 + 30220/31220 or PHYS 10310/11310 + 10320/11320 as determined by the requirements of their respective majors.

PHYS 10096. Physics II

(4 -0-4)

This course is the AP-credit equivalent of PHYS 30220. It requires demonstrated knowledge of the basic principles of electricity, magnetism, optics, and modern physics. Primarily for students in the life sciences. Laboratory meetings each week. Students intending to apply to medical or other professional schools where AP science credit is not accepted, or where two semesters of general physics with laboratories at the college level are required, almost universally waive their AP credit at Notre Dame and take the classes for academic degree credit. In these cases, PHYS 10095/10096 will revert to non-degree credit on their final transcript, when replaced by 8.0 letter-graded degree credits of either PHYS 30210/31210 + 30220/31220 or PHYS 10310/11310 + 10320/11320 as determined by the requirements of their respective majors.

PHYS 10111. Principles of Physics I

(3 -0- 3)

PHYS 10111 is a prerequisite to PHYS 10122. A course intended for students who desire a grounding in all the major principles of physics but who plan to major in some area other than science or engineering. The ability to apply these principles to the solution of problems is a major goal of the course. The following topics are normally included; kinematics and dynamics of a particle, work, energy, momentum, harmonic motion, gravitation, and circular orbits; wave motion, interference, standing waves, the Doppler effect; and temperature, heat, first law of thermodynamics, and kinetic theory of gases. Additional material will be at the discretion of the instructor. The division between PHYS 10111 and 10122 will depend on the order of presentation.

PHYS 10140. Descriptive Astronomy

(3 -0- 3)

A description of the motions and structure of the earth, moon, and planets; an exposition of the modern theories of solar and stellar structure, nebulae, and galaxies; basics of stellar evolution, black holes, quasars, and other recent developments; an introduction to cosmology. This course includes elementary observational projects.

PHYS 10222. Introductory Physics II

(3 -0- 3)

Prerequisite: PHYS 10111

This non-calculus-based course is intended for students seeking an understanding of principles of physics beyond those discussed in a one-semester course. The course covers topics useful to but not limited to students in architecture and designed for students who plan to major in some area other than science or engineering. Among the topics discussed are phases of matter, thermodynamics, heat exchange, energy storage, vibrations and acoustics, and basic electricity and magnetism. The course will emphasize applications to practical problems and will explore challenges such as light pollution, earthquake-proofing, and energy conservation.

PHYS 10240. Elementary Cosmology

(3 -0- 3)

An elective course for students planning to major in the arts and letters or business. It is designed to acquaint the non-mathematically inclined student with the most important discoveries in physics of the last few decades and how they have altered our perceptions of the origin and structure of the universe. This course examines such questions as: "Where did the universe come from?" "Why do scientists feel sure that it was born in a cosmic fireball called the Big Bang?" and "Where did the Big Bang itself come from?" This is a reading-intensive course based on popularizations of science written for the curious and intelligent layperson. The emphasis will be on class discussion of the readings. One book report and a term paper are required in addition to examinations. If taken by College of Science students, this course counts as general elective credit.

PHYS 10262. Physical Methods in Art and Archaeology

(3 -0- 3)

A course that gives an overview of the various physics-based analysis and dating techniques used in art and archaeology. The course will cover topics such as X-ray fluorescence and X-ray absorption, proton-induced X-ray emission, neutron-induced activation analysis, radiocarbon dating, accelerator mass spectroscopy, luminescence dating, and methods of archeometry. Multiple examples of the use of the techniques in art and archaeology will be given, e.g., under X-ray techniques and accelerator mass spectrometry, the analysis of ancient coins and violin varnish and the Iceman and the Turin Shroud are used respectively as examples. Physics principles of the methods and techniques will be taught in a descriptive manner.

PHYS 10310. General Physics I

(4 -0- 4)

Prerequisite: MATH 10550 (may be taken concurrently) or MATH 10850 (may be taken concurrently)*Corequisite:* PHYS 11310, PHYS 12310

The first course in a two-semester sequence in general physics. Topics include the kinematics and mechanics of a particle; work, energy and momentum, and associated conservation laws; rotation, torque and angular momentum; oscillations and wave motions. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only. Weekly tutorial sessions.

PHYS 10320. General Physics II

(4 -0- 4)

Prerequisite: (PHYS 10310 or PHYS 10411) and (MATH 10550 or MATH 10850) and (MATH 10560 (may be taken concurrently) or MATH 10860 (may be taken concurrently))*Corequisite:* PHYS 11320, PHYS 12320

The second course in a two-semester sequence in general physics. Topics include electrostatics, electric current, and circuits; magnetism, electromagnetic induction, and waves; and geometrical optics. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only. Weekly tutorial sessions.

PHYS 10342. Modern Physics from Quarks to Quasars

(3 -0- 3)

Prerequisite: ALHN 13950

Restricted to first-year Arts and Letters intents in the Honors Program. This course emphasizes themes of modern physics and will be organized around the concepts of symmetry and physical laws. For example, how do symmetries observed in nature lead to fundamental laws of conservation of energy and momentum? Examples from areas of modern physics such as cosmology and astrophysics are used to bring these topics to life. We consider questions such as: "What happens if one travels alongside a beam of light?" (which leads us into special relativity); "Why is the night sky so dark?" (the Big Bang); "What is matter?"; "What is mass?"; "What are forces?" The course is a mix of lecture, discussions, and lab/demonstrations.

PHYS 10411. General Physics A—M/Mechanics

(4 -0- 4)

Prerequisite: MATH 10550 (may be taken concurrently) or MATH 10850 (may be taken concurrently)*Corequisite:* PHYS 11411

The first semester of a three-semester sequence in general physics. Topics include the kinematics and mechanics of a particle; work, energy, and momentum, and associated conservation laws; rotation, torque, and angular momentum; oscillations and wave motions. A course designed for students intending to enter the Department of Physics. Laboratory meetings each week.

PHYS 10424. GenPhys B—M/Waves, Thermo, SpRel

(4 -0- 4)

Prerequisite: (PHYS 10310 or PHYS 10411) and (MATH 10550 or MATH 10850) and (MATH 10560 (may be taken concurrently) or MATH 10860 (may be taken concurrently))

Corequisite: PHYS 11424

The second semester of the a three-semester course in general physics. Topics include classical thermodynamics, fluids and acoustics; wave motions, geometric and physical optics; special relativity. The course is intended primarily for physics majors but is open to other qualified students.

PHYS 10555. Science Play: Physics and Astronomy on the Stage

(3 -0- 3)

This course will examine a selection of plays that use astronomy or physics to delve into the scientific process, including plays by Auburn, Stoppard, Brecht, and Frayn. By focusing on the moments abutting the instant of scientific discovery, these plays create an ideal space to explore the scientific idea itself as well as the attending complex human interactions and issues such as the scientific method, the interplay of society and science, the scientist's responsibility to society, and gender and genius. The course will guide the student through our evolving view of the physical laws that govern the interactions between particles in the universe, loosely mirroring the arc of the scientific content of the plays. In addition to addressing these key ideas, we will study the theatricality of the plays. Having explored major topics in physics at a non-technical level as well as the roles of the playwright, director and actor in giving life to the science play, the course will culminate in the translation of these scientific ideas to the stage.

PHYS 11310. General Physics I Laboratory

(0 -1- 0)

Corequisite: PHYS 10310

PHYS 12310

The laboratory is a corequisite for PHYS 10310

PHYS 11320. General Physics II Laboratory

(0 -1- 0)

Prerequisite: (MATH 10550 or MATH 10850) and (MATH 10560 (may be taken concurrently) or MATH 10860 (may be taken concurrently)

Corequisite: PHYS 10320, PHYS 12320

The laboratory is a corequisite for PHYS 10320

PHYS 11411. General Physics A-M/Mech Lab

(0 -2- 0)

Corequisite: PHYS 10411

The laboratory is a corequisite for PHYS 10411

PHYS 11424. General Physics B-M/Waves, Thermo, SPRel Lab

(0 -2- 0)

Corequisite: PHYS 10424

The Laboratory is a corequisite for PHYS 10424.

PHYS 12310. General Physics I Tutorial

(0 -1- 0)

Corequisite: PHYS 10310

PHYS 11310

The tutorial is a corequisite for PHYS 10310

PHYS 12320. General Physics II Tutorial

(0 -1- 0)

Corequisite: PHYS 10320

PHYS 11320

The tutorial is a corequisite for PHYS 10320

PHYS 20051. Energy and Society

(3 -0- 3) Aprahamian

A course developing the basic ideas of energy and power and their applications from a quantitative and qualitative viewpoint. The fossil fuels (coal, oil, natural gas) are studied together with their societal limitations (pollution, global warming, diminishing supply). Nuclear power is similarly studied in the context of the societal concerns that arise (radiation, reactor accidents, nuclear weapons proliferation, high-level waste disposal). The opportunities as well as the risks presented by alternative energy resources, in particular solar energy, wind, geothermal, and hydropower, together with various aspects of energy conservation, are developed and discussed. This course is designed for the non-specialist.

PHYS 20054. Climate Physics

(3 -0- 3)

Prerequisite: MATH 10360

This course is a one-semester investigation of the processes leading to balance in the Earth's climate system. The course will study the physical processes driven by the laws of thermodynamics, convective hydrodynamics, and radiative energy transfer. The course is appropriate for undergraduate science as well as non-science majors and will count for science credit for science majors.

PHYS 20061. Nuclear Warfare

(3 -0- 3)

Nuclear phenomena; nuclear fission and fusion. Nuclear weapons. Effects of blast, shock, thermal radiation, prompt and delayed nuclear radiation. Fire, fallout, ozone-layer depletion, electromagnetic pulse, "nuclear winter." Medical consequences, physical damage, effects on the individual and on society. Defensive measures and their feasibility. Scenarios for war and peace, proliferation of nuclear weapons material, recent diplomatic history. U.S. Bishops' Pastoral Letter. The course counts for science majors as a general elective credit.

PHYS 20071. Physics of Sound and Music

(3 -0- 3)

This course includes a non-technical introduction to the physics of sound, including musical acoustics and the science of sound reproduction. The course will include basic Newtonian mechanics, oscillating systems, wave motion, sound, Fourier synthesis, psychoacoustics and hearing, and the acoustics of various musical instruments. It will also include a short introduction to electricity and magnetism, and the physics of microphones, loudspeakers, phonographs, digital recording, and electronic synthesizers. Although there are no formal prerequisites, the course will make use of some algebra and trigonometry. There will not be laboratory, but many demonstrations will be offered, including students playing their own instruments.

PHYS 20140. Descriptive Astronomy

(3 -0- 3)

A description of the motions and structure of the Earth, moon, and planets. An exposition of the modern theories of solar and stellar structure, nebulae, and galaxies. Basics of stellar evolution, black holes, quasars, and other recent developments. An introduction to cosmology. This course includes elementary observational projects.

PHYS 20330. General Physics III

(3.5 -0- 3.5)

Prerequisite: PHYS 10320 and (MATH 10560 or MATH 10860) and (MATH 20850 (may be taken concurrently) or MATH 20550 (may be taken concurrently))

Corequisite: PHYS 21330

A third semester in general physics. Topics include 1) interference and diffraction; 2) quanta and the wave-particle duality; 3) introduction to quantum mechanics; 4) atomic, nuclear, and particle physics; 5) physics of the solid state; and 6) astrophysics and cosmology. A course designed for students of science and engineering. Laboratory meetings in alternating weeks only.

PHYS 20435. GenPhysC—M/Electricity and Magnetism

(3 -0- 4)

Prerequisite:)PHYS 10310 or PHYS 10411) and (MATH 20550 (may be taken concurrently) or MATH 20850 (may be taken concurrently))*Corequisite:* PHYS 21435

The third semester of a three-semester sequence in general physics. Topics include electrostatics, electric current and circuits, magnetism, electromagnetic induction and waves. A course designed for students majoring in the Department of Physics. Laboratory meetings each week.

PHYS 20451. Mathematical Methods in Physics I

(3 -0- 3.5)

Prerequisite: MATH 20550 (may be taken concurrently) or MATH 20850 (may be taken concurrently)*Corequisite:* PHYS 22451

A two-semester course in the study of methods of mathematical physics. Topics include linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. The division between PHYS 20451 and 20452 will depend on the order of presentation. Weekly tutorial sessions.

PHYS 20452. Mathematical Methods in Physics II

(3 -0- 3.5)

Prerequisite: PHYS 20451 or MATH 20570*Corequisite:* PHYS 22452

A two-semester course in the study of methods of mathematical physics. Topics include linear algebra (including matrices and determinants), vector and tensor analysis, vector calculus, curvilinear coordinates, series, ordinary differential equations, partial differential equations, orthogonal functions and vector spaces, special functions (including Bessel, Legendre, and Hermite), calculus of variations, Fourier series, and group theory. The division between PHYS 20451 and 20452 will depend on the order of presentation. Weekly tutorial sessions.

PHYS 20454. Intermediate Classical Mechanics

(3 -0- 3)

Prerequisite: (PHYS 20451 or MATH 20570) and (PHYS 20452 (may be taken concurrently) or MATH 20670 (may be taken concurrently))

Newtonian mechanics of particles in one, two, and three dimensions; oscillations; non inertial reference frames; gravitation, central forces; systems of particles; kinet-ics and dynamics of rigid body motion; Lagrangians; Hamilton's equations.

PHYS 20464. Modern Physics I

(4 -0- 4)

Prerequisite: PHYS 10424 or PHYS 20435 or PHYS 10320

Special relativity, foundations of quantum concepts. Properties of atoms. Interactions of electromagnetic fields with atoms. Wave mechanics and the Schroedinger equation. Atomic structure and atomic spectra. Atomic wave functions. Fine structure and Zeeman effect. Multiplet analysis. Exclusion principle, periodic table and spectra of multielectron atoms. Introduction to the statistical physics of quantum mechanical systems.

PHYS 20481. Introduction to Astronomy and Astrophysics for Majors

(3 -0- 3) Phillips

Prerequisite: PHYS 10310 or PHYS 10411 or PHYS 30210

This one-semester course uses basic physical principals of mechanics, optics, and radiation to provide an introduction to modern astronomy and astrophysics. Topics include the solar system, stars, interstellar matter, galaxies, and cosmology. The underlying observations (from radio to gamma rays) are used to provide a fundamental understanding topics and their historical background. Several observ-ing projects will be completed at the observatory in the Jordan Hall of Science. (This course is offer in the fall of even years.)

PHYS 21330. General Physics III Laboratory

(0 -1- 0)

Corequisite: PHYS 20330

The laboratory is a corequisite for PHYS 20330

PHYS 21435. GenPhysC-M/E&M Laboratory

(0 -2- 0)

Corequisite: PHYS 20435

The laboratory is a corequisite for PHYS 20435.

PHYS 22451. Mathematical Methods in Physics I Tutorial

(0 -1- 0)

Corequisite: PHYS 20451

The tutorial is a corequisite for PHYS 20451

PHYS 22452. Mathematical Methods in Physics II Tutorial

(0 -1- 0)

Corequisite: PHYS 20452

The tutorial is a corequisite for PHYS 20452.

PHYS 23411. Sophomore Seminar

(1 -0- 1)

An introduction to the physics major, career and post-graduate options, and current topics in physics research. Classes are conducted by staff members.

PHYS 30210. Physics I

(3 -0- 4)

Prerequisite: MATH 10360 or MATH 10460 or MATH 10560 or MATH 10860*Corequisite:* PHYS 31210

The basic principles of mechanics, fluid mechanics, thermal physics, wave motion, and sound. Primarily for students in the life sciences. Laboratory meetings each week.

PHYS 30220. Physics II

(3 -0- 4)

Prerequisite: (PHYS 10310 or PHYS 10411 or PHYS 30210 or PHYS 34210) and (MATH 10360 or MATH 10460 or MATH 10560 or MATH 10860)*Corequisite:* PHYS 31220

The basic principles of electricity, magnetism, optics, and modern physics. Primarily for students in the life sciences. Laboratory meetings each week.

PHYS 30389. Philosophical Issues in Physics

(3 -0- 3)

Prerequisite: PHYS 10122 or PHYS 10320 or PHYS 30220 or PHYS 20435

This course is intended for non-science students who desire to begin an examina-tion of the origins of the modern laws of physics and for science students who wish to know the actual route to the discovery and the broader implications of the formal theories with which they are already familiar. The historical background to and philosophical questions associated with major laws of physics will be discussed, in large measure by examining directly relevant excerpts from the writ-ings of some of the creators of seminal concepts and theories in physics. The latter part of the course will concentrate on historical and philosophical issues related to relativity and especially to quantum theory and its interpretation. This course is accepted as a science elective in the College of Science.

PHYS 30421. Scientific Programming

(3 -0- 3)

A major part of this course is devoted to teaching the student a modern computer language. In this instance, the choice of language will be Fortran 95/2003. However, a student who understands one computer language should be able to translate his/her knowledge to another language, for instance C++, and those connections will be made explicit. Computer-based algorithms are also very important in the training of a modern scientist. As a result, several examples of scientific computing algorithms will also be presented. Specifically, the focus will be on numerical methods for solving roots of equations, numerical linear algebra,

numerical integration, solution of ODEs and sparse matrix methods and their relation to the solution of PDEs. The course also provides a modest amount of introduction to symbolic manipulation using the Mathematica - package. Scientific visualization via the IDL package is also presented.

PHYS 30432. Lasers and Modern Optics

(3 -0- 3)

Prerequisite: PHYS 20330 or (PHYS 10424 and PHYS 20435)

Corequisite: PHYS 31432

Principles and practical aspects of laser operation and applications in modern optics. Propagation of plane electromagnetic waves. Diffraction and interference of light. Gaussian beam propagation and optical resonators. Theory of laser oscillation. Gas, solid, semiconductor, and dye lasers. Detectors of optical radiation. Nonlinear optics. Applications in research and industry. Laboratory exercises include polarization, interference, Fourier optics, holography, gas, diode and turnable lasers, and harmonic generation. A course primarily intended for physics majors.

PHYS 30461. Thermal Physics

(3 -0- 3)

Prerequisite: PHYS 20454

The first half of this course covers classical thermodynamics, from ideal gases to thermodynamic potentials, finishing with phase transitions. The second half is devoted to statistical mechanics as the basis of thermodynamics. Classical and quantum distributions will be introduced to explain the collective behavior of particles, ending with Bose-Einstein condensation.

PHYS 30465. Topics in Modern Physics II

(3 -0- 3)

Prerequisite: PHYS 20464

A continuation of Modern Physics I. Topics in quantum physics. Molecular bonding and spin valence. Molecular spectra. Bonding, energy levels and band structure in solids. Ionic crystals, metals and semiconductors. Thermal, electric, magnetic and optical properties of solids. Quantum numbers of particles, basic forces, the particle zoo. Stable nuclei, nuclear structure and models, nuclear decay and reactions, energy levels, fission, fusion. Particle scattering. Production, detection and properties of elementary particles.

PHYS 30471. Electricity & Magnetism

(3 -0- 3)

Prerequisite: (PHYS 20435 or PHYS 10320) and (PHYS 20452 or MATH 20670)

Electro- and magnetostatics. Laplace's and Poisson's equations. Boundary value problems. Multipole fields. Dielectric and magnetic phenomena. Maxwell's equations.

PHYS 30472. Electromagnetic Waves

(3 -0- 3)

Prerequisite: PHYS 30471

Study of electromagnetic waves, physical optics, radiation from accelerating charges, and some topics from the special theory of relativity.

PHYS 30481. Modern Observational Techniques

(3 -2- 3)

Prerequisite: PHYS 20435 or PHYS 10320

This one-semester modern-astronomy laboratory course emphasizes new advances in telescopes, astronomical imaging and spectroscopies as well as photoelectric observations. Data processing and analysis techniques are taught. Extensive use will be made of the new observatory in the Jordan Hall of Science. There is a possibility of field trips to the VATT, LBT, or other major research telescopes. (This course is offered in the fall of odd years.)

PHYS 31210. Physics I Laboratory

(0 -2- 0)

Prerequisite: PHYS 30210 (may be taken concurrently) or PHYS 34210

The laboratory is a corequisite for PHYS 30210

PHYS 31220. Physics II Laboratory

(0 -2- 0)

Corequisite: PHYS 30220

The laboratory is a corequisite for PHYS 30220

PHYS 31432. Lasers and Modern Optics Lab

(0 -2- 0)

Corequisite: PHYS 30432

Accompanying lab for PHYS 30432.

PHYS 33411. Junior Seminar

(1 -0- 1)

A discussion of current topics in physics by staff members.

PHYS 40371. Medical Physics

(3 -0- 3)

Prerequisite: PHYS 10320 or PHYS 20435 or PHYS 30220

Topics involving the applications of physics in medicine and biology are selected from the following: external and internal forces on the body; heat and temperature equilibrium; physics of hearing; physics of vision; nerve conduction; muscle contraction; electric potentials of the brain; physics of cardiovascular and pulmonary systems; ionizing radiations and their effects; nuclear medicine; radiotherapy; physics of some biological instruments. A science elective course for preprofessional students, but open to other students.

PHYS 40432. Biological Physics

(3 -0- 3)

Prerequisite: PHYS 10320 or PHYS 20435 or PHYS 30220

The functioning of cells at the molecular level will be discussed on the basis of basic physics principles including Newtonian mechanics, thermodynamics, statistical mechanics, and electrical transport. The course covers diverse topics including cell energy balance, molecular machines, nerve impulse propagation, self-assembly; electrical properties of molecules. This is an approved science elective.

PHYS 40441. Modern Physics Laboratory I

(0 -2- 3)

Prerequisite: PHYS 20464 and PHYS 30471

Corequisite: PHYS 41441

A two-semester laboratory course stressing experiments in atomic, nuclear, and solid-state physics. The course is designed to introduce the student to experiments and methods closely related to modern-day research. Students will be introduced to the fundamentals of semiconductor devices and the construction and use of such devices.

PHYS 40442. Modern Physics Laboratory II

(0 -3- 3)

Prerequisite: PHYS 40441

Corequisite: PHYS 41442

A two-semester laboratory course stressing experiments in atomic, nuclear, and solid-state physics. The course is designed to introduce the student to experiments and methods closely related to modern-day research. Students will be introduced to the fundamentals of semiconductor devices and the construction and use of such devices.

PHYS 40445. Advanced Astrophysics

(3 -0- 3) Garnavich

Prerequisite: PHYS 30471 (may be taken concurrently) and PHYS 40453 (may be taken concurrently)

A study of the physical problems associated with stellar motions; energy generation and radiation; astronomical distances; celestial mechanics; galactic dynamics; cosmic rays; interstellar matter; thermodynamics; and equations of state of various stellar models. Observational techniques and methods of computation will be discussed. An elective course for senior physics majors and other qualified students.

PHYS 40453. Introduction to Quantum Mechanics I

(3 -0- 3)

Prerequisite: PHYS 20464 and (PHYS 20452 or MATH 20670)

A two-semester course on the experimental basis for the wave picture of matter and the fundamental ideas of quantum mechanics. The first semester covers: scattering and bound state solutions to the Schrodinger equation in one and three dimensions; Hilbert spaces and the mathematical formalism underlying quantum mechanics; angular momentum and spin; the hydrogen atom; and multi-particle wave functions and identical particles.

PHYS 40454. Introduction to Quantum Mechanics II

(3 -0- 3)

Prerequisite: PHYS 40453

A two-semester course on the experimental basis for the wave picture of matter and the fundamental ideas of quantum mechanics. The second semester covers: corrections to the hydrogen atom, including fine structure, hyperfine splitting and Zeeman effect; approximation techniques, including WKB, perturbation theory, and variational principle; adiabatic theorem; geometrical phases; and scattering theory.

PHYS 40602. Particle Physics and Cosmology

(3 -0- 3)

Prerequisite: PHYS 30461 or PHYS 40453

An introduction to Particle Physics and Cosmology. The course will cover the two well established foundations of the fields; The Standard Model of Particle Physics and the Standard Model of Cosmology. Topics to be covered, Relativistic Quantum Mechanics, Quantum Electrodynamics, Quantum Chromodynamics and the Weak Interaction. General Relativity, The Big Bang and the expanding universe, The Cosmic Microwave Background, Big Bang Nucleosynthesis, Stellar Evolution, Dark Matter and Dark Energy.

PHYS 41441. Modern Physics I Laboratory

(0 -4- 0)

Prerequisite: Corequisite: PHYS 40441

The laboratory is a co-requisite for PHYS 40441

PHYS 41442. Modern Physics II Laboratory

(0 -4- 0)

Corequisite: PHYS 40442

The laboratory is a corequisite for PHYS 40442

PHYS 43411. Senior Seminar

(1 -0- 1)

A discussion of current topics in physics by students and staff members.

PHYS 46490. Directed Readings

(V -0- V)

Study of topics not covered or only briefly covered in other courses. Readings, problems and reports.

PHYS 48480. Undergraduate Research

(V -0- V)

Research in collaboration with members of the faculty. Three to nine hours each week, arranged individually for each student. One to three credits.

PHYS 48999. Physics Research Education for Undergraduates

(3 -12- 0)

Students are granted stipends, university housing, and assistance with travel and food expenses. REU program gives valuable research experience, to help students decide if physics research is right for them.

PHYS 50051. Numerical PDE Techniques for Scientists and Engineers

(3 -0- 3)

Partial Differential Equations (PDEs) are ubiquitous in science and engineering and are usually discussed in classes as analytic solutions for specialized cases. This course will teach the students the basic methods for their numerical solution. The course starts with an overview of PDEs, then moves on to discuss finite difference approximations. Hyperbolic systems are introduced by the scalar advection and scalar non-linear conservation laws, followed by the Riemann problem for hyperbolic systems and approximate Riemann solvers. Multidimensional schemes for non-linear hyperbolic systems are then presented. Elliptic and parabolic systems and their solution methodologies are then discussed including Krylov subspace methods and Multigrid methods. The course explains the theory underlying the numerical solution of PDEs and also provides hands-on experience with computer codes. A recommended prerequisite for this course is programming courses or programming background.

PHYS 50303. Quantum Optics

(3 -0- 3)

Prerequisite: PHYS 40453

This course will cover properties of the quantized electromagnetic field as it interacts with atoms and other forms of matter. The interaction of light with matter is the basis for the phenomena of photoelectric detection, measurement, and nonlinear optics which will be used to investigate the quantum mechanical nature of photon correlations, coherent states of light, squeezed states, and the basics of quantum computing.

PHYS 50472. Relativity: Special and General

(3 -0- 3)

Prerequisite: PHYS 30471

An introduction to relativity, both special and general. Special relativity: Lorentz transformations of events, geometry of space-time, relativistic kinetics (energy-momentum), Lorentz transformations of electromagnetic fields. General relativity: gravity and light, principle of general covariance, Einstein's field equations, Schwarzschild solution, precession of perihelions of planets, deflection of light, black holes. An elective course for senior physics majors.

The University

Aerospace Studies (ROTC–Air Force)

AS 10101. The Foundations of the United States Air Force

(1 -0- 1) Williams

AS 10101 is the first course in the two-semester sequence for AS 100. AS 100 is a survey course designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps. Featured topics include: overview of ROTC, special programs offered through ROTC, mission and organization of the Air Force, brief history of the Air Force, introduction to leadership and leadership related issues, Air Force Core Values, Air Force officer opportunities, and an introduction to communication studies. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AS 10102. The Foundations of the United States Air Force

(1 -0- 1) Williams

Corequisite: AS 11102

AS 10102 is the second course in the two-semester sequence for AS 100. AS 100 is a survey course designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps. Featured topics include: overview of ROTC, special programs offered through ROTC, mission and organization of the Air Force, brief history of the Air Force, introduction to leadership and leadership related issues, Air Force Core Values, Air Force officer opportunities, and an introduction to communication studies. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AS 11101. Leadership Laboratory

(0 -2- 0)

Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the detachment commander and operations flight commander. LLAB cadets are classified into one of four groups with respect to field training attendance and/or commissioning: 1) Initial Military Training (IMT) cadets, 2) Field Training Prep (FTP) cadets, 3) Intermediate Cadet Leaders (ICL), and 4) Senior Cadet Leaders (SCL). Initial Military Training (IMT) cadets are part of the General Military Course (GMC) but are not scheduled to attend field training (normally AS 100 cadets). The focus of IMT objectives/activities are to promote the Air Force way of life and help effectively recruit and retain qualified cadets. This time is spent acquainting the cadets with basic Air Force knowledge and skills to help them determine whether they wish to continue with the AFROTC program.

AS 11102. Leadership Laboratory

(0 -2- 0)

Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the detachment commander and operations flight commander.

LLAB cadets are classified into one of four groups with respect to field training attendance and/or commissioning: 1) Initial Military Training (IMT) cadets, 2) Field Training Prep (FTP) cadets, 3) Intermediate Cadet Leaders (ICL), and 4) Senior Cadet Leaders (SCL). Initial Military Training (IMT) cadets are part of the General Military Course (GMC) but are not scheduled to attend field training

(normally AS 100 cadets). The focus of IMT objectives/activities are to promote the Air Force way of life and help effectively recruit and retain qualified cadets. This time is spent acquainting the cadets with basic Air Force knowledge and skills to help them determine whether they wish to continue with the AFROTC program.

AS 20101. The Evolution of USAF Air and Space Power

(1 -0- 1) Williams

AS 20101 is the first course in the two-semester sequence for AS 200. AS 200 is a course designed to examine general aspects of air and space power through a historical perspective. Utilizing this perspective, the course covers a time period from the first balloons and dirigibles to the space-age systems of the Global War on Terror. Historical examples are provided to extrapolate the development of Air Force distinctive capabilities (previously referred to as core competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension: e.g., Principles of War and Tenets of Air and Space Power. As a whole, this course provides the students with a knowledge-level understanding for the general employment of air and space power, from an institutional, doctrinal, and historical perspective. In addition, the students will be inculcated into the Air Force Core Values, with the use of operational examples and will conduct several writing and briefing assignments to meet Air Force communication skills requirements.

AS 20102. The Evolution of USAF Air and Space Power

(1 -0- 1) Williams

Corequisite: AS 21102

AS 20102 is the second course in the two-semester sequence for AS 200. AS 200 is a course designed to examine general aspects of air and space power through a historical perspective. Utilizing this perspective, the course covers a time period from the first balloons and dirigibles to the space-age systems of the Global War on Terror. Historical examples are provided to extrapolate the development of Air Force distinctive capabilities (previously referred to as core competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension: e.g., Principles of War and Tenets of Air and Space Power. As a whole, this course provides the students with a knowledge-level understanding for the general employment of air and space power, from an institutional, doctrinal, and historical perspective. In addition, the students will be inculcated into the Air Force Core Values, with the use of operational examples and will conduct several writing and briefing assignments to meet Air Force communication skills requirements.

AS 21101. Leadership Laboratory

(0 -2- 0)

As a complement to AS 200, Field Training Prep (FTP) cadets are scheduled to attend field training in the upcoming year (normally AS 200 cadets). The FTP objectives provide training to ensure every cadet is mentally and physically prepared for the rigorous field training environment.

AS 21102. Leadership Laboratory

(0 -2- 0)

Corequisite: AS 20102

As a complement to AS 200, Field Training Prep (FTP) cadets are scheduled to attend field training in the upcoming year (normally AS 200 cadets). The FTP objectives provide training to ensure every cadet is mentally and physically prepared for the rigorous field training environment.

AS 30101. Air Force Leadership Studies

(3 -0- 3) Cernicky; Moffett

AS 30101 is the first course in the two-semester sequence for AS 300. AS 300 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course.

AS 30102. Air Force Leadership Studies

(3 -0- 3) Moffett

Corequisite: AS 31102

AS 30102 is the second course in the two-semester sequence for AS 300. AS 300 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course.

AS 31101. Leadership Laboratory

(0 -2- 0)

Complementing AS 300 courses are the Intermediate Cadet Leaders (ICL) who are cadets returning from field training. ICL objectives/activities give cadets the opportunity to further develop the leadership and followership skills learned at field training. Every cadet position should provide the ICL the opportunity to sharpen their planning, organizational, and communication skills, as well as their ability to effectively use resources to accomplish a mission in a constructive learning environment.

AS 31102. Leadership Laboratory

(0 -0- 0)

Corequisite: AS 30102

Complementing AS 300 courses are the Intermediate Cadet Leaders (ICL) who are cadets returning from field training. ICL objectives/activities give cadets the opportunity to further develop the leadership and followership skills learned at field training. Every cadet position should provide the ICL the opportunity to sharpen their planning, organizational, and communication skills, as well as their ability to effectively use resources to accomplish a mission in a constructive learning environment.

AS 40101. National Security Affairs/Preparation for Active Duty

(3 -0- 3) Cernicky

AS 40101 is the first course in the two-semester sequence for AS 400. AS 400 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills.

AS 40102. National Security Affairs/Preparation for Active Duty

(3 -0- 3) Cernicky

Corequisite: AS 41102

AS 40102 is the second course in the two-semester sequence for AS 400. AS 400 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills.

AS 41101. Leadership Laboratory

(0 -2- 0)

Senior Cadet Leaders (SCL) are cadets scheduled to be commissioned in the upcoming year (normally AS 400 cadets complementing AS 400 courses). This time is spent on additional opportunities to develop leadership and supervisory capabilities, and prepares cadets for their first active duty assignment. Extended Cadet Leaders (ECL) are cadets whose ROTC academic requirements are complete but still have one or more terms of college left to complete. These cadets may hold special duty or regular positions within the cadet corps upon discretion of the Detachment Commander (Det CC) or Operations Flight Commander (OFC).

AS 41102. Leadership Laboratory

(0 -2- 0)

Corequisite: AS 40102

Senior Cadet Leaders (SCL) are cadets scheduled to be commissioned in the upcoming year (normally AS 400 cadets complementing AS 400 courses). This time is spent on additional opportunities to develop leadership and supervisory capabilities, and prepares cadets for their first active duty assignment. Extended Cadet Leaders (ECL) are cadets whose ROTC academic requirements are complete but still have one or more terms of college left to complete. These cadets may hold special duty or regular positions within the cadet corps upon discretion of the Detachment Commander (Det CC) or Operations Flight Commander (OFC).

Institute for Educational Initiatives

ESS 20202. Social Inequality and American Education

(3 -0- 3)

Many have claimed that the American educational system is the “great equalizer among men.” In other words, the educational system gives everyone a chance to prosper in American society regardless of each person’s social origins. In this course, we explore the validity of this claim. Do schools help make American society more equal by reducing the importance of class, race, and gender as sources of inequality, or do schools simply reinforce existing inequalities and reproduce pre-existing social relations? Topics covered include unequal resources among schools, sorting practices of students within schools, parents’ roles in determining student outcomes, the role of schooling in determining labor market outcomes for individuals, and the use of educational programs as a remedy for poverty. This is an education-focused course.

ESS 20203. Introduction to Social Problems: A Community-based Learning Approach

(3 -0- 3) Strand

This course introduces a sociological study of some of the serious social problems plaguing society. Among these are poverty and homelessness, racial disparities, gender injustice, gross educational inequalities, interpersonal violence, and difficulties faced by prisoners upon re-entry to society. This course will give students opportunities to practice good social science by comparing theories about the causes of social problems and possible solutions to 1) empirical evidence presented in important sociological studies and 2) evidence gleaned by students through their own community-based learning experiences. To gain this first-hand knowledge, students enrolled in this course must volunteer a minimum of 20 hours during the course of the semester in a South Bend community organization dealing with one or more of these social problems.

ESS 20205. Social Inequality: The Social Construction of Difference and Inequality

(3 -0- 3)

Many of us are aware of our own experiences of disadvantage (or perhaps privilege), but people are generally not aware of how structural arrangements in society result in systems of difference and inequality. Only occasionally do we question whether or not things are really black and white, right and wrong, true or false, and even less often do we contemplate the repercussions of such binary assumptions. This class will challenge taken-for-granted beliefs about race and ethnicity, social class, sex and gender, and sexuality. We will discuss how these socially constructed categories of difference are given significant meaning and how this process subsequently results in real differences in experiences, expectations, and achievements between groups of individuals.

ESS 20301. American Catholic Experience

(3 -0- 3)

Corequisite: HIST 32615

A survey of the history of Roman Catholicism in the United States from colonial times to the present, with emphasis on the 20th-century experience. The first half of the course covers the Catholic missions and settlements in the New World, Republican-era Catholicism’s experiment with democracy, and the immigrant church from 1820 to 1950. The second half of the course focuses on the preparations for, and impact of, the Second Vatican Council (1962–65). Assigned reading includes a packet of articles and primary sources about the liturgical renewal, Catholic action, social justice movements, and other preconciliar developments. This is an education-general course.

ESS 30205. Race and Ethnicity

(3 -0- 3)

This course focuses on race and ethnic relations in the United States. Current cases involving racial and ethnic issues will be presented and discussed in class. Readings and materials will present three approaches to the study of majority-minority group relations, the emergence and maintenance of group dominance

and minority-group adaptations to modes of dominance, including separation, accommodation, acculturation, and assimilation. Class participation and students’ experiences will be emphasized. This is an education-general course.

ESS 30210. Today’s Gender Roles

(3 -0- 3)

Current changes in male and female roles and the reasons for these changes are examined. Existing gender differences, various explanations for them, and proposals for change are discussed and evaluated. This is an education-general course.

ESS 30211. Sociology of Teaching

(3 -0- 3)

This course surveys the sociological foundations of teaching and learning in America’s elementary and secondary school classrooms. The class begins with an examination of teaching as a profession. What attracts individuals to the teaching profession, and why do they leave? What constitutes professional success for teachers? Next, we’ll examine how local context shapes the work that teachers do, looking at some elements of schools and communities that impact the nature of teachers’ work. The course concludes by looking at the teacher’s role in producing educational success by considering two enduring educational problems: how to foster student engagement, and how to teach students of differing abilities within the same classroom. In addition to research in the sociology of teaching, students will be exposed to teacher narratives of success and struggle. This is an education-focused course.

ESS 30212. Sociology of Culture: Culture and Society, Sociological Approaches

(3 -0- 3)

In this class we will examine cultural dimensions of important social processes, and we will survey contemporary sociological approaches to analyzing culture. Examples will include readings on home and work, social hierarchies, political culture, media and the arts, and social change.

ESS 30213. Gender Roles and Violence in Society

(3 -0- 3)

Much of the violence in contemporary society—whether it is domestic abuse, school shootings, gang warfare, video games, or inter-ethnic conflict—has something to do with gender. This course explores the connection between gender role socialization and the expression of conflict or aggression. Through readings, discussions, films and projects, students will be encouraged to examine sex differences in violent behavior as the outcome of complex processes. We will try to understand those processes better and develop the ability to describe the causes and their effects.

ESS 30214. Sociology, Self and Catholic Social Tradition

(3 -0- 3)

What’s Catholic about sociology? What’s sociological about Catholic Social Tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

ESS 30215. Introduction to Cultural Sociology

(3 -0- 3)

This class is an introduction to the way that sociologists study the cultural dimensions of the social world. Culture is here defined as all objects, ideas and practices that people attach some meaning to. We will survey contemporary sociological approaches to analyzing culture along the way tracing and discussing the way that culture and meanings are produced, disseminated, interpreted and used by social actors. We will investigate how cultural objects are produced in mass media industries, how social boundaries and social hierarchies (such as those based on

gender, race and class) are created through the consolidation of cultural categories, and how social practices related to the consumption of cultural objects have become a central facet of life modern societies.

ESS 30216. Gender and Society

(3 -0- 3)

This course is an introduction to the study of gender and society. We will study how gender is constructed through social interaction and how it is patterned in a wide gamut of structural locations, such as the following: education, media, family, the field of medicine, and business and the economy. Major themes in this course include the social construction of gender, how people “do” gender, and patriarchy and the perpetuation of gender inequality in our society. After exploring the core characteristics of patriarchy and its power as a social system, the final project in this course will work toward solutions to gender inequality.

ESS 30217. Statistics for Sociological Research

(3 -0- 3) Alvarado

This course is designed to show students how to interpret and critically evaluate statistics commonly used to describe, predict, and evaluate in the social sciences, as well as many areas of the business and/or medical world. The focus is on a conceptual understanding of what the statistic does, means, and what assumptions are made from it. Hands-on experience in using data analysis is part of the course.

ESS 30220. Racism and Activism

(3 -0- 3) McVeigh

Throughout much of American history, individuals have organized and acted collectively to advance interests based on a common racial or ethnic identity. In some instances, groups have organized in an attempt to overcome discrimination and to stake a claim to rights and privileges enjoyed by majority group members. In other cases, members of the majority group have organized to restrict opportunities for the minority and to protect an advantaged position. We will consider the causes and consequences of both progressive and conservative social movements—such as the civil rights movement, the Ku Klux Klan, and the contemporary Tea Party movement—giving particular attention to how theories of social movements help us to understand episodes of race-based collective action.

ESS 30221. Religion and Social Life

(3 -0- 3) Christiano

How does social life influence religion? How does religion influence society? What is religion's social significance in a complex society like ours? Is religion's significance declining? This course will consider these and other questions by exploring the great variety in social expressions of religion. The course examines the social bases of churches, sects, and cults, and it focuses on contemporary religion in the United States.

ESS 30222. Poverty, Inequality, and Social Stratification

(3 -0- 3) Andrew

Social inequality is a prominent and persistent feature of modern society. Social stratification theory attempts to explain the causes of inequality and the reasons for its persistence. This course will address such questions as: Why are some people rich and some people poor? Why does inequality persist? Who gets ahead? Can men and women get the same jobs? Do different races have the same opportunities? Is inequality necessary? Potential topics include class structure in U.S. society, status attainment and occupational mobility, racial and ethnic stratification, gender stratification in the labor market, inner-city and rural poverty, the working poor, educational inequalities, welfare dependency, and homelessness.

ESS 30250. An Introduction to Cognitive Development

(3 -0- 3) Lany

How do infants and children perceive, remember, and learn about their world? This course will cover developmental changes in human cognition, such as perception, action, learning and memory, reasoning and problem solving, and language acquisition. The focus will be on early development (prenatal to 4–5 years) because this is the period of most dramatic change, although it will include some discussion of development during later childhood and adolescence. The goal

of this course is to provide students with basic empirical facts of human cognitive development, as well as to ground them in broader theoretical issues, such as questions of what development means, and the central controversies in the study of cognitive development. An additional goal is to help students to be responsible consumers of psychology research.

ESS 30251. Learning and Memory

(3 -0- 3) Radvansky

A survey of the theories and methods relating to basic processes in learning and memory from both biological and cognitive perspectives.

ESS 30303. U.S. Civil Rights History: The Chicano Movement

(3 -0- 3)

The “Chicano Movement” for Mexican American civil rights grew in tandem with the main contours of the civil rights culture that developed in the United States during the 1960s. As such, this course seeks to place the movement alongside other national movements for social change including the African-American civil rights movement, labor movement, counter-culture, and the anti-war movement. It will also be attentive to related efforts to build bridges between Latino populations (mainly Puerto Ricans) in American cities. As it emerged in the 1960s, the Chicano Movement challenged and maintained the ideological orientation of past efforts for Mexican-American inclusion as it borrowed from the rich mix of social and cultural movements that defined the 1960s and early 1970s. This course will explore movement centers in California and Texas as well as a growing body of research on the civil and labor rights efforts in the Great Lakes, Pacific Northwest, and other Mexican ancestry communities across the United States as well as connections to Mexico and Cuba. This course will detail the key events and leadership of the movement as well as the art, music, and cultural production of one of the most important American civil rights movements of the post World War II era.

ESS 30305. Women and American Catholicism

(3 -0- 3)

This course is a survey of the history of American Catholic women from the colonial period to the present. Through a combination of lectures, reading and discussion, we will explore the following themes and topics: the role of religious belief and practice in shaping Catholics' understanding of gender differences; the experience of women in religious communities and in family life; women's involvement in education and social reform; ethnic and racial diversity among Catholic women; devotional life; the development of feminist theology, and the emergence of the “new feminism” as articulated by Pope John Paul II. We will seek to understand how Catholic women, both lay and religious, contributed to the development of Church and nation, and examine how encounters with the broader American society have shaped Catholic women's relationship to the institutional church over the last three centuries.

ESS 30306. African-American History Since 1865

(3 -0- 3) Pierce

Corequisite: HIST 32800

This African-American history survey begins with an examination of West African origins and ends with the Civil War era. We will discuss the Atlantic slave trade, slavery in colonial America, the beginnings of African-American cultures in the North and South during and after the revolutionary era, slave resistance and rebellions, the political economy of slavery and resulting sectional disputes. Particular attention will be paid to northern free blacks.

ESS 30308. Mexican-American History

(3 -0- 3) Rodriguez

This course is an introductory survey of Mexican-American history in the United States. Primarily focused on events after the Texas Revolution, and annexation of the American Southwest we will consider the problems the Spanish and Mexican settlers faced in their new homeland, as well as the mass migration of Anglo-Americans into the region following the annexation. Throughout the course, we will explore the changing nature of Mexican American U.S. citizenship. Other themes and topics examined will include immigration, the growth of agriculture in Texas and California, internal migration, urbanization, discrimination,

segregation, language and cultural maintenance, and the development of a U.S.-based Mexican-American politics and culture. Although primarily focused on the American Southwest and California, this course also highlights the long history of Mexican-American life and work in the Great Lakes and Midwestern United States. We will conclude with the recent history of Mexican- and Latin-American migration to the United States after 1965, and the changing nature of Mexican-American identity and citizenship within this context.

ESS 30310. Reforming America in the Long 19th Century (1776–1919)

(3 -0- 3)

With the recent 2008 presidential election there is a lot of excitement about the possibility of “change” and “reform” in our country. This class will provide perspective on our present historical moment by examining American reform movements of the past. It will focus on “the long nineteenth century” from the American Revolution to World War I. During this time optimistic Americans of various stripes set out to reform all sorts of things: religion, sex, eating and drinking, race and gender relations, education, and working and living conditions, to name just a few. As we look at these reform movements, we will ask the questions: What drove certain people to buck convention and seek reform? Why did they choose to focus on these particular reforms at these times? What did they believe would be the ultimate significance of the changes they were seeking? Why were some movements more successful than others?

ESS 30470. Race, Ethnicity, and American Democracy

(3 -0- 3)

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What roles do American political institutions—the Congress, presidency, judiciary, state and local governments, etc.—play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society? This is an education-general course.

ESS 30471. Schools and Democracy

(3 -0- 3)

Education sits high on the public policy agenda. We are living in an era of innovations in education policy, with heated discussion surrounding issues such as vouchers, charter schools, and the No Child Left Behind Act. This course introduces students to the arguments for and against these and other educational innovations, and does so through the lens of how schools affect the civic health of the nation. Often forgotten amidst debates over school choice and standardized testing is the fact that America’s schools have a civic mandate to teach young people how to be engaged citizens. Students in this course will grapple with the civic implications of America’s educational landscape, and have an opportunity to propose ways to improve the civic education provided to young people.

ESS 30472. The Politics of Poverty and Social Welfare

(3 -0- 3)

The United States is the wealthiest nation in the world, yet poverty remains a persistent concern. In this course, we will study the sources of poverty and economic inequality and what has and can be done to address the problem. We begin by discussing different theories on to what extent citizens’ income and wealth should be equal in a society and the government’s prescribed role, if any, in the process. We then trace the history of poverty in the United States and various government efforts to address the problem through social welfare programs. Finally, we will closely study the different forms poverty takes on today and enter the ongoing debate over what public policies should be implemented in response. Throughout the course, we will pay particular attention to the decidedly political dimension of poverty in America.

ESS 30500. Economics of Poverty

(3 -0- 3)

An examination of the extent and causes of poverty in the United States. The current system of government programs to combat poverty is analyzed. Reforms of this system are also considered. This is an education-general course.

ESS 30502. Economics and Education

(3 -0- 3)

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender and class? What roles do American political institutions—the Congress, presidency, judiciary, state and local governments, etc.—play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society? This is an education-focused course.

ESS 30503. Development of the American Labor Force

(3 -0- 3) Wozniak

This course uses the tools of economics to understand the major forces shaping the American labor force, in both the past and the present. Examples of course topics include: the major waves of European migration to the U.S., including waves of Irish immigration; the development and rise of the high school in America; important trends in educational attainment particularly of women and minorities; the economic effects of Civil Rights legislation; and the English language only debate. This course is closely related to ECON 33480 (Migration, Education and Assimilation) but does not require a research paper. Prerequisites: Principles of Microeconomics. Concurrent enrollment in or completion of a statistics course, Econometrics, or Intermediate Microeconomics is helpful but not required.

ESS 30590. Catholics in America

(3 -0- 3)

Since 1850 Roman Catholics have constituted the single largest religious denomination in the United States. This course explores what the presence of Catholics has meant for the American experience, focusing on themes of church/state separation, religion and politics, education, and social reform. We will also examine how the American context has transformed the practice of Catholicism, with attention to ethnicity, gender, region, race and class as variables that have shaped the American Catholic experience. Assigned readings range from excerpts of anti-Catholic publications to first-hand accounts written by American Catholics from the colonial period to the present. In addition we will study the representation of Catholics in American film, themes of Catholic fiction, material culture relating to Catholic devotional life and the sacraments, and the shifting position of American Catholics in the universal Roman Catholic Church.

ESS 30591. Latinos in Chicagoland and Northern Indiana: A Cultural History

(3 -0- 3)

Latinos have long contributed to the social fabric of the region popularly known as “Chicagoland,” which includes Northwestern and North Central Indiana. From food to sports to politics to the arts, Latinos have shaped and reshaped the local culture and formed vibrant communities. However, Midwestern Latinos have been marginalized by both local/regional approaches to history and by the field of Latino studies, which tends to focus on the east and west coasts and the U.S. Southwest. This interdisciplinary course will explore Latino communities from Chicago to South Bend to better understand how these communities fit into the broader Latino experience but remain uniquely Midwestern. Some of the questions that we will ask include: Why did Latinos settle in Chicagoland and Northern Indiana? Why do new migrants keep coming? How has gentrification affected urban Latino communities? How are individuals and organizations working to improve the lives of migrant workers in rural areas? How do Latinos contribute to the Chicago arts scene? The course will include several site visits to

community organizations and cultural institutions throughout the region and will require students to collect an oral history from a member of one of the communities encountered in class.

ESS 30592. Schooling Masculinities

(3 -0- 3) Burke

This course will examine the ways in which schooling and education come to de/re/form American concepts of masculinities. Along the way we will leverage queer, feminist and poststructural theories in developing complex understandings about the historical formation of genders and sexualities in schools through curriculum, architecture and sports. We will encounter some version of the following questions (among many others) together: What do portrayals of schooling in the media (think *Glee* or *Awkward!*) do in terms of shaping gendered and masculine expectations? What might the shape and design of a school building and its subsequent grounds say about sexual priorities and surveillance? How do we “teach” gender through the null, hidden, and intended curriculum enacted nationwide?

ESS 30602. Democracy and Our Schools

(3 -0- 3)

Politics arguably influences education policy more than any other domestic issue in American life. This seminar explores education policy in the United States through the lens of American politics. We will examine the complex and inter-related relationship between democracy and schools. On the one hand, we know that education shapes our democracy by cultivating norms of civic engagement and political participation. Yet, public schools are themselves profoundly shaped by democratic politics. After all, schools are agencies of government and nearly everything about them—their organization, their funding, and who has access to them in the first place—is determined through the political process. Over the course of the semester, we will consider the causes and consequences of living in a nation that relies on elected officials to govern its schools. Key questions we will address include: Does politics compromise equality in education and for whom? Are school officials more responsive to the needs of some groups over others? How does the electoral process shape incentives for education officials to pursue school reform? How much voice should the public have in setting education policy?

ESS 30603. Education and Entrepreneurship

(3 -0- 3) Chattopadhyay

This course will explore the emerging role and impact of entrepreneurship in K–12 education in the United States. Starting with a conceptual overview of the broader policy context; the course will examine the dynamics of educational entrepreneurship in both public and private domains of basic education in America. This analytical foundation will then be extended into in-depth case studies of institutional models of educational entrepreneurship. Finally, shifting the focus from educational institutions to students; the course will examine the growing field of youth entrepreneurship education, and its potential in improving student outcomes. This course will be relevant for students with interest in education policy, business analysis, entrepreneurship, and teaching-learning of entrepreneurial skills. Laura Hollis, Director of Gigot Center for Entrepreneurial Studies at Mendoza College of Business, will serve as a co-instructor for this course.

ESS 30604. Literacies: Education, Schooling and Power

(3 -0- 3)

Literacy matters for schooling. Actually, literacies matter. The ability to code switch within and to a given literacy that’s been granted “most-favored-nation” status for political reasons is a valuable skill for students today. When it comes to schooling, socioeconomic background, gender, sexuality, racial identity, ethnicity and country of origin (among any number of other social identities given short shrift here as in society at large) all bear significant influence on the literacies a student brings to the classroom. These literacies, in turn, have great influence on student motivation, persistence and achievement. This course will engage students in a conversation about the role that literacies play in (de)limiting possibilities for students in the American educational system. In the process we’ll look at the concept of “literacy” as a fraught political vehicle used as a tool to communicate myriad—and often troubling—messages.

ESS 30605. Education Law and Policy

(3 -0- 3) Schoenig

This course focuses on selected legal and policy issues related to K–12 education in the United States. A central theme is the intersection of K–12 schooling and the state, with a particular focus on Constitutional issues of religious freedom and establishment, student speech and privacy, parental choice, educational opportunity, and education reform trends such as charter schools and accountability measures. Questions examined over the course of the semester include: What are the most basic obligations of the state with regard to its regulation of K–12 education? What are the most basic rights of parents in this regard? In what ways does the 1st Amendment protect—and limit—the speech and privacy rights of K–12 schoolchildren? In what ways may the state accommodate K–12 schools with an explicitly religious character? What are the Constitutional requirements with regard to religious speech or expression within K–12 public schools? To what degree is the principle of equality manifest in the form of educational opportunity? How has this changed over time? In what ways have education reform trends such as charter schooling and increased accountability changed the policy landscape of K–12 education?

ESS 30606. Doing Research in International Education (DRI)

(V -0- V)

This course is designed for students with a demonstrated interest and or commitment in carrying out research, evaluation, teaching or service oriented engagements in education in international contexts. The course requires students’ background knowledge in key issues of international educational development, as covered in course such as EDGE (ESS 33605) and EIP (ESS 30621). The course also requires students to come with a “live” research interest—which they will refine into a viable research inquiry and subsequently formulate into a viable research proposal. LEARNING OBJECTIVES: Having taken this course, students will: 1) Acquire a broad foundation on research methods employed in international educational contexts; 2) Become familiar with a critical body of scholarship through review of literature in their respective education research topic; and 3) Fully develop a research proposal that would guide their education-related engagements overseas.

ESS 30608. Introduction to Applied Linguistics

(3 -0- 3)

This course will introduce students to the properties of language and their systematic study via linguistic inquiry. Specifically, the origins and mechanisms of linguistic knowledge will be examined alongside the componential units of syntax, morphology, phonology and semantics. The course will further introduce students to applied linguistic study with an emphasis on second language acquisition and the integration of sociocultural knowledge within this process. Students will complete this course with a greater understanding of the nature of language and the mechanisms whereby it is acquired, conceptually represented and produced.

ESS 30609. The Impact of Language, Culture and Identity on Educational Practices

(3 -0- 3)

This course seeks to critically examine the interaction and integration of language, culture and identity as they impact educational practices. The course will provide a broad introduction and overview of linguistic and cultural theory as they relate specifically to routines of socialization and interaction in the construction and maintenance of identity. Although much of the course will be devoted to American cultural contexts—particularly in the area of educational practices—our focus will be decidedly multicultural/lingual in scope. Topics will include language politics & policy, models of sociolinguistic interaction and variation, linguistic and cultural variables of developmental socialization, linguistic standardization, approaches to bilingual instruction, and a broad array of sociocultural influences on educational practice—in addition to many others. While some course content will require careful analysis of various theoretical considerations, the thrust of our curriculum will move beyond the conceptual in order to address discrete issues of application and evaluation. As such, we will draw on contemporary illustrations

of course material whenever possible and incorporate both outside fieldwork and guest speakers to elucidate the real-world impact of language, culture and identity on education.

ESS 30611. Tutoring in the Community

(1 -0- 1) Masters

ESS 30611 is a one credit seminar for students who are tutoring in the South Bend community. This seminar will provide tutors with an opportunity to explore the social, economic, and cultural forces that influence the lives of their students. Tutoring in the Community will give tutors the tools they need to analyze beliefs and pedagogy, improve instruction, and foster development in South Bend school children in need.

ESS 30614. Educational Psychology

(3 -0- 3) Turner

Educational Psychology examines questions about development, learning and achievement in schools. In this course we will explore fundamental questions such as 1) What is intelligence? Is it fixed or changeable? What are the implications of conceptions of intelligence for achievement? 2) How does learning occur? What are the implications of different theories of learning? Is there a “correct” theory of learning? Does learning differ in different subject areas? 3) What motivates student learning? Can instruction be “motivational”? 4) What is “good” instruction? How do theories of learning relate to instructional practices? 5) How do aspects of school context, such as interaction with peers and teachers, and school culture, influence learning, motivation and achievement?

ESS 30615. Ideas That Shape Catholic Education

(3 -0- 3)

Catholic elementary and secondary schools contribute to the common good of civic society while advancing the evangelical mission of the Catholic Church. This course focuses on the historical successes of Catholic schools in the USA, surveys current research, and analyzes trends in theology, history, and philosophy that have shaped the current structure of the K–12 Catholic school system. Requirements include a field-based experience in a local Catholic school.

ESS 30616. The Politics of Educational Policy

(3 -0- 3)

This course will provide an overview of the major political processes, structures and issues in education. We will analyze the nature of policymaking in education and discuss the roles of the various participants in the decision-making process. In addition, we will critically analyze the language of educational policies and the impact that these policies have on various stakeholders. Finally, we will examine the roles that legislation and courts have in shaping education policy.

ESS 30617. Education and Social Change

(3 -0- 3)

We live in an age when there is great optimism about the power of education to influence the wellbeing of individuals, communities, and nations. Parents see education as a way for their children to improve their lives by building an understanding of their own place in the world. It is also the principal means by which young people can establish a competitive advantage in the labor market. While it might appear that little has changed in education—students still walk through school gates and university lecturers still speak to rooms of undergraduates—economic, political, and social shifts over the past thirty years have fundamentally altered the nature and prospects for education. This course seeks to assess critically these fundamental shifts in our society. Students will develop a broad understanding of the global context of both the causes and effects of these changes. Also, students will develop the capacity to assess the extent to which, as Basil Bernstein famously asked, education can compensate for society.

ESS 30619. Cognitive Development

(3 -0- 3)

This course provides an introduction to the central issues in the field of cognitive development. It will cover (1) general frameworks for studying cognitive development, (2) key questions in the field, and (3) specific topics such as conceptual

development, memory development, language development, and the development of mathematical understanding. The primary focus will be on cognitive development from infancy to adolescence. Students will be expected to synthesize and evaluate material presented in lectures, readings, and class discussions.

ESS 30621. Education Innovations in Diverse Contexts of Poverty

(3 -0- 3)

This course will look at innovative educational interventions for socio-economically disadvantaged children in diverse contexts—both here in the United States, and internationally. Whether it is the Comer model in New Haven CT, or Diversity Project in Berkeley CA, or EDUCO schools in Nicaragua, or Pratham’s community based supplementary education programs for slum children in India; the course will explore in-depth promising education interventions for children and adolescents growing up in poverty in a globalized world. The course will aim to make students aware of the ways in which educators in diverse contexts of poverty and inequality have conceptualized and implemented empowering alternatives. In doing so, the course will help students better understand what is possible in contexts of poverty, and indeed what are the limits of the possible without any structural change in society.

ESS 30622. Disability

(3 -0- 3)

This course investigates the cultural meanings attached to extraordinary bodies and minds. Cultural and literary scholarship has extensively explored issues connected with identities derived from race, gender and sexuality. Only recently have concepts of bodily identity, impairment, stigma, monstrosity, marginalization, beauty, deviance, and difference begun to cohere around disability as a concept and have emerged into a discipline called “disability studies.” This course covers topics such as human rights, feminism, medical attitudes, social stigma, normalcy, life narratives, pedagogy, gothic horror, bodily representation, mental impairment, the politics of charity, community and collective culture, bible narrative, the built environment, and empowerment, in a range of disciplines including literary studies, film, theology, government policy, art, and drama. Key texts and films will include *The Elephant Man*, *The Hunchback of Notre Dame*, Victor Hugo’s *Notre-Dame de Paris*, Jean-Dominique Bauby’s *The Diving Bell and the Butterfly: A Memoir*, Milton’s *Samson Agonistes*, Charlotte Perkins Gilman’s *The Yellow Wallpaper*, Ben Jonson’s *Volpone* and Mary Shelley’s *Frankenstein*. As part of the assessment, students who take this class will take part in a local placement with people with disabilities in order to gain experience of community-based learning.

ESS 30623. Community-Based Research in Education

(V -0- V)

Community-based research (CBR) is a form of applied scholarship that collaboratively engages campus and community organizations in the research process. By definition, a CBR problem originates in the community, and campus/community partners actively work together during the design and analysis phases. As a result, the research outcome is more likely to be useful for the community partner. In this course, students will have a wonderful opportunity to influence educational policy by helping the South Bend Community School Corporation: 1) review existing research on specific contemporary educational issues; 2) do evaluative research of existing programs. Previous research experience is helpful, but not necessary; interest in educational issues is required.

ESS 30624. Survey of Historical Developments in American Education: 1650–2010

(3 -0- 3)

This course is an opportunity for students from a variety of disciplines to familiarize themselves with a lynchpin of U.S. democracy—American schooling. The course will begin with a focus on the political, social, and economic factors impacting the emergence and evolution of American schooling over the history of the nation. A special emphasis within the evolution of American schooling will be placed on how a variety of constituent groups—immigrants, Native Americans, and African-Americans were, and often still are, educated separately and differently than their “white” counterparts. Private and parochial education will also be touched upon. This course is in no way meant to be an exhaustive history of

American schooling but an introduction into the significant events in the history of American schooling and their social, political, and economic influences.

Students will garner additional historical contexts to use when analyzing modern day educational trends and issues in American education.

ESS 30625. Language and Difference: The Vocabulary of Disability and Inclusion

(3 -0- 3)

The language we use to describe an idea or item helps define our feelings toward it. Referring to a person with a disability as a “disabled person” implies a pervasive overall lack of ability, whereas a “non-disabled person” seems, by definition, to be more capable, productive, and independent. The term “disabled person” suggests someone in need; the term “person with a disability” might call to mind a brilliant physicist (Stephen Hawking) or a brilliantly successful wartime president (F.D.R.). Students may never have thought deliberately about the vocabulary used in their schools to describe students at different levels of mastery of academic skills. They may never have thought about the vocabulary pundits use to describe those with autism, ADHD, or the range of other disabilities and diagnoses. It is important to be aware of the social consequences of such vocabulary. Language from the Rehabilitation Act of 1973 will be placed alongside other statutory language such as the Individuals with Disabilities Education Act, the Americans with Disabilities Act, and No Child Left Behind. These legal terms will then be dissected in the broader social context of language about disabilities and inclusion or disability services.

ESS 30626. Education and Social Entrepreneurship

(3 -0- 3)

Constituted in three parts, this course will explore the interplay of education and social entrepreneurship. Part 1 of the course will focus on social entrepreneurs active in the field of education and youth development. Part 2 will study entrepreneurial school leaders, particularly those in public, charter and Catholic schools serving high needs students. This part will introduce course participants to the contemporary debates in the education leadership literature. Finally, Part 3 will focus on teaching and learning of entrepreneurship for school age adolescents and youth, and will be informed by research in youth entrepreneurship and entrepreneurship education programs at school levels. Offered as an ESS Elective, this course will feature guest lecturers from Mendoza College of Business.

ESS 30627. The System: Opportunity, Crisis, and Obligation in American Education

(1 -0- 1)

Education is one of the most fundamental and important pieces of American culture and society. Yet as a society we can not agree on how to best educate children in America, but everyone agrees that more can be done. This year at the University of Notre Dame the University forum will focus on topics relating to education and since the forum will have so many diverse topics this course will directly be related to the speakers and events related to the forum events. This course is designed to challenge students to interact and engage intellectually with the speakers and forum events through critical debate, writing, and the creation of their own research. This unique, one time, reading intensive course will have multiple instructors from around the university and will offer both commentary and critique on the forum topics as they arise. This course is open to students from across the University.

ESS 30628. Landscapes of Urban Education, Place, Space, and Race

(3 -0- 3)

This seminar course explores the intersection of the physical realities of urban environments, race, and education and will be a question based seminar. As a group we will work to answer a cluster of questions surrounding the course topic in a systematic, interdisciplinary format. Questions may include: How does the physical landscape/structure of schools matter to urban education? How does the high concentration of poverty and racial segregation impact curriculum, school culture, and neighborhood? How do early childhood programming, college preparatory programs, and after school programs factor into the landscape of urban education?

What are “best practices” involved with teaching in urban environments? The final question we will work on as a group will be: What are the implications of what we know about race and urban landscapes in propelling positive micro and macro level change for our educational system? This course demands a high level of class participation and student initiative.

ESS 30629. Early Childhood Policy in the United States: Origins and Current Context

(3 -0- 3)

This course covers the various issues relevant to the current early childhood education landscape. This includes theories of early learning and child development, policy development in the United States, the issues of inequality and the achievement gap (particularly related to K–12 Education Reform) and research on interventions or “what works” in early childhood programming. The advantage to understanding the theories of child development, the policy context and the intervention research is that it gives future teachers and future policymakers a foundational premise upon which to grow, analyze, learn and teach. Topics covered will include: theories of child development (infant schools to present), Head Start and the CCDBG, state preschool, inequality and the achievement gap in the early years and interventions in early childhood (HighScope/Perry Preschool, Abecedarian and Chicago Parent Studies, Head Start Research). The goal of this class is to come away with a greater understanding of the language, the history, the goals and the possibilities in this policy area as well as its connections to other social welfare programs and to K–12 schooling. Students will become more fluent in the language of early childhood education and will gain the foundational knowledge of past and current theories, laws, policies and educational interventions.”

ESS 31211. Sociology of Teaching—Film Lab

(0 -0- 0)

Corequisite: ESS 30211

This is the film lab required of Sociology of Teaching, SOC 30237.

ESS 33218. Education and Social Stratification

(3 -0- 3)

Education is one of the best predictors of occupational success and it is often viewed as one of the best ways to achieve social mobility. Given the emphasis placed on educational attainment in contemporary society, it is important that we consider the following questions: To what extent does the current educational system succeed in improving the opportunities of all members of society? To what extent does the educational system reinforce existing social inequality? In this course we explore these questions in detail by examining the relationships between education, social class, race and ethnicity, and gender.

ESS 33219. Race, Ethnicity and Inequality in Public Education

(3 -0- 3)

This course explores the link between racial and ethnic relations in the U.S. and the American education system. We will discuss sociological understandings of racial and ethnic inequality in education over the past several decades. Moving beyond black-white inequality, this course will examine the political, cultural, and historical perspectives of racial and ethnic inequality among and between racialized groups in the U.S. Students will be introduced to central sociological debates within the fields of race/ethnicity and education. We will also pay some attention to the changing nature of racial and ethnic inequality in education over the latter part of the twentieth century and the future of racial and ethnic inequality in education during the 21st century.

ESS 33520. Contemporary Education Reform in America

(3 -0- 3)

Prerequisite: ESS 33600

This course examines the need for educational reform in the United States and the strategies being implemented to achieve reform. Emphasis will be given to the situation of low-income students in high poverty schools. In particular, recent studies of the impact of poverty on child development and its implications for learning will be reviewed to establish an understanding of the optimal school environment and pedagogies for teaching children from disadvantaged backgrounds. After a

brief history of education reform in America, the course will scrutinize the current reform movement considering the appropriateness of its goals, identifying its major political players, and reviewing social science research about the effectiveness of reform strategies including curriculum reform, charter schools, and teacher accountability in reducing the achievement gap and raising student learning.

ESS 33600. Education, Schooling, and Society

(3 -0- 3) McKenna

The aim of the introductory course is to introduce some basic questions about the nature and goals of education, its history, and theoretical explanations of influences on learning, teaching, and schooling. We will incorporate both classic and current texts. The core course will incorporate several disciplinary perspectives.

ESS 33601. Exploring Authentic Ways of Learning Amidst a Myriad of Educational Challenges

(2 -0- 2)

This course will focus on various aspects that affect a school setting that is undergoing reflections of its teaching and learning practices. After a discussion of current trends and practices in education, students will explore the reality gap between current curriculum and its preparation of future students to thrive in a global economy. Throughout the course, students will be challenged to think about new ways to enhance student learning in the following areas: literacy, creativity, critical thinking, and problem solving. Students will be presented issues through research and guest speakers that impact educational settings, e.g., cultural diversity, gender equity, special student populations such as children with autism, health related concerns such as childhood obesity, and poverty. After understanding the culture of a local school and weaving together the educational challenges and innovations presented at seminar, students will create, implement, and evaluate an authentic learning experience that could be used by other mentors or volunteers in K–8 schools. Requirements include approximately two hours per week of community service at St. Adalbert's School. Department approval required.

ESS 33602. Multicultural Education in the New Millennium: The Sociopolitical Context

(3 -0- 3)

The success or failure of students in school has been the subject of much research and debate, particularly for students whose racial, ethnic, linguistic, or social class backgrounds differ from that of the dominant group. This course will focus on both the individual experiences (psychological responses), and how societal and educational structures, policies, and practices affect student learning. Students will explore ways that teachers, individually and collectively, can provide high quality education in spite of obstacles that may get in the way. Multicultural education will be placed within a broad sociopolitical context considering education, politics, society, and economics.

ESS 33603. Think GREEN—Environmental Education in K–12 Schools

(1 -0- 1)

Classrooms will focus on environmental issues in which K–12 students can take an active role to help make a difference and/or change attitudes or behaviors. After discussions of environmental issues through film, presentations, readings, and blog interactions, students will explore the ND Green Initiatives; ND Forum on the Environment; Indiana Department of Education's Learn Green, Live Green 2008 initiative as well as other environmental educational programs for K–12 students. Students will use critical thinking strategies, curriculum ideas, and environmental education resources to create a service project or plan an action research project. Requirements include work with a K–12 school, science club, or after school program for a minimum of 10 hours during the semester. Course will include a maximum of five seminars on environmental education topics, attending the ND Forum and follow-up discussions; participating in a blog; several small group projects. Department approval required.

ESS 33604. Strategies for Instructing Children in the Community (1 -0- 1)

ESS 33604 is a one credit seminar for students who want to serve as Student Learning Specialists with the No Parent Left Behind program in the South Bend community. This seminar will give students the necessary tools to create and implement effective learning activities with children in need. We will primarily focus on prior knowledge assessment, literacy acquisition and basic math skills. Strategies for Instruction will also prepare students to invite parents into their children's education and intellectual growth, so the effective learning strategies begun by the Student Learning Specialist can be continued and reinforced in the home.

ESS 33605. Education and Development in a Global Era

(3 -0- 3) Chattopadhyay

Forces of globalization are profoundly changing the experiences and opportunity structures of young people in an increasingly interconnected world. While there is a growing recognition that the knowledge-based global economy requires a new paradigm for education in the 21st century, a significant segment of the world's largest generation of adolescents remains vulnerable, disengaged and disenfranchised from education. Against this backdrop, this course will explore the critical issues confronting education in developing countries in different regions of the world. The course has a strong applied focus and the readings will be drawn primarily from policy documents on current topics in international educational development. At the same time, the underlying theoretical and conceptual issues will be accessible to students through supplementary research articles and critical commentaries. Students taking this course will: 1) gain a critical understanding of the broader global development context in which educational policy takes shape in low-income countries; 2) develop operational fluency in key contemporary policy issues and institutional actors in international educational development; and 3) enhance their awareness of an educational development framework that is informed by the dynamic interdependencies of the global and the local.

ESS 33606. Social Foundations of Coaching

(1 -0- 1) Power

This course examines coaching children and adolescents as an educational ministry. We will explore the ways sports participation contributes to athletes' development as integrated human beings and the role that coaches can play in fostering that development. We will reflect on the nature of sports as play and on the motivational and moral aspects of sports participation. Finally, we will consider Bart Giamatti's reflection on the spiritual nature of sports: "I believe we have played games and watched games to imitate the gods, to become more godlike in our worship of each other, and through those moments of transmutation, to know for an instant what the gods know." Course participants can be certified as official "Play Like A Champion Today" trainers at the completion of the course.

ESS 33607. Principles of Coaching

(1 -0- 1) Thomas

This course is designed to provide principles and methods necessary to become an effective coach at the youth and interscholastic levels. The focus will include coaching philosophy, qualities for successful leadership, strategies for effective and cohesive programs, developing a sound understanding coaching philosophy at various levels, and gaining an understanding of the art and science of coaching. This course and ESS 33606 (Social Foundations of Coaching) are prerequisites for ESS 33608, a practicum in coaching which will be offered in spring 2010.

ESS 33609. Emerging Trends in Science Education

(1 -0- 1)

The paradigm in science education is moving away from the traditional "lecture-lab" and more towards student engagement—utilizing strategies that help students learn science concepts in the same way that scientists do. In this course, students will study these trends and visit local classrooms to observe the engaging science education strategies as they are implemented in order to gain a broader perspective on this new paradigm in science education. Students who complete this course

will be able to reflect in a critical way how science is taught and learned within the structure of this new paradigm and assess how this may impact students in their college and career attainment.

ESS 33611. History of American Education: Race, Class, Gender and Politics

(3 -0- 3) Collier

American Education mirrors American society with myriad challenges, successes, and ideologies. This course will look at how political struggles over race, language, gender, and class have all played out in the battle over American schools, schools that ultimately hold the literal future of America. This course will explore the History of Education in American from the late 1865 to the present and will have special emphasis on segregated schools in the 19th century and today. The course will also look closely at the very best programs re-shaping American education such as The Alliance for Catholic Education and KIPP. The course will look at education from kindergarten all the way through graduate programs as we study how our institutions have formed and how they form and transform our society.

ESS 33612. Perspectives on Literacy: K–12 Schools

(1 -0- 1)

The purpose of this course is to provide opportunities for students to learn about the topic of literacy in K–12 schools today. Lack of developmentally appropriate literacy instruction has wide-ranging effects not only on academic progress, but also on self-confidence, motivation to learn, and achievement in future endeavors. In this course, we will examine current research on the effectiveness of a variety of approaches to literacy instruction including the use of academic (common core) standards for reading and writing at the K–12 levels. We will discuss other topics that have a bearing on literacy such as parenting and family literacy, sociocultural literacies, visual/technological and multimedia literacy, as well as “best practices” for literacy instruction. Requirements for the course will include development of a literacy project to be implemented in a local K–12 classroom. Students must have time available to work in a classroom during the school day or in an after-school program.

ESS 33619. Race and Ethnicity in Public Education

(3 -0- 3)

This course explores the multiplicity and complexity of race, ethnicity and culture in U.S. public education. Through its focus on the histories and contemporary realities of racial and ethnic groups in the United States, we will develop critical knowledge about the contingent, layered, and contested development of educational policies, institutions, and curricula. We will achieve this, in part, by examining the interplay of various racial and ethnic groups, numerous and sometimes competing interests, and the impact of power, history and place upon public education. Through an exploration of these complex relationships, students will not only develop a stronger foundation in the politics and history of race and ethnicity in public education, but will also engage in more nuanced and critical analyses of contemporary issues. The goal of this course is to provide students with the tools necessary to critically and thoughtfully engage in and contribute to discussions and behavior that will support successful, affirming and healthy public education for all children.

ESS 33623. Community-Based Research in Education

(V -V- V)

This Community-Based Research (CBR) in Education course is focused on one community issues: lack of parent involvement in local urban schools. Like *CSI* forensic members, we will be working collaboratively with community members (parents, teacher, administrators, South Bend Community School Corporation students) to determine how to improve parent involvement. Students in this course will be formulating a literature review, creating surveys and interview protocols, collecting data at multiple school sites, and analyzing data to create a final research report for the local school corporation. Although previous research experience is helpful (but not necessary), an interest in educational issues is required.

ESS 33624. Reading, Studying and Teaching Literature in the Contemporary Classroom

(3 -0- 3) Staud

One of the most beloved storytellers of the 20th century, JRR Tolkien, contemplates the power of stories within his masterwork, *The Lord of the Rings*. Resting for a while on the road to Mordor, Sam and Frodo find a measure of solace and purpose as they ruminate together on the nature of “the tales that really mattered, the ones that stay in the mind.” Shakespeare also acknowledges the power of story, albeit in a different sense, when he has Hamlet assert: “The play’s the thing/ Wherein I’ll catch the conscience of the king.” Central to this course is our study of two great writers of the English tradition, Shakespeare and Tolkien. We will read and discuss works that “stay in the mind”—*Romeo and Juliet*, *Hamlet*, *King Lear*, and *The Lord of the Rings*. In one sense the contemporary classroom will be our own! Yet we will also study these works in the context of contemporary education, one in which, for example, English teachers find that many of their students either complain about reading or choose not to read much at all, at least in part because they lack the skill and patience to read long or difficult texts. So as we study Shakespeare and Tolkien, we will do so with attention to questions about the purpose of literature, issues of literacy, and the challenges and opportunities of teaching literature in the contemporary classroom.

ESS 33625. Sports and Human Development

(1 -0- 1) Power

Prerequisite: ESS 33606

This course is designed to prepare students to have a coach/mentor experience in a rural village in Uganda. We will explore the economic, social, and religious life of people in the villages of Uganda while focusing on the role sports can play in fostering social, moral, and spiritual development among children in a developing society. In this course we will discover how sports can be a tool in promoting equality and civic virtue. We will discover that when combined with instruction about health, sport can be a powerful tool in promoting equality for all. Combined with instruction, sports can help to educate communities on ways to prevent disabilities, and to stress the importance of vaccination, proper nutrition and responsible sexuality. The course will meet three times during the semester, dependent upon individual schedules.

ESS 33626. Education for Human Development: Coach-Mentoring in Rural Uganda

(1 -0- 1) Power

Prerequisite: ESS 33606 and ESS 33625

This course involves participation in a two-week service-learning experience in a rural village in Uganda during the last two weeks of May, 2012. Participants will lead sports events, conduct classes in an elementary school, and participate in an ongoing research project. They will meet with village leaders and learn about the local economy and culture. They will be assigned readings and will participate in evening seminars. Early in the fall 2012, participants will write a paper on their experience and their research findings.

ESS 35372. Anthropology of Childhood and Education

(3 -1- 3)

Concepts of human growth vary extraordinarily across time and space. When children become full-fledged persons, when they can reason, when or whether they should be independent from their parents and how all this happens are variable and illuminating. Education—either formal or informal—reflects and also constitutes a society’s view of childhood. This course provides a (selective) cross-cultural survey of childhood and education, looking at stages from pregnancy and infancy to late adolescence. Students will devise and conduct projects of their own.

ESS 35600. Field Experience in Education: Internship in K–12 Teaching

(1 -0- 1)

This internship is designed to provide an experience that will broaden students’ knowledge of teaching and learning through field experience in local K–12 classrooms. Students will spend 3 hours each week in the classroom. The hours are flexible. Academic work includes occasional reflections and short readings.

ESS 35608. Coaching Practicum

(0 -3- 3)

Prerequisite: ESS 33606 and ESS 33607

The practicum involves supervised work experience in various athletic settings. Students will demonstrate effective coaching through the submission of evidence-based documentation. Students must complete both the principles and foundations courses before doing the practicum. The student will have directed supervision in coaching. The student will pick a sport that s/he is interested in coaching. After approval of the cooperating coach and the director of coaching, the student will be granted a coaching practicum under direct supervision of the cooperating coach/supervisor. Periodic interactive meetings will be held to discuss the experience with other students and experienced coaches.

ESS 35623. Practicum in Developmental Disabilities

(3 -0- 3)

Prerequisite: ESS 40263

This practicum/seminar is the logical outgrowth of a long informal relationship that student volunteers have had with families in the Michiana community who have autistic and other special-needs children. The practicum aspect of the course will involve students going into a family home and working in a structured program with an autistic child for, on average, three times a week and a total of six to seven hours. In addition, students will meet in class once a week for discussion on a range of topics relating to autism, including issues regarding its definition, assessment, etiology, and treatment, as well as topics regarding the impact of autism on the family, community resources, and social policy. A number of classes will feature discussions led by parents of autistic children. This class is recommended particularly for students interested in child clinical psychology, education, developmental psychology, and social work.

ESS 36615. Directed Readings

(V -0- V)

Student and Instructor will design readings relevant to a special interest in education.

ESS 36616. Directed Readings: Motivation to Learn in Theory and Practice

(3 -0- 3)

This is a directed readings course focusing on the theme of motivation.

ESS 36617. Directed Readings in Education

(V -0- V)

Directed readings on various topics in education.

ESS 40200. Racial and Ethnic Conflict in the U.S.

(3 -0- 3)

The course examines the causes and consequences of racial and ethnic conflict. We will address questions such as the following: How do race and ethnicity become meaningful to social actors? What factors contribute to inter-group conflict? What are the origins and consequences of inter-group inequalities? How are racial and ethnic identities related to social class? How are racial and ethnic identities related to politics? How can a racial or ethnic group overcome a subordinate status? In addition to engaging relevant literature, students will devote significant time to developing original research questions which could, with further development, result in published articles. (May not take if already took SOC 43838 because of course content overlap.)

ESS 40209. Ethnicity in America

(3 -0- 3)

A study of the dynamic process of formation and development of the society of the United States and its cultural, religious, and racial pluralism; a review of the history and theory of interethnic relations, and their manifestation in the basic institutions of family, education, religion, economics, and government.

ESS 40210. Unequal America

(3 -0- 3)

Although America is world's richest nation, it has the most unequal distribution of wealth and income in the industrialized world. In this course, we will examine why this is so. In particular, we will examine the following questions: What social forces create inequality in society? Is inequality inevitable? Is there such a thing as "social class"? Who gets ahead and why? Why is race/ethnicity and gender still related to social status, wealth, and income? Does America have a "ruling elite"? Who are "the poor" and what explains their poverty? Are there social policies that can create more equality in American society—and is that what Americans really want?

ESS 40214. Society and Identity

(3 -0- 3)

This course looks at sources, dynamics, and consequences of identity in contemporary society. Identity is conceived as definitions of an individual that self and others use as a basis for interacting with one another. Significant outcomes of the way we are defined are the life chances, evaluations, and emotional meanings we experience. The course format is a discussion. Seminar. This is an education-general course.

ESS 40215. Great Books in Sociology of Education

(3 -0- 3)

This course focuses on classic works in the sociology of education that not only shaped the direction of the education subfield, but also were landmarks in the field of sociology as a whole and often greatly influenced public policy. Discussion of the works will focus not only on an evaluation of the contribution of each work to sociology of education but also on the question of how these works contributed to sociological theory. One important goal of the course is to use careful evaluation of classic works to develop good research questions and/or to use concepts and arguments from the works to inform current research projects. This is an education-focused course.

ESS 40250. Children and Poverty: Developmental Implications

(3 -0- 3)

Every fifth child in America faces hunger or poverty. This course examines the impacts of youth poverty and related risks from the perspectives of developmental and social psychology. Key topics include changing family patterns, violence and conflict resolution, moral development, resiliency, and educational inequalities/potentials. Central to the course will be an emphasis on children's developing cognitive perceptions of self in relation to society, and an examination of potential solutions, model programs, and relevant social policy. Readings will be drawn from a variety of sources and discussed in seminar format. Active student participation and service-learning engagement or community-based research are fundamental to the course. Students currently working with youth via student organizations or local entities are especially encouraged to apply.

ESS 40251. Multicultural Psychology

(3 -0- 3) Park

The general purpose of this course is to examine and learn to talk about issues of culture and race in the United States from a psycho-social perspective. Culture and race are not synonyms. So, we will be examining some of the ways that each affects the quality of our psychological functioning. The goals of this course are to learn to recognize and appreciate culture in ourselves and others; to examine the different ways that cultural and racial socialization influence behavior, to consider how culture and race relate to various psychological constructs, and to understand the ways in which racism and ethnocentrism operates in everyday life. To accomplish these goals, we will use readings, group discussions, lectures, films, and each other to expanding our awareness of how culture and race operates in our everyday life. As a student in this class, you will be encouraged to share your ideas and life experiences. This is an education-general course.

ESS 40253. Latino Psychology

(3 -0- 3)

The purpose of this course is to examine the psychosocial research and literature about Latino/a individuals and communities within the United States. Students

will be actively involved in discussing issues relevant to Latino/a well-being, including immigration and acculturation, ethnic identity, religiosity, family life, prejudice and discrimination, and multiracial identity. Economic, educational and social opportunities for Latinos also will be studied, and efforts towards social advocacy and the delivery of psychological interventions for Latino communities will be critically examined. This is an education-general course.

ESS 40256. Moral Development

(3 -0- 3) Narvaez

Students are challenged to think about the nature of moral development, learn how to examine and compare theories in moral development, develop critical thinking and have the opportunity to create a study of moral development. The course reflects on Catholic Social Teaching and its relation to moral identity and social action generally and in our own lives.

ESS 40259. Psychology of Personality

(3 -0- 3) Kelly

Major theories and research findings on social, emotional, and cognitive development are covered. Although emphasis is on the time from birth to early adulthood, some research on adulthood and the elderly is included. Attention is given to how different environments enhance or hinder healthy development.

ESS 40260. Abnormal Psychology

(3 -0- 3)

Defines the concept of abnormal or maladaptive behavior; reviews the principles involved in human development and adjustment and describes the common clinical syndromes, their causes, and treatments.

ESS 40261. Developmental Psychology

(3 -0- 3) Christensen

Major theories and research findings on social, emotional, and cognitive development are covered. Although emphasis is on the time from birth to early adulthood, some research on adulthood and the elderly is included. Attention is given to how different environments enhance or hinder healthy development.

ESS 40262. Cognitive Psychology

(3 -0- 3) Brockmole

A lecture course presenting a cognitive approach to higher processes such as memory, problem solving, learning, concept formation, and language.

ESS 40263. Autism

(3 -0- 3) Whitman

This seminar discusses topics related to developmental disabilities, with a special emphasis on pervasive developmental disorders and autism. Issues regarding their definition, etiology, and treatment are also discussed.

ESS 40301. African-American Civil Rights Movement

(3 -0- 3)

Corequisite: HIST 42851

There may not be a term in American society as recognized, and yet as misunderstood, as “civil rights.” Often civil rights are conflated with human rights, even through each are distinct of the other. During the semester, we will trace the African-American civil rights movement in the United States during the 20th century, as well as its lasting impact on American society. We will do so using as many media as possible. Fortunately, we will have the opportunity to study an important part of American history in significant detail. The time span we cover will not be that great, but the issues we investigate challenge the founding principles of American society to its core.

ESS 40402. The Teaching of Writing

(3 -0- 3)

This course is designed to acquaint students seeking professional training in English with the methods, theories, and pedagogies appropriate for teaching English language arts and composition based on National Council of Teachers of English (NCTE) and International Reading Association (IRA) standards.

Throughout the semester students will engage in an array of writing tasks, including lesson planning, research writing, and other formal and informal writing activities. Most of the writing projects serve as models for the kinds of assignments you might develop and implement in future classrooms.

ESS 40403. The Literature of Disability

(3 -0- 3)

A review of literature about “disability”, how the “disabled” experience literature, and how to teach literature to the “disabled.”

ESS 40404. “Our America”: Exploring the Hyphen in African-American Literature

(3 -0- 3)

Close readings of various 20th-century African-American literatures, with foci on how “black subjectivity” is created; the relationship between literature, history, and cultural mythology; the dialectic of freedom and slavery in American rhetoric; the American obsession with race; and the sexual ideology and competing representations of domesticity.

ESS 40530. Educating in Faith: Catechesis in Catholic Schools

(3 -0- 3)

This course is designed to assist current or prospective teachers of religion/theology at the junior-high and high school levels in the catechesis of adolescents in Catholic schools. The course is also helpful for those anticipating a career in pastoral, and most especially catechetical, ministry with adolescents and young adults. The course is open to Theology students at the undergraduate and graduate levels and to Notre Dame undergraduates with minors in Education, Schooling, and Society. Within class sessions designed to be highly dialogical, interactive, and prayerful, participants explore both theological and practical/pedagogical dimensions of the process of catechesis. Required readings are drawn from the *National Directory for Catechesis*, the *General Directory for Catechesis*, and *The Catechism of the Catholic Church*, as well as from the works of theologians and educational theorists who have contributed significant responses to the two central questions addressed in this course: “What is Catechesis?” and “How Do We Engage in Catechesis in the Context of Catholic Schools?” During this course, participants explore all of the central tasks that constitute the holistic process of catechesis as delineated in the general and national Catholic catechetical directories and other catechetical documents and as adapted for use in Catholic schools: communicating knowledge of the mystery of God’s self-revelation; fostering maturity of faith and moral development; sharing and celebrating faith by forming Christian communities of prayerful people; promoting Christian service and social justice; and witnessing to faith through pedagogy and by the example of authentic spiritual lives. Participants are required to read all assigned selections from the course packet, as well as from the *National Directory for Catechesis*. Participants also actively contribute to class sessions (Presence in class is mandatory; one excused absence is allowed for illness; participation is factored into the final grade.) Participants also synthesize within the following assignments what they have learned from both readings and class sessions: 1) in-class group work on pedagogical strategies; 2) short written assignments and oral reports; 3) a mid-term examination; 4) a personal mission statement for the student as catechist (2–3 pages); 5) an integrative essay (10–12 pages) answering the question, “What does it mean to educate in faith?”

ESS 40655. Latinos in Education

(3 -0- 3)

This course examines the educational experiences and struggles of Latinos in U.S. public and private schools. Students will study these experiences through legal, political, historical, social, and economic perspectives, regarding educational policies and practices. Additionally, this course focuses on the potential of education as an agent for social justice and change for linguistically and culturally diverse groups, and thus its important role in the Latino experience. The goal of this course is to develop a reflective individual who is able to understand the educational context of Latinos in the United States.

ESS 43200. Research on School Effects

(3 -0- 3)

It might seem a truism that schools have powerful effects on student achievement. Yet beginning with the landmark Equality of Educational Opportunity study in 1966, social scientists have debated the role that schools play in the production of student achievement. Does it matter much, which school a student attends? Why are some schools chronically low performing, and what are the characteristics of more effective schools? Students should have completed coursework in methods and statistics for social research or equivalent coursework before enrolling in this course.

ESS 43201. Population Dynamics

(3 -0- 3)

Demography, the science of population, is concerned with virtually everything that influences, or can be influenced by, population size, distribution, processes, structure, or characteristics. This course pays particular attention to the causes and consequences of population change. Changes in fertility, mortality, migration, technology, lifestyle and culture have dramatically affected the United States and the other nations of the world. These changes have implications for a number of areas: hunger, the spread of illness and disease, environmental degradation, health services, household formation, the labor force, marriage and divorce, care for the elderly, birth control, poverty, urbanization, business marketing strategies, and political power. An understanding of these is important as business, government, and individuals attempt to deal with the demands of the changing population.

ESS 43255. Adolescent Development

(3 -0- 3) Lapsley

Focuses on adolescent development within various social contexts, including family, peer groups, and the workplace. Special emphasis on normative development at the transition from childhood to adolescence.

ESS 43256. Developing Minds

(3 -0- 3) Day

In this course, students will learn some of the ways cognition changes with age, experience, and education. Cognition in this course is defined broadly and includes, but is not limited to, basic processes such as memory, knowledge of subjects taught in school (e.g., reading and arithmetic), and thoughts about one's self as a learner (e.g., perceived self-competence). The age range covered is from birth to old age. Two fundamental questions addressed throughout the course are: What cognitive abilities do individuals of different ages bring to learning environments, and how do learning environments affect individuals' thinking?

ESS 43257. Attention Deficit Disorder

(3 -0- 3)

Attention deficit disorder (also known as attention deficit hyperactivity disorder) is a diagnosis applied to children and adults who have experienced a handicap in their school, home, work, and/or social settings due to abnormal levels of distractibility, impulsively, and/or hyperactivity. According to epidemiological data, approximately 4% to 6% of the U.S. population has ADD, which makes it one of the most prevalent psychological disorders in contemporary society. Furthermore, it is currently believed that 66% of those diagnosed with ADD as children will continue to exhibit symptoms as adults. Over the past decade, there has been heated debate over both the cause and treatment of ADD. For instance, ADD has been attributed to a variety of causes including minor brain damage, poor diet, and poor parenting. Likewise, a variety of different treatment options have been recommended including medication, behavior therapy, and cognitive therapy; and recently, there has been concern expressed by the FDA that several medications used to treat ADD might be harmful to children. This seminar will provide a comprehensive survey of current research into the cause and treatment of ADD. In addition, the seminar will focus on the effects of this disorder from the perspective of both afflicted individuals and their families as well.

ESS 43258. Motivation and Academic Learning

(3 -0- 3)

Traditional studies of learning have focused almost exclusively on cognitive, or "cold," processes. Recent research on learning illustrates how "hot" processes also influence thinking and academic learning. In this course, we focus on how social, motivational, and emotional influences interact with cognitive processes to affect academic learning. Social influences will include students' social goals in school, friendships, and family dynamics. Motivational influences are explored through the study of major theories of achievement motivation, including attribution, self-efficacy, intrinsic motivation, "possible selves," and goal theories. Emotional factors such as coping mechanisms, test anxiety, and wellbeing also are discussed. In addition, we explore how development affects students' social, motivational, and emotional responses to learning. Child, adolescent, and adult models are discussed, and applications to educational child settings will be an integral part of the course.

ESS 43259. The Psychology of Diversity in Higher Education

(3 -0- 3)

This course provides an overview of issues pertaining to diversity and diverse college students. In this course, "diversity" is defined in terms of various demographic characteristics, such as race/ethnicity, social class, gender, and religion. Topics include not only psychological concepts related to diversity (e.g., cultural psychology, stereotyping, prejudice, and discrimination), but also how these concepts are relevant to university settings (e.g., student interactions, college admissions) and how college diversity experiences may affect student outcomes.

ESS 43640. Seminar: Educational Research

(3 -0- 3) Greene; Turner

Students will learn about both methods and topics in educational research. Students will design and execute an original research study.

ESS 43642. Seminar: New Directions in Educational Research

(3 -0- V)

Seminar for seniors in the ESS minor. Students will study new approaches to educational research.

ESS 45600. Internship in Educational Research

(3 -0- 3)

Students will gain experience working with the No Parent Left Behind program in South Bend.

ESS 45652. Mexican Immigration: South Bend Case Study

(3 -1- 4)

This course uses experiential learning in the Mexican community of South Bend in order to understand how Mexican migrants conduct their lives across the vast distances separating South Bend and their homeland. The course begins with readings in social science and fiction about transnationalism, Mexican-U.S. migration and the history and sociology of the local community. Next we learn ethical fieldwork methods in preparation for community research. Students working in two-person teams will gather data on local and transnational households and kin networks, gender relations, political involvement, employment, consumption practices, cultural activities and religious life, working through contacts with social service agencies, the Mexican consulate, and Mexican- or Latino-run media, businesses, food stores, and sports leagues. We will document the innovative adaptations of this migrant community, especially the growth of an ethnic enclave of small businesses that both unite Mexicans as an ethnic group and sustain their ties to their homeland. We intend to compile the research in a volume published by Latino Studies to be given to those who shared their lives with us and to entities that are committed to helping them.

ESS 47600. Special Studies: Focus on Leadership in Catholic Schools

(2 -0- V)

Research-based course focused on leadership issues in Catholic schools.

ESS 47601. Special Studies: Research in Catholic Education

(3—V)

This course is designed to provide undergraduate students an opportunity to engage in systematic research of issues and trends in Catholic Education. Faculty members in the ACE leadership program will supervise individual research projects, facilitate presentations at conferences when possible and appropriate, and ensure that individual student research efforts are informed by and contribute to the growing field of Catholic education.

ESS 48999. Research Experience Undergraduate

(0 -0- 0)

A zero-credit course for students engaged in independent research or working with a faculty member or a member of the University staff on a special project. Registration requires a brief description of the research or project to be pursued and the permission of the Director of the Summer Session.

Institute for International Peace Studies**IIPS 20501. International Relations**

(3 -0- 3)

This course provides an introduction to the study of international relations and will cover several theoretical approaches to and empirical issues in the field of IR. Readings have been selected to highlight both traditional approaches to and more recent developments in world politics. The first half of the course focuses on contending theories of IR, while the second half of the course deals with more substantive issues. Empirical topics and subjects covered include: international security (nuclear weapons, ethnic conflict, and terrorism)—international political economy (trade, international finance, and globalization)—and 20th-century history (WWI, WWII, and the Cold War). In addition, we will examine several contemporary topics in international organization and law, including the environment, nongovernmental organizations, and human rights. We conclude by discussing the future of international relations in the 21st century.

IIPS 20703. War, Law, and Ethics

(3 -0- 3)

Corequisite: IIPS 27999

This course is designed to explore the ethical and legal considerations related to war and the use of force. Beginning with a historical overview of Christian thinking on war and peace, we will develop an account of various ethical positions on the use of force, including views rooted in the just war tradition and in pacifism. We will also consider the ethical implications of contemporary issues related to the use of force, e.g., sanctions, war crimes, humanitarian intervention, and terrorism. In collaboration with the Center for Social Concerns and La Casa de Amistad, students will have the opportunity to engage in service-learning by working with students from Washington High School to collect stories from local war veterans as part of the Library of Congress, “Veterans History Project.”

IIPS 20704. Christianity and World Religions

(3 -0- 3) Malkovsky

The purpose of this course is to introduce the student to the basic teachings and spiritualities of Hinduism, Buddhism, and Islam. We will approach these religions both historically and theologically, seeking to determine where they converge and differ from Christianity on such perennial issues as death, meaning, the nature of the ultimate mystery, the overcoming of suffering, etc. We will also examine some traditional and contemporary Catholic and Protestant approaches to religious pluralism. Our own search to know how the truth and experience of other faiths is related to Christian faith will be guided by the insights of important Catholic contemplatives who have entered deeply in the spirituality of other traditions. By course's end we ought to have a greater understanding of what is essential to Christian faith and practice as well as a greater appreciation of the spiritual paths of others. Requirements: Short papers, midterm exam, and final exam.

IIPS 20705. Ways of Peacemaking: Gandhi, Heschel and King

(3 -0- 3) Neiman

An intensive study of the philosophy and spirituality of three of the greatest peace educators of our century: M. Gandhi, A. Heschel and M. Luther King.

IIPS 20707. A Faith to Die For

(3 -0- 3)

An introduction to Catholic moral theology, with an accent on how Catholic belief and practice shape the Church's understanding of the moral life. Aspects of Catholic belief and practice to be covered include baptism, penance, reading scripture, preaching, prayer, the Eucharist, martyrdom, religious life, marriage, and mission. In the context of these beliefs and practices, several leading themes in Catholic moral theology will be explored (e.g., sanctification, the eternal and natural law, and virtues and vices), and several moral issues will be examined (e.g., abortion, suicide, capital punishment, economic justice, and war and peace). This course explores an understanding of the moral life in terms of participation in the life, death, and resurrection of Christ, but at the same time it avoids construals of the moral life that rest merely on pious exhortations (“Jesus says”),

assertions of ecclesial authority (“the Church says”), or invocations of negative moral prohibitions (“thou shalt not”). Thus, the “faith” will be presented as a set of beliefs and practices that are disturbingly radical, demanding that Christians die to themselves, yet also deeply attractive, in that dying serves as a passageway to true life. As suggested by the title, a leading emphasis in the course is that only a faith worth dying for can forge a moral life that is truly worth living. Readings include selections from scripture, liturgical texts, theological and moral treatises, encyclicals, and the documents of Vatican II, plus Augustine’s *Confessions*, Cantalamessa’s *The Eucharist: Our Sanctification*, Graham Greene’s *The Power and the Glory*, short stories of Flannery O’Connor, Dorothy Day’s *The Long Loneliness*, and Helen Prejean’s *Dead Man Walking*. Evaluation is based on a midterm, a final, several short papers, and interactive class participation.

IIPS 20711. The Ethics of War and Peace

(3 -0- 3) Kaiser

This course explores Christian understandings of the ethics of war and peace from the time of the early church to the present. Through this historical survey, we will seek to develop an account of various ethical positions on the use of force, particularly views rooted in pacifism and in the just war tradition. We will also consider how different theological convictions in the areas of Christology, ecclesiology, and eschatology (among others) have shaped Christian teaching on the nature of peace and the permissibility of using violence. Finally, we will investigate the ethical implications of several contemporary issues related to the ethics of war and peace such as war crimes, sanctions, humanitarian intervention, and terrorism.

IIPS 20713. Culture and Politics in Northern Ireland

(3 -0- 3)

Using a broad range of texts—drama, fiction, poetry, film, painting, and documentary material—an examination of the politics of culture, and the cultures of politics, in the North of Ireland during the 20th century.

IIPS 20716. Introduction to Islamic Civilization

(3 -0- 3) Guo

This course is designed to introduce students to Islamic civilization and Muslim culture and societies. The course will cover the foundations of Islamic belief, worship, and institutions, along with the evolution of sacred law (al-shari’ah) and theology, as well as various aspects of intellectual activities. The Koran and the life of the Prophet Muhammad will be examined in detail. Both Sunni and Shi’i perspectives will be considered. Major Sufi personalities will be discussed to illuminate the mystical, and popular, tradition in Islam. Topics on arts, architecture, literary culture, and sciences will be covered. Although the course is concerned more with the history of ideas than with modern Islam as such, it has great relevance for understanding contemporary Muslim attitudes and political, social, and cultural trends in the Muslim world today.

IIPS 20719. War, Peace and Conscience

(3 -0- 3)

This course examines ancient, medieval, and modern understandings of the ethics of war primarily, but not exclusively, within Christian tradition. It comes in three parts. First, it surveys the emergence and development of the morality of war from ancient times (Jewish, Christian, and classical), through the medieval period (church canonists, Aquinas, the scholastics), and into the modern period (Grotius and later sources of international law). Second, it examines the nature of modern warfare by means of historical illustrations, including the Civil War, the so-called Indian Wars, World War I, World War II, the Vietnam War, and the Gulf War. Third, it takes up several cases with the aim of exploring the tension between traditional conceptions of just war theory and the practice of modern warfare, focusing on issues involved in the use of weapons of mass destruction, the “fog of war,” wars of revolution, ethnic and religious conflict, and the continuing “war on terrorism.” Texts include: Roland Bainton, *Christian Attitudes Toward War and Peace*, Erich Maria Remarque, *All Quiet on the Western Front*, John Hersey, *Hiroshima*, Olson and Roberts, *My Lai: A Brief History with Documents*, plus writings on the attacks of September 11. Requirements include a take-home test, several short papers, and a final exam.

IIPS 20720. Islam: Religion and Culture

(3 -0- 3)

This course will discuss the rise of Islam in the Arabian peninsula in the seventh century of the Common Era and its subsequent establishment as a major world religion and civilization. Lectures and readings will deal with the life of the Prophet Muhammad, the Qur’an and its role in worship and society, early Islamic history, community formation, law and religious practices, theology, mysticism, and literature. Emphasis will be on the core beliefs and institutions of Islam and on its religious and political thought from its formative period until our own time. The latter part of the course will deal with resurgent trends within Islam, both in their reformist and extremist forms, and contemporary Muslim engagements with modernity. We will also discuss the spread of Islam to the West and increasing attention focused on “political Islam” or “Islamism” today. All readings are in English translation.

IIPS 20727. Moral Problems

(3 -0- 3) Sterba

In this course we will critically evaluate alternative solutions to a number of contemporary moral problems. We will begin with the problems of the distribution of income and wealth and our obligations to distant peoples and future generations. We will then turn to the problem of sexual equality and to a particular challenge to feminism which maintains that men themselves suffer from a “second sexism” that benefits women. Finally, we will take up the problem of affirmative action and examine the legal and moral issues raised by affirmative action as it again makes its way to a decision before U.S. Supreme Court.

IIPS 20728. Women and War

(3 -0- 3)

This course looks at the wide range of women’s literary responses to World Wars I and II. Our readings and class conversations will be structured around central themes such as women’s military service, women’s pacifism, women and national boundaries, women and empire, shell-shock, and nursing national wounds. Students will look at an international range of authors, including the French author Marguerite Duras; British authors Virginia Woolf, Radclyffe Hall, and Rebecca West; British-Jamaican author Andrea Levy; New Zealand writer Katherine Mansfield; American authors H.D. and Edith Wharton; and Canadian author J.G. Sime and Japanese-Canadian author Joy Kogawa. We will cover a range of genres, including prose, the novel, autobiography, and the short story.

IIPS 20729. The Askesis of Non-Violence

(3 -0- 3)

This course will explore the theology and practice of nonviolence as a form of askesis, or spiritual discipline. The material will include readings from Scripture, the early Christian tradition, and Catholic social teaching. Religious sources outside the Christian tradition will include Gandhi, Thich Nhat Hanh, and Badshah Khan. This course will use the method of community-based learning and will require 20 hours of service at particular sites in the South Bend area.

IIPS 20731. Christian Ethics, Technology, and War

(3 -0- 3)

This course examines the theological resources which can be brought to bear on the ethical issues surrounding the use of emerging weapons technologies in war. Some of the emerging technologies that will be considered are Unmanned Aerial Vehicles (UAVs), robots with artificial intelligence, surveillance technologies, and the use of neuroscience technologies to enhance and/or alter the psychological, physical and emotional capabilities of the soldier on the battlefield. The course will begin by introducing students to the Christian just war tradition as a way of demonstrating how theology, law, ethics and war can be related. The course will then undertake a very brief overview of the history of weapons development in war and the Church’s reaction to some of them (e.g. the crossbow, nuclear weapons). The course will then move on to examine particular emerging technologies. Students will be asked to consider how the specific technologies impact: 1) the moral agency of individual soldiers in relation to the operation of the technology itself; 2) the relationship of soldiers to fellow allied soldiers as well as enemy combatants; 3) the

relationship of individual soldiers to military, social, and political institutions; 4) the relationship of the military to other social institutions, most notably political and economic institutions; and 5) the environment. Students will be asked to consider how the just war tradition may or may not be an adequate framework with regard to thinking through the ethical issues surrounding emerging weapons technologies. The course will conclude by asking students to consider what type of moral responsibility is required by non-military agencies or individuals with regard to their cooperation in the research, development, and funding of these weapons systems (e.g. banks, engineers, civilian corporations, lawyers, the church, the academy, etc.) Students will undertake a major group project and presentation at the end of the course in which the students will present a case study on the moral and ethical implications of a particular weapons system using the resources and material provided to them throughout the course.

IIPS 20732. Theology, Culture and Human Rights

(3 -0- 3)

A significant development in modern Roman Catholic Social Teaching is the endorsement of the doctrine of universal human rights. This course explores the tensions and challenges that arise, both within and outside the Christian theological tradition, in articulating, promoting, and defending the discourse and practice of human rights within a globalized setting that is religiously, ethically, and culturally pluralistic. The first part of the course will be devoted to thematic issues such as the meaning of the Church and its mission, the diversity of religious and cultural practices and traditions, and the idea of a universal morality or natural law. The second part of the course will consider several practical issues that arise in relation to the practice of certain human rights, among these the issue of religious freedom, the rights of women and children, and the rights of ethno-cultural minorities.

IIPS 20901. Gender Roles and Violence in Society

(6 -0- 3)

Much of the violence in contemporary society—whether it is domestic abuse, school shootings, gang warfare, video games, or inter-ethnic conflict—has something to do with gender. This course explores the connection between gender role socialization and the expression of conflict or aggression. Through readings, discussions, films, and projects, students will be encouraged to examine sex differences in violent behavior as the outcome of complex processes. We will try to understand those processes better and develop the ability to describe the causes and their effects.

IIPS 20902. Environmental Ethics

(3 -0- 3)

Corequisite: IIPS 27999

The course will be an attempt to come to grips critically with the moral significance of contemporary concern for ecology and the environment.

IIPS 20904. The Ethics of Energy Conservation

(3 -0- 3)

This is a joint theology and engineering course exploring the ethics of energy conservation by using the method of community-based learning. Students will begin by using the university campus as a “trial laboratory” for measuring energy efficiency and thinking creatively about possible energy conservation measures. We will then ask them to conduct a limited energy efficiency and conservation study for selected non-profit organizations in the South Bend community. This course will fulfill a number of civic learning goals, including: the cultivation of theological and scientific competence in environmental ethics; the identification of leadership skills necessary to address the concrete concerns facing non-profit organizations as they strive to meet pressing human needs in an environmentally sound manner; and, formation of consciences sensitive to the social responsibility of caring for the environment.

IIPS 20905. Sociology of Terrorism

(3 -0- 3)

The purpose of this course is to provide a broad review of terrorism with a focus on sociological approaches such as social movements theory, network analysis, and

ideology. The course will examine profiles of terrorists within a historical and social psychological perspective. Specifically, we will focus on the purpose and difference of terrorists and terrorist groups and frame our discussion around historical factors that continue to influence modern terrorism. Finally, we will discuss the consequences of terrorism in terms of social responses to terrorism, the economic and political costs of these responses, and the possibility of preventing terrorism in the future.

IIPS 20906. Energy and Society

(3 -0- 3)

A course developing the basic ideas of energy and power and their applications from a quantitative and qualitative viewpoint. The fossil fuels (coal, oil, natural gas) are studied together with their societal limitations (pollution, global warming, diminishing supply). Nuclear power is similarly studied in the context of the societal concerns that arise (radiation, reactor accidents, nuclear weapons proliferation, high-level waste disposal). The opportunities as well as the risks presented by alternative energy resources, in particular solar energy, wind, geothermal, and hydropower, together with various aspects of energy conservation, are developed and discussed. This course is designed for the non-specialist.

IIPS 20907. Environmental Philosophy

(3 -0- 3)

A philosophically integrated examination of current environmental issues, drawing on familiar literature from ecology (Leopold), economics (Boulding), and ethics (Singer), as well as recent fiction (Tolkien, Herbert).

IIPS 20908. Globalization and Social Movements

(3 -0- 3)

In what ways does an increasingly global political, economic and cultural system impact our lives? Has globalization led to increased peace and justice, or to new types of conflict and inequality? How has globalization affected national and transnational social movements? This course examines the ways in which changes in the global economic and political system affect politics within countries. First, we will briefly review the broader research literature on the sociology of social movements. Readings will cover a range of different movements, such as those working to protect the environment, advocating for economic justice, addressing social problems such as extreme poverty and public health, and fighting for the rights of women and working people. Then, we will look at how globalization has affected social movements. This course is particularly applicable to students majoring in business, political science, economics, peace studies, anthropology, sociology, and any foreign language. Students planning to study abroad may also be interested.

IIPS 20909. Ecology, Ethics and Economics

(3 -0- 3)

An examination, through literature and reasoned argument, of 1) social values behind the economic excesses that have led to our ecological crisis and 2) alternative values by which the crisis might be alleviated.

IIPS 20910. Sociology of War and Terror

(3 -0- 3)

This course offers a broad introduction to the sociology of wars, terror, and communal violence, including their causes, conduct, and consequences. We will consider the basic social forces which impel people to kill and to risk death in the name of their societies, including the relationship of violence to “human nature.” We will survey the manifold characteristics of societies that contribute to and are affected by war and terror: politics; economics; religion; culture; demographics; the environment; gender; race, ethnicity, and nationalism; social movements; and social psychology. We will survey the scope of war and terror throughout social history and pre-history, but will give special attention to the security dilemmas confronting American society. And we will consider alternatives to war and terror and the prospects for transcending the communal violence that has been so much a part of social life for millennia. The format of the course combines lectures, presentations, and discussions. We will draw on both written and visual materials of several kinds. Grades will be based on examinations, brief written work, and

participation. (This course requires no background in sociology. It is open to students in any major who are concerned about the occurrence of armed conflict in social life. This course can be counted as a Sociology elective.)

IIPS 20911. Development and Human Well Being

(3 -0- 3)

Development. People around the world clamor for more of it and oust government leaders for failing to achieve it, but what exactly is “development?” If development were sitting in front of you on the sidewalk, how would you know it, and what would it look like? In this course we will unpack the deceptively simple word “development” into different specific aspects, each with concrete outcomes for human well-being: education, health, political freedoms, material wealth/consumption, and happiness. We will look at how our understanding of the distribution of “development” among countries, and historically over time, changes when we view it through each of these different lenses. We will consider whether these different aspects of development tend to reinforce each other, and try to understand cases when they do not. We will conclude the course by looking at how “doing” development differs depending on which aspect of development is targeted.

IIPS 20912. Ethics of Emerging Weapons Technology

(3 -0- 3) Lee

This course explores the ethical challenges posed by the ongoing revolution in the technology of war. After learning about some general, philosophical approaches to ethical decision making, we will examine a wide range of new weapons technologies, from “smart” bombs, drones, and robots to em (electromagnetic) weapons, cyberwar, and bio-enhancement, asking the question whether the existing framework of Just War Theory and the Law of Armed Conflict (LOAC) are adequate for war as it will be fought in the 21st century.

IIPS 23901. Power and Identities

(3 -0- 3)

This seminar explores various ways of thinking about the distribution and exercise of power in modern societies, and how power is related to identities and the self. We read and discuss contemporary theoretical works and case studies which examine authority relations and their construction, and the interplay of power with economics, politics, religion and culture. Readings include, among others, works by Michel Foucault, Richard Sennett, Saba Mahmood, and Leora Auslander. Because of its themes and interdisciplinary approach, this course may be of interest not only to sociology majors, but also to majors in political science, gender studies, anthropology, and history.

IIPS 30101. Introduction to Peace Studies

(3 -0- 3)

This course surveys: 1) the major causes of deadly conflict around the world; 2) various definitions of “peace” and the conditions under which it occurs and is sustained; and 3) the style and comparative success of various strategies such as building peace movements and nonviolent social change as ways to achieve peace. (Open to all undergraduates—required for peace studies minors and majors)

IIPS 30301. How To Do Political Research

(3 -0- 3)

This is a course primarily intended for juniors or seniors who are writing, or are planning to write, a senior essay, although it is open to all majors. It helps students acquire the practical skills that are essential for completing a substantial empirical research project: posing a research question, finding out what is already known, staking out an original argument, identifying counterarguments, deciding what kind of evidence is required to figure out who is right, clarifying concepts and boundary conditions, gathering the evidence, analyzing the evidence, and interpreting the analysis. The course encourages students to consider a variety of approaches and helps them decide whether to use quantitative methods, qualitative methods, or both. Students will do independent research to compile a bibliography, gather and analyze evidence, and write an outline, but will not write a paper. Instead, they will present and defend their findings orally and visually. All students are expected to participate vigorously in evaluations of their peers’ research.

IIPS 30302. Microventuring Consulting

(3 -0- 3)

Prerequisite: IIPS 30924 or BAMG 30924

A comprehensive review of the fundamentals of finance, law, marketing, and management will be presented. In classroom and workshop formats, students will be teamed up to develop sound business plans with local entrepreneurs and compete for available seed capital to implement their business plans within the surrounding community. Students take their skills, work with business owners, and become mentors.

IIPS 30401. Terrorism, Peace, and Other Inconsistencies

(3 -0- 3) Lopez

This course examines the roots and sustaining conditions of contemporary terrorism, and explores the diverse counter-terrorism measures and policy prescriptions employed by the U.S. and for the international community after Sept 11, 2001. It will devote special attention to the way in which U.S. culture and policy assess 9-11 during this tenth anniversary time. We then address what challenges both the causes and the cures for terror pose to those who take seriously the creation of a world with less war, terrorism and violence. The course will require a heavy dose of reading each week, and participants will be required to write two op-ed essays and three persuasive and/or policy papers, based on course readings, of about seven pages each in length. There will be a cumulative final exam.

IIPS 30403. Borders, Boundaries and Frontiers

(3 -0- 3) Kaufman

This course explores political borders, boundaries and frontiers and their changing meaning and dynamics from the beginning of the colonial era (circa 1500) until the present. We will explore the formation of political borders, life along borders and border conflicts and their resolutions (or lack thereof). Themes, including colonialism and globalization, will also be discussed through the prism of political boundaries. Geographically we will look at areas including the Middle East, Africa, Europe, South Asia and the U.S.-Mexican border in order to analyze boundaries through both global and regional perspectives.

IIPS 30404. The United Nations and Global Security: Where Politics, Law and Ethics Contend

(3 -0- 3) Johansen

In this course students explore how to increase peace and security for all people on earth. The course emphasizes human security as much as national security in addressing questions such as: What are the reasons for the United Nations’ successes and failures in maintaining international peace and security? What are the impacts of United States security policies toward the United Nations? What is the international legal basis for humanitarian intervention and for preventing crimes against the peace, war crimes, genocide, crimes against humanity, and acts of terrorism? How can those who want to be good citizens both of their nation and of the world meet the ethical challenges posed by security problems in an age of globalization and weapons of mass destruction? Students evaluate ways to strengthen the role of international law and organization in preventing armed conflict while addressing major issues of international peacebuilding.

IIPS 30405. Aid and Violence

(3 -0- 3) Fast

The principles of impartiality, neutrality, and independence have traditionally guided humanitarian actors working to provide life-saving assistance to those affected by violent conflict and war. However, in the wake of the end of the Cold War and the more recent wars in Iraq and Afghanistan, the politicization of humanitarian aid and the changing nature of violence have forced humanitarians to reevaluate some of the central assumptions of providing aid in the conflict of war and violence. Using a series of case studies, this course will examine the central debates and dilemmas of humanitarianism, especially in relation to the “relief-to-development” continuum, military-civilian interactions, safety and security issues, and the protection of war-affected populations. The course will be conducted in seminar format, with a strong emphasis on reading and discussion. Grades will be based on a series of written assignments.

IIPS 30500. On War

(3 -0- 3) Rosato

This course is about the causes and conduct of war. As regards causes, the focus is on evaluating the strengths and weaknesses of the most prominent explanations for the outbreak of major war, including balance of power, regime type (democracy/autocracy), civil/military relations, and the personality traits of individual leaders. As regards conduct, the emphasis is on considering the effect of broad political, social, and economic factors (nationalism, democratization, industrialization, military professionalization) on how wars are and have been fought. Particular historical emphasis is placed on the causes and conduct of great power wars (especially the two World Wars), although other wars will be discussed.

IIPS 30502. The Rise and Fall of World Communism

(3 -0- 3)

Corequisite: POLS 32487

For most of the twentieth century, communist states, like the Soviet Union and China, represented the greatest political, ideological, and military challenges to the western world. But now, most of these states are gone; of those that still exist, only one (which one?) can credibly live up to the bloody examples set by Josef Stalin and Mao Zedong. In this course, we will draw upon an eclectic mix of approaches from political science, history, sociology, and political philosophy to make sense of both the rise and the demise of the communist phenomenon. Rather than focusing on only one country or region, we will consider an array of different cases. These will include not only the Soviet Union and China but also such fascinating examples as Cuba, Vietnam, East Germany, Poland, Romania, Yugoslavia, and—my favorite—North Korea. There are no prerequisites for this course, although I do hope you will be inclined to view world communism as one of the most intriguing political movements of all time

IIPS 30503. Politics of Southern Africa

(3 -0- 3)

Prerequisite: POLS 20400

This course focuses on the key state of the region—the Republic of South Africa. After outlining the political history of apartheid, the phenomenon of Afrikaner nationalism, and the rise of African nationalism and the liberation movements, attention turns to the country's escalating turmoil of the 1980s and resulting political transition in the 1990s. South Africa's political and economic prospects are also examined. The semester concludes with a survey of the transitions that brought South Africa's neighboring territories to independence, the destabilization strategies of the apartheid regime, and United States policy in that region.

IIPS 30504. International Law

(3 -0- 3)

International law and institutions are increasingly important for understanding the nature of world politics. This course investigates the interaction between international law and international politics. We examine how international institutions operate, the significance of international law to state behavior, and the connections between international norms and domestic law. The substantive issues addressed in this course include trade, human rights, and environmental protection.

IIPS 30505. International Organizations

(3 -0- 3) Reydams

Examination of governance in international relations, including both formal and informal institutions. The functioning of organizations such as the United Nations, International Monetary Fund, World Trade Organization, European Union, and multilateral development banks. Research papers on topics including peacekeeping and humanitarian intervention, political conflicts surrounding trade liberalization, and assessment of economic development programs.

IIPS 30506. The Northern Ireland “Troubles,” 1920 to the present

(3 -0- 3)

This course explores the history of the six north-eastern counties of Ireland which became “Northern Ireland” in 1920/1. Northern Ireland remained part of the United Kingdom and had a built-in Protestant unionist majority, while the

Catholic minority, alienated from the state from the outset, looked across the new border and to Dublin, capital of the Irish Free State, as the site of their allegiance. Northern Ireland was thus, from the beginning, dysfunctional, scarred by sectarian violence and systematic discrimination in housing and employment. After examining the origins of the state and the early decades of its existence, the class will turn to its main concern, “the troubles,” which broke out in the late 1960s. The major episodes under scrutiny include the civil rights movement, Bloody Sunday, the hunger strikes, and the Good Friday Peace Agreement.

IIPS 30507. Transition to Democracy

(3 -0- 3)

In this class, we will analyze the institutional underpinnings of a successful transition to democracy, and we will discuss ways in which democratic institutions following the transition are set up. Obviously, to understand what contributes to successful transitions, we need to analyze the cases of failed transitions to democracy and failed processes of democratization. Most examples in this class come from the former Soviet Union and from East and Central Europe. Our ambitions, however, are more universal. By the end of the class, you should be able to apply the theories and concepts you learn to transitions taking place in other parts of the world.

IIPS 30509. Latin American International Relations

(3 -0- 3) Hagopian

The primary goal of the course is to understand the bases for the political, economic, and security relations of Latin American states with the United States. The course begins with a theoretical and historical examination of the competing perspectives on what determines United States policy toward Latin America: its normative ideals, its security interests, or its economic interests. It then takes up several enduring themes in U.S.–Latin American relations, including the response of the United States to dictatorships, expropriations of United States-owned property, and revolution, and efforts to promote development, democracy, and human rights. Next, it considers the relations of several Latin American states with each other and the United States, from the Latin American point of view, with special attention paid to the foreign policies of Cuba and Mexico. Finally, it examines several new issues in U.S.–Latin American relations, including regional free trade agreements and trade policy, the environment, migration, and drugs, in a post-Cold War environment.

IIPS 30510. War and the Nation-State

(3 -0- 3)

Prerequisite: POLS 10200 or POLS 20200 or IIPS 20501

This course will examine the phenomenon of war in its broader political, social, and economic context since the emergence of the modern nation-state. The general themes of the course include the impact of nationalism, democratization, industrialization, military professionalization, the nuclear revolution, and the information and communication revolution on the development of warfare and the state. Particular historical emphasis will be placed on exploring the causes and conduct of World War I and World War II.

IIPS 30511. Politics of Tropical Africa

(3 -0- 3) Walshe

Following an introduction to traditional political institutions, the colonial inheritance, and the rise of African nationalism, the course concentrates on the current economic and political problems of tropical Africa. This includes case studies of political organizations, ideologies, and government institutions in Ghana, Nigeria, and Tanzania.

IIPS 30512. International Political Economy

(3 -0- 3)

Prerequisite: POLS 10200 or POLS 20200 or IIPS 20501

This course examines the interaction of politics and economics in the international arena. We begin with a brief historical exploration of the international political economy, and introduce four analytical perspectives on state behavior and international outcomes. Topics include trade policy, foreign direct investment and

multinational corporations, international capital flows, exchange rate regimes and currency unions (including European Monetary Union), financial crises, and the fight against money laundering and terrorist financing.

IIPS 30514. U.S. Foreign Policy

(3 -0- 3) Lindley

The United States is the most powerful state in the world today. U.S. foreign policy is important not just for U.S. citizens, but it also affects whether others go to war and whether they will win, whether states receive economic aid, what kind of aid starving people will receive, and the extent of global efforts to cope with environmental problems. With these issues at stake, this course addresses the following questions: What determines U.S. foreign policy? What is the national interest? When do we go to war? Would you send U.S. soldiers into war? If so, into which wars and for what reasons? How do our economic policies affect others? Does trade help or hurt the U.S. economy and its citizens? To answer these questions, we first study several theories about foreign policy. We then examine the U.S. foreign policy process, including the president, Congress, the bureaucracy, the media, and public opinion. To see how this all works in practice, we turn to the history of U.S. foreign policy, from Washington's farewell address through the World Wars and the Cold War to the Gulf War. We then study several major current issue areas, including weapons of mass destruction, terrorism, trade and economics, and the environment. Finally, we develop and debate forecasts and strategies for the future.

IIPS 30517. International Relations in East Asia

(3 -0- 3) Moody

This course explores the interactions of the states and societies in the east Asian region, focusing mainly on the relationships of China and Japan, their interactions with each other and with the outside "Asian" powers, the United States and Russia (Soviet Union). Topics include: the China-centered system in east Asia prior to the intrusion of the new world system carried by western imperialism; the western impact, including colonialism, the Chinese revolution, and Japan's "defensive modernization;" the clash between Japanese and Chinese nationalism; the diplomacy of the Second World War and postwar developments; the cold war; decolonization and the emergence of new states and nationalism; the Sino-Soviet rift; the failure of the American policy of deterrence in Vietnam; the diplomatic reconciliation of the United States and China; the liberal reforms in China and their partial disappointment; the end of the cold war; China's growth as a potential world power; Japan's perhaps increasing restiveness in serving as an American surrogate; Asian assertiveness against perceived American hegemonic aspirations; potential tensions and rivalries within the region itself; the collapse of the Asian economic boom and the onset of a period of chronic economic troubles. Course requirements include assigned readings and class participation; a midterm and final examination; completion of two brief research papers dealing with the foreign policy of one of the "smaller" Asian countries (that is, one of the countries other than China and Japan).

IIPS 30521. History of Modern Africa

(3 -0- 3) Ocobock

This course is an introduction to the history of the peoples of Africa from the late nineteenth century to the present day. During the term, we will consider the ways in which Africans shaped and were shaped by the transformative events of the period. In the second half of the nineteenth century, European powers conquered and colonized much of the continent. Over the next sixty years, Africans lived and died under the yoke of European rule; some resisted, others collaborated, but all influenced the nature of colonialism and its eventual collapse. By the 1960s, most Africans were free of foreign rule. Since then the peoples of Africa have endeavored to achieve political stability, navigate Cold War politics, harness development aid, and adapt to a globalizing economy. In recent years, they have succumbed to brutal wars and endured devastating famines, but they have also inspired the world with their triumph over apartheid, emerging vibrant democracies, rich cultures, and deep history. In this class, we will identify, problematize, and debate these

major themes in Modern African history. We also will make use of a variety of texts, from historical documents to classic academic works to works of African art, film, and fiction.

IIPS 30523. Indigenous and Colonial Mexico

(3 -0- 3)

This course investigates the history of Mesoamerica from the Olmec, Mayan, and Aztec societies to Mexico's independence from Spain after 1800. We will examine the nature of several indigenous societies, their conquest and domination by Europeans, post-conquest debates concerning Indians' nature and colonial Indian policy, the structure of colonial society, including relations between Indians, Africans, and Europeans, Catholic conversions and the role of the Church, and finally the causes of independence. We will use readings, lectures, discussions, archeological evidence, film, and literature throughout the course. Students need not have any background in Latin American history.

IIPS 30525. Latin American Development and Politics

(3 -0- 3)

Latin American countries face many challenges, some inherited from Spanish and Portuguese colonial rule, some created by today's globalization, and some common to all developing countries. This course examines how several Latin American countries have responded to the most important of these challenges: How to build a state that can maintain order at home and stay at peace with its neighbors, how to form legitimate governments that can pass needed laws, how to ensure that citizens have political rights and a say in the political process, how to promote industrialization and economic growth, and how to achieve a more equal distribution of wealth and ensure that basic human needs are met.

IIPS 30526. Political Movements in Asia

(3 -0- 3) Hui

This course analyzes a wide range of political movements including nationalist and revolutionary movements, guerrilla insurgencies, terrorist organizations, democracy movements, and peace movements. The Asian region encompasses China (including Taiwan, Tibet, Xinjiang, Hong Kong), Mongolia, North and South Korea, Japan, the Philippines, Vietnam, Thailand, Cambodia, Burma, Malaysia, Indonesia, India, Pakistan, Nepal, Afghanistan, and so on. To understand various movements, we will study global trends, human rights values, cultural differences, religious doctrines, historical legacies, state-society relations, leadership skills, mobilization strategies, and violent vs. nonviolent trajectories. In addition to analytical readings, we will also watch a series of documentaries and read a number of prominent autobiographies.

IIPS 30527. Chile in Comparative Perspective

(3 -0- 3)

This course will learn about the Chilean political process since the 1930s, with a special emphasis on the period from 1964 to 2002. Students will analyze and discuss institutional, economic, social, and cultural changes that occurred during that period. Chilean politics, economics, and sociology will be addressed from a historical perspective.

IIPS 30528. U.S. Foreign Policy in the Cold War

(3 -0- 3) Brady

This course covers the main developments in American foreign policy from World War II through the end of the Cold War. The principal topics of investigation will be wartime diplomacy and the origins of the Cold War; the Cold War and containment in Europe and Asia; Eisenhower/Dulles diplomacy; Kennedy-Johnson and Vietnam; Nixon-Kissinger and détente; Carter and the diplomacy of Human Rights; Reagan and the revival of containment; Bush and the end of the Cold War.

IIPS 30529. Global Politics in the Post Cold War Era

(3 -0- 3) Hui

This course analyzes U.S. foreign policy in the post-Cold War and post-September 11 world. We first examine a number of underlying causes for global problems in the post-Cold War world, including civilizational differences, state failure, poverty, and political domination. We then discuss the vexing problems of religious

violence, ethnic cleansing, and genocide. Humanitarian crises present the challenges of humanitarian intervention, peace-making, post-conflict reconstruction, democracy-building, and bringing justice for crimes against humanity. We will also explore a wide range of foreign policy issues in the post-Sept. 11 world, including international terrorism, rogue states, weapons of mass destruction, American primacy, anti-Americanism, unilateralism and multilateralism, and the war in Iraq.

IIPS 30530. Israeli-Palestinian Conflict

(3 -0- 3)

This class discusses the roots, evolution, current situation and prospects of resolution of the Israeli-Palestinian conflict. In order to better understand this theme the class will also locate this conflict in larger regional and global perspectives. Thus, issues such as nationalism in the Middle East, colonial impact in the region, the Arab states and their involvement in the conflict, cold war and post-cold war dynamics, will all be an integral part of the class discussions. We will also juxtapose the competing narratives of Israelis and Palestinians towards this conflict. Finally, we will engage in an un-historical practice by looking at the future and thinking about possible avenues for concluding this protracted conflict

IIPS 30532. Modern Middle East

(3 -0- 3) Kaufman

This course surveys Middle Eastern history from 1500 to the present. The primary themes to be covered include: the emergence and demise of the last Muslim unitary states; European colonial and imperial penetration of the Middle East in the 19th century; the social and cultural impact of imperialism; state-building in the 20th century; new ideologies/nationalisms; and contemporary problems of political and economic development. We will also consider the most important movements of Islamic reform and revival over the past two centuries.

IIPS 30534. Human Rights in an “Age of Terrorism”: View from South Asia

(3 -0- 3)

This course will look at Human Rights and its continued relevance in the “age of terrorism.” Recent developments have shown the need for states to protect themselves and their populations from acts of terror while at the same time maintaining respect for human rights and the rule of law. This course examines how to uphold that balance and draws from the experience of Pakistan’s involvement in the global fight against terror. It examines both the misuse of prevention of terrorism laws as well as the minimum safeguards and remedies that must be guaranteed and provided if human rights are not to become the first casualty in the war on terror. There is no exam. Grades based 75 % on research paper; 25% on class participation. Students are expected to have done readings before the class.

IIPS 30535. Politics and Development in Central America

(3 -0- 3) Cosenza

This course will explore the impact that politics and politicians have had on development in Central America. It will begin with a discussion of the concept of development and how we attempt to measure it. It will then proceed to review the different approaches used to spur development and what conventional wisdom holds today to be the determinants of growth. After this, it will review the socio-economic indicators of Central America and how they have evolved with time. It will subsequently study how politics and politicians, through current Constitutions, laws, institutions, political culture and practice have affected the determinants of growth. It will close with a discussion of the changes needed to foster high, sustainable and equitable growth in the region.

IIPS 30536. Middle East and the West

(3 -0- 3) Kaufman

This course examines the relationship between what could roughly be defined as “the West” (Europe and the United States) and Middle Eastern societies from the Napoleonic invasion of Egypt in 1798 until the American invasion of Iraq in 2003. We shall start by trying to make sense of the terms the “West” and the “Middle East.” We shall then explore different and eclectic themes such as European colonial penetration into the Middle East, reciprocal stereotypes of the Middle East and the West, cultural exchanges between these regions, and the

relationship between contemporary Europe and its growing Muslim population. We shall also examine American involvement in the region by focusing on themes such as oil interests, the Arab-Israeli conflict and the Iraqi imbroglio. Finally, we shall discuss contemporary Middle Eastern perceptions of the West in light of American hegemonic power around the globe in general and in the Middle East in particular.

IIPS 30537. Modern South Asia

(3 -0- 3) Sengupta

Corequisite: HIST 32106

Home to over a billion people, just over 23% of humanity, the South Asian subcontinent is a fascinating laboratory in which to analyze the unfolding of such themes in modern history as colonialism, nationalism, partition, decolonization, post-colonial democracies, the modern state, economic development, center-region problems and relations between Asia and the West. The course will consider critical themes in social, political, economic, and cultural history, which will include imperialism, capitalism, nationalism, religious politics, regionalism, ethnicity, globalization, diaspora, ecology, social inequality, and gender, development, and democracy. It will not only provide a lively historical narrative told through lectures based on scholarly research and primary texts, but will also seek to embellish this narrative with the perception and articulation of vision and sound, as well as with readings from representative genres of South Asian literature.

IIPS 30539. The Logics and Politics of International Migration

(3 -0- 3)

This course investigates the primary economic, humanitarian, and political forces that are driving and sustaining the complex phenomenon of contemporary transnational migration. Within this context, three core questions are addressed. First, have the forces of globalization and the entanglements of international commitments and treaty obligations significantly diminished the policy making autonomy of the traditional nation state? Second, what are the significant benefits and costs of transnational migration for the immigration receiving countries? Finally, is a liberal immigration regime desirable and, if so, can it be politically sustained? This is a course with a methodological component.

IIPS 30540. War, Violence and Politics in Europe since World War I

(3 -0- 3)

This class examines the management and effects of domestic, colonial, and interstate armed conflicts on European societies and democracy since the First World War, in order to probe the relationship between violence and politics. The overriding question of the course is, “How has politically motivated violence affected European democracy?” Course themes include the effects of war on regimes, the effect of domestic violence on democratic institutions, and the attempts to come to terms with terror as a political weapon. The course studies the World Wars, the role of violence in effecting political and social change, including changing gender norms, and terrorist violence in both Western Europe and in the colonial context.

IIPS 30541. NGOs in International Relations

(3 -0- 3)

This course examines the role that non-governmental organizations (NGOs) play in international relations. Since the end of World War II, international relations scholarship has been dominated by theories that assume privacy of the state. However, in the last 20 years, non-state actors have grown in number, size, and influence. We will analyze the impact that this development has had on both traditional approaches to international relations as well as empirical problems associated with the prominence of NGOs in IR. The first half of the course will analyze several competing theoretical approaches to NGOs, while the second half of the course will focus on empirical topics and contemporary case studies that highlight the efforts of NGOs to influence state behavior. Topics covered include: the origins of NGOs, NGOs as interest groups, transitional advocacy networks, epistemic communities, globalization, human rights, the environment, the United Nations, access to international negotiations, and the effectiveness of NGOs in altering state behavior. This course examines governance in international relations, including both formal and informal institutions, and the functioning of

organizations such as the United Nations, International Monetary Fund, World Trade Organization, European Union, and multilateral development banks. Students will conduct research on topics including peacekeeping and humanitarian intervention, political conflicts surrounding trade liberalization, and assessment of economic development programs.

IIPS 30542. Political Economy of Globalization

(3 -0- 3) Rosato

This course examines the intersection of politics and economics in an increasingly global world. Economic interdependence has increased dramatically over the past fifty years. While this has raised living standards in many countries, it has also given rise to new social, economic, and political tensions. This course offers an analytical framework for evaluating the consequences of globalization and provides an overview of several theoretical approaches to and empirical issues in today's global economy. The course is divided into three main sections. The first part of the course focuses on understanding what is meant by 'globalization' as well as an introduction to several contending theories of globalization. The second part of the course will focus on managing globalization, and will evaluate different options available to states, institutions, and other actors. The final section of the class will be devoted to empirical issues associated with globalization. Topics discussed include: the environment, corruption, human rights, non-governmental organizations, democratization, and regional trading blocs.

IIPS 30543. Contentious Politics and Resistance Movements

(3 -0- 3) Hui

This course analyzes prominent resistance movements in the twentieth and twenty-first centuries. We first examine the conceptual tools of contentious politics, domination and resistance, state-society relations, and violent vs. nonviolent strategies of resistance. We then examine various nationalist independence movements, revolutionary movements, communist insurgencies, civil wars, and peaceful democracy movements. To better understand resistance movements from the perspectives of leaders and participants, we will watch a series of documentaries and read the (auto-) biographies of Mahatma Gandhi, Nelson Mandela, Aung San Suu Kyi, the Dalai Lama, Wei Jingshen, and others. In analyzing democracy movements, we will further examine what the third wave of democracy entails, why some movements succeed while others fail, how new democracies should reconcile with past dictators, to what extent constitutional engineering can solve past problems and facilitate successful transitions, and why some new democracies remain fragile.

IIPS 30544. Politics of Poverty and Social Welfare

(3 -0- 3)

The United States is the wealthiest nation in the world, yet poverty remains a persistent concern. In this course, we will study the sources of poverty and economic inequality and what has and can be done to address the problem. We begin by discussing different theories on to what extent citizens' income and wealth should be equal in a society and the government's prescribed role, if any, in the process. We then trace the history of poverty in the United States and various government efforts to address the problem through social welfare programs. Finally, we will closely study the different forms poverty takes on today and enter the ongoing debate over what public policies should be implemented in response. Throughout the course, we will pay particular attention to the decidedly political dimension of poverty in America.

IIPS 30545. Arab-Israeli Relations: From Confrontation to Coexistence

(3 -0- 3)

This course is following and analyzing the complexity of relations between the Arab countries and the state of Israel (and the State in the making) since the early 20th century to this day. This conflict has been one the major elements shaping the political, diplomatic and military history of the region drawing into the conflict a variety of actors among them the super powers, nation states from within and outside the region, sub-states, and supra states. The effects of the conflict on these respective regimes are analyzed as well. Three major processes became the main source of interest for all actors: the Arab effort to prevent the creation of the

Jewish state; the armed conflicts, and finally the diplomatic processes that continue today. Most of them will be studied in the context of the diplomatic and political history of the Middle East.

IIPS 30546. Radical Islam in Comparative Perspective

(3 -0- 3)

Muslim radical movements are not new to the Middle East. They made their debut in the 18th-century Arabian Peninsula paving the way for the first Saudi Kingdom. However, the use Islam by individuals, movements and nation states for political purposes has become common since the mid-1970s. Many of the contemporary Muslim actors use religious terminology in their ideology and activities but are active as political actors per se. This course is studying the roots of the political Islam, its current political activities and their implications, the distinction between mainstream Islam and radical Islam, and finally the phenomena of religious terror used by several of these movements.

IIPS 30547. Building a European Union

(3 -0- 3)

This undergraduate lecture course introduces the contemporary project for greater economic, political, and security integration among the current 27 members of the European Union within its appropriate historical context, its current economic and political setting, and its projected future ambitions. The course is thus very much concerned with recent events and important European events-in-the-making, including the implementation of the Amsterdam Treaty, the expansion of the membership of the European Union and EU-sponsored strategies to facilitate democratic transitions in Eastern Europe.

IIPS 30548. Genocide in the Modern World

(3 -0- 3)

This course investigates modern genocide. We will consider several cases: Armenia, the Jewish Holocaust, Cambodia, Rwanda, and possibly Darfur, and examine the conditions that lead to genocidal violence. We will also examine the uses of humanitarian interventions, trials, and strategies of societal reconciliation, and relevant conceptions of justice, guilt, forgiveness and moral responsibility.

IIPS 30549. United States Operations in Central America

(3 -0- 3)

As European countries furthered their economic penetration of Africa and Asia during the 19th century, the United States continued its westward expansion by extending its borders to the Pacific and securing its economic and political dominance throughout the Latin American Hemisphere. This course examines the social, cultural and political repercussions a broad range of U.S operations had in Central America since the writing of the Monroe Doctrine in 1823 until the "fall of communism" in the late 1980s, including "Dollar Diplomacy," CIA-sponsored coups, paramilitary training of "death squads," and overt military occupations.

IIPS 30550. Diplomacy and Conflict in the Middle East

(3 -0- 3)

This course examines the role of diplomacy in shaping the Middle East and in managing conflict in the region today.

IIPS 30551. State Terror and Violence

(3 -0- 3)

This course on state sponsored terror, repression, and violence examines its causes and implications, and the role of the international community in responding to it.

IIPS 30553. Modern Genocide in Historical Context

(3 -0- 3)

In 1948, the United Nations adopted a convention that defined genocide; the ratifying nations promised to prevent genocides, to intervene in those that broke out, and to hold the perpetrators responsible. However, genocides have continued to occur, and the signers of the convention have spent more time arguing over the definition and its limitations than acting against the perpetrators. In what context was the UN genocide convention drawn up and signed? How did the definition fall short in the eyes of so many of the signatories and scholars? What are its

limitations? This course will explore modern genocide in its historical context in order to approach a definition of genocide that will complement the existing UN definition, underscoring the usefulness of the genocide convention as well as exploring alternate definitions and introducing students to the complexities of politics when it comes to enforcing such legislation. We will be looking at several different case studies throughout the semester, including genocides that preceded the invention of the word, most notably the Holocaust. Topics may include the German army in South West Africa; the Armenian genocide during World War I; the figure of Raphael Lemkin and the meaning of the 1948 convention; the impact of the Soviet Union on the official definition; the Cambodian and Rwandan genocides; ethnic cleansing and genocide in the Balkans after 1990; distinctions between ethnic cleansing, crimes against humanity, and genocide; and contemporary events in Darfur. Assignments may include short review papers, a longer research paper, and one oral presentation over the course of the semester.

IIPS 30554. Human Rights and Human Wrongs

(3 -0- 3) Verdeja

This course will examine theories of human rights and their applications and implications for international politics.

IIPS 30555. South Asia: Colonialism and Nationalism

(3 -0- 3)

This course will examine the colonial encounter in the Indian subcontinent, i.e. the period of the advent, establishment, and collapse of British colonial power during the period roughly between 1750 and 1950. It will explore the nature of this encounter and its impact on the subcontinent, particularly the emergence of modern nationalisms and the making of the modern South Asian nation-states of India and Pakistan. Recent scholarship on British colonialism and Indian nationalism has been rich and diverse, examining areas ranging from the nature of “anti-colonial” nationalism to the impact on the economy, on state practices, social structures such as caste, peasant resistance, gender relations and modern history-writing itself. One of the objectives of the course is to introduce students to some of the major historical debates in South Asian history through the concepts of “nationalism”, “colonialism” and “modernity.” Another is to think about the ways in which this encounter has been represented in different kinds of texts ranging from scholarly texts to fiction and films.

IIPS 30556. Ethnic Conflict in Comparative Perspective

(3 -0- 3)

Most nations today may be considered as multi-cultural, that is: they are comprised of at least two distinct societies based on different cultures. About 5000 ethnic groups are found today in about 200 nations. It is evident that in spite of the high hopes since the collapse of the Communist Block the number of ethnic conflicts increased dramatically. At present about 300 conflicts are registered. Each and every one of them is unique and yet there are some similarities which characterize most of them. This course maps the main conflicts, studies the roots and claims of the protagonists, and based on the recognition of the similarities attempts to define a model of ethnic conflicts and some features of possible solutions.

IIPS 30557. Military Regimes and “Dirty Wars” in Latin America

(3 -0- 3)

Between 1964 and 1990 most South American countries lived under dictatorial military regimes. In this period of extreme political radicalization, these societies were divided alongside contending visions of their national states. Under the premise that they were assuming office in order to save their nations, the South American military established regimes characterized by widespread repression, human rights violations and impunity. Violence, however, was resisted by different sections of society and a particular type of motherhood—embodied by the women who looked for their missing children—acquired subversive connotations in countries like Argentina and Peru. In this course on Military Regimes and Dirty Wars in South America, we will seek to understand why military institutions played such a prominent role in the region in the twentieth century, how their doctrines of national security and U.S. assistance enabled them to assume power, and the

mechanisms that the military used in order to establish cultures of fear and death in their countries. We will also focus on the responses by individuals and organized civil society to state repression and violence. Although the course keeps a regional approach, it pays particular attention to three countries: Chile, Argentina, and Peru. What were the similarities and differences among the ‘dirty wars’ occurred in these countries? How did the categories of class, gender and race interplay in the implementation of military and insurgent violence? What memories about repression were crafted in these countries? How did successor regimes make a break with the past, establish a new set of social norms, and work toward the administration of justice, redress and reconciliation? We will approach to this subject by using a variety of primary and secondary sources, fiction and documentary films, as well as elements of pop culture. We aim to see how these lengthy military and authoritarian interventions have shaped present-day societies in South America, and what mechanisms Chile, Argentina and Peru have established to deal with the legacies from their troubled pasts.

IIPS 30558. Dictators, Democrats and Development: African Politics Since Independence

(3 -0- 3)

This course will focus on the causes and consequences of political change in sub-Saharan Africa since the late 1950s and early 1960s. Special attention will be focused on the relationship between political change and economic/human development. The key questions this course will address include the following: 1) What explains the rise of post-colonial authoritarian regimes? 2) What explains the demise of post-colonial authoritarian regimes? 3) What might affect the variation in the extent to which Africans participate in politics, engage in protests, and join movements devoted to promoting democracy? 4) What explains the variation in the extent of democratization that has taken place across sub-Saharan Africa since the late 1980s and early 1990s? 5) Should it matter to the rest of the world that sub-Saharan African countries become more developed and democratic? 6) If it should matter, can/how can the United States and other countries promote development and democratization in the region?

IIPS 30559. War and the Modern World

(3 -0- 3) Soares

Warfare has long been a persistent fact of international life; since 1914 it has involved many nations and peoples; triggered numerous diplomatic efforts to prevent, end or gain from it; brought so many political, social and technological transformations; and inspired cultural representations ranging from high art to the most crass commercial exploitation. To make sense of war and its impact on affected peoples and nations, this course will use a variety of readings, films and art to examine selected conflicts in different parts of the world since the outbreak of World War I.

IIPS 30560. Theories of Genocide

(3 -0- 3) Singh

As inexplicable as genocides and mass killings are from a moral perspective, they have a political logic of their own. This seminar seeks to unlock the reasons behind 20th- and 21st-century mass killings by bringing an analytical perspective to bear on them. Together, we will explore important questions about the causes and conduct of mass killings. Why do mass occur in some places and not others? Who participates in the killing? How much support from society is necessary? How does the world react to such events? What can outside actors do to stop the killing? Are there legal options for punishing the perpetrators and hopefully deterring future killings? How can you heal a society after such a tragedy? The course will investigate these questions through the study of the Holocaust, Cambodia, Rwanda, and Darfur.

IIPS 30600. Peace vs. Justice: What is “justpeace”?

(3 -0- 3) Springs

“Peace is the work of justice” —*Gaudium et spes* (cf. no. 78). Peace activists, scholars, philosophers, religious leaders have often agreed that you cannot have true peace without justice, nor true justice without peace. Peace without justice is “false peace;” justice without peace is “ugly justice.” In practice, however, peace and justice frequently appear to stand at odds with one another. Striving to see

that “justice is served” can cause conflict and instability. Resolving conflict and achieving tranquil conditions often will require giving up the traditional idea that “each must receive his or her due” (justice). This class takes up a careful examination of what it means to say that justice and peace must be sought together (e.g. that “peace is the work of justice”). Is it possible to think in terms of—and to work for—“justpeace”? How might such a conception provide the orientation for peace studies and peace activism? In exploring this possibility, we will examine concrete cases where justice and peace appear to conflict. We will examine efforts to pursue peace by administering a legal understanding of justice (i.e., International Court of Human Rights on Sudan, and Criminal Tribunal on the Former Yugoslavia). In examining the differences between “positive peace” and “negative peace,” we will explore the ways that different conceptions of violence—“direct,” “structural,” and “cultural” forms—influence and inform what the conception of a “justpeace” can, and should, seek to accomplish, and the breadth of contexts to which it is applicable (including the United States). The course will conclude by applying the refined account of “justpeace” to the theory and practice of conflict transformation, and strategic peacebuilding more broadly.

IIPS 30602. Jerusalem: Peace or Apocalypse?

(3 -0- 3) Omer

Jerusalem is a holy city for many religions. It is believed to represent heavenly eternal peace but is also the source of earthly and historical violence. What are the sources of this contested legacy? What are the prospects of building peace with justice in such a volatile context? We will relate our understanding of the complexities of Jerusalem to the analysis of other conflicts involving sacred spaces and narratives. This interdisciplinary course will explore the histories, theologies, politics, and social realities of the city of Jerusalem. We will explore the interface between religion and politics by asking how Jerusalem fits into secular and religious Jewish Zionist ideologies as well as how Christian Zionists’ conceptions of the end-time informs a commitment to maintaining Jewish political hegemony over the city. We will discuss the question of sacred spaces and how they relate to the cycles and transformation of violent conflicts: Are sacred spaces negotiable? Nonnegotiable? Do they have fixed or rather elastic boundaries? How do sacred religious spaces figure into secular national ideologies? What might be the role of trans- or supra-national religious networks in informing decisions concerning the divisibility or indivisibility of sacred spaces?

IIPS 30700. Politics and Conscience

(3 -0- 3) Keys

Against a backdrop of large-scale society, mass movements, and technological bureaucracy, the invocation of “conscience” recalls the individual human person as a meaningful actor in the political sphere. But what is conscience, and what are its rights and responsibilities? What is it about conscience that ought to command governmental respect? Are there limits to its autonomy? What role should conscience play in questions of war and peace, law-abidingness and civil disobedience, citizenship and political leadership? And how does the notion of conscience relate to concepts of natural law and natural rights, rationality and prudence, religion and toleration? This course engages such questions through readings from the Catholic intellectual tradition (Augustine, Thomas Aquinas, Thomas More, Francisco de Vitoria, Desiderius Erasmus, John Henry Newman, Karol Wojtyła/John Paul II, and Joseph Ratzinger/Benedict XVI) and other writers of the history of ethical-political thought (Cicero, Seneca, John Locke, Mahatma Gandhi, Jan Patočka, and Alexandr Solzhenitsyn). We consider also various contemporary reflections on conscience expressed in films, essays, letters, plays, short stories, speeches, and declarations, beginning with Martin Luther King, Jr.’s “Letter from a Birmingham Jail” and Václav Havel’s speech “Politics and Conscience.” This class serves as both the capstone course for the interdisciplinary minor Philosophy in the Catholic Tradition and an upper-level elective for Political Science majors and Peace Studies minors. Its format combines lecture and seminar-style discussion.

IIPS 30702. Religion, Development and Democracy

(3 -0- 3) Dowd

The impact of religion on social and political change and the impact of social and political change on the influence of religion are immensely important topics.

While many have claimed that religious faith communities essentially impede human progress, others have argued that human progress is impossible to explain without some reference to such faith communities. In this course, we will take a critical look at religion, particularly Christianity and Islam, and examine two major questions: 1) What effects, if any, do religious beliefs and institutions have on human development and the prospects for and the quality of democracy? 2) What effects, if any, do human development and democratization have on the relevance of religious beliefs and the influence of religious institutions? Students will take an active role in leading in-class discussions, write several short essays and one longer essay on a topic of their choice.

IIPS 30704. Contention in China

(3 -0- 3) Hui

Is China next for a “Jasmine Revolution?” Why have pro-democracy efforts repeatedly failed in China? Why is there no organized democracy movement despite the prevalence of sporadic protests about various kinds of social injustices? Is China immune to democratization because of a deeply rooted “Confucian culture?” This course examines a wide range of contentious politics in modern China, from the May Fourth Movement through the Communist Revolution, the Cultural Revolution, the Tiananmen Democracy Movement to recent protests by workers, peasants, religious followers, and middle-class property owners. In addition to contention by Han Chinese, this course also examines resistance by Tibetans, Uighurs, Mongolians, and other minorities.

IIPS 30707. U.S. Civil Rights History: The Chicano Movement

(3 -0- 3)

The “Chicano Movement” for Mexican American civil rights grew in tandem with the main contours of the civil rights culture that developed in the United States during the 1960s. As such, this course seeks to place the movement alongside other national movements for social change including the African American civil rights movement, labor movement, counter-culture, and the anti-war movement. It will also be attentive to related efforts to build bridges between Latino populations (mainly Puerto Ricans) in American cities. As it emerged in the 1960s, the Chicano Movement challenged and maintained the ideological orientation of past efforts for Mexican American inclusion as it borrowed from the rich mix of social and cultural movements that defined the 1960s and early 1970s. This course will explore movement centers in California and Texas as well as a growing body of research on the civil and labor rights efforts in the Great Lakes, Pacific Northwest, and other Mexican ancestry communities across the United States as well as connections to Mexico and Cuba. This course will detail the key events and leadership of the movement as well as the art, music, and cultural production of one of the most important American civil rights movements of the post World War II era.

IIPS 30710. Religion, Myth, and Magic

(3 -0- 3) Gaffney

The study of religious beliefs and practices in tribal and peasant societies emphasizing myths, ritual, symbolism, and magic as ways of explaining man’s place in the universe. Concepts of purity and pollution, the sacred and the profane, and types of ritual specialists and their relation to social structure will also be examined.

IIPS 30711. Islam and Politics in the Middle East

(3 -0- 3) Shahin

This course is designed to provide students with an understanding of the phenomenon of political Islam in the Arab and Muslim worlds. It examines the reasons, implications, and consequences of the reassertion of Islam in today’s politics. The first part of the course provides a thorough analysis of the Islamic order and the model(s) that inspires modern Islamist activists. The second part critically examines the ideas of the main ideologues of contemporary Islamic movements. The third part discusses the approaches to the understanding of contemporary political Islam and the Islamic movements and presents cases studies of mainstream and radical Islamic movements in a number of Arab and Muslim countries. Finally, the course concludes with a critical analysis of the future of political Islam and its relations with the West.

IIPS 30712. Society, Culture and State in Modern Israel

(3 -0- 3) Kaufman

This class surveys the political and social history of the state of Israel from the beginning of Zionism in the late 19th century to the present. Chronologically, we will explore the ideological and practical foundations of Zionism, the history of the pre-state era and the crystallization of a Jewish polity in Palestine, and of the state of Israel from its establishment in 1948 war until the recent past. Thematically, we will analyze the different social and political groups that form the Israeli society, certain foundational myths and their dissolution and the Arab-Israeli conflict and its impact on state and society in Israel. We will also dedicate some time to discuss U.S.-Israeli relationship.

IIPS 30716. Slavery and Society in Classical Antiquity

(3 -0- 3) Bradley

This advanced course in ancient history examines the role played by slavery in the societies of ancient Greece and Rome (particularly Rome). Topics studied include how Greeks and Romans acquired slaves, the jobs and occupations to which slaves were assigned, how slaves were treated by their owners, and how they responded to enslavement (the revolt of Spartacus included). Attention is also paid to Greco-Roman theoretical views about slavery, including Christian views. Slavery is one of the least attractive features of Greco-Roman antiquity, but some understanding of it is crucial to understanding the nature of classical culture. The subject raises questions about freedom, exploitation, and human rights that have special contemporary relevance.

IIPS 30718. Catholicism and Politics

(3 -0- 3) Philpott

Catholicism and Politics poses the question, both simple and complex: How ought Catholics to think about the political order and political issues within it? The first part of the course will survey major responses to this question drawn from Church history: the early church, the medieval church, and the modern church. The second part applies these models to contemporary issues ranging among war, intervention, globalization, abortion, the death penalty, religious freedom, gender issues, and economic development. The course culminates in "The Council of Notre Dame," where teams of students, representing church factions, gather to discover church teachings on selected controversial political issues.

IIPS 30721. Russian Realms: Societies/Cultures of Eastern Europe and Beyond

(3 -0- 3) Gaffney

This course explores the social structures, the historical contexts, and the symbolic universes of the peoples who either identify themselves as Russian or whose way of life has come to be deeply affected by the Russian tradition. It concentrates on those territories that were formerly incorporated into the Tsarist empire and subsequently formed parts the Soviet Union. It will include an examination of the extensive efforts by Russian thinkers to characterize their own national spirit, reflecting, for example, on classic and contemporary attempts to define *dusha* or a distinctively Russian "soul," as well as some of the consequences of these formulations, looking at this famous "civilization" question through art, literature, and film as well as social science works. However, the chief approach of the course will be through reading of anthropological studies that have addressed the larger questions from numerous specific local venues. A strong emphasis will also be placed on the so-called current "transition period," as a new Russia in the neighborhood of the "Commonwealth of Independent States" seeks to reshape its heritage amid complex problems arising from social, economic, political, and cultural, not to mention old ghosts of global rivalry, terrorism, and disputed legitimacy.

IIPS 30723. Religion and Social Movements In Latin American History

(3 -0- 3)

The purpose of this course is to give students an understanding of the role religion has played in Latin American history from the colonial period to the present. We will focus specifically on how religion mediates relations between culturally-distinct peoples during points of encounter and the role it plays in social movements. Religion in Latin America served paradoxically as a means of

and justification for "conquest" but also at times as a foundation for "subordinate" people's resistance to domination. We will examine this dynamic as it evolved in successive efforts by outsiders to impose control over people of indigenous and African descent. The course will focus on Spanish proselytization and its results during the colonial period, millenarian movements by people of indigenous and African descent during the nineteenth century, and American Catholic and Protestant mission endeavors and their outcomes in the twentieth century.

IIPS 30726. The Worlds of Buddhism

(3 -0- 3)

A thematic introduction to the pan-Asian (i.e., South, Southeast, and Central Asian as well as East Asian) Buddhist tradition exploring the fundamentals of Buddhist doctrine and practice while also sampling major themes in the religion's social, cultural, and material history. Among the particular topics to be covered are: the life of the Buddha (history & hagiography), the "Four Noble Truths" (the essentials of the Buddhist "creed"), the Buddhist canon (the nature and scope of Buddhist scripture), Buddhist cosmology (Buddhist conceptions of the formation and structure of the universe, i.e., of time and space), Buddhist monasticism, meditation and the Buddhist contemplative life, Buddhist ethics, the ritual lives of Buddhists, Buddhism and politics, Buddhist "family values," Buddhism and the arts, etc.

IIPS 30727. Religion and Politics in Comparative Perspective

(3 -0- 3)

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America and South America) discuss the robustness of such hypotheses. The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on the effects of modernization and globalization on the political salience of religion and whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others.

IIPS 30728. Genocide, Witness, and Memory

(3 -0- 3)

How are episodes of mass killing experienced, survived, and remembered? In this course we consider political, social and cultural trauma as expressed in memoir, documentary, fiction, and academic text. Witness as an ethical stance is examined; the role of memory in shaping morality is questioned. (Does "Never Again" actually work?) We also look at the perpetrators of genocidal killing: who are they? What prompts their actions? Moreover: are any of us incapable of this kind of violence?

IIPS 30729. Contemporary Political Islam

(3 -0- 3)

This course is designed to provide students with an understanding of the phenomenon of political Islam in the Arab and Muslim worlds. It examines the reasons, implications, and consequences of the reassertion of Islam in today's politics. The first part of the course provides a thorough analysis of the Islamic order and the model(s) that inspires modern Islamist activists. The second part critically examines the ideas of the main ideologues of contemporary Islamic movements. The third part discusses the approaches to the understanding of contemporary political Islam and the Islamic movements and presents cases studies of mainstream and radical Islamic movements in a number of Arab and Muslim countries. Finally, the course concludes with a critical analysis of the future of political Islam and its relations with the West.

IIPS 30730. Screening the Irish Troubles

(3 -0- 3)

This course will look at how political conflict in Ireland from the 1916 Rebellion and the War of Independence up to and including what became known as "The Troubles" in the North of Ireland has been represented on the screen. Students will analyze a wide variety of cinematic texts, mainstream commercial Hollywood features as well as independent Irish and British films. Documentary film will also

be analyzed. Certain seminal events such as Bloody Sunday and the 1981 Hunger Strikes which have a diverse representational history on screen will be given particular attention. Among the films discussed will be *Mise Eire*, *Saoirse*, *Michael Collins*, *The Wind that Shakes the Barley*, *Some Mother's Son*, *In the Name of the Father*, and *Bloody Sunday*.

IIPS 30731. We Hold These Truths: Catholics in 20th-Century America

(3 -0- 3)

A survey of the Catholic presence in the United States during “the American century,” the focus of the class will be on the ways Catholics integrated their national and religious identities. Defining American culture broadly, we will discuss Catholic politicians and laborers, monks and nuns, pacifists and cold warriors. What was the relationship between Catholic spirituality, cultural criticism and social reform? What consequences did conflict over “sex” and gender have in the realm of church authority and lay practice? Why did Catholics stop going to confession in the mid-sixties? We will examine the challenges of being American and Catholic by exploring Catholic themes in American popular music, film, and fiction; Catholic social teaching on the economy and nuclear war; and the changes in Catholic religious practice and self-understanding inspired by the events of the 1960s, including the Second Vatican Council and the civil rights movement. Profiles of “everyday Catholics” drawn from primary historical sources will be complemented by brief excerpts from the writings of influential thinkers and activists such as John Ryan, Dorothy Day, John Courtney Murray, Thomas Merton, Richard Rodriguez, Cardinal Joseph Bernardin and Cathleen Kaveny. Two class sessions will be devoted to Notre Dame’s role in this story, including the vocation and career of Father Ted Hesburgh, while three class sessions will be devoted to contemporary challenges facing Catholics and the Church.

IIPS 30800. Saving the World or Wasting Time?: The Effectiveness of Social Movements

(3 -0- 3) Davenport

This course is geared toward constructing a successful social movement organization. To do this, students will evaluate the existing theoretical literature based in political science and sociology to explore what a social movement is as well as how it attempts to achieve its objectives. We will also address the issue of how one evaluates progress toward a specific end and what leads to/hinders this progress. Students will examine existing statistical databases on the topic (e.g., a database of all collective action in the United States from 1960 to 1995) as well as detailed cases of both attempts as well as outcomes of these efforts. The former is taken from research compiled by the professor as well as other scholars of conflict/contentious politics. The latter is taken from diverse documents housed at the Radical Information Project as well as from diverse human rights organizations associated with the Robert F. Kennedy Center for Human Rights: these are based in the U.S., India, Northern Ireland, Rwanda and Zimbabwe.

IIPS 30801. U.S. Civil Rights Movement

(3 -0- 3)

Corequisite: HIST 42851

There may not be a term in American society as recognized, and yet as misunderstood, as “Civil Rights.” Often civil rights are conflated with human rights, even though each are distinct of the other. During the semester, we will trace the African-American civil rights movement in the United States during the 20th century, as well as its lasting impact on American society. We will do so using as many media as possible. Fortunately, we will have the opportunity to study an important part of American history in significant detail. The time span we cover will not be that great, but the issues we investigate challenge the founding principles of American society to its core.

IIPS 30803. Nonviolent Social Change

(3 -0- 3) Cortright

This course will help students understand and participate more effectively in movements for nonviolent social change. Students will become familiar with both the theories of nonviolence and social action and the practice of effective social organizing. Topics to be addressed include the religious roots and philosophy

of nonviolence, recent cases of nonviolent social struggle, principles of strategy, and the techniques and methods of nonviolent action, including media communications, fundraising, lobbying, grass roots organizing, and coalition building. Relevant historical and contemporary examples will be reviewed to illustrate how movements for social change work in practice. Course work will consist of readings, lectures, videos, and class discussion on the identified topics. In addition, students will be asked to participate in class activities and team learning exercises. Two team learning exercises are scheduled during the semester.

IIPS 30804. Youth and Political Violence

(3 -0- 3) Taylor

This course will examine how youth are affected by political violence and war, with a focus on stress and coping in violent and post-war contexts. We will discuss major theories and recent research in developmental, social, and political psychology on these issues. The course will emphasize resilience processes, that is, identifying risk and protective factors that can explain why and how political conflict affects youth, with a focus on real-world application. Case studies and interdisciplinary readings from sociology, anthropology, literature, and political science will also be incorporated into the readings, lectures, class discussion, and writing assignments. Students will be encouraged to consult the existing empirical literature to suggest ways to (a) protect youth mental health on an individual level, and (b) decrease the potential for inter-group violence and promote constructive peacebuilding on a societal level.

IIPS 30901. Home Fronts during War

(3 -0- 3)

How have Americans responded at home to war and threats of war throughout the 20th century and into the 21st? What internal divisions and shared identities has war inspired or revealed? We will examine not the battles and factors that determined the military outcomes, but the domestic struggles that have defined our national experience and informed many of our responses to current events. Topics will include critiques of democracy and civil rights inclusion during WWI; treatment of Japanese Americans during WWII; development of peace movements, and antinuclear movements; cold war politics and fears of American communism; and debates over the draft, just-war, racism at home, and U.S. policies abroad in the wake of Vietnam. The final unit will focus on the Gulf War, terrorism, and developments since September 11, 2001.

IIPS 30904. International Development

(3 -0- 3) Dutt

This course looks at why some countries are more economically developed than others, and why some are developing more than others, using a political economy perspective. It discusses alternative meanings and measures of development. It then examines alternative views on the constraints to development, at different levels of analysis, individual, sectoral, national and global. In so doing it analyzes economic factors, and their interaction with broader political, social and cultural factors, and explores both problems internal to countries and to those arising from international interactions and globalization. Finally, it critically examines different strategies and policies for development.

IIPS 30906. Development Economics

(3 -0- 3)

The current problems of Third World countries are analyzed in a historical context, with attention given to competing theoretical explanations and policy prescriptions. The course will combine the study of the experiences of Latin American, African, and Asian countries with the use of the analytical tools of economics.

IIPS 30910. The International Human Rights Movement

(3 -0- 3)

Bound by a common and hitherto nearly unassailable discourse, the international human rights movement ascended at the turn of the 21st century. The first line of inquiry of this course considers the history and evolution of transnational human rights activism, from ad hoc campaigns in late 18th century to the emergence of a social movement in the mid-1970s and its ascendancy thirty years later; the second compares the human rights movement with other transnational social movements,

viz. global labor, the women's movement, the environmental movement, the peace and disarmament movement, the humanitarian movement, and the global justice and democracy movement; the third line of inquiry investigates the movement's relationship with these other social movements, with states and intergovernmental organizations, and with the market; the fourth examines the impact of "rights talk" and activism on the political realm; the final inquiry is a political economy analysis of the contemporary human rights movement. The course ends with considerations about the future of a movement that is increasingly perceived as hegemonic, a(nti)-political and un-democratic, and market-oriented. It speculates about possible challengers and investigates whether the movement may have reached its limits. The broader background of this course is 1) the growing debate about the marketization and corporatization of the nonprofit sector generally (estimated \$1 trillion a year globally), NGO accountability, legalization and instrumentalization of human rights, and top-down global legalism, and 2) the current re-reading and reinterpretation of the history of human rights.

IIPS 30914. International Environmental Politics

(3 -0- 3)

This course surveys the major actors (states, NGO's, scientists, IOs, consumers, corporations) and issues relating to global and regional environmental problems. We consider issues such as ozone depletion, deforestation, climate change, biodiversity, acid rain, water supply, nuclear power safety, and more. We study the range of political mechanisms that have been used to foster international environmental cooperation and ask how existing political solutions have fared in response to some of the major international environmental problems. We will develop a sense of what works for international environmental protection and what does not, in order to assess how policymakers might devise effective responses to current and future environmental problems.

IIPS 30915. Democracy, Development, and Conflict in Africa

(3 -0- 3) Singh

This course surveys African politics through the lens of the "big themes" in comparative politics—democratization, economic development, and internal conflict. Each theme is approached through both broad theories and specific case studies, so that students will learn about Africa in general and concrete ways. Students will consider the nature of Africa's challenges, what conditions distinguish Africa's successes from its failures, and what can be realistically accomplished in the future.

IIPS 30916. United States Labor History

(3 -0- 3)

Corequisite: HIST 32618

This course will examine the history of paid and unpaid labor in the United States from the American Revolution to the near present. We will seek to understand how working people both shaped—and were shaped by—the American Revolution, early industrialization, the debates over slavery and free labor culminating in the Civil War and Reconstruction, the rise of big business, the creation of a national welfare state, the Cold War-era repression of the left, and continuing debates over the meanings of work, citizenship, and democracy. Throughout the course, we will devote considerable time to the organizations workers themselves created to advance their own interests, namely the unions and affiliated institutions that have made up the labor movement. We will also pay special attention to the crucial connections between work and identities of class, race, and gender as they evolved over the past two centuries.

IIPS 30917. International Development in Theory and Practice

(3 -0- 3) Reifenberg

This course on international development has three major purposes: 1) to examine diverse approaches to thinking about international development and processes that bring about individual and societal change, 2) to explore the role and constraints of development projects in areas such as poverty reduction, social development, health, education, the environment, and emergency relief, and 3) to develop practical skills related to project planning and management, negotiations, communications, and the evaluation of international development projects.

This class aspires to develop relevant knowledge and practical skill for students

interested in engaging in bringing about positive change in a complex world. The class is particularly relevant for students planning international summer service internships, studying abroad, or for those considering careers in areas related to social and economic development. The course will make use of specific case studies from Haiti, Peru, Uganda, Mexico, Bangladesh, Pakistan, and Chile, among others, drawing lessons from instructive stories of failure and inspirational stories of change.

IIPS 30918. U.S. Environmental History

(3 -0- 3)

This course is an introduction to the new field of environmental history. While many people think "The Environment" suddenly became important with the first Earth Day in 1970 (or a few years earlier), environmental issues have in fact long been of central importance. In recent decades historians have begun actively to explore the past sensibilities of various groups toward their surroundings and fellow creatures. They have also increasingly paid attention to the ways environmental factors have affected history. This course will range widely, from world history to the story of a single river, from arguments about climate change to the significance of pink flamingos, and will survey a number of types of history including cultural, demographic, religious, and animal.

IIPS 30919. Economics of Poverty

(3 -0- 3) Warlick

An examination of the extent and causes of poverty in the United States. The current system of government programs to combat poverty is analyzed. Reforms of this system are also considered.

IIPS 30920. Global Economic History

(3 -0- 3)

The course presents a comparative economic history emphasizing the sources of long term economic growth. The comparative analysis is used to explore different development strategies around the world over the past two centuries, from the British Industrial Revolution to the contemporary developing countries, focusing on examples from Europe, Latin America, and North America. Subjects include population change, migration, technological change, industrialization, market integration, education, inequality, and government expenditure. Each topic is discussed through a current economic policy concern. Special attention will be placed upon the role played by the natural resources endowments and institutional change. The last section of the course centers around the debates on globalization and inclusive development. Does going global foster growth? Who gains and who loses?

IIPS 30922. Working in America Since 1945

(3 -0- 3) Graff

This course explores the relationships among and between workers, employers, government policymakers, unions, and social movements since the end of World War II, as well as the ways in which those relationships have shaped and been shaped by American politics and culture more broadly. The United States emerged from the Second World War as the globe's unequaled economic and political power, and its citizens parlayed that preeminence into a long postwar economic boom that created, however imperfectly, the first truly mass middle-class society in world history. At the heart of that new society was the American labor movement, whose leaders and members ensured that at least some of the heady postwar profits made it into the wallets of workers and their families—and not just the wallets of union members, as working Americans generally experienced great improvement in wages, benefits, and economic opportunity during the quarter-century ending in 1970. During those same years, civil rights activists challenged the historic workplace discrimination that kept African Americans at the bottom of the labor market, confronting the racism of employers, unions, and the government, and inspiring others, primarily Mexican-Americans and women, to broaden the push for equality at the workplace. Since that time, however, Americans have experienced a transformation in the workplace—an erosion of manufacturing and the massive growth of service and government work; a rapid decline in number of union members and power of organized labor; and unresolved conflicts

over affirmative action to redress centuries of racial and gender discrimination. Meanwhile, income inequality and wealth disparities have grown every year over the past three decades. What accounts for the decline of organized labor since 1970, and why have the people of the mythic land of milk and honey experienced declining upward mobility and widening gaps between the rich and everyone else? Are these phenomena linked?

IIPS 30924. Social Entrepreneurship

(3 -0- 3)

Social Entrepreneurship (formerly MicroVenturing I) explores the innovative concepts, practices and strategies associated with building, sustaining, and replicating social impact organizations in less developed countries (LDCs) and here in the United States. Many dynamic organizations are aspiring to a “double” or “triple bottom line”—beneficial human impact, environmental sustainability, and profitability. This course exposes students to a new and growing trend in leadership, venture creation, product design, and service delivery which uses the basic entrepreneurial template to transform the landscape of both for-profit and not-for-profit ventures. In addition, students will analyze various social enterprise business models, including microfinance, microenterprise development, bottom of the pyramid, etc., and will devise strategies and tactics to improve the efficacy of these ventures, as well as engage in research seeking to advance the field of social enterprise at Notre Dame.

IIPS 30925. Race and Ethnicity

(3 -0- 3)

This course has three objectives. First, the course will help you to think critically about issues related to race and ethnicity in American society. These issues include the meaning of race and ethnicity; the extent of racial and ethnic inequality in the U.S., the nature of racism, discrimination, and racial stereotyping; the pros and cons of affirmative action; the development of racial identity; differences between assimilation, amalgamation, and multiculturalism; and social and individual change with respect to race relations. The second objective is to foster a dialogue between you and other students about racist and ethnocentric attitudes and actions. The third objective is to encourage you to explore your own racial and ethnic identity and to understand how this identity reflects and shapes your life experiences.

IIPS 30926. Environmental Philosophy

(3 -0- 3)

A philosophically integrated examination of current environmental issues drawing on familiar literature from ecology, economics and ethics, as well as recent fiction. This course is equivalent to IIPS 20907.

IIPS 30927. Immigration in Global Perspective

(3 -0- 3)

How do people in immigrant-receiving countries shape their attitudes toward immigrants? What are the differences between refugees and other migrants? How is immigration related to urban “immigrant riots”? And what can anthropological studies of borders and national policies tell us about the transnational world in which we live? We will examine these and related questions, and more generally the causes, lived experiences, and consequences of migration. We will acquire a sound understanding of migration in its social, political, legal, and cultural facets. Fieldwork accounts from countries of origin and from the U.S., Europe, Australia, and Japan will enable us to appreciate both global and U.S. distinctive trends. Rather than merely learning a collection of facts about immigrants, we will address how migration intersects with gender and class; the mass-media; border enforcement; racism; the economy; territory and identity formation, and religion.

IIPS 30928. Global Environment: Capitalism, Marxism, Fascism, Nature

(3 -0- 3)

The global climate crisis is upon us, leading historians to ask how did we get to this point and what tools historical knowledge might provide for finding our way in the future. This course considers, first, the nature of “climate collapse” (as some term it) on a global scale. We then turn to the issue of what values and what

modes of production and consumption have caused this dramatic transformation of our planet. Looking particularly to political and economic analyses of global history, we trace the effects of modern industrial development and colonialism. Food, water, and other basics of life are all at stake. Finally, we discuss possible responses to this crisis looking to a number of intellectual genealogies from left to right.

IIPS 30929. Global Sociology

(3 -0- 3)

Global level changes have profound impacts on societies and on people’s everyday practices. This course explores the major economic and institutional changes that have helped shape the world in which we live. Students will become familiar with the workings of global institutions like the United Nations, the World Bank, the International Monetary Fund, and the World Trade Organization. We explore important topics such as immigration, inequality, gender, human rights, environmental degradation, and development as we consider how the global system affects other levels of social organization and practice. How, for instance, does the World Trade Organization affect democracy within countries? Do U.S. policies within the World Bank contribute to environmental protection? What happens when international trade agreements come into conflict with international human rights norms? How has globalization affected the ways people engage in political action?

IIPS 30930. Inequalities: Poverty and Wealth in World History

(3 -0- 3)

The difference between rich and poor nations (and rich and poor individuals) is not, as Ernest Hemingway once said, merely that the rich have more money than the poor. It is a question of opportunity, itself structured by the political, economic, institutional, and social contexts for both nations and individuals. This course examines inequalities in the context of economic and social development in historical contexts. We focus especially on the long nineteenth century, roughly 1750 to 1930, but touch on deeper roots and enduring legacies for today’s world. We will examine factors that historically fostered inequality as well as the implications of inequality for social development, drawing cases from U.S., Latin America, Africa, Asia, as well as from Europe.

IIPS 30931. The Holocaust

(3 -0- 3) Spicer

In this lecture/discussion class, we will study the Nazi German program of mass killings that has come to be known as the Holocaust. We will explore the ideas, decisions, and actions that culminated in the murder of an estimated hundred thousand people deemed handicapped, half a million Roma (Gypsies), and six million European Jews. The role of historical prejudices, the impact of National Socialist ideology and leadership, and the crucial factor of the war itself will all be considered. We will address the experiences of those targeted for annihilation as well as the actions of perpetrators and the role of others: bystanders, witnesses, and rescuers. At the same time we will examine how attacks on other groups—for example, homosexuals, Polish intellectuals, Soviet prisoners of war, Jehovah’s Witnesses, and Afro-Germans—fit into the overall Nazi scheme for a “new world order.” The legacy of the Holocaust after 1945 will be discussed as well. Course requirements include short papers in response to weekly readings, a comparative book review, and a cumulative final exam.

IIPS 30933. The United States During the 1960s

(3 -0- 3)

Few periods in American history have been as controversial as the 1960s. Sometimes called the “Long Sixties,” it runs conceptually from the mid-1950s to the early 1970s, and was a turbulent time. Concentrating on politics and society, this course explores the major personalities and events, including Martin Luther King, John F. Kennedy, Lyndon Johnson, Richard Nixon, the New Frontier, the Great Society, the Vietnam War, the breakdown of the liberal consensus, the rebirth of the conservative movement, and national movements led by youths, women, and African Americans. Although the emphasis is on the U.S., the course also visits several major international issues. There are two goals for students: acquiring knowledge about the period, and developing analytical tools to form

their own judgments about it. Toward the first goal, students will encounter a combination of readings, videos, mini-lectures, and class discussions. Toward the second, they will be exposed to four different approaches: 1) discussing primary documents and writing a paper on some of them; 2) studying three small-scale case studies; 3) examining the large-scale phenomenon of protest; and 4) reading the memoirs of a Cabinet member, hence gaining an insider's view of the life and activities in the White House.

IIPS 30934. People, Environment, Justice

(3 -0- 3) Smith

What is our environment? What is our role within our surroundings? How do our actions affect ecological landscapes, and people's livelihoods, across the globe? How does our reliance of fossil fuels lead to catastrophes such as Hurricane Katrina? What—if anything—does it mean to be “green?” This course will address these and other questions through the use of critically applied anthropology. We will explore the interaction of local peoples and cultures with natural and man-made ecosystems. We will focus equally on traditional environmental knowledge held by small-scale communities as on the usage of the environment by the industrial world. This course will focus on theory and major environmental questions, problems, and possible solutions illustrated by various case studies from different parts of the world. Topics to be discussed include: intellectual property rights, poverty and environmental health and justice, economic development, health and emerging disease, and ethno- and eco-tourism. Through readings, films, discussions, and independent research students will be able to critically understand the complexity surrounding humans' place within the environment.

IIPS 30935. Education Innovations in Diverse Contexts of Poverty

(3 -0- 3)

This course will look at innovative educational interventions for socio-economically disadvantaged children in diverse contexts—both here in the United States, and internationally. Whether it is the Comer model in New Haven CT, or Diversity Project in Berkeley CA, or EDUCO schools in Nicaragua, or Pratham's community based supplementary education programs for slum children in India; the course will explore in-depth promising education interventions for children and adolescents growing up in poverty in a globalized world. The course will aim to make students aware of the ways in which educators in diverse contexts of poverty and inequality have conceptualized and implemented empowering alternatives. In doing so, the course will help students better understand what is possible in contexts of poverty, and indeed what are the limits of the possible without any structural change in society.

IIPS 30936. Political Economy of North-South Relations

(3 -0- 3)

This course will introduce the changing perspectives and current controversies concerning international economic relations between the developed and developing worlds. What do we mean by “development?” To what extent should states intervene in free markets? Does it matter that today's developing countries operate in a different global environment than countries like Britain and the U.S. did during their development period? Should developing countries be given special consideration in trade and financial agreements? Do international financial institutions (IFIs) like the IMF, the World Bank and the WTO act in the interest of the world as a whole or serve the narrower interest of the powerful north? How are domestic imperatives balanced with global aims? The course will have a strong interdisciplinary flavor, with readings taken from both political science and economics.

IIPS 30937. World Poverty and Inequality

(3 -0- 3)

This course is the seminar version of ECON 40850. Analysis of the trends, causes and consequences of the inequality between rich and poor nations, or what are called the North and South. The course uses theoretical, empirical and broader political-economy analyses to examine the implications of international trade,

capital and labor movements, technological transfers and environmental interactions between rich and poor countries. Particular emphasis is given to globalization and its effects on poor countries.

IIPS 30938. Global Activism

(3 -0- 3)

Take action now! This course is about transnational networking, organizing, and campaigning for social change, with equal attention for conceptual and substantive issues. Conceptual issues include framing, strategies, tactics, and actors. The issue areas examined are labor, human rights, women's rights, the environment, peace and disarmament, and anti-globalization. The course zooms in on specific campaigns like global warming, violence against women, and ban-the-bomb. Counter-campaigns are also reviewed and readings on any given issue or campaign always include a critical or dissident voice.

IIPS 30939. Working to Eat: A Labor History of American Food

(3 -0- 3)

This social and cultural history course explores the unpaid and paid work related to the production, processing, distribution, sale, serving, and clean-up of what Americans have eaten, from the colonial era to the present. Sites of investigation will include the farm and the factory, the kitchen table and the drive-through window, and everywhere Americans have worked to feed themselves or others. Close attention will be paid to gender and race as organizing features of the American food economy over the past four centuries.

IIPS 30940. Racism and Activism: From Civil Rights to Tea Parties

(3 -0- 3) McVeigh

Throughout much of American history, individuals have organized and acted collectively to advance interests based on a common racial or ethnic identity. In some instances, groups have organized in an attempt to overcome discrimination and to stake a claim to rights and privileges enjoyed by majority group members. In other cases, members of the majority group have organized to restrict opportunities for the minority and to protect an advantaged position. We will consider the causes and consequences of both progressive and conservative social movements—such as the civil rights movement, the Ku Klux Klan, and the contemporary Tea Party movement—giving particular attention to how theories of social movements help us to understand episodes of race-based collective action.

IIPS 33201. Dorothy Day and the Catholic Worker

(1 -0- 1)

This course examines the life and writings of Dorothy Day, the co-founder and spiritual guide of the Catholic Worker Movement. The course is seminar in style. Readings will include Day's autobiography, *The Long Loneliness*, and selections from her other writings.

IIPS 33702. Sociology, Self, and Catholic Social Tradition

(3 -0- 3)

What's Catholic about sociology? What's sociological about Catholic Social Tradition? What does all this mean for sociology majors, what they study, and how this may affect their careers and lives after graduation? This course is a critical examination of the links between Catholic social thought and sociology as a discipline. We will engage these ideas through an experimental, team-taught seminar format. Readings will include core statements of Catholic social tradition, critiques thereof, and autobiographical essays written by sociologists and others who are dedicated to social justice.

IIPS 33902. Social Concerns Seminar: Leadership Issues

(3 -0- 3)

The course examines the consequences of wars, including international wars, civil wars and terrorism. It also examines approaches to peace building and post-war reconstruction. While it focuses mainly on economic factors at work and makes use of the tools of economic analysis, it adopts a broader political economy framework.

IIPS 33903. Can Latin American Social Inequality be Tamed?

(3 -0- 3)

Scholarly interest in Latin American welfare regimes has grown significantly in recent years. By addressing the most unequal region in the planet, experts grapple with the complex and dynamic relationship between social policies and structures as played out through families and labor markets. We will concern ourselves with novel research addressing gender relations as organizational pillars of welfare regimes and engage in South-South comparisons as we look beyond the largest and most studied Latin American countries (e.g., Argentina and Chile). Drawing from the work of leading scholars in the area, we will examine theories, methods, findings and policy implications of contemporary research as we struggle to understand one of the world's most daunting ethical and political questions: "can social inequality be tamed?"

IIPS 33905. Rethinking Crime and Justice: Explorations from the Inside Out

(3 -0- 3) Brandenberger

What are the causes and costs of criminal behavior? How are people and communities affected by incarceration? How can we make our criminal justice system as good as it can be for all stakeholders? This course brings together students from both sides of the prison wall to explore issues including why people commit crime, what prisons are for, realities of prison life and reentry, effects of victimization, and restorative justice perspectives. This course follows the Inside-Out model of prison exchange now well established across the United States. It provides an opportunity for "inside students" (at the Westville Correctional Facility) and "outside students" (from Notre Dame) to learn with and from each other and to break new ground together. Notre Dame students travel to Westville each week of the semester for dialogue with students at the facility, who have read the same relevant texts. Together they examine myths and realities related to crime and to punishment, explore the effects of criminal justice policy, and develop ideas for responding more effectively to crime in our communities. Students must apply for this Social Concerns Seminar at the Center for Social Concerns website: <http://centerforsocialconcerns.nd.edu>

IIPS 33906. Education and Development in a Global Era

(3 -0- 3) Chattopadhyay

Forces of globalization are profoundly changing the experiences and opportunity structures of young people in an increasingly interconnected world. While there is a growing recognition that the knowledge-based global economy requires a new paradigm for education in the 21st century, a significant segment of the world's largest generation of adolescents remains vulnerable, disengaged and disenfranchised from education. Against this backdrop, this course will explore the critical issues confronting education in developing countries in different regions of the world. The course has a strong applied focus and the readings will be drawn primarily from policy documents on current topics in international educational development. At the same time, the underlying theoretical and conceptual issues will be accessible to students through supplementary research articles and critical commentaries. Students taking this course will: 1) gain a critical understanding of the broader global development context in which educational policy takes shape in low-income countries, 2) develop operational fluency in key contemporary policy issues and institutional actors in international educational development; and 3) enhance their awareness of an educational development framework that is informed by the dynamic interdependencies of the global and the local.

IIPS 35901. Anthropology of Globalization

(3 -0- 3)

This course analyzes contemporary patterns of globalization drawing on recent ethnographies. We will briefly overview the historical antecedents of globalization, and then proceed to analyze globalization's cultural, socio-political, and economic complexity, often resulting in urbanization. In particular, we will tackle the global circulation of food, entertainment, fashion, capital, ideologies, violence, religious practice, migrant/trafficked labor, and even of so-called "anti-globalization" movements. Examples of specific topics include youth and free trade in Latin America; cyber-politics among transnational Chinese, Eritreans, and others; McDonald's

and consumerism in Moscow; Indian cinema and global media. By locating global processes in everyday practice, we will come to understand the interconnectivity sustaining globalization, and the resulting practices of resistance. More broadly, we will appreciate on the one hand how various cultures and societies become increasingly interconnected, and on the other how people around the world appropriate large-scale processes in culturally specific ways. The course emphasizes anthropology's role as a discipline that is globally relevant and publicly "engaged." Accordingly, we will focus on the discipline's methodological and theoretical contributions in the study of globalization and its inequalities, and toward a more socially-just world. The course will also equip you to design and implement an original research project, and to write an ethnographic account based on such project.

IIPS 40201. The Vocation of Peacebuilding: The Art and Soul of Peace Practice

(3 -0- 3)

This course proposes an inquiry into the life vocation of peacebuilding. The challenge of exploring life vocation requires of students something that the academic setting, with its primary focus on intellectual and professional development, has not always found easy to provide: The nurturing of voice, sense of place, creativity and calling. We will engage this vocational challenge through two broad themes, referred to here as the "art" and the "soul" of peacebuilding. Art will provide a lens to explore peacebuilding as an artistic process and an avenue to encourage creativity. Soul will provide inquiries into voice and the sense of place, and disciplines to sustain the peacebuilder. Students should be prepared for more informal, experimental, inductive hands-on, and dialogical approaches to learning. The course is restricted to senior peace studies majors only.

IIPS 40402. Iraq War

(3 -0- 3)

This course explores the scope and meaning of the Iraq War for U.S. society and for the dynamics of peace and security in the wider globe. The course brings a variety of disciplinary, conceptual and policy frameworks to bear on the Iraqi experience of internal and external war. The course includes substantial reading and the opportunity for students to do policy relevant research.

IIPS 40403. Globalization, Democracy and Development in the Middle East

(3 -0- 3) Singh

This course examines how Middle Eastern countries are responding to the challenges of globalization and democratization. It investigates the policies and strategies they have adopted to achieve economic growth and political development. The topics that the course covers include: the impact of the global economy on MENA countries; the mismanagement of the region's resources; types of political regimes; problems associated with state-led growth; the process of democratization; and the limits of liberalization. The assigned readings analyze specific case studies.

IIPS 40503. War and the U.S.

(3 -0- 3) Curtis

This seminar takes as its unifying theme the experience of war in its social and cultural aspects. We begin with a discussion of the creation of the soldier/Marine and the unit and proceed to a discussion of fictional, critical accounts of the war enterprise and warrior culture in the U.S.; the commemoration of wars and military campaigns, particularly the "smaller" wars these commemorative activities engender; the American military complex both at home and abroad; and the sometimes controversial role anthropologists have played in the current war on terror.

IIPS 40504. Violent Transformations in African States

(3 -0- 3) Kabamba

While striving to propose some means of resolving some aspects of the African predicament, the course will tour the major debates on the key issues that have shaped the post-colonial African scholarship with a focus on the state formation, re-formation and transformation. The course will emphasize the fact that there is no general formula for the success of state projects; they always have to respond

to local historical conditions and relations of the struggles. The course will cover several themes, including: historical origins, slavery, State formation, colonialism, under-development, nationalism, and political violence.

IIPS 40513. U.S. and the Vietnam War

(3 -0- 3) Brady

This course examines the participation of the United States in its “longest war”—the conflict in Vietnam. The course is taught primarily from an “American” as opposed to a “Vietnamese” perspective. Broad topics to be covered include: Vietnamese background (land, people, history, culture); American political and diplomatic decision making; 1950–75: how the war was fought; debating the war; the war at home; the aftermath of war; and lessons of the war. This is a lecture AND a discussion course.

IIPS 40515. Diplomacy of U.S. Foreign Policy

(3 -0- 3)

The United States emerged from World War II in a new peacetime role as a super-power. We had to discover for ourselves how to combine diplomacy and military power in a manner consistent with our democratic principles. While the policy choices were stark in the days of the Cold War, they have become more complex in recent years. Presented by a career diplomat who headed U.S. overseas missions in four countries, the course emphasizes case studies and the practical problems that have confronted U.S. leaders from the end of World War II to the present. The issues treated will illustrate the height of tensions in the Cold War, the emergence of detente and deterrence, and the challenges of the global agenda after the end of the Cold War. The course aims to help the student understand current foreign policy issues, which will be discussed briefly in class. A research paper (10 pages), a midterm exam, and a final exam are required.

IIPS 40516. The Politics of International Trade

(3 -0- 3)

If global free trade is theoretically optimal for the economy, why does free trade foster so much concern politically? Spanning events from the 1700s to the present day, this lecture course will discuss the politics of free trade in four different issue areas: 1) global trade and national security; 2) winners, losers, and the domestic politics of trade policy; 3) global trade and the development of democracy; and 4) the rise of international institutions and the decline of sovereignty. The syllabus will draw on classic readings in international relations and comparative politics, and students will be exposed to the variety of methods used by political scientists to analyze these questions: qualitative descriptions, quantitative analysis, formal models, etc. While the course does not require any background in economics, basic economic models of trade will be covered in the introductory sections. Students will be evaluated by both examinations and short papers.

IIPS 40602. Ethics, Law and International Conflict

(3 -0- 3)

The terrorist attacks of 9/11 and the war in Iraq have contributed to a dramatic reexamination of moral and legal norms governing the role of military force in international affairs. This course provides an introduction to legal and moral perspectives on issues of war and peace, with special attention to Catholic social teaching. Topics include the UN framework for collective security, collective enforcement, and peacekeeping; terrorism, aggression and self-defense; intervention on behalf of self-determination and human rights; norms governing the conduct of war; accountability for war crimes; and approaches to arms control and disarmament. These topics are discussed with special attention to their application in combating global terrorism, the interventions in Iraq and Afghanistan, the wars in the Balkans, and other recent conflicts.

IIPS 40603. Islam and Muslim/Christian Dialogue

(3 -0- 3) Omar

The course is designed to introduce students to medieval Muslim perspectives of the Christian “other” and how these resonate in contemporary relations between Muslims and Christians. It will focus on Muslim-Christian relations in the modern/post-modern period, with particular attention to contexts of conflict and the potential for dialogue, solidarity and interreligious peacebuilding.

IIPS 40604. When Tolerance Is Not Enough: Ethical Perspective on Religion, Conflict and Peace

(3 -0- 3)

Tolerance of religious differences is heralded today as a primary accomplishment of the modern liberal-democratic societies, and perhaps the best hope for transforming conflict and building peace in conflict zones across the globe. Where did this value come from and how did it evolve? How has it come to orient modern, liberal society, and mark the difference between liberal and illiberal societies? Is religious toleration an absolute good? What are its limits? In what ways might it assist or impede the pursuit of transitional and restorative justice, and peacebuilding? Is the basis of religious toleration the secularization of public life and politics? This class examines the concept of toleration, attending specifically to its application to current debates about the relation of religious belief and practice to politics and social movements in contemporary European and North American contexts. We will examine the difference between free speech and hate speech, the controversies pertaining to religious freedom in contemporary France, Holland and Britain, as well as apparent stand-off between multiculturalism, secularization, human rights and group rights.

IIPS 40606. Religion and Democracy in Comparative Perspective

(3 -0- 3)

This course will first explore how Muslim, Christian and Jewish thinkers have theorized the question of democracy in various contexts like Iran, Israel and the U.S. and how they drew on the resources of their respective traditions in their effort to address issues such as minority rights and religious freedom. Of a special focus will be the tension between a support of democratic values and a general commitment to ethno-national political projects. Second, the course will interrogate the presuppositions underlying the conventional construal of this comparative discussion as one that asks whether Islam, Judaism or other traditions are compatible or incompatible with democracy.

IIPS 40607. Religion, Civil Disobedience and Nonviolent Resistance

(3 -0- 3)

This course explores the ways in which religious ethicists, political philosophers, social critics have employed conceptions of love and violence as resources for criticizing and resisting oppressive political conditions, and for radically transforming existing social arrangements. We begin by exploring the writings of Ralph Waldo Emerson and Henry David Thoreau concerning the moral status of civil disobedience in the context of the U.S. abolitionist struggle, with particular attention to the influence of the Bhagavad-Gita upon their thinking. We will examine the ways that both Thoreau's writings and the Gita influenced Mahatma Gandhi on questions of non-violent civil disobedience, Gandhi's exploration of the power of non-violence in light of the Sermon on the Mount, and his correspondence with the Russian novelist Leo Tolstoy. We will examine how this entire mosaic of influences came to inform Martin Luther King, Jr.'s work in the Civil Rights Movement in the U.S. during the 1960s. Other assessments of civil disobedience and non- or non-violent resistance include Dorothy Day and the Catholic Worker Movement and Malcolm X and the Nation of Islam in the United States. We will engage critical perspectives on these thinkers and ideas, such as George Orwell's criticisms of Gandhi, Frantz Fanon's claims that colonialism is an essentially violent phenomenon that requires an essentially violent response, arguments against pacifism on the basis of political realism by Max Weber and Reinhold Niebuhr. We conclude by brief examination of principled vs. practical pacifism in the work of John Howard Yoder, Stanley Hauerwas and Cornel West.

IIPS 40702. Conflict and Democracy in Classic American Literature

(3 -0- 3)

In his influential study *Democracy in America*, Alexis de Tocqueville described the United States as an unprecedented experiment in political democracy that would soon reshape the world. Tocqueville particularly noted the prominence of deliberative bodies, which ranged from town hall meetings, to voluntary associations, to local, state, and national legislatures, where social concerns could be

addressed and conflicts peaceably resolved. He also observed the exclusion of many people—women, African Americans, Native Americans—from those deliberative bodies and anticipated some of the difficulties that would arise from those exclusions. In this class, which is cross-listed with the Peace Studies program, we will read iconic works of American literature that explore the main social conflicts of American history, including poverty and class difference, colonialism and westward expansion, slavery and racism, prejudices regarding gender and sexuality, religious difference, environmental degradation, and war. Beginning with colonial-era and early national statements about the good society, we will trace the themes of conflict and democracy through classic literary works that centrally and explicitly engage the problem of how best to democratically resolve differences. Conflict is an essential element in all plots. What distinguishes this class is its focus on works that foreground the rich experiential and social sources of major conflicts and that explore the means to resolve them in a manner that respects democratic ideals. Our readings will include social and political writings such as James Madison, selections from *The Federalist Papers*; Judith Sargent Murray, “On the Equality of the Sexes”; Daniel Webster, *The Second Reply to Hayne* (opposing nullification and defending deliberative democracy); David Walker, *An Appeal to the Coloured Citizens of the World*; and William Apess, “An Indian’s Looking-glass for the White Man.” We will also read a number of novels, which are likely to include James Fenimore Cooper, *The Last of the Mohicans*; Harriet Beecher Stowe, *Uncle Tom’s Cabin*; Upton Sinclair, *The Jungle*; Ernest Hemingway, *A Farewell to Arms*; Ralph Ellison, *Invisible Man*; Norman Mailer, *An American Dream* (with a response by Kate Millet from *Sexual Politics*); Joan Didion, *Democracy*; and Leslie Marmon Silko, *Ceremony*.

IIPS 40703. Culture and Politics in Northern Ireland

(3 -0- 3)

What the literature of Northern Ireland reveals about the culture and politics of Northern Ireland.

IIPS 40708. Anthropology of War and Peace

(3 -0- 3) Nordstrom

This class will explore the human capacity for war and for peace. The course will explore the many forms of war, from tribal conflicts through guerrilla warfare to conventional and nuclear war. It will also study societies without war, the place of war and peace in human society, whether violence is inherent in human nature or learned, and what the future of war and peace is likely to be on our planet.

IIPS 40711. Topics in Asian Anthropology: South Asia

(3 -0- 3)

This course explores the latest developments in the anthropology of Asian societies and cultures. The course may include the study of nationalism and transnationalism; colonialism and post-colonialism; political-economy; gender; religion; ethnicity; language; and medicine and the body. Emphasis will be on social and cultural transformations of Asian societies in specific historical contexts.

IIPS 40718. The Irish Hunger Strikes

(3 -0- 3)

“We remember them with pride for on hunger strike they died these brave men were Ireland’s sons they were the men of ‘81”—*Republican ballad*.

“We’ll never forget you Jimmy Sands”—*Loyalist graffiti in East Belfast shortly after Bobby Sands death on hunger strike*.

Thirty years ago, in 1981, Bobby Sands and nine other Irish republican prisoners died on hunger strike in the Maze Prison outside Belfast. Their deaths and the British response were pivotal in the history of the recent “Troubles.” It would hardly be an exaggeration to say that the fallout from the 1981 Hunger strike had the same momentous impact on nationalists and on Irish politics as had the executions of the leaders of 1916. This course will examine the 1981 hunger strike in the context of previous political hunger strikes in Ireland and will examine both its genesis, the strike itself and its aftermath. It will pay particular attention to the ways in which the political hunger strike and the 1981 hunger strike in

particular is “remembered” and commemorated, drawing on the work of Paul Ricoeur among others. We will engage with a variety of texts and sources including memoirs, news reports, documentaries, film and songs.

IIPS 40719. Catholic Social Teaching

(3 -0- 3)

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and appropriation of these documents. We will examine papal, conciliar, and episcopal texts from *Rerum Novarum* (1891) up to the present time, identifying operative principles, tracing central theological, ethical, and ecclesial concerns, and locating each document in its proper historical context.

IIPS 40720. Christianity in Africa

(3 -0- 3) Kollman

Few places on earth exhibit the dynamism of contemporary Christianity like Africa. Such dynamism creates new challenges and opportunities for the Catholic Church and other ecclesial bodies, and also shapes African life more generally. Through novels, historical studies, and present-day reflections from a variety of perspectives this course will explore Christianity in Africa, beginning with the early Church but with heightened attention to the more recent growth of Christianity on the continent. It will also examine Christianity’s interactions with Islam and forms of African ways of being religious that predated Christianity and Islam, many of which have ongoing vitality. Attention will also be paid to African Christian theology, carried out formally and informally, as well as the implications of the spread of African Christianity for world Christianity.

IIPS 40722. Religion and Politics in Comparative Perspective

(3 -0- 3)

In this course, we examine various hypotheses about the relationship between religion and politics, religious institutions and political institutions, and based on evidence from across time and space (i.e., Africa, Asia, Europe, Middle East, North America and South America). The aim of the course is to think critically about the conventional wisdom concerning the relationship between religion and politics. Special attention will be focused on whether certain types of religious systems (i.e., various types of Christianity and Islam) are more compatible with and conducive to democracy than others. Students will write two short reflection papers that demonstrate familiarity with the readings, one during the first half of the semester and one during the second half of the semester. There will be a “short” mid-semester exam and a final research paper due at the end of the semester.

IIPS 40724. Globalization, Spirituality, and Justice

(3 -0- 3) Groody

This course will explore what it means to be Christian in the context of this new era of globalization. It is a time of new opportunities and unprecedented potential, but it brings with it new perils and greater social, political, and economic turmoil than ever before. In particular, we will explore the meaning of Christian discipleship in a time when half the world lives on less than two dollars a day and two thirds live in abject poverty. After grounding our discussion of socio-economic research, we will then do a theological reading of globalization, and then a global reading of theology. In particular, we will explore the meaning of Christian faith today as we draw from the deep wells of scripture, early Christian sources, Catholic social teaching, major world religions, liturgy, and contemporary theological reflection, icons of justice, mysticism, and spirituality as we explore what it means to be Christian in a time of titanic change.

IIPS 40726. Comparative Spiritualities

(3 -0- 3)

This course provides a first introduction to some of the more influential spiritualities practiced by Hindus, Buddhists, Muslims, and Eastern Orthodox Christians down through the ages and seeks to determine their significance for contemporary Roman Catholic spiritual praxis and theology. In order to properly understand the practices of Hindu yoga and bhakti, of Buddhist vipassana and Zen, of Muslim salat/namaz and Sufism, of the Eastern Orthodox Jesus Prayer/Hesychasm and the accompanying place of human effort in asceticism and morality, it will be

necessary to examine underlying convictions about the nature of the human person and the supreme reality, of divine presence and grace, as well as the declared ultimate goal of spiritual endeavor, whether it be expressed more in terms of a communion of love or of enlightened higher consciousness. During the semester we will not only study important spiritual texts of other religions, but we will also practice meditation, visit a local mosque for Friday prayers and sermon, and be instructed by expert guest speakers who represent religious traditions other than our own.

IIPS 40728. Transnational Immigration/European Cinema

(3 -0- 3)

The globalization of capital and labor over the course of the 20th century has created a paradox where the transnationalization of capital, and advances in communication and technology promote a porosity of borders which increases and even advocates the mobility of people, while at the same time individual nation-states consciously control their borders in an attempt to contain the presumed homogeneity of their cultures. This is particularly evident in Europe, where European national borders have become unstable due to geopolitical changes like the fall of the Berlin Wall and the Balkan wars, and the constant growth of the European Union. This seminar will examine fundamental aspects of immigration in the European Union and the way they are represented in contemporary European film. With this in mind, we will examine the paradox where on the one hand the European Union in its constant growth promotes a cosmopolitan, borderless society, while on the other hand it attempts to curb what it considers an invasion by the immigrant other. We will juxtapose the legacies of the French, English, and German post-colonial and immigrant cultures to the immigration wave of the early 1990s which has affected the southern European countries of Spain, Italy and Greece. The massive influx of immigrants to these countries is challenging their preconceived notions of homogeneously imagined communities. We will spend the last part of the semester concentrating on subtler issues of nation, gender, politics and religion, and the possible solutions that directors offer in the beginning of the 21st century as a way of escaping the ideological and cultural impasse of the end of the 20th century. Students who have completed the Notre Dame language requirement in Spanish are eligible to sign up for an additional single credit discussion section as part of the Languages across the Curriculum (LAC) initiative in the College of Arts and Letters. Choosing this option means that students will do some additional reading in Spanish language material (approximately 10 to 15 pages per week) and meet once a week with the instructor who will guide a discussion in Spanish and grade some brief writing assignments. The LAC discussion section in Spanish associated with this course will be graded on a pass/fail basis and credited to the student's transcript.

IIPS 40729. Contemporary French and Francophone Fiction

(3 -0- 3)

Through recent fiction by Francophone writers of Muslim origins, this course will offer us an opportunity to understand and reflect critically upon contemporary issues affecting relations between Muslim and Western cultures. We will read Tahar Ben Jelloun from Morocco (*Partir*, 2006), Yasmina Khadra from Algeria (*Les Sirènes de Bagdad*, 2006), Salim Bachi from Algeria (*Le Silence de Mahomet*, 2008), Chahdortt Djavann from Iran (*La Mulette*, 2008), and Atiq Rahimi from Afghanistan (*Syngué sabour: Pierre de patience*, 2008, Prix Goncourt). Apart from their literary merits that call for examination and appreciation, these novels raise key issues in our world today, including exile, immigration, post colonialism, the wars in Iraq and Afghanistan, Islamic extremism and terrorism, gender and social disparities, and various forms of violence, especially toward women. They also demonstrate attempts to engage Western readers, in particular through an original, literary approach to the Prophet Muhammad's biography. Students are expected to participate fully in class discussions and will be responsible for two essays (one with the opportunity to revise and rewrite) as well as one oral presentation (done in a group). This class is taught in French.

IIPS 40730. Shiism and Catholicism

(3 -0- 3)

Most Western discussions of Islamic matters or the Arab world tend to focus, often implicitly, on Sunnism. This is perhaps to be expected, since the overwhelming majority of the world's 1.5 billion Muslims are Sunnis. Shias number from 150 million to 200 million people, or 10 to 15 percent of the total. In the Islamic heartland, from Lebanon to Pakistan, however, there are roughly as many Shias as there are Sunnis, and around the economically and geostrategically sensitive rim of the Persian Gulf, Shias constitute 80 percent of the population. The divide between Shiism and Sunnism is the most important in Islam. The two sects parted ways early in Muslim history, and each views itself as the original orthodoxy. Their split somewhat parallels the Protestant-Catholic difference in Western Christianity. This new course offers a panoramic survey of the Shia Islam and its commonalities with Catholicism. The course will be divided into three sections. The first part of the course, will deal with the history and origins of Shiism from its birth in the Arabian peninsula in the seventh century. We will look at the history of the early Islam and the most important events which split the two major Islamic traditions. In the second unit, the Shia doctrines, practices, political leadership and movements, gender, social relations and cultural norms will be explored. The last portion of the course will focus on the similarities and common grounds between Si-ism and Catholicism in which we will hopefully uncover the roots that remain deeply entangled and intertwined in the histories and philosophies of Christians and Muslims.

IIPS 40731. World Christianity

(3 -0- 3)

In a recent review of Martin Marty's *The Christian World: A Global History* (2008), Philip Jenkins concluded with this line: "Let me then offer a modest proposal for the creation of a non-Eurocentric humanities curriculum that is at once global, diverse, polycentric, multicultural and multiracial, one that incidentally tells the story of the wretched of the earth in terms of their deepest aspirations, and in their own voices. Let us study Christianity." Jenkins' proposal, dripping with irony designed to tweak not a few noses, captures one of the most important historical realities of the past several decades: the enormous growth of Christianity in places outside the global North and West, into the South and East. This course explores the contours and implications of Christianity as a global reality. It will examine some of the rich explosion of scholarship that is now pouring forth on the recent and remarkable world-wide expansion of Christianity, while also putting such growth in a larger historical and theological perspective. The course readings will draw from fiction, theology, history, and the social sciences. After sampling major general interpretations (by scholars like Mark Noll, Andrew Walls, and Lamin Sanneh), readings will concentrate on Africa and Asia (perhaps either eastern or southern Asia), which are regions of startling change over the last century as well as places for which scholarship is burgeoning. Some of the course readings come from the standpoint of missionary activity, but more reflect new expressions of indigenous faith. Studies of Protestant, Catholic, and independent movements are included; readings come from a wide variety of Catholic, Protestant, and secular perspectives. Student responsibilities will include seminar-style participation, occasional short responses to readings, 3 shorter (5–6 page) papers, and a final exam.

IIPS 40801. Conflict Resolution: Theory and Practice

(3 -0- 3)

This course explores a variety of theories and frameworks for analyzing conflict and emphasizes building foundational conflict resolution skills. Particular attention is focused on the key areas of communication, negotiation and mediation with an emphasis on engaged, reflective learning through role plays and case studies. We will study interpersonal, small group, community and international conflict with a special emphasis on interpersonal and small group conflict as building blocks for understanding and responding to more complex conflicts. The course will give students a solid foundation in understanding conflict as well as a range of options for responding to it constructively.

IIPS 40802. Gender and Peace Studies

(3 -0- 3) St. Ville

This course will place the resources of gender theory into conversation with peace studies. In so doing it will highlight both how the category of “gender” serves as a useful analytical tool for peace scholars while at the same time noting how specific situations of conflict and peacebuilding call into question and so prompt a reshaping of prominent concepts in gender theory. In the first section of the course we will consider how attention to the social marginalization of women has clarified the differential effects of war and peace efforts. Topics to be covered include women’s greater vulnerability to personal and systemic forms of violence in conflict situations, the sexual politics of warfare including the use of sexual violence as a tool of war, and the role of women as perpetrators of violence. We will consider also the increased roles in peacebuilding that have emerged for women as a result of the attention to gender, including formal calls for women to be included in peace processes, the recognition of gender-based war crimes, and grass-roots peacebuilding initiatives by women. In this section, we will draw heavily on first-hand accounts from specific contexts of conflict, most notably Northern Uganda and Afghanistan. Our study of women’s peacebuilding in particular sites will position us in the final section of the course to think still more critically about concepts of gender and power. Critics of contemporary gender theory frequently charge that in its radical questioning of concepts of the self and identity, gender theory has lost its ability to be politically effective. In light of our analyses, we will take up this challenge asking whether and in what ways “gender” remains a useful tool for students of peace studies and what possibilities our inquiry might open for reimagining concepts of gendered identity to inform future work in peacebuilding.

IIPS 40804. Structural Violence: The Underbelly of Conflict

(3 -0- 3)

In this course we will examine the “violence of everyday life” experienced by people both inside and outside of active war zones, and investigate how taken-for-granted structures such as bureaucracy, security, nation, color and creed (to name only a few) constrain and damage peoples’ lives, causing suffering, stress, and often leading to radicalism and violence. How do physical walls perpetrate and perpetuate violence? Why does resource richness cause poverty and war? What is the lived experience of systematic inequality? When does everyday hopelessness become explosive violence? Students will examine how violence is both culturally mediated and understood, and will learn to recognize the symptoms and anticipate the consequences of oppression, neglect, and resistance around the world.

IIPS 40805. Globalization and Its Discontents

(3—3)

The past several decades have witnessed an economic revolution of unforeseen proportions and consequences. Some claim that these economic trends, and the political conditions from which they originate, fuel the flames of secularism, religious fanaticism and fundamentalism, severe forms of poverty and economic inequality, destroy the environment, and ultimately create situations of conflict and violence. Others claim that globalized markets put in place conditions that are necessary for peacebuilding. This course examines the rise and development of free market capitalism, the challenges it presents to identifying and transforming conflict and building peace, and the range of value-frameworks available for identifying, assessing and transforming conflict. Throughout we will explore the development of the ideas that underpin the rise of free market capitalism, value frameworks that challenge or compete with it, engaging specifically the issues of environment, multi-national corporations and reconceived concepts of “empire” and “globalization” that accompany them. We will explore answers to questions such as: Does global, free market capitalism constitute a new form of global colonialism? Do capitalist models of economy work everywhere in the world? If not, why not? What are options where it fails? Is it ethically relevant that 46 million people across six continents eat at McDonalds every day? Should it be? Is the global market economy inherently opposed to environmental concerns? Is free market capitalism a carrier of religious secularization? Do globalized markets create religious fundamentalists? Does free market capitalism help poor people? Are market forces impartial to gender, ethnicity and race? What are possible options

for ethical analysis of de-regulated markets? In what ways can ethical orientations toward development and globalization create, exacerbate or assuage conflict; aid or hinder peacebuilding?

IIPS 40806. The Psychology of Prejudice and Group Conflict

(3 -0- 3)

The social psychological study of prejudice and group conflict emerged in the United States and Europe in the mid-twentieth century as a consequence of two major phenomena: 1) the devastation of World War II in Europe (particularly the culmination of exclusionary nationalism and anti-Semitism in the Holocaust), and 2) the growing recognition of the social injustice of racism and ethnocentrism in the United States, realized in policies like segregation. In the spirit of these origins, this course examines both local (i.e., U.S.) and global settings of conflict between groups in the twentieth and twenty-first centuries. We focus on the psychological processes implicated in maintaining and exacerbating conflict, including prejudice and discrimination, racism, stereotyping, and categorization more broadly. We examine the relationship between these psychological processes and structural asymmetries between groups, thus integrating psychological and social-structural levels of analysis. We review major theory and research in social and political psychology on these issues, with a focus on real-world application in the interest of reducing conflict, addressing power asymmetries, and transforming relations between groups.

IIPS 40902. Self, Society and Environment

(3 -0- 3)

This course focuses on social psychological aspects of relationships between humans and the natural environment. Issues include how humans interact with different environments, symbolic transformations of environments, and competing accounts or claims concerning human-environment relationships. The course is framed in a sociology of knowledge perspective and touches on alternative ways of envisioning and valuing individual and institutional perspectives on human-environment relationships with an eye toward implications for social change.

IIPS 40903. International Migration and Human Rights

(3 -0- 3) Bustamante

This course is an extension from the mini-course to a full term offered by Prof. Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the Industrial Revolution to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States’ migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United Nations’ Commission of Human Rights on the relationship between migration and human rights are also covered.

IIPS 40905. International Migration: Mexico and the United States II

(2 -0- 2) Bustamante

A three-week course that refers to a review of basic questions on international migration, with emphasis on immigration to the United States and the methods through which these questions have been adequately or inadequately answered. The numbers, impact, nature, structure, process, and human experience will be discussed in terms of the research methods commonly used to approach them.

IIPS 40906. Gender and Violence

(3 -0- 3) Mahmood

This upper-level anthropology course focuses on the problematic intersection between gender and violence. The question of male aggression and female pacifism is explored, with attention to female fighters and male practitioners of nonviolence. Women in circumstances of war, trauma, and healing are studied for the insight such study may provide for peacebuilding initiatives. Gender in the military, gender and violence ritual cross-culturally, and rape as a sociopolitical

phenomenon are among the other topics considered. Primary source readings complement intensive class discussion; substantial writing and speaking buttress academic skills.

IIPS 40908. International Economics

(3 -0- 3)

Prerequisite: ECON 10101 or ECON 10015 or ECON 12101 or ECON 20015
A study of the general theory of international trade; the pattern of trade, gains from trade, tariffs, trade and special interest groups, trade and growth, foreign exchange markets, balance-of-payment problems and plans for monetary reform.

IIPS 40909. Race, Ethnicity, and Power

(3 -0- 3)

Presents a review and discussion of social scientific research concerning the nature of race and ethnicity and their expression as social and cultural forces in the organization of multiethnic societies. The focus is multidisciplinary.

IIPS 40910. Conflict and Development

(3 -0- 3)

The aim of this course is to introduce students to the political and humanitarian dimensions of complex emergencies. Complex emergencies are situations of disrupted livelihoods and threats to life produced by warfare, civil disturbance and large-scale movements of people, in which any emergency response has to be conducted in a difficult political and security environment. The course will explore the challenges the development community faces when operating in complex emergencies and discuss the different stages of the conflict and development relationship. It will also look at the ways in which social and economic development can contribute to, or undermine, peace; the ways in which conflict complicates development; the various ways in which peacebuilding strategies can impact development and, finally, explore the transition from relief to development.

IIPS 40915. Gandhi's India

(3 -0- 3) Sengupta

The dominant figure in India's nationalist movement for nearly thirty years, M.K. "Mahatma" Gandhi has also been the twentieth century's most famous pacifist, and a figure of inspiration for peace and civil rights movements throughout the world. This course offers an examination of Gandhi and the nature of his unconventional and often controversial politics. It charts Gandhi's career against the background of events in London, South Africa, and India. Examines the evolution and practical application of his ideas and techniques of non-violent resistance, and his attitudes toward the economy, society and state. Gandhi's influence on Indian politics and society is critically assessed and his reputation as the "apostle of non-violent revolution" examined in the light of developments since his death in 1948. Some of the questions that will be discussed are: how far did the distinctive character of Gandhian politics derive from his absolute commitment to India's nationalist struggle? Was his success due to the force and originality of his political ideas and his advocacy of nonviolent action? Can his achievements be explained by political wiliness and pragmatism, or by willingness to embark on new experiments with the truth? Though helpful, a prior knowledge of Indian history is not required for this course.

IIPS 40916. Slavery and Human Bondage

(3 -0- 3)

For many Americans, the history of slavery is synonymous with plantations in the Atlantic world. This course seeks to expand our view of Atlantic slavery by looking to the Ancient World, Africa, Asia and Europe in historic and contemporary contexts. This course examines slavery as a labor system and a social form intimately connected with the political economies and cultural groups within which it arose. It will also examine debates about contemporary forms of bonded labor and slavery emerging from global encounters today. By examining different types of bonded and unfree labor, such as chattel, domestic, and wage slavery, we will form an inquiry about slavery's relationship to the following: person-hood and social death; the emergence of market economies; systems of differentiation used

to maintain the social condition of the enslaved; and power and violence. This course will take an interdisciplinary approach relying on archaeology, anthropology and history for our case studies in understanding this particular social form.

IIPS 40917. History of Sport and the Cold War

(3 -0- 3) Soares

This course will explore the ways that sport reflected the political, ideological, social, economic and military struggle known as the Cold War. Sport permitted opportunities to defeat hated rivals or to develop competition more peacefully. It reflected the internal politics and societies in nations, and also illuminated relations among allies. Using a variety of readings, media accounts and film clips, this course will look at a number of crucial teams, athletes and events from the Cold War, including the 1980 U.S. Olympic hockey team, the controversial 1972 Olympic basketball final, "ping pong diplomacy", Olympic boycotts, Martina Navratilova and other Eastern European tennis stars, East German figure skater Katarina Witt, Romanian gymnast Nadia Comaneci, the ferocious Soviet-Czechoslovakian hockey rivalry following the Soviet invasion of 1968, and more.

IIPS 40918. Women's Human Rights

(3 -0- 3) Botting

This upper-level political theory course will explore the philosophical origins and evolution of the idea of women's human rights, which has become a cornerstone of human rights advocacy, women's non-governmental organizations, and development programs around the world. Readings will be drawn from Scotus, Ockham, Suárez, Grotius, Hobbes, Locke, Rousseau, Kant, Wollstonecraft, Grimké, Stanton, J.S. Mill, Okin, Nussbaum, and MacKinnon. Undergraduate and graduate students will write article-length research papers and make in-class, conference-style presentations on their research projects.

IIPS 43101. Peace Studies Senior Seminar

(3 -0- 3)

Prerequisite: IIPS 30101

The peace studies senior seminar is a capstone course for both the supplemental major and the minor in peace studies. The centerpiece of the course is a seminar paper that students research and write on a subject of their choice in light of the theme of the course. The course also consists of readings and discussions that explore familiar topics in peace studies in greater depth as well as introduce research methods to the students. This required course is open to peace studies majors and minors only.

IIPS 43500. Governance and Africa

(3 -0- 3) McDonnell

In this course we will try to understand both the successes and failures of governance on the African continent. Why do some states provide reasonably peaceful political climates while others have been torn by decades of civil strife? What effect did the colonial past have on the governments we see today? Why have some states developed a reputation for reasonably effective governance while others are among the most corrupt governments on the planet? How have states dealt with varied health and educational challenges, like low literacy rates and high infant mortality? These are just a few of the questions we will address in this course. Each student will become an expert on one of the countries on the continent, and assignments are designed to help cultivate that expertise.

IIPS 43701. The Ethics of Gender and Race

(3 -0- 3)

This course is concerned with two central ideas—equal opportunity and discrimination. It focuses on what constitutes equal opportunity with respect to gender and race and how best to achieve it, as well as what constitutes sexual and racial discrimination and how best to avoid it. It begins by considering arguments of those who hold that feminist causes discriminate against men and that affirmative action programs discriminates against whites, and then considers opposing arguments. The goal of the course is to help students make up their own minds about which views on these topics are most morally defensible.

IIPS 43703. Telling About Society: Media, Representation, and the Sociology of Knowledge

(3 -0- 3) McDonnell

How do we see the world? How do these modes of representation determine our social reality? How can we use media to create social change? This rigorous seminar interrogates the lenses through which we see, and more importantly make, our world. We open with an interrogation of theories of media, representation, and the sociology of knowledge so as to develop a critical eye towards how these lenses shape our everyday reality. From there we discuss particular modes of representation: photography, ethnography, statistics, journalism, maps, and more. We consider the inherent biases within these ways of seeing, and debate the appropriate uses of these technologies. From this starting point, the course turns its eye to particular historical periods and phenomena: the Great Depression, Vietnam War, the era of HIV/AIDS, and the growing surveillance society. We compare across different media representations of each event to evaluate how different media tell very different kinds of stories about that moment. Ultimately, this class presses students to consider the capacities of these media for encouraging mobilization and change—to redesign the world. To work through these issues, students will engage in fieldwork on a local topic of their choosing. Their final project will consider how different media have shaped our knowledge of a local issue, and in response students will create a final multimedia campaign designed to alter people's "ways of seeing" that topic. In this project, students will persuade their audience using a variety of "lenses" to make their case: from ethnography to documentary film to radio journalism to new media and more.

IIPS 43902. Population Dynamics

(3 -0- 3)

Demography, the science of population, is concerned with virtually everything that influences, or can be influenced by, population size, distribution, processes, structure, or characteristics. This course pays particular attention to the causes and consequences of population change. Changes in fertility, mortality, migration, technology, lifestyle and culture have dramatically affected the United States and the other nations of the world. These changes have implications for a number of areas: hunger, the spread of illness and disease, environmental degradation, health services, household formation, the labor force, marriage and divorce, care for the elderly, birth control, poverty, urbanization, business marketing strategies, and political power. An understanding of these is important as business, government, and individuals attempt to deal with the demands of the changing population.

IIPS 43903. Confronting Homelessness

(3 -0- 3)

The purpose of this seminar is to examine the conditions of extreme poverty and homelessness within the broader context of American culture and society. In order to confront the nature of these conditions, this seminar will draw upon insights from history, literature, documentary film and photography, and the social sciences. We will focus on the degree of permanence and change in our approach to both traditional and modern forms of the social problem. There will be an experiential component to the seminar as well.

IIPS 43904. Children and Poverty: Developmental Implications

(3 -0- 3)

Every fifth child in America faces hunger or poverty. This course examines the impacts of youth poverty and related risks from the perspectives of developmental and social psychology. Key topics include changing family patterns, violence and conflict resolution, moral development, resiliency, and educational inequalities/potentials. Central to the course will be an emphasis on children's developing cognitive perceptions of self in relation to society, and an examination of potential solutions, model programs, and relevant social policy. Readings will be drawn from a variety of sources and discussed in seminar format. Active student participation and service-learning engagement or community-based research are fundamental to the course. Students currently working with youth via student organizations or local entities are especially encouraged to apply.

IIPS 43906. Moral Development

(3 -0- 3)

Students are challenged to think about the nature of moral development, learn how to examine and compare theories in moral development, develop critical thinking and have the opportunity to create a study of moral development. The course reflects on Catholic Social Teaching and its relation to moral identity and social action generally and in our own lives.

IIPS 43907. Consumption and Happiness

(3 -0- 3)

Do increases in consumption increase happiness? This course will look at the available evidence which suggests that happiness does not increase with consumption and income for people beyond a point, by their own reckoning. It will examine why this may be so, looking especially at the idea that happiness from consumption depends on not the amount we consume but rather on the amount we consume relative to others. It will also examine how increases in consumption can adversely affect other things many people think are important—including time with family and friends, the environment, economic growth, and income distribution.

IIPS 43908. Religion and Social Activism

(3 -0- 3)

This course mainly focuses on how religion acts as a double-edged sword for social change, promoting both radicalization and quiescence. Students will be exposed to the major topics, theories, and debates in the scholarly work on religion and social change as well as important empirical cases of collective action in which religion has been a force, such as the U.S. civil rights movement, U.S. Central peace movement, East German Revolution, and anti-abortion activism. In studying religion's impact on social change, we will pay particular attention to how different dimensions of religion shape social activism, the mechanisms through which religion mobilizes or demobilizes social activism, and whether—and if so, how—religious-based activism is distinct from its secular counterpart. Though most of the course examines the effect of religion on social activism, we will also reverse the causal arrow and consider how social activism affects religion and the processes involved in this influence. (Please note: During the semester, students will have the opportunity to engage in service-related projects, both locally and at least one non-local location, though doing so is not required.)

IIPS 43909. Citizens, Capitalists, and Rulers: The Global Sociology of Discontent

(3 -0- 3) Velitchkova

From Egypt's Tahrir Square to Wall Street, citizens are taking their discontent with rulers and capitalists to the streets. This course explores how global, domestic, and personal factors combine to influence street politics. We will build on social movement and collective action theories and on theories of globalization to address the following questions: What are some causes of discontent in today's world? When does discontent lead citizens to protest? What is the role of social networks and new technologies in contemporary protest movements? When do citizens pursue non-violent or violent tactics and how likely are these tactics to succeed? We will draw insights from movements from each continent.

IIPS 45501. Global Crime and Corruption

(3 -0- 3) Nordstrom

As the world of the 21st century globalizes, so too does crime. Millions of people and trillions of dollars circulate in illicit economies worldwide. This represents power blocks larger and more powerful than many of the world's countries. This class will look at what constitutes the illegal today, who is engaged in crime and corruption, and what kinds of economic, political and social powers they wield. It will also look at the societies and cultures of "outlaws." For example, internationalization has influenced crime in much the same ways that it has multinationals and nongovernmental organizations: criminal networks now span continents, forge trade agreements and hone foreign policies with other criminal organizations, and set up sophisticated systems of information, exchange, and control. Anthropology—with its studies of cultures—provides a dynamic approach

to the illegal: what customs inform law abiders and criminals, what values guide their actions, what behaviors shape their worlds? The course will explore the many kinds and levels of criminality and corruption: how do we consider the differences (or similarities) among, for example, drug and arms smugglers, white collar corruption, gem runners or modern day slavers, and governmental or multinational corporate crime? What impact does each have on our world and in our lives? What solutions exist? Class is interactive in nature, and in addition to the normal reading and writing, students will do an anthropological class project on a topic of their choice concerning global crime and corruption.

IIPS 45701. Ethnographic Method and Writing for Change
(3 -0- 3)

The notion that a written text can itself be a 'site of resistance,' a location where political commitment and rigorous scholarship intersect, undergirds this course on ethnographic method. We study the construction and interpretation of field notes, subjectivity and objectivity in research, ethical issues in fieldwork, feminist and postcolonial critiques of ethnographic practice, 'voice' and oral history, and aspects of ethnographic inquiry that impact on change processes. Students engage in field projects in the local community and produce experimental ethnographic text as a central part of coursework. We also examine the writing process, rhetorical style, the responsibilities of the author, and polyvocality and inclusivity. Ethnography as a nexus of theory and practice, of scholarship and action, emerges from our work in the course

IIPS 45900. The Anthropology of Human Rights
(3 -0- 3)

This seminar will consider several key issues in global human rights particularly salient to anthropology: the individual versus the community, the local versus the regional or national, and classic relativism versus universalism. Human rights will be investigated as a practice and as a form of discourse, developed in the West and adapted to varying extents around the globe. We will engage in service-learning with immigrant communities in the Michiana area to delve in depth into the question of political asylum, a particularly central issue today when rights and security often weigh against each other—and anthropological knowledge can help in resolving complex questions. Upper undergraduate and graduate students in peace studies, law, sociology, political science and American studies may find this course of interest, as well as anthropologists. Our readings include strictly legal explanations of international human rights as well as personal narratives and various interpretive essays and advocacies.

IIPS 45902. Anthropology of Poverty
(3 -0- 3)

What is poverty? What does it mean to be poor, destitute and powerless? Does poverty in the developed world refer to the same conditions and factors that determine poverty in developing and undeveloped countries? What does genteel poverty mean? Does the ability to possess material goods and to consume indicate lack of poverty? What is the cycle of poverty? Can one break out of it? This course will address these and other questions on poverty through anthropological analysis. The course is divided into two parts: a) poverty in the pre-industrial era, and b) poverty in contemporary societies. Topics covered in Part A include the beginnings of poverty and social inequality in the earliest complex urban societies of the Middle East, Africa and South Asia, urbanism, production, distribution and poverty in various time periods including classical Greece and Rome, the Middle Ages and the Early Modern Era, and slavery, colonialism and poverty. Part B will address issues such as the relationship between industrialism, colonialism and poverty in 19th and 20th centuries, instituted poverty in post-colonial and post-industrial societies, and global manifestations of poverty in the 21st century. The course materials include readings from anthropology (archaeology, cultural anthropology, and biological anthropology), history, economics, theology, political science, as well as documentaries and films.

IIPS 45903. Crisis and Community: A Gendered Response
(3 -0- 3)

Under the broad theoretical, political and historical umbrella of feminism, archaeologists today are negotiating their own paths toward an engendered past from multiple directions, and this course will explore the diversity of these approaches toward creating a (pre)history of people. We will consider the historical and theoretical foundations of creating an engendered past, the methodological and practical aspects of "doing" engendered archaeology, and the intersection between political feminism, archaeological knowledge production, and the politics of an engendered archaeology. Topics for consideration include feminist perspectives on science, anthropology, and archaeology; concepts of gender in prehistory and the present; women's and men's relations to craft production, mortuary practices, and space; construction of race, gender and class relations in the past (and present); and the complex relationship between feminism, archaeology, and the politics of reconstructing the lives of women, men, and children in archaeology and the archaeological past.

IIPS 46201. Directed Readings
(0 -0- V)

Directed readings at the 40000-level on peace studies topics outside of the specific thematic areas.

IIPS 47901. Cultural Difference and Social Change
(3 -0- 3)

Research or service in the developing world can generate questions about our own role as "the elite" and "privileged" in contexts where our very presence marks us as "outsiders." In such situations we frequently grapple with balancing our research objectivity with the often-times stark realities we have witnessed and experienced. This course is designed especially for students returning from service projects or study abroad programs in the developing world to help make sense of these experiences. This process will be achieved through additional scholarly research (frequently self-directed) to better understand the sites that the students visited during their overseas projects, orienting them in relation to broader global, regional, and national patterns; the eventual outcome will be the analysis of each student's data that is framed by the larger context. Course readings will cover such topics as world systems theory, globalization, development, NGOs, various understandings of "human rights," applied anthropology, activism, and the relation between cultural relativism and service. Through discussions, readings, presentations, and writing students will develop an analysis based on their overseas experience, and will focus on the site where they worked, a problem that they observed in cross-cultural perspective, and an examination of strategies for redressing this sort of problem. The overall goal of the course will be for students to gain an understanding of how social science analysis might help to understand and confront problems in cross-cultural contexts. Students can only enroll with the permission of the instructor; requires prior field research or study abroad.

IIPS 50201. Design and Methods in Peace Research
(3 -0- 3)

This course provides an overview of social science research methods with special attention to the application of research principles and practices to research projects in the areas of peace and conflict resolution. The aim of the course is to provide students with the basic tools needed to develop their own research project and to strengthen their skills in reading published research articles. Students will gain familiarity with commonly used research methods such as ethnography, survey research, interviews, document/content analysis, and basic statistical analysis. Students who are developing their final M.A. projects will have opportunities to present and discuss their work throughout the semester. Also, we will devote some time to considering the processes of writing grant proposals to fund research and publishing research results.

IIPS 50402. Ideas and American Foreign Policy
(3 -0- 3)

The aim of this course is not to consider policy as such but to examine the ideas underpinning U.S. foreign policy and informing the foreign policy debate.

Some (affirming) ideas inspire or explain or justify actually existing policy. Other (dissenting) ideas call into question or challenge government actions and priorities while advancing alternatives. The course takes a chronological approach. It begins with the founding of Anglo-America and concludes with the period since 9/11. Throughout, we will examine the assigned readings to determine what they can tell us about the following: the image and role of America; the definition of U.S. national interests; the image of the world as viewed by Americans; the existing or proposed terms of the relationship between the United States and the rest of the world.

IIPS 50604. Islamic Ethics of War and Peace

(3 -0- 3) Omar

Since September 11, 2001, topics related to Islam have inundated the airwaves, aroused the curiosity of many and troubled the minds of some. In order to better understand current events, it is important to have a greater understanding of the world view of Islam. This course on “Islamic Ethics of War and Peace” will provide students with such an opportunity. It examines the major principles of Islamic ethics and the key theories of classical and contemporary Muslim ethicists. These principles and theories will be applied to analyze contemporary Muslim perspectives on war and peace. Cognizant of the various contexts within which ethical questions are debated, students will be encouraged to explore the impact of modernity, post-modernity, globalization and liberalism on Muslim ethical discourses. Students will also be encouraged to compare the ethical principles and theories of Islam on war and peace with that of other philosophical and religious theories to discover points of difference as well as convergence. Students are not expected to emerge from this course as experts on Islamic Ethics or any of its subfields, but rather, they will be exposed to major authors and arguments and be provided with a number of conceptual lenses that can be applied to their analysis of the diverse ways in which Islam is implicated in conflict, violence and peacebuilding on both a global and local level.

IIPS 50705. Feminist and Multicultural Theologies

(3 -0- 3)

An exploration of how the voices of women have helped to reshape theological discourse and to bring to light new dimensions of the living Christian tradition. Like other liberation theologies, feminist theologies take the experience of suffering and missing voices in the tradition as the starting points for theological reflection on the mystery of God and all of reality in relation to God. Using the writings of feminist, womanist, Latina, mujerista, Asian, and Third World theologians, this class will focus on the following questions and areas of theology: the theological task and vocation, the significance of gender and social location in the fields of theological anthropology and Christology, theologies of the cross in the face of contemporary suffering, the mystery of God, and implications of women’s spirituality in our day. Students will have the opportunity to join an optional reading group that will focus on classic texts in the development of feminist theologies.

IIPS 50800. Trauma and Peacebuilding

(3 -0- 3) St. Ville

In this course we will critically examine issues of trauma and healing as they emerge in conflict situations and as challenges to peacebuilding. The course will be structured in three parts. In Part one, we will examine how theorists from such different disciplines as psychology, psychoanalysis, philosophy and cultural studies have conceptualized trauma and the necessary steps to recovery. In part two, we will review recent anthropological accounts that have emerged from areas of extreme trauma, notably Rwanda and Northern Uganda. These accounts will provide the backdrop for assessing the adequacy of the dominant theories of trauma and healing models, especially when these models are taken into cross-cultural contexts. In part three of the course we will reflect on the implications of our examination of trauma and healing for peacebuilding on both the micro and macro levels. We will consider the challenges and possibilities for working with victims of trauma in various cultural situations as well as the reality of secondary traumatic stress experienced by practitioners. On the macro level, we will consider

how trauma research might broaden our understanding of ideals of reconciliation, forgiveness and restorative justice, as well as the advisability of truth-telling commissions and war-crimes tribunals.

IIPS 50803. Approaches to Conflict Transformation

(3 -0- 3)

This course surveys the various theories that explore the nature and root causes of conflict and existing methods of conflict transformation. Students will learn to apply analytical tools and practical strategies in order to transform conflict at the interpersonal, intergroup, and international levels.

IIPS 50901. Environmental Justice

(3 -0- 3) Shrader-Frechette

This course will survey environmental impact assessment (EIA), ecological risk assessment (ERA), and human-health risk assessment (HHRA); ethical and methodological issues related to these techniques; then apply these techniques to contemporary assessments for which state and federal governments are seeking comments by scientists and citizens.

IIPS 50904. Political Economy of Development

(3 -0- 3) Kim

The course is divided into two parts. The first part provides an overview of the institutional and empirical features of the developing world, followed by a survey and critical evaluation of the conventional development theories. The second part looks into the selected topics evoking the critical, controversial stakes in Third World development debates today. The topics include: rent-seeking activities, land tenure and peasantry, micro-financing, corporate governance, failed state and market failure, market and democracy, income-distribution and poverty, feminism in development, ethnic conflicts in resource use, and population pressures. The approach taken in this course is a political-economy perspective with references to the historical, cross-cultural, and empirical materials. The course aims at providing the students with intellectual spaces for alternative development paradigms and strategies. Where appropriate, the tools used in economic analysis will be reviewed at an elementary and accessible level.

IIPS 57700. Writing Ethnography

(3 -0- 3)

This seminar will explore the craft of writing an ethnographic text. Considerations include how authority is established, how a sense of place is achieved, how theory and data are integrated, traditional and experimental relationships between “subject” and “object” in the anthropological enterprise, and the ethics and methods of representation. Student writing and critique will form a large part of the course work, and we will critically examine classic ethnographies to analyze style and the tactics of persuasion. The seminar fulfills the method requirement for the anthropology major.

Institute for Latino Studies

ILS 20001. Pirates, Planters and Peasants: Caribbean Experiences in the Past

(3 -0- 3)

The Caribbean is often depicted as a sea inhabited by pirates, filled with exotic islands, picturesque beaches and bucolic landscapes. What is often overlooked is the culture and history of the people who actually lived there. Who were the pirates of the Caribbean, why were the islands so important to European powers, and what were the effects of slavery? Focusing on Jamaica, Belize, and Barbados, this course charts the emergence of a multi-ethnic anglophone Caribbean through an examination of plantation colonies and the aftermath of slavery. Specifically it will focus on cultural encounters between Native Americans, Africans, and Europeans through a combination of ethnography, history and archaeology.

ILS 20075. Ballads to Hip-Hop: Music, Culture, and Society in Mexican America

(3 -0- 3)

This course is designed to introduce students to important historical and stylistic musical developments as part of the cultural experience of ethnic Mexicans in the United States. To this end, we examine both music-making and performance as aesthetic dialects of the social texture of “everyday life”. We will cover various styles and genres, including corridos (the Mexican ballad form), Chicano rock ’n’ roll and hip-hop, jazz, and contemporary folk-derived styles (i.e. Banda, Pasito Duranguense, Norteño) with attention to their historical, political, and musical significance. In order we achieve our aims, the course is organized along two axes: one chronological, the other conceptual—neither complete. The chronological portion will allow us to survey the various genres, styles, and ensembles of ethnic Mexican musical production. We dovetail this effort with a focus on important themes and concepts, identity, race, gender, migration, hybridity, that pertain to the present and historical social conditions of this community. Our approach, such that we are dealing with music-cultures, is at once anthropological and ethnomusicological, yet we are guided more broadly, by the paradigm of cultural studies, as we interrogate the expressive terrain where history, language, performance, and social bodies intersect.

ILS 20114. Script Analysis and Dramaturgy

(3 -0- 3)

In this course, students will learn: 1) how to read and interpret a playscript for production (script analysis) and 2) how to read and understand a dramatic text in terms of its historical and literary contexts (dramaturgical analysis).

ILS 20115. Latina Theatre

(3 -0- 3) Garcia-Romero

Latina/o theatre continues to expand throughout the U.S. theatre world since its rise to prominence in the 1970s. A significant aspect of this growth includes an increasing number of plays written by Latinas. This course is designed to introduce students to theatrical texts by U.S. Latina playwrights. Many of these playwrights hail from multi-cultural backgrounds and within their plays, engage equally with a variety of cultural complexities that complicate definitions of Latina/o culture and identity. Starting with works by the Obie-Award winning playwright, Maria Irene Fornes, this course will examine the trajectory of U.S. Latina theatre from the late 20th century to the present. Playwrights explored in this course also include Quiara Alegría Hudes, Cusi Cram, Elaine Romero, Caridad Svich and Karen Zacarias.

ILS 20232. Christian Ethics and Immigration

(3 -0- 3)

This course takes up the themes of welcoming the stranger and loving the neighbor to introduce students to the Christian tradition and its sources for ethical reflection: Scripture, tradition and experience. We will rely on immigration to the United States from Mexico as the primary though by no means exclusive test case to explore the theoretical and practical implications of our inquiry. The course’s textbooks are the Bible and *Christians at the Border: Immigration, the Church,*

and the Bible (2008) by M. Daniel Carroll. Students will also be required to read online resources, including the *Compendium of the Social Doctrine of the Church* (2004) and other church teachings. In four of our classes we will participate, along with students from universities across the U.S. in an e-study abroad session on migration through Catholic Relief Service’s Global Solidarity Network. The final course grade is based on class participation, participation in the e-study abroad activities, two quizzes, a midterm exam, a final exam, and a case analysis and presentation.

ILS 20277. Latin American Art and Architecture

(3 -0- 3)

This course introduces the student to the rich visual and religious culture of the peoples of Latin America at the arrival of the Europeans and thereafter. The course deals with Mexico and the Andean region from 1491–1821 and the encounter of Aztecs and Incas with Christian artistic culture, and vice versa. Attention will be paid to the indigenous art forms on the eve of the Spanish invasion, the cooperative work of natives and clergy in the construction and decoration of churches, and in the development of a hybrid multicultural, multiracial society. Late medieval, Renaissance and Baroque art forms, as reinterpreted in the Spanish-speaking Americas, are the focus. Questions of religious syncretism and conscious enculturation through the arts are raised. Issues of colonialism, race, gender and class will also be dealt with in the context of the visual religious cultures of the Latin American past and present. A reading knowledge of Spanish would be helpful but is not required.

ILS 20301. Stories of New America

(3 -0- 3)

The Latino populations of the United States increasingly influence many sectors of American society. Despite this ongoing demographic shift, mainstream American society often views these populations within the severely restricted fields of view of undocumented immigration, drugs and crime. In response, this course asks two large questions: What can be said about the complexities of these American populations? And how might the America of the future differ from today’s version? Course readings will include Norma Cantus’ *Canicula*, Cristina Garcia’s *Dreaming in Cuban*, Nuyorican poetry by Tato Laviera, Rudolfo Anaya’s *Bless Me, Ultima*, Richard Rodriguez’s *An Argument with My Mexican Father*, and various selections by Gloria Anzaldúa, Julia Alvarez, Tino Villanueva, Pedro Pietri, and others. Our films will include *Come and Take It Day* and the film version of Tomas Rivera’s class work *...and the earth did not devour him*. We will augment our primary fiction and poetry with critical, scholarly articles to illuminate our materials and broaden our discussions. Students will write four essays, and take a mid-term and final exam.

ILS 20302. Latinos, leadership and literature

(3 -0- 3) Limon

Recently a media news outlet raised the questions: “Who are the Latino leaders of today? Do Latinos need leaders?” Such questions are raised, of course, in the context of a continuing social marginalization of Latino communities in the United States. This class turns primarily to literary sources of varying genres to explore the issue of Latino leadership asking these same questions but others as well. What might be the characteristics of a successful Latino leadership? What constitutes failure? Are writers “cultural leaders?” Are Latinas the leadership of the future? What kind of an education best produces leadership for Latinos? Is there a special role for Notre Dame in such an endeavor? Among others we will read Franz Fanon, Ernesto Galarza, Américo Paredes, John Phillip Santos, Richard Rodriguez, Mario T. García and Esmeralda Santiago as well as having guest speakers on this question.

ILS 20317. Class and Mobility in Latino Cultural Expression

(3 -0- 3) Limon

The continuing social marginality of Latinos in the United States has understandably led artists from these communities to emphasize this marginality in their representations cast chiefly in the imagery that the cultural theorist, Hayden White, has called the “Wild Man” and the “Noble Savage.” We will revisit these

representational strategies in writers, painters and film makers such as Cesar González, Tomás Rivera, Piri Thomas and Edward James Olmos among others. However, we shall also examine newer representations that are charting the mobility of these communities into the middle class such as the work of Oscar Hijuelos, Oscar Casares and the non-Latino film maker, John Sayles.

ILS 20556. The American South: Race and Representations

(3 -0- 3)

This course will trace a long historical arc in considering depictions of the United States South and of the peoples who have lived there. Though we'll dip into the eighteenth century, the course will be roughly divided between the nineteenth and twentieth centuries. And while we'll spend most of our time analyzing the relations of blacks and whites, during slavery and after, we'll also consider the experiences of Native Americans, Asians, and Latinos. What role has "the South," as a place both real and imagined, played in the cultural history of the United States? And—as a region almost entirely set apart—how has "the South" figured in the creation of national identity? To what extent has it been used to contain, and even quarantine, the nation's racial problems? We'll dwell on these questions, and others, as we engage with novels, slave narratives, paintings, and films.

ILS 20701. Introduction to Latinos in American Society

(3 -0- 3) Cardenas

This course will examine the sociology of the Latino experience in the United States, including the historical, cultural, and political foundations of Latino life. We will approach these topics comparatively, thus attention will be given to the various experiences of a multiplicity of Latino groups in the United States.

ILS 20703. Health and the Latino Paradox

(3 -0- 3)

The objective of this course is to enhance your awareness of major theories, concepts, issues and research studies related to the physical and mental health of Latinos in the United States. Particular attention will be drawn to the diversity of the Latino experience in the U.S. and the health care system in terms of country of origin, race, class, gender, and generation. This course attempts to be an introduction to the historical, political, economic and social structures that determine how a subpopulation in the United States is defined within and navigates thru a primary institution, like health care, and the ramifications of this for the society at large.

ILS 20800. U.S. Latino Spirituality

(3 -0- 3) Elizondo

U.S. Latino spirituality is one of the youngest spiritualities among the great spiritual traditions of humanity. The course will explore the indigenous, African, and European origins of U.S. Latino spirituality through the devotions, practices, feasts, and rituals of the people.

ILS 20801. Latin American and U.S. Latino Theologies

(3 -0- 3)

This course examines the emergence and development of Latino religion and theology in the United States. In particular, the course will explore how U.S. Latina and Latino theologians have articulated the meaning and implications for Christian living of core theological topics such as Christology, evangelization, social justice, and liturgy.

ILS 20900. Spanish for Heritage Speakers

(3 -0- 3)

This course of intensive grammar study, reading, and writing is designed for those who may speak Spanish with some fluency but need additional work on their grammar and writing skills. It is most appropriate for students who speak some Spanish in the home but whose primary language is English. The goal is to work toward becoming fully bilingual and to strengthen the command of written Spanish and the mechanics of composition and style.

ILS 20901. La telenovela: history-culture-production

(3 -0- 3) Mangione-Lora

Prerequisite: ROSP 20202

The goal of this course is to facilitate student exploration of the genre of the telenovela. Students will sharpen oral and written language skills through exposure to authentic telenovelas from Latin America, reading of authentic texts, and through the creation and production of their own telenovela. They will hone their oral and written proficiency and learn the idiosyncrasies of Hispanic culture as they write, direct, act in, tape, and edit a telenovela. During this process students will also learn and apply basic videography and non-linear video and audio editing techniques.

ILS 20911. Approaches to Hispanic Cultures through Writing

(3 -0- 3)

This content-driven course is intended for students who want to further broaden their knowledge of the Spanish language and related cultures, as well as improve both their understanding of the Hispanic world and their communication skills in the Spanish language. Development of advanced structures is achieved through intensive practice in speaking and writing. Each course focuses on a different aspect of Hispanic culture.

ILS 21011. Playwriting

(3 -0- 3)

This course is designed to introduce students to creating original work for the theater. The course will explore the writing process as well as models from contemporary U.S. theater with the aim to present a variety of paths toward creating new, vibrant plays. This is primarily a writing course. In addition, by reading and discussing ten separate dynamic play texts, we will analyze dramatic writing. Weekly writing exercises, movement work, visual arts approaches, improvisation techniques and collaborative discussions will create resources for rich play material, which each student will eventually use in a final scene, presented in a public reading at the end of the semester.

ILS 30001. Mexican Photography

(3 -0- 3)

This course examines Mexican photography from the 19th century on to contemporary works. Theoretical issues pertaining to the histories of photography, with emphasis in documentary photography, photography as an art form, photojournalism and photo manipulation are part of this course. Key films, such as *Mala Hierba* from 1940 and *Canoa* (1970), will be discussed in the context of the relation they have with still images. Photography and film will be situated to particular photographic moments and specific socio-cultural and political developments in Mexico. Critical questions on the role of photography in the formation of national narratives and the role of photographers in the life of art and culture will be addressed. Works by Romulado García, Agustín Casasola, Manuel Álvarez Bravo, Nacho López, Lola Álvarez Bravo, Tina Modotti, Lourdes Grobet, Graciela Turbide and other artists will be discussed.

ILS 30005. Latinos in American Film

(3 -0- 3)

This course will survey representations of Latinos in American cinema from the silent era to the present. We will examine how stereotypes associated with Latinos have been produced, reinforced, and challenged in American films—from "greasers" and "Latin lovers" to gangsters, kingpins, and border crossers. We will explore the fascinating contradiction that, despite a long history of misrepresentation and underrepresentation, Latinos have made significant contributions to Hollywood and independent cinema. We will also examine the rise of Latino directors in recent years and their drive to reframe the Latino image for American audiences. Screenings will range from the silent epic *Martyrs of the Alamo* (1915) to more recent films such as *Maria Full of Grace* (2004). Our interdisciplinary approach to the subject will draw upon readings from history, film theory and criticism, and ethnic/American studies. Students will take a midterm exam and make class presentations.

ILS 30007. The U.S.-Mexican-Border

(3 -0- 3) Ruiz

The U.S.-Mexico border has been a hotly contested social and political space since it took its current shape in the mid-nineteenth century. Today, the border remains the source of contentious debates in the United States—from proposed amnesty for undocumented workers and unprecedented activism for migrants' rights to those who argue for a 700-mile fence to physically divide the two nations—even as Latinos have become America's largest minority group. This course will unpack these varied (and often contradictory) meanings of the border, paying particular attention to the history of representations of Mexico and "Mexicanness" in the United States and their impact upon foreign policy, political organizing, and cultural relations. Our approach will be interdisciplinary, drawing on methods and texts from history, sociology, film studies, critical race theory, cultural studies, and ethnic studies. Together we will read texts as varied as Gloria Anzaldúa's *Borderlands/La Frontera* and Steven Soderberg's *Traffic*.

ILS 30010. Images of Mexico: A Photographic Journey

(3 -0- 3)

This course on Mexican photography is taught from the lens of Mexican documentary photographer, Antonio Turok. We will explore key themes and struggles in Mexican society and culture through the visual legacy of Mexico's photographers, domestic and foreign, past and present. The primary goal of the course is to analyze photography as a means of understanding Mexico's complex diversity of peoples, landscapes and history. The goal of the course is not only to motivate students to learn about Mexican photography but also to analyze the political, social, economic, cultural and religious contexts informing the work in order to formulate a broader understanding of Mexico and Mexicans. Among the questions we will be asking in our exploration of the photography of Mexico are what motivated the photographer to create the images; how did the photographer shape the images to become visual symbols? Materials for the course include the visual legacies of photographers, photographic criticism and recorded interviews with the photographers talking about their work.

ILS 30012. Exploring Society Photographically: Sharing, Voicing and Healing in Times of Crisis

(3 -0- 3)

Students will work with internationally known documentary photographer to achieve a body of images along with text to express the issues that we are facing today. Students will be asked to use photography as a means to document the current economic realities that we are facing today, such as home foreclosures, loss of jobs, businesses closing, cost increases in gasoline and food, etc. These images will be used in a final exhibition at the end of the semester and it is the hope of the instructor that a catalog can be published to distribute to the community at-large as well as the local, state, and new federal administration. This class will engage students in a positive and creative manner as to how to make a difference in society through their reflective images and words for change.

ILS 30014. Relief Printing: Studio Class

(3 -0- 3) Segura

Students will learn the technical skills associated with relief printmaking processes such as linocut, woodcut, and wood engraving. There will be a historical component where students will learn the essential history of early relief printmaking thru to contemporary uses of the process. Students will also take part in critical analysis of artwork produced for this class.

ILS 30015. The Hyphenated American

(3 -0- 3)

This course will engage theatrical works for, by, and about hyphenated Americans (African-Americans, Asian-Americans, etc.) Students will see live theatre, theatre on video, and interviews with dramatists and performers. Reading and understanding plays and various theoretical materials on race, culture and immigration will also be vital components of the course. The course will require a large research project based on a topic of the students' choosing.

ILS 30020. Beyond Beans and Rice: Theatre from Latin America

(3 -0- 3)

What does popular theatre look like beyond our borders? What can we learn from artistic choices are in Mexico, Argentina or Cuba? This course will serve as an introduction to contemporary plays, playwrights and performances from Latin America. Models from South America, Central America, North America and the Caribbean will be included (in English) to give students an overview from a sampling of the Spanish-speaking world. Students will be expected to read plays and articles, analyze scripts and performances, give creative and/or historical presentations about contexts in Latin American countries, participate in discussions about theatrical methods and materials, and research areas of particular interest to them. No previous Spanish language or acting experience is necessary.

ILS 30100. Societies/Cultures of Latin America

(3 -0- 3)

This course introduces students to the diverse cultures and societies of Latin America through historical, ethnographic, and literary study. Contemporary issues of globalization, violence, and migration will preoccupy the discussion of Central and South America and the Caribbean today.

ILS 30101. Caribbean Diasporas

(3 -0- 3)

This course examines the development of Creole societies in the French, Spanish, Dutch, and British Caribbean in response to colonialism, slavery, migration, nationalism and, most recently, transnationalism. The recent exodus of as much as 20 percent of Caribbean populations to North America and Europe has afforded the rise of new transnational modes of existence. This course will explore the consciousness and experience of Caribbean diasporas through ethnography and history, religion, literature, music, and culinary arts.

ILS 30102. Creole Language and Culture

(3 -0- 3) Richman

This course introduces students to the vivid, sonorous language of Kreyòl, or Creole, and to the fascinating culture of its speakers. This intensive, beginning-level course is intended for students with no knowledge of Creole. In small-group teaching sessions, students will be prepared for conversational fluency with basic reading and writing skills, emphasizing communicative competence as well as grammatical and phonetic techniques. Our study of Kreyòl is closely linked to our anthropological exploration of how the language is tied to Caribbean society and culture. The course takes a holistic, anthropological approach to the history, political economy, and religion of Haiti. In addition to class work, audio tapes, music and film enhance the study of the Haitian language and culture.

ILS 30103. Intermediate Creole Language and Culture

(1.5 -0- 1.5) Richman

Prerequisite: ILS 30102

This intermediate level course is intended for students who have taken Beginning level Creole. In small-group teaching sessions, students will be prepared for conversational fluency with basic reading and writing skills, emphasizing communicative competence as well as grammatical and phonetic techniques. Our study of Kreyòl is closely linked to our exploration of how the language is tied to Caribbean society and culture. Evaluation of student achievement and proficiency will be conducted both informally and formally during and at the conclusion of the course. Those looking to develop or improve their language skills are welcome to the class. The program is designed to meet the needs of those who plan to conduct research in Haiti or in the Haitian diaspora, or who intend to work in a volunteer or professional capacity either in Haiti or with Haitians abroad.

ILS 30110. Latino Printmaking and its Roots from the 14th to the 21st Century: History, Critique, and Practice

(3 -0- 3) Segura

This course combines classroom study with studio practice. The course provides a historical overview of early European, Latin American, and American Latino printmaking. We will consider how artists represent gender, immigration, politics, history, border issues, labor, religion and other themes in printed form. Our study

of prints will include visits to the Snite museum collection as well as off-site visits to local collections of European, Latino and Latin American prints. As a studio course, the class introduces students to the fundamentals of printmaking; processes may include lithography, etching, relief and silkscreen. The class project will be a collaborative print inspired by the visit of an artist.

ILS 30306. Women in the Americas

(3 -0- 3)

This introductory course will survey a wide variety of literature (fiction, poetry, testimonios, personal essays, autobiographies, critical essays, and oral histories) and film written by and about women in the Americas from the time of the conquest/ encounter to the present. We will focus on literature and film produced by women of color in the Americas (South, Central, and North, as well as the Caribbean). Issues to be explored include: colonization and resistance; slavery; intercultural contact, exchange, and transformation; the place of womanhood in the development of nation; woman of color feminism; and religion and spirituality. We will read materials from previous historical periods, but we will primarily focus on 20th-century representations and interpretations of these issues.

ILS 30308. Latino/a Poetry

(3 -0- 3)

This course will focus on several prominent contemporary Latino poets whose work has enriched and diversified the canon of American poetry in the last 20 years. Among them are such established and acclaimed authors as Gary Soto, Lorna Dee Cervantes, Pat Mora, Martín Espada, and Victor Hernández Cruz. Because Latinos are not homogeneous, emphasis will be given to these poets—diverse ethnic and cultural origins. In this regard, one important component of the course is the various ways in which Latino poets respond to the spiritual and the sacred. Other topics to be discussed include social justice, the family, identity (in its multiple forms), and, of course, poetics. Readings will be assigned in individual poetry collections and in one anthology.

ILS 30310. Tropical Heat Waves: Contemporary Latino/a and Caribbean Literature

(3 -0- 3)

A review of selected contemporary Latino/a and Caribbean novels.

ILS 30315. U.S. Latino/a Poetry

(3 -0- 3)

The literature of Latina/o immigration and migrancy brings together a range of contemporary concerns, from identity, to the transnational, to definitions of the literary. How does international movement inflect notions of American identity? How do writers create and describe communities in constant movement? These are only two questions that can be posed to the literatures of Latina and Latino transnational and intra-national movement. In this course, we will read a range of recent materials dealing with immigration between Mexico and Latin America and the United States, and with intra-national migrancy. Key texts will include, Luis Alberto Urrea's *The Devil's Highway*, Julia Alvarez's *How the Garcia Girls Lost Their Accents*, Cristina Garcia's *Dreaming in Cuban*, Tomas Rivera's *and the Earth did not devour him*, and Elva Treviño Hart's *Barefoot Heart: Stories of a Migrant Child*. In addition, we will draw upon various critical readings focusing on transnationalism, displacement, and new theories about contemporary globalization. Students will write three short essays and a final exam, and will be required to participate actively in class.

ILS 30400. History of Modern Mexico

(3 -0- 3)

This course examines the complex nation that is Mexico in the 20th century, its challenges, and its prospects. Focusing primarily on the period since 1870, we will study the social, economic, political, and cultural forces that have shaped the history of the United States' southern neighbor.

ILS 30401. Mexican-American History

(3 -0- 3) Rodriguez

This course is an introductory survey of Mexican American history in the United States. Primarily focused on events after the Texas Revolution, and annexation of the American Southwest we will consider the problems the Spanish and Mexican settlers faced in their new homeland, as well as the mass migration of Anglo-Americans into the region following the annexation. Throughout the course, we will explore the changing nature of Mexican American U.S. citizenship. Other themes and topics examined will include immigration, the growth of agriculture in Texas and California, internal migration, urbanization, discrimination, segregation, language and cultural maintenance, and the development of a U.S. based Mexican American politics and culture. Although primarily focused on the American Southwest and California, this course also highlights the long history of Mexican American life and work in the Great Lakes and Midwestern United States. We will conclude with the recent history of Mexican and Latin-American migration to the United States after 1965, and the changing nature of Mexican American identity and citizenship within this context.

ILS 30402. Modern Latin America

(3 -0- 3)

A survey of Modern Latin American History.

ILS 30403. U.S. Civil Rights History: The Chicano Movement

(3 -0- 3)

The "Chicano Movement" for Mexican American civil rights grew in tandem with the main contours of the civil rights culture that developed in the United States during the 1960s. As such, this course seeks to place the movement alongside other national movements for social change including the African American civil rights movement, labor movement, counter-culture, and the anti-war movement. It will also be attentive to related efforts to build bridges between Latino populations (mainly Puerto Ricans) in American cities. As it emerged in the 1960s, the Chicano Movement challenged and maintained the ideological orientation of past efforts for Mexican American inclusion as it borrowed from the rich mix of social and cultural movements that defined the 1960s and early 1970s. This course will explore movement centers in California and Texas as well as a growing body of research on the civil and labor rights efforts in the Great Lakes, Pacific Northwest, and other Mexican ancestry communities across the United States as well as connections to Mexico and Cuba. This course will detail the key events and leadership of the movement as well as the art, music, and cultural production of one of the most important American civil rights movements of the post World War II era.

ILS 30404. The Mexican Revolution: One Hundred Years of Images and Interpretations

(3 -0- 3)

This year marks the 100th anniversary of the Mexican Revolution. Conflicting interpretations and a massive amount of secondary literature, films, and artistic expressions have been generated over the last century to highlight the significance of this "first world revolution of the 20th century." This course examines the multiple and diverse images and interpretations that have been produced over the last century of the Mexican Revolution on the part of historians, the Mexican state, its cultural industry, political activists, international actors, and Mexican Americans living in the United States. The goal of the course is to provide students with a clear understanding of the origins, outcome, impact, and multiple legacies of the Mexican Revolution as interpreted in both Mexico and the United States with particular emphasis on the armed, post-revolutionary, and institutional phases, from 1910 to the 1970s.

ILS 30405. Colonial America

(3 -0- 3) Cangany

This course considers the history of New World exploration and settlement by Europeans from the 15th century to the 18th century. It examines the process of colonization in a wide variety of cultural and geographic settings. It explores the perspectives of Indians, Europeans, and Africans with a particular emphasis on the consequences of interracial contacts. We will discuss the goals and perceptions

of different groups and individuals as keys to understanding the violent conflict that became a central part of the American experience. Lectures, class discussions, readings, and films will address gender, racial, class, and geographic variables in the peopling (and de-peopling) of colonial North America.

ILS 30406. Working in America since 1945

(3 -0- 3) Graff

This course explores the relationships among and between workers, employers, government policymakers, unions, and social movements since the end of World War II, as well as the ways in which those relationships have shaped and been shaped by American politics and culture more broadly. The United States emerged from the Second World War as the globe's unequaled economic and political power, and its citizens parlayed that preeminence into a long postwar economic boom that created, however imperfectly, the first truly mass middle-class society in world history. At the heart of that new society was the American labor movement, whose leaders and members ensured that at least some of the heady postwar profits made it into the wallets of workers and their families—and not just the wallets of union members, as working Americans generally experienced great improvement in wages, benefits, and economic opportunity during the quarter-century ending in 1970. During those same years, civil rights activists challenged the historic workplace discrimination that kept African Americans at the bottom of the labor market, confronting the racism of employers, unions, and the government, and inspiring others, primarily Mexican Americans and women, to broaden the push for equality at the workplace. Since that time, however, Americans have experienced a transformation in the workplace—an erosion of manufacturing and the massive growth of service and government work; a rapid decline in number of union members and power of organized labor; and unresolved conflicts over affirmative action to redress centuries of racial and gender discrimination. Meanwhile, income inequality and wealth disparities have grown every year over the past three decades. What accounts for the decline of organized labor since 1970, and why have the people of the mythic land of milk and honey experienced declining upward mobility and widening gaps between the rich and everyone else? Are these phenomena linked? What has the decline of the labor movement meant for workers specifically, and the American economy and politics more broadly? How and why have popular perceptions of unions changed over time? What has been the relationship of organized labor to the civil rights movement, feminism, modern conservatism, and the fortunes of individual freedom more broadly? What is globalization, and what has been its impact upon American workers? Through an exploration of historical scholarship, memoirs, polemical writings, and films, this course will try to answer these questions and many others. It will also address the prospects for working people and labor unions in the twenty-first century.

ILS 30441. Working to Eat: A Labor History of American Food

(3 -0- 3)

This social and cultural history course explores the unpaid and paid work related to the production, processing, distribution, sale, serving, and clean-up of what Americans have eaten, from the colonial era to the present. Sites of investigation will include the farm and the factory, the kitchen table and the drive-through window, and everywhere Americans have worked to feed themselves or others. Close attention will be paid to gender and race as organizing features of the American food economy over the past four centuries.

ILS 30500. Latinos and the U.S. Political System

(3 -0- 3)

This course provides a careful and “critical” analysis of the political status, conditions, and the political activities of the major Latino (or “Hispanic”) groups in the United States—particularly, Mexican-Americans, Puerto Ricans, and Cuban-Americans. To provide a context and grounding, various theoretical perspectives are first considered, followed by discussions of the historical experiences and contemporary socioeconomic situations of the several Latino groups. Attention then turns to a number of issues concerning political attitudes, behaviors, and activities. Assessments of Latino influence upon the major local, state and national institutions of the political system—and vice versa—are next considered. Policy

areas particularly significant for Latinos are also examined. Finally, the major issues, questions, and themes considered throughout the semester are “revisited” and reconsidered.

ILS 30504. U.S.–Latin American Relations

(3 -0- 3)

The primary goal of the course is to understand the bases for the political, economic, and security relations of Latin American states with the United States. The course begins with a theoretical and historical examination of the competing perspectives on what determines United States policy toward Latin America: its normative ideals, its security interests, or its economic interests. It then takes up several enduring themes in U.S.–Latin American relations, including the response of the United States to dictatorships, expropriations of United States-owned property, and revolution, and efforts to promote development, democracy, and human rights. Next, it considers the relations of several Latin American states with each other and the United States, from the Latin American point of view, with special attention paid to the foreign policies of Cuba and Mexico. Finally, it examines several new issues in U.S.–Latin American relations, including regional free trade agreements and trade policy, the environment, migration, and drugs, in a post-Cold War environment.

ILS 30505. Latin American Politics

(3 -0- 3)

Latin America is vital for the United States because of the region's importance in trade, migration, the environment, and security issues. This course is an introduction to the politics of this important region of the world. What are the major challenges facing Latin America in the early 21st century? How are different countries facing these challenges? What are the origins of the current dilemmas and opportunities facing Latin America? The main objective of the course is to provide understanding of some of the major political challenges facing Latin America today. The final section will provide an overview of some of the outstanding issues in U.S./Latin American relations.

ILS 30507. Latinos in the Midterm Elections

(3 -0- 3)

Participation among Latino voters surged in the 2008 Presidential election. In 2010, the Latino electorate is poised to play an important role in several key states with hotly contested statewide elections. This increased awareness of the role of Latinos is evident by increased efforts of both major parties since the 2000 presidential election. Despite their augmented presence, many misconceptions plague national understanding of this diverse population. This course will cover a broad range of issues to draw connections between the Latino community and American political systems and institutions. Questions that arise are: What difference does it make to be Latino and are there Latino-specific issues and concerns? How does the political system view and treat Latinos? To what extent do Latinos participate in politics and mobilize to advance their political interests? These questions will help us highlight the role of Latinos nationally and locally in the 2010 midterm elections.

ILS 30508. Urban Politics

(3 -0- 3) Ramirez

This course introduces students to major actors, institutions, processes, and policies of sub-state governments in the United States. Through an intensive comparative examination of historical and contemporary politics in city governments, we will gain an understanding of municipal government and its role within the larger contexts of state and national government.

ILS 30535. Race/Ethnicity in American Politics

(3 -0- 3)

This course introduces students to the dynamics of the social and historical construction of race and ethnicity in American political life. The course explores the following core questions: What are race and ethnicity? What are the best ways to think about the impact of race and ethnicity on American citizens? What is the history of racial and ethnic formation in American political life? How do race and ethnicity link up with other identities animating political actions like gender

and class? What role do American political institutions the Congress, presidency, judiciary, state and local governments, etc. play in constructing and maintaining these identity categories? Can these institutions ever be used to overcome the points of division in American society?

ILS 30686. Racialization in the U.S. and Brazilian History

(3 -0- 3)

This course will consider the processes that have caused aspects of society to be racialized, or labeled with racial meanings, symbolisms, and/or identities. The class will focus on, but will not be limited to, “black” racialization. We will examine how racialization has shaped the human experience in the largest ex-slaveholding nations of the Americas—the United States and Brazil. Our goal is to understand the ways in which not only people are racialized, but also communities, geographical regions, nations, cultural production (such as music), behavior, labor, and gender, to name a few. With these two nations as our case studies, the class will explore the dynamic nature of racialization, focusing on the impact that space and time has had on the way we identify and live race.

ILS 30704. Race and Ethnicity and the Latino Population in the U.S.

(3 -0- 3) Duarte

How Latinos are racialized often defies the common understanding of race as either Black or White. This course attempts to complicate this debate by exploring the historical, political, economic and social structures that determine the ethnic and racial stratification of Latinos in the United States. Topics include the multigenerational experience of Latinos, contemporary immigration, Latino youth and gender.

ILS 30707. Migration, Documented

(1 -0- 1)

The migration of people from their homelands is as old as humanity. Yet migration is still misunderstood; emigrants are often seen as traitors and immigrants as dangerous and self-serving invaders. Film is a burgeoning medium for documenting experience of migration for the migrants themselves, the communities they leave and the societies in which they settle. Documenting migration compels us to question the meanings of borders, the nature of identity, and the possibility of cultural pluralism and integration. This course showcases documentary films about migration in the Americas.

ILS 30708. Latinos and the City

(3 -0- 3)

This course is a critical examination of urban life and how it affects and is affected by Latinos. We will explore the salient features of social structure, experience and transformation in the American metropolis as it relates to the past and growing Latino population. This class will be geared toward viewing the city as simultaneously a social, cultural, and political economic phenomenon, with particular attention to the following concerns: 1) the city as a locus of ethnic, racial, gender and class relations, interactions and conflicts; 2) The growing urban population in Latin American and its effects on Latino immigration to the U.S.; 3) how Latinos have been affected by strategies of urban “revitalization” and the future of the “postmodern” city in the major metropolitan areas of the United States (i.e. Los Angeles, New York, Chicago and Miami).

ILS 30709. Undocumented Immigrants: The Social Consequences of Immigration Policy

(3 -0- 3)

This course examines the social realities of undocumented immigration to the United States through sociological and cultural perspectives. Notable emphasis will be placed on Mexican migration. The course will be divided into four four-week segments, beginning with an overview of unauthorized migration to the United States and an introduction to various theories of immigration. The following section will examine the social consequences of contemporary immigration policy and U.S.-Mexico border enforcement, including increased migrant deaths and human rights violations along the southern border. We will then trace the legal and social criminalization of unauthorized migrants and will highlight the consequences of

these processes. The course concludes by comparing and contrasting unauthorized migration in countries around the world to U.S.-Mexico case. Each class will begin and end with a short lecture. The rest of the class time will be spent discussing the assigned material as a group in a seminar-style setting. Various documentaries and guest-speakers will be used throughout the semester to supplement the course material.

ILS 30710. The Catholic Church and Immigrant Rights Movement: The Ethics of Mobilizing for Immigration Reform

(1 -0- 1)

One cannot study the Church’s efforts on immigrant rights without first understanding the religious values that drive and constrict the church’s actions. Thus, in this course we will examine Catholic Social thought as the impetus for the Church’s policy positions and activism on immigration legislation. We will examine the values and ideas of Catholicism regarding immigration as expressed through the Gospel, Papal Statements, and Bishops Statements. We will limit our discussion of the Catholic Church’s activism and policy positions to two legislative campaigns: the Immigration Reform and Control Act of 1986 and the current of HR4437/S2611 campaign.

ILS 30711. Health and the Latino Paradox

(3 -0- 3) Duarte

The objective of this course is to enhance your awareness of major theories, concepts, issues and research studies related to the physical and mental health of Latinos in the United States. Particular attention will be drawn to the diversity of the Latino experience in the U.S. and the health care system in terms of country of origin, race, class, gender, and generation. This course attempts to be an introduction to the historical, political, economic and social structures that determine how a subpopulation in the United States is defined within and navigates thru a primary institution, like health care, and the ramifications of this for the society at large.

ILS 30803. Social Concerns Seminar: Hispanic Ministry

(0 -1- 1)

The Center for Social Concerns and the Hispanic Ministry jointly offer a pilgrimage based in the Parish of Nuestra Senora de Soledad in Coachella, California. Participants will have the opportunity to experience the Church’s option for the poor through an immersion into the spirituality, culture, and economy of the rural southern California community of Coachella. Students will meet with resource people making a difference in the lives of valley residents by helping them with immigration issues, housing, access to education and health programs, and overcoming addiction.

ILS 30804. Social Concerns Seminar: Border Issues

(0 -1- 1) Beyerlein

This seminar examines immigration and related issues that surface between the United States and Mexico. Participants travel to El Paso, and Ciudad Juarez, Mexico to meet refugees, work with parish organizations, and discuss policy issues.

ILS 30805. Latino Theology and Christian Traditions

(3 -0- 3)

This course examines the emergence and development of Latino Religion and theology in the United States. In particular, the course will explore how U.S. Latino and Latina theologians have articulated the meaning and implications for Christian living of core theological topics such as Christology, evangelization, social justice, and liturgy.

ILS 30851. Rebel Youth in Latino/a America

(3 -0- 3)

This course will explore the history of youth and youth movements of Latino descent in the United States during the 20th century with particular emphasis on the historical evolution of two representative communities: Mexican Americans in the South West and Puerto Ricans in New York. How was youth discovered and defined as an age group in these two “communities”? More specifically, what did it mean to be a “pelona” or a “flapper” of Mexican descent during the roaring

1920s, a “pachuco” in East Los Angeles during WWII, a “rebel without a cause” of Puerto Rican descent in postwar New York, a young Chicano/a or a young Mexican American during the 1960s and 1970s, a young Nuyorican or a member of the Young Lords Movement in Spanish Harlem in the same turbulent period, a so-called “cholo” in the streets of San Antonio and Los Angeles during the 1980s, or a Latino/a hip-hop artist in the Bronx and Miami during the 1990s? Did young people construct these identities and/or labels different in any way or fashion, as the media, the state, the conservative right, the left, or the cultural industry? Moreover, what were some of the social and political consequences that negative as well as positive perceptions of Latino/a youth had on mainstream America? Finally, how did young people of Latin American descent organize politically to challenge “labels” imposed on them from above, shape their respective identities from below, and improve their local communities? Were they successful in achieving their goals; if so, how? To answer these broad historical questions, students will be asked to critically evaluate theoretical approaches to the study of youth, learn the history of Latino/as in the United States, explore the political thought of various youth movements, and examine different aesthetic expressions of Latino/a youth. In addition, students will be required to analyze relevant primary sources, including political manifestoes, memoirs, newspapers accounts, photographs, television images, documentaries, and films. The course will conclude with a brief exploration of youth culture in the United States today with particular emphasis on media representations of Latino/a youth produced in commercial Hollywood films, MTV videos, and Television shows.

ILS 30903. Studies in Modern Spanish America: El Caribe en la poesía: de Martí a Martín Espada

(3 -0- 3)

Prerequisite: ROSP 27500 or ROSP 20237 or ROSP 20220 or ROSP 30310 or ROSP 30320

This advanced 300-level course is intended for students who want to further broaden their knowledge and understanding of the Hispanic world through literature, art, film, and other cultural manifestations. Each course focuses on a different aspect of the culture of Modern Spanish America. Course taught in Spanish.

ILS 33959. Latino Community Organizing Against Violence

(1 -0- 1) Mick

This seminar will examine current efforts among community activists and organizations in favor of violence prevention and intervention. As an active participant, you will be invited to explore the rich cultural heritage of Chicago during a five-day immersion. From the perspectives of the violence prevention and intervention initiatives that you will gain, you will be encouraged to reflect on the challenges and opportunities that go hand in hand with cultural diversity as it is experienced in Chicago and South Bend. In particular, we will explore cultural diversity from the standpoint of the dynamic of immigration and integration that the Latino population—especially its teenagers and young adults—is living through. The seminar is a one-credit hour course graded “S” or “U.”

ILS 33967. Social Concerns Seminar: Migrant Experience

(1 -0- 1) Toms Smedley

This seminar offers a unique immersion into the lives of migrant farm workers in Florida during the spring harvest. Students pick tomatoes in the fields (donating their wages), live with migrant families, assist church and social agencies that serve migrants, and meet with community leaders, never again to take food for granted.

ILS 35801. Summer Service Learning: Latino Leadership Intern Program

(3 -0- 3)

This is a leadership internship for Hispanic studies working 10–12 weeks in a Hispanic/Latino area with organizations dedicated to empowering local communities. Students will complete the requirements of THEO 33931 and work with the Center for Social Concerns to build partnerships with the agencies and people involved. Application and interview necessary for participation.

ILS 40246. U.S. Latino Catholicism

(3 -0- 3)

Latina and Latino Catholics have lived their faith in what is now the continental United States for almost twice as long as the nation has existed. This course explores the origins and development of Latino Catholicism in the United States, particularly the theological contributions of contemporary Latinas and Latinos.

ILS 40301. Memory in Latino/a Literature

(3 -0- 3)

What is memory? Do we have national or communal memories and, if so, how are these formed? Does the present affect the memory of the past? What is the relationship among memory, history and fiction? In this course we will consider these questions as we study Latino/a novels, short stories, autobiographies, memoirs, poetry, film and performance. Our selected texts frequently address or invoke memory, linking it to an exploration of belonging and to individual and communal identities (national, ethnic, racial, gendered, sexual). Some of the questions we might ask ourselves as we read include: What is remembered in Latino/a literatures? How and why do these literatures invoke and create individual and collective memories? How does memory intersect with the “stance of resistance” that Ramon Saldivar suggests is a central to Chicano/a literature? Who does the remembering? How do acts of memory expand the parameters of what constitutes “Latino/a” or map multiple Latino/a nations? Requirements for this research seminar include: weekly one-page critiques, regular participation in discussion, one oral presentation, and an original research paper of 15 pages length (including bibliography and first draft for review. This small group research seminar affords students the opportunity for more in-depth work with professor and peers.

ILS 40304. Icons and Action Figures in Latino/a Literature

(3 -0- 3)

Understanding U.S. Latino/a literature, art, and film through its many allusions to and representations of traditional icons and historic figures as well as legends, myths, popular figures, and action heroes/heroines of the Americas (including those with origins in Native American, Latino/a, African, Asian, and European cultures).

ILS 40305. Migrating Melodramas: Latino/a Literature and Popular Culture

(3 -0- 3)

This course examines how various forms of popular culture from Latin America and the Caribbean migrate to the U.S. and are reappropriated by Latina/o cultural producers. Focusing particularly on theories of melodrama as a feminine discursive space, we will analyze several works of Latina/o literature which underscore women’s active interpretation of music, film, and television. While this is a literature-based course, students will also examine how hybrid cultural products such as contemporary boleros, films, and telenovelas produce a transnational imaginary that connects Latinas/os in the U.S. with Latin America and the Caribbean. We will read novels such as *Loving Pedro Infante* by Denise Chavez, *The Mambo Kings Play Songs of Love* by Oscar Hijuelos, and *Tomorrow They Will Kiss* by Eduardo Santiago.

ILS 40307. Literatures of Immigration

(3 -0- 3)

Closed reading of recent literature that explores the immigration between Mexico, Latin America, and the United States.

ILS 40311. Mexican-American Fiction

(3 -0- 3)

In 1542 the Spanish explorer, Cabeza de Vaca, published his *Relación*, an imaginatively elaborated account of his long trek through what is now the U.S. Southwest after being shipwrecked on the Texas Gulf Coast. With its occasional imaginative elaborations, some critics, in a perhaps overstated fashion, have suggested that the *Relación*, with its themes of adversity, conflict and the “Other,” may be the first instance of an American literature largely set within what are now the boundaries of the United States. In later centuries and into our own time other literary examples set in the Southwest appeared from writers of Spanish and later

Mexican heritage, literature written in Spanish. However, the nineteenth century brought four new inter-related developments: the incorporation of the Southwest officially into the United States; the identification of its resident and immigrant Spanish/Mexican peoples as citizens of the United States; the continuation of literary work from such peoples but now also written in English; and finally, the clear emergence of fiction within this literary discourse. This course will closely examine several examples of such English-language fiction from the nineteenth century to the present. For demographic reasons, the largest and most artistically and culturally significant work has come from the states of Texas and California, and therefore we will restrict our inquiry to those bodies of work, but we will do so in an inter-regional comparative fashion. Among others, our writers will include early authors such as Jovita González, María Amparo Ruiz de Burton, Américo Paredes and José Antonio Villarreal and later writers such as Tomás Rivera, Helena María Viramontes, Sandra Cisneros and Oscar Casares.

ILS 40313. Caribbean Migrations: An Interdisciplinary Excursion
(3 -0- 3)

What is the meaning of identity in a transnational space straddling the United States and the Caribbean? Migration, settlement and return are central to the historical experiences and the literary and aesthetic expressions of Caribbean societies. This course combines literary and anthropological perspectives to the study of novels and historical and anthropological texts in which themes of migration, immigration and transnationalism play central roles.

ILS 40326. South by Southwest: Literature, the U.S. South, and Greater Mexico
(3 -0- 3)

C. Vann Woodward, the late eminent historian of the U.S. South, once noted that the study of the U.S. South stood “in great need of comparative dimensions if suitable comparative partners could be found,” comparative projects, he added, beyond the now stale North-South axis. Woodward was speaking specifically of comparative history, but other disciplines such as English, can also generate such comparative projects. This course will examine a significant range of two distinctive yet comparable bodies of American literature, mostly twentieth century, produced respectively in the U.S. South and in the culture area that Américo Paredes called “Greater Mexico.” Américo Paredes, a U.S. intellectual and literary figure akin to Woodward, coined the phrase, Greater Mexico, to refer to all peoples of Mexican-origin wherever they may be geographically found although they continue to be concentrated in Mexico and the U.S. Southwest. Our close examination of such literary works, all written in English, will proceed from a broad understanding of these two cultural-geographical areas as historically created peripheral zones relative to a dominant capitalist core even as we will also take account of direct connections between these two peoples. Authors: Jovita Gonzalez and Eve Raleigh, *Caballero: A Historical Novel*; Richard Wright, *Uncle Tom's Children*; Mariano Azuela, *The Underdogs*; William Faulkner, *Absalom, Absalom!*; Carlos Fuentes, *The Death of Artemio Cruz*; Ralph Ellison, *Invisible Man*; Américo Paredes, *George Washington Gomez: A Mexico-Texan Novel*; Walker Percy, *The Movie-Goer*; Rolando Hinojosa, *The Valley and Rites and Witnesses*; Mary Karr, *The Liars' Club*; John Phillip Santos, *Places Left Unfinished at the Time of Creation*; Bobbie Anne Mason, *Shiloh and Other Stories*; Sandra Cisneros, *Woman Hollering Creek and Other Stories*.

ILS 40600. Latino Psychology
(3 -0- 3)

The purpose of this course is to examine the psychosocial research and literature about Latino/a individuals and communities within the United States. Students will be actively involved in discussing issues relevant to Latino/a well-being, including immigration and acculturation, ethnic identity, religiosity, family life, prejudice and discrimination, and multiracial identity. Economic, educational, and social opportunities for Latinos also will be studied, and efforts towards social advocacy and the delivery of psychological interventions for Latino communities will be critically examined.

ILS 40601. Psychology of Race: Examining Racial and Ethnic Identity Development

(3 -0- 3)

The purpose of this course is to examine the psychological aspects of racial and ethnic identity development in the United States. This course will look at the general ideas of identity development from a psychological basis as well as the personal identities of American groups. The main course objectives are: To increase students' cultural awareness of their own and others' racial and ethnic identities; To develop relevant knowledge of about identity constructs in understanding different populations; and, To develop critical thinking skills in studying and evaluating research on the role of racial and ethnic identity development in psychological processes and human behavior.

ILS 40602. Inequities in Mental Health

(3 -0- 3) Park

This seminar will examine the problem of mental health and health disparities in the U.S. and possible solutions for addressing such inequities. Specifically, the course will explore how race, poverty, and other social conditions have contributed to a greater burden of unmet mental health needs and physical illness among ethnic minorities and other underserved populations, primarily using the lens of psychological theory and empirical research. Strategies for addressing these disparities will also be discussed, including an emphasis on improving access to, and quality of, mental health services and psychological interventions for ethnic minorities and other underserved populations in the U.S.

ILS 40700. International Migration: Mexico and the United States II

(2 -0- 2) Bustamante

A three-week course that refers to a review of basic questions on international migration, with emphasis on immigration to the United States and the methods through which these questions have been adequately or inadequately answered. The numbers, impact, nature, structure, process, and human experience will be discussed in terms of the research methods commonly used to approach them. Spring.

ILS 40707. International Migration and Human Rights

(3 -0- 3) Bustamante

This course is an extension from the mini-course to a full term offered by Prof. Bustamante, with a wider coverage of international migration experiences in the world with an emphasis on human rights. It starts with a historical approach to various immigration waves to the United States, from the years of the Industrial Revolution to the present. It focuses on the current debate on the impact of the undocumented immigration from Mexico and Central America, with a discussion of the gap between public perceptions and research findings. Differences between Mexico and the United States' migration policies, and its social and economic implications, are discussed. The recent developments within the context of the United Nations' Commission of Human Rights on the relationship between migration and human rights are also covered.

ILS 40710. Aesthetics of Latino Art and Cultural Expression

(3 -0- 3) Cardenas

This course analyzes the philosophy and principles underlying the social and political aspects of Latino art. We will approach this analysis by examining a range or topics, including Chicano and Puerto Rican poster art, mural art, Latina aesthetics, and border art.

ILS 40715. Latinos in Education

(3 -0- 3)

This course examines the educational experiences and struggles of Latinos in U.S. public and private schools. Students will study these experiences through legal, political, historical, social, and economic perspectives, regarding educational policies and practices. Additionally, this course focuses on the potential of education as an agent for social justice and change for linguistically and culturally

diverse groups, and thus its important role in the Latino experience. The goal of this course is to develop a reflective individual who is able to understand the educational context of Latinos in the United States.

ILS 40716. Immigration, Political Rights and Citizenship: New Perspectives

(3 -0- 3) Esguevillas Ruiz

Citizenship is a pressing question for nation-states in the era of globalization. Whereas previous research on citizenship focused narrowly on the process of legal status, new studies are illuminating the actual practice of citizenship. As individuals' lives increasingly span national boundaries, states are debating the rights of people who claim to belong in more than one country. What are and what should be the extent of immigrants' economic rights? What about their legal rights, political rights and cultural rights? The European Union and the United States confront similar challenges of integrating immigrants. The immigration debate that peaked in the United States with the end of the national Quota Act in 1965 surged again at the turn of the millennium while the Parliament and the Council of the European Union in 2008 adopted the directive of "Return of Illegal Immigrants", marking a new milestone in Europe's internal immigration debate.

ILS 40722. Mestizo Stories

(2 -0- 2)

Mestisaje (racial-cultural blending) is a foundational paradigm for understanding Latino history, culture and politics. This course provides students a wide-ranging, inter-discipline introduction to the subject of mestisaje. Jose Vasconcelor influential book *La Raza C6smica (The Cosmic Races)* will be the conceptual anchor for analysis and interpretation. The book will be augmented by films, videos, recordings and assigned readings exploring three core areas of concerns: 1) The historical origins of mestizo/a identity and cultural production. 2) The experience and narratives of mestisaje in the United States and 3) The global implications of mestisaje as a transcendent social and cultural manifestation. Students are expected to be critical readers of the assigned texts, which will be primarily in English though some will be in Spanish or bi-lingual. Active participation in class discussions is also essential. Students are also expected to present a power-point presentation on a selected aspect of mestisaje from a wide range of humanities and social science topics to be investigated. The oral-visual presentation will become the basis for a written research paper. Mestizo Stories will explore visual, musical, literary and performative texts of human agency, resistance and survival.

ILS 40804. Latino Film: Culture, God, and Redemption

(3 -0- 3)

The course will view great films from Latin America and the Latino United States and discern what culture is portrayed, the presence or absence of God within the film, and how redemption is expressed in the film. Since some of the films will not have subtitles, a working knowledge of Spanish is helpful.

ILS 40846. U.S. Latino Catholicism

(3 -0- 3) Elizondo

Latina and Latino Catholics have lived their faith in what is now the continental United States for almost twice as long as the nation has existed. This course explores the origins and development of Latino Catholicism in the United States, particularly the theological contributions of contemporary Latinas and Latinos.

ILS 40900. From El Barrio to Calle Ocho: Urban Experience in U.S. Latino/a Literature

(3 -0- 3)

In this course students will examine Latino/a texts of various ethnic backgrounds that offer representations of the urban landscape and experience. Issues of migration, discrimination, social mobility, gender, class, race, and transnationalism will be central to our discussions of the cultural politics of urban space. Knowledge of Spanish required.

ILS 40901. Cuban Literature

(3 -0- 3)

An in-depth study of a particular theme, author, or genre in Cuban literature.

ILS 40902. Mexican Literature

(3 -0- 3)

An overview of the historical development of prose, poetry, and theatre in Mexico, in its social and aesthetic contexts.

ILS 40904. Mexican Literature

(3 -0- 3) Ibsen

An overview of the historical development of prose, poetry, and theatre in Mexico, in its social and aesthetic contexts.

ILS 40905. Beyond the Islands: Latino/a Caribbean Literature and Culture

(3 -0- 3)

This course examines the literary and cultural production of Latinos/as from the Spanish-speaking Caribbean. Issues of migration, transnationalism, and transculturation will be explored through the analysis of texts by Puerto Rican, Cuban-American, and Dominican-American authors.

ILS 40907. Migrant Voices

(4 -0- 4) Moreno

This course examines the literary production of U.S. Latinos/as. We will read works by Mexican-American, Puerto Rican, Cuban-American and Dominican-American authors paying close attention to the intersection of race, class, and gender issues. The literature studied will serve as a window into the culture of the local Latino community as students engage in service-learning at Casa de Amistad throughout the semester.

ILS 40908. Self, Family, Nation: Insular and U.S. Hispanic Caribbean Women Authors

(3 -0- 3)

This course focuses on the literature of Hispanic Caribbean women authors in the islands and in the U.S. By contrasting the works of recent and more established authors from Puerto Rico, Cuba, the Dominican Republic, and their counterparts in the U.S., we'll explore the construction of gender and sexuality from a Caribbean feminist perspective. Some of the texts that this course will examine include: *In the Time of the Butterflies* by Julia Alvarez, *Papi* by Rita Indiana, *When I was Puerto Rican* by Esmeralda Santiago, *Maldito amor* by Rosario Ferr6, and *Dreaming in Cuban* by Cristina Garc6a.

ILS 40910. Race and Ethnicity in U.S. Latino Literature

(3 -0- 3) Moreno

In this course, students will examine the key issues of race and ethnicity in U.S. Latina/o literary production, particularly in the works of Afro-Latina/o, Andean-Latina/o (and other Latinos of indigenous descent), and Asian-Latina/o authors. The range of races, ethnicities, and nationalities of the established and emerging authors studied in the course will enhance the students' understanding of the complexity and heterogeneity of that group that we call "Latinos." The course will be divided into three major units: Caribbean, Central American, and South American Latinos. Students will read works by migrants from a range of countries, including Puerto Rico, Cuba, Dominican Republic, Guatemala, El Salvador, Costa Rica, Panam6, Per6, Ecuador, Uruguay and Colombia. This course will have a service-learning component. Students will be required to spend two hours per week volunteering at the local Hispanic community center Casa de Amistad. The course will be conducted in Spanish. Participation, frequent short essays, a journal, midterm, final exam, and final paper will determine the final grade.

ILS 40944. Good Neighbors? Hispanic Caribbean and Central American Literary Representations

(3 -0- 3)

Examines the relationship between the Hispanic Caribbean and Central American nations and United States through readings of texts by authors from Colombia, Cuba, the Dominican Republic, Guatemala, Nicaragua, Puerto Rico, and Venezuela among others. Although principally focusing on literary texts, works from other fields of study such as politics, history, and economics are also studied.

ILS 43509. Religion, Immigration and Rights: European and American Policies

(3 -0- 3) Celador-Angon

People have migrated from place to place since before the creation of modern nation-states. As immigrants try to find ways to adapt to life in new countries, host societies are forced to consider how much difference they can tolerate and which rights they will extend to the newcomers. Religion plays a major role in this process. Religious institutions are key vehicles in immigrant integration. At the same time religion and religious difference can be used to justify discriminatory policies that isolate and marginalize immigrants. The purpose of this course is to study European and U.S. models of integration of religious minorities. The course investigates the legal mechanisms used by host countries to respect or reject the religious freedom of migrants. We will study such questions as religious symbols in public spaces, including clothing, signs and icons, teaching religion in schools, economic and institutional support of religious groups, freedom of religious expression and rights to object to laws that violate immigrants' religious freedom.

ILS 43601. Immigrant Families and Mental Health

(3 -0- 3) Park

This course examines major psychological topics relevant to immigrant families in the U.S. and factors influencing their mental health. Given that one out of five youths in the American public school system is a child of immigrants, it is critical to study this rapidly growing population especially for those interested in working with youths and their families. Broad areas to be covered include cultural adaptation processes (e.g., acculturation), biculturalism, identity development, family processes, academic achievement, and mental health as well as implications for culturally competent mental health treatment and service delivery.

ILS 43716. Visual Sociology: Exploring Society Photographically

(3 -1- 3)

This course will examine the uses of photography and film in sociology and will explore the impact of visual expression on society. Subjects include introductory work in documentary photography and film, gender advertising, ethnographic film, political cinema, muralism and social protest art. The course will focus on photo-based strategies for sociological and anthropological research. While broad in scope, this course will rely on content found in the United States, the American Southwest, Mexico and Latin America.

ILS 45054. Latinos in Chicagoland and Northern Indiana

(3 -0- 3)

Latinos have long contributed to the social fabric of the region popularly known as "Chicagoland," which includes Northwestern and North Central Indiana. From food to sports to politics to the arts, Latinos have shaped and reshaped the local culture and formed vibrant communities. However, Midwestern Latinos have been marginalized by both local/regional approaches to history and by the field of Latino studies, which tends to focus on the east and west coasts and the U.S. Southwest. This interdisciplinary course will explore Latino communities from Chicago to South Bend to better understand how these communities fit into the broader Latino experience but remain uniquely Midwestern. Some of the questions that we will ask include: Why did Latinos settle in Chicagoland and Northern Indiana? Why do new migrants keep coming? How has gentrification affected urban Latino communities? How are individuals and organizations working to improve the lives of migrant workers in rural areas? How do Latinos contribute to the Chicago arts scene? The course will include several site visits to community organizations and cultural institutions throughout the region and will require students to collect an oral history from a member of one of the communities encountered in class.

ILS 45103. Mexican Immigration: A South Bend Case Study

(3 -1- 4)

This course uses experiential learning in the Mexican community of South Bend in order to understand how Mexican migrants conduct their lives across the vast distances separating South Bend and their homeland. The course begins with readings in social science and fiction about transnationalism, Mexican-U.S. migration and

the history and sociology of the local community. Next we learn ethical fieldwork methods in preparation for community research. Students working in two-person teams will gather data on local and transnational households and kin networks, gender relations, political involvement, employment, consumption practices, cultural activities and religious life, working through contacts with social service agencies, the Mexican consulate, and Mexican- or Latino-run media, businesses, food stores, and sports leagues. We will document the innovative adaptations of this migrant community, especially the growth of an ethnic enclave of small businesses that both unite Mexicans as an ethnic group and sustain their ties to their homeland. We intend to compile the research in a volume published by Latino Studies to be given to those who shared their lives with us and to entities that are committed to helping them.

ILS 45999. Cross Cultural Leadership Internship Program

(3 -0- 3)

This is a leadership internship for Cross-cultural/Urban studies working 8 weeks in Los Angeles, CA in a multicultural area with organizations dedicated to empowering local communities. Students will work with ILS to build partnerships with the agencies and people involved. Students will complete academic requirements including readings, reflection sessions, and a presentation of a synthesis paper at the end of the internship. Application and interview necessary for participation.

ILS 46711. Directed Readings: Latino Studies

(V -0- V)

Independent faculty supervised readings. Credits 1–6.

ILS 46713. Directed Readings

(V -0- V)

Independent faculty supervised readings. Credits 1–3.

ILS 48900. Senior Thesis

(3 -0- 3)

Senior Thesis research and writing.

Military Science (ROTC – Army)

MSL 10101. Introduction to Military Leadership I

(1 -2- 1) Yuen

A study of the organization of the Army with emphasis on understanding and implementing officership, leadership, and the Army values. Military courtesy, discipline, customs, and traditions of the service, fitness, and communication are taught and demonstrated through practical exercise. Includes a 48-hour field training exercise and a weekly two-hour laboratory emphasizing basic soldier skills such as land navigation and marksmanship.

MSL 10102. Introduction to Military Leadership II

(1 -2- 1) Yuen

A study of functions, duties, and responsibilities of junior leaders. Emphasizes operations of the basic military team to include an introduction to the Army's problem-solving process as well as the fundamentals of time and resource management. Includes a 48-hour field training exercise and a weekly two-hour laboratory emphasizing basic soldier skills such as first aid, U.S. weapons, and military communication.

MSL 20201. Foundations of Military Leadership I

(2 -2- 2) Yun

Study and application of map-reading skills, military communications, and development of individual leadership techniques by learning the fundamentals of small unit tactical operations. Emphasis on individual physical fitness and conducting self-evaluations to facilitate growth. Includes a 48-hour field training exercise and a weekly two-hour laboratory that offers the opportunity to demonstrate learned leadership techniques along with instruction on basic military skills of land navigation and rifle marksmanship.

MSL 20202. Foundations of Military Leadership II

(2 -2- 2) Yun

Study and application of mission planning and orders with an emphasis on small unit leadership in tactical settings. Land navigation, map reading, marksmanship, and communication skills will be evaluated. Students are expected to demonstrate that they have mastered basic soldier skills and leadership fundamentals. Includes a 48-hour field training exercise and a weekly two-hour laboratory that offers the opportunity to demonstrate learned leadership techniques along with advanced instruction on military skills.

MSL 30301. Tactical Military Leadership

(3 -3- 3) Van Winkle

Military decision making, problem analysis, and integrated planning of squad and platoon operations. Analysis of the components of leadership through practical exercises and historical examples. Includes one 48-hour field training exercise and a weekly two hour lab that offers the opportunity to demonstrate leadership and tactical techniques.

MSL 30302. Applied Military Leadership

(2 -2- 3) Ballas

Advanced military decision making, problem analysis, and integrated planning with synchronization of multiple assets. This is conducted on the basis of squad and platoon operations and tactics. Includes one 48-hour field exercise and a weekly two hour lab that offers the opportunity to demonstrate leadership and tactical techniques.

MSL 40401. The Professional Officer and Developmental Military Leadership

(3 -3- 3) Polhamus

Advanced study of the military profession and of the concept of officership. Addresses training management, along with staff organization, functions, and processes, the components of officership, which include requirements to be a leader of character, a warfighter, a member of the profession of arms, and a servant of the nation, and the Just War tradition.

MSL 40402. Adaptive Military Leadership and Military Ethics

(2 -2- 3) Polhamus

Advanced study of military leadership, military ethics, and a variety of issues relevant to junior military officers. Addresses the Army's leadership doctrine in depth, paying particular attention to the Army's leadership requirements model, along with military ethics and ethical decision-making in professional situations. Additional topics include the Law of War, cultural awareness, Army organization, and Army administration.

MSL 47498. Topics in Military Studies

(3 -0- 3)

This is an independent study course that will allow contracted ROTC cadets to design a course of study to investigate selected topics in military science more completely.

Naval Science (ROTC – Navy)

NSCI 10101. Introduction to Naval Science

(2 -0- 2) Hood

Corequisite: NSCI 41000

An introductory study of the U.S. Naval customs and traditions, military courtesies, organizational structure, officer career paths, and the role of the naval service in supporting national policies. Required for all NROTC Freshmen. Fall.

NSCI 10102. Maritime Affairs

(2 -0- 2) Hood

Corequisite: NSCI 41000

A comprehensive study of the development of seapower throughout history, focusing on the important role played by the American Navy in the formation of an independent United States. Includes analysis of the Roman and Greek navies, but focuses on the American Navy from the Revolutionary War through the Global War on Terrorism. This course is required for all NROTC Freshmen. Spring.

NSCI 20201. Leadership and Management I

(3 -0- 3) Teuscher

Corequisite: NSCI 41000

A comprehensive study of organizational leadership. Emphasis on motivation, planning, communication, feedback, and subordinate needs. Introduction to moral leadership. Fall.

NSCI 20202. Navigation

(3 -0- 3) Bennett

Corequisite: NSCI 41000

A study of the theory and principles of navigation. The course covers dead reckoning, piloting, and navigation tools. Electronic, inertial, and celestial navigation systems are discussed. Nautical rules of the road and laws regarding vessel operation are also included. Spring.

NSCI 30301. Naval Ships Systems I

(3 -0- 3) Williams

Corequisite: NSCI 41000

A detailed study of ship propulsion and auxiliary systems. Emphasis on fossil fuel, nuclear, and gas turbine systems. Introduction to ship design and damage control. Fall.

NSCI 30302. Naval Ships Systems II

(3 -0- 3) Williams

Prerequisite: AS 10101 AND MSL 30301

Corequisite: NSCI 41000

An overview of basic theory and principles of modern naval ordnance, weapon systems, and their interaction with the physical constraints of the environment from initial target detection to final target engagement. Course contains an overview of types of weapon systems, including a study of target identification, detection, acquisition, tracking, and engagement. Spring.

NSCI 40401. Naval Operations and Seamanship

(3 -0- 3) Smith

Corequisite: NSCI 41000

A study of ship handling and employment, including communications, and sonar and radar searches. Tactical formations, dispositions, and basic seamanship are taught. Relative motion and the maneuvering board are introduced. Naval command and control issues are also discussed. Fall.

NSCI 40402. Leadership and Ethics

(3 -0- 3) Carter

Prerequisite: *Corequisite:* NSCI 41000

A study of practical leadership skills for any manager focusing on the specific leadership and management responsibilities of a naval officer. Teaches skills needed to transition from student to manager. Explores naval ethical issues, naval law, and Navy policies and programs. Spring.

NSCI 40413. Amphibious Warfare I

(0 -0- 3) Schiller

Corequisite: NSCI 41000

A study of the origin and development of amphibious warfare with emphasis on leadership, tactics, the principles of war, and application to the modern battlefield. This course is required for Marine Options and alternates every other fall semester with NSCI 40415 "Evolution of Warfare".

NSCI 40415. Evolution of Warfare I

(3 -0- 3) Schiller

Corequisite: NSCI 41000

An exploration of warfare as an instrument of foreign policy throughout history. An analysis of the great captains, military organizations, and military theorists of history. This course is required for Marine Options and alternates every other fall semester with NSCI 40413 "Amphibious Warfare."

NSCI 41000. Drill/Leadership Laboratory

(0 -1- 0) Schiller

Practical exercises in leadership, including close order drill and professional development classes.

Physical Education and Wellness Instruction

PE 10000. Physical Education

(0 -0- 0)

Corequisite: PE 11000

All Notre Dame first-year students must take two semesters of physical education as a University requirement. However, those who enroll and remain in an ROTC program are exempted from physical education. The department believes that basic swimming skills are important for the student. A swim test will be administered at the beginning of the year to determine each student's ability. Most students will be able to elect four of the following activities to complete their requirement. It is strongly recommended that activities from both the wellness and lifetime sports tracks be taken: American Ballroom Dance, Contemporary Topics for College Students, Fencing, First Aid, Fitness for Life, Fundamentals of Basic Activity, Golf, Handball, Hiking/Orienteering, Ice Skating, Latin Ballroom Dance, Racquet Sports, Self-Defense, Skiing: Cross Country or Downhill, Soccer, Lifeguard Training, Water Safety Instruction, Team Handball, Tennis, Volleyball, Weight Training, and Yoga. All activities are offered at the beginning level; however, some activities are offered at an intermediate level. If the student has a physical disability and is unable to participate in activity classes, a specially designed program will be arranged.

PE 10001. Physical Education

(0 -0- 0)

All Notre Dame first-year students must take two semesters of physical education as a University requirement. However, those who enroll and remain in an ROTC program are exempted from physical education. All students are required to register for the course "Contemporary Topics for College Students". The department believes that basic swimming skills are important for the student. A swim test will be administered at the beginning of the year to determine each student's ability. Most students will be able to elect four of the following activities to complete their requirement. It is strongly recommended that activities from both the wellness and lifetime sports tracks be taken: American Ballroom Dance, Basic Activities, Fencing, First Aid, Fitness Development, Golf, Handball, Hiking/Orienteering, Ice Skating, Latin Ballroom Dance, Officiating, Racquet Sports, Self-Defense, Skiing: Cross Country or Downhill, Soccer, Lifeguard Training, Lifesaving, Team Handball, Tennis, Volleyball, Weight Training, and Yoga. All activities are offered at the beginning level; however, some activities are offered at an intermediate level. If the student has a physical disability and is unable to participate in activity classes, a specially designed program will be arranged.

PE 11001. Contemporary Topics 1

(0 -0- 0)

Corequisite: PE 10000

This course is designed to aid the student in transition from high school to university life issues. The class will address the unique demands on the student and will be directed toward the different dimensions of wellness. Emphasis is on decision making skills and positive life choices in areas of personal, academic, and professional success. Opportunities will be presented to enable the student to increase awareness of self-responsibility, enhanced self-understanding, exposure to campus resources, and strategies for improved behavior change.

PE 11002. Contemporary Topics 2

(0 -0- 0)

Corequisite: PE 10001

This course is designed to aid the student in transition from high school to university life issues. The class will address the unique demands on the student and will be directed toward the different dimensions of wellness. Emphasis is on decision making skills and positive life choices in areas of personal, academic, and professional success. Opportunities will be presented to enable the student to increase awareness of self-responsibility, enhanced self-understanding, exposure to campus resources, and strategies for improved behavior change.

PE 11003. Contemporary Topics 1 and 2

(0 -0- 0)

Corequisite: PE 10001

This course is designed to aid the student in transition from high school to university life issues. The class will address the unique demands on the student and will be directed toward the different dimensions of wellness. Emphasis is on decision making skills and positive life choices in areas of personal, academic, and professional success. Opportunities will be presented to enable the student to increase awareness of self-responsibility, enhanced self-understanding, exposure to campus resources, and strategies for improved behavior change.

PE 11004. Athlete

(0 -0- 0)

Corequisite: PE 10001

This course is for student-athletes.

PE 11005. American Dance -Female

(0 -0- 0)

Corequisite: PE 10001

These activities are among the departments most popular. The basics of Ballroom Dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

PE 11006. American Dance -Male

(0 -0- 0)

Corequisite: PE 10001

These activities are among the departments most popular. The basics of Ballroom Dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

PE 11007. Latin Dance—Female

(0 -0- 0)

Corequisite: PE 10001

These activities are among the departments most popular. The basics of Ballroom Dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

PE 11008. Latin Dance—Male

(0 -0- 0)

Corequisite: PE 10001

These activities are among the departments most popular. The basics of Ballroom Dance, along with proper etiquette, are presented. American Dance includes the Waltz, Foxtrot, Two-Step, Jitterbug, Swing, and Polka. Latin Dance includes the Cha Cha, Merengue, Mambo, Tango, and Salsa.

PE 11009. Fencing

(0 -0- 0)

Corequisite: PE 10001

Fencing is the art and sport of swordsmanship using a blunt weapon. Fencers use one of three types of weapons—the foil, the epee, or the sabre. Students will learn fencing moves such as On Guard, Lunge, Attack and Parry, and Touch; as well as understanding basic rules of competition.

PE 11010. First Aid / CPR (AED)

(0 -0- 0)

Corequisite: PE 10001

The principle objective in this course, through knowledge and skill development, is to be prepared and meet the needs of most situations where emergency action is required. In this course Adult CPR and First Aid sections are certified separately. Automated External Defibrillation is included if time allows.

PE 11011. Fitness for Life

(0 -0- 0)

Corequisite: PE 10000

These activities focus on several methods of achieving and maintaining a healthy level of fitness. Emphasis will be on aerobic conditioning and cardiorespiratory endurance, but flexibility, agility, coordination, and balance will be addressed. Many activities are group oriented; such as soccer, team handball, circuit training, jump rope, rabbit runs, interval training, and ultimate frisbee/football.

PE 11013. Golf

(0 -0- 0)

Corequisite: PE 10001

Rules, regulations, and golf etiquette will be introduced via videos and books. Using irons and woods three areas will be addressed: the basics of grip, techniques of a sound swing, and elements of the game. Descriptions and practice of putting, chipping, pitching and the full swing are included in this course.

PE 11014. Handball

(0 -0- 0)

Corequisite: PE 10001

This is an excellent activity to develop several elements of fitness: cardiovascular endurance, muscular fitness, coordination, and flexibility. Students will have access to ten courts in the Rockne Memorial Building. Emphasis is on eyes to hand to ball coordination, developing the weak hand and side, as well as handball skills for play. Rules, regulations, safety, and principles for strategy will be covered.

PE 11015. Hiking

(0 -0- 0)

Corequisite: PE 10000

Learn how to prepare for and enjoy a day of hiking in a variety of urban and natural settings. Learn compass techniques, pacing, safety, survival skills, and the climbing wall.

PE 11016. Ice Skating

(0 -0- 0)

Corequisite: PE 10001

Ice skating is an important competitive sport as well as a popular form of recreation. This class will teach skating safety, use of the right equipment, basic skating moves and techniques. Class may include games, relays, and broomball.

PE 11017. Independent Study

(0 -0- 0)

Corequisite: PE 10001

This course permits individual curriculum design between the student and the PE department.

PE 11018. Lifeguard Training

(0 -0- 0)

Corequisite: PE 10001

The purpose of this Red Cross course is to provide students the skills and knowledge needed to prevent and respond to aquatic emergencies. The suggested time for the Lifeguard course is approximately 33 hours. It is all-inclusive with First Aid, CPR, and AED for the Professional Rescuer. Administering Emergency Oxygen Administration and Preventing Disease Transmission will also be included.

PE 11019. Racquetball

(0 -0- 0)

Corequisite: PE 10001

A game similar to handball with respect to rules and the physical skill involved. Since only one hand is used it is more easily learned than handball. This sport has high carry-over potential and can be enjoyed co-recreationally. Emphasis is placed on rules of the game, strokes, footwork, court position and strategy.

PE 11020. Self Defense

(0 -0- 0)

Corequisite: PE 10001

This course will provide knowledge, understanding and appreciation of the psychological and philosophical fundamentals required to participate in the art of self defense. Through practice and different example scenarios students will develop a degree of proficiency in a variety of techniques.

PE 11022. Skiing—Cross Country

(0 -0- 0)

Corequisite: PE 10001

Learn one of the fastest growing sports in the country. This course will introduce the student to equipment and basic skills necessary for participation. Equipment is provided and classes are taught on the Notre Dame Golf Course. A fee is charged.

PE 11023. Skiing—Downhill/Snowboarding

(0 -0- 0)

Corequisite: PE 10001

This course is open to both non-skiers and skiers of various abilities. It is designed to help the beginner to achieve adequate skill in order to enjoy the sport and to ski under control. It will allow a person who has skied before to improve their ability. The fee charged includes transportation, lessons, lift tickets and use of equipment.

PE 11024. Soccer

(0 -0- 0)

Corequisite: PE 10001

Soccer maintains its place in the program due to its contribution to fitness and worldwide popularity. The sport is a combination of individual skills and team play. The course objectives are to develop stamina, agility, balance and coordination as well as an understanding of the rules and field strategy.

PE 11027. Swimming—Basic

(0 -0- 0)

Corequisite: PE 10000

It is University policy that all students should be able to protect themselves in the water. Therefore, all students must take a swim test. Our swimming program is designed to equip the student with water safety skills and knowledge in order to be reasonably safe and comfortable in, on, and around the water. BEGINNING SWIMMING (First Unit) instruction covers swimming strokes like the front crawl and elementary backstroke. Safety around water is emphasized. STROKE DEVELOPMENT (Second Unit) will continue skills from unit one as necessary and introduces the breaststroke and sidestroke.

PE 11028. Team Handball

(0 -0- 0)

Corequisite: PE 10001

A physical and dynamic sport which combines the skills of running, jumping and throwing into a fast moving and exciting game. Team Handball incorporates facets of various team sports, most closely resembling basketball; dribbling and passing, picks and rolls, and fast breaks. The basic objective of the game is to out maneuver the opponent by passing the ball quickly and then throw the ball past the defense and goalie to score.

PE 11029. Tennis

(0 -0- 0)

Corequisite: PE 10001

Beginning tennis introduces the student with little or no background to a game that can be played throughout one's lifetime. Fundamentals of grip, forehand, backhand, serve and volley as well as rules and etiquette of tennis are stressed. Time for supervised practice is provided. Intermediate tennis will review basic skills of the game as well as introduce net play, volley, overheads and lob. In addition, court strategy and tactics are taught. The department provides racquets. **Students must wear tennis shoes to participate.**

PE 11030. Volleyball

(0 -0- 0)

Corequisite: PE 10001

Volleyball is an increasingly popular team game that can be played in or outdoors, either recreationally or competitively. Basic skills include fundamentals of the serve, passing, spiking and blocking. Rules and court strategy are a part of this course.

PE 11031. Walking and Jogging

(0 -0- 0)

Corequisite: PE 10000

Becoming one of the fastest growing trends for cardiorespiratory endurance, it is used for recreational fitness as well as an Olympic sport. Students will learn about proper shoes, safety, correct stride techniques, as well as designing and monitoring a successful program.

PE 11033. Weight Training

(0 -0- 0)

Corequisite: PE 10001

The objectives of this course are to introduce the student to methods and techniques for improving muscular strength and endurance through program design. Methods of training include machines, free weights, and training without apparatus. Orientation to equipment, safety and proper technique is emphasized.

PE 11034. Yoga

(0 -0- 0)

Corequisite: PE 10001

Yoga has a long history of philosophy and tradition, often referred to as the science of spirituality. Used as a form of exercise and cross training, it has profound and far-reaching health benefits. Students will receive information on the benefits, history, and the Eight Limbs of Yoga. Classes will focus on learning different breathing techniques and relaxation to be utilized as stress management tools for everyday life. Through consistent practice a student will gain strength, flexibility, balance, and coordination.

PE 11035. S.C.U.B.A.

(0 -0- 0)

Corequisite: PE 10001

This course consists of 28 hours of classroom and pool sessions (6 Sundays and 1 Saturday afternoon). Completion of the course results in receiving a YMCA SCUBA Open Water Diver Certification, which is a lifetime certification. An informational meeting is held before the start of each course for a questions and answers session. This course is taught at the Rockne Memorial. A fee is charged.

PE 11036. Ultimate Frisbee

(0 -0- 0)

Corequisite: PE 10001

Ultimate Frisbee is a physical and dynamic sport which includes running, catching, and throwing. The basic objective is to out maneuver the opponent to score a goal.

PE 11038. Biking for Fitness

(0 -0- 0)

Corequisite: PE 10001

Biking is an excellent lifetime sport that will increase your cardio-respiratory and muscular endurance and help in maintaining a healthy weight. It's also fun! In this class you will learn practical and useful information on equipment, maintenance, riding position, techniques, repairing punctures and the different types and styles of bikes. We will ride in and around campus.

PE 11039. Fencing Advanced Beginner

(0 -0- 0)

Corequisite: PE 10001

Fencers who successfully completed level I may participate in this class. No intermediate or advanced students are allowed. Students will already have proper

understanding of foil, different commands and proper footwork. Advanced beginner students will learn how to parry in the different zones, learn more advanced footwork and strategies.

PE 11040. Golf Advanced Beginner

(0 -0- 0)

Corequisite: PE 10001

This class is for students with a limited background in golf or who have taken Beginning Golf in the fall. Club use skills will be addressed along with an understanding of all rules, terminology and etiquette. Mental as well as physical aspects of the game of golf will be integrated into this class.

PE 11041. Advanced Tennis

(0 -0- 0)

Corequisite: PE 10001

Students who took Beginning Tennis in the fall or have limited knowledge of the game, may sign up for Advanced Beginner level. You should already be able to execute the basics of the forehand, backhand, serve and volley. No intermediate or higher players will be allowed to take the class. This class is designed to improve your beginning strokes and learn to use them in a single or doubles play situation. Other advanced beginning strokes will be taught such as lob and overhead. We will also incorporate singles and doubles set up and responsibilities. As we incorporate the principles of Mind, Body and Spirit into the Advanced Beginner level, the concepts of relaxation, simplicity, repetition and preparation will be integrated into this class.

PE 11042. Weight Training Advanced Beginner

(0 -0- 0)

Corequisite: PE 10000

Students who have taken beginning weight training or have some basic knowledge of weight training may sign up for this class. This class is for students with basic background knowledge of weight training. This class is designed to teach more advanced lifting techniques and methods of weight training than those taught in the beginning weight training class. The class will allow for individual appraisal of each student's needs when designing a program.

PE 11043. Swimming For Fitness

(0 -0- 0)

Corequisite: PE 10001

This class is designed to give students the cognitive know-how to develop a swim conditioning program that will allow for successful swim training across the students lifespan. Emphasis will be placed on stroke development; students will be exposed to different training methods. Students will experience different training principles aerobic, interval, tempo, training, sprint, middle distance, and distance training. Prerequisites: Student has knowledge of three of the four competitive strokes. Demonstrate the ability to confidently swim 100 yards using any of the four competitive swimming strokes

PE 11045. Running for Fitness and Competition

(0 -0- 0)

Corequisite: PE 10001

The design of this class is based around the student currently training for a road race or eventually planning on building off of their fitness base to compete in a road race. Whether the student wants to compete to win or is set out to accomplish a given distance, they will learn the necessary tools to be properly prepared for race day and each day of the journey leading up to the event.

PE 11046. Bowling

(0 -0- 0)

Corequisite: PE 10001

The class will cover etiquette, and all bowling fundamentals such as scoring, form, stance, grips, approach, delivery and spare pick-up. A fee is charged and will cover transportation, lanes fees, and shoes. Location is "Strikes and Spares." Transportation will leave from the library circle at 3:30p.m. and return to campus at 5:45p.m. This class will meet for 4 2-hour sessions, 1 per week.

PE 11047. Cycling

(0 -0- 0)

Corequisite: PE 10001

The student will learn basic cycling techniques, training principles, training routines while enhancing core strength, flexibility and cardio-respiratory endurance.

PE 11048. Introduction to Fitness

(0 -0- 0)

Corequisite: PE 10001

Introduction to Fitness is a course in which students learn fitness principles while developing higher personal levels of physical fitness, through participation in a variety of activities. The curriculum consists of twelve topics from which the instructor will choose one topic each class session. Offerings will be based on instructor expertise and facility availability. The topics include: Medicine Ball Workout, Yoga, Cycling, Jump Rope Circuit, Sport of Choice, Weight Training, Dance Dane Revolution, Body Weight Training, Circuit Training, Campus Run, Pool Workout and Kettle Bells.

PE 11049. Introduction to Martial Arts

(0 -0- 0)

Corequisite: PE 10000

Classes will include: various martial arts stretches, exercises for warming up and helping the body develop the motor skills necessary for martial arts technique development, first 15 basic fundamentals, first pattern or poom-se, 10 basic self-defense techniques; 2 walking combination techniques, as well as several different martial arts kicking techniques.

PE 11050. Climbing Wall

(0 -0- 0)

Corequisite: PE 10001

The course will cover the basic concepts of rock climbing and training techniques. In addition, sport climbing, top rope setting, and equipment maintenance will also be discussed.

PE 11051. Aqua Fitness

(0 -0- 0)

Corequisite: PE 10001

This class is designed to introduce the student to different forms of exercise that can be completed in a pool. Students will be introduced to aqua jogging, deep and shallow water exercise, and lap swimming.

PE 11052. Advanced Skill Golf

(0 -0- 0)

Corequisite: PE 10001

Instruction will cover the terminology and techniques of the full swing, chipping, pitching, sand trap explosion, and putting. At the end of class, students will have a better understanding of on-course management strategies, rules of the game, equipment selection, and courtesy/etiquette on the course. The fee is \$100.00.

PE 11053. Goju-Ryu Karate for 21st Century Life

(0 -0- 0)

Corequisite: PE 10001

This class will explore the spiritual, physical, and intellectual dimensions of Goju-Ryu, one of the most ancient schools of Karate-Do. Students will learn the some of the basic movements, kata (pre-arranged fighting patterns) and bunkai (self-defense applications), of Tenshi Goju Karate-Do—one of many modern American expressions of Goju-Ryu. Students will also be given exercises to facilitate their own reflection on the implications of this martial and meditative art for an approach to living that is fully integrative of mind, body, and spirit. Participation in a seminar on November 5th led by the founder of the Tenshi Goju system is also required.

PE 11054. Living Mindfully

(0 -0- 0)

Corequisite: PE 10001

Whether seeking to reduce stress, enjoy routine responsibilities, create fulfillment in your studying, change unhealthy habit, or build awareness this introductory course will offer basic concepts of mindfulness as well as practical application. Each class will consist of teaching points, practical application, journaling, and discussion. There will be outside assignments and practice to reinforce the skills taught during class (done according to individual needs, schedule, and time).

PE 11055. Karate II: Entering the Goju Matrix—Applications of the Nine Principles

(0 -0- 0)

Corequisite: PE 10001

This class will focus on how the nine principles introduced in the class, “Principles of Goju Ryu Karate for 21st Century Life,” may further be utilized as a matrix for personal development, contemplation, and self-defense—i.e., how one expression of the martial art known as Karate Do, “the way of the empty hand,” may be deployed in the promotion of wellbeing, bodily awareness, and a unitive approach to daily living. [1] The precepts and applications dealt with in this course are derived from Tenshi Goju Ryu, a fourth generation descendent of the hard and soft lineage of Karate Do, whose ancestry can be traced through Peter Urban and Gogen Yamaguchi back to Chojun Miyagi, the founder of the school. The philosophy, techniques, kata (practice forms) and bunkai (self-defense applications) of Tenshi Goju embody the ethos of its venerable forebears as well as the innovative spirit of its creator, Hanshi Lou Angel. Enrollment is limited to students who completed “Principles of Goju Ryu Karate for 21st Century Life” in Fall 2011.

PE 11056. Personal Nutrition

(0 -0- 0)

Corequisite: PE 10001

Personal Nutrition for Notre Dame students will cover a wide range of nutrition topics beyond your typical Contemporary Topics class. In addition to classroom information, this course will provide more in depth analysis of personal nutrition. It will also provide the opportunity to leave the classroom and examine other resources on and off campus.

PE 11057. Competitive Tennis: Old School Skills and Tactics for the Modern Game

(0 -0- 0)

Corequisite: PE 10001

Some have suggested that modern tennis—with its emphasis on power (particularly serves and ground strokes) and aggressive baseline / mid-court play—bears little resemblance to either its 19th century ancestor or the “all-court” game that evolved in the latter half of the 20th century. Significant advances in athletic training, racket technology, and the surfaces on which competitive tennis is now played, have produced major changes in grips, strokes, and strategies. The emphasis on first-strike tactics utilized to control tempo has limited the extent to which many players develop either a well-rounded set of racket skills or the ability to: (1) control ball placement, pace, and spin; (2) play comfortably—and proficiently—at net; (3) utilize specialty shots effectively—e.g., drop shots, lobs, and returns of serve; (4) find the right balance between aggressiveness and consistency in match play; (5) deploy defensive tactics to neutralize an opponent’s power; (6) utilize playing patterns in the construction of points; and (7) develop, implement, and modify—when necessary—a game plan through the use of careful observation and the cultivation of intuitive awareness. A close examination of those players perennially atop the men’s and women’s professional rankings reveals that many possess these abilities. This class will provide experienced players with an opportunity to learn and / or refine such skills. Enrollment is limited to advanced players with high school or tournament experience.

PE 12001. Physical Education Makeup

(0 -0- 0)

This Physical Education course is designed to accommodate students who have not yet completed their PE requirement for the First Year of Studies.

PE 12002. Physical Education Makeup

(0 -0- 0)

This Physical Education course is designed to accommodate students who have not yet completed their PE requirement for the First Year of Studies.

PE 15532. Water Safety Instructor Course

(0 -2- 0)

Corequisite: PE 10001

The WSI course prepares candidates to teach various Red Cross swimming and diving skills as well as emergency prevention and response. The course length is approximately 34 hours which includes the Fundamentals of Instructor Training.
